section catches situations such as the interests of a newly appointed director in the company's existing transactions or interests in existing contracts which an established director has just acquired, for example, because he or she has become a shareholder in one of the company's suppliers.

But why should a board wish to know about the interests of its directors in concluded transactions? What practical use can it make of the information? An example might be where the company has a power under an existing contract (for example, to terminate it unilaterally) to which knowledge of the director's interest is relevant.

Methods of disclosure

16–65

The details on what must be disclosed, and how, are broadly those applicable to proposed transactions (discussed immediately above), with the following amendments and exceptions. First, the disclosure must be made "as soon as is reasonably practicable".[248] Secondly, the statutory methods of giving notice discussed earlier in the non-mandatory context of s.177 are the only ones permitted in relation to existing transactions.[249] It presumably follows that a failure to make a declaration in the prescribed manner will render the declaration either a nullity or incomplete, and a further declaration will be required (s.182(3)).[250] Thirdly, a sole director is required to make a declaration only where the company is required to have more than one director but that is not the case at the time of the disclosure. That declaration must be recorded in writing and is deemed to be part of the proceedings at the next meeting of the directors after it is given.[251] Fourthly, the obligation applies explicitly to shadow directors.[252] However, not surprisingly, the method of giving notice at a meeting of the directors is not available to a shadow director nor is a general notice required to be given or brought up at a meeting of directors. Instead a general or specific notice is to be given in the case of a shadow director by notice in writing to the directors, though that will then cause the notice to be treated as part of the proceedings of the next directors' meeting and minuted accordingly.[253]

16–66

Finally, only a criminal sanction (a fine) is provided in respect of breaches of this statutory duty to disclose.[254] This duty, being found in Ch.3, is not one of the general duties in Ch.2, and so the various common law remedies imported by virtue of s.178 do not also apply here to breaches of s.182. Nevertheless, these demands of compulsory disclosure certainly contribute, like the general duties, to aiding better corporate governance.

Transactions between the Company and Directors Requiring Special Approval of Members

16–67

The move over the years from shareholder approval of self-dealing transactions (as required by the common law) to mere board disclosure amounted to a significant dilution of the legal controls over this class of no-conflict cases. The move, which had been substantially achieved by the first quarter of the last century, was later shown to have weaknesses in those areas where the temptation to give way to conflicts of interest was high and scrutiny of the terms of the self-dealing transaction by the other members of board could not be relied upon to be effective. Consequently, not only did the legislature introduce what is now s.177 of the 2006 Act, but it also went further and, at various times, introduced statutory provisions which restored the common law principle of shareholder approval in certain specific classes of case. These provisions are now gathered together in Chs 4 and 4A of Pt 10 of the 2006 Act. Consequently, a complete understanding of the law relating to self-dealing transactions requires knowledge not only of s.177 and Ch.3 of Pt 10 of the 2006 Act but also of Chs 4 and 4A.

Relationship with the general duties

16–68

Where either Ch.4 or Ch.4A applies, then compliance with the general duties is not enough to put the director in compliance with the requirements of the Act (s.180(3)). Indeed, without this rule, Chs 4 and 4A would have little point. In the interests of

avoiding having to obtain multiple approvals, however, s.180(2) provides that securing shareholder approval under those Chapters will relieve the director from having to comply with ss.175 (the duty to avoid conflicts of duty and interest) and 176 (duty not to accept benefits from a third party).[255] The subsection also applies even if the situation is one which in principle falls within Chs 4 or 4A but no shareholder approval is in fact required under that Chapter, for example, because the transaction is one of small value. In such a case neither Chs 4 or 4A, nor ss.175 and 176 apply. However, since the paradigm transaction falling under Chs 4 and 4A is a transaction *with* the company, in the usual case ss.175 and 176 would not bite, even if applicable. Shareholder approval is to be given by ordinary resolution of the shareholders unless the articles of association require a higher level of approval, which might extend to unanimity (s.281(3)).[256]

However, the other general duties will apply to transactions falling within Chs 4 and 4A (s.180(2)). Thus, the duty of the directors to promote the success of the company and to act within their powers will still apply, and crucially will apply to all the directors, not just the self-dealing one. This is important because transactions within Chs 4 and 4A will typically require both board and shareholder decisions. The board in the exercise of its powers under the articles takes the decision whether to enter into the proposed transaction and the shareholders then decide whether to approve the proposal as required by statute.[257] Thus, it is important that directors taking the decision whether to enter into the proposed transaction should be under the core duty of loyalty and be required to act within their powers. Further, the self-dealing director will remain under the duty to disclose the nature and extent of his or her interest to the board under s.177. This may seem unnecessary because such disclosure will be part of the process of seeking shareholder approval. However, the board decision may well precede the shareholder decision by some time. In any event, the board decision will be the only one in the case of a transaction falling within Chs 4 or 4A but not requiring shareholder approval under its provisions. In either case, disclosure of the conflict to the board in advance of the board decision, as s.177 requires, is obviously desirable.

Chapter 4 of Pt 10 brings within its scope three types of

transaction: (a) substantial property transactions; (b) loans and analogous transactions; and (c) two sets of decisions affecting the remuneration of directors, namely, decisions about the length of directors' service contracts and decisions about gratuitous payments to directors upon loss of office. These situations were reviewed by the Law Commission which made various proposals for reform, mainly in matters of detail.[258] A number of these provisions contain financial limits. These are capable of being altered by statutory instrument as the Secretary of State sees fit, subject to negative resolution in Parliament (s.258). Chapter 4A of Pt 10 contains special provisions dealing with the remuneration of directors of quoted companies. Its requirements were considered in Ch.14.[259] In outline, remuneration and loss of office payments are not to be made to directors of such companies unless they are consistent with an approved directors' remuneration policy, or alternatively have been specifically approved by the members (ss.226B and 226C). These additional requirements do not negate any necessary Ch.4 requirements, although approval by the members under Ch.4 will satisfy the equivalent need for Ch.4A approval (s.226F).

16–69

Unlike the position with the general duties, the statute expressly applies all the provisions of Ch.4 to shadow directors (s.223), though with the qualification that a company is not to be regarded as the shadow director of its subsidiary simply because the directors of the subsidiary are accustomed to act in accordance with its instructions or directions (s.251(3)).[260]

A further and helpful characteristic of Chs 4 and 4A, in comparison with the general duties of Ch.2, is that they stipulate not only the duties to obtain shareholder approval, but also the consequences of failure to obtain it, in terms of both the directors (and others) being in breach of duty and of the validity of the transaction in question.

The provisions of Ch.4 apply only to "UK registered companies".[261] These are defined as companies registered under the 2006 Act or its predecessors, but excluding overseas companies.[262] The exclusion of companies registered in other jurisdictions is not surprising. However, confining the statutory

provisions to companies registered under the Companies Acts excludes also companies incorporated in the UK but in some other way than under the Companies Acts, for example, companies formed by royal charter or Act of Parliament.[263] The provisions of Ch.4A extend more broadly, to companies quoted domestically, or officially listed in an EEA State, or on the New York or Nasdaq stock exchange (s.385).

Substantial property transactions

The scope of the requirement for shareholder approval

16–70

Section 190 requires prior shareholder approval of a substantial property transaction between the company and its director. It was said of the predecessor of s.190:

> "The thinking behind that section is that if directors enter into a substantial commercial transaction with one of their number, there is a danger that their judgment may be distorted by conflicts of interest and loyalties, even in cases of no actual dishonesty … It enables members to provide a check … It does make it likely the matter will be more widely ventilated, and a more objective decision reached."[264]

Given the motivations for oversight with this type of self-dealing, it is perhaps not surprising that the definition of the transactions caught is very wide, so wide indeed that the section imposes substantial inroads on the default rule in s.177, where disclosure to the board is all that is required.

16–71

A substantial property transaction is an arrangement (note the vagueness of this term) in which the director acquires[265] from, or has acquired from him or her by, the company a substantial non-cash asset[266] of a value which exceeds either £100,000 or 10 per cent of the company's net assets (provided the latter figure exceeds £5,000) (s.191).[267] The approval must be given either before the director enters into the transaction or the transaction must be conditional upon the approval being given, i.e. everything can be agreed between the parties but the transaction must not become binding on the company until the shareholders give their consent.[268] If this principle is not followed, then the director in question, the contracting party (if different) and the

directors who authorised the transaction are all potentially liable to civil sanctions (as set out in s.195). However, the company itself is not subject to any liability by reason of the failure to obtain the necessary approval (s.190(3)), a necessary provision since the purpose of the rules is to protect the company's assets. Although s.190 requires prior approval of the transaction, nevertheless approval by the members of the company within a reasonable period after the transaction has been entered into will mean that the transaction can no longer be avoided by the company, but the other civil consequences of breach of s.190 will follow (s.196). Those civil consequences are dealt with below.

It will be noted that the section does not in its terms preclude the self-dealing director from voting as a member at a general meeting to approve or affirm the transaction, although the common law rules relating to the propriety of this will still apply.[269]

Approval is also required if the contracting party is a director of the company's holding company or a person connected with the director (of the company or the holding company). The extension of the section in this way is in order to pre-empt rather obvious avoidance devices. In the case of the director of a holding company (and a person connected with that director), the section requires the approval of the members of the holding company as well as of the members of the company, unless the company is a wholly-owned subsidiary of the holding company, in which case, for obvious reasons, the authorisation of the subsidiary's members is dispensed with (s.190(2) and (4)(b)).[270] The policy here appears to be that the director of the holding company may be in an institutional position to influence the actions of the subsidiary, so that the risk of unfair dealing with the subsidiary's property arises here as well. On the other hand, such a policy explains why the section is not extended to transactions between the company and a director of its subsidiary or of a sister company in the group, because those directors have no institutional position of influence over the company. If, in the particular case, such a situation of influence does exist, then it may be that the director of the subsidiary will fall within the definition of a shadow director in relation to the

parent or will be regarded as a connected person in relation to a director of the parent.

The provisions on connected persons deal with a different set of avoidance devices, applicable to free-standing companies as well as companies which are members of groups, whereby the contract is diverted to a person with whom the director is connected, such as the director's spouse. However, to cover all possibilities, the resulting definition of a "connected person" is highly complex. Section 252 puts into that category members of the director's family, as widely defined in s.253. It adds companies (in fact, "bodies corporate")[271] with which the director is "connected", and s.254 defines the necessary connection as being where the director and persons connected with him or her are interested in at least 20 per cent of the equity shares of the company or control at least 20 per cent of the voting power at a general meeting. Section 252 then adds a person who is a trustee of a trust the beneficiaries (including discretionary beneficiaries) of which include the director or a person who is connected with the director under the above provisions and, finally a (business) partner of the director or of a person connected with the director. The detail need not be further examined here, but it will provide many hours of delight for those trying to avoid the provisions of Ch.4 of Pt 10 of the Act.

Exceptions

16–72

Because of the width of the connected person definition, certain transactions have to be taken out of the requirement for shareholder approval, notably certain transfers of property between group companies. Here, no director or indeed any other individual is a party to the transaction, but one of the companies might be a person connected with the director, for example, where a holding company, in which a person has a 20 per cent shareholding, enters into a substantial transaction with a subsidiary company of which that person is a director (s.192(b)). To provide a safe harbour, also excluded from s.190 are transactions between a company and a person in his character as a member of the company (even if that person is also a director

of the company), thus protecting substantial distributions *in specie* to its members by the company (s.192(a)). Also excluded are transactions by a company in insolvent winding up or administration (s.193—though not transactions by a company in administrative receivership), presumably because the directors are no longer in control of the company; and certain transactions on a recognised stock exchange effected through an independent broker (s.194), presumably because the broker and the market provide the assurance that the terms of the trade are fair. Finally, s.190 does not apply to anything the director is entitled to under his or her service contract or any payment for loss of office falling under the provisions discussed below (s.190(6)).

Remedies

16–73

Section 195 provides an extensive suite of civil remedies for breach of s.190, which operate in addition to any common law remedies,[272] and which at one stage looked likely to provide a template for the remedies to be made available for breach of the general duties.[273] The transaction or arrangement is voidable at the instance of the company unless restitution of the subject-matter of the transaction is no longer possible, third party rights have intervened, an indemnity has been paid (s.195(2)) or the arrangement has been affirmed within a reasonable time by a general meeting (s.196). It should be noted that a third party is one who "is not a party to the arrangement or transaction" entered into in contravention of s.190 (s.195(2)(c)). So, a connected person who is a party to the transaction will not count as a "third party" even if that person did not know of the connection with the director. Consequently, the connected person will not be able to prevent the transaction being avoided by the company by claiming to be a good faith third party without actual knowledge of the contravention—even though such a connected person may be relieved of liability to the company, as we see below. This statutory regime is therefore broader than its common law equivalents.

16–74

The same is true of the financial liability of those involved in the transaction. As we saw earlier, the orthodox equitable rule in

relation to self-dealing transactions is that they are simply voidable.[274] Section 195(3), by contrast, contemplates liability both to account to the company for any gain which has been made by the defendant (directly or indirectly)[275] and (jointly and severally with any others liable under the section) to indemnify the company from any loss resulting from the arrangement or transaction. This has perhaps been interpreted more narrowly in some ways, and more widely in others, than might have been expected from the statutory words themselves. In the normal case, it has been held, a gain will be made by the director where the director acquires an asset from the company, and a loss suffered by the company where the company acquires an asset from the director[276]: regarded this way, the statutory provisions provide a mechanism for effecting notional rescission of the self-dealing transaction, but doing so in money rather than by re-delivery of the assets originally exchanged. This seems sensible.

So too is the notion that s.195(3) makes the remedy of accounting of profits additional to the right to avoid the transaction. Thus, any profit made by the director, but not captured by the company through avoidance of the transaction, can still be sought by the company; or the company may seek an accounting of profit even though the transaction cannot any longer be avoided. This is wider than the common law, but the advantages are clear.

In the case of losses, actual payment of an indemnity, by any person, removes the power to avoid the transaction. However, if the transaction has been avoided, the company could still sue for an indemnity against any losses not recovered by the reversal of the transaction. Further, and more surprisingly, the Court of Appeal has deduced from the fact that an indemnity deprives the company of its power to avoid the transaction that the indemnity, in relation to assets acquired by the company, must include losses incurred after the completion of the transaction in question, even if those losses were not caused by the absence of shareholder consent, provided the losses result from the acquisition. This means that the director is at risk of having to indemnify the company for losses caused by post-transaction adverse movements in the market.[277] Where a transaction is avoided, the company, by restoring the situation prior to the

transaction, protects itself against both transaction losses and post-transaction losses, and it was held that an indemnity must go as far.

Finally, s.195(8) preserves any other remedy the company may have against the director or to avoid the transaction, for example, under the common law or any other provisions of the Act. It might be wondered what common law remedies would not be covered by the comprehensive provisions of s.195. One answer is that the remedies created by s.195 are not proprietary, because the section applies to Scotland which does not recognise proprietary remedies in this situation. However, so far as the common law applying in other parts of the UK confers a proprietary character on the company's remedies against directors,[278] s.195 preserves it.

16–75

A further notable feature of the section is the range of persons made potentially liable. Under s.195(4)(a) and (b) liability is imposed upon the director who entered into the transaction (including the director of the holding company where the transaction is with him or her) and on the connected person if that person was the party to the transaction. This is to be expected. However, s.195(4)(c) extends liability to a director (of the company or the holding company) with whom the party to the arrangement is connected, where the transaction was with the connected person. In other words, by using a connected person to effect the transaction the director does not escape personal liability to indemnify the company against losses or to account for profits, if the director made a profit thereby—though the subsection is not confined to such instrumental cases. Finally, and this is most important, s.196(4)(d) extends liability to any director of the company who authorised the arrangement, or any transaction in pursuance of it, even if neither that director nor a person connected with him entered into the arrangement. Thus, s.195 creates incentives not only for directors not to breach s.190 but also for directors to monitor compliance with the requirements of that section on the part of their fellow directors and, even more difficult, of persons connected with fellow directors. These liabilities arise whether or not the arrangement has been avoided by the company, and—perhaps oddly—they

are not expressly discontinued even if the company confirms the arrangement under s.196.

16–76

This is therefore an extremely wide-ranging remedial scheme. First, the potential defendants are not just the director who was in a position of conflict of duty and interest and entered into the transaction, but also the person connected with him or her and the director so connected (where the transaction was with the connected party) and the non-self-dealing directors of the company who authorised the transaction. And secondly, the remedies range exceptionally broadly—rescission, account of profits, compensation for losses. For these reasons, two defences are provided against the liabilities created by s.195(3) and (4).

Where the arrangement is entered into by a connected person, the director with whom the connection exists is not liable if the director shows that he or she took "all reasonable steps to secure the company's compliance" with s.190 (s.195(6)). This defence does nevertheless require the director to be active, by taking "reasonable steps". For example, a director with a controlling holding in another company, which might engage in substantial property transactions with the company, would appear to be required at least to disclose to the company of which he is a director the existence of the connection and to warn of the need for shareholder approval, should a transaction be contemplated. Moreover, the director would seem required to take reasonable steps to monitor developments in both business and personal life which might give rise to "connections" of a statutory kind, so as to be able to disclose them.[279]

A further defence is provided for the connected person and an "authorising" director. They are not liable if they show that they "did not know the relevant circumstances constituting the contravention" (s.195(7)), which, given the width of the connected person definition, is not a fanciful situation. This wording does seem wide enough to cover the situation where the connected person (an estranged step-son, for example) does not know of the step-father's directorship. In this case, the connected person does not appear to be under any legal pressure to monitor the activities of the person with whom he or she is connected so

as to ascertain, for example, of which companies the other person has become a director. The defence in s.195(7) is one based on simple ignorance. However, if the connected person does know of the connection, it does not appear that he or she escapes liability on the basis that there was a failure to understand that the law requires shareholder approval in such a case.

Additional rules for listed companies

16–77

In the case of companies whose shares are Premium Listed on the London Stock Exchange, there are further requirements for shareholder approval in the Listing Rules[280] drawn up by the Financial Conduct Authority ("FCA"). Such approval is required for all "related-party" transactions, a term which includes transactions with a director or shadow director of the listed company or of another company within the same corporate group (not just of the holding company) or a person who has been such a director within the previous 12 months or an associate of such a director, or a person with significant influence.[281] On the other side of the transaction is the listed company or any of its subsidiaries. In addition, the category also includes transactions between the listed company and any person, the purpose and effect of which is to benefit a related party.[282] The requirement for shareholder approval applies to *any* related-party transaction (other than a transaction of a revenue nature in the ordinary course of business, small transactions and certain specified types of transaction),[283] so that the FCA rules have a wider range than those contained in Ch.4 of Pt 10 of the 2006 Act. The Listing Rules make every effort to ensure that the shareholders are well-advised, including requiring an independent expert's report to support the directors' statement that the transaction or arrangement is fair and reasonable as far as the security holders are concerned (LR 13.6.1(5)). Crucially, on the approval resolution the related party may not vote and the related party must also take all reasonable steps to ensure any associates do not vote either.[284] The principle of shareholder approval and disinterested voting is thus taken much further in the Listing Rules than in the Act.

Loans, quasi-loans and credit transactions

Arrangements covered

16–78

As in other areas of life—a recent example being the funding of political parties—loans constitute an easy way of avoiding the rules governing the disposition of assets. A transaction can be presented as a loan when it is in effect a gift, either because the loan is never expected to be re-paid or because the terms of the loan are non-commercial. Given their control over the company's day-to-day activities, the directors are in a good position to effect such transactions for their own benefit, thus indirectly increasing their remuneration; and history has shown that from time to time they give into the temptation to do so. Consequently, loans have long been subject to special regulation by the Companies Acts. In 1945 the Cohen Committee[285] recommended that the legislation move beyond requiring disclosure of the loans to directors to prohibiting them. It said: "We consider it undesirable that directors should borrow from their companies. If the director can offer good security, it is no hardship for him to borrow from other sources. If he cannot offer good security, it is undesirable that he should obtain from the company credit which he would not be able to obtain elsewhere". The 1948 Act thus introduced a prohibition on loans to directors.

Now in the 2006 Act the prohibition has been re-cast in terms of a requirement for prior shareholder approval (s.197).[286] At the same time, the criminal sanctions previously attaching to these provisions were removed so that the sanctions are now purely civil. The result is to produce a much greater degree of parallelism between the provisions on loans and those on substantial property transactions, discussed above. On the other hand, the change arguably downgrades the protection available to creditors. In owner-controlled companies making a loan to the directors can be used as a way of siphoning assets out of the company to the shareholders where the company does not have distributable profits. If the company becomes insolvent, the administrator or liquidator will not be able to sue the directors for the recovery of the loans under the 2006 Act, unless either

the controllers, acting as shareholders, have forgotten to approve their decision to make the loans, taken as directors (which may happen), or the insolvency practitioner can discharge the greater burden of showing a breach of the directors' core duty of good faith or some other duty, such as the wrongful trading provisions or the common law creditor-regarding duties or can impugn the shareholder approval whitewash.[287]

16–79

As with substantial property transactions, a headache for the legislature has been the need to predict and pre-empt avoidance devices on the part of directors. With various exceptions and exemptions, the 2006 Act brings within its compass simple loans (s.197), loans to both the directors of holding companies[288] and persons connected with directors (of both the company and its holding company),[289] and also extends the rules to transactions analogous to loans. Thus, the provisions extend to what are called "quasi-loans" (s.198), to "credit transactions" (s.201) and to "related arrangements" (s.203). These provisions are hardly simple.

Sections 197 and 203 apply to any company; ss.198 and 201 only apply to a public company or a company, even if private, which is "associated with" a public company. Two companies are associated if one is subsidiary of the other or both are subsidiaries of the same body corporate.[290] It does not matter which is the public and which the private company.

16–80

A loan is a well-known concept. A quasi-loan is not. Essentially, quasi-loans are transactions, to which the company is a party, resulting in a director or a connected person obtaining some financial benefit for which the director is liable to make reimbursement to the company.[291] An example might be the company providing a credit card to the director, the company undertaking the obligation to meet the payments due to the credit card issuer and the director having an obligation to reimburse the company. This is not a loan because no funds are advanced by the company to the director, but the effect is the same as if the director took out the credit card in his or her own name and the company lent the director the money to pay the card issuer. The

sections require disclosure to the shareholders of the core elements of the proposed transaction and approval from the members before the company enters into a loan or quasi-loan transaction with a director or director of the holding company or a person connected with such a director. Approval is also required if the company, instead of making the loan or quasi-loan, gives a guarantee or provides security in relation to loan or quasi-loan made by a third party. Thus, if an unconnected bank makes a loan to the director, but the company guarantees the loan, approval will be required.

Section 201 deals with credit transactions. A credit transaction is one in which goods, services or land are supplied to the director but payment for them is left outstanding, including hire-purchase, conditional sale, lease or hire agreements (s.202). Again, such a transaction is not a loan, because no funds are advanced to the director, but the economic effect is the same as if the company had made a loan to the director and the director had then used those funds to obtain the goods, land or services in question. The section applies to both credit transactions entered into by the company with the director (i.e. the company provides the goods, services or land) and transactions entered into by a third party with the director but the company gives a guarantee or security to the third person (s.201(2)).

Finally, s.203(1) requires shareholder approval for a further set of "arrangements" entered into, not by the company, but by a third party with or for the benefit of a relevant director or connected person. In order for such an arrangement to be caught it must be one which (a) would have required shareholder approval if it had been entered into by the company; and (b) the third party acquires a benefit from the company or a body corporate associated with it. Thus, the company cannot induce a third party to do without shareholder approval something which, if done by the company, requires such approval, where the third party obtains a benefit from the company for doing that thing. Section 203(1) also brings within the shareholder approval requirement situations where the company assumes responsibility under an arrangement previously entered into by a third party which, if entered into by the company, would have required the shareholders' approval. Thus, if a bank makes a

loan to the director, but later the company assumes the obligation to repay the loan, the assumption of obligation by the company will require shareholder approval. By virtue of s.203 the company cannot avoid shareholder approval by doing indirectly what it cannot do directly.

Method of approval and related disclosures

16–81

Shareholder approval is by ordinary resolution, unless the articles impose a higher requirement.[292] Because of the potential complexity of the transactions covered by the provisions, it is not surprising that the Act requires full details of the proposed arrangement to be disclosed to the shareholders in writing in advance of their consideration of the approval resolution. Those details must disclose in particular the value the director will receive under the transaction and the amount of the company's liability.[293] As usual, approval is not required of the members of a wholly-owned subsidiary.[294]

Additional disclosure is required in the annual accounts issued at the end of the relevant financial year (s.413). Section 413 applies to "advances and credits" granted by the company to its directors and "guarantees of any kind" entered into by the company on behalf of its directors. The wording does not map easily onto the transactions dealt with in Ch.4 of Pt 10 of the Act and is in fact derived from the Directives on companies' accounts.[295] Given that shareholders will already have approved these arrangements, there is perhaps no need for the accounts provisions to mimic the provisions of the sections discussed above. Indeed, it is possible that nothing specific about disclosure of the above transactions in the accounts would have been required by the Act had the Directives not required otherwise.

Exceptions

16–82

Having brought a wide range of transactions within the net of those needing shareholder approval, the statute then proceeds to provide "safe harbours", i.e. to identify certain situations where

the member approval requirement is not required because the transaction is thought to be legitimate or to raise only a small risk of abuse. First, the requirement does not apply to anything done by the company to put the director or connected person in funds to meet expenditure incurred for the purpose of the company or to perform properly the duties of an officer of the company or to enable the person to avoid incurring such expenditure. However, a cap of £50,000 is placed on the value of arrangements falling within the exemption (s.204).[296] Thus, if the credit card mentioned above is confined to business expenditures, and has an appropriate credit limit, it will not require shareholder approval.

Secondly, shareholder approval is not required for arrangements designed to put the director of the company or holding company in a position to defend civil or criminal proceedings alleging breach of duty, to apply for relief in relation to such an action,[297] or to defend regulatory proceedings, in relation to the company or any associated company (ss.205–206). However, other than in the case of regulatory proceedings, the arrangement must be reversed (for example, the company repaid a loan) if the defence is not successful.

Thirdly, certain minor value arrangements are exempted (under £10,000 for loans and quasi-loans; under £15,000 for credit transactions) (s.207(1),(2)). Fourthly, credit transactions entered into by the company in the ordinary course of its business on no more favourable terms than it is "reasonable to expect" the company would offer to an unconnected person are exempted (s.207(3)). Fifthly, loans and quasi-loans by money-lending companies are exempted if made in the ordinary course of the company's business and no more favourable terms[298] than it is "reasonable to expect" the company would offer to an unconnected person (s.209).[299] Finally, arrangements for the benefit of associated companies[300] are permitted, even if they are connected persons, in order to facilitate intra-group transfers (s.208).

Remedies

16–83

The civil remedies provided under s.213 are similar to those

under s.195 in relation to substantial property transactions, i.e. avoidance of the transaction,[301] recovery of profits made and an indemnity against loss, the latter two remedies being exercisable against the director receiving the loan, etc. those connected with that director and the directors authorising the loan.[302] The same defences are provided.

Directors' service contracts and gratuitous payments to directors

16–84

A director contracting with his or her company in relation to the remuneration to be received constitutes a paradigm example of a conflict of interest, which is likely to exist in a very strong form. However, Ch.4 of Pt 10 does not in general require shareholder approval of directors' remuneration. It does so only in two specific areas. Approval is required for directors' service contracts of more than two years' duration (s.188) and of gratuitous payments for loss of office (ss.215 et seq.). These provisions are discussed elsewhere in the book, as part of our more general discussion of the control of directors' remuneration and in relation to takeovers.[303] In addition, there are the more demanding requirements of shareholder approval of the remuneration policies of all quoted companies, or, alternatively, specific approval of particular remuneration or loss of office payments.[304]

Political donations and expenditure

16–85

It may be convenient here to deal briefly with a final situation where shareholder approval of directors' acts is required, namely for political donations and expenditure. These provisions are to be found in Pt 14 of the Act, rather than Pt 10, although they can be presented as aiming to control a potential conflict of interest. That conflict is between the personal interests of the directors in promoting a particular political party and the interests of the shareholders as a body in not having corporate assets spent in ways which do not help to promote the success of the company. Of course, the provisions also have a wider constitutional significance, which is not a concern for this book, especially in

the light of the long-standing regulation of the use by trade unions of their funds for political purposes.[305] What is required is not shareholder approval of a particular transaction, but shareholder approval of a company policy. The shareholder resolution approving political expenditure "must be expressed in general terms" and in fact "must not purport to authorise particular donations or expenditure".[306] If passed, the resolution has effect for four years, though the articles may impose a shorter period.[307]

The Act requires an authorising resolution for (a) corporate donations to political parties registered under the relevant British legislation or those which participate in elections to public office in other EU Member States, to other political organisations and to independent candidates[308]; and (b) other political expenditure.[309] The latter is expenditure of a promotional type and other corporate activities which are "capable of being reasonably regarded as intended to affect public support for a political party or other political organisation",[310] even though there is no direct donation to a political party. A resolution is required of the shareholders (by ordinary resolution unless the articles impose a higher standard) in the case of a free-standing company; and of the shareholders of the (ultimate) holding company as well if the company is part of a group. However, in a group situation some relief is provided from the need to obtain multiple authorisations in that a resolution is not required of the company itself if it is a wholly-owned subsidiary.[311] There is one exception to this relief: even a wholly-owned subsidiary requires a resolution of its shareholders, if the parent company is not "UK registered", i.e. registered under the Act or any of its predecessors.[312] This is because a holding company which is not UK registered is not required to pass a resolution conferring approval on the political expenditure of its UK subsidiaries, so that, in such a case, the obligation on the wholly-owned subsidiary revives.[313] This may often be a rather pointless formality, but at least it will require the directors of the UK subsidiary to explain to the foreign parent the provisions of the Act on political donations.

The resolution may give authority for political expenditure generally or confine it to one or more of the following: donations

to political parties and independent candidates, donations to other political organisations and political expenditure. In any event, the resolution must set a monetary limit for the expenditures during the period to which it applies.[314]

Where a free-standing company makes a political payment or incurs expenditure without the required shareholder approval, the directors of the company making the payment will be jointly and severally liable to restore to the company the expenditure (with interest) and to compensate the company for any loss or damage it has suffered in consequence, though this second head of loss might be difficult to show.[315] The liability provisions of Pt 14 also extend to shadow directors.[316] Where the company in default is a subsidiary, the directors of the ultimate UK holding company will also be liable (to the subsidiary) but only if they failed to take all reasonable steps to prevent the breach by the subsidiary.[317]

There is anecdotal evidence that the effect of these provisions of the Act (introduced in 2000) has been to persuade the directors of many companies not to make political donations from corporate funds, rather than to seek to shareholder approval to do so. Of course, wealthy business figures make large donations to political parties, but do so out of their personal wealth, which may be derived from the activities of businesses they control.

Conflicts of Interest and the Use of Corporate Property, Information and Opportunity

The scope and functioning of section 175

16–86

Section 175(1) states that "a director must avoid a situation in which he has, or can have, a direct or indirect interest that conflicts, or possibly may conflict, with the interests of the company".[318] Section 175(7) makes it clear that a conflict of interests includes a conflict of duties. Subject to a restriction in relation to charitable companies,[319] s.175(3) excludes from the scope of the section one central type of situation involving conflict of interest, namely, "a conflict of interest arising in relation to a transaction or arrangement with the company".

These self-dealing transactions are covered by s.177, as discussed above, rather than by s.175.[320] However, it should be noted that s.175(3) has the effect of excluding self-dealing transactions even if s.177 does not apply its normal rule of disclosure to the board of the self-dealing transaction in question, for example, decisions on directors' remuneration (s.177(6)(c)). Having excluded self-dealing transactions, s.175 applies, as is expressly stated in s.175(2), "in particular to the exploitation of any property, information or opportunity" of the company. However, this is simply an inclusive assertion: it is important to note that s.175 imposes a general obligation to avoid conflicts of interest. Any conflict situation, not excluded by s.175(3), will fall within its scope, whether or not it involves the exploitation of property, information or opportunity of the company. The example of a person acting as a director of competing companies is discussed below. Deciding whether a situation does indeed involve the necessary conflict is often the most difficult question in this area. If anything, recent developments in the case law seem to have brought an even wider range of situations within the conflicts category.[321]

As with the self-dealing transactions discussed above, the secondary aim of the rules in this area is to identify the appropriate body or bodies to handle the conflict situation on behalf of the company. As with self-dealing transactions, again, the common law rule was shareholder approval.[322] Section 175 introduces, as we shall see, the mechanism of approval by the uninvolved members of the board, as an alternative to shareholder approval. However, unlike s.177 which imposes simply an obligation of disclosure to the board for self-dealing transactions, s.175 requires the board, assuming it wishes to act, to approve the director putting him- or herself in a position of conflict of duty and interest. This difference in the roles of the board is necessary because, unlike with self-dealing transactions, situations falling within s.175 will not necessarily generate a transaction to which the company is party. An example would be where a director diverts a corporate opportunity for personal benefit. The decision for the board thus becomes not whether to enter into the transaction (the typical question in the self-dealing case), but whether to approve what would otherwise be the director's breach of duty. Nevertheless, the statute has clearly

made it easier for directors to obtain approval for the exploitation of a conflict personally, by permitting the non-involved members of the board to give approval (subject to safeguards).

There are two crucial questions to be answered in the area of corporate opportunities: first, how does the law identify an opportunity as a "conflicted" one and, secondly, what processes does it specify for the company to give authority for the taking of the corporate opportunity by the director personally? The statute deals with the second issue in part but with the first issue hardly at all, where reliance is placed on the common law. We look at each of these two issues in turn.

A strict approach to conflicts of interest

16–87

The reason for depriving a director of a profit made from unauthorised exploitation of a corporate opportunity is not an objection to directors making profits as a result of or in connection with or whilst holding their office, but rather that the prospect of a personal profit may make the director careless about promoting the company's interest in taking the opportunity. If taking the opportunity personally does not involve any conflict with the interests of the company, there is no reason to deprive the director of his or her profit. It follows that some of the prior case law on corporate opportunity, which seemed to be based on a free-standing "no profit" rule, is to be regarded with caution under the new statutory provisions. However, as we shall see below, there is a high degree of overlap between a "no conflict" approach and a "no profit" approach if both are given a rigorous interpretation.

16–88

That the approach of s.175 to the "no conflict" principle is rigorous is suggested by two features of the section. First, s.175(1), echoing Lord Cranworth LC in *Aberdeen Rly Co v Blaikie Bros*,[323] includes within the principle a personal interest which "possibly may conflict" with that of the company. Secondly, s.175(2), referring to corporate opportunities, etc. says that "it is immaterial whether the company could take advantage

of the property, information or opportunity". On the other hand, the primacy of the conflict approach is asserted by s.175(4)(a), which provides that the section is not infringed if "the situation cannot reasonably be regarded as likely to give rise to a conflict of interest". These parts of the section are to some degree in tension with one another. One thing is clear: it is certainly not enough for the director to escape liability under this section that he or she acted in good faith (i.e. had honestly formed the view that the company's interests were not capable of being harmed by what was done), for the question of whether an actual or potential conflict of interest has arisen is one for the court.

In identifying situations as involving a conflict, s.175 applies "in particular" to exploitation by the director of "property, information or opportunity" of the company. Misuse of corporate assets generally presents no particular problem[324]; even the most unsophisticated directors should realise that they must not use the company's property as if it was their own (although even this is frequently overlooked or ignored in a "one-man" company). It is misuse of corporate information or a corporate opportunity—in practice the two are likely to overlap—which gives rise to difficulties. The main difficulty in the law relating to the misuse of corporate information and opportunities (hereafter referred to simply as corporate opportunities) is isolating the criteria for the identification of a corporate opportunity (as opposed to one the director is free to exploit personally without seeking any authorisation from the company). To put it another way, what sorts of linkages between the opportunity and the company are needed to make the opportunity a "corporate" one, for which exploitation personally the director needs the authorisation of the company? In two relatively recent decisions, the Court of Appeal has taken a broad view of the criteria, but we need to put those decisions in the context of the prior case law.

Identification of "corporate" opportunities

16–89

In a famous decision during the Second World War, *Regal (Hastings) Ltd v Gulliver*,[325] the House of Lords, following the law relating to trustees,[326] held directors liable to account to the

company for the profit made from their personal exploitation of a corporate opportunity once it was established:

> "(i) that what the directors did was so related to the affairs of the company that it can properly be said to have been done in the course of their management and in utilisation of their opportunities and special knowledge as directors; and (ii) that what they did resulted in a profit to themselves."[327]

Although this case is based on a "no profit" rationale which the Act now expressly rejects, it is not difficult to re-cast it in conflict terms. The facts, briefly, were as follows: company A owned a cinema and the directors decided to acquire two others with a view to selling the whole undertaking as a going concern. For this purpose they formed company B to take a lease of the other two cinemas. But the lessor insisted on a personal guarantee from the directors unless the paid-up capital of company B was at least £5,000 (which in those days was a large sum). Company A, the directors concluded, was unable to subscribe more than £2,000 and the directors, although initially willing to do so, changed their minds about giving personal guarantees. Accordingly the original plan was changed; instead of company A subscribing for all the shares in company B, company A took up 2,000 and the remaining 3,000 were taken by the directors and their friends. Three weeks later, all the shares in both companies were sold, a profit of nearly £3 being made on each of the shares in company B. The new controllers then caused company A to bring an action against the former directors to recover the profit they had made.

Issues of scope

16–90

It is not difficult to see a conflict of interest in these facts. It was the directors who decided not to give personal guarantees, thus creating the opportunity for them to participate personally in the financing of the acquisition and to share in the profits from the re-sale and depriving the company of the ability to take the whole of the profit on the sale of the subsidiary. It was the directors who, with the same result, decided not to obtain additional finance for the company to capitalise the subsidiary at the required level, even though the subsequent sale three weeks later was in contemplation when the additional cinemas were

being acquired, so that it is difficult to believe that it would have been impossible for the company to obtain bridging finance for such a short period. These facts were emphasised in the judgment of Lord Russell of Killowen, even though he, like the other judges, based his reasoning on the "no profit" principle noted above.

Thus, it is submitted that a modern court, applying the "no conflict" principle, could come to the same result as the House of Lords in this case, especially as s.175(2) provides that "it is immaterial whether the company could take advantage of the property, information or opportunity".[328] This seems at first sight a very odd provision: was it not the possibility that the company could have taken up the opportunity itself which in *Regal* provided the basis for the conflict of interest, so that the existence of that possibility can hardly be characterised as "immaterial"? However, the rule can be justified as relieving the court of having to make a judgement it was not well-placed to make, i.e. whether the company was genuinely unable to raise the finance itself. It may also be justified as a prophylactic rule. It is the duty of the director to obtain the opportunity for the company. If the director is to be relieved of this duty and made free to take the opportunity personally where there is only a low chance of the company obtaining the opportunity itself, this will give the director an incentive not to strive as hard as he or she might to promote the company's interests. Section 175(2) removes this incentive.

16–91

It will be observed, however, that the claim in *Regal* was wholly unmeritorious. Recovery by the company benefited only the purchasers, who in this way received an undeserved windfall resulting, in effect, in a reduction in the price which they had freely agreed to pay. It also appears that the directors had held a majority of the shares in company A so that there would have been no difficulty in obtaining authorisation or ratification of their action by the company in general meeting[329]; but acting, as it was conceded they had, in perfect good faith and in full belief in the legality and propriety of their actions, it had not occurred to them to go through this formality. Nor does this account exhaust the anomalies inherent in the decision. The chairman

(and, apparently, the dominant member) of the board, instead of agreeing himself to subscribe for shares in company B, had merely agreed to find subscribers for £500. Shares to that value had, accordingly, been taken up by two private companies of which he was a member and director, and by a personal friend of his. It was accepted that the companies and friend had subscribed beneficially and not as his nominees and, accordingly, neither he nor they were held to be under any liability to account for the profit which they had made.[330]

The company's solicitor also escaped; though he had subscribed for shares and profited personally, he could retain his profit because he had acted with the knowledge and consent of the company exercised through the board of directors. The directors themselves could avoid liability only if a general meeting had approved,[331] but the solicitor, not being a director, could rely on the consent of the board. And this despite the fact that the board had acted throughout on his advice. Hence the two men most responsible for what had been done escaped liability, while those who had followed their lead had to pay up. What seems wrong with the application of the basic principle in this case is that recovery was not from all the right people and, more especially, was in favour of quite the wrong people.[332] Had it not been for the change of ownership it might well have been equitable to order restoration to the company, thus, in effect, causing the directors' profits to be shared among all the members. As it was, the case can be seen as one in which equitable principles were taken to inequitable conclusions.

16–92

Of the many subsequent decisions that have followed or commented on the *Regal* case, four are of particular interest: *Industrial Development Consultants v Cooley*,[333] *Canadian Aero Service v O'Malley*[334] (a decision of the Canadian Supreme Court in which the judgment was delivered by Laskin J—later the CJ), *Bhullar v Bhullar*[335] and *Allied Business and Financial Consultants Ltd v Shanahan* (also known as *O'Donnell v Shanahan*).[336]

The facts in the first two cases were very similar. In both, the companies concerned had been eager to obtain, and were in

negotiation for, highly remunerative work in connection with impending projects. In both, it was unlikely that the companies would have obtained the work, but in each there was a director whose expertise the undertaker of the project was anxious to obtain. Accordingly, each of the directors concerned resigned his office and later joined the undertaker of the project, in *Cooley* directly, in *Canadian Aero Service* indirectly through a company formed for the purpose which entered into a consortium with the undertaker. In both the directors were held liable to account for the profits which they made.

In neither case is it difficult to analyse the facts through a conflict-of-interest prism, since both directors were under a duty to obtain the opportunity for the company, unlikely though it was that they would succeed, though the reasoning of the courts involved was not expressed exclusively in this way. In *Cooley*, liability was based on misuse of information,[337] the defendant, while managing director, had obtained information and knowledge that the project was to be revived and had deliberately concealed this from the company and taken steps to turn the information to his personal advantage. It was irrelevant that the approach had been made to him and that his services were being sought as an individual consultant and would be undertaken free from any association with the company.[338] "Information which came to him while he was managing director and which was of concern to the plaintiffs and relevant for the plaintiffs to know, was information which it was his duty to pass on to the plaintiffs." It might seem remarkable that the plaintiffs should receive a benefit which "it is unlikely that they would have got for themselves had the defendant complied with his duty to them" but "if the defendant is not required to account he will have made a large profit as a result of having deliberately put himself into a position in which his duty to the plaintiffs who were employing him and his personal interests conflicted".[339] This is an expression of the policy, as noted above, which now finds expression in s.175(2) of the Act. The quotation also demonstrates that the basis of the decision was not a mere misuse of information but the conflict of interest and duty to which the use gave rise.

16–93

In *Canadian Aero Service*, the decision was based firmly on misuse of a corporate opportunity, conceived of as generating a conflict of interest. On this Laskin J said[340]:

> "An examination of the case-law shows the pervasiveness of a strict ethic in this area of the law. In my opinion this ethic disqualifies a director or senior officer[[341]] from usurping for himself or diverting to another person or company with whom or with which he is associated a maturing business opportunity which his company is actively pursuing; he is also precluded from so acting even after his resignation where the resignation may fairly be said to be prompted or influenced by a wish to acquire for himself the opportunity sought by the company, or where it was his position with the company rather than a fresh initiative which led him to the opportunity which he later acquired."

Effect of director's resignation

16–94

Another feature of the *Cooley* and *O'Malley* cases was that the directors in question resigned, but were nevertheless held liable to account to the company for the profits subsequently made. The issue was considered by Lawrence Collins J in *CMS Dolphin Ltd v Simonet*,[342] who concluded that the answer lay in the proposition that the opportunity is treated as the property of the company, so that a director who resigns after learning about such an opportunity "is just as accountable as a trustee who retires without properly accounting for trust property". As we have seen above,[343] this approach to the issue of resignation has been confirmed in s.170(2)(a) of the Act, and without the need for dubious characterisation of the opportunity as the property of the company. It follows, of course, that if what the director has learned before his or her resignation does not fall within the category of a corporate opportunity, it is no breach of this aspect of fiduciary duties to exploit the information personally thereafter; the line can be difficult to draw.[344] This means that, beyond the boundaries of these statutory rules, or any contractual[345] or equitable restraints on the director (for example, rules on breach of confidence), he or she is otherwise free to exploit his or her enhanced knowledge, talents and skills after resignation as a director.[346]

Effect of board determinations of scope

16–95

The last two cases of the four noted earlier are in many ways the

more interesting. In *Bhullar v Bhullar*,[347] in contrast to *Cooley* and *Canaero*, the defendants did not seek to divert to themselves an opportunity which their company was actively pursuing. On the contrary, the two families which had set up the company to acquire properties having fallen out, the family which constituted the claimant side of the litigation informed the family which formed the defendant side of the litigation that it did not want the company to acquire further properties. Subsequently, the defendant directors, by chance and without reliance on any information confidential to the company, discovered that a property adjacent to one of the company's properties was for sale and purchased it themselves. The claimants nevertheless succeeded in their argument that the opportunity to purchase the property should have been made available to the company, whose property would have been much more valuable if joined with the adjacent property, and that the defendants accordingly held the property on trust for the company.[348] This is a notable decision on two grounds.

First, it seems to move English law in the direction of the US "line of business test", i.e. if the opportunity falls within the company's existing business activities, not simply where the company is actively pursuing a particular opportunity, then an opportunity the director comes across is a corporate one, even if no property or information of the company was deployed by the director to obtain the opportunity. There was no suggestion in *Bhullar* that the directors had used their position in the company to bring the opportunity to maturity and then diverted it for themselves, as in *Canaero.* For this reason, the decision can be seen as affecting a significant extension of the criteria for identifying a corporate opportunity. This is probably a desirable development. It recognises that, for the purpose of the conflict of interest and duty rule, the duties of a director are pervasive, not ones arising only in specific and limited circumstances.

Secondly, however, the application of the extended understanding of a corporate opportunity to the facts of the case was questionable, for the court attached no weight to the fact that, before the opportunity arose, the board decided, albeit informally, at the initiative of the claimants and for reasons which were apparent, not to acquire any more properties.[349]

Nevertheless, the claimants were, in effect, able to reverse their decision once a particularly attractive opportunity arose. It is not clear why the claimants should have been permitted to act in such an opportunistic way. In *Regal*, where the claimants' behaviour was also opportunistic, as we have seen, it could be said that it was the directors who decided that the company could not afford the opportunity who were the ones who later took it themselves, and that such behaviour is necessarily suspect. In *Bhullar* it was found as a fact that the claimants, not the defendants, took the initiative to restrict the scope of company's future activities.[350]

16–96

This second point is not unrelated to the first. If the courts are, rightly it is submitted, to extend liability beyond the maturing business opportunity so as to embrace opportunities within the company's line of business, a director needs to be able to establish what the company's business actually is. Of course, this may not be simple, and it is probably right that any ambiguity ought to be resolved against the director and in favour of the company, so requiring the director to act with undeviating loyalty in furthering the company's possible wider interests.[351] On the other hand, it would seem undesirable to extend the corporate opportunity doctrine to any business opening which a director comes across and which the company could exploit, even though the company was neither already exploiting that type of opportunity nor seeking to do so.[352] To do so would come close to restoring the "no profit" rule which the section does not adopt, and indeed to do so without the usual limitations inherent in that common law rule.[353] This sort of rule would increase the costs of being a director (the director is at risk of losing the opportunity to the company) and in the case of non-executive directors in particular this might seem a high cost as against the potential rewards of the directorship.

In particular, an answer needs to be provided to the question posed in *Regal*: does the equitable principle involve "the proposition that, if the directors bona fide decide not to invest their company's funds in some proposed investment, a director who thereafter embarks his own money therein is accountable for any profits he may derive therefrom?"[354] The reason this

question is unresolved, it is suggested, is to be found in the underdeveloped state of the law on the role of the board in the area of corporate opportunities, for the board performs two closely linked but conceptually distinct roles. It may authorise the taking by the director of an opportunity which is a corporate one, as s.175 contemplates, but, through its direction of the company's business strategy, its decisions may, or ought, to have the effect of taking some opportunities out of the category of being corporate, with the consequence that authorisation is not required, because there is no conflict of interest. As s.175(2) says, it may indeed be "immaterial" whether the company could take advantage of the opportunity, but if it is an opportunity outside the range of the company's business activities, present or in contemplation, can the situation "reasonably be regarded as likely to give rise to a conflict of interest", as s.175(4)(a) requires? It is suggested that the line of business test provides a way of reconciling these two provisions of the section, with due regard being accorded to decisions of the board in determining the company's business strategy.

16–97

This "scope of business" reasoning has, however, been dealt an unexpected and it is suggested rather unfortunate blow in the last and most recent case on our list. In *O'Donnell v Shanahan,*[355] the deputy judge held that there had been no breach of fiduciary obligations because the impugned opportunity (which concerned a property development) arose outside the scope of the business of the principal company (which focussed upon the provision of loans, mortgages and financial advice[356]), and further there had been no use of the company's property or information in acquiring the benefit.[357] The Court of Appeal took the opposite view. The company operated as a quasi-partnership with three members, the petitioner and the two defendants (the latter also ran a property development partnership on the side). Although not part of the company's usual business, the company had, in an ad hoc fashion, agreed to procure finance for and advise one particular investor who was interested in purchasing a development property. In return, the company would earn fees and a commission. Valuation reports were obtained and other work done, but the deal did not proceed. After further

negotiations, the two defendants and a third party procured the opportunity for themselves, and did so on the basis that no commission would be paid to the company. The defendants did, nevertheless, pay the petitioner a sum representing her notional share of the lost commission. Later, after the falling out, the petitioner claimed that the investment in the development property was made in breach of the "no conflict" and "no profit" rules, without her consent, and that she was entitled to a share in the profits.

The Court of Appeal agreed, holding that the opportunity had arisen in the course of the directors' activities as company directors and therefore it should have been disclosed to the company which should have been given a chance to decide whether or not it wished to exploit the opportunity itself. It was immaterial that property development was not the focus of the company's activities. The "scope of business" test, described in *Aas v Benham*[358] (and heavily relied upon by the deputy judge), was held inapplicable: it was, the court held, a partnership precedent; its application was limited to partnerships where the partnership activities were clearly defined in restrictive partnership deeds; by contrast, in companies (even, it seems, quasi-partnership companies, as here) and trusts, *Aas v Benham* had no application—directors were simply fiduciaries in whatever activities they engaged. According to Rimer LJ[359]:

> "I would regard it as correct to characterise the nature of a director's fiduciary duties as being so unlimited and as akin to a 'general trusteeship'. In my judgment, the decision in *Aas v Benham* provides no assistance in determining the nature and reach of the 'no profit' rule so far as it applies to trustees and directors. In particular, in the present case, the scope of the company's business was in no manner relevantly circumscribed by its constitution: it was fully open to it to engage in property investment if the directors so chose."

And later, given this, he reached the same conclusions on the "no conflict" rule. It followed that the two directors had breached their fiduciary duties and were required to account for the profits earned on the development project (should the facts establish there were any). This would, in turn, boost the assets of the company, which would in turn increase the share price, and thus improve the return to the petitioner who was seeking to have her shares repurchased as her remedy under the unfair prejudice petition.

Moreover, the court dismissed without discussion as seemingly irrelevant the fact that the petitioner had accepted her share of the notional commission from the defaulting directors, and had at least implicitly acquiesced in the purchase of the development property by the defendants.

Finally, although it is true that unfair prejudice claims can be pursued successfully without proof of matters that would constitute legal wrongs, here the entire focus of the Court of Appeal's reasoning was on the question of whether there had been a breach of the no-conflict fiduciary duties.

16–98

Where does this leave directors? It is easy to explain that it is, and ought to be, irrelevant to the question of fiduciary breach whether the company could, or would, exploit the opportunity in question. Those questions are more relevant when the alleged breach is of the good faith duty (s.171), or even the care and skill duty (s.174). But the gist of the "no conflict" rule is to compel, so far as possible, unwavering loyalty to the corporate endeavour. Both the duty and its remedies are geared to this end. This, it is suggested, implicitly and inevitably requires the courts to pay some regard to the scope of that endeavour. Instead, the two cases just described (*Bhullar v Bhullar*[360] and *O'Donnell v Shanahan*[361]) adopt a broad approach that, taken only a little further, verges on a finding that any opportunity that is at all interesting financially will be seen as of interest to the company. This raises the risks for directors, and increases the chances of pure windfall gains to the company and its shareholders: the trend is towards there being no safe harbour other than to present every entrepreneurial idea to the board before pursuing it individually, notwithstanding the nature of the corporate business or whether there is a real, sensible prospect of a conflict. This effectively gives the company a right of first refusal on opportunities seen by the directors as worth pursuing. Within the company's scope of business, broadly interpreted, this is precisely the goal of the no-conflict rule, but outside that context the broader rule needs some justification. It raises the fiduciary "no-conflict" rule from pragmatic prophylaxis to something far more draconian.

Since all these cases were determined under the common law, it remains to be seen how far the statutory encapsulation has imposed its own pressure in s.175(4) to deny a breach if "the situation cannot reasonably be regarded as likely to give rise to a conflict of interest". However, recent authorities do not appear to deviate from these common law authorities on the tests for determining the scope of the director's duty.[362]

Competing and multiple directorships

16–99

It is common for directors to hold directorships in more than one company, certainly where the companies are part of a group but also where they are independent of one another. In such cases an issue arises in relation to the compatibility of this practice with the no-conflict rule set out in s.175, whether conceived of as a conflict of interest and duty (s.175(1)) or a conflict of duty and duty (s.175(7)). There are two situations which need to be looked at: the first is where directorships are held in companies which are in business competition with one another, or indeed where the director in any other way enters into competition with the company; and, secondly and more commonly, where the companies are not competitors but where nevertheless their interests may conflict from time to time.

Competing with the company

16–100

One of the most obvious examples of a situation which might be expected to give rise to a conflict between two sets of a director's duties[363] is where the director carries on or is associated with a business competing with that of the company. Certainly fiduciaries without the consent of their principals are normally precluded from competing with them, and this is specifically stated in the analogous field of partnership law.[364] For a while, and strangely therefore, it was supposed that a similar rule did not apply to directors.[365] However, the one definite, if inadequately reported, decision that a director could not be restrained from acting as a director of a rival company appears to be based on the conclusion that competing directorships were not unconstitutional (i.e. not contrary to the

articles or the director's contract) rather than that they were not in breach of the director's fiduciary duty.[366] It has been held that the duty of fidelity flowing from the relationship of employer and worker may preclude the worker from engaging, even in his spare time, in work for a competitor,[367] notwithstanding that the worker's duty of fidelity imposes lesser obligations than the full duty of good faith owed by a director or other fiduciary agent. It seems impossible to suggest, therefore, that a director can compete whereas a subordinate employee cannot.

In the light of the above it was not surprising that in *In Plus Group Ltd v Pyke*[368] the Court of Appeal expressed unease with the state of the law as set out above, but resisted the temptation to engage in a wholesale review of the case law in this area in the situation facing them where the defendant director had been wholly, and probably wrongfully, excluded from any influence over the operation of the claimant companies, in which he was also a substantial shareholder. The Court held that in these circumstances the claimant companies could not obtain an account of the profits made by the director as a director of a competing company which he had established. In taking this approach, the court has indicated that the logical way forward is simply to examine the rule against competition in the circumstances of each case. *The Mashonaland* case must then be seen, not as one laying down a rule that competition is in principle permitted, but as one where, as in the *Pyke* case, it was inappropriate to apply the no-competition rule.[369]

16–101

It can also be argued that s.175 has made it much easier for directors to deal with such conflicts of duty. If both companies consent to the situation, there is no breach of fiduciary duty arising simply from taking up directorships in competing companies, but so long as consent at common law required the approval of the shareholders, directors would regard the process of obtaining consent as a burdensome one. Under s.175, by contrast, the non-conflicted directors of the companies involved will normally be in a position to give their consent (subject to the different default rules for private and public companies noted below).

Two difficulties remain, however. First, the section does not contemplate, in the way that s.177 does, a general declaration of interest. The director must seek approval from the non-involved directors for taking up the position as a director of the competing company and, should the nature of that situation change—for example, should the competing company start an additional line of business in competition with the other company—a further consent would apparently be required. However, it may not always be easy to judge when a situation has arisen which requires further consent. Secondly, even if consent is given to the taking up of the directorship, the director is likely to be faced with constant difficulties in avoiding breaches of the core duty of loyalty to the companies concerned as he or she performs the duties of the directorships. The director would be required to treat both companies equally, which might reduce his or her utility to both companies.[370] It has been recognised that one who is a director of two rival concerns is walking a tight-rope and at risk if he fails to deal fairly with both.[371] However, it should be noted that the legal problem here arises not so much from the no-conflict rule as from the fact that, by becoming a director of two companies, the director owes a core duty of loyalty to each.

In practice, it is in fact rare for a director to act for competing companies, except in the very problematic case where the director forms a new company for the purpose of competing with the current company when, as he plans, he ceases to be associated with it. The tension then is to balance the freedom of individuals to exploit their talents after their association with a company ceases, and the obligations of fiduciary loyalty intended to protect the company from misuse of the company's business opportunities or trade secrets. The company cannot, of course, prevent the departing director from applying his acquired general (and non-confidential) knowledge and experience of the company's line of business and its markets for the benefit of his new employer. And, moreover, simply forming an intention to leave the company and compete with it, and indeed taking preparatory steps towards that end but without actually engaging in any competitive activity, has been held not to constitute any breach of the director's duty of loyalty, however much it may seem to be lacking in merit.[372] But actual competitive activity (such as recruiting the company's employees to work in the new

business) will not only be a breach of the no-conflict rule, but the director's core duty of good faith and fidelity will require disclosure of this threat to the company's business to its board, even if it involves the director disclosing his or her own wrongdoing.[373] The rigour of the fiduciary principles is, however, somewhat abated in those cases where the resignation of the directors has been forced upon him or her and the director has not actively sought to seduce the company's customers away or to exploit an opportunity belonging to it.[374] Beyond that, the courts seem to have adopted rather pragmatic solutions based on common sense and the merits of the case. This is an area in which context is all. So in *Foster Bryant Surveying Ltd v Bryant*,[375] Rix LJ summarised the existing cases as follows:

> "At one extreme (*In Plus Group v Pyke*[376]) the defendant is director in name only. At the other extreme, the director has planned his resignation having in mind the destruction of his company or at least the exploitation of its property in the form of business opportunities in which he is currently involved (*IDC*,[377] *Canaero*,[378] *Simonet*,[379] *British Midland Tool*[380]). In the middle are more nuanced cases which go both ways: in *Shepherds Investments v Walters*[381] the combination of disloyalty, active promotion of the planned business, and exploitation of a business opportunity, all while the directors remained in office, brought liability; in *Umanna*,[382] *Balston*,[383] and *Framlington*,[384] however, where the resignations were unaccompanied by disloyalty, there was no liability." (citations added)

After resignation, however, the director will be able to compete freely subject to any contractual restraints, the law relating to trade secrets and the rules relating to conflicts which arose before resignation (see s.170(2)).

Multiple directorships

16–102

The law relating to multiple directorships of a non-competing type is basically as set out above, though obviously a directorship of another non-competing company creates a lesser conflict problem. Indeed, in the case of a non-executive director of a company (i.e. one who is not bound to devote all his time and efforts to the company) taking a non-executive directorship in another, non-competing company can be said not to raise a conflict issue at all. However, it is no doubt good practice to obtain the consent of each board to the position, and in the case of an executive director such consent would seem to be

necessary.

When conflicts of interest arise at a later date, for example, where the director is on the boards of two companies which are on opposite sides of a transaction, it is common for the director simply to withdraw from a role on the board of either company. Provided the articles make provision for this solution, the Act appears to relieve the director of liability in such a case, even liability arising under the core duty of loyalty.[385] In the absence of appropriate provisions in the articles, however, the director's position is precarious. If a person is a director of two non-competing companies but one makes a takeover bid for the other, how can the director discharge the core duty of loyalty to both in such a situation? Withdrawal may ensure equal treatment but can hardly be said to amount to a discharge of the duty to promote the success of the (each) company. In that situation, resignation from one of the involved companies may be the only possible step. However, where the conflict is less pressing, the strategy of withdrawal may seem appropriate.

Approval by the board

16–103

We now reach discussion of the second of the two principal issues arising under s.175. Assuming the impugned transaction does involve an unacceptable conflict, whose permission must the director obtain for personal exploitation of it? Section 175 introduces the possibility of board approval, supplementing the orthodox common law doctrine of shareholder approval which we discuss below in relation to directors' duties as a whole.[386] Previously the common law had never condoned mere board approval in these circumstances,[387] and its use by the statute in this way is a major innovation.

By virtue of s.175(4)(b), authorisation may be given by the board itself for a conflict of interest on the part of one of their number, so that no breach of duty is committed.[388] The conflicted director him- or herself is excluded in the calculation of the quorum needed for the directors' meeting at which authorisation is given, and the director's vote is disregarded in determining whether board approval has been given (s.175(6)). Any "interested" director is also similarly excluded, but when a

director can be said to be interested in another director's authorisation to take a corporate opportunity is left to the courts to decide. Any other director participating in the opportunity would clearly be interested, but how far the concept of interest goes beyond that is not clear.

Notably, if there is no authorisation in advance of the taking of the opportunity, subsequent ratification of the director's breach of duty by the company requires a decision of the shareholders.[389]

Nevertheless, it might be asked whether this is a wise innovation. On the one hand, a requirement of shareholder approval is a heavy one, and may deter directors from proceeding with courses of action which, if asked, shareholders would approve, thus imposing unnecessary restrictions on directors' entrepreneurial activities. On the other hand, the risk with board approval is that, although the approving directors may have no interest in the particular case, they may have an underlying interest in a culture of easy conflict approvals ("you scratch my back and I'll scratch yours"). No doubt, such conduct would be a breach of the other duties imposed on directors, discussed above, but such breaches may be difficult to detect and to prove in court.

16–104

It may be for this sort of reason that the statute allows or requires the company's constitution (notably the articles) to have some control over whether uninvolved directors can authorise conflicts of interest. In the case of private companies, the board can act as the authorising body unless something in the company's articles or other parts of its constitution restricts the board from so acting. In the case of public or charitable[390] companies, the company's constitution must positively empower the directors to act in this way, and the articles might (but need not) then regulate in further detail the scope or manner of exercise of the authorisation power. Compliance with the articles would in either case be a pre-condition for the valid exercise of the directors' powers of authorisation (s.178(5)). The more restrictive rule applied to public companies reflects the fact that their shareholding bodies tend to be more dispersed than those in

private companies and their collective action problems are accordingly greater. Hence, in public companies the burden of introducing the rule of director authorisation is placed on those who want it (normally the directors themselves) rather than the burden of removing it on those who do not want it (presumably the shareholders).[391] However, the statute, surprisingly, does not adopt a proposal of the CLR that board authorisations should be reported to the shareholders in the subsequent directors' report.[392]

We shall see below that, in relation to shareholder approval, the common law developed a doctrine that certain breaches of duty are not capable of approval by the company, the case of *Cook v Deeks*[393] being a leading authority in this area. Does such a restriction apply to authorisation given by the independent members of the board? There is no mention of such a restriction in s.176 and, since independent board approval is an invention of the statute, it would seem that this limitation cannot be imported into the board's power of authorisation. Is this surprising? There are two controls over board authorisation which do not exist in relation to shareholder authorisation at common law. First, interested directors are excluded by the statute from voting on a board resolution, whereas at common law interested directors were entitled to vote as shareholders to authorise the taking of a corporate opportunity (the modern statutory rule on shareholder voting is now different[394]). The exclusion of interested directors from voting might be thought to reduce the danger of biased corporate decisions or unfair treatment of minority shareholders, although it does not eliminate it. Secondly, the non-involved voting directors, unlike shareholders, are subject to fiduciary duties when exercising their votes. The core duty of loyalty requires directors to give priority to the promotion of the success of the company when deciding whether to authorise, for example, the taking of a corporate opportunity, though such a breach might be difficult to prove.[395]

Where the board does not have approval power (because it is explicitly removed by the articles in a private company, or not granted in a public or charitable company, or not practically possible because all the directors are conflicted), then approval will need to be obtained in accordance with any specific rules set

out in the company's articles, or in accordance with the common law default rule which requires the approval of the shareholders in general meeting, as discussed below.

A conceptual issue

16–105

Section 175 is based on the existence of a conflict of duty and interest (or a conflict of duties).[396] In the area of corporate opportunity, this conflict arises because of the conflict between the interest of the director in personal exploitation of the opportunity and his or her duty to offer the opportunity to the company (or pursue it on behalf of the company). The duty to offer the opportunity to the company arises because it has been characterised as a corporate one: that is why the identification of the criteria for making the opportunity a corporate one is so central to this body of law, and why the uninhibited approach of the most recent cases seems questionable.[397]

However, one can ask, what is the nature of this duty? It is generally accepted that, if the director does not wish to exploit the opportunity personally, no breach of s.175 arises because there is then no personal interest conflicting with the director's duty to the company. In other words, a director who does nothing can never be found liable under s.175. Might the director, however, be liable for breach of some other duty, for example, the duty of care or good faith? In principle, this possibility exists. In the case of the core duty of loyalty the director would have to form the view that the promotion of the success of the company required the opportunity to be communicated to the company, and then fail to do so. The duty of care seems a more promising avenue of approach because it is based on an objective test. However, it would not necessarily be correct to infer from the existence of a duty for the purposes of the no-conflict rule a duty for the purposes of the duty of care. The courts have traditionally developed far more demanding standards of loyalty than of care and that approach may continue under the statute.[398]

Remedies

16–106

The detail of the remedies available to the company for breach by directors of their duties to the company are dealt with later,[399] but it is useful at this stage to note their broad outline in relation to the conflicts cases, as their key characteristic differs fundamentally from the remedies so far encountered. For all breaches of directors' duties, if discovered at the planning stage, it is true that the court may be persuaded to order an injunction to prevent the plan being implemented. But, once the breach is committed, we have seen that by and large the remedy has been compensation to the company for the loss thereby caused, whether that compensation is assessed using common law or equitable rules (the former for the duty of care, it is suggested; the latter otherwise).

The only exception so far has been with the self-dealing rule, where the orthodox remedy is rescission of the contract,[400] not compensation for loss or an account of profits.[401] In these cases, as with all the "no-conflict" duties here, the aim of the remedy is to strip the defaulting director of the benefits of his or her disloyal distraction from undeviating focus on the company's interests, but the courts have typically declined to value the contract between the company and the director, and have therefore required the remedy to be solely by way of putting the parties back into their pre-contracting status.

With the conflicts of interests cases just considered, however, this difficult valuation problem does not arise. Where the conflict arises not from any self-dealing, but typically from the director's misuse of the company's property, information or opportunity, then, too, the remedy aims to strip the defaulting fiduciary of the profits of his or her disloyal activities. If the disloyal venture is not profitable, then it follows that the company does not have a remedy under this head; if it is profitable, the director must account for the profit. This seems straightforward. The point to note, however, is that the focus of these no-conflict remedies is profit-stripping; the company is not entitled, under this head, to recover losses: to recover those, the company must, and very often can on the same facts, sue its disloyal fiduciary for some other failure, be it failure to act within powers, or breach of the duty of good faith or care and skill, provided it can prove the elements of those quite different

claims.[402]

Duty not to Accept Benefits from Third Parties

The scope of section 176

16–107

Section 176 provides that a director "must not accept a benefit from a third party conferred by reason of (a) his being a director, or (b) his doing (or not doing) anything as a director".[403] A "third party" means a person other than the company, an associated body corporate or a person acting on behalf of such companies. The connection of this rule with the no-conflict principle is underlined by the provision that the duty is not infringed if the benefit "cannot reasonably be regarded as likely to give rise to a conflict of interest" (s.176(3)).[404] This being so, it may be wondered what the purpose of s.176 is, for could not the situations it deals with be handled under the general no-conflict section (s.175)? The answer, and it is an important one, is that there is no provision in s.176 for authorisation to be given by uninvolved directors for the receipt of third-party benefits. The risk of such benefits distorting the proper performance of a director's duties is so high that it is rightly thought to be proper to require authorisation from the shareholders in general meeting (even though that turns the rule into a near-ban on the receipt of third-party benefits). Although the point is not expressly dealt with in s.176, the availability at common law of shareholder authorisation is preserved by s.180(4)(a).[405] Finally, the fact that s.175 applies to a situation does not prevent s.176 being relied upon as well, i.e. the sections are cumulative rather than mutually exclusive in their operation.[406]

The common law termed such payments "bribes", although that seems a misnomer as it is enough at common law that there has been the payment of money or the conferment of another benefit upon an agent whom the payer knows is acting as an agent for a principal in circumstances where the payment has not been disclosed to the principal.[407] There is no need to show that the payer of the bribe acted with a corrupt motive; that the agent's mind was actually affected by the bribe; that the payer knew or suspected that the agent would conceal the payment

from the principal; or that the principal suffered any loss or that the transaction was in some way unfair. None of these matters seem to be requirements of s.176 either. Thus, the term "third party benefits" is more appropriate than the term "bribe".

On the other hand, so far as true bribes are concerned, enormous changes have been introduced by the Bribery Act 2010, as we have seen. This Act was designed to bring the UK in line with international norms on anti-corruption legislation. It makes it a criminal offence to give or receive a bribe, but, most significantly, it also introduces a corporate offence of failing to prevent bribery.[408]

Remedies

16–108

At common law the remedies available in the case of third party benefits were extensive. These common law remedies, so far as they give the company remedies against the defaulting director, continue to apply by virtue of s.178, despite the change of nomenclature in s.176. Although that section imposes a duty only on the director, the common law also imposed obligations on (and provided remedies against) the third party, and these are presumably unaffected. Thus, where such a benefit has been paid to a director, the company may rescind the contract between it and the third party (provided the third party knew the recipient was a director of the company), and it matters not whether the payer is the third party or the third party's agent.[409] In addition, or instead, both the third party and the director are jointly and severally liable in damages in fraud to the company, the amount of the recovery depending upon proof of actual loss.[410] Alternatively, the company may hold both the director and the third party jointly and severally liable to pay the amount of the benefit to the company as money had and received to its use, this liability being naturally not dependent upon proof of loss. Against the director, such a personal liability to account is straightforward: the bribe is akin to a secret profit made out the director's position. Against the third party it is a rather peculiar remedy, though one which seems to be established.[411] However, the company must choose between the remedies of damages and account, the choice no doubt depending on the amount of the

provable loss which the company suffered as a result of the bribe, though it need not do so until judgment.[412]

In *Attorney-General for Hong Kong v Reid*,[413] the Privy Council took the further step of recognising a proprietary remedy by way of a constructive trust in favour of the company (or other principal) against the director (or other agent) in respect of the bribe. The significance of this remedy being available, in addition to the personal remedy to account, is that the company may then make further tracing claims to any investment profits made by the defaulting director through the use of the original benefit (whilst falling back on the personal claim if the investment has been unprofitable); the company may also follow the benefit (and its traceable substitutes) into the hands of third parties who are not bona fide purchaser for value; and, importantly, all these proprietary claims will prevail over the claims of the unsecured creditors in the event of the director's (or the third party's) insolvency. After a great deal of academic and judicial debate, the Privy Council's conclusions in this case have now been confirmed by the Supreme Court in *FHR European Ventures LLP v Cedar Capital Partners LLC*,[414] as discussed in more detail below.[415]

Remedies for Breach of Duty

16–109

As we have already noted, although there is a statutory statement of the general duties owed by directors, the remedies for breach of these duties is not similarly stated. Rather, s.178 simply provides that "the consequences of a breach (or threatened breach) of ss.171 to 177 are the same as would apply if the corresponding common law rule or equitable duty applied"; and that the duties contained in the sections (other than s.174) are "enforceable in the same way as any other fiduciary duty owed to a company by its directors". It should be noted that s.178 applies only to the general duties laid out in ss.171–177, not to the provisions to be found in Ch.3 of Pt 10 dealing with disclosure of interests in existing transactions (for which the statute provides only criminal sanctions)[416]; nor to the provisions contained in Chs 4 or 4A of Pt 10, requiring shareholder approval for certain transactions with directors, for which a self-

contained statutory civil code of remedies is provided.[417] It should also be noted that the second proposition in s.178 is not applied to the duty to exercise reasonable care, skill and diligence, in line with the modern view that this is not a fiduciary duty. The remedy for that breach is normally confined to damages.[418]

We have sought to indicate the principal remedies available for each of the duties as we have gone along. Nevertheless, it may be useful to bring them together here, since it is important to appreciate both the areas of overlap and the areas of difference. The main remedies available are: (a)injunction or declaration; (b) damages or compensation; (c) restoration of the company's property; (d) rescission of the contract; (e) account of profits; and (f) summary dismissal.

(a) Injunction or declaration

16–110

These are primarily employed where the breach is threatened but has not yet occurred.[419] If action can be taken in time, this is obviously the most satisfactory course. However, if the remedy is to be used effectively by an individual shareholder, suing derivatively,[420] he or she will need to be well-informed about the proposals of the board, which in all but the smallest companies will not often be the case. An injunction may also be appropriate where the breach has already occurred but is likely to continue, or if some of its consequences can thereby be avoided.[421]

(b) Damages or compensation

16–111

Damages are the appropriate remedy for breach of a common law duty of care, or non-compliance with the terms of the director's contract or the company's constitution; compensation is the analogous equitable remedy for breach of the (originally) equitable duty of good faith (acting to promote the success of the company) or acting for improper purposes. In practice, the common law/equity distinction has become blurred,[422] and probably no useful purpose is served by seeking to keep them distinct.[423] Both are inevitably personal remedies. All the

directors who participate in the breach[424] are jointly and severally liable with the usual rights of contribution inter se.[425]

(c) "Restoration" of property

16–112

Although the directors are not trustees of the company's property (which is held by the company itself as a separate legal person), we have noted at a number of points in this chapter that the courts sometimes treat directors as if they were such trustees. In particular, where a director disposes of the company's property in unauthorised ways, and in consequence the company's property comes into his or her own hands, the director will be treated as a constructive trustee of the property for the company.[426] This means that the property, or its proceeds, can be recovered by way of proprietary claim against the director, so far as traceable[427]; and that the company's claim against its defaulting director will have priority over any competing claims of the director's unsecured creditors (since the property is the company's property, not the director's). The doctrinal underpinnings of these conclusions are rarely unpicked, but they must surely rely more on analysing the claim as a profitable breach of the conflicts rules (the conflict being obvious),[428] for which proprietary disgorgement of the gains is available,[429] rather than analysing the claim as merely an unauthorised (and therefore potentially void) contract and indeed one where the identity of the counterparty is irrelevant.[430] Where these proprietary disgorgement claims are available against the defaulting directors, they can be enormously valuable to the company.

Alternatively, if the director no longer has the company's assets or their traceable proceeds, or if their use did not generate a profit, or if the company's assets were initially, and without authority, paid away to third parties rather than to the director,[431] then the company may, in the alternative, sue the director for compensation for the losses suffered by the company as a result of the director's initial unauthorised disposition of the company's property. One aspect of this is straightforward: the remedy is necessarily personal, and so the company's claim against its defaulting director will rank equally with the claims

of the directors' general creditors.

But beyond that, this remedy has proved enormously controversial. It was long argued that the claim in issue was for "restoration of property" (albeit in money), and not for compensation. This had the enormous advantage, so it was said, that the claim was not dependent upon proof of loss on the part of the company, as a damages claim would be.[432] It was further suggested that it then followed that if, for example, £1 million was paid out by the director in the unauthorised purchase of X when it should have been paid out in the authorised purchase of Y,[433] then the appropriate remedy was effectively for the director to restore to the company the misappropriated £1 million.[434] By contrast, if the remedy were simply compensation, then the director would be required to restore to the company what effectively it *should* have had absent the breach, i.e. Y, if possible, or the monetary value of Y.[435] Moreover, this former claim to a "restoration" remedy was regarded as being available in addition to, and by way of an alternative option to, the usual compensation remedy. The effect was thus to enable a company to claim *either* £1 million (adjusted, as noted above) if the authorised investment had crashed, *or* Y (or, more accurately, it or its value, again adjusted) if the proper investment was a winner. This gave the company a "heads I win, tails you lose" remedial menu.

In fact few cases went so far, and we now seem to have reached the preferable and far more defensible position that choice between "£1 million" or "Y" is only available when the recipient of the £1 million is the defaulting director him- or herself. In these circumstances, the claim to the £1 million is better viewed as *not* for "restoration" as a self-standing option, but as a claim for disgorgement made out under one or other of the various conflicts rules. Otherwise, however, the company's claim is merely one for compensation, and—equitable or otherwise—this compensation is directed solely at reversing loss, not at some sort of free-standing "restoration" where no loss (or some far smaller loss) has been suffered.[436]

(d) Avoidance of contracts

16–113

An agreement between the director and the company that breaches the no-conflict rules may be avoided, provided that the company has done nothing to indicate an intention to ratify the agreement after finding out about the breach of duty,[437] that restitutio in integrum is possible,[438] and that the rights of bona fide third parties have not supervened.[439] It might now be doubted how strong a bar restitutio in integrum really is, given the wide powers the court has to order financial adjustments when directing rescission.[440]

Equally, a contract entered into by the company in breach of the directors' duties to exercise their powers for a proper purpose is in principle avoidable by the company, but again subject to the considerations noted above and the rights of good faith third parties.[441] Where, however, the directors have simply acted without power, the contract will be void, not voidable.[442]

(e) Accounting for profits: disgorgement of disloyal gains

16–114

This liability arises as a response to profitable contracts or arrangements between the director and a third party which are held to be in breach of the conflict of interest rules[443] or the duty not to accept benefits from third parties.[444] In such cases there can be no question of rescinding the contract at the instance of the company, since the company is not party to it, and an account of profits to strip the defaulting fiduciary of any benefits will be the sole remedy.

As we have seen, recovery of the profit by the company is not conditional on proof of any loss suffered by the company; the profit is recoverable not as damages or compensation but because the company is entitled to call upon the disloyal director to account to it.[445] All the profits made by the director[446] and attributable to the breach must be disgorged, but not those attributable to other sources.[447] This is sometimes ameliorated in the case of trustees, but only where their bona fides are not in question; then the courts have sometimes permitted the trustee an allowance in the accounting process to provide a reasonable remuneration (including a profit element) for the work carried

out in effecting the profitable deal.[448] The fact that the director could have made the same profit without breaching his or her duty[449] or that the company, if asked, would have given its consent to the director's activities,[450] is irrelevant.

16–115

Moreover, if the disloyal gain is identifiable in the director's hands, then the director will hold that asset on constructive trust for the company; in short, the disgorgement remedy is proprietary.[451] This conclusion has been confirmed in England only relatively recently,[452] even though it has long been the position in other common law jurisdictions.[453] In those jurisdictions, however, the courts claim to have a discretion as to whether or not to award a constructive trust on the facts before the court: they have what is described as a "remedial constructive trust", while the English courts insist that the constructive trust is "institutional" only, so that if the facts support its existence then there is not discretion in the court to deny it to a successful claimant. This latter approach seems preferable, and indeed the practice in other jurisdictions—despite their asserted flexibility—is overwhelmingly the same. The constructive trust, being proprietary, carries with it significant advantages.[454] There seems little merit in asserting that these follow from the wrong, and then denying the claimant their benefits, usually just when they are most needed.[455]

(f) Summary dismissal

16–116

The right which an employer has at common law to dismiss an employee who has been guilty of serious misconduct has no application to the director as such, not being an employee.[456] However, it could be an effective sanction against executive directors and other officers of the company, since it may involve loss of livelihood rather than simply of position and directors' fees. However, it tends to be used only in the clearest cases. Generally, the company prefers the director to "go quietly", which means that his or her entitlements on departure are calculated as if the contract were unimpeachable, even if there is scope for arguing that the company has the unilateral right to remove the director for breach of contract.[457]

Shareholder Approval or “Whitewash” OF Specific Breaches of Duty

16–117

It is a normal feature of the law, including the law relating to directors, that those to whom duties are owed may release those who owe the duties from their legal obligations. Thus the company ought in principle to be able to release the directors from their general duties. But in deciding how this might be achieved in practice, a number of difficult issues emerge.

What is being decided?

16–118

The company will normally act by resolution, either of the board of directors or of the general meeting, and it is important to ask precisely what their resolution seeks to achieve. This is the first issue. Decisions to authorise or ratify a breach, where effective, have the result of putting the directors in a position where either they do not commit a breach of duty to the company or are treated as not having been in breach. Where such approval is given in advance of the breach of duty, it is normally referred to as *authorisation* and where it is given afterwards it is referred to as *ratification.*[458] Both these decisions should be distinguished from *affirmation*, where the shareholder resolution has the effect of making binding on the company a transaction which is otherwise voidable by the company because of the director’s breach of duty, and from *adoption* where the transaction is one the director had no power at all to enter into, but the shareholders do,[459] and they decide the company should enter into it.[460] Affirmation or adoption does not of itself constitute implicit forgiveness, and the company may (the context is important) nevertheless still enforce its remedies against the director, for example, for compensation. However, a single resolution may be intended to deliver more than one end, for example to both forgive the directors and make the transaction binding on the company, and it is a matter of interpretation whether any particular resolution does this. Finally, ratification must also be distinguished from a mere decision not to sue the director. Such a decision has no effect on the director’s legal

position as being in breach of duty, and unless the decision not to sue constitutes a binding contract or *waiver*, the company can always change its mind later and sue the director, subject to the statute of limitations.[461]

Ratification is inevitably given in respect of an identified wrong already committed. Authorisation, by contrast, may be given in relation to a specific breach of duty or generally, i.e. where no specific breach of duty is in contemplation or has yet occurred. The obvious mechanism to use to provide general ex ante authorisation of the release from a category of duties is an appropriate provision in the articles of association. It is also obvious that such authorisation in the articles (or elsewhere) may be regarded with more suspicion than a specific release (whether authorisation in advance or ratification after the event) because, provided that full disclosure of the relevant facts is made to the shareholders in advance of their decision,[462] they will, in the latter case, know precisely the nature of the infringement of the company's rights to which they are consenting. By contrast, a general waiver of the benefit of a nominated duty in advance is necessarily a less informed waiver, and shareholders, when voting on a change to the articles, may underestimate the chances of situations arising in the future where they would not want to give approval.[463] In other words, a provision in the articles may be less reliable an indication of shareholder preferences than specific authorisation of a particular breach. In this section we are concerned with the particular cases of what might be called "ad hoc" approval by the company, i.e. approval of a particular actual or proposed breach of duty. In the next section we discuss whether approval can be given in advance for broad categories of future breaches, where no or little detail is available concerning the particular breaches which may occur in the future.

Authorisation and ratification are recognised in the Act. Section 180(4)(a), recognising but not seeking to amend the common law rules on authorisation, states that the directors' general duties "have effect subject to any rule of law enabling the company to give authority … for anything to be done (or omitted) by the directors … that would otherwise be a breach of duty".[464] And s.239 recognises the common law doctrine of

ratification, but also seeks to regulate and modify it in certain important respects. This regulation is welcome by way of clarification, but one undesirable side-effect is that the rules applying to ratification are no longer in all respects the same as those applying to authorisation, so that it may matter, oddly, if the company gives its approval the day before or the day after the directors breach their duty. And it will be interesting to see if the common law on authorisation develops so as to align more with the revised statutory rules.

Who can take the decision for the company?

16–119

The next concern is which corporate organ should take the decision for the company. If the company were deciding whether or not to pursue its legal claims against third parties, or affirm voidable contracts, or waive breaches of duty committed by third parties dealing with the company, then in the ordinary course it would be the board of directors (or its delegates) who would take these decisions. But where the claims in issue are the company's claims against one or more of its directors, the common law has typically assumed that the decision will be taken by the general meeting (subject to one important qualification, noted below[465]). This appears to track the approach taken in trusts cases, where it is the beneficiaries who decide whether or not to pursue claims against wrongdoing trustees. But of course in these trusts cases the claim in issue *is* the beneficiaries' claim, whereas in the corporate scenario it is the company's. Nevertheless, there are sound and rather obvious reasons for adopting a parallel general rule, and so it has persisted.

But, whatever the advantages of such a default rule, the underlying question is simply which corporate organ should take the decision in issue, and the answer to that is not—and need not be—set in stone. The articles may make different provisions. And we have already seen that the Act itself ousts the common law default rule in certain circumstances, and hands the relevant decision to the directors. For example, advance authorisation of self-dealing transactions is determined by the board of directors (ss.177, 180(1)(b))—indeed authorisation in this context is a misnomer; mere disclosure to the board is all that is required,

and the company will then go ahead with the transaction if it approves, or call it off if it does not. So too in relation to breaches of the conflict of interest rule (ss.175, 180(1)(a)), where the default rule of shareholder authorisation is again replaced by board authorisation (subject to the articles not prohibiting/permitting this for private/public companies respectively). In both these contexts, the risk profile supporting the common law default rule is considered too low to warrant the cost and inefficiency of its use here. By contrast, there are no statutory alternatives for advance authorisation of proposed breaches of the other general duties (ss.171–174 and 176): there the common law default rules would apply.

Again, by contrast, note that there are no parallel statutory provisions for ratification decisions: if a breach is to be forgiven after the event, then the Act does not in its terms recognise a reason to relax the protections afforded by the common law default rule, which gives the decision to the general meeting. Indeed, as we will see in the next few paragraphs, the Act rather goes the other way, and stiffens the relevant restrictions.

As a result of these statutory inroads, there is no necessary alignment in the approval mechanisms for prior authorisation and for subsequent ratification, even at the level of which organ is to take the decision in question. The company's own articles might further complicate the picture. This reinforces the need identified at the outset to be clear about what the company is purporting to decide.

16–120

There is one important qualification to the preceding analysis. The underlying assumption has been that the shareholders in general meeting constitute the appropriate expression of "the company" for the purpose of approval. However, this is not always true. As we have seen,[466] when the company is in the vicinity of insolvency, the common law takes the view that the creditors are the persons with the primary economic interest in the company. One important consequence of this is that the general meeting in such a situation may no longer approve breaches of the directors' duties: that is a matter for the creditors who, however, have no means of acting until the company goes

into an insolvency procedure and an insolvency practitioner is appointed to act on their behalf.[467]

Disenfranchising particular voters

16–121

Settling the appropriate corporate organ to take the company's decision is not the end of the analysis. Whichever organ makes the decision for the company, there is an obvious concern to see that the decision is a good one for the company. If the decision is to be taken by the board of directors, the directors' general duties, especially those in ss.171–174, go a long way to ensuring that their deliberations are appropriately focused on the corporate benefit. Even so, where the decision is one concerning authorisation or ratification of a breach of duty by one of their number, the niceties are obvious. The Act deals with these head on. In those rare cases where the authorisation decision is given to the board of directors, as it is in the s.175 conflicts cases, then conflicted directors are excluded in the calculation of the quorum, and their votes are disregarded in determining whether board approval has been given (s.175(6)).[468] This straightforward statutory disenfranchisement effectively eliminates the moral dilemma of "asking turkeys to vote for Christmas".[469]

The Act does not stop there. A similar approach is taken to ratification decisions, notwithstanding that these are decisions for the general meeting. Section 239(4) indicates that the ratification resolution is to be regarded as passed "only if the necessary majority is obtained disregarding the votes in favour of the resolution by the director … and any member connected with him".[470] This may not capture every member whose motivations might be thought suspect, but it certainly goes some distance towards that.

Given these two very substantial inroads, both directed rather sensibly at disenfranchising the defaulting directors (along with certain associated parties), it is perhaps surprising that the Act did not continue in the same vein and apply the same rule to authorisation decisions taken by the general meeting. The same mischief is equally in issue in both cases. But instead these are left to the common law default rules, with the Act merely acknowledging this approach in s.180(4)(a). This reticence is

seemingly repeated in the provisions of Chs 4 and 4A of Pt 10, which, as we have seen, appear to permit interested directors to vote on the resolutions required by those Chapters (subject to any stricter rules applying to listed companies). This difference in approach to authorisation and to ratification is both odd and undesirable, especially since controlling directors will generally be able to choose the timing of the necessary shareholder resolution, and thus whether it is to be a resolution of authorisation or ratification.[471]

16–122

The common law default rules on authorisation (and, prior to the Act, equally applicable to ratification) have long been a source of concern. Starting from the unexceptional position that the appropriate organ for making these decisions was the general meeting, the common law view was that it then followed that directors who were in breach of duty were entitled to cast their votes as shareholders in favour of the forgiveness of their own wrongs to the company.[472] This conclusion was seen as justified because shareholders, unlike directors, were not subject to fiduciary duties, and indeed their shares, and the rights attached to them, were to be regarded as their property, with all the inherent rights to use that property in their own interests. There is much to be said for the view that the law in this area should—and indeed, properly analysed, does—start from a different point. Property and fiduciary obligation do not come into it. At a most basic level, the shareholders hold, and exercise, a power on behalf of the company. All such powers come with constraints requiring that they be exercised "in good faith and for proper purposes", as it is typically put.[473] However broadly this particular approval power is conceived, it would not seem to cover use by interested members to deliver to themselves forgiveness by the company for their wrongs and relief from their need to provide the company with appropriate remedies.[474]

Voting majorities

16–123

The next issue to consider is the necessary majority for approval decisions. Subject to what is said in the next paragraph, the common law default rule, unaffected by any of the statutory

interventions noted earlier, is for company authorisation or ratification to be by an ordinary majority of either the directors or the shareholders (depending on the appropriate organ for the decision in question). The company's articles may, of course, make other provision. The Act is silent on the matter so far as authorisation is concerned, merely preserving the common law. And so far as ratification is concerned, the Act again preserves the common law, with s.239(2) stipulating that the ratification decision "must be taken by the members" and "may" be taken by ordinary majority, unless the company's articles or some common law or statutory rule requires a higher level of approval.[475]

But that is not necessarily the end of the matter. The majority, especially the majority shareholders, may approve a breach of duty by the directors and, in so doing, act unfairly towards the minority, most obviously where they themselves are the directors in question. This could be seen simply as an example of majority unfairness towards the minority which can be handled through the general mechanisms for dealing with such unfairness, and which we discuss in Pt 4. However, the issue is perhaps better dealt with—despite the precedents to the contrary—by straightforwardly addressing the core problem of the validity of the decision being taken, and to that end disenfranchising the interested directors/shareholders, as discussed earlier.[476] Perhaps because this was not the common law approach, and yet the difficulties in this area were plain to see, an alternative tack was taken: certain breaches of directors' duties were regarded as "unratifiable". This is a difficult approach to explain or defend, and we address it briefly in the next paragraphs.

Non-ratifiable breaches

16–124

A further question which has bedevilled the common law, and which the Act acknowledges but does not answer,[477] is whether all breaches of duty by a director are capable of being ratified. At common law it has long been held that some breaches of directors' duties are not ratifiable, but it is much less clear how wide that rule is. Moreover, it is assumed that the doctrine of the

non-ratifiable breach restricts the scope of authorisation as much as it does that of ratification. Since the Act does not address either aspect of the issue, there is at least the benefit of retained equivalence, so far as non-ratifiability is concerned, between the approval rules applying before and after the breach.[478]

But which breaches are not ratifiable? The most commonly formulated proposition is that a majority of the shareholders may not by resolution expropriate to themselves company property, because the property of the company is something in which all the shareholders of the company have a (pro rata) interest. Consequently, a resolution to ratify directors' breaches of duty which would offend against this principle of equality is ineffective (unless, presumably, all the shareholders of the company agreed to the resolution and any relevant capital maintenance rules were complied with).[479] But this is a principle easier to formulate than to apply. The principle was applied in *Cook v Deeks*,[480] where the directors had diverted to themselves contracts which they should have taken up on behalf of the company. By virtue of their controlling interests they secured the passing of a resolution in general meeting ratifying what they had done. It was held that they must nevertheless be regarded as holding the benefit of the contracts on trust for the company, for "directors holding a majority of votes would not be permitted [by the law] to make a present to themselves".[481] The same may apply when the present is not to themselves but to someone else.

Where, then, is the line to be drawn between those cases where shareholder approval is ineffective, and those in which shareholder approval has been upheld? How, in particular, can one reconcile *Cook v Deeks* with the many cases in which the liability of directors has been held to disappear as a result of ratification in general meeting, notwithstanding that the voting majority has been carried by the interested directors?[482] Why, in *Regal (Hastings) Ltd v Gulliver*,[483] did the House of Lords say that the directors would not have been liable to account for their profits had the transaction been ratified, while, in *Cook v Deeks*, the Privy Council made the directors account notwithstanding such ratification? A satisfactory answer, consistent with common sense and with the decided cases, is difficult (and perhaps impossible) to provide.[484]

Beyond the proposition that ratification is not effective where it would amount to misappropriation, or expropriation, of corporate property, it is difficult to formulate any further limitations which command general consent. But even this general consent might be misplaced. *Every* approval decision amounts to a prospective or retrospective appropriation of corporate property: in every case the company is giving up a valuable claim, typically to compensation for losses or disgorgement of gains from the director. It is not a misappropriation of corporate property for the company to do this; it is an inherent aspect of the company's legal autonomy that it can. In *Cook v Deeks*, it was surely not the nature of the corporate opportunity, or its value, or any other attribute related to the type of breach or the nature of the corporate opportunity, which denied the directors their claim to valid ratification. Had *all* the shareholders approved the ratification deal, it would have stood. What could not be tolerated was the suggestion that the three defaulting directors could *themselves* take this decision in the face of a dissenting minority holding a contrary view. If this is right, then the directors' breaches were not *un*-ratifiable; they were simply not effectively ratified by the wrongdoers themselves. The same conclusion is equally true when the company is on the brink of insolvency, or where the directors' breach consists in acting against the creditors' interests. The directors' breaches in these circumstances are not *un*-ratifiable; but they can only be ratified by the appropriate corporate organ, and, exceptionally, that is not the general meeting—even a general meeting governed by a majority of disinterested shareholders.[485] Despite the pervasiveness of the notion of un-ratifiable breaches, the relevant precedents all arguably incline more to expressing concern with the validity and appropriateness of the vote and the voting organ taking the approval decision rather than to the nature of the breach as being un-ratifiable.

If this is right, then the issue may largely disappear, since the Act has in large measure addressed the concern with interested parties voting. Section 239, by depriving the directors in breach of the right to vote, avoids the result which the Privy Council was so desirous of avoiding in *Cook v Deeks*, and does so without the need to resort to the concept of a "non-ratifiable wrong". In other words, the rule against making presents of the

corporate assets seems much less strong (provided the creditors' interests are not affected) if the non-involved shareholders approve. This consideration may lead the courts in future to narrow, and maybe even eliminate,[486] the class of non-ratifiable wrongs.[487]

General Provisions Exempting Directors from Liability

Statutory constraints

16–125

Although directors may secure specific authorisation or ratification of their actions from the shareholders, they are likely to regard that route to legal absolution as uncertain and unduly public. Historically, they have sought to use the articles to obtain general shareholder approval for certain categories of, or even all, breaches of duty. We have seen above that the articles were widely used in this way in respect of self-dealing transactions, and in fact the legislature in the 2006 Act accepted that outcome by re-writing the statutory duty in relation to self-dealing transactions as a duty to disclose to the board rather than as a duty to obtain the approval of the shareholders.

However, in some cases the articles went further, and included provisions exempting the directors from liability for all breaches of duty (unless fraud was involved). Parliament responded in the Companies Act 1929.[488] In the current version of that reform (s.232(1)) the principle is laid down that "any provision that purports to exempt a director[489] of a company (to any extent) from any liability that would otherwise attach to him in connection with any negligence, default, breach of duty or breach of trust in relation to the company is void".

This is a very important statutory provision. Subject to its exceptions, the section turns the directors' duties provisions into mandatory rules. Although the common law may regard those duties as existing for the benefit of the shareholders and thus to be waivable by the shareholders in the articles, the section takes a different view, perhaps reflecting doubt about the reality of the consent expressed in approvals given in advance of the event.

Conflicts of interest

Despite the general prohibition in s.232, s.232(4) then provides that "nothing in this section prevents a company's articles from making such provision as has previously been lawful for dealing with conflicts of interest". Thus it is clear that *some* inroads are permitted in the articles in relation to the "no conflict" duties. This conclusion is reinforced by the provisions of s.180(4)(b) to the effect that "where the company's articles contain provisions for dealing with conflicts of interest, [the general duties] are not infringed by anything done (or omitted) by the directors, or any of them, in accordance with those provisions".[490] The test for the legality of such provisions which s.232 adopts is whether the provision had "previously been lawful for dealing with conflicts of interest"; and it seems that s.180(4)(b) must be interpreted as subject to a similar restriction.

What is the meaning of this Delphic phrase? What could the articles previously (i.e. before the 2006 Act) do in relation to conflicts of interest? In order to answer this question one needs to know the history of judicial interpretation of the predecessor of s.232, namely, s.310, later s.309A, of the 1985 Act. This was a highly debated question, arising previously mainly in relation to self-dealing transactions, because that was where the problem arose in practice. The debated question was whether articles substituting informing the board for shareholder approval were compatible with the predecessors of s.232. That particular question is no longer relevant because s.177 adopts outright the principle of disclosure to the board.[491] However, the answer given to the question under the former law may tell us how to approach under the 2006 Act an article dealing with any other conflict of interest.

The only intellectually respectable answer in that debate was given by Vinelott J in *Movitex Ltd v Bulfield*.[492] His explanation drew a distinction between (1) "the overriding principle of equity" that "if a director places himself in a position in which his duty to the company conflicts with his personal interest or duty to another, the court will set aside the transaction without enquiring whether there was any breach of duty to the company"; and (2) the director's "duty to promote the interests of [the company] and when the interests of [the company]

conflicted with his own to prefer the interests of [the company]". While any proposed modification of (2) would infringe s.310 of the 1985 Act, the shareholders of the company in formulating the articles could modify the application of (1), "the overriding principle of equity", provided that in doing so they did not exempt the director from, or from the consequences of, a breach of that duty to the company.[493]

16–127

But even this is not as clear as it might be. In unravelling the issues, it seems important to recognise that "the overriding principle of equity" in (1) requires, or enables, courts to set aside self-dealing transactions whenever there is a *potential* conflict, without requiring investigation of whether the alleged conflict is real. So it might simply be this evaluative step which the articles can legitimately introduce, although if a real conflict exists they cannot go further and exempt the director from the obligation to prefer the company's interests. *Movitex* implicitly, and perhaps explicitly, takes this line. And that evaluative step could legitimately be taken by any appropriately qualified organ of the company. Again, in *Movitex*, it seemed important that the decision, allocated to the board of directors, was conditional on full disclosure and on disenfranchising the interested director from both quorum and voting numbers.[494] But to regard the board's decision as limited to this evaluative function denies reality. Indeed, the limitation seems unnecessary. We have seen that the company can prospectively authorise what *would* otherwise be a breach of the conflicts rules; there is no limitation to a mere evaluation that what is proposed would *not* constitute an actual breach. Although the common law default rule holds that this decision is for the general meeting, it must surely be open to the articles to settle an alternative but appropriately qualified organ of the company for the purposes of making this decision. This, more realistically, was what was done in *Movitex*. It is also what is now done in the current Act in ss.175 and 177. But this approach, recognising the possibility of advance authorisation, then lays bare the question at the outset: given the rigours of s.232, can ss.232(4) and 180(4)(b) legitimately permit the articles to make any inroads into the conflicts rules beyond specifying the appropriate corporate organ for any necessary

evaluations, authorisations and ratifications?

Moreover, given that the duty in relation to self-dealing transactions has become, under the 2006 Act, a simple duty of disclosure, where will there be an incentive for provisions in the articles to be deployed in future which provide further inroads relating to directors' liability for conflicts of interest? The obvious areas are corporate opportunities and multiple directorships. Translated into corporate opportunity terms, however, the *Movitex* approach indicates that the articles cannot exempt the director from obtaining the company's authorisation (and note the difficulties in determining whether that is appropriately given[495]) before taking personally an opportunity the company was actually pursuing (as in *Cook v Deeks*[496] and *Industrial Development Consultants v Cooley*[497]) or probably one which the company had an interest in considering because it falls within its current line of business (as in *Bhullar v Bhullar*[498]), because in that situation there would be an actual conflict of interest. However, the articles might conceivably exempt the director from taking without authorisation an opportunity which the company (normally the board) had rejected in good faith (as in *Regal*[499]), but the better argument here is that such a decision by the board puts the opportunity outside the scope of conflicts which are caught by the equitable or statutory rule, so nothing more would need to be said in the articles, and indeed if anything were said it would be otiose.[500] Similarly, the *Movitex* case would suggest that an article permitting multiple directorships would be upheld by virtue of s.232(4) only if there is no actual conflict of duties for the director in consequence of the taking up of additional directorships. Given this, there would once again seem to be little point to such a provision.

Provisions providing directors with an indemnity

16–128

The ban, contained in s.232, on provisions exempting directors from liability extends (subject to important exceptions) to any provision by which the company provides, directly or indirectly, an indemnity to a director or a director of an associated company in respect of these liabilities (s.232(2)). Under an indemnity arrangement the director remains in principle liable but the

company picks up the financial consequences of that liability. The indemnity prohibition applies also to indemnities provided in favour of directors of associated companies, thus preventing evasion of the section in group situations, whereby all the directors have the benefit of indemnity provisions, but in no case is the indemnity provided by the company of which they are a director. The provisions referred to in the section are those "contained in a company's articles or in any contract with the company or otherwise".[501] The indemnity might be provided by means of the company promising to indemnify the director or, indirectly, by the company taking out insurance on the director's behalf, so that the indemnity is to be provided by the insurance company. As we shall see, the legislation is less strict in relation to permitted insurance than in respect of permitted direct indemnities (labelled "third party" indemnities in the Act).

Insurance

16–129

Since 1989 a company has been free (but of course not obliged) to buy insurance against any of the liabilities mentioned in s.232 for the benefit of its directors (s.233) and it is in fact common practice to do so, at least in large companies. At first sight, this is very odd. Insurance certainly means, assuming the policy limits are large enough, that the company receives compensation for any loss it suffers as a result of the breach of duty. On the other hand, the company pays for the insurance and so, over time at least, the insurance premia will roughly equal the losses inflicted on the company by the directors, so that the company ends up paying for the directors' breaches of duty. This seems to deprive the directors' duties rules of any deterrent effect as against the directors and to mean that the insurance simply operates as a way of smoothing the losses inflicted on the company by the directors.

This argument has considerable force, but needs to be assessed subject to the following qualifications. First, the impact of s.233 depends upon the extent of the cover which the insurance market is prepared to make available at any particular time. It is unlikely that insurance is available against the consequences of a breach of duty involving fraud or wilful

default, because of the moral hazard problem for the insurance company in providing such cover.[502] And it may be difficult to obtain cover against the liability to account for profits made as opposed to losses inflicted on the company. In any event, the policy is likely to be subject to monetary limits, so that liability remains to some extent personally with the director in the case of large claims.

Secondly, it is conceivable that insurance companies will adjust their premia according to the claims experience of the company so that a financial incentive is generated for the company to monitor the actions of its directors or refuse to insure those with a bad claims record, or insurance companies may even engage in more general monitoring of the corporate governance arrangements in the company, thus somewhat restoring the deterrent effect of the duties.[503]

Finally, it may be that qualified persons will be unwilling to take on board positions without the benefit of such insurance. This might be true particularly of non-executive directors, whose financial benefits from the company may be modest (at least in comparison with the remuneration of executive directors) and whose knowledge of and control over the company is necessarily limited. They could buy such insurance themselves, for the section does not restrict the taking out of insurance against directors' liabilities by the directors themselves.[504] However, they would no doubt expect the cost of such insurance to be reflected in their fees, and it may be cheaper and more effective for the company to provide that insurance itself.

Third party indemnities

16–130

Despite the term "third party indemnities" the indemnity under discussion here is one provided by the company in favour of the director. It is a "third party" indemnity because it relates to litigation which might be brought by a third party (i.e. someone other than the company) against the director.[505] Under an indemnity provision the company promises that the director will not be out of pocket in relation to the claim made against him or her (whether by way of a judgment against the director, a settlement of the litigation or by the incurring of legal costs), so

that, to the extent of the indemnity, the cost of the director's breach of duty is borne directly by the company. As we have seen, it will be rare for breaches of the duties discussed in this chapter to lead to liability other than to the company, but this may not be the case where the liability arises under a foreign system of law, notably US law, and s.232 is not in terms confined to liabilities arising under the law of a UK jurisdiction. A director may prefer insurance to a promise of an indemnity by the company, because on insolvency the company's promise may not be worth very much, but an indemnity may be regarded by the director as better than nothing, and the company may prefer, in effect, to self-insure by promising an indemnity.

Note, however, that the company may not promise an indemnity against liability or costs incurred in an action brought by the company. This may be provided for only through the purchase of insurance by the company, as discussed above. Why is this? It may have been thought, on the one hand, that a complete indemnity would come very close to an exemption from liability, thus defeating the purpose of s.232. On the other hand, despite the failings of the insurance market, insurance requires an assessment of the extent of and the costs of the risks involved by another commercial organisation, which will exclude some risks from those it is prepared to underwrite. This provides some external control over the liabilities from which directors can be exempted, for example, where they have acted deliberately in breach of duty. Equally, the need to buy insurance will bring the cost of the protection home to the board which is arranging for it, whilst an indemnity, which carries no immediate costs for the company, might be too easy a provision to slip into the articles.

The Act prohibits provision of certain forms of indemnity (s.234(3), as elaborated in s.234(4)–(6)), in particular in relation to:

— a fine imposed on a director in criminal proceedings;

— the costs of defending criminal proceedings in which the director is convicted;

— a penalty payable to a regulatory authority;

— costs incurred in connection with an application for relief (see below) which is unsuccessful; or

— the costs of defending civil proceedings brought by the company or an associated

company in which judgment is given against the director.

The last category of exclusion may seem surprising, given that liability to the company or associated company is not within the definition of a "third party indemnity" (s.234(2)) but it is to be noted that what s.234(3) deals with is not the director's liability to the company or associated company but the director's liability for costs incurred in defending civil proceedings brought by such a company, which liability may be incurred to a third party, i.e. the director's legal team. The exclusion thus completes the policy objective of preventing the indemnity from operating in respect of any aspect of a claim brought by the company or an associated company, but only if the company is successful in the claim. If no judgment is given against the director, either because the director is successful or because the case is settled, a provision requiring the company to indemnify the director against legal costs is permitted. The section achieves the same result in relation to criminal proceedings against the director: only the costs of successfully defending a criminal charge may be the subject of an indemnity provision. However, it appears that the costs of an unsuccessful defence in a regulatory procedure (for example, one brought by the Financial Conduct Authority) may be the subject of an indemnity provision (though not the cost of any penalty imposed by the FCA).

However, the real importance of the section is not revealed by what it says by way of exclusion but what it does not exclude. In the case of a civil action brought by a third party (for example, shareholders in a class action) the indemnity provision may cover both the liability of the director and the costs of defending the action, whether successfully or unsuccessfully.

16–131

An indemnity provision which meets the requirements of s.234 is termed a "qualifying indemnity provision". A qualifying indemnity provision[506] must be disclosed to the shareholders in the directors' annual report (s.236); and must be made available for inspection in the usual way by any shareholder of the company without charge, who may also require a copy of it to be provided upon payment of the prescribed fee (ss.237 and 238).

It should finally be noted that what s.234 creates is a

permission for the company, not an obligation, and it is a permission to have a provision (in the company's articles or in a contract with a director, for example) which provides for an indemnity of the relevant type. The section does not deal with ad hoc decisions by boards of directors to pay an indemnity in a particular case, where there is no existing provision dealing with this matter. Such a decision is governed by the directors' duties discussed above and by the general law of the land.[507] It is also possible that a company might wish to lend the director money in advance to defend proceedings brought against him or her, whether criminal, civil or regulatory. We have already seen that a company is exempted from the normal rules on shareholder approval if it decides to make such a loan, or enter into an analogous transaction, for this purpose. However, the loan must be on terms that it is repayable if the director is unsuccessful in the proceedings.[508] A loan on different terms or for a different purpose (for example, to meet a liability in a judgment rather than to defend proceedings) would need shareholder approval.

Pension scheme indemnity

16–132

Where a company runs an occupational pension scheme (a less frequent situation these days than previously), the company may be a trustee of the trust through which the scheme is organised and the director may act on behalf of the company in its capacity as such a trustee.[509] Section 235 permits provisions indemnifying the director against any liability incurred in connection with the company's activities as trustee of the scheme, subject to the same restrictions as in s.234 in relation to criminal and regulatory proceedings. However, s.235 permits indemnity arrangements in relation to civil suits, whether brought by a third party or by the company, which indemnity may extend to both costs and liability. In other words, as far as the director's activities on behalf of the company as trustee are concerned, a complete indemnity arrangement is permissible in relation to civil liability. The same reporting and copy requirements apply in relation to a qualifying pension scheme indemnity provision as in relation to a third-party indemnity provision.

Relief Granted by the Court

16–133

Whether or not the director is able to secure forgiveness from the company, the director, and any officer of the company (including auditors and liquidators), has the possibility of appealing to the court to prevent the full application to him or her of the statutory duties included in Pt 10 or indeed any analogous duties arising, for example, at common law. Under s.1157 the court has a discretion to relieve, prospectively or retrospectively, against liability for negligence, default, breach of duty or breach of trust, provided that it appears to the court that the director has acted honestly and reasonably and that, having regard to all the circumstances, he or she ought fairly to be excused. The court may relieve on such terms as it thinks fit. The requirement of reasonableness might suggest that s.1157 is not available in relation to the directors' duties of care, skill and diligence but this appears not to be the case.[510] However, the section is not available in respect of third-party (as opposed to corporate) claims against the director,[511] and, more important for present purposes, will not be applied even to corporate claims where that would be inconsistent with the purposes underlying the rule imposing the liability against which relief is sought.[512]

Liability of Third Parties

16–134

Despite the wide range of civil remedies which exist to support the substantive law of directors' duties, it is often the case that the directors are not in fact worth suing, at least if they are uninsured. They may once have had property belonging to the company but, by the time the company finds this out, may have it no longer. They may have made large profits which they should account for to the company, but may well have spent them by the time the writ arrives. Companies are therefore likely to want to identify some more stable third party, often a bank, which is worth powder-and-shot, either instead of or in addition to the directors.[513]

But under what conditions may the company hold a third party liable in connection with a breach of duty by the directors? This is not a matter dealt with in the Act in relation to the general duties of directors. It is left to the common law, which is rather

complex, although it is an area which recent decisions of the Privy Council and House of Lords have helped to clarify. Only the briefest sketch of the relevant principles is attempted here.

16–135

It has long been recognised that there are two bases of third-party liability, one resting on receipt by the third party of company property ("knowing receipt" claims) and the other resting on complicity on the part of the third party in the director's breach of duty ("dishonest assistance" claims). The main conceptual contribution of the Privy Council in *Royal Brunei Airlines Sdn Bhd v Tan*[514] was to make it clear that the principles supporting the imposition of liability in these two situations are different from one another.

In the case of dishonest assistance claims, which the court helpfully termed "accessory" liability, the liability is a reflection of a general principle of the law of obligations. This imposes personal liability upon third parties who assist in or procure the breach of a duty or obligation owed by another, the liability of the third party being enforceable by the person who is the beneficiary of the duty whose performance has been interfered with. Provided there has been a breach of duty by the director, whether committed knowingly or not, the third party accessory will be liable to the company if the third party has acted dishonestly. After some to-ing and fro-ing, it seems, rightly, to be agreed that the test of dishonesty is objective: the accessory is dishonest if, by ordinary standards, the defendant's mental state would be characterised as dishonest, and it is irrelevant that the defendant him- or herself takes a different view.[515] The third party is often said to be obliged to account "as a constructive trustee". This label is uninformative, and indeed confusing, and should be discarded, but the cases confirm that the accessory is liable to compensate the principal (the company, here) for losses caused by the director's breach of fiduciary duty and, it seems, for any profits generated personally by the accessory from that breach.[516]

16–136

Given the dishonesty element in accessory liability, such claims are unlikely against solvent and respectable third parties.[517] The

alternative is the personal claim based on "knowing receipt" of the company's property,[518] at least if the term "knowing" is given a wide enough connotation. The essence of this claim is restitutionary, being the return of the value of the company's property that was received as a result of the director's breach, and regardless of the fact that the third party may no longer have the property or its identifiable proceeds in its hands.[519] A common situation found in the cases is one where the directors have used the company's assets in breach of the statutory prohibition on the provision of financial assistance towards the purchase of its shares, and the assets in question have passed through the hands of a third party.[520]

The scope of knowing receipt liability depends heavily upon the degree of knowledge on the part of the third party which is required to trigger it, an issue which has been much discussed in the courts over recent decades. Although the issue remains unsettled, the tendency in recent decisions has been to resist imposing liability on the basis of constructive knowledge in ordinary commercial transactions, on the grounds that the doctrine of constructive knowledge presupposes an underlying system of careful and comprehensive investigation of the surrounding legal context, which is typical of property transactions but atypical of commercial transactions (including the non-property aspects of commercial property transfers).[521] This probably misconceives the notion of constructive notice, which is inherently supremely context sensitive, so that in commercial contexts the right question would be, what would a reasonable *commercial* party know in *this* context (given the usual and reasonable enquiries that such a party would—or would not—have made)?

In any event, in *Bank of Credit and Commerce International (Overseas) Ltd v Akindele*[522] the Court of Appeal struck out on a new tack. Whilst confirming that dishonesty is not a requirement for liability under the "knowing receipt" head, the Court abandoned the search for a single test for knowledge in this area. Instead, the question to ask was whether the recipient's state of knowledge was such as to make it unconscionable for him or her to retain the benefit of the receipt. The Court thought this would enable judges to "give common sense decisions in the

commercial context", though it has to be said that the test is a very open-ended one and not likely to conduce to a common approach on the part of the courts.

16–137

Third-party liability may also arise in relation to corporate opportunities. Here, the question again arises of how far a corporate opportunity constitutes an asset of the company. We have seen above[523] that this question is relevant to the question of whether the director's taking of the opportunity can be ratified by a simple majority of the shareholders. It arises again here: does receipt by a third party either of the opportunity itself or of assets arising out of its exploitation fall within the "knowing receipt" principle? What is clear is that merely entering into a contract with the company which remains executory does not put the third party in a position in which he or she can be said to be in receipt of corporate assets.[524] Where the corporate opportunity is regarded as an asset of the company, however, it follows that the company will be able to seek to recover profits made out of exploitation of the opportunity by the third party (provided of course that the important requirement of knowledge is met), even if the defaulting director does not him- or herself make any personal profit.[525]

Whether in such a case the *director* can be held liable, with the third party, for the third party's profits is much debated. In principle this should not be possible unless the director can in some way be made personally liable for the defaults of the third party. This may be possible if the third party is a partnership of which the director is a member, but logic suggests that generally the director's own liabililty will be restricted to his or her allocated share of the profits. It will also be possible, on orthodox principles, in the narrow circumstance where the third party is a company but the company is a sham, hiding the director.[526] But where the third-party company is not a sham, it might still be disputed whether the director can be liable with the company for the company's profits on the grounds that director and company are jointly in breach of trust or whether the position is that each is liable only for the profits made personally.[527]

16–138

The question of whether directors acting in breach of their fiduciary duties have the benefit of the Limitation Acts is another area where the analogy between the director and the trustee is to the fore, the specific provisions of the Limitation Act 1980 dealing with actions by a beneficiary against a trustee being applied to actions by a company against a director.[528] The crucial question is whether there is any limitation period in such cases, for until the late nineteenth century trustees did not have the benefit of a limitation period in actions by beneficiaries.[529] Under s.21 of the 1980 Act a limitation period of six years is applied to such actions (unless some other section of the Act applies a different limitation period), but there are two exceptions where the old rule of no limitation continues to operate. These are (a) where the claim is based upon "any fraud or fraudulent breach of trust to which the trustee was a party or privy"; and (b) where the action is to recover "from the trustee trust property or the proceeds of trust property in the possession of the trustee or previously received by the trustee and converted to his use". In a standard case, therefore, of an action against a director to recover a profit made in breach of his fiduciary duties or for equitable compensation, the limitation period will be six years. Only where the claimant can go further and bring himself within either the (a) or (b) exception will the Act not apply.[530]

As to (a), it should be noted that it is a strong rule, since defendants in actions based on fraud are not generally deprived by the Limitation Act of the benefit of a limitation period. To benefit from this exception the claimant has to show not simply that the director acted in breach of duty, but that he or she intended to act either knowing that the action was contrary to the interests of the company or recklessly indifferent as to whether it was.[531]

As to (b), it means that there is no limitation period in those cases where a director has misapplied company property which has come into his or her hands and the company is seeking restoration of that property. This rule applies even though the company's property is no longer in the hands of the director.[532]

As it was put some hundred years ago, the rule is intended to prevent the director from "coming off with something he ought not to have".[533]

16–139

However, in recent years the scope of both (a) and (b) has been debated in relation to third parties who are often called "constructive trustees" by the courts under the doctrines of accessory liability and knowing receipt discussed above and in other circumstances too. The courts have drawn a distinction between two types of constructive trustee, constructive trustees properly so-called and those in respect of whom the term would better be abandoned.[534] The first case is the case of the person who, though not expressly appointed as a trustee, has assumed the duties of a trustee by a lawful transaction which was independent of and preceded the breach of trust now in issue. Such a person falls within cases (a) (if the facts fit) and (b). So a director who receives company property in breach of fiduciary duty holds that property on constructive trust, and the limitation defence is not available.

The second case is where the trust obligation arises as a direct consequence of the unlawful transaction which the claimant challenges and where the constructive trust is imposed simply to provide an effective proprietary remedy in equity.[535] Such a person does not fall within cases (a) or (b). The Supreme Court in *Williams v Central Bank of Nigeria*[536] has held, by majority, that third parties who are dishonest assistants or knowing recipients are in this fortunate position (for them), and can therefore rely on the normal limitation periods. The analysis remains controversial, however, with doctrinal and policy considerations pulling in both directions.

Conclusion

16–140

This is a long chapter, and its detailed rules on directors' duties are an enormously important and frequently used tool in regulating the management of companies by their directors. The most substantial reform in this area in recent times has undoubtedly been the statutory enactment of the general duties

in the 2006 Act, replacing their earlier common law counterparts. This in itself was reform of a unique sort, with its careful management of the inevitable ongoing interplay between the statutory rules and their common law counterparts (see especially s.170(4)). But what can be said of the consequences? At this short distance down the track, no seismic shifts have occurred, either for good or for ill. This should come as no surprise, since what was done was largely intended to be a restatement of the past, with a few relatively minor added tweaks to improve rules and practices where problems were already well known and aired.

Section 172, imposing a general duty on directors to promote the success of the company, might be thought of as one exception to that minimal-change approach, especially as it contains an explicit recognition of stakeholder interests for the first time in British company law, which had previously referred only to members and employee interests.[537] However, those stakeholder interests are to be pursued by directors only where such action is needed to promote the success of the company for the benefit of its members. The core duty of loyalty is thus still shareholder-centred. Further, it seems clear that the prior common law permitted directors to take into account stakeholder interests where promoting the interests of the company (shareholders) required it.[538] Consequently, the novelty of the statutory formulation of the core duty of good faith and fidelity may be the added obligation—rather than entitlement—of directors to take stakeholder interests into account where the promotion of the success of the company requires this. This is only a marginal change in legal obligation, however, and there is as yet nothing to suggest that this revised statutory articulation of the need to take into account stakeholder interests in this way has had much impact, even when coupled with larger changes in legal rules and the social and economic context within which companies operate.[539]

The statutory rules are explicitly more constraining than the common law in their provisions on negligence (s.174), the core duty of loyalty (s.172) and the rules on ratification (s.239). The changes to the core duty of loyalty (s.172) have already been noted. So far as the duty of care is concerned, the objective

standard of care introduced by s.174 is undoubtedly a strong contrast with the subjective formulation of that duty to be found in the nineteenth-century negligence cases. But common law decisions were already well-advanced in moving the law in an objective direction, and so it might be said that s.174 merely confirmed what was already emerging in the case law.[540] Equally, s.239[541] introduced important changes to the rules on who may vote on a shareholder resolution to ratify a breach of directors' duties by excluding the votes of the directors in question and those connected with them. But this trend too was evident in a trickle of cases, and clearly easily justified on policy grounds. It is undoubtedly an important reform in closely held companies, but its real impact will only be felt, even there (or especially there), if these rules also trigger a parallel change in the common law authorisation rules and their approach to disenfranchising interested voters. This, it is suggested, is a far better approach than tinkering further with the difficult notions of "un-ratifiable wrongs".[542]

16–141

Going in the other direction, and tending to relax rather than tighten the constraints on directors, perhaps the most significant statutory changes were those that allowed the independent members of the board to authorise breaches of the directors' duty not to place themselves in a position of conflict of duty and interest (or of duty and duty).[543] Although the principle of board decision-making was already established under the prior law in relation to self-dealing transactions (at least as a matter of practice, via provisions in the articles), its extension to corporate opportunities and other conflicted situations was a new step. The argument in favour of the extension is that shareholder authorisation, as the sole method of authorisation permitted by the prior law, was in practice too uncertain and too public to be a practical form of permission, so that the prior law operated in fact so as to allow directors to pursue corporate opportunities only at the risk of the company later deciding to take from the director the profit earned from the exploitation of the opportunity. The argument against the extension is that the dynamics of board relationships mean that the uninvolved members of the board may not exercise a genuinely independent

judgment on whether to release the corporate interest in the opportunity, even if this is what the law requires of them. This argument may be less strong in companies listed on the main market of the London Stock Exchange and so required to comply with the provisions of the UK Corporate Governance Code as to independent non-executive directors, but that is a very small proportion of the companies incorporated under the Companies Acts. In the result, outside the area of benefits received by directors from third parties,[544] the board is now the guardian of the company's position in situations of conflict, contrary to the wisdom of the common law that only the shareholders could be relied upon for this purpose.

[8] *Attorney-General's Reference (No.2 of 1982)* [1984] Q.B. 624 CA; *R. v Phillipou* (1989) 89 Cr.App.R. 290 CA; *R. v Rozeik* [1996] B.C.C. 271 CA.

[9] The standout exception is *Safeway Stores Ltd v Twigger* [2010] EWCA Civ 1472 CA, which looks increasingly difficult to justify. The question the court had to answer, and one it conceded was difficult, was whether, if a company had been fixed with the improper intentions of its company officers and subjected to a regulatory sanction (under the Competition Act), could it then seek an indemnity from those same defaulting officers? The answer might seem simple: that the breach of duty by the officers had caused the company a loss, for which it could seek compensation. But this possibility was decisively rejected by the Court of Appeal. The policy underpinning the Competition Act 1998 was to impose "personal" sanctions on firms, the court held, and this liability could not then be offloaded onto individuals. To reach this end, the court relied on the illegality defence (i.e. the disqualifying principle of ex turpi causa). This decision was considered by the Supreme Court in *Bilta (UK) Ltd (In Liquidation) v Nazir* [2015] UKSC 23; [2016] A.C. 1, and although its correctness was not seriously

challenged, its relevance and effect seem now very much confined to the statutory competition code (and its underlying policy): see [83] (Lord Sumption JSC) and [157]–[162] (Lords Toulson and Hodge JJSC), with whom Lord Neuberger PSC seemingly agreed though not expressing any conclusive view ([31]).

[10] *Bilta (UK) Ltd (In Liquidation) v Nazir* [2015] UKSC 23; [2016] A.C. 1 SC at [9], expressly agreeing with agree with Lord Mance's analysis at [37]–[44].

[11] *Safeway Stores Ltd v Twigger* [2010] EWCA Civ 1472 CA, and also see fn.9, above. In *Bilta (UK) Ltd (In Liquidation) v Nazir* [2015] UKSC 23; [2016] A.C. 1 SC, Lord Neuberger said, at [31], that he "would take a great deal of persuading that the Court of Appeal did not arrive at the correct conclusion in [the *Safeway*] case". However, Lords Toulson and Hodge were more critical: paras [157]–[162].

[12] See S. Worthington, "Corporate Attribution and Agency: Back to Basics" (2017) 133 LQR (forthcoming).

[13] In particular, it does not explain *Safeway Stores Ltd v Twigger* [2010] EWCA Civ 1472 CA, already discussed; nor the case of *Stone & Rolls Ltd v Moore Stephens* [2009] UKHL 39; [2009] 1 A.C. 1391, discussed below at para.22–41, where the House of Lords concluded by a narrow majority that the illegality defence (ex turpi causa) applied to prevent a company from suing its auditors for their failure to detect fraud in circumstances where the fraud had been perpetrated by the very person who had formerly controlled the company. See however *Moulin Global Eyecare Trading (In Liquidation) v The Commissioner of Inland Revenue* [2014] HKCFA 22 Hong Kong Court of Final Appeal at [101] (Lord Walker NPJ); and *Bilta (UK) Ltd (In Liquidation) v Nazir* [2015] UKSC 23; [2016] A.C. 1 at [24]–[30] (Lord Neuberger PSC); [46]–[50] (Lord Mance JSC); [79]–[81] (Lord Sumption JSC); and [136]–[154] (Lords Toulson and Hodge JJSC). For comment on both cases, see fn.12.

[14] On similar grounds the court rejected an attempt to create a parallel set of duties owed by directors to individual shareholders via implied terms in the articles of association: *Towcester Racecourse Co Ltd v The Racecourse Association Ltd* [2003] 1 B.C.L.C. 260.

[15] *Peskin v Anderson* [2001] 1 B.C.L.C. 372 at 379. To the same end, see *Sharp v Blank* [2015] EWHC 3220 (Ch).

[16] *Briess v Woolley* [1954] A.C. 333 HL; *Allen v Hyatt* (1914) 30 T.L.R. 444 PC.

[17] *Percival v Wright* [1902] 2 Ch. 421. This applies even if all the shares are owned by a holding company with which the directors have service contracts: *Bell v Lever Bros* [1932] A.C. 161 HL.

[18] *Coleman v Myers* [1977] 2 N.Z.L.R. 225 NZCA. In the Supreme Court (ibid.) Mahon J had held that *Percival v Wright* was wrongly decided but the Court of Appeal distinguished it. See also *Brunningshausen v Glavanics* (1999) 46 N.S.W.L.R. 538 CANSW.

[19] *Peskin v Anderson* [2001] 1 B.C.L.C. 372 at 397, following the decisions of Browne-Wilkinson VC in *Re Chez Nico (Restaurants) Ltd* [1991] B.C.C. 736 at 750 and, though not cited, of David Mackie QC in *Platt v Platt* [1999] 2 B.C.L.C. 745 (the Court of Appeal in that case did not deal with the point: [2001] 1 B.C.L.C. 698).

[20] Similarly, see *Sharp v Blank* [2015] EWHC 3220 (Ch), with Nugee J denying the directors owed a fiduciary duty to the shareholders in the context of Lloyds Banking Group's acquisition of Halifax Bank of Scotland Plc.

[21] *Re A Company* [1986] B.C.L.C. 382. The case involved an application under s.459

(see Ch.20, below), but the judge's analysis appears to have related to the common law.

[22] See also *Re Charterhouse Capital Ltd* [2014] EWHC 1410 (Ch) at [276] in particular (Asplin J), as affirmed in [2015] EWCA Civ 536 CA (in particular, [50]). In addition, takeover bids for public and listed companies will be governed by the City Code on Takeovers and Mergers (below, Ch.28), which both requires directors to give advice and attempts to ensure that that advice is given to serve the shareholders' needs. These more demanding provisions of the Code will in practice overtake those of the common law.

[23] On proper purposes requirement, see below, para.16–26.

[24] *Yukong Line Ltd v Rendsburg Investments Corporate (No.2)* [1998] 1 W.L.R. 294; and see above at para.9–11.

[25] e.g. the beneficiaries of a trust which the company, as trustee, is managing: *Bath v Standard Land Co Ltd* [1911] 1 Ch. 618; *Gregson v HAE Trustees Ltd* [2008] EWHC 1006 (Ch); [2008] 2 B.C.L.C. 542, confirming that although the beneficiary could not pursue a claim against the director directly (since the director's duty was owed to the trustee company, not to the beneficiary, although the beneficiary was in turn owed duties by the trustee company), the beneficiary would, in any event, be protected by the liquidator's ability to pursue the insolvent trustee company's claim against its defaulting director.

[26] There is some statutory support for this view in the definition of a director in s.250 as including "any person occupying the position of director, by whatever name called".

[27] The easy cases are those such as *Re Canadian Land Reclaiming and Colonizing Co* (1880) 14 Ch. D. 660 concerning a director not properly appointed because of his failure to take up shares in the company which action its articles stipulated to be a condition for appointment as director. For a more detailed discussion in a modern context of what makes a person a de facto director see *Secretary of State for Trade and Industry v Tjolle* [1998] 1 B.C.L.C. 333; and *Re Gemma Ltd v Davies, Gemma Ltd (In Liquidation)* [2008] EWHC 546 (Ch); [2008] 2 B.C.L.C. 281. This latter case, at [40], shows that the important question is whether the person is factually engaged in the central management of the company on an equal footing with the other directors and performing tasks that can only properly be discharged by directors, regardless of whether the person is held out as a director of the company (although holding out may provide important supporting evidence that the individual is acting as a director). Also see *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793, discussed below, declining to identify a single defining test ([26], [39], [93]) but supporting the focus on finding real influence in the central governance of the company (paras [36], [91]). See also *Elsworth Ethanol Co Ltd v Hartley* [2014] EWHC 99 (IPEC) at [54], and, as an illustration of the highly factual nature of the question, [58]–[85] (Judge Hacon); and *Smithton Ltd v Naggar* [2014] EWCA Civ 939; [2014] B.C.C. 482 at [33]–[44] (Arden LJ). See also generally *Secretary of State for Business, Innovation and Skills v Chohan* [2013] EWHC 680 (Ch) (Hildyard J); *Vivendi SA v Richards* [2013] EWHC 3006 (Newey J).

[28] *Secretary of State for Trade and Industry v Tjolle* [1998] B.C.C. 282, 290 (Jacob J).

[29] *Re Kaytech International Plc* [1999] B.C.C. 390 at 402 CA (Robert Walker LJ).

[30] *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC.

[31] *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC at [53].

[32] This is no longer permitted: every company must now have at least one human director (s.155); and corporate directorships will be fully prohibited (subject to exceptions) as a result of new ss.156A–156C, introduced by s.87 of the Small Business, Enterprise and Employment Act 2015 (commencement expected October 2016).

[33] *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC at [25], [28]–[29], [39]–[40], [42]–[43], [94]–[96]. Also see previous note. This follows the trend in other jurisdictions where the legislature has intervened to require that all directors be natural persons: e.g. as under the Corporations Act 2001 s.201B (Australia), the Canada Business Corporations Act 1985 s.105(1)(c), the New York Business Corporation Law s.701, and the Delaware General Corporate Law s.141(b) (see [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC at [96], Lord Collins).

[34] See above, paras 7–34 and 7–37 et seq. By contrast, see [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC, [117]–[118] (Lord Walker) on the approach in tort cases.

[35] Where, again, the question is often said to be simply whether the adviser "assumed" responsibility for the advice being given, although the court, taking a more objective approach, seems to search for whether the advisee is entitled to insist that the adviser did so do that.

[36] Although perhaps the desired remedy might be achieved in two steps, with the principal companies suing the corporate director, liquidating it, and it (through its liquidators) then suing Holland for the liabilities his management failings had caused to it, with the proceeds of this second claim then passed down the chain to meet the corporate director's primary liability to the principal companies. The issue in *Holland* is that the wrong in the first step was wrongly paying away dividends (a strict liability claim); in the second step it would perhaps have to have been negligently advising that the payments were permissible in the circumstances, and the facts may not have readily supported such a claim (given the legal advice, etc. obtained by Holland).

[37] *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC at [114]–[115], [129]–[134], [139], [144]–[145].

[38] *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC at [115].

[39] *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC at [101] and [115].

[40] 2006 Act s.251(1).

[41] See Small Business, Enterprise and Employment Act 2015 s.89(1).

[42] *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 (Ch) at [1279] et seq.—the case went on appeal but the CA did not consider this issue. cf. *Yukong Line Ltd v Rendsburg Investments Corp of Liberia* [1998] 1 W.L.R. 294, in which Toulson J, in a brief and unargued dictum, took the opposite view.

[43] The judge did accept that the shadow director might attract liability under the rules relating to the involvement of third parties in breaches of directors' duties (see below, para.16–134), but these provisions are relatively restrictive.

[44] *Vivendi SA v Richards* [2013] EWHC 3006; [2013] B.C.C. 771.

[45] *Sukhoruchkin v Bekestein* [2014] EWCA Civ 399 CA [39]–[41], notes the differences in approach between *Ultraframe* and *Vivendi* without preferring one or other, but also notes that any conclusions are necessarily built on the foundation of the UK statutory

definition of a shadow director, and so may not be appropriate in the context of other statutory definitions (as in the instant case).

[46] See [2013] EWHC 3006 [133]–[145], especially [142]. See also *Smithton Ltd v Naggar* [2014] EWCA Civ 939 CA at [33]–[45] (Arden LJ). The Law Commissions also took the view that the shadow director was subject to the common law duties (as they then were) and certainly ought to be "where he effectively acts as a director through the people he can influence": Law Commission and Scottish Law Commission, *Company Directors: Regulating Conflicts of Interest and Formulating a Statement of Duties, A Joint Consultation Paper*, 1998, para.17.15. The CLR took a similar view: Completing, para.4.7.

[47] It seems to have been introduced by the Companies (Particulars as to Directors) Act 1917 s.3.

[48] *Re Hydrodam (Corby) Ltd* 1994] 2 B.C.L.C. 180, 183.

[49] As well as the cases which follow, see too *McKillen v Misland (Cyprus) Investments Ltd* [2012] EWHC 521, which describes de facto and shadow directors at [19]–[31], concluding at paras [32]–[34] that there is no sharp dividing line between the two classes (David Richards J); similarly, see *Smithton Ltd v Naggar* [2014] EWCA Civ 939 CA at paras [33]–[45] (Arden LJ).

[50] *Re Kaytech International Plc* [1999] 2 B.C.L.C. 351, 424 CA.

[51] Also see *Commissioners of HM Revenue and Customs v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 at [110] and [127]—Lords Walker and Clarke respectively, although both dissenting on the majority's finding that the defendant was not a de facto director.

[52] *Secretary of State for Trade and Industry v Deverell* [2001] Ch. 340 at [35] CA. The conclusion to be drawn from all these cases is perhaps that it is often possible to conclude that the shadow director owes all the general duties of de jure directors in relation to any decisions where he or she directed the outcome, but whether the shadow director is also subject to other duties, e.g. on pursuing corporate opportunities (see below, para.16–86), needs to be more carefully determined on a case by case basis. See also *Vivendi SA v Richards* [2013] EWHC 3006 at [133]–[145] (Newey J); and *Smithton Ltd v Naggar* [2014] EWCA Civ 939 CA at [33]–[45] (Arden LJ).

[53] A non-corporate controlling shareholder does not have the same protection.

[54] For an illustration, see *Item Software (UK) Ltd v Fassihi* [2005] 2 B.C.L.C. 91 CA, where the consequence of this approach was to subject the director to a higher standard of fiduciary duty than would have been applicable had he only been an employee, albeit a senior one.

[55] *Canadian Aero Services Ltd v O'Malley* (1973) 40 D.L.R. (3d) 371 at 381.

[56] *University of Nottingham v Fishel* [2000] I.C.R. 1462; *Shepherds Investments Ltd v Walters* [2007] I.R.L.R. 110; *Helmet Integrated Systems Ltd v Tunnard* [2007] I.R.L.R. 126 CA; *Ranson v Customer Systems Plc* [2012] EWCA Civ 841. The issues remain controversial: see the disagreement in *Generics (UK) Ltd v Yeda Research & Development Co Ltd* [2012] EWCA Civ 726 at [19]–[36] (Sir Robin Jacob) contrasted with [41]–[84] (Etherton LJ), with whom Ward LJ was persuaded to agree ([91]–[121]). Generally, see *Airbus Operations Ltd v Withey* [2014] EWHC 1126 QB; *Halcyon House Ltd v Baines* [2014] EWHC 2216 QB.

[57] Note, however, that the employee's duty of "mutual trust and confidence" finds its

roots in contract rather than the law of fiduciary obligations, as emphasised by Lewison LJ (with whom Lloyd and Pill LJJ agreed) in *Ranson v Customer Systems Plc* [2012] EWCA Civ 841 CA, at [36]–[40]; and the distinction between the contractual duty of fidelity and the duties of a fiduciary are discussed at [41]–[43].

[58] *Shepherds Investments Ltd v Walters* [2007] I.R.L.R. 110 at [129]–[130]; *Sybron Corp v Rochem Ltd* [1984] Ch. 112 CA; *Tesco Stores Ltd v Pook* [2004] I.R.L.R. 618. On disclosure of wrongdoing, the main difference between a senior manager and a director concerns the extent to which they are obliged to disclose their own wrongdoing: see *Bell v Lever Bros* [1932] A.C. 161 HL (suggesting an employee is never under a duty to disclose his own wrongdoing); and *Item Software (UK) Ltd v Fassihi* [2005] 2 B.C.L.C. 91 CA, taking a narrower view. However, all may depend on the employee's contract: in *Ranson v Customer Systems Plc* [2012] EWCA Civ 841 CA, it was held that an employee can have an obligation to disclose his own wrongdoing, but that this can only arise out of the terms of the contract of employment, not by any analogy with the fiduciary duties owed by company directors (see [44]–[61]). The analysis may matter: *Threlfall v ECD Insight Ltd* [2012] EWHC 3543 at [111]–[126] (Lang J); *Haysport Properties Ltd v Ackerman* [2016] EWHC 393 (Ch).

[59] See para.14–69.

[60] Contrast the Australian Corporations Act 2001, which defines an "officer", in s.9, as a person "(i) who makes, or participates in making, decisions that affect the whole, or a substantial part, of the business of the entity; or (ii) who has the capacity to affect significantly the entity's financial standing", and then makes officers subject to many of the statutory duties applying to directors (see ss.179 et seq.). CA 2006 does not take this approach with directors' duties (ss.170 et seq.), although elsewhere it does make rules which apply more generally to "officers" (defined inclusively in s.1173), typically in connection with reporting requirements (see, e.g. s.113(7)). Even though corporate directors are to be abolished (see above, fn.32), it remains possible, it seems, to have "corporate officers" (see s.1122).

[61] For employees see *Lister v Romford Ice and Cold Storage Co Ltd* [1957] A.C. 555 HL; and *Janata Bank v Ahmed* [1981] I.C.R. 791 CA and for the duty of care required of directors, see the following section. For a case where the defendant was sued for breach of his duty of care both as a director and as an employee, see *Simtel Communications Ltd v Rebak* [2006] 2 B.C.L.C. 571.

[62] In *Lindgren v L & P Estates Ltd* [1968] Ch. 572, the Court of Appeal rejected an argument that a "director-elect" is in a fiduciary relationship to the company.

[63] This point is discussed further below in relation to the taking of corporate opportunities, which is where it most often arises. See the approach in *Thermascan Ltd v Norman* [2011] B.C.C. 535.

[64] Directors cannot, for example, be held liable for the failure to exercise powers which they no longer have. In *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 at [1330] Lewison J suggested the "no conflict" rule would not apply either (though the "no profit" and basic loyalty duties would continue to bite). Also see paras 9–4 et seq. and 9–11 et seq., above.

[65] *Re City Equitable Fire Insurance Co* [1925] Ch. 407, a decision of the Court of Appeal but always quoted for the judgment of Romer J at first instance, because the appeal concerned only the liability of the auditors.

[66] The most famous example of this is perhaps *Re Cardiff Savings Bank* [1892] 2 Ch. 100, where the Marquis of Bute, whose family, despite its Scottish antecedents, owned,

indeed had largely rebuilt, Cardiff Castle, was appointed president of the Bank at the age of six months and attended only one meeting of the board in his whole life. He was held not liable.

[67] *Re City Equitable Fire Insurance Co* [1925] Ch. 407 at 427 (emphasis added). This test also contains *an* objective element, because the director could be held liable for failing to live up to the standard which a person of his or her skill is reasonably capable of reaching, but the strong restriction in the proposition is the subjective one, since the director can never be required to achieve a standard higher than that which he or she is personally capable of reaching.

[68] See above, Ch.15.

[69] See above, para.14–69.

[70] Principally the wrongful trading provisions to be found in s.214 of the Insolvency Act 1986, above, para.9–6. For a modern elucidation of this provision, see *Brooks v Armstrong* [2015] EWHC 2289 (Ch); [2015] B.C.C. 661.

[71] Decided in 1977 but fully reported only in 1989: [1989] B.C.L.C. 498.

[72] *Norman v Theodore Goddard* [1991] B.C.L.C. 1027 (where the judge was "willing to assume" that s.214 of the Insolvency Act represented the common law); and *Re D'Jan of London Ltd* [1994] 1 B.C.L.C. 561 where the director was found negligent on the basis of an objective test, though it has to be said that the director could probably have been found liable on the facts on a subjective test of diligence (he signed an insurance proposal form without reading it). See also *Cohen v Selby* [2001] 1 B.C.L.C. 176 at 183 CA; and *Brumder v Motornet Service and Repairs Ltd* [2013] 1 W.L.R. 2783 CA at [45]–[47] (Beatson LJ).

[73] See above, para.9–6.

[74] 2006 Act s.463. See below, para.21–28. It should be noted that this clause exempts the director only in respect of statements in the relevant reports and not in respect of any negligent conduct to which the statements inaccurately refer.

[75] The section attributes to the director the knowledge, skill and experience of *both* the reasonable person and the particular director in question, so the latter is important only when it *adds* to the attributes of the reasonable person.

[76] One potentially significant omission from s.174 of the Companies Act in comparison with the Insolvency Act is that s.214(5) of the latter explicitly extends the meaning of "carried on" to include functions entrusted to the director as well as those actually carried out, if that should be thought necessary.

[77] Note how in the Australian case of *Daniels v Anderson* (1995) 16 A.C.S.R. 607 the Court of Appeal of NSW, applying an objective test, found that the non-executive directors were not liable for the failure to discover the foreign exchange frauds being committed by an employee, but the chief executive officer was so held.

[78] *Daniels v Anderson* (1995) 16 A.C.S.R. 607 at 664. The language of monitoring fits in well with the views of the Cadbury and Greenbury Committees and their successors on the proper role for the board of directors.

[79] *Re City Equitable Fire Insurance Co* [1925] Ch. 407 at 429. See also *Dovey v Cory* [1901] A.C. 477 HL. But the matter must not be delegated to an obviously inappropriate employee or official, as was the case in *City Equitable* itself.

[80] See above.

[81] *Re Barings Plc (No.5)* [2000] 1 B.C.L.C. 433, 489 (per Jonathan Parker J), approved by the CA at 536. See also *Equitable Life Assurance Society v Bowley* [2004] 1 B.C.L.C. 180, 188–189. Also see *Brumder v Motornet Service and Repairs Ltd* [2013] 1 W.L.R. 2783 CA at [55] (Beatson LJ).

[82] Institute of Chartered Accountants in England and Wales, *Internal Control: Guidance for Directors on the Combined Code* (1999). The Report fleshes out the bare principles now contained in the UK Corporate Governance Code (Principle C.2) that boards should maintain sound systems of risk management and internal control, should review them annually, and should report to the shareholders that they have done so. See too the Financial Reporting Council's revised *Guidance on Risk Management, Internal Control and Related Financial and Business Reporting*, at *https://www.frc.org.uk/Our-Work/Publications/Corporate-Governance/Guidance-on-Risk-Management,-Internal-Control-and.pdf* [accessed 1 February 2016].

[83] *Re Barings Plc (No.5)* [2000] 1 B.C.L.C. 523 CA. See above, para.10–10.

[84] *Re Barings Plc (No.5)* [2000] 1 B.C.L.C. 523 CA; and *Re Westmid Packaging Services Ltd* [1998] 2 B.C.L.C. 646, 653. Also see *Weavering Capital (UK) Ltd (In Liquidation) v Peterson* [2012] EWHC 1480 (Ch), as affirmed in [2013] EWCA Civ 71 at [173]–[174] (Proudman J); and *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) in which the Court held that some directors were entitled to rely, and therefore had not failed to exercise reasonable care and skill by relying, on the expertise and experience of other members on the board. On the other hand, the failure of the directors with the appropriate experience to apply their minds to the question as to whether the transactions were in the interests of the company constituted a breach of the duty to exercise reasonable skill and care (Popplewell J).

[85] See, e.g. *Lexi Holdings Plc v Luqman* [2009] EWCA Civ 117; [2009] 2 B.C.L.C. 1 CA: the managing director of a company was found liable for stealing £59.6 million which had been lent by banks to the company. Overturning the trial judge, the Court of Appeal also held his two sisters jointly liable (with their brother) for the stolen money on the basis that the state of the company's accounts should have aroused their suspicions, given their knowledge of their brother's earlier imprisonment for deception, and they should have acted accordingly; their inactivity was a breach of duty.

[86] Law Commission and Scottish Law Commission, *Company Directors: Regulating Conflicts of Interest and Formulating a Statement of Duties*, Cm. 4436, 1999, Pt 5.

[87] cf. *Smith v Van Gorkam* (1985) 488 A. 2d 858.

[88] For a critique see C.A. Riley, "The Company Director's Duty of Care and Skill: the Case for an Onerous but Subjective Standard" (1999) 62 M.L.R. 697.

[89] See below, para.22–37.

[90] *Re Denham & Co* (1883) 25 Ch. D. 752. See also *Cohen v Selby* [2001] B.C.L.C. 176 CA, stressing the need at common law to show that the negligence caused the loss suffered by the company. The classic statement of the problem is that by Learned Hand J in *Barnes v Andrews* (1924) 298 F. 614 at 616–617.

[91] *ASIC v Rich* [2003] NSWSC 85. The judge referred in particular to Annex D of Mr Derek Higg's review of the role of non-executive directors: above, para.14–73.

[92] See *Henderson v Merrett Syndicates Ltd* [1995] 2 A.C. 145; *Bristol & West Building Society v Mothew* [1998] Ch. 1.

[93] *Bristol and West Building Society v Mothew* [1998] Ch. 1, CA. The case provides a

good example of the difference between a compensatory and a restitutionary remedy. A building society had advanced money to a purchaser after receiving negligent information from its solicitor. The purchaser defaulted, and the building society sued the solicitor. A restitutionary claim would have required the solicitor to put the building society back in the position in was in before it made the loan (i.e. to meet the whole of the society's loss), whereas the compensatory claim required him only to compensate the society for the loss caused to it by his negligence. This might have been nil if the solicitor's negligence had not affected the building society's assessment of the ability of the purchaser to keep up the repayments on the loan.

[94] In the *Mothew* case (see previous footnote) Millett LJ referred to the distinction between equitable compensation and common law damages for breach of the duty of care as "a distinction without a difference". Now see *AIB Group (UK) Plc v Mark Redler & Co Solicitors* [2014] UKSC 58; [2015] A.C. 1503, especially at [47]–[77] (Lord Toulson JSC) and [90]–[138] (Lord Reed JSC); and *Libertarian Investment Ltd v Hall* (2013) 16 HKCFAR 681 Hong Kong Court of Final Appeal at [84]–[96] (Ribeiro PJ) and [166]–[175] (Lord Millett NPJ).

[95] *Re City Equitable Fire Insurance Co* [1925] Ch. 407 at 426 (Romer J).

[96] "It follows from the principle that directors who dispose of the company's property in breach of their fiduciary duties are treated as having committed a breach of trust that a person who receives that property with knowledge of the breach of duty is treated as holding it upon trust for the company. He is said to be a constructive trustee of the property", per Chadwick LJ in *JJ Harrison (Properties) Ltd v Harrison* [2002] 1 B.C.L.C. 162, 173. Also see *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) at [292] (Popplewell J); and *Fern Advisers Ltd v Burford* [2014] EWHC 762 (QB) at [18] (HH Judge Mackie QC). In this situation the trustee-like nature of the directors' duties affects also the legal position of third parties. See further below, at para.16–134.

[97] See above, para.7–17.

[98] See above, para.14–5.

[99] Note Charities Act 2011 s.105(9): an order under this section may authorise an act even though it involves a breach of one or more of the general duties just described.

[100] See below, para.19–4.

[101] See above, para.3–13.

[102] 2006 Act ss.17, 29–30.

[103] 2006 Act s.257.

[104] As we saw at para.14–7, under the model articles the shareholders by special resolution may give directors instructions as to how they should conduct the management of the company, even in areas where the articles confer managerial powers upon the directors.

[105] *Re Lands Allotment Co* [1894] 1 Ch. 616 CA. On ultra vires see above at para.7–29.

[106] *Re Oxford Benefit Building and Investment Society* (1886) 35 Ch.D. 502 (an early example of a company's accounts recognising profits which had not been earned); *Leeds Estate Building and Investment Co v Shepherd* (1887) 36 Ch.D. 787. It might be said that the requirement upon the directors to repay the dividends was based on the illegality of their payment as a matter of statute or common law, but the directors were also

required to repay their remuneration, the payment of which was objectionable only because it was done in breach of the company's articles. (The articles entitled the directors to remuneration only if dividends of a certain size were paid, a rule which, perhaps naturally, encouraged the directors not to be too careful about observing the restrictions on their dividend payment powers.)

[107] See below, paras 16–30 and 16–109 et seq.

[108] See paras 16–34 et seq.

[109] See *Howard Smith Ltd v Ampol Ltd* [1974] A.C. 821 at 834 PC; citing *Fraser v Whalley* (1864) 2 H.C.M. & M. 10; *Punt v Symons & Co Ltd* [1903] 2 Ch. 506; *Piercy v S Mills & Co Ltd* [1920] 1 Ch. 77; *Ngurli v McCann* (1954) 90 C.L.R. 425 Aust. HC; *Hogg v Cramphorn Ltd* [1967] Ch. 254 at 267. The "improper purpose" test, as a requirement distinct from good faith in the common law test, has been rejected, however, in British Columbia: *Teck Corp Ltd v Millar* (1973) 33 D.L.R. (3d) 288.

[110] But see *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [15] (Lord Sumption SCJ), it seems confining himself to the latter point.

[111] Although it may of course review them as being negligent or not: s.174, above para.16–15.

[112] The best analysis of this is probably in the trusts case, *Edge v Pensions Ombudsman* [2000] Ch. 602 CA at 627E–630G; but also see *Equitable Life Assurance Society v Hyman* [2002] 1 A.C. 408 HL at [17]–[21]. And see immediately below and also paras 16–40 et seq.

[113] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71. Noted, Worthington [2016] C.L.J. 202.

[114] *Howard Smith Ltd v Ampol Petroleum Ltd* [1974] A.C. 821 PC.

[115] The principle applies generally. For examples in relation to other powers, see *Stanhope's Case* (1866) L.R. 1 Ch. App. 161; and *Manisty's Case* (1873) 17 S.J. 745 (forfeiture of shares); *Galloway v Halle Concerts Society* [1915] 2 Ch. 233 (calls); *Bennett*'s case (1854) 5 De G.M. & G. 284; and *Australian Metropolitan Life Association Co Ltd v Ure* (1923) 33 C.L.R. 199 Aust. HC (registration of transfers); *Hogg v Cramphorn Ltd* [1967] Ch. 254 (loans); *Lee Panavision Ltd v Lee Lighting Ltd* [1992] B.C.L.C. 22 CA (entering into a management agreement); *Equitable Life Assurance Society v Hyman* [2002] 1 A.C. 408 HL; *Criterion Properties Plc v Stratford UK Properties LLC* [2003] B.C.C. 50 CA (giving joint venture partner an option to be bought out at a favourable price); *Re HLC Environmental Projects Ltd (In Liquidation)* [2014] B.C.C. 337 (payments made when the company was in financial distress).

[116] This has often been assumed and the directors had apparently been so advised and sought, unsuccessfully, to show that this was their purpose.

[117] *Howard Smith Ltd v Ampol Petroleum Ltd* [1974] A.C. 821 at 835–836 PC.

[118] *Harlowe's Nominees Pty Ltd v Woodside Oil Co* (1968) 121 C.L.R. 483 Aust. HC.

[119] *Teck Corp Ltd v Miller* (1972) 33 D.L.R. (3d) 288 BC Sup.Ct.

[120] Or, conversely, to block a bid: *Winthrop Investments Ltd v Winns Ltd* [1975] 2 N.S.W.L.R. 666 NSWCA.

[121] *Re Smith and Fawcett Ltd* [1942] Ch. 304 at 306.

[122] *Howard Smith Ltd v Ampol Petroleum Ltd* [1974] A.C. 821 at 837 PC: “The constitution of a limited company normally provides for directors, with powers of management, and shareholders, with defined voting powers having to appoint the directors, and to take, in general meeting, by majority vote, decisions on matters not reserved for management. Just as it is established that directors, within their management powers, may take decisions against the wishes of majority shareholders, and indeed that the majority of shareholders cannot control them in the exercise of these powers while they remain in office so it must be unconstitutional for directors to use their fiduciary powers over the shares in the company purely for the purpose of destroying an existing majority, or creating a new majority which did not previously exist. To do so is to interfere with that element in the company’s constitution which is separate from and set against their powers”. This principle was applied by the Court of Appeal in *Lee Panavision Ltd v Lee Lighting Ltd* [1992] B.C.L.C. 22, where the incumbent directors entered into a long-term management agreement with a third party knowing that the shareholders were proposing to exercise their rights to appoint new directors.

[123] See below, para.28–19.

[124] *Criterion Properties Plc v Stratford UK Properties LLC* [2002] 2 B.C.L.C. 151 (Hart J); [2003] 2 B.C.L.C. 129 CA. The issue was not analysed by the House of Lords, which focused on the logically prior question of the director’s authority (actual or apparent) to enter into the contract on behalf of the company: [2004] 1 W.L.R. 1846. The “poison pill” arrangement entitled the joint venture partner of the potential target company (Criterion) to require Criterion to buy out its interest in the venture on terms which were very favourable to the partner and thus very damaging economically to Criterion. However, this arrangement was capable of being triggered not only by a takeover but also by any departure of the existing management of Criterion, even in circumstances, which in fact arose, which were wholly unconnected with a takeover.

[125] *Re Smith and Fawcett Ltd* [1942] Ch. 304 CA, where in a quasi-partnership company it was held that the directors, in exercising a power to refuse to register a transfer of shares, could “take account of any matter which they conceive to be in the interests of the company … such matters, for instance, as whether by their passing a particular transfer the transferee would obtain too great a weight in the councils of the company or might even perhaps obtain control” (at 308). Similarly, see *Gaiman v National Association of Mental Health* [1971] Ch. 317. In modern law the position would now have to be considered in the light of any “legitimate expectations” enforceable under s.994. See below, Ch.20.

[126] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71.

[127] Under Pt 22 of the 2006 Act (see ss.793 et seq.) and the company’s articles.

[128] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2013] EWHC 2631 (Ch).

[129] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2014] EWCA Civ 640.

[130] As summarised by Lord Sumption SCJ at [2015] UKSC 71 at [28].

[131] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2014] EWCA Civ 640 at [136].

[132] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [31] and [30] respectively. For earlier academic considerations, see Completing, para.3.14; and R.C. Nolan, “The Proper Purpose Doctrine and Company Directors” in B. Rider (ed.), *The Realm of Company Law* (Kluwer Law International, 1998).

[133] In the same vein, it would be improper for a director to act for the purpose of

favouring his or her nominator, with the cases again suggesting, if only by inference, that a "but for" test is appropriate: see, e.g. *Kuwait Asia Bank EC v National Mutual Life Nominees Ltd* [1991] 1 A.C. 187 PC.

[134] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [17] (Lords Sumption and Hodge SCJJ); citing *Mills v Mills* (1938) 60 C.L.R. 150 at 185–186 Aust. HC, where Dixon J indicated the difficulties.

[135] *Howard Smith Ltd v Ampol Petroleum Ltd* [1974] A.C. 821 at 832 PC (Lord Wilberforce).

[136] *Mills v Mills* (1938) 60 C.L.R. 150 at 186 Aust. HC; *Whitehouse v Carlton House Pty* (1987) 162 C.L.R. 285 at 294 Aust. HC: although this interpretation, supported in *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 by Lord Sumption SCJ (with whom Lord Hope SCJ agreed) (at [21]–[22]) was doubted by Lord Mance SCJ (with whom Lord Neuberger PSC agreed) (at [53]). See also *Hirsche v Sims* [1894] A.C. 654 PC; *Hindle v John Cotton Ltd* (1919) 56 S.L.T. 625.

[137] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [49].

[138] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [20] (on the "primary" purpose test), and see too [54] (on both).

[139] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [21], but see generally [21]–[23].

[140] Lord Mance SCJ (with whom Lord Neuberger PSC agreed) set out his doubts at [2015] UKSC 71 at [51]–[54].

[141] *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 at [42]–[43].

[142] See the cases cited in fnn.106 and 109.

[143] See the cases cited in fnn.106 and 109. The most recent Supreme Court authority on quantification of this form of compensation comes from the non-company case of *AIB Group (UK) Plc v Mark Redler & Co Solicitors* [2014] UKSC 58 SC.

[144] They might escape liability, however, where, for example, the provisions of the constitution were not clear; and see also the discussion of s.1157, below, para.16–133.

[145] See the analysis of the cases in *Hunter v Senate Support Services Ltd* [2004] EWHC 1085 (Ch); [2005] 1 B.C.L.C. 175, [173]–[179]. Note the importance of the absence/excess of authority versus abuse of authority distinction in *Hogg v Cramphorn* [1967] Ch. 254—a decision to attach multiple voting rights to shares issued to the company's pension fund, in breach of the company's articles, was ineffective, whereas the issue itself, for improper purposes, was voidable only; *Guinness v Saunders* [1990] 2 A.C. 663 HL—fixing of directors' remuneration by a board committee, rather than the full board, in breach of the articles, meant that the decision was void and the recipient director had to repay the money; *Smith v Henniker-Major Co* [2003] Ch. 182 at [48]—inquorate board meeting. cf. *Hely-Hutchinson v Brayhead Ltd* [1968] 1 Q.B. 549, where the correct body acted but the director was in breach of his obligation under the articles to comply with disclosure provisions: here the decision was voidable but not void.

[146] *Bamford v Bamford* [1970] Ch. 212 CA (ratification by shareholders of decision taken for an improper purpose); and *Criterion Properties Plc v Stratford UK Properties LLC* [2004] 1 W.L.R. 1846 (on the application of the statutory protection for the benefit of third parties).

[147] See above, at para.7–9. Unless the third party is a director of the company or a

person connected with the director. See s.41 and above, para.7–13.

[148] 2006 Act s.40(1).

[149] Liability under s.171 is preserved by s.41(1) but it would seem more attractive to proceed under s.41 where this is possible.

[150] Including a director of the company's holding company.

[151] The transaction itself is voidable by the company (s.41(2) and (4)), but not void, as it would be at common law. It will cease to be avoidable if (a) restitution of the subject-matter of the contract is not possible; (b) the company has been indemnified for the loss suffered; (c) the rights of bona fide purchasers without notice have intervened; or (d) the shareholders in general meeting have ratified the transaction.

[152] See above, para.3–18.

[153] See many of the cases cited earlier, including the leading case of *Howard Smith v Ampol* [1974] A.C. 824 PC. By contrast, in *Eclairs Group Ltd v JKX Oil & Gas plc* [2015] UKSC 71 SC, the shareholders would be expected to have jurisdiction to complain.

[154] For an attempted defence of this, see S. Worthington, "Directors' Duties, Creditors' Rights and Shareholder Intervention" (1991) 18 Melbourne University Law Review 121, 125–30. Also see *Equitable Life Assurance Society v Hyman* [2002] 1 A.C. 408 HL.

[155] But for the perhaps preferable view that acting for an improper purpose is an abuse of power but not a breach of the articles see *Winthrop Investments Ltd v Winns Ltd* [1975] 2 N.S.W.L.R. 666 NSWCA. Also see *Rolled Steel Products (Holdings) Ltd v British Steel Corp* [1986] Ch. 246.

[156] *Re Sherborne Park Residents Co Ltd* (1986) 2 B.C.C. 528.

[157] See above, para.16–25.

[158] Per Sir George Jessel MR in *Flitcroft*'s case (1882) 21 Ch. D. 519; quoted with approval by the Court of Appeal in *Bairstow v Queen's Moat Houses Plc* [2001] 2 B.C.L.C. 531. See above, para.12–13.

[159] At para.13–56. See also the discussion of *Re Duckwari (No.2)* [1998] 2 B.C.L.C. 315 CA, below at fn.277.

[160] *MacPherson v European Strategic Bureau Ltd* [2000] 2 B.C.L.C. 683.

[161] *MacPherson v European Strategic Bureau Ltd* [2000] 2 B.C.L.C. 683 at 701.

[162] See *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) at [191] (Popplewell J).

[163] *Cartmells'* case (1874) L.R. 9 Ch. App. 691. On the Government's intention to preserve this rule see HC Debs, Standing Committee D, Company Law Reform Bill, Fifteenth Sitting, 11 July 2006 (Afternoon), col. 600 (the Solicitor-General).

[164] But see *Clark v Workman* [1920] 1 Ir.R. 107; and an unreported decision of Morton J in the *Arderne Cinema* litigation, below, at paras 19–10 et seq.; and the Scottish decision in *Dawson International Plc v Coats Paton Plc* 1989 S.L.T. 655 (1st Div.) where it was accepted that an agreement by the directors would be subject to an implied term that it did not derogate from their duty to give advice to the shareholders which reflected the situation at the time the advice was given.

[165] Contrast the position of shareholders who may freely enter into such voting agreements: below, paras 19–25 et seq. What if the directors and the members enter into an agreement which fetters the directors' discretion? This was discussed, but not clearly settled, by the Canadian Supreme Court in *Ringuet v Bergeron* [1960] S.C.R. 672, where the majority held the voting agreement valid because, in their view, it related only to voting at general meetings. The minority held that it extended also to directors' meetings and was void, but they conceded that the position might have been different had all the members originally been parties to the agreement: see ibid., at 677. But cf. *Fulham Football Club Ltd v Cabra Estates Plc* [1994] 1 B.C.L.C. 363 at 393.

[166] *Thorby v Goldberg* (1964) 112 C.L.R. 597 Aust. HC, per Kitto J at 605–606.

[167] *Cabra Estates Plc v Fulham Football Club* [1994] 1 B.C.L.C. 363 CA; noted by Griffiths [1993] J.B.L. 576.

[168] See HC Debs, Standing Committee D, Company Law Reform Bill, Fifteenth Sitting, 11 July 2006 (Afternoon), col. 600 (the Solicitor-General).

[169] *John Crowther Group Plc v Carpets International* [1990] B.C.L.C. 460; *Rackham v Peek Foods Ltd* [1990] B.C.L.C. 895; *Dawson International Plc v Coats Paton Plc*, 1989 S.L.T. 655. The correctness of these decisions was left open by the Court of Appeal in *Cabra Estates.* Even here it must be accepted that the shareholders may in consequence lose a commercial opportunity which would otherwise be open to them. See the discussion below at paras 28–36 et seq.

[170] See above, para.16–6.

[171] *Boulting v ACTT* [1963] 2 Q.B. 606 at 626, per Lord Denning MR; *Kuwait Asia Bank EC v National Mutual Life Nominees Ltd* [1991] 1 A.C. 187 PC. The latter case shows that this principle has the advantage of not making the nominator liable for any breaches of duty to the company by the nominee director. Also see *Thompson v The Renwick Group Plc* [2014] EWCA Civ 635 CA, where the Court rejected the view that a parent assumes a duty of care to employees of its subsidiary in health and safety matters by virtue of that parent company having appointed an individual as director of its subsidiary company with responsibility for health and safety matters.

[172] *Brady v Brady* [1988] B.C.L.C. 20 at 40 CA.

[173] *Gaiman v National Association for Mental Health* [1971] Ch. at 330: "both present and future members". Also see below, para.16–46.

[174] *Hutton v West Cork Railway* (1883) 23 Ch. D. at 673, the "cakes and ale" being in this case gratuitous benefits for the employees. For this reason directors can normally justify modest, business-related political or charitable donations on the part of their companies, though the broader public policy issues arising out of such donations are recognised in the requirement that such donations be disclosed in the directors' report and in some cases approved by the shareholders: see below, paras 16–50 and 21–23.

[175] The Law Society, *Company Law Reform White Paper*, June 2005, p.6.

[176] See Developing, Ch.3 and Completing, Ch.3.

[177] *LNOC Ltd v Watford Association Football Club Ltd* [2013] EWHC 3615 (Comm) at [64] (HH Judge Mackie QC).

[178] The classic case where the directors did all too clearly reveal their reasoning is *Dodge v Ford Motor Co* (1919) 170 N.W. 668. Henry Ford openly took the view that the shareholders had been more than amply rewarded on their investment in the company

and so proposed to declare no further special dividends but only the regular dividends (of some 60 per cent per annum!) in order to reduce the price of the cars, to expand production and "to employ still more men, to spread the benefits of this industrial system to the greatest possible number, to help them build up their lives and their homes" (at 683). This was held to be "an arbitrary refusal to distribute funds that ought to have been distributed to the stockholders as dividends" (at 685).

[179] See the current regulations on narrative reporting (which apply to financial years ending on or after 30 September 2013) as set out in the Companies Act 2006 (Strategic Report and Directors' Report) Regulations 2013. These followed from a BIS consultation on narrative reporting, *The Future of Narrative Reporting—A further consultation* (2011) and *The Future of Narrative Reporting: The Government Response* (2012) *https://www.gov.uk/government/consultations/the-future-of-narrative-reporting-a-further-consultation* [Accessed 5 May 2016].

[180] Developing, para.2.22.

[181] "and not for any collateral purpose" [this closing phrase seeing its statutory parallels in s.171(b)]: [1942] Ch. 304 at 306 CA.

[182] *Regentcrest Plc (In Liquidation) v Cohen* [2001] 2 B.C.L.C. 80. See also *Extrasure Travel Insurances Ltd v Scattergood* [2003] 1 B.C.L.C. 598 at [90]. It is to be noted that in neither the formulation of Lord Greene MR nor in s.172 is there a requirement upon the director to act "honestly" as well as "in good faith", though the word "honestly" is used in a number of court decisions in this area. However, the CLR did not believe that the adverb "honestly" added anything of importance to the requirement of good faith and its use might create uncertainty, and so it did not recommend its use either here or elsewhere in the statutory restatement: Completing, para.3.13.

[183] *Re Smith and Fawcett Ltd* [1942] Ch. 304 at 306 CA (Lord Greene MR).

[184] *Re W&M Roith Ltd* [1967] 1 W.L.R. 432.

[185] Following *Re Lee, Behrens & Co Ltd* [1932] 2 Ch. 46; but cf. *Lindgren v L&P Estates Ltd* [1968] Ch. 572 CA, where it was held that there had been no failure on the part of the directors to consider the commercial merits.

[186] Similarly, see *Scottish Co-operative Wholesale Society Ltd v Meyer* [1959] A.C. 324 HL.

[187] *Charterbridge Corp v Lloyds Bank* [1970] Ch. 62. A similar approach has been adopted in the area of unfair prejudice. See *Nicholas v Soundcraft Electronics Ltd* [1993] 1 B.C.L.C. 360 CA.

[188] cf. *Extrasure Travel Insurances Ltd v Scattergood* [2003] 1 B.C.L.C. 598, accepting the law as stated in the *Charterbridge* case, but coming to a different conclusion on the facts because (a) the directors of the subsidiary never considered whether the survival of the parent was crucial to the subsidiary; and (b) no reasonable director would have concluded that the steps taken by the directors would lead to the survival of the parent.

[189] *Re HLC Environmental Projects Ltd (In Liquidation)* [2014] B.C.C. 337 at [92]–[93] (John Randall QC); *Green v El Tai* [2015] B.P.I.R. 24 Ch D at [110] (Registrar Jones); *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) at [194].

[190] See also *Lindgren v L & P Estates Co Ltd* [1968] Ch. 572, 595, per Harman LJ (no duty owed by director of holding company to subsidiary); and *Bell v Lever Bros Ltd* [1932] A.C. 161 at 229, per Lord Atkin (no duty owed by director of subsidiary to the parent company). The statutory qualification to the definition of a "shadow director" in

s.250(3) (above, para.16–8), excluding a company in relation to its subsidiaries, supports this approach. The cases do not distinguish between wholly-owned subsidiaries and those with outside minority shareholders. Only in the latter case does the imposition of a group policy potentially have an adverse effect on the interests of the shareholders, for which the unfair prejudice provisions may now provide a remedy (see Ch.20). It should also be noted that it is apparently legitimate for the company's articles to permit or require the directors to take into account the interests of other companies in the group, because in that way it could be said that the articles have defined what is to be regarded as "success" for the company in question.

[191] *Re W & M Roith Ltd* [1967] 1 W.L.R. 432.

[192] See above, para.16–40; and *Edge v Pensions Ombudsman* [2000] Ch. 602 at 627E-630G CA; *Equitable Life Assurance Society v Hyman* [2002] 1 A.C. 408 at [17]–[21] HL.

[193] *Equitable Life Assurance Society v Hyman* [2000] 2 All E.R. 331 at [17]–[21] CA (per Lord Woolf). In the House of Lords ([2002] 1 A.C. 408) Lord Steyn dealt with the case as a matter of an implied term in a contract, whilst Lord Cooke, dealing with it as a matter of the exercise of a discretion for a proper purpose, did not cite the *Wednesbury* principle but confined himself to mention of the *Howard Smith v Ampol* case (see fn.109, above). See also *Hunter v Senate Support Services Ltd* [2005] 1 B.C.L.C. 175 at [165]–[232].

[194] See the previous note and the cases referred to therein. However, it should also be noted that *Re Smith & Fawcett Ltd* was itself an intra-member dispute.

[195] HC Debs, Standing Committee D, Company Law Reform Bill, Fifteenth Sitting, 11 July 2006 (Afternoon), all quotations from cols 591–592. At one stage the duty of the director to take into account the listed factors was qualified by the phrase "so far as reasonably practicable" but this was deleted, perhaps because of the suggestion in the phrase of an objective test for review of the directors' decision. See also HL Debs, vol.681, cols 845–846, 9 May 2006 (Lord Goldsmith, on Report).

[196] *Item Software (UK) Ltd v Fassihi* [2005] 2 B.C.L.C. 91. Also see *GHLM Trading Ltd v Maroo* [2012] EWHC 61 (Ch); *IT Human Resources Plc v Land* [2014] EWHC 3812 (Ch).

[197] See *Stupples v Stupples & Co (High Sycombe) Ltd* [2012] EWHC 1226 (Ch) at [59] (HHJ David Cooke). Further, in *First Subsea Ltd v Balltec Ltd* [2014] EWHC 866 (Ch), Norris J emphasised (at [191]) that the duty to "self-report" is "not a discrete and free-standing duty. It is one aspect of a bundle of interrelated obligations which together constitute 'good faith' and 'loyalty'."

[198] See *Shepherds Investments Ltd v Walters* [2006] I.R.L.R. 110 at [132].

[199] *Bell v Lever Bros Ltd* [1932] A.C.161.

[200] *Bell v Lever Bros Ltd* [1932] A.C.161 at [57]—presumably because the parties were on opposite sides of a negotiation.

[201] See Counsel's Opinion quoted in the Report by Mr Milner Holland of an investigation under s.165(b) of the Companies Act 1948 into the affairs of the Savoy Hotel Ltd and the Berkeley Hotel Company Ltd, Board of Trade, 1954. This somewhat obscure source has long been regarded as the *locus classicus* on this point. See also *Gaiman v National Association for Mental Health* [1971] Ch. at 330: "both present and future members".

[202] CLR, Final Report I, p.345 (Principle 2, Note (1)).

[203] CGC, A.1-Main Principle. See too BIS, *A Long-Term Focus for Corporate Britain: A Call for Evidence* (2010). Responses were published, but then nothing more was done: see *https://www.gov.uk/government/consultations/a-long-term-focus-for-corporate-britain-a-call-for-evidence* [Accessed 13 February 2016].

[204] See above, para.16–36.

[205] Companies Act 1985 s.309, although expressed in different terms to s.172(1)(b).

[206] cf. *Re Saul D. Harrison & Sons Plc* [1995] 1 B.C.L.C. 14 at 25 CA, where resort was had to the Companies Act 1985 s.309 to undermine the shareholder petitioning under s.459 against the board/majority shareholders of the company.

[207] See CLR, Final 1, para.3.17 and p.348 (Principle 9); *Modernising Company Law*, Cm. 5533-I, July 2002, paras 3.11-3.12.

[208] See paras 9–4 et seq.

[209] The courts are likely to give a positive answer to this question.

[210] Thus, in *Evans v Brunner, Mond & Co Ltd* [1921] 1 Ch. 359, where the question was whether a shareholders' resolution expressly conferring power on the directors to make a certain class of donation was ultra vires, Eve J said obiter of the authority conferred by the resolution that it "is certainly impressed with this implied obligation on those to whom it is given, that they shall exercise the discretion vested in them bona fide in the interests of the company whose agents they are".

[211] *Re Lee, Behrens and Co Ltd* [1932] 2 Ch. 46. Also see *MSL Group Holdings Ltd v Clearwell International Ltd* [2012] EWHC 3707 (QB) (Sir Raymond Jack) at [41]–[42], [45].

[212] *Evans v Brunner, Mond & Co Ltd* [1921] 1 Ch. 359.

[213] The donation can then be presented as a contract: a payment in exchange for exposure of the company's name before a valued target audience, in fact a form of advertising.

[214] Thus, in *Parke v Daily News Ltd* [1962] Ch. 927 the payments to the employees failed because it could not be argued that a company about to enter liquidation any longer had a (shareholder) interest in fostering good relations with its employees. The specific decision in that case was reversed, within limits, by what is now s.247, which confers a power on the company, if it would otherwise not have it, to make provisions for the benefit of employees on the cessation or transfer of its business, which power is exercisable "notwithstanding the general duty imposed by s.172 (duty to promote the success of the company)".

[215] See above, para.16–50.

[216] Overwhelmingly, the conflict is between the director's personal interest and his duty to the company of which he is director, but where the same person is director of two competing companies, he or she may then be subject to competing duties. See *Clark Boyce v Mouat* [1994] 1 A.C. 428; *Bristol and West Building Society v Mothew* [1998] Ch. 1; *Transvaal Lands Co v New Belgium (Transvaal) Land and Development Co* [1914] 2 Ch. 488.

[217] *Bray v Ford* [1896] A.C. 44 at 51–52 HL.

[218] The rules on who needs to provide such consent differ as between the different statutory categories of conflicts, as discussed below.

[219] Or the danger of "being swayed by interest rather than driven by duty": *Breitenfeld UK Ltd v Harrison* [2015] EWHC 399 (Ch) at [68] (Norris J).

[220] On the importance of distinguishing between self-dealing transactions and personal exploitation of corporate opportunities see *Bell v Lever Bros Ltd* [1932] A.C. 161 HL, per Lord Blanesburgh; *Sinclair Investments (UK) Ltd v Versailles Trade Finance Ltd* [2011] EWCA Civ 347 CA (which has however, on the issue of proprietary remedies, been overruled by the Supreme Court in the next case); *FHR European Ventures LLP v Cedar Capital Partners LLC* [2014] UKSC 45; [2015] A.C. 250.

[221] Loans to directors and directors' service contracts are the obvious examples.

[222] *Aberdeen Railway Co v Blaikie Bros* (1854) 1 Macq. H.L. 461 HL Sc.

[223] *Aberdeen Railway Co v Blaikie Bros* (1854) 1 Macq. H.L. 461 at 471–472 HL Sc.

[224] See above at para.14–30.

[225] The most common example is a "charging clause" enabling professional trustees and their firms to charge fees for acting as trustees or executors.

[226] See below, para.16–57.

[227] See below, para.16–63.

[228] The model articles for both public and private companies (arts 14 and 16 respectively) exclude the director from both, but subject to important exceptions where the director can both be counted and vote.

[229] See above, para.16–8.

[230] The argument that disclosure to the board is pointless in the case of a shadow director, because the board by definition does what the shadow director wants, needs to be qualified because (a) the definition of a shadow director requires only that the board be accustomed to do what the shadow director wants, not that it does it on every occasion (see s.251); and (b) because, if the argument is correct, it is not clear why shadow directors are required to disclose interests in relation to existing transactions.

[231] cf. *Re Duckwari (No.2)* [1998] 2 B.C.L.C. 315, 319, interpreting the word "arrangement" in what is now s.190. The predecessor to s.177 was s.317 of the 1985 Act, which made this point clear (see s.317(5)—"whether or not constituting a contract"). However, it is not thought that the omission of the words "whether or not constituting a contract" from s.177 indicates an intention to confine the section to contractual transactions or arrangements. See also *Financial Conduct Authority v Capital Alternatives Ltd* [2014] EWHC 144 (Ch) at [51].

[232] The arguments in favour of this view, given in the fifth edition of this book at p.577, in relation to Companies Act 1985 s.317 seem equally applicable to s.177. Those arguments were approved by the judge in *Neptune (Vehicle Washing Equipment) Ltd v Fitzgerald* [1996] Ch. 274, whose decision was treated as authoritative by the Law Commissions, above, fn.1, at para.8.38 and was approved on consultation.

[233] See, for example, *Aberdeen Railway Co v Blaikie Bros* (1854) 1 Macq. H.L. 461 HL Sc; *Transvaal Lands Co v New Belgian Land Co* [1914] 2 Ch. 485 CA; and more recently, *Newgate Stud Co v Penfold* [2008] 1 B.C.L.C. 46, suggesting the common law rule catches transactions between the company and any person whose relationship with

the director is such as to create “a real risk of conflict between duty and personal loyalties”.

[234] The courts when interpreting provisions in companies’ articles have long required disclosure of the extent as well as the nature of interests. See, for example, *Imperial Mercantile Credit Association v Coleman* (1873) L.R. 6 H.L. 189.

[235] A similar provision is to be found in s.175(4)(a) in relation to the statutory duty to avoid conflicts of interest.

[236] cf. *Boardman v Phipps* [1967] 2 A.C. 46 at 124 per Lord Upjohn: “In my view [the phrase] means that the reasonable man looking at the relevant facts and circumstances of the particular case would think that there was real sensible possibility of conflict”.

[237] In the case where there is a single member who is also a director of the company (and may be the only director) and the company contracts with that member other than in the ordinary course of the company’s business, s.231 requires that the terms of the contract are either set out in a written memorandum or recorded in the minutes of the first meeting of the directors following the making of the contract. This section aims to reduce the uncertainties which might later arise about the terms of the contract if there were to be no contemporaneous written record of it and no other person had been involved in its approval on the part of the company. This could be important, for example, if the company subsequently went into liquidation and a liquidator had to establish the extent of the company’s liabilities. The section is enforced by a summary criminal sanction but breach of it does not affect the validity of the contract (s.231(4) and (6)). However, the requirement is applied expressly to shadow directors, i.e. where the sole member is a shadow director, in which case some other person(s) will constitute the board (s.231(5)). The section implements in domestic law the requirements of art.5 of Directive 89/667 on single-member private limited-liability companies ([1989] O.J. L395/40).

[238] cf. s.177(2) (“may (but need not)”). It thus appears that an oral declaration of interest to other directors outside a directors’ meeting, for example, is permissible in respect of proposed transactions.

[239] 2006 Act ss.184 and 248.

[240] 2006 Act s.185. It should not be necessary to say so, but note that it is insufficient to give general notice pursuant to ss.177(2)(b) and 185 where the transaction in question is not one which is entered into with the company (and therefore falls outside the remit of s.175(3)): *Re Coroin Ltd* [2012] EWHC 2343 (Ch) at [582]–[583] (David Richards J).

[241] 2006 Act s.185(4).

[242] 2006 Act s.178.

[243] This is especially evident in older cases dealing with promoters: *Erlanger v New Sombrero Phosphate Co* (1878) 3 App. Cas. 1218 HL; *Re Cape Breton Co* (1887) 12 App. Cas. 652 HL.

[244] And this may well be possible: for example, a misuse of the company’s property (and a self-dealing transaction may fall into that category) may involve a conflict of duty and interest (for which rescission is potentially available); *and* a breach of the duty to act bona fide and for proper purposes (for which equitable compensation is recoverable, even if the director has not made a profit from the misuse (*Gwembe Valley Development Co Ltd v Koshy (No.3)* [2003] EWCA Civ 1478; [2004] 1 B.C.L.C. 131 CA)); *and* perhaps also negligence (in that the advice to the company in favour of the self-interested deal may have been poor and caused loss, for which common law damages are

available). See *Costa Rica Railway Co Ltd v Forward* [1901] 1 Ch. 746; *Imperial Mercantile Credit Association v Coleman* (1873) L.R. 6 H. L.189; *JJ Harrison (Properties) Ltd v Harrison* [2001] 1 B.C.L.C. 158 Ch.D.; and [2002] 1 B.C.L.C. 183 CA; *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm); *Airbus Operations Ltd v Withey* [2014] EWHC 1126 (QB).

[245] See para.7–9, above.

[246] See *Guinness Plc v Saunders* [1990] 2 A.C. 663 HL, where the wrong body under the company's articles (a committee of the board rather than the full board) acted to pay a bonus to the director so that the decision to pay the bonus was void, the committee being without power to act, and the money repayable by the director. cf. *Hely-Hutchinson v Brayhead Ltd* [1968] 1 Q.B. 549, where the correct body acted, but the director was in breach of his fiduciary obligations unless the right approvals were given: here the decision was voidable but not void.

[247] 2006 Act s.182(1).

[248] 2006 Act s.182(4). The formulation in s.177(4)—before the company enters into the transaction—is clearly not available.

[249] 2006 Act s.182(2).

[250] How this requirement will be reconciled with s.182(6)(b), indicating that the duty does not apply if the other directors are already aware of the interest, or ought to be aware of the interest, is unclear.

[251] 2006 Act s.186. In the case of a proposed transaction the declaration has no point (if a further director is appointed before the transaction is completed, the s.177 obligation will arise at that point) but an interest in an existing transaction will be of continuing relevance and the declaration will be available to the new director immediately when appointed. Indeed, in most cases the sole director will have to make disclosure as soon as the proposed transaction is completed.

[252] 2006 Act.187(1).

[253] 2006 Act s.187(2)–(4).

[254] 2006 Act s.183. The disputes in relation to the remedies for breach of the predecessor provision, CA 1985 s.317 (see ninth edition of this book, p.568), have been laid to rest in the current Act.

[255] Both duties discussed below.

[256] If approval is required under more than one of the sets of statutory provisions discussed below, the requirements of each must be met, but not so as to require separate resolutions for each: s.225.

[257] The shareholders' meeting could in principle both approve the transaction and instruct the board to enter into it, but if the transaction falls within the managerial powers of the directors, such an instruction would have to take the form of a special resolution. See above, para.14–7.

[258] Law Commissions, above, fn.1.

[259] See above, para.14–38.

[260] The statute leaves it up to the courts to decide how far the general duties apply to shadow directors, but does exclude holding companies in the circumstances set out in

s.251, if the shadow director principle applies at all. See above, para.16–8.

[261] 2006 Act ss.188(6)(a), 190(4)(b), 197(5)(a), 198(6)(a), 201(6)(a), 203(5)(a), 217(4)(a), 218(4)(a), and 219(6)(a).

[262] 2006 Act ss.1158 and 1.

[263] Above, para.1–31.

[264] *British Racing Driver's Club Ltd v Hextall Erskine & Co (A Firm)* [1996] 3 All E.R. 667 at 681–682. The case is a good illustration of the operation of both the dangers and their remedy. Technically, the transaction is not between the directors and one of their number but rather between a director and the company, but of course the decision on behalf of the company is taken by the other directors. See also *Granada Group Ltd v The Law Debenture Pension Trust Corp Plc* [2015] EWHC 1499 (Ch) in which Andrews J provides an extension discussion of the predecessor to s.190 (appeal outstanding); and *Smithton Ltd v Naggar* [2014] EWCA Civ 939; [2015] 1 W.L.R. 189 CA.

[265] Defined in s.1163 to include the creation or extinction of an estate or interest in, or right over, any property and the discharge of any person's liability other than for a liquidated sum.

[266] Also defined in s.1163 and meaning "any property or interest in property other than cash". See *Re Duckwari Plc (No.1)* [1997] 2 B.C.L.C. 713 CA; and *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638, where the term was held to include a lease, a licence to exploit intellectual property, a supply of assets, and a sale of stock, but not a supply of services.

[267] The value of the net assets is to be determined by the latest accounts or, if none have been laid, by reference to its called-up share capital: s.192(2). Non-cash transactions need to be aggregated to test for their compliance with the statutory thresholds: s.191(5).

[268] Some degree of certainty of entering into the transaction or arrangement is needed despite the fact that a conditional arrangement may otherwise fall within s.190: *Smithton Ltd v Naggar* [2014] EWCA Civ 939; [2014] B.C.C. 482 at [110] (Arden LJ, with whom Elias and Tomlinson LJJ agreed).

[269] See below paras 16–117 et seq.

[270] 2006 Act s.190(4)(a) dispenses with the requirement for shareholder approval if the company is not a UK-registered company. So, if the only British company is a wholly-owned subsidiary of a foreign company, the requirements for shareholder approval, if any, will be determined by the system of company law governing the foreign company.

[271] 2006 Act s.1173(1), so that bodies incorporated outside the UK are included.

[272] 2006 Act s.195(8).

[273] See fn.6, above.

[274] Although see above, fn.244, for possible alternative claims.

[275] Thus, the duty to account is confined to the profit made by the person who is so accountable (though indirect profit is taken into account): there appears to be no duty on a director to account, for example, for a profit made solely by a connected person, though the connected person may be liable to account.

[276] *NBH Ltd v Hoare* [2006] 2 B.C.L.C. at [44]–[49]: when a director (or a connected person) sold an asset to the company at an undervalue (i.e. without loss to the company,

here with that fact reinforced by the company's subsequent sale of the asset for a profit), the director was not liable for his own profits on the sale of the asset (and indeed their measurement might be difficult, and certainly could not be assumed to be the difference between the price at which the director acquired the asset, perhaps years ago, and the price for which it was later sold to the company). Also see *Re Duckwari Plc (No.2)* [1999] Ch. 253, 261 (Nourse LJ). cf. the quite different situation described in fn.277 immediately below.

[277] See *Re Duckwari (No.2)* [1999] Ch. 253; [1998] 2 B.C.L.C. 315 CA; and *Re Duckwari (No.3)* [1999] Ch. 268; [1999] 1 B.C.L.C. 168 CA. In these cases, the company recovered by way of indemnity the loss (with interest) suffered after the acquisition of a piece of land (at a fair price) from a director without shareholder approval when the property market subsequently collapsed, but not the higher rate of interest actually paid by the company on the funds borrowed to effect the purchase. The court in the former case based its decision that the post-acquisition loss was recoverable also on the argument that, if the statute had not made express provision for the company's remedies, the director would have been liable to restore to the company the money paid for the property (less its residual value) on the grounds that the payment amounted to receipt of corporate assets paid to the director in breach of trust on the part of the directors; and there was no suggestion in the statute that Parliament wished to give the company remedies inferior to the common law ones.

[278] See below, para.16–115.

[279] It would not seem a legitimate reading of the section to interpret it so as to require the taking of reasonable steps only in relation to connections of which the director is actually aware, though the more remote the connection, the less the taking of reasonable steps would require.

[280] LR 11.1.

[281] LR 11.1.4.

[282] LR 11.1.5.

[283] LR 11.1.5–6. The specific exemptions are set out in LR 11 Annex 1.

[284] LR 11.1.7.

[285] Report of the Committee on Company Law Amendment, Cmnd. 6659, 1945, para.94. It is interesting to note that one of the corporate governance reforms made in US federal law in the aftermath of the Enron affair was to introduce in the Sarbanes-Oxley Act 2002 a ban on loans by companies to their directors: s.402(a).

[286] This has removed a doubt arising under the old law about whether the company could seek to enforce its rights of civil recovery under the statute, on the grounds that it was seeking to rely on an illegal transaction.

[287] See above, paras 9–4 et seq. and below, paras 16–117 et seq.

[288] 2006 Act ss.197(1). See also ss.198(2) and 201(2).

[289] See ss.200 and 201(2).

[290] 2006 Act s.256. The reference to "body corporate" brings in companies incorporated outside the UK (s.1173(1)), so two British subsidiaries of a foreign company will be associated. If one is public and the other private, both will be caught by the quasi-loans provisions, even though the rules on quasi-loans do not apply to the holding company (see s.198(6)).

[291] 2006 Act s.199.

[292] 2006 Act s.281(3).

[293] 2006 Act ss.197(3),(4), 198(3),(5), 200(4),(5), 201(4),(5), and 203(3),(4).

[294] 2006 Act ss.197(5)(b), 198(6)(b), 200(6)(b), and 203(5)(b).

[295] Arts 43(1) and (13) of Directives 78/660/EEC and 83/459/EEC.

[296] In practice, this is likely to be a heavily used exception. Transactions have to be aggregated for the purpose of determining whether monetary thresholds have been crossed (s.209) and s.210 gives some guidance on the valuation of different types of arrangement.

[297] See below, para.16–113.

[298] However, a loan to purchase or improve a main residence for the director may be on non-commercial terms if the company has a home-loan scheme for its employees, it regularly makes such loans to its employees and the terms of the loan are the standard ones under the scheme: s.208(3),(4).

[299] 2006 Act s.208(2). This is a somewhat narrower exception than that for credit transactions because credit transactions are exempted when entered into by any company (provided this is done in the ordinary course of the company's business) whereas the loan exception applies only to money-lending companies, i.e. those whose ordinary business includes the making of such loans. So, if the ordinary course of a company's business requires it to enter into a one-off credit transaction, it may make use of s.206(3), whether or not its ordinary business includes entering into this class of transaction.

[300] See para.16–78, above.

[301] And s.214 makes the same provision as s.196 in relation to affirmation.

[302] It has been held that it is sufficient to impose liability on the director who authorised the loan (s.213(4)(d)), jointly and severally with the director who received it, that the director was aware from the annual accounts of the practice of making loans to the recipient director, even if he was unaware of the precise amounts. See *Neville v Krikorian* [2007] 1 B.C.L.C. 1 CA; followed in *Queensway Systems Ltd v Walker* [2007] 2 B.C.L.C. 577. In that case the authorising director was also held to be in breach of his general duties to the company by not seeking to recover the loans (which were repayable on demand) as soon as he knew of their existence.

[303] See para.14–30, above, and para.28–28, below.

[304] See para.14–38, above.

[305] See now the Trade Union and Labour Relations (Consolidation) Act 1992 Part I Ch.VI.

[306] 2006 Act s.367(5).

[307] 2006 Act s.368.

[308] 2006 Act s.364. A donation to the political fund of a trade union is included, but not any other type of donation to a union: s.374.

[309] 2006 Act s.366. There is an exemption for small donations (no more than £5,000 over any period of 12 months): s.378.

[310] 2006 Act s.365. Also included is expenditure on activity designed to influence voters' attitudes in referendums.

[311] 2006 Act s.366(3),(4). Provision is made for a single resolution to be passed in groups of companies, for example, covering donations by a holding company and any of its subsidiaries (even where those subsidiaries change during the period of the validity of the resolution): s.367(1), (2),(4),(7).

[312] 2006 Act ss.1158 and 1.

[313] 2006 Act s.366(4)(b). The 1985 Act had a series of more complex provisions attempting to deal with non-UK holding and subsidiary companies, but these have been abandoned.

[314] 2006 Act s.367(3),(6).

[315] 2006 Act s.369(1),(2),(3). If the donation is repaid by the recipient, presumably the first head of loss falls away. This was made explicit under the previous law.

[316] 2006 Act.379(1).

[317] 2006 Act s.369(3)(b),(4).

[318] Subject to the exception—"not reasonably regarded as likely" to give rise to a conflict—in s.175(4)(a), which parallels the provision in s.177(6)(a). See para.16–60, above.

[319] In the case of charitable companies self-dealing transactions fall within s.175, unless the articles permit the s.175 duty to be disapplied and, even then, the articles may not effect a blanket disapplication but may do so only "in relation to descriptions of transactions or arrangements specified" in the articles (s.181(2)). Thus, for charitable companies, board or shareholder authorisation will be required in many cases for directors' conflicted transactions with the company. The tougher rules for charitable companies are probably based on the premise that monitoring of the directors by the members of a charitable company is generally less effective than in the case of a non-charitable company and that the Charity Commission cannot make up the whole of the monitoring deficit.

[320] The provisions are thus described as "mutually exclusive": *Re Coroin Ltd* [2012] EWHC 2343 (Ch) at [583] (David Richards J).

[321] Notably *Bhullar v Bhullar* [2003] 2 B.C.L.C. 241 CA; and *Allied Business and Financial Consultants Ltd v Shanahan* (also known as *O'Donnell v Shanahan*) [2009] EWCA Civ 751; [2009] 2 B.C.L.C. 666 CA. Also see, recently, *Sharma v Sharma* [2013] EWCA Civ 1287; [2014] B.C.C. 73 CA; and *Pennyfeathers Ltd v Pennyfeathers Property Co Ltd* [2013] EWHC 3530 (Ch).

[322] In *Queensland Mines Ltd v Hudson* [1978] 52 A.L.J.R. 379 the Privy Council appeared to accept a board decision as releasing the corporate interest in an opportunity, but in that case the only members of the company were two other companies, each represented on the board of the company in question.

[323] *Aberdeen Rly Co v Blaikie Bros* (1854) 1 Macq. 461 HL.

[324] Except the problem of knowing when "corporate assets" end and "corporate information" or "corporate opportunity" begin. The present law does not draw a clear distinction between them and the decisions frequently treat the latter as "belonging" to the company, i.e. as being its "property" or "asset". The modern law on remedies tends to encourage this, as precise distinction seems irrelevant for those purposes.

[325] *Regal (Hastings) Ltd v Gulliver* [1942] 1 All E.R. 378; [1967] 2 A.C. 134n.

[326] Notably *Keech v Sandford* (1726) Scl. Cas. Ch. 61.

[327] per Lord Macmillan at [1967] A.C. 153.

[328] More difficult to explain in this way might be the trusts case of *Boardman v Phipps* [1967] 2 A.C. 46 HL, where two of their lordships found against liability on the grounds that there was no conflict of interest on the part of the trustees, who made a profit out of confidential information obtained from the trust, which the trust itself was prohibited from acting on, whilst the majority found in favour of liability on the basis of confidential information plus profit. However, Lord Cohen (in the majority) also found that there was a conflict of interest, so that it might be argued that the majority view was that a conflict needed to be found for liability to be established. Lord Upjohn, dissenting, said that for a conflict of interest to arise there must be "a real sensible possibility of conflict" in the eyes of a reasonable person, a dictum which seems to be reflected in s.175(4)(a) of the Act.

[329] See the cogent editorial note in [1942] 1 All E.R. at 379. It was conceded that had this been done, there could have been no recovery: see further on this question, paras 16–117 et seq., below.

[330] The companies and friend had not been sued. Recovery might have been obtained from them if they had fallen within the rules relating to third parties' involvement in breaches of directors' duties. And in that case could the director be made liable for the third party's profits? See below, para.16–137.

[331] This would continue to be the case even under the Act because there appear to have been no uninvolved directors who could have given authorisation.

[332] Some American jurisdictions, in like circumstances, allow what is there known as "pro rata recovery" by those shareholders who have not profited. We, unfortunately, lack any such procedure.

[333] *Industrial Development Consultants v Cooley* [1972] 1 W.L.R. 443, per Roskill J.

[334] *Canadian Aero Service v O'Malley* [1973] 40 D.L.R. (3d) 371 Can. SC.

[335] *Bhullar v Bhullar* [2003] 2 B.C.L.C. 241 CA.

[336] *Allied Business and Financial Consultants Ltd v Shanahan* [2009] EWCA Civ 751; [2009] B.C.C. 822 CA.

[337] Roskill J presumably chose this rather than the more obvious loss of opportunity because the chance that the company could have secured the opportunity was minimal: Roskill J assessed it at not more than 10 per cent: [1972] 1 W.L.R. 443 at 454.

[338] So that, "in one sense, the benefit did not arise because of the defendant's directorship: indeed, the defendant would not have got this work had he remained a director": [1972] 1 W.L.R. 443 at 451.

[339] *Industrial Development Consultants v Cooley* [1972] 1 W.L.R. 443, at 453.

[340] *Canadian Aero Service v O'Malley* (1973) 40 D.L.R. (3d) 371 at 382.

[341] See above, para.16–11 on the question of how far English fiduciary principles apply to non-board senior managers.

[342] *CMS Dolphin Ltd v Simonet* [2001] 2 B.C.L.C. 704 at 733. Alternatively, it can be said that the conflict of personal interest and duty to the company arises at the moment

the opportunity emerges and that subsequent resignation does not operate retrospectively to cure the breach (indeed, it is often an expression of the director's preference for his or her personal interest). It is true that the profit arising out of the breach is made after resignation, but there is no reason why the company should not recover this if the breach occurred before resignation, just as a director who takes a decision adverse to the company in breach of the core duty of loyalty or duty of care does not reduce his or her liability to the company by resigning immediately after taking the decision. cf. *Lindsley v Woodfull* [2004] 2 B.C.L.C. 131 at [28]–[30] CA. See also *FHR European Ventures LLP v Mankarious* [2013] EWCA Civ 17; [2014] Ch. 1 at [56]–[59] CA (not affected by the appeal at [2014] UKSC 45; [2015] A.C. 250).

[343] See para.16–13, above.

[344] *Island Export Finance Ltd v Umunna* [1986] B.C.L.C. 460; *Balston Ltd v Headline Filters Ltd* [1990] F.S.R. 385; *Framlington Group Plc v Anderson* [1995] 1 B.C.L.C. 475; *Halcyon House Ltd v Baines* [2014] EWHC 2216 (QB); *First Subsea Ltd v Balltec Ltd* [2014] EWHC 886 (Ch) (appeal outstanding); *Weatherford Global Products Ltd v Hydropath Holdings Ltd* [2014] EWHC 2725 (TCC); [2015] B.L.R. 69. Also see *Imam-Sadeque v Bluebay Asset Management (Services) Ltd* [2012] EWHC 3511 (QB); [2013] I.R.L.R. 344 (in the context of a former employer-employee relationship).

[345] See, e.g. *Dranez Anstalt v Hayek* [2002] EWCA Civ 1729; [2003] 1 B.C.L.C. 278 CA, finding a restraint of trade clause too wide and therefore unenforceable.

[346] See generally *Odyssey Entertainment Ltd v Kamp* [2012] EWHC 2316 (Ch); *Halcyon House Ltd v Baines* [2014] EWHC 2216 (QB); *First Subsea Ltd v Balltec Ltd* [2014] EWHC 886 (Ch) (appeal outstanding).

[347] *Bhullar v Bhullar* [2003] 2 B.C.L.C. 241 CA. In the same vein, also see *Towers v Premier Waste Management Ltd* [2011] EWCA Civ 923; [2012] 1 B.C.L.C. 67 CA, requiring the company to be given the option to reject the opportunity.

[348] Thus, they could be obliged to convey it to the company, subject to the company's payment to them of the costs of purchase.

[349] The issue is hardly touched upon in the reasoning of the court.

[350] It is possible that the court thought that the purchase of the adjacent property did not fall unambiguously within the decision not to purchase new properties.

[351] Companies' business models change from time to time, often quite rapidly, and the obvious place for a director to look for a current definition is in the decisions of the board setting its business strategy, but it also seems right that the company's interests might legitimately be seen as extending more widely to encompass at least those broader but related corporate endeavours that any proactive directors ought at least periodically to consider and critically review as possible new corporate endeavours. These too should be included within the compass of the directors' duties of loyalty.

[352] For example, the non-executive director of a company providing business services learns on the golf course from a friend who does not know of his directorship of an opportunity to invest in a restaurant project. Does the director need the authorisation of the company to make the investment, simply because his company is financially able to take it up? It is suggested that the answer is in the negative. For some recognition of the force of this argument see *Wilkinson v West Coast Capital* [2007] B.C.C. 717.

[353] That being, as stated in *Regal*, that the opportunity came to the directors "by reason and only by reason of the fact that they were directors of Regal, and in the course of their execution of that office": per Lord Russell at [1967] 2 A.C. 134, 147.

[354] per Lord Russell (quoting Greene MR) at [1967] 2 A.C. 152. cf. the answer given in *Peso Silver Mines v Cropper* (1966) 58 D.L.R. 2d 1 and the criticism of that decision by Beck in (1971) 49 Can. B.R. 80.

[355] *Allied Business and Financial Consultants Ltd v Shanahan* (also known as *O'Donnell v Shanahan*) [2008] EWHC 1973 (Ch); [2009] B.C.C. 517; overturned in [2009] EWCA Civ 751; [2009] 2 B.C.L.C. 666 CA. The case was brought as an unfair prejudice petition under CA 1985 s.459 (now CA 2006 s.994). See below, para.20–14.

[356] This was as defined in the company's constitution, although there was also the common broader power to carry on any other business considered by the directors to be advantageous.

[357] Any use of the valuation report (see below) was, if anything, in breach of the rights of the first potential buyer, not the company.

[358] *Aas v Benham* [1891] 2 Ch. 244.

[359] *O'Donnell v Shanahan* [2009] EWCA Civ 751; [2009] 2 B.C.L.C. 666 at [68]–[69] CA.

[360] *Bhullar v Bhullar* [2003] 2 B.C.L.C. 241 CA.

[361] *Allied Business and Financial Consultants Ltd v Shanahan* (also known as *O'Donnell v Shanahan*) [2008] EWHC 1973 (Ch); [2009] B.C.C. 517; overturned in [2009] EWCA Civ 751; [2009] 2 B.C.L.C. 666 CA.

[362] See *Towers v Premier Waste Management Ltd* [2011] EWCA Civ 923; [2012] B.C.C. 72 CA at [51]; *Sharma v Sharma* [2013] EWCA Civ 1287; [2014] B.C.C. 73 at [51]–[52] CA; *Richmond Pharmacology Ltd v Chester Overseas Ltd* [2014] EWHC 2692 (Ch); [2014] Bus. L.R. 1110 at [69]–[72]. Also see generally *Pennyfeathers Ltd v Pennyfeathers Property Co Ltd* [2013] EWHC 3530 (Ch); and *Invideous Ltd v Thorogood* (judgment reversed on other grounds in [2014] EWCA Civ 1511 CA).

[363] 2006 Act s.176(7) makes it clear that the section applies to a conflict of duties.

[364] Partnership Act 1890 s.30.

[365] It clearly does not apply to members, even in a private company, for members, as such, are not fiduciaries, though such conduct might give rise to a remedy under the unfair prejudice provisions. See Ch.20, below.

[366] *London & Mashonaland Exploration Co v New Mashonaland Exploration Co* [1891] W.N. 165; approved by Lord Blanesburgh in *Bell v Lever Bros* [1932] A.C. 161 at 195 HL. By contrast, the dicta in *Item Software (UK) Ltd v Fassihi* [2004] EWCA Civ 1244 at [63], per Arden LJ, suggests, it seems, that although a finding that directors could not hold multiple directorships would be a "substantive extension" of the duties of directors, there was—as in this case—no suggestion that those multiple directorships would not be subjected to the full panoply of fiduciary restrictions. See also *First Subsea Ltd v Balltec Ltd* [2014] EWHC 866 (Ch), in which the former directors were found to have breached their duties of loyalty even though the setting up of a competing business itself was not a breach (appeal outstanding).

[367] *Hivac Ltd v Park Royal Scientific Instruments Ltd* [1946] Ch.169 CA. If correct it must apply to an executive director: see *Scottish Co-op Wholesale Society Ltd v Meyer* [1959] A.C. 324 HL, per Lord Denning at 367. Also see *Allfiled UK Ltd v Eltis* [2015] EWHC 1300 (Ch) (the granting of an interim injunction restraining the use of confidential information and intellectual property in a new company pending trial, but

allowing the new company to continue trading in the meantime).

[368] *In Plus Group Ltd v Pyke* [2002] EWCA Civ 370; [2002] 2 B.C.L.C. 201 CA, especially the judgment of Sedley LJ. Also see, recently, *Halcyon House Ltd v Baines* [2014] EWHC 2216 (QB) at [220]–[227]; and *First Subsea Ltd v Balltec Ltd* [2014] EWHC 866 (Ch) at [193]–[203] (appeal outstanding).

[369] As Brooke LJ pointed out, the *Mashonaland* case was a "startling" one, but the director there had never acted as a director of the claimant company nor attended a board meeting. As for the *In Plus Group* case, Lewison J in *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 suggested that the "no conflict" principle applied only to the powers a director has, so that a director excluded from exercising powers, even if wrongfully, was no longer subject to the principle—and certainly not at the suit of those who excluded him.

[370] For example, if the director came across a corporate opportunity, might he not have to offer it at the same time to both companies? Consent to acting as a director of competing companies would not of course involve consent to personal exploitation of any corporate opportunity the director might come across.

[371] See, per Lord Denning in *Scottish Co-op Wholesale Society v Meyer* [1959] A.C. 324 at 366–368 HL. This concerned an application under what is now the unfair prejudice provisions (on which see Ch.20, below) but Lord Denning obviously had doubts whether the *Mashonaland* case was still good law. See also *Bristol and West Building Society v Mothew* [1998] Ch. 1, 18 (per Millett LJ); and, more recently, *Global Energy Horizons Corp v Gray* [2012] EWHC 3703 (Ch).

[372] *Balston Ltd v Headline Filters Ltd* [1990] F.S.R. 385 at 412 (Falconer J); *Halcyon House Ltd v Baines* [2014] EWHC 2216 (QB).

[383] *Balston Ltd v Headline Filters Ltd* [1990] F.S.R. 385.

[384] *Framlington Group Plc v Anderson* [1995] 1 B.C.L.C. 475.

[385] 2006 Act s.180(4)(b): general duties not infringed “where the company’s articles contain provisions for dealing with conflicts of interest” and the director acts in accordance with them. Again, it will be interesting to see what types of provision are thought acceptable by the institutional shareholders in respect of listed companies.

[386] See below, para.16–117.

[387] See *Benson v Heathorn* (1842) 1 Y. & C.C.C. 326, per Knight-Bruce VC at 341–342; and *Imperial Mercantile Credit Association v Coleman* (1871) L.R. 6 Ch. App. 558 at 567–568 CA, per Hatherley LC. As a matter of principle, it might be asked why the board, acting properly as the company (so with the conflicted directors undoubtedly excluded from voting), could not give such informed consent: see S. Worthington, “Corporate Governance: Remedying and Ratifying Directors’ Breaches” (2000) 116 L.Q.R. 638. The new statutory rule adopts precisely this approach.

[388] Nor is any transaction or arrangement with the company liable to be set aside on the grounds that the shareholders have not given their approval: s.180(1). This provision applies to conflicts of interest generally under s.175, although the present discussion relates to corporate opportunities.

[389] Section 239(2)(a), on which see below at para.16–117. It is submitted that the standard use of the word “authorise” in company law is to refer to ex ante permission, whilst ratification refers to permission given after the breach. It is clear that the CLR’s proposal, on which s.175 is based, contemplated the non-involved members of the board giving permission only in advance. See Final 1, p.346, cl. 6 where the phrase adopted is “the use [of the corporate opportunity] has been proposed to and authorised by the board”.

[390] 2006 Act s.181(2)(b).

[391] Of course, the provision may be inserted in the company’s articles upon incorporation, but at least those who become its shareholders then know what they are letting themselves in for. In the case of subsequent amendments to the articles it will be interesting to see what sorts of board approval provisions institutional investors are prepared to accept in the articles of listed companies.

[392] CLR, Final Report I, para.3.25.

[393] *Cook v Deeks* [1916] 1 A.C. 554 PC.

[394] In relation to ratification, s.239(3),(4) now excludes interested directors from voting as shareholders, but it seems they are still entitled to do so on authorisations. On ratification, see para.16–118, below.

[395] cf. the discussion of *Regentcrest Plc v Cohen* [2001] 2 B.C.L.C. 80 in para.16–41, above.

[396] This notwithstanding that the wording of the section itself pitches the conflict as one between the director’s and the company’s *interests*, not the duty of one and the interests of the other. This, it is suggested, does not evince an intention to alter the underlying premises of the common law. Rather, the director’s duty is seen to be to act in the interests of the company (at common law, or, under s.171, to act to promote the success of the company—see above, paras 16–37 et seq.).

[397] See above, para.16–89.

[398] It is difficult to believe that the directors in *Regal*, having concluded that the company could not finance the project, would have been held liable in negligence for not putting additional money of their own into the company so that it could take up the opportunity, whereas in *Cooley* it might be said that failing to follow up for the company an opportunity of the very type the director had been hired to pursue would seem to constitute a plausible case of negligence.

[399] See below, para.16–109.

[400] With all the limitations inherent in that option if the company is no longer able to return the property acquired from the director. We noted earlier that the option of "pecuniary rescission", which, while requiring the court to value the assets transferred, might enable better justice to be done between the parties. This is, effectively, what the statute allows in those cases governed by statutory provisions. Indeed, where the statute has intervened, the remedies are both more varied and more extensive.

[401] Unless the facts allow reliance on the statutory remedies: see paras 16–73 and 16–83, above.

[402] For example, if the director has diverted the company's property into a loss-making conflicting opportunity, then there will be no account of profits for breach of the conflict rule (there are no profits), but the director may be compelled to restore the company's property which has been used in an unauthorised fashion, or to compensate the company for its negligent or unfaithful use.

[403] Benefits from associated companies are excluded as are benefits received by the director from a company which supplies his or her services to the company: s.177(2) and (3).

[404] This might be contrasted with the predominant view under the earlier common law rules that the "no profit" rule (which would catch such benefits) did not necessarily involve a conflict of duty and interest, although of course in practice it very often might: see the earlier discussion of *Regal (Hastings) Ltd v Gulliver* at para.16–89.

[405] "The general duties have effect subject to any rule of law enabling the company to give authority for anything to be done by the directors that would otherwise be a breach of duty."

[406] "Except as otherwise provided, more than one of the general duties may apply": s.179.

[407] *Industries and General Mortgage Co Ltd v Lewis* [1949] 2 All E.R. 573; *Taylor v Walker* [1958] 1 Lloyd's Rep. 490; *Logicrose Ltd v Southend United FC Ltd* [1988] 1 W.L.R. 1257. Also see, recently, *Pullan v Wilson* [2014] EWHC 126 (Ch); [2014] W.T.L.R. 669; *FHR European Ventures LLP v Cedar Capital Partners LLC* [2014] UKSC 45; [2015] A.C. 250 SC.

[408] See above, para.7–46.

[409] *Taylor v Walker* [1958] 1 Lloyd's Rep 490; *Shipway v Broadwood* [1899] 1 Q.B. 369 CA. There is not space here to explore the complications which may arise when the payer is also the director of a company and makes unauthorised use of that company's assets to effect the bribe. See also *Airbus Operations Ltd v Withey* [2014] EWHC 1126 (QB) in relation to the position of employees.

[410] *Mahesan v Malaysia Government Officers' Co-operative Housing Society Ltd* [1979]

A.C. 374 at 381 PC. The cause of action appears to lie in fraud.

411 *Mahesan v Malaysia Government Officers' Co-operative Housing Society Ltd* [1979] A.C. 374 at 383.

412 *Mahesan v Malaysia Government Officers' Co-operative Housing Society Ltd* [1979] A.C. 374; and *United Australia Ltd v Barclays Bank Ltd* [1941] A.C. 1 HL. Where the briber is or acts on behalf of a supplier, the damages are unlikely to be less than the amount of the bribe, but could be more.

413 *Attorney-General for Hong Kong v Reid* [1994] 1 A.C. 324 PC; declining to follow *Metropolitan Bank v Heiron* (1880) 5 Ex. D. 319 CA; and *Lister & Co v Stubbs* (1890) 45 Ch. D. 1 CA. The decision was controversial among academic writers but was mostly followed by the courts, although see *Sinclair Investments (UK) Ltd v Versailles Trade Finance Ltd (In Administrative Receivership)* [2011] EWCA Civ 347 CA. See the judgment of Lawrence Collins J in *Daraydan International Ltd v Solland International Ltd* [2005] Ch.119; *Sinclair Investments* (ibid.); and *FHR European Ventures LLP v Cedar Capital Partners LLC* [2013] EWCA Civ 17 CA; affirmed [2014] UKSC 45; [2015] A.C. 250 SC for a review of both the subsequent court decisions and the academic writings. Now see para.16–115.

414 *FHR European Ventures LLP v Cedar Capital Partners LLC* [2014] UKSC 45; [2015] A.C. 250 SC.

415 See below, para.16–115.

416 See above, para.16–66.

417 See above, paras 16–67 et seq.

418 See above, para.16–20.

419 *United Pan-Europe Communications NV v Deutsche Bank AG* [2000] 2 B.C.L.C. 461 CA.

420 See Ch.17.

421 For example, to enjoin the delivery up of confidential documents improperly taken away by a former director: *Measures Bros v Measures* [1910] 2 Ch. 248 CA; *Cranleigh Precision Engineering Ltd v Bryant* [1965] 1 W.L.R. 1293; *Allfiled UK Ltd v Ellis* [2015] EWHC 1300 (Ch).

422 This is especially so where the "wrong" involves a fiduciary—such as a director—failing to comply with contractual mandates. By way of illustration, see the latest authorities on quantifying equitable compensation: *Libertarian Investment Ltd v Hall* (2013) 16 HKCFAR 681 Hong Kong Court of Final Appeal at [84]–[96] (Ribeiro PJ) and [166]–[175] (Lord Millett NPJ); and *AIB Group (UK) Plc v Mark Redler & Co Solicitors* [2014] UKSC 58; [2015] A.C. 1503 SC at [47]–[77] (Lord Toulson JSC) and [90]–[138] (Lord Reed JSC).

423 Although see the paragraph immediately following.

424 Either actively or by subsequent acquiescence in it: *Re Lands Allotment Co* [1894] 1 Ch. 616 CA. Merely protesting will not necessarily disprove acquiescence: *Joint Stock Discount Co v Brown* (1869) L.R. 8 Eq. 381.

425 Civil Liability (Contribution) Act 1978. The application of the principle of joint and several liability is discussed more fully below at paras 22–31 et seq. in relation to auditors.

[426] *JJ Harrison (Properties) Ltd v Harrison* [2002] 1 B.C.L.C. 162 CA For an early recognition of the principle see *Re Forest of Dean Coal Co* (1878) 10 Ch. D. 450.

[427] For a recent discussion on the use of the tracing remedy, see *Relfo Ltd (In Liquidation) v Varsani* [2014] EWCA Civ 360 CA; [2015] 1 B.C.L.C. 14.

[428] Whether under s.177 (if the director has contracted with the company) or under s.175 (if not).

[429] See para.16–62 (where the self-dealing transaction is voidable); and paras 16–106 and 16–108 et seq. (on accounting for gains derived from other unauthorised conflicts).

[430] See, e.g. the void remuneration contract in *Guinness v Saunders* [1990] 2 A.C. 662 HL. Although the proprietary nature of the remedy was not in issue here (there being no insolvency risk), *Westdeutsche Landesbank Girozentrale v Islington LBC* [1996] A.C. 669 HL, is authority for it being unavailable to reverse a void contract, at least where the defendant is not a fiduciary. Although against this, see the trustee case, *Foskett v McKeown* [2001] 1 A.C. 102 HL, where the proprietary claim to stolen trust funds was considered to be "part of our law of property" (Lord Millett), not dependent on either unjust enrichment (the HL holding so explicitly) or on fiduciary disloyalty (implicitly, as the suggestion was not raised).

[431] The company may also have claims against the third parties: see below, paras 16–134 et seq.

[432] The cases typically cited are *Bishopsgate Investment Management Ltd (In Liquidation) v Maxwell (No.2)* [1994] 1 W.L.R. 261 at 265a–266a (Hoffmann LJ); *Bairstow v Queens Moat Houses Plc* [2001] 2 B.C.L.C. 531 at [49]–[54] CA (Robert Walker LJ); *Re Loquitur* [2003] S.T.C. 1394 at [135]–[137] (Etherton J); *Revenue and Customs Commissioners v Holland, In Re Paycheck Services 3 Ltd* [2010] 1 W.L.R. 2793 at [96]–[98] (Rimer LJ) and at [46], [48], [49] (Lord Hope).

[433] Or, alternatively, should have been retained by the company as part of its own assets.

[434] Less an allowance for the value of X, being the benefit the company did receive.

[435] Again with the company giving allowance for what it had in fact received, being the value of X.

[436] See the detailed analyses in *Libertarian Investment Ltd v Hall* (2013) 16 HKCFAR 681 Hong Kong Court of Final Appeal at [84]–[96] (Ribeiro PJ) and [166]–[175] (Lord Millett NPJ); and *AIB Group (UK) Plc v Mark Redler & Co Solicitors* [2014] UKSC 58; [2015] A.C. 1503 SC at [47]–[77] (Lord Toulson JSC) and [90]–[138] (Lord Reed JSC). Also see *HLC Environmental Projects Ltd* [2013] EWHC 2876 (Ch) at [136]–[145]; *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) at [292]–[293], [296]–[306].

[437] *Lagunas Nitrate Co v Lagunas Syndicate* [1899] 2 Ch. 392 CA, a case concerning promoters' liability, but the operative principles are the same. The right to rescind will be lost if the company elects not to rescind or is too late to do so: *Re Ambrose Lake Tin Co* (1880) 11 Ch. D. 390 CA; *Re Cape Breton Co* (1885) 29 Ch. D. 795 CA (affirmed sub nom. *Cavendish Bentinck v Fenn* (1887) 12 App. Cas. 652 HL); *Ladywell Mining Co v Brookes* (1887) 35 Ch. D. 400 CA; *Gluckstein v Barnes* [1900] A.C. 240 HL; *Re Lady Forrest (Murchison) Gold Mine* [1901] 1 Ch. 582; *Burland v Earle* [1902] A.C. 83 PC; *Jacobus Marler v Marler* (1913) 85 L.J.P.C. 167n; *Hely-Hutchinson v Brayhead Ltd* [1968] 1 Q.B. 549 CA; *Salt v Stratstone Specialist Ltd t/a Stratstone Cadillac Newcastle* [2015] EWCA Civ 745 CA.

[438] *Erlanger v New Sombrero Phosphate Co* (1878) 3 App. Cas. 1218 at 1278 (Lord Blackburn); *Bentinck v Fenn* (1887) 12 App. Cas. 652, where rescission was not possible because the company had already re-sold the properties.

[439] *Transvaal Lands Co v New Belgium (Transvaal) Land & Development Co* [1914] 2 Ch. 488 CA.

[440] This is certainly the case when fraud is involved and perhaps even when it is not: *Erlanger v New Sombrero Phosphate Co* (1873) 3 App. Cas.1218 HL; *Spence v Crawford* [1939] 3 All E.R. 271 HL; *Armstrong v Jackson* [1917] 2 K.B. 822; *O'Sullivan v Management Agency and Music Ltd* [1985] Q.B. 428 CA; *Salt v Stratstone Specialist Ltd t/a Stratstone Cadillac Newcastle* [2015] EWCA Civ 745 CA.

[441] *Hogg v Cramphorn* [1967] Ch. 254; *Bamford v Bamford* [1970] Ch. 212 CA; *Criterion Properties Plc v Stratford UK Properties LLC* [2004] B.C.C. 570 HL.

[442] *Guiness Plc v Saunders* [1990] 2 A.C. 663 HL. A void contract is much more threatening to the position of third parties, though in the case of third parties contracting with companies the provisions of s.40 (above, para.7–9 et seq.) may save the day.

[443] For example, in relation to the use of corporate information or opportunity discussed above, paras 16–87 et seq.

[444] See the "bribe" cases above, para.16–107, and also the secret/undisclosed commission case of *Imperial Mercantile Credit Association v Coleman* (1873) L.R. 6 H.L. 189, where the defaulting director proposed to the company a contract from the execution of which he stood to derive a secondary undisclosed profit. Also see, recently, *Airbus Operations Ltd v Withey* [2014] EWHC 1126 (QB).

[445] *Murad v Al-Saraj* [2005] EWCA Civ 959 CA.

[446] In general the director is not jointly liable for profits made by others (e.g. the company with which the director is associated, although such third parties may themselves have secondary liability, see below, para.16–134): *Regal (Hastings) Ltd v Gulliver* [1967] 2 A.C. 134; *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 (Ch) at [1550]–[1576], cf. *CMS Dolphin Ltd v Simonet* [2001] 2 B.C.L.C. 704. By contrast, a director may be jointly liable for the whole of the profits made by his partnership as a result of his breach: *Imperial Mercantile Credit Association v Coleman* (1873) L.R. 6 H.L. 189. Also see, more recently, *Airbus Operations Ltd v Withey* [2014] EWHC 1126 (QB) at [451]–[465]; and *Northampton Regional Livestock Centre Co Ltd v Cowling* [2015] EWCA Civ 651 CA.

[447] This can sometimes raise nice questions: *Murad v Al-Saraj* [2005] EWCA Civ 959 CA; *Warman International Ltd v Dwyer* (1995) 182 CLR 544 Aust HC (account of profits limited to first two years of operation of diverted business opportunity). Notice, too, the argument that the causal test may either *be* different, or at least have different outcomes, when applied to a third party "dishonest assistant" rather than a director/fiduciary: *Novoship (UK) Ltd v Mikhaylyuk* [2015] Q.B. 499 at [111]–[115] CA.

[448] *Phipps v Boardman* [1967] 2 A.C. 46 HL; *O'Sullivan v Management Agency and Music Ltd* [1985] Q.B. 428 CA. In *Guinness v Saunders* [1990] 2 A.C. 663 their lordships were very reluctant to entertain the possibility of an allowance for work done, but in the event the action was not decided as a breach of the conflict rules, but as a contract not properly authorised according to the terms of the articles, so the defaulting director was required to return the company's property, not account for profits made. See above, fn.246. The same hard line was taken in *Quarter Master UK Ltd v Pyke* [2004] EWHC 1815 (Ch); [2005] 1 B.C.L.C. 245 at [76]–[77].

[449] *Murad v Al-Saraj* [2005] EWCA Civ 959 at [67] CA (Arden LJ).

[450] *Regal (Hastings) Ltd v Gulliver* [1967] 2 A.C. 134 at 150 (Lord Russell); *Murad v Al-Saraj* [2005] EWCA Civ 959 at [71] CA (Arden LJ).

[451] *FHR European Ventures LLP v Cedar Capital Partners LLC* [2014] UKSC 45; [2015] A.C. 250 SC. Applying this analysis, see *FHR European Ventures LLP v Mankarious* [2016] EWHC 359 (Ch).

[452] The proprietary approach had been taken in *Attorney General of Hong Kong v Reid* [1994] 1 A.C. 324 PC, the court there declining to follow *Metropolitan Bank v Heiron* (1880) 5 Ex. D. 319 CA; and *Lister & Co v Stubbs* (1890) 45 Ch. D. 1 CA. The decision was controversial amongst academic writers but was mostly followed by the courts, although see *Sinclair Investments (UK) Ltd v Versailles Trade Finance Ltd (In Administrative Receivership)* [2011] EWCA Civ 347 CA. For a review of both the subsequent court decisions and the academic writings, see Lawrence Collins J in *Daraydan International Ltd v Solland International Ltd* [2005] Ch. 119; *Sinclair Investments* (ibid.); and *FHR European Ventures LLP v Cedar Capital Partners LLC* [2013] EWCA Civ 17 CA; affirmed [2014] UKSC 45; [2015] A.C. 250 SC.

[453] *FHR European Ventures LLP v Cedar Capital Partners LLC* [2014] UKSC 45; [2015] A.C. 250 SC at [45] (Lord Neuberger PSC). *Chan v Zacharia* (1984) 154 C.L.R. 178 Aust HC, is typically cited.

[454] These were noted earlier at para.16–112.

[455] One of the rare examples where the court's jurisdiction to do just this was both asserted and utilised is *Grimaldi v Chameleon Mining NL (No.2)* [2012] FCAFC 6, see especially [583]. But a close reading of the complicated facts of that case suggest an English court might well have reached precisely the same conclusion on orthodox "institutional" constructive trust grounds.

[456] The right which the shareholders have under s.168 to remove a director at any time by ordinary resolution (see above, paras 14–48 et seq.) could be prayed in aid, and the articles sometimes provide that a director must resign if called upon by a majority of the board to do so.

[457] Hence the importance of regulating the contractual entitlements of the director when the contract is concluded. See above, para.14–56.

[458] This terminology seems to be adopted by the Act. For example, s.263, dealing with derivative actions, distinguishes between whether a breach is likely to be "(i) authorised by the company before it occurs, or (ii) ratified by the company after it occurs": s.263(2)(c) and (3)(c). See below, para.17–20.

[459] If this is to be effective, the general meeting must have the necessary authority to take the decision.

[460] For an example of affirmation see ss.196 and 214 (above, paras 16–73 et seq. and para.16–83): shareholders making substantial property transactions and loan transactions binding on the company, but not relieving the directors of their breach of duty.

[461] This can be difficult. Section 239(6)(b) preserves "any power of the directors to agree not to sue, or to settle or release a claim made by them on behalf of the company" but does not tell us anything about the extent of that power. Suppose the directors in good faith enter into a contract with one of their number on behalf of the company not to sue him or her for breach of duty. Can the director obtain an injunction to stop the litigation if the shareholders in general meeting or an individual shareholder in a

derivative action later institutes litigation? Since the contract gives the director nearly the whole of what is obtainable by ratification, but ratification requires shareholder approval or may not be available at all (see below), it might be thought odd policy to allow the board to enter into such a contract on behalf of the company, and yet clearly they can. The problem is discussed in H. Hirt, *The Enforcement of Directors' Duties in Britain and Germany* (2004), pp.95–96.

[462] See, for instance, *Sharma v Sharma* [2013] EWCA Civ 1287; [2014] B.C.C. 73 CA; and *Pennyfeathers Ltd v Pennyfeathers Property Co Ltd* [2013] EWHC 3530 (Ch).

[463] A fortiori if the change has already been made and the question for an investor is whether he or she should acquire shares in that company.

[464] This does not necessarily mean that the doctrine of authorisation is confined to breaches of the general duties.

[465] See below, para.16–120.

[466] Above, para.9–11.

[467] See *West Mercia Safetywear Ltd v Dodd* [1988] B.C.L.C. 250 CA; *Aveling Barford v Perion Ltd* [1989] B.C.L.C. 626; *Re DKG Contractors Ltd* [1990] B.C.C. 903; *Official Receiver v Stern* [2002] 1 B.C.L.C. 119 at 129. Also see, more recently, *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) at [272]–[288] (Popplewell J); *Goldtrail Travel Ltd (In Liquidation) v Aydin* [2014] EWHC 1587 (Ch) at [113]–[118] (Rose J).

[468] Any "interested" director is also similarly excluded, although when a director can be said to be so interested is left to the courts to decide.

[469] There are other illustrations of a similar approach. For example, where the board is required to decide whether the company should enter into a transaction with one of its directors (i.e. a s.177 transaction), the model articles for both public and private companies (arts 14 and 16 respectively) exclude the self-dealing director from both the quorum and vote head counts, but subject to important exceptions where the director can both be counted and vote.

[470] Section 239(4). An equivalent provision is made for written resolutions in s.239(3). Those "connected with" the director are defined by the sections discussed above in the context of substantial property transactions: see above, para.16–70, except that here a fellow director can be a connected person if he or she otherwise meets the criteria: s.239(5)(d). Also see *Goldtrail Travel Ltd (In Liquidation) v Aydin* [2014] EWHC 1587 (Ch) at [116]–[118] (Rose J).

[471] See above, para.16–118.

[472] *North-West Transportation v Beatty* (1887) 12 App. Cas. 589 PC; *Burland v Earle* [1902] A.C. 83 PC; *Goodfellow v Nelson Line* [1912] 2 Ch. 324; *Northern Counties Securities Ltd v Jackson & Steeple Ltd* [1974] 1 W.L.R. 1133. The contrary views of Vinelott J in *Prudential Assurance Co Ltd v Newman Industries Ltd (No.2)* [1981] Ch. 257, to the effect that interested shareholders may not vote on ratification resolutions, was regarded as heretical by many (see Wedderburn, (1981) 44 M.L.R. 202), but in the light of modern developments might be seen as prescient.

[473] See paras 16–117 et seq. (directors), 19–4 et seq. (shareholders), and 31–30 et seq. (bondholders).

[474] See Worthington, (2000) 116 L.Q.R. 638. Pursuing a similar line, see Completing,

paras 5.85 and 5.101. The Bill preceding CA 2006, as originally introduced, also disqualified from voting those "with a personal interest, direct or indirect, in the ratification".

[475] 2006 Act s.239(7). The shareholders may also act informally by unanimous consent: s.239(6)(a).

[476] See paras 16–119 et seq.

[477] 2006 Act s.239(7) says it does not "affect any rule of law as to acts that are incapable of being ratified by the company". Those rules would seem to apply equally to prior authorisation by the shareholders. Section 180(4)(a) does not require otherwise, since it preserves existing powers of authorisation only.

[478] *Franbar Holdings Ltd v Patel* [2008] EWHC 1534 (Ch); [2009] 1 B.C.L.C. 1.

[479] See *Re Halt Garage (1964) Ltd* [1982] 3 All E.R. 1016; *Aveling Barford Ltd v Perion Ltd* [1989] B.C.L.C. 626; *Rolled Steel Products (Holdings) Ltd v British Steel Corp* [1986] Ch. 246 at 296; *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Comm) at [268]–[269]. Similarly, see s.239(6)(a).

[480] *Cook v Deeks* [1916] 1 A.C. 554 PC. See also *Menier v Hooper's Telegraph Works* (1874) L.R. 9 Ch. App. 350; cf. *Azevedo v Imcopa Importacao* [2013] EWCA Civ 364; [2015] Q.B. 1 CA at, in particular, [66] and [71].

[481] *Cook v Deeks* [1916] 1 A.C. 554 at 564. Followed by Templeman J in *Daniels v Daniels* [1978] Ch. 406, where he refused to strike out a claim alleging that the majority had sold to themselves property of the company at a gross undervalue. In that case, the majority had not actually sought to ratify their actions, but the question was whether the wrong was ratifiable so as to prevent the minority from suing in a derivative action by virtue of the rule in *Foss v Harbottle*. Today such a transaction might well be caught by s.190 of the Act (see above, para.16–70).

[482] e.g. *NW Transportation Co v Beatty* (1887) 12 App. Cas. 589 PC; *Burland v Earle* [1902] A.C. 83 PC; *A Harris v Harris Ltd*, 1936 S.C. 183 (Sc.); *Baird v Baird & Co*, 1949 S.L.T. 368 (Sc.).

[483] *Regal (Hastings) Ltd v Gulliver* [1942] 1 All E.R. 378; [1967] 2 A.C. 134 HL, above, paras 16–87 et seq.

[484] It has troubled a number of writers: see, in particular, Wedderburn [1957] C.L.J. 194; [1958] C.L.J. 93; Afterman, *Company Directors and Controllers* (Sydney, 1970), pp.149 et seq.; Beck, in Ziegel (ed.), *Studies in Canadian Company Law*, Vol. II (Toronto, 1973), pp.232–238; Sealy [1967] C.L.J. 83 at 102ff.

[485] See above, para.16–120.

[486] A wrong is only truly un-ratifiable if there is no corporate organ with the *capacity* to act. It is difficult, perhaps impossible, to conceive of circumstances where this would be the case.

[487] For further elaboration, see S. Worthington, "Corporate Governance: Remedying and Ratifying Directors' Breaches" (2000) 116 L.Q.R. 638, suggesting that the common law resolution (and so for authorisation as well as for ratification) is, as in the statute, to exclude from voting those parties who are unquestionably seen as likely to vote for improper purposes.

[488] Responding to the decision in *Re City Equitable Fire Insurance Co Ltd* [1925] Ch. 407, where a provision in the company's articles exempted the directors from liability

except in cases of “wilful neglect or default”.

[489] The earlier provisions applied also to any auditor or officer of the company. Since the enactment of the 2006 Act the provisions on auditors have developed in a separate direction and are discussed below at para.22–42, whilst officers have now disappeared from the section as well—and have not been replaced, it should be noted, by shadow directors.

[490] See *Bilta (UK) Ltd v Nazir* [2015] UKSC 23; [2016] A.C. 1 at [104].

[491] See above, paras 16–57 et seq.

[492] *Movitex Ltd v Bulfield* [1988] B.C.L.C. 104.

[493] *Movitex Ltd v Bulfield* [1988] B.C.L.C. 104 at 120–121d.

[494] See above, paras 16–55 et seq., for discussion of the issues.

[495] See above, paras 16–121 et seq.

[496] *Cook v Deeks* [1916] 1 A.C. 544 PC.

[497] *Industrial Development Consultants v Cooley* [1972] 1 W.L.R. 443.

[498] *Bhullar v Bhullar* [2003] EWCA Civ 424; [2003] B.C.C. 711.

[499] *Regal (Hastings) Ltd v Gulliver* [1967] 2 A.C. 134n. Although there may be nice questions on disclosure at the board rejection stage.

[500] See above, paras 16–90 et seq.

[501] 2006 Act s.232(3). In *Burgoine v Waltham Forest LBC* [1997] 2 B.C.L.C. 612 it was held that the phrase “or otherwise” did not extend the section beyond indemnities, etc. given by the company (as opposed to a third party), though that is now subject to the extension of the indemnity prohibition to the directors of associated companies. Presumably, the force of these words is to ban such provisions in members’ or directors’ resolutions.

[502] The provisions to be found in such insurance contracts are analysed by C. Baxter, “Demystifying D&O Insurance” (1995) 15 O.J.L.S. 537, now a somewhat dated, but nevertheless useful, article. The insurance may extend, of course, to protection against liabilities beyond those discussed in this chapter.

[503] Evidence from the US suggests that neither form of control by insurance companies is strong, probably because the directors, who control the decision where to place the insurance, would not welcome it. See T. Baker and S. Griffin, “Predicting Governance Risk: Evidence from the Directors’ and Officers’ Liability Insurance Market” (2007) 74 Chicago L.R. 487; and “The Missing Monitor in Corporate Governance: The Directors’ and Officers’ Liability Insurer” (2007) 95 Georgetown L.J. 1795. This view is concurred in by Baxter, above, fn.502.

[504] This seems to be the implication of the *Burgoine* decision, above, fn.501.

[505] 2006 Act s.234(2).

[506] Whether made by the company or not, so that the directors of an associated company must report it as well; and copies must be available for inspection by the shareholders of both companies.

[507] It has been suggested in a trade union case that, whereas a once-off ex post decision

to indemnify an officer against a fine was unobjectionable (if authorised by the union's rules), "continued resolutions authorising the refunding of fines might fairly be said to lead to an expectation that a union would indemnify its members against the consequences of future offences" and that would be against public policy: *Drake v Morgan* [1978] I.C.R. 56, 61.

[508] See above, para.16–82.

[509] Of course, the director may be appointed personally by the company to be a trustee of the scheme, but it may have been thought that, in such a case, any liability would not be incurred in the capacity of director but as trustee or appointee, so that any indemnity provision would not fall within s.232.

[510] *Equitable Life Assurance Society v Bowley* [2004] 1 B.C.L.C. 180 at [45]; *Re D'Jan of London Ltd* [1994] 1 B.C.L.C. 561 at 564. For recent application, see, for instance, *Northampton Regional Livestock Centre Co Ltd v Cowling* [2014] EWHC 30 (QB) (reversed in part by the Court of Appeal) at [159]–[170]; and *Re HLC Environmental Projects Ltd* [2013] EWHC 2876 (Ch); [2014] B.C.C. 337 at [108]. And see *Re Powertrain Ltd* [2015] EWHC 3998 (Ch) (concerning liquidators).

[511] *Customs and Excise Commissioners v Hedon Alpha Ltd* [1981] 1 Q.B. 818 CA.

[512] *Re Produce Marketing Consortium Ltd* [1989] 1 W.L.R. 745 (wrongful trading liabilities excluded).

[513] See, for example, *Selangor United Rubber Estates v Cradock (No.3)* [1968] 1 W.L.R. 1555.

[514] *Royal Brunei Airlines Sdn Bhd v Tan* [1995] 2 A.C. 378 PC, noted by Birks, [1996] L.M.C.L.Q. 1 and Harpum, (1995) 111 L.Q.R. 545. The facts of the case did not raise an issue of directors' duties. In fact, the fiduciary duty in question was owed by the company and the principle of accessory liability was used to make the director liable to the claimant for the *company's* breach of duty. But the principle of the case is clearly of general application.

[515] *Barlow Clowes International Ltd v Eurotrust Ltd* [2005] UKPC 37; [2006] 1 W.L.R. 1476 at [15] PC (Lord Hoffmann), also excusing, at [15], as "ambiguous" the earlier majority views, including his own, in favour of subjective dishonesty in *Twinsectra Ltd v Yardley* [2002] UKHL 12; [2002] 2 A.C. 164 HL (Lord Millett dissenting vigorously), which had in turn varied the views of Lord Nicholls in *Royal Brunei Airlines Sdn Bhd v Tan* [1994] UKPC 4; [1995] 2 A.C. 378 PC, who favoured an objective test. The final position represents a return to orthodoxy, and *Starglade Properties Ltd v Nash* [2010] EWCA Civ 1314; [2011] 1 P. & C.R. D.G. 17 confirms that the *Barlow Clowes* decision represents the law in England. Also see, more recently, *Bank of Ireland v Jaffery* [2012] EWHC 1377 (Ch) (in the context of a bank's former senior executive).

[516] See *Fyffes Group Ltd v Templeman* [2000] 2 Lloyd's Rep. 643; *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638, holding that the accessory's liability was not confined to damages but included a liability to account for profits which the accessory had made (but not profits made by the director); *Charter Plc v City Index Ltd* [2007] EWCA Civ 1382; [2008] Ch. 313; *Novoship (UK) Ltd v Mikhaylyuk* [2015] QB 499 CA; *Williams v Central Bank of Nigeria* [2014] UKSC 10; [2014] A.C. 1189. Notice in particular the argument that the causal test may either be different, or at least have different outcomes, when applied to a third party "dishonest assistant" rather than a director/fiduciary: *Novoship (UK) Ltd v Mikhaylyuk* [2015] QB 499 at [111]–[115] CA.

[517] Which is not to say that the first basis of liability is never available: see *Canada Safeway Ltd v Thompson* [1951] 3 D.L.R. 295.

[518] If the third party does still have the property or its identifiable proceeds to hand, then a proprietary constructive trust or tracing claim may be possible, subject only to the bona fide purchaser defence.

[519] *El Ajou v Dollar Land Holdings Plc* [1994] 2 All E.R. 685 at 700, per Hoffmann LJ.

[520] See above, para.13–57; and *Belmont Finance Corp v Williams Furniture Ltd (No.2)* [1980] 1 All E.R. 393 CA.

[521] See *Eagle Trust Plc v SBC Securities Ltd* [1993] 1 W.L.R. 484; *Cowan de Groot Properties Ltd v Eagle Trust Plc* [1992] 4 All E.R. 700; *Eagle Trust Plc v SBC Securities Ltd (No.2)* [1996] 1 B.C.L.C. 121.

[522] *Bank of Credit and Commerce International (Overseas) Ltd v Akindele* [2001] Ch. 437 CA. See also the use of this test in *Criterion Properties Plc v Stratford UK Properties LLC* [2003] B.C.C. 50 CA.

[523] Above at para.16–124.

[524] *Criterion Properties Ltd v Stratford UK Properties Ltd* [2004] 1 W.L.R. 1846 HL.

[525] As in the case of the chairman in *Regal (Hastings) Ltd v Gulliver* [1967] 2 A.C. 134n, although in that case the language of the court was not noticeably proprietary in tone.

[526] For the third-party partnership see *Imperial Mercantile Credit Association v Coleman* (1873) L.R. 6 H.L. 189; and on the sham third-party company see *Trustor AB v Smallbone (No.2)* [2001] 1 W.L.R. 1177; *Glencor ACP Ltd v Dalby* [2000] 2 B.C.L.C. 734, but note the modern analysis of these latter cases as set out in *Prest v Petrodel Resources Ltd* [2013] UKSC 34; [2013] 2 A.C. 415 SC and discussed above in paras 8–15 et seq.

[527] Contrast *CMS Dolphin Ltd v Simonet* [2001] 2 B.C.L.C. 704 at [98] et seq.; and *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 at [1516] et seq. See also *Novoship (UK) Ltd v Mikhaylyuk* [2015] QB 499 CA.

[528] But not to claims by third parties against a director, where the normal limitation periods apply.

[529] The position was changed by the Trustee Act 1888.

[530] *Gwembe Valley Development Co Ltd v Koshy (No.3)* [2004] 1 B.C.L.C. 131 at [111] and [118] CA.

[531] *Gwembe Valley Development Co Ltd v Koshy (No.3)* [2004] 1 B.C.L.C. 131 at [131] CA.

[532] *JJ Harrison (Properties) Ltd v Harrison* [2002] 1 B.C.L.C. 162 CA; *Re Pantone 485 Ltd* [2002] 1 B.C.L.C. 266.

[533] *Re Timmis, Nixon v Smith* [1902] 1 Ch. 176 at 186.

[534] *Paragon Finance Plc v D B Thackerar & Co* [1999] 1 All E.R. 400 CA.

[535] These are the definitions set out by Millett LJ in *Paragon Finance Plc v DB Thackerar & Co* [1999] 1 All E.R. 400 CA.

[536] *Williams v Central Bank of Nigeria* [2014] UKSC 10; [2014] A.C. 1189 SC. But note the strong dissent of Lord Mance. The issues are clearly difficult. The court’s

conclusions rely heavily on the judgment of Millett LJ in *Paragon Finance Plc v DB Thackerar & Co* [1999] 1 All E.R. 400 CA, although interestingly his analysis is used by both sides, and even Millett LJ, in *Paragon* at 414, had noted that "there is a case for treating a claim against a person who has assisted a trustee in committing a breach of trust as subject to the same limitation regime as the claim against the trustee".

[537] See above, paras 16–37 et seq. and for the prior statutory law see Companies Act 1985 s.309.

[538] *Hutton v West Cork Ry Co* (1883) 23 Ch.D. 654, per Bowen LJ: "Most businesses require liberal dealings".

[539] For example, changes within company law about narrative reporting (see paras 21–22 et seq.) or outside company law the increasing legal and political significance of environmental issues.

[540] See above, paras 16–15 et seq.

[541] Above, para.16–121.

[542] See above, paras 16–124 et seq.

[543] 2006 Act s.175 and see above, paras 16–103 et seq.

[544] See above, paras 16–107 et seq.

CHAPTER 17

THE DERIVATIVE CLAIM AND PERSONAL ACTIONS AGAINST DIRECTORS

The Nature of the Problem and the Potential Solutions 17–1
 The board and litigation 17–2
 The shareholders collectively and litigation 17–3
 Derivative claims 17–4
 Other possible solutions 17–7
The General Statutory Derivative Claim 17–11
 The scope of the statutory derivative claim 17–11
 Deciding whether to give permission for the derivative claim 17–17
 Varieties of derivative claim 17–22
 The subsequent conduct of the derivative claim 17–25
The Statutory Derivative Claim for Unauthorised Political Expenditure 17–29
Shareholders' Personal Claims 17–32
Against Directors
 Reflective loss 17–34
Conclusion 17–39

THE NATURE OF THE PROBLEM AND THE POTENTIAL SOLUTIONS

17–1

The duties discussed in the previous chapter are not likely to play a significant role in the governance of British companies if, for one reason or another, they are rarely enforced, either in actual litigation or in the threat of it. However, it is important not to jump from that banality to the conclusion that in every case where it is arguable that a director has infringed his or her duties to the company, the company should be contemplating litigation. The test, it is submitted, is whether "the interests of the company" require that litigation be instituted, and that question can be answered only on the facts of a particular case. It is easy to imagine many reasons why litigation would actually leave the company worse off than it was before. There may be doubts about whether a judgment in favour of the company will be obtained, either because of disputes about the law or because of difficulties of proving the events said to constitute the breach of duty. Or the defendants may not be in a position to meet the

judgment even if the litigation is successful. Or the senior management time spent on the litigation might more profitably be used elsewhere or, finally, whilst winning the legal arguments and obtaining an enforceable remedy, the company may suffer collateral reputational harm which outweighs the gain from the litigation.[1] In other words, the decision whether to initiate litigation in respect of an alleged breach of directors' duty will not always be an easy one, and a negative decision is not necessarily a sign that the company is being too lax towards its directors.

On the other hand, a decision not to sue a director may indeed be heavily influenced by that director's personal interests, rather than those of the company. The conflicts of interest which we analysed in the previous chapter are not magically excluded from corporate decision-making on litigation. Thus, the need is to distinguish between litigation decisions (especially decisions not to sue) which are in the interests of the company and those which are not. Given that such decisions require a close analysis of particular cases, it is impossible to specify in advance categories of case in which litigation should always be brought and categories where it should never be. The role of the law is thus to determine the person or persons who can safely be entrusted with taking the decision whether in a particular case litigation to enforce the company's rights should be initiated or not.

The board and litigation

17–2

One possible solution to this question would be to say that the litigation decision is like any other decision the company might take and so should be left to the normal decision-making processes of the company. In most cases this approach would have the consequence of putting the litigation decision exclusively in the hands of the board. That the board will have the power under the constitutions of most companies to initiate litigation against wrongdoing directors seems clear, for it will be part of its standard management powers.[2] That the board may be unwilling always to sue the wrongdoing director even when it is in the best interests of the company to do so, however, seems

equally clear. The wrongdoers may be a majority of the board or may be able to influence a majority of the board, and the same incentives which operated to cause the directors to breach their duties in the first place may cause them to utilise their board positions so as to suppress litigation against them.

Of course, this is not always the case. The board may act in an independent-minded way[3] or, perhaps more likely, the directors may have lost the influential positions on the board which they had when they committed the original wrongdoing. Thus, the previous board may have been replaced by a new set of directors as a result of a takeover[4] or, the company having become insolvent, the board has been replaced by an insolvency practitioner, acting in one capacity or another on behalf of the creditors.[5] Indeed, the importance of litigation against wrongdoing directors (and other officers of the company) in this situation is recognised in s.212 of the Insolvency Act 1986, which gives liquidators (and others) in a winding up the benefit of a summary procedure for the enforcement of, inter alia, breaches of fiduciary duty and of the duty of care on the part of directors and to recover compensation by way of a contribution to the company's assets of such amount as the court thinks just. Under s.212 the liquidator sues in his or her own name but in substance on behalf of the company, which will be the recipient of any recovery.[6] Crucially, however, the courts regard the section as purely procedural so that it does not extend the range of the duties to which directors are subject.[7]

The shareholders collectively and litigation

17–3

Despite these examples of litigation against wrongdoing directors being initiated by those in charge of its management, it would obviously be unsound policy to leave such decisions exclusively with the board of the company. If the board decides to sue, all well and good, but it may result in less litigation than is optimal (i.e. than the interests of the company would dictate) if the board has exclusive control over the initiation of litigation in the company's name. In recognition of this argument, the common law seems to take the view that, even if the board does not wish to sue, it is open to the shareholders collectively by

ordinary resolution to decide to do so.

Although sensible enough in policy terms, the reasoning by which the shareholders collectively come to have concurrent powers with the board to initiate litigation against wrongdoing directors is something of a mystery, since, as we saw in Ch.14, the allocation of a power to the board by the articles operates, in the absence of an express reservation, to remove that power from the shareholders. Consequently, in the absence of an express provision in the articles conferring upon the shareholders the power to initiate litigation, a shareholder decision to that effect would need to be passed by a special resolution, because that is the equivalent of a resolution to alter the articles. However, the common law appears to regard an ordinary resolution to initiate litigation as sufficient. This result can be rationalised on the basis that there is a rule of law, designed to promote shareholder control of the litigation decision, which overrides in this limited respect the allocation of functions by the articles. So, despite what the articles may say about the directors having general powers of management, it may be that the decision to sue may still be taken by an ordinary majority of the shareholders.[8]

However, it is still not obvious that the test of promoting the interests of the company will always be correctly applied to the litigation decision by the shareholders collectively. It is not impossible that the directors will control the general meeting through their own shareholdings, whether alone or in combination with those other shareholders whose decisions they can influence. Although the CLR proposed[9] to discount the votes of interested directors and those under their influence on decisions to sue, the Act applies that rule only to ratification decisions. If the shareholders do not purport to forgive the director’s wrongdoing, but simply decide not to sue him or her (an inherently temporary commitment, unless the decision amounts to a waiver), it appears at first blush that the director in question is free to vote on that question.

Further, even in the absence of wrongdoer control of the general meeting, it is not obvious that the general meeting will come to consider the exercise of its power to initiate litigation. The wrongdoing directors, presumably, will not take steps to put the matter before the general meeting, unless they think the

general meeting will support them, and so the shareholders as a whole may simply remain in ignorance of the fact that there is an issue for them to discuss. One or more shareholders may know of at least some of the relevant facts, and may seek to use their powers, discussed in Ch.15, to have the matter put on the agenda of an AGM or to have a meeting called to discuss the issue. In both cases, the support of substantial numbers of fellow shareholders will be required to force the company to take these steps and the support of half the shareholders present and voting at the meeting actually to pass a resolution in favour of litigation.

Derivative claims

17–4

In these circumstances, it is hardly surprising that provision was eventually made for giving individual shareholders standing to pursue litigation on behalf of the company against the alleged wrongdoing directors, although subject to appropriate safeguards. Indeed, the principle just articulated can be said to have been accepted since 1843, when the *Foss v Harbottle* principle was formulated, because the substance of the controversy ever since has centred, not on whether such litigation should be permitted, but on the definition of the "appropriate safeguards".

On the one hand, relatively free access to the courts for individual shareholders suing on behalf of the company (or "derivatively", as the term is) will increase the levels of litigation against wrongdoing directors. If it is thought that the levels of such litigation are sub-optimal, because of the ability of the wrongdoers to influence litigation decisions at either board or shareholder level, then such an increase in litigation is likely to be welcomed. On the other hand, it is difficult to demonstrate that such litigation brought derivatively by individuals will invariably be brought in the interests of the company. It may be initiated more to promote the personal interests of the shareholder than the interests of the company (i.e. the shareholders as a whole). This is especially a risk since, as we shall see further below, in a derivative claim, recovery in the litigation goes to the company, not to the individual shareholder bringing the litigation. A person with a small shareholding thus

has little financial incentive to sue on behalf of the company, because the return to that person will be, at most, a percentage of the recovery which reflects the percentage of the shares of the company that person holds.[10] So, litigation brought by such a person runs a risk of being motivated by concerns other than to increase the value of the company's business.[11] Of course, the larger the shareholder, the less this particular risk, but, by the same token, the lower the obstacles are which prevent such a shareholder from using the mechanism of the general meeting.

17–5

The English common law had always been more impressed by the risk of derivative claims being motivated by personal objectives than by the risk that confining derivative claims would lead to less litigation than the company's interests required. Accordingly, the common law, whose cumulative decisions in this area were referred to as "the rule in *Foss v Harbottle*",[12] permitted individual shareholder access to the courts on behalf of the company on only a very limited basis. The question which the rule in *Foss* set itself to answer was whether the individual shareholder should be allowed to sue derivatively or whether the litigation question would be better left to the shareholders as a whole.[13] Unfortunately, the rule was one-sided in its operation, i.e. it was effective to exclude the derivative suit if the law took the view that the decision of the shareholders as a whole should be relied upon, but it contained no mechanism whereby a meeting of such shareholders could be summoned to consider the question, and nor did it deprive interested directors of their votes.[14] Consequently, the rule did nothing to correct the deficiencies of group decision-making by the shareholders, as identified above, but simply made it difficult for the individual shareholder to sue instead.

17–6

These problems with the rule in *Foss v Harbottle* had become increasingly apparent over time and in 1997 the Law Commission advanced proposals for taking the law in a new direction by allocating the litigation decision to someone external to the company, namely, the court.[15] These proposals were largely endorsed by the CLR and are now embodied in

somewhat different form in the Companies Act 2006. The Act now provides that derivative claims cannot be brought at common law but can only be brought under the statute (at least where the statute applies[16]), and so, to that extent at least, the rule in *Foss v Harbottle* need no longer be examined—to the relief of almost all those involved in company law.

Other possible solutions

17–7

Before turning to an analysis of the statutory provisions on the derivative claim, it is perhaps worth noting that the three mechanisms noted above—to have litigation decisions taken by the board, by the shareholders as a whole, or by individual shareholders—do not exhaust the possible mechanisms for handling this problem, even within the company. There are other obvious options, and to some extent the final form of the current statutory derivative action cherry-picks the better aspects of each of them.

17–8

One alternative might be to give the litigation decision to a sub-set of the members of the board, such as the uninvolved board members or its independent NEDs. As we have seen,[17] this is the approach taken in the Act to the authorisation of conflicts of interest, but not to the ratification of breaches of duty, where a shareholder decision is required. However, since the decision not to sue defaulting directors is akin to a ratification decision, it seems consistent not to use a sub-set of the board to take the litigation decision either. On the other hand, there are benefits to having director-input, especially given the powerful duties owed by directors to their companies. Recognising this, the statutory derivative framework makes it mandatory for the *court* itself to have regard to the likely approach of a disinterested director, acting in compliance with the good faith duty in s.172, to the litigation question (s.263(2)(a)). Equally, however, the ratification model, too, has its attractions, and, backing both horses, the statutory derivative claim also requires the court to consider the actual or likely views of the non-involved shareholders (i.e. those who could have voted to ratify) (ss.263(2)(b) and (c) and (3)(c) and (d)). All this is explored

further below.

17–9

A further alternative would be to entrust the litigation decision to some group of shareholders, lying between the shareholders as a whole and the individual shareholder. The common law has not used this device and, although it has been used extensively in German law, the common law was perhaps right to reject it, since fixing the appropriate percentage has proved difficult. However, the strategy has been introduced into British law by the legislature in one specific context, as we will see later.[18] Where the company's claims arise in consequence of unauthorised political donations or expenditures made by the company's directors, then the right to sue in the name of the company is conferred, not on individual shareholders, but on an "authorised group" of members, defined by statute to be a minority of a particular size, but then at the same time excluding individual shareholders from suing, on the basis presumably that they might be motivated by reasons which did not relate to the company's interests.

17–10

A final and more radical approach would be to give the right to commence a derivative action to someone outside the company altogether. This is unlikely to be a sensible approach to the general run of companies, where it is difficult to identify anyone outside the company with a legitimate interest in commencing litigation on its behalf. However, some vestiges of this technique might be thought evident in the ability of a liquidator or administrator to bring all manner of claims on behalf of the company,[19] or the Secretary of State specifically to seek compensation orders against directors and other persons who are the subject of disqualification orders or undertakings where their conduct has caused loss to one or more creditors of their insolvent company.[20] Similarly, the Regulator of Community Interest Companies ("CIC") may bring proceedings (subject to a right of appeal by any director of the CIC to the court, which then has broad powers to confirm, discontinue or set terms for the litigation).[21] If the Regulator takes this step, the company must be indemnified by the Regulator against the costs and

expenses of the litigation, unless, presumably, the court orders the costs should be borne by the company. This perhaps highlights a further concern with this approach in the context of viable companies.

The General Statutory Derivative Claim

The scope of the statutory derivative claim

The court's gatekeeper role

17–11

The novelty of the general statutory derivative claim, contained in Pt 11 of the 2006 Act, is that it places the gatekeeping decision about whether it is in the interests of the company for litigation to be commenced in any particular case in the hands of the court, i.e. an outsider to the company.[22] True, a shareholder must take the first initiative, but after the claim form has been issued, a shareholder seeking to bring a derivative claim must seek the permission of the court to take any substantive steps in the litigation (other than, in the normal case, informing the company that the claim has been issued and that the shareholder is applying to the court for permission to continue the claim).[23] It was already the case that the court had a role in the early stages of derivative claims at common law, but this was to check that the claimant had standing to sue under the rule in *Foss v Harbottle*.[24] Under the new general derivative claim the court has a broader role, namely, to exercise a constrained discretion to decide whether it is in the best interests of the company for the litigation to be brought. This new procedure has the advantages, on the one hand, that the individual shareholder can easily obtain a decision on the central question (whether it is in the interests of the company for the litigation to be brought), whilst, on the other hand, the individual shareholder's enthusiasm for derivative litigation is subject to the filter of a judge having to be convinced that this particular litigation on behalf of the company is desirable.

17–12

Whilst it is true that many of the policy issues which underlay the rule in *Foss v Harbottle* reappear under the statutory

procedure,[25] they appear now not as absolute bars to a derivative claim, but as factors the court must take into account in deciding whether to allow the litigation to proceed. Thus, a claimant who is turned away by the court will receive a judgment explaining why a derivative claim in the particular case is not in the company's interests, whereas previously the court's decision said nothing about the desirability of the litigation from the company's point of view, but simply that the litigation decision was a decision for the shareholders generally rather than the individual shareholder.

The types of claims covered by the statutory regime

17–13

There are a good number of limitations to the statutory jurisdiction. The statute applies only to derivative claims or derivative proceedings, i.e. claims brought in respect of a cause of action vested in the company and seeking relief on its behalf.[26] Since the individual shareholder has no power to initiate litigation in the company's name, but the company is to be bound by and is the potential beneficiary of any judgment or order made in the derivative litigation, the Civil Procedure Rules require the company to be made a defendant in the litigation, even though it is the company's rights which are being enforced. Thus, the claim appears in the form of "Shareholder v Director and Company".[27] This can be a cause of confusion, unless it is remembered that the company is only a nominal defendant and that the real defendants are the directors.[28]

17–14

Most derivative claims can now be brought only under the Act,[29] either under the Pt 11 provisions discussed here or as a result of a court order made in unfair prejudice provisions discussed in Ch.20. The rule in *Foss v Harbottle* is thus almost entirely consigned to the dustbin. On the other hand, not all claims a shareholder might want to bring on behalf of the company may be brought under Pt 11 of the Act. The Act contemplates as derivative claims only claims "arising from an actual or proposed act or omission involving negligence, default, breach of duty or breach of trust by a director of the company".[30] Where the company has a cause of action arising in some other way (for

example, a claim against a non-directorial employee), the policy seems to be that a derivative claim is not available, and the litigation decision should be taken according to the division of powers contained in the company's articles of association (i.e. normally exclusively by the board). It is only where the directors themselves are in breach of duty that the statutory derivative procedure is available, because that is when the risk of conflicted decision-making by board or shareholders generally arises. However, although the company's cause of action must arise out of breach of duty, etc. by the directors, the defendants are not necessarily limited to and may not even include the directors themselves.[31] We have seen above[32] that third parties may become liable to the company as a result of their involvement in directors' breaches of duty and, in such cases, the derivative claim may be used against the third party, even if no director is sued.

17–15

Directors for the purpose of Pt 11 include former and shadow directors,[33] but this is less significant than it may seem. The Pt 11 rules do not alter the circumstances in which former or shadow directors owe duties to the company; they merely ensure that, where such duties are owed, the derivative claim can be used to enforce them. We have discussed in the previous chapter the circumstances in which the general duties of directors do in fact fall upon former or shadow directors.[34]

Shareholder claimants

17–16

A shareholder may bring a derivative claim in respect of a cause of action which arose before he or she became a member of the company.[35] On the other hand, only members of the company can bring derivative claims: a former member cannot sue even in respect of a matter which occurred when he was a shareholder.[36] This reflects the legal position of shareholders generally: the shareholder has an interest in the assets of the company as they stand during his or her membership. That interest is not confined to assets acquired during the shareholder's membership. On the other hand, once membership is relinquished, so is the interest in the company's assets, including in assets the shareholder or even

the company was unaware were possessed during the period of membership (for example, the shareholder who sells the week before oil is discovered below land owned by the company just has to accept that loss).

However, there is one useful statutory extension of the notion of a "member". This term is not confined to those who have been entered on the company's register of members—which is a standard requirement for membership[37]—but is extended to those to whom shares have been transferred or transmitted by operation of law, even if not entered on the register of members.[38] The usual example of transmission is on death or bankruptcy. The extension of the meaning of membership to include mere transferees is especially useful in quasi-partnership companies where the directors normally have power under the articles to refuse to admit new members and are often prepared to use the power to keep out of the company those with whom they do not wish to work. Making the derivative claim available may enable them to challenge their exclusion or, at least, to challenge action by the controllers of the company—for example, siphoning assets out of the company to the detriment of the would-be member—designed to induce the would-be member to transfer the shares to the other members at a low price. Such action by the controllers carries the risk that the would-be member will bring a derivative action to restore the company's position. A similar and even more important extension of the term "member" is to be found in the unfair prejudice provisions, discussed in Ch.20.

Deciding whether to give permission for the derivative claim

17–17

The central issue under the new statutory procedure is the nature of the discretion vested in the court to approve or not the continuance of the derivative claim. That discretion is broad but not unconstrained. The statute proceeds in three stages by requiring the claimant, first, to make out a prima facie case; then identifying three situations in which leave must be denied[39]; and then, assuming the case does not fall within any of those three situations, laying down a number of factors the court must take

into account when deciding whether to give permission to proceed with the derivative claim.

The prima facie case and judicial management of proceedings

17–18

The decision whether to grant permission for the derivative claim to proceed will potentially generate a wide-ranging enquiry before the court. Although the company is a potential beneficiary of the derivative action, there is a risk that companies might find themselves subjected to overly-high levels of proposed derivative claims by shareholders who have a fanciful or even self-interested view of the likely benefits to the company from such litigation. Companies would then be distracted from more important tasks by having to explain in court why such claims should not be allowed to proceed further. In partial recognition of this issue, the statute contains a procedure whereby the court's initial consideration of the claim is on the basis of the evidence submitted by the member alone. If the court does not at this stage think the applicant has established a prima facie case for permission to be granted, the application will be refused. At this initial stage, the company is not a respondent to the application to the court for permission to continue the claim and so is not required to file evidence or be present at any hearing. Only if the application survives this initial examination will the company be invited to file evidence as to whether permission should be granted or not.[40]

Mandatory refusal of permission

17–19

Two of the situations where permission must be denied are obvious: where the actual or proposed breach of duty has been authorised or ratified in accordance with the rules set out in the previous chapter.[41] In such a case, there is no, or is no longer, any wrong by the director to the company, and, just as the company cannot complain of it, neither can the shareholder suing derivatively. The important prohibition is thus the third one. The court must deny permission to continue the derivative claim where a person acting in accordance with the directors'

core duty of loyalty (to promote the success of the company for the benefit of its members) "would not" seek to continue the claim.[42] Since the core duty of good faith, set out in s.172, is the modern version of the notion of acting "in the interests of the company", it is sensible to use it as the test in relation to the derivative claim, and indeed it is used both at this mandatory dismissal stage and again at the permissive stage. At this mandatory stage, the words have been interpreted as meaning *no* director would seek to pursue the claim.[43] At the permissive stage, more flexibility is both warranted and inevitable, as noted below.

Discretionary grant of permission

17–20

If the proposed litigation passes the negative test (i.e. will it fail to promote the success of the company?), one might have thought that whether it should be allowed to proceed should depend on whether it can pass that test put positively, i.e. will the litigation promote the success of the company?—or, rather, that all that is required is the positive version of the test. However, the tests which are to be applied to the proposal if it passes the negative test are more varied than that.

The statute sets out seven factors[44] which the court must take into account in deciding whether to allow the litigation to proceed once it is considered to have passed the negative test.[45] To be sure, one of those tests is "the importance that a person acting in accordance with section 172 would attach to continuing it"[46] (see below), but that is only one of the tests. The thinking behind the drafting may have been that the court should not be under pressure to allow the litigation to proceed where its financial contribution to the company was likely to be small and there were other factors pointing against the litigation,[47] though it is doubtful if the term "success" in s.172 is to be construed solely in financial terms. Alternatively, it may have been thought desirable to give the court more guidance on the factors to be considered than a single general test would provide.

17–21

The further tests, which are explicitly stated not to be exhaustive

of the considerations the court should take into account,[48] are as follows:

- Whether the shareholder seeking to bring the derivative claim is acting in good faith—or whether, for example, the litigation is motivated by personal interests.
- The importance that a person acting in accordance with s.172 would attach to continuing it. In that vein, it should be noted that there is one crucial difference between the court's role when it is hearing an allegation that a director has breached the core duty of loyalty and its role in the statutory derivative claim. In the former case, provided the director has properly formed a good faith view as to what promoting the success of the company requires, the court has no power to interfere. Under the statutory procedure, however, it does not appear that such deference is to be accorded at the permissive stage to the individual shareholder's decision to initiate derivative proceedings. Rather, the court will have to formulate its own view about whether the proposed litigation will fail to promote the success of the company.[49] This is difficult: as Lewison J noted in *Iesini v Westrip Holdings Ltd*,[50] it is "essentially a commercial decision, which the court is ill-equipped to take, except in a clear case."
- Whether the act or omission which constituted the breach of duty is likely to be ratified by the company (i.e. by the shareholders collectively) or—expressed as a separate test—whether in the case of a proposed breach of duty the act or omission is likely to be authorised or ratified by the company. Authorisation, as we saw in the previous chapter,[51] can sometimes be given by the non-involved members of the board. These two tests reflect a factor which was very important under the rule in *Foss v Harbottle*, but, whereas at common law the possibility of shareholder approval (normally referred to as ratifiability) of the wrong normally barred access to the derivative claim,[52] under the statutory procedure the prospect of either authorisation or ratification[53] is not a bar to the derivative claim but simply a factor weighing against giving permission. The removal of ratifiability as a bar to the derivative claim is one of the most important changes brought about by the statutory procedure.

Under the common law the derivative claim was largely excluded as a mechanism for the enforcement of ratifiable breaches of duty, and that perhaps goes some way to explaining the rise of the concept of "un-ratifiable breaches".[54]

- Whether the company (whether through a decision of the board or of the shareholders) has decided not to pursue the claim. What is at issue here is a board or shareholder resolution which, whilst not seeking to ratify the directors' breach of duty, nevertheless contains a decision not to sue the directors.[55] Such a resolution may constitute an argument against allowing the derivative claim to continue, provided the decision was not influenced by the alleged wrongdoers,[56] but it is only a factor to be taken into account. Again, this is a significant change from the common law. Under the common law regime, even a non-ratifiable wrong could not be pursued derivatively unless the alleged wrongdoers were in control of the general meeting. Under the statutory procedure, permission to continue the litigation can be granted by the court even if the alleged wrongdoers are not in control of the shareholders' meeting.[57] No doubt, however, a decision by the shareholders, uninfluenced by the wrongdoers, not to initiate litigation will count heavily against the derivative claim.
- Whether the facts give rise to a cause of action which vests in the member personally and which he or she could pursue as such rather than through a derivative claim on behalf of the company. Perhaps the most obvious claim a shareholder might bring is a petition based on unfairly prejudicial conduct by the controllers of the company, dealt with in Ch.20.[58] Apart from that, the possibilities for a personal action will be limited, since, normally, directors' duties are owed to the company, not to shareholders individually.[59] The shareholder may prefer a derivative claim because the costs of it will fall on the company (see below), but, given the courts' firm view that, outside the area of unfair prejudice, recovery cannot be obtained in a personal claim for loss to the shareholder which reflects the company's loss, the availability of the personal claim may not be a strong

argument against allowing the derivative claim to proceed, even where both causes of action exist.[60]

- Finally, and by way of separate subsection, the court is required to have "particular regard" to any evidence before it of the views of the other shareholders who have no personal interest in the matter.[61] Again, this reflects an important element of the rule in *Foss v Harbottle*, which, however, appeared to say that the individual shareholder did not have standing to bring a derivative claim if a majority of the independent shareholders were against the litigation.[62] Now those views are only a factor, but are likely to be a powerful factor for or against the derivative claim where reliable evidence of those views can be provided to the court.

Varieties of derivative claim

Taking over existing claims

17–22

The discussion so far has assumed a derivative claim being brought where the company itself has failed to initiate litigation. No doubt this is the core case. However, the statute also specifically provides for a shareholder to apply to the court for permission to take over as a derivative claim litigation which the company has commenced.[63] The reasoning, perhaps, is that without this protection the directors of a company might stultify potential derivative claims by instituting litigation in the company's name but then failing to pursue it with vigour. The statute deals with this problem by allowing a shareholder to apply to take over the company's litigation in derivative form.

Of course, the company's claim must be one which falls within the scope of the derivative claim and the court must apply to the shareholder's application for permission to take over the claim the same criteria it would have applied had the litigation been commenced in derivative form.[64] In addition, the shareholder must show why he or she should be allowed to take over the company's claim. The permitted grounds are that the proceedings have been conducted by the company in a way which constitutes an abuse of the process of the court or that the company has not prosecuted the litigation diligently or that for

other reasons it is "appropriate" for the shareholder to be substituted for the company.[65] However, if the company has already settled the case against the directors, there would appear to be no basis upon which the section could operate.

17–23

The statute even provides a mechanism for a shareholder to apply to the court to take over an existing derivative claim. The point seems to be to prevent the directors from stultifying litigation against themselves by securing a friendly shareholder to commence litigation in derivative form but then not prosecute the claim effectively.[66] The grounds for taking over a derivative claim are the same as for taking over a claim begun in the company's name, but of course the tests for giving permission to commence a derivative claim do not have to be applied to the claim to take over an existing derivative claim, since they will have been met at an earlier stage. It should be noted that a claim to take over an existing derivative claim can be made whether the claim was originally commenced in derivative form or was commenced by the company but later taken over derivatively; and whether the shareholder from whom the applicant wishes to take over the litigation is the originator of the litigation, took the litigation over from the company or is someone later down the chain of shareholders who have been pursuing the claim derivatively.[67]

Multiple derivative claims

17–24

The statute does not, however, cater for the possibility of "multiple derivative claims", being claims brought by a member of a corporate member of the wronged company, contrary to the suggestion of the Company Law Review.[68] A restrictive construction of the exclusive nature of the statutory scheme would mean that such actions could not be brought either under the statutory scheme (not falling within the s.260(1) definition of a derivative claim) nor at common law, but this construction has been rejected in recent cases, which have instead held that such claims can still be brought under the common law and that the court's jurisdiction in that respect has not been taken away by the statutory scheme.[69]

The subsequent conduct of the derivative claim

General issues

17–25

The statutory provisions governing the general derivative claim say nothing about the subsequent conduct of the derivative claim, except that the court is given a general power to give permission for the claim to continue "on such terms as it thinks fit".[70] It is perhaps odd that the subsequent conduct of the general derivative claim is less clearly regulated than that of the special derivative claim for unlawful political donations discussed next. In particular, there is no counterpart in the statute or Civil Procedure Rules to the duties of care and loyalty which are imposed on those bringing a derivative claim in respect of unauthorised political donations.[71] It may be that the courts could develop such provisions on the basis of the quasi-agency position in which a person bringing a general derivative claim is placed.

Information rights

17–26

Those bringing general derivative claim also lack the specific information right conferred by CA 2006 s.373 in favour of those seeking derivatively to recover an unauthorised donation from the directors. It is possible that the court might deal with this matter when setting the conditions for the conduct of the general claim. However, another avenue may be open to secure the board's co-operation with those responsible for the general derivative claim. By permitting the derivative action, the court will have determined that a director acting in accordance with the core duty of loyalty would bring the litigation and that there are no other factors which outweigh that conclusion. In that situation it will be difficult for the board, consistently with their duties, not to co-operate fully with the shareholder who has charge of the derivative claim. Indeed, it may be wondered whether its duties do not require the board to give serious consideration to bringing the claim in the company's name, though presumably the court's permission would be needed for the derivative claim to be superseded by a corporate one and the

court might be reluctant to so agree if the board's previous attitude towards the claim had been one of unmitigated hostility.

Costs

17–27

The important case of *Wallersteiner v Moir (No.2)*[72] established that a consequence of the derivative claim being to enforce the company's rights is that, where permission is given, the company should normally be liable for the costs of the claim, even, in fact especially, where the litigation is ultimately unsuccessful. This decision is now reflected in the Civil Procedure Rules which provide that "the court may order the company … to indemnify the claimant against any liability for costs incurred in the permission application or in the derivative claim or both".[73] This is a very important provision because, without it, the financial disincentive for a shareholder to bring a derivative claim would be very strong, no matter how relaxed the standing rules. On these rules, however, if a shareholder can obtain permission from the court to bring a derivative claim, there should be no financial disincentive to proceed.[74]

Restrictions on settlement

17–28

The Civil Procedure Rules ("CPR") also deal with one further post-permission issue. The derivative litigation is brought to enforce the company's rights for the company's benefit, but a common perversion of the procedure, known in some quarters as "greenmail", involves the shareholder being primarily interested in obtaining some private benefit from the litigation, normally as part of the terms on which the company's claim against the directors is settled. To discourage such behaviour, the CPR empower the court to order that the claim may not be "discontinued, settled or compromised without the permission of the court", thus giving the court the opportunity to scrutinise the terms of any settlement.[75]

The Statutory Derivative Claim for Unauthorised Political Expenditure

17–29

As noted earlier, minority group shareholder action on behalf of the company has been introduced into British law by the legislature in one specific area. Under what is now Pt 14 of the Act, a company's policy to make political donations and incur political expenditure is subject to approval by the shareholders in general meeting.[76] If this requirement is contravened, every director (and shadow director) of the company at the relevant time is liable to pay to the company the amount of any donation, or expenditure and damages in respect of any loss or damage suffered by the company in consequence of the unauthorised donation or expenditure.[77] Section 370 then provides for a statutory derivative claim in order to enforce the directors' liability. However, this right to sue in the name of the company is conferred, not on individual shareholders, as in the general derivative action, but on an "authorised group" of members, meaning, in the case of a company limited by shares, the holders of not less than 5 per cent of the nominal value of the company's issued share capital or any class thereof; in the case of a company not limited by shares by not less than 5 per cent of its members; or, in either case, by not less than 50 members of the company.[78] It seems that the aim of confining the right to sue to a small group of shareholders was to provide a realistic chance of enforcement action being brought whilst at the same time excluding individual shareholders from suing, who might be motivated by reasons which did not relate to the company's interests. There is no added role for the court to act as gatekeeper giving permission to proceed.

17–30

Having conferred a statutory right of action in relation to donations upon the approved group of members, the Act also takes some steps to facilitate the use of the power by the minority but also to ensure that the power is exercised by the group in the interests of the shareholders as a whole. In particular, the fact that the statutory derivative claim is brought on behalf and in the interests of the company is emphasised by a number of features of the legislation:

(i) The same duties (of care and loyalty) are owed to the

company by the authorised group as would be owed to the company if the claim had been brought by the directors of the company. However, action to enforce these duties against the minority cannot be taken without the leave of the court, presumably so as to protect the minority from the tactical use of counter-litigation by the alleged wrongdoing directors.[79]

(ii) Proceedings may not be discontinued or settled by the group without the leave of the court and the court may impose terms on any leave it grants.[80] This provision reduces the risk of "gold digging" or "greenmail" claims where the purpose of the claim is to extract from the company a private benefit for the group in exchange for the settlement of the claim rather than to advance the interests of the shareholders as a whole.

(iii) The group may apply to the court for an order that the company indemnify the group in respect of the costs of the litigation and the court may make such order as it thinks fit. The group is not entitled to be paid its costs out of the assets of the company other than by virtue of an indemnification order or as a result of a costs order made in the litigation in favour of the company.[81] These provisions both recognise the principle that the company in appropriate circumstance should pay for derivative litigation which is brought for its benefit (as is the case with the general statutory derivative claim)[82] and make it less easy for the group to pursue "gold digging" claims in the guise of generous payments by the company to the group by way of recompense for costs incurred in the litigation.

(iv) On the other hand, there is conferred upon the group an express right to all information relating to the subject-matter of the litigation which is in the company's possession, so that the group can better decide in what way to prosecute the litigation. This right extends to information which is reasonably obtainable by the company (for example, from another group company). The court may enforce this right by order.[83]

17–31

This is quite a different model from that applying to the general

derivative claim. Section 370(5) provides that the existence of the specific procedure here does not bar access to the general statutory derivative procedure. The general procedure will normally be available because payment of an unauthorised donation or the incurring of unauthorised expenditure by the director will usually constitute a breach of the director's general duties. Whether the specific or the general statutory derivative claim will be more attractive is not clear.

Shareholders' Personal Claims Against Directors

17–32

The above description of the problem underlying the rule in *Foss v Harbottle* has been couched in terms of the enforcement by individual shareholders of duties owed by directors to their company. Where the duty is owed by the director to the shareholder personally, the above analysis ought to be irrelevant. If the shareholder is also the right-holder, it would seem in principle to be entirely a matter for his or her discretion whether the right is enforced. So much is indeed recognised in the statute, Pt 11 of which applies only to claims to enforce "a cause of action vested in the company".[84]

17–33

However, there are two points which call for comment. First, the range of rights owed by directors to shareholders personally is limited. We saw in the previous chapter that the general duties of directors are only rarely owed to individual shareholders rather than to the company.[85] In addition, however, the directors may owe duties to shareholders under the general law. In either case, the duties typically arise where the directors give advice to the shareholders or otherwise take action in relation to the exercise by the shareholders of the rights attached to their shares, including the sale of the shares. So although these duties, under the general law or under company law, should be freely enforceable, it is not often that shareholders have such rights to enforce.

Reflective loss

17–34

Secondly, even where the shareholder has a personal claim, the shareholder's claim may be restricted by the "no reflective loss" principle. What is required to trigger the principle is that both the company and the shareholder should have a claim against the directors arising out of the same set of facts, and part or all of the shareholder's loss can be seen as mimicking the loss caused by the directors to the company. Notice that the rule does not merely prevent potential double recovery by the shareholder: that would be unexceptional. Rather, it prevents the shareholder's *claim*, insisting that in these circumstances the shareholder's rights will be satisfied, if at all, through the company's recoveries. Perhaps predictably, there are exceptions. But we look to the general rule first. The rule applies equally to claims which the shareholder may have against the director other than in his or her capacity as a member of the company (so that the rule applies to claims the shareholder brings as unsecured creditor or employee[86]). In this respect a creditor or employee who is also a shareholder is worse off than if this were not the case. The no reflective loss rule applies whether or not a derivative claim is available to enforce the company's rights and whether or not the shareholder chooses to bring a derivative claim against the director as well as a personal claim.[87]

17–35

The principle can be illustrated by the decision of the Court of Appeal in *Prudential Assurance Co Ltd v Newman Industries Ltd (No.2)*,[88] where the directors in breach of duty to the company had sold assets at an undervalue to a third party and had then obtained the shareholders' consent to the transaction by issuing a misleading circular convening a meeting of the shareholders, thus committing a wrong by way of misrepresentation against the shareholders. The Court of Appeal held that the personal claim should lead (in effect) to no recovery for the shareholder on the facts, because the only relevant loss suffered by them consisted in a diminution in the value of their shares, which was simply a reflection of the loss inflicted on the company by the sale of its assets at an undervalue, which was a wrong only to the company. The principle that a shareholder cannot recover a loss which is simply reflective of the company's loss, even though the

shareholder’s cause of action is independent of the company’s, was confirmed by the House of Lords in *Johnson v Gore, Wood & Co.*[89]

17–36

Several rationales could be put forward for this rule limiting recovery. It might be thought to be justifiable on the grounds of preventing double recovery, i.e. to prevent the wrongdoer having to compensate both the shareholder and the company for, in effect, the same loss. However, this result could be avoided simply by preventing the company from recovering if the shareholder has recovered, and vice versa. However, the rule in fact goes further than that by always subordinating the shareholder’s claim to that of the company. It applies whether or not the company has recovered from the directors. Why should this be? It might be said that it addresses the following issue: if the shareholder is allowed to recover first, he or she effectively moves assets out of the company, to the potential detriment of the creditors of the company, who can sue the company but not the shareholders. This seems a good reason for often giving the company’s claim priority, but, where the company has distributable assets, the creditors cannot be said to be prejudiced by this indirect form of distribution to the shareholders. A further argument might be that the initiation of a decision to distribute is normally entrusted by the articles to the board and certainly is not given to individual shareholders. The “no reflective loss” principle thus supports the principle of centralised management of the company’s assets through the board.

17–37

The strength of these arguments has to be weighed against the fact that, where the principle applies, the shareholder’s recovery is limited even though the company may not recover its loss from the directors, so that the shareholder’s loss is not made good through the company either. Thus, the rule applies even where the company is incapable of enforcing its claim, for example, because it has been compromised or is subject to limitation or simply because the defendant has a good defence to the company’s, but not to the shareholder’s, claim.[90] This point

led the Court of Appeal in *Giles v Rhind*[91] to refuse to apply the "no reflective loss" principle at least in the case where it was the wrongful act of the defendant himself which had put the company in a position where it could not pursue its claim. Here, by exception, if the shareholder has a separate cause of action, he or she should be able to recover damages in full, even for reflective losses.

17–38

However, the "no reflective loss" principle does not prevent the shareholder from suing to recover a loss which is separate and distinct from that suffered by the company. The distinction between reflective and separate losses is illustrated in *Heron International Ltd v Lord Grade*,[92] where, in the context of a proposed takeover, the board preferred the lower bidder to the higher bidder and, unusually, was able to take action to enforce its choice on the shareholders. The Court of Appeal distinguished between the harm inflicted on the company's assets by this decision (because it was unclear that the relevant regulator would allow the lower bidder to operate in the industry in question) and the harm suffered directly by the shareholders individually though their inability to accept a higher takeover offer for their shares (assertable in a personal claim). However, although the principle is clear, the distinction between reflective and independent losses is not always easy to draw.

Conclusion

17–39

Although the new statutory derivative claim is doctrinally very different from the common law it replaces, it is still not clear what its impact on the levels of derivative litigation will be. In the early days, the Law Commission was rather downbeat in its assessment. In its Consultation Paper it made the following remarks about the policy which underlay its proposed reforms: "a member should be able to maintain proceedings about wrongs done to the company only in exceptional circumstances" and "shareholders should not be able to involve the company in litigation without good cause … Otherwise the company may be 'killed by kindness', or waste money and management time in dealing with unwarranted proceedings".[93] Whilst the latter

remark is undoubtedly true, it is unclear whether this should lead to derivative claims being available only in exceptional circumstances, because the ability of wrongdoing directors to block decisions in favour of litigation is a matter of empirical fact which has not been extensively investigated—though the unfair prejudice cases discussed in Ch.20 below suggest it is a not uncommon feature of small companies. In its final report the Law Commission stated that "we do not accept that the proposals will make significant changes to the availability of the action. In some respects, the availability may be slightly wider, in others it may be slightly narrower. But in all cases the new procedure will be subject to tight judicial control".[94]

If the common law led to sub-optimal levels of derivative litigation, one would hope that the statutory changes would have a significant impact, even whilst the judges remain fully alive to the fact that the statute, rightly, creates no entitlement in the shareholder to bring a derivative claim. All depends on how the courts exercise their discretion. The statute does not suggest the rule in *Foss v Harbottle* should rule the courts from its grave and in due course the courts may strike out more boldly. There is some indication of this trend; as of September 2013, in the 13 reported cases where permission to continue a derivative claim was the central issue, permission was granted in just over a third of cases, suggesting that the court is not taking an unduly restrictive approach in its exercise of discretion.

[1] *Taylor v National Union of Mineworkers (Derbyshire Area)* [1985] B.C.L.C. 237, 254–255 (Vinelott J).

[2] See art.3 of the model articles for both private and public companies limited by shares.

[3] cf. *John Shaw & Sons (Salford) Ltd v Shaw* [1935] 2 K.B. 113 CA, where the company's articles had allocated the litigation decision to a committee of the board from which the wrongdoers were excluded. This case shows that, where the board has the power under the articles and does decide to sue, the shareholders cannot by ordinary majority countermand its decision.

[4] See *Regal (Hastings) Ltd v Gulliver* [1942] 1 All E.R. 378 HL; above, para.16–89.

[5] Indeed, the replacement of the board by an insolvency practitioner was regarded under the previous law as a good reason for not allowing the individual shareholder to sue on behalf of the company. See *Ferguson v Wallbridge* [1935] 3 D.L.R. 66 PC; *Fargro Ltd v Godfroy* [1986] 1 W.L.R. 1134. In *Barrett v Duckett* [1995] 1 B.C.L.C. 243 CA the principle was even extended to deny to a shareholder who turned down the opportunity to put the company into liquidation the possibility of bringing a derivative claim: "As the company does have some money which might be used in litigating the claims, it is in

my opinion manifest that it is better that the decision whether or not to use the money should be taken by an independent liquidator rather than by [the shareholder]" (at 255, per Peter Gibson LJ). These are still factors the court could take into account under s.263 (see below) but they would no longer be absolute bars to the derivative claim.

[6] Note that the court has a discretion under IA 1986 s.212 to reduce the amount that the defendant has to pay, but not to excuse liability altogether: *Revenue and Customs Commissioners v Holland* [2010] UKSC 51; [2010] 1 W.L.R. 2793 SC.

[7] *Cohen v Selby* [2001] 1 B.C.L.C. 176 at [20] CA. Nor does it allow the liquidator to escape from any limitation period to which the claim by the company would be subject: *Re Lands Allotment Co* [1894] 1 Ch. 616; *Re Eurocruit Europe Ltd* [2007] 2 B.C.L.C. 598.

[8] See *Alexander Ward & Co Ltd v Samyang Navigation Co Ltd* [1975] 1 W.L.R. 673 at 679, per Lord Hailsham LC, quoting with approval a passage from the third edition of this book at pp.136–137. Unless this is the case, the rule in *Foss v Harbottle* (see below) made no sense, because the question that rule posed was whether the individual shareholder should be allowed to sue on behalf of the company or whether the matter should be left to a simple majority of the shareholders. On the other hand, the abolition by the 2006 Act of the rule in *Foss v Harbottle*, as far as derivative claims are concerned, reduces the force of this argument. The power of the shareholders to initiate litigation may not apply in the situation identified in the cases mentioned in fn.5, i.e. where the board has been replaced by an insolvency practitioner acting on behalf of the creditors. The not fully considered decision of Harman J in *Breckland Group Holdings Ltd v London and Suffolk Properties* [1989] B.C.L.C. 100 might seem to point in the direction of exclusive board control of the litigation, but there was in that case a shareholders' agreement in effect requiring the only two shareholders (or rather their board nominees) to support a decision to commence "material litigation".

[9] CLR, Completing, para.5.101 but contrast s.239 (above, para.16–119).

[10] Even then, the directors may choose not to pay out the recovery by way of dividend and instead to invest it in some perhaps unsuccessful venture.

[11] For an example of a derivative claim brought for what appears to be a collateral purpose, see the rather unusual case of *Konamaneni v Rolls-Royce Industrial Power (India) Ltd* [2002] 1 All E.R. 979. In the US, where derivative claims can be brought much more freely, it is sometimes argued that the drivers of the litigation are the firms of lawyers who stand to take a handsome percentage of awards obtained under contingent fee arrangements, if the derivative litigation is successful.

[12] *Foss v Harbottle* (1843) 2 Hare 461.

[13] See in particular the classic judgment of Jenkins LJ in *Edwards v Halliwell* [1950] 2 All E.R. 1064 CA.

[14] The technique endorsed in *Danish Mercantile Co Ltd v Beaumont* [1951] Ch. 680 CA, of commencing litigation in the name of the company (i.e. not derivatively) but without authority to do so and the court referring the issue to the shareholders for decision when the authority issue is raised, has not been used in practice (perhaps because the solicitors are personally liable in costs if the shareholders do not ratify the decision to sue), though it is consistent with the notion that, in the area of litigation, the shareholders have authority to decide, parallel to that of the board.

[15] Law Commission, *Shareholder Remedies*, Cm. 3769, 1997.

[16] The common law rules are still relevant for multiple derivative claims (see below,

para.17–24) and claims concerning foreign registered companies (see *Abouraya v Sigmund* [2014] EWHC 277 (Ch); and *Novatrust Ltd v Kea Investments Ltd* [2014] EWHC 4061).

[17] See above, paras 16–103 and 16–117.

[18] See below, paras 17–29 et seq.

[19] See Ch.33.

[20] See CDDA 1986 ss.15A–15C, introduced by SBEEA 2015 s.110 from 1 October 2015. The application must be made within two years of the disqualification order or undertaking (s.15A(5)). The compensation will be payable either: (i) to the Secretary of State for the benefit of a creditor or creditors specified in the order, or a class or classes of specified creditors; or (ii) as a contribution to the assets of the company (s.15B). See generally Ch.10.

[21] Companies (Audit, Investigations and Community Enterprise) Act 2004 s.44.

[22] The earlier history and the purpose of the new statutory derivative claim are considered in *Iesini v Westrip Holdings Ltd* [2009] EWHC 2526 (Ch); [2011] 1 B.C.L.C. 498 at [73]–[83] (Lewison J).

[23] CPR 19.9(4), 19A(2).

[24] In *Prudential Assurance Co Ltd v Newman Industries Ltd (No.2)* [1982] Ch. 204 CA the court insisted that the question of standing to bring the derivative claim should be decided in advance of and separately from the decision on the merits of the case. This approach is embodied in CPR 19.9. Under this provision the courts recently began to take a broader look at the value to the company of the proposed derivative claim: *Portfolios of Distinction Ltd v Laird* [2004] 2 B.C.L.C. 741 at [51]–[68]; *Airey v Cordell* [2007] B.C.C. 785.

[25] See ss.263 and 268, discussed below.

[26] 2006 Act s.260(1): derivative claims (for England and Wales and Northern Ireland). Section 265(1) provides similarly for derivative proceedings in Scotland. Because of the intimate connection between derivative claims and civil procedure, the Act contains separate provisions for Scotland (ss.265–269) and the rest of the UK (ss.260–264). However, the underlying policies are the same.

[27] CPR 19.9(3). The reason for this oddity seems to be that anyone can make another person a defendant to a claim but making a person a claimant requires that person's consent.

[28] If the shareholder has a personal claim against the directors, the statutory procedure has no application. Personal claims are dealt with below and, as we shall see, there are great complexities about remedies where both the company and the shareholder personally have claims against a director.

[29] The exceptions are those claims against directors falling outside the statutory definition of a derivate claim, in particular multiple derivative claims and claims against foreign registered companies: for the former, see below, para.17–24; for the latter, see *Abouraya v Sigmund* [2014] EWHC 277 (Ch); *Novatrust Ltd v Kea Investments Ltd* [2014] EWHC 4061 (Ch).

[30] 2006 Act ss.260(3) and 265(3).

[31] 2006 Act ss.260(3) and 265(4).

[32] See paras 16–134 et seq.

[33] 2006 Act ss.260(5) and 265(7).

[34] See above, paras 16–8 and 16–13.

[35] 2006 Act ss.260(4) and 265(5).

[36] 2006 Act ss.260(1) and 265(1).

[37] 2006 Act s.112. For further discussion see para.27–5.

[38] 2006 Act ss.260(5)(c) and 265(7)(e).

[39] 2006 Act ss.263(1) and 268(1).

[40] 2006 Act ss.261(2) and 266(3). In England and Wales this procedure is fleshed out in CPR 19.9A. In some cases, the court has been inclined to merge the first two stages into one: *Mission Capital Plc v Sinclair* [2008] EWHC 1339 (Ch); *Franbar Holdings Ltd v Patel* [2008] EWHC 1534 (Ch); *Stimpson v Southern Private Landlords Association* [2009] EWHC 2072 (Ch); and *Bridge v Daley* [2015] EWHC 2121 (Ch).

[41] 2006 Act ss.263(2)(b), (c) and 268(1)(b), (c). See above, paras 16–55, 16–67 et seq., 16–103, 16–117 et seq.

[42] 2006 Act ss.263(2)(a) and 268(1)(a). On the director's core duty of good faith see above, paras 16–37 et seq.

[43] *Iesini v Westrip Holdings Ltd* [2009] EWHC 2526 (Ch); [2011] 1 B.C.L.C. 498, where the court held that the strength of the claim against the board was so weak that *no* director, acting in accordance with s.172, would seek to continue the claim.

[44] To which the Secretary of State may add by regulation: ss.263(5) and 268(4).

[45] 2006 Act ss.263(3),(4) and 268(2),(3).

[46] 2006 Act ss.263(3)(b) and 268(2)(b). *Iesini v Westrip Holdings Ltd* [2009] EWHC 2526 (Ch); [2011] 1 B.C.L.C. 498 failed this test.

[47] Although, conversely, if the potential financial gain is high, a more uncertain case might be worth pursuing: *Stainer v Lee* [2010] EWHC 1539 (Ch); [2011] 1 B.C.L.C. 537.

[48] See the words "in particular" in ss.263(3) and 268(2).

[49] See *Iesini v Westrip Holdings Ltd* [2009] EWHC 2526 (Ch); [2011] 1 B.C.L.C. 498, finding that, under s.263(3)(b), a person acting in accordance with s.172 would attach little weight to continuing the action. Also see *Re Seven Holdings* [2011] EWHC 1893; and *Kleanthous v Paphitis* [2011] EWHC 2287 (Ch).

[50] *Iesini v Westrip Holdings Ltd* [2009] EWHC 2526 (Ch); [2011] 1 B.C.L.C. 498 at [85], noting that the decision required consideration of factors which included "the size of the claim; the strength of the claim; the cost of the proceedings; the company's ability to fund the proceedings; the ability of the potential defendants to satisfy a judgment; the impact on the company if it lost the claim and had to pay not only its own costs but the defendant's as well; any disruption to the company's activities while the claim is pursued; whether the prosecution of the claim would damage the company in other ways (e.g. by losing the services of a valuable employee or alienating a key supplier or customer) and so on".

[51] Above, para.16–103.

[52] See *Edwards v Halliwell* [1950] 2 All E.R. 1064 CA.

[53] The statute specifies that this is "by the company", thus importing the mechanisms and their qualifications discussed at various stages in Ch.16, especially paras 16–117 et seq.

[54] On the common law's distinction between ratifiable and non-ratifiable breaches of duty, see the previous chapter at para.16–124.

[55] *Bridge v Daley* [2015] EWHC 2121 (Ch).

[56] A decision by the company not to pursue the claim should be given very little weight where the defendant directors constitute the majority of its directors: *Cullen Investments v Brown* [2015] EWHC 472 (Ch).

[57] See *Bamford v Harvey* [2012] EWHC 2858 (Ch). However, this is likely to be rare: *Cinematic Finance Ltd v Ryder* [2010] All E.R. (D) 283.

[58] See *Franbar Holdings Ltd v Patel* [2008] EWHC 1534 (Ch); [2009] 1 B.C.L.C. 1, where the shareholder's concurrent unfair prejudice claim was seen as delivering almost all the shareholder wanted, so the right to pursue the derivative claim was, to that extent, denied. Similarly, see *Kleanthous v Paphitis* [2011] EWHC 2287 (Ch); *Singh v Singh* [2014] EWHC Civ 103. The unfair prejudice alternative is important even where the shareholder does not want to be bought out.

[59] See above at para.16–5. Also see *Cullen Investments Ltd v Brown* [2015] EWHC 473 (Ch).

[60] See below, para.17–32. Also see *Cullen Investments Ltd v Brown* [2015] EWHC 473 (Ch), where the "no reflective loss" principle was one of the factors considered by the court in reaching its conclusion that no alternative remedy was available in that case.

[61] 2006 Act ss.263(4) and 268(3). Moreover, unlike the other matters to which the court must have regard, this one cannot be altered by the Secretary of State by regulation: s.263(5)(b).

[62] *Smith v Croft (No.2)* [1988] Ch. 114; cited with approval in *Franbar Holdings Ltd v Patel* [2008] EWHC 1534 (Ch); [2009] 1 B.C.L.C. 1.

[63] 2006 Act ss.262 and 267.

[64] 2006 Act ss.262(1),(3), 263(1), 267(1),(3), 268(1).

[65] 2006 Act ss.262(2) and 267(2).

[66] 2006 Act ss.264 and 269.

[67] 2006 Act ss.264(1) and 269(1).

[68] *Developing*, para.4.133.

[69] See *Re Fort Gilkicker Ltd* [2013] EWHC 348 (Ch); *Bhullar v Bhullar* [2015] EWHC 1943. The same argument also permits common law derivative claims concerning foreign registered companies: *Abouraya v Sigmund* [2014] EWHC 277 (Ch); *Novatrust Ltd v Kea Investments Ltd* [2014] EWHC 4061.

[70] 2006 Act ss.261(4)(a), 262(5)(a), 264(5)(a), 266(5)(a), 267(5)(a) and 269(5)(a). Contrast the provisions relating to the derivative claim arising out of unauthorised

political donations or expenditure, below, at paras 17–29 et seq.

[71] See below, para.17–30.

[72] *Wallersteiner v Moir (No.2)* [1975] Q.B. 373 CA.

[73] CPR 19.9. However, the court is not likely to give the claimant a blank cheque but to review the company's obligation to pay stage-by-stage as the litigation proceeds. See *McDonald v Horn* [1995] 1 All E.R. 961, 974–975 CA; *Stainer v Lee* [2010] EWHC 1539 (Ch); [2011] 1 B.C.L.C. 537 (capped at £40,000). Moreover, such an order does not give the shareholder priority over the unsecured creditors of the company (*Qayoumi v Oakhouse Property Holdings Plc* [2003] 1 B.C.L.C. 352) so that the shareholder may be unwilling to pursue a derivative claim on behalf of a doubtfully solvent company.

[74] Indeed, even greater security is given in that, in leave proceedings, the court can make a declaratory conditional order as to costs of the main litigation, requiring the company to indemnify the member at least to a certain extent: *Wishart v Castlecroft Securities Ltd* [2009] CSIH 65; [2010] B.C.C. 161. And costs might also cover the application for leave: [2010] CSIH 2. However, the court has to exercise considerable care when deciding whether to order a pre-emptive indemnity: *Bhullar v Bhullar* [2015] EWHC 1943 (Ch).

[75] CPR 19.9F.

[76] See the previous chapter at para.16–85.

[77] 2006 Act s.369. In some cases, as we saw in the previous chapter at para.16–85, the liability may fall upon a director of a holding company and be a liability to the subsidiary. In such a case the derivative claim to enforce the subsidiary's rights may be brought by an authorised group of the shareholders of the holding company as well as by an authorised group of the shareholders of the subsidiary: s.370(1)(b). This will be a useful facility where the subsidiary is wholly owned by the parent.

[78] This mechanism seems to have been chosen in the original legislation of 2000 on the basis of a somewhat bizarre analogy with the group of shareholders who have the right to complain to the court about a resolution on the part of a public company to re-register as a private one: s.98. The analogy is odd because the claim arising under s.98 is not derivative.

[79] 2006 Act s.371(4).

[80] 2006 Act s.371(5).

[81] 2006 Act s.372.

[82] See above, para.17–27.

[83] 2006 Act s.373. However, the right to information does not arise until proceedings have been instituted, and so the right seems not to aid the minority at the stage when it is considering whether to institute litigation.

[84] 2006 Act s.260(1)(a). Section 265, applying in Scotland, is less explicit but, it is submitted, equally clear. More than one shareholder may have their rights infringed by the directors' claims, in which case the litigation may be brought in representative form by one shareholder as a representative of all shareholders who have the same interest in the matter (under CPR 19.6).

[85] Above, para.16–5. The cases below suggest that the shareholders' agreement adopts some or all of the general duties of directors and so makes them binding as between the

director/shareholders parties to the agreement.

[86] *Gardner v Parker* [2004] 2 B.C.L.C. 554 CA.

[87] It used to be thought that it was not possible to combine a personal and a derivative claim in the same litigation, but in *Prudential Assurance Co Ltd v Newman Industries Ltd (No.2)* [1981] Ch. 257, 303–304 Vinelott J permitted it a first instance. The Court of Appeal ([1982] Ch. 204, 222–224) did not dissent from this view.

[88] *Prudential Assurance Co Ltd v Newman Industries Ltd (No.2)* [1981] Ch. 257.

[89] *Johnson v Gore, Wood & Co* [2002] 2 A.C. 1 HL. For a critique see Mitchell, (2004) 120 L.Q.R. 457. For the potential breadth of the excluded (i.e. “reflective”) losses, see: *Webster v Sandersons Solicitors* [2009] EWCA Civ 830; [2009] 2 B.C.L.C. 542 CA. BREACH OF CORPORATE DUTIES: ADMINISTRATIVE REMEDIES

Introduction	18–1
Informal Investigations: Disclosure of Documents and Information	18–2
Formal Investigations by Inspectors	18–5
When inspectors can be appointed	18–5
Conduct of inspections	18–7
Power of Investigation of Company Ownership	18–11
Liability for Costs of Investigations	18–12
Follow-Up to Investigations	18–13
Conclusion	18–15

INTRODUCTION

18–1

A distinctive feature of British company regulation for many years has been the conferment of powers of investigation on the relevant Government Department, currently the Department of Business Innovation and Skills ("BIS").[1] Those provisions are still contained in Pt XIV of the Companies Act 1985 (rather than the 2006 Act),[2] as amended by the Companies Act 1989 and strengthened by the Companies (Audit, Investigations and Community Enterprise) Act 2004.[3] The 1985 Act, as amended, empowers the Department to launch inquisitorial raids on corporate (and even unincorporated) bodies, and BIS now has a sizeable Companies Investigation Branch ("CIB"), which in 2006 became part of the Insolvency Service Agency of the Department. The departmental powers are draconian, despite the acknowledged need to ensure that the investigatory and inspection powers comply, in both design and use, with the Human Rights Act 1998, and with the fairness standards of domestic public law, and it is perhaps the Government's desire not to spend public money on matters which should be the concern purely of the company's members or creditors which has tended to limit the scale of their use.[4]

Originally, appointment of outside inspectors (usually a QC

and a senior accountant) was the only form of investigation power that the Secretary of State had. But an announced appointment of inspectors is likely in itself to cause damage to the company. Hence the Department was reluctant to appoint unless a strong case for doing so could be made out, and it normally made inquiries of the board of directors before doing so. Though such inquiries might cause the board to take remedial action, they might equally well provide an opportunity for evidence to be destroyed or fabricated. Hence, on the recommendation of the Jenkins Committee,[5] power to require the production of books and papers was added in 1967, a power which can be exercised with less publicity[6] and which may suffice in itself or may lead to a formal appointment of inspectors if the facts elicited show that that is needed. This power, now conferred by s.447 of the 1985 Act, is by far the one most commonly exercised.[7] It is sometimes referred to as the power of (informal or confidential) investigation, by way of contrast with the far more formal and public powers of inspection (by appointment of inspectors). It is undoubtedly the primary form of intervention, and we consider it first.

Informal Investigations: Disclosure of Documents and Information

18–2

Under s.447, the Secretary of State may require or, more likely, authorise an investigator from the CIB to require a company to produce, at such time and place as are specified, such documents[8] and information as may be specified. Authorising an investigator to impose the requirement avoids the risk of the documents being destroyed or doctored; the officer will arrive without warning[9] at the company's registered office (or wherever else the documents are believed to be held).[10] The investigator may be authorised further to impose the same requirements on "any person",[11] a power to be used where, for example, the documents concerned are in the possession of some person other than the company. The power of an investigator to impose a requirement on "any person" in relation to the production of "information" as well as documents means that, for example, an officer or employee of the company may be

required to provide an explanation of a document or, if a document is not produced by the person asked, to state to the best of his or her knowledge where it is.[12]

Failure to comply with the requirements of s.447 on the part of any person may be certified by the Secretary of State or the investigator to the court and the court may treat that person as guilty of contempt of court if, after a hearing, it concludes that the defendant did not have a reasonable excuse[13] for non-compliance with the requirement.[14] In addition, providing information known to be false in a material particular, or doing so recklessly, is a criminal offence, punishable by imprisonment or a fine.[15] Criminal sanctions are also imposed on any officer of the company who is privy to the falsification or destruction of a document relating to the company's affairs, unless the officer shows there was no intention to conceal the affairs of the company or to defeat the law.[16] In addition, fraudulently to part with, alter or make an omission in such a document is a crime.[17]

These various provisions are all aimed at extracting information from those who may be unwilling to provide it without compulsion. It may happen, however, that a person wishes to volunteer information to an investigator, but feels constrained from so doing because the information has been imparted to him or her in confidence and so disclosure might trigger an action for breach of confidence on the part of the person who provided the information to the informer. The Act now gives a limited protection against such actions. The information must be of a kind which the person making the disclosure could be required to disclose under the Act, the disclosure must be in good faith and in the reasonable belief that it is capable of assisting the Secretary of State, must be no more than is necessary for this purpose, and must not be a disclosure prohibited by or under statute or by a banker or lawyer in breach of an obligation of confidence owed in that capacity.[18]

18–3

An investigator appointed under s.447 is not confined to turning up at premises to ask questions and demand documents, running the risk that admittance will be denied. The Act provides for the investigator to be given compulsory powers of entry and

search.[19] These come in escalating tiers. A Justice of the Peace, if satisfied on information given on oath by the Secretary of State or by a person appointed or authorised to exercise powers under Pt XIV, that there are on any premises documents, production of which has been required under that Part and which have not been produced, may issue a search warrant.[20] Under that provision a search warrant cannot be issued unless there has first been a requirement to produce the documents sought. The company, thus forewarned, could destroy the documents before the search took place, even if such action might be a crime.[21]

Hence, the 1989 Act added a further provision under which a warrant may be issued if a J.P. is satisfied: (a) that there are reasonable grounds for believing that an indictable offence has been committed and that there are on the premises documents relating to whether the offence has been committed; (b) that the applicant has power under Pt XIV to require the production of the documents; and (c) that there are reasonable grounds for believing that if production was required it would not be forthcoming but the documents would be removed, hidden, tampered with or destroyed.[22] Though narrowly circumscribed by the need to satisfy a J.P. of conditions (a)–(c), this enables the search for the documents to be undertaken by the police rather than by the (possibly self-interested) officers of the company.

Although the search warrant power introduced in 1989 undoubtedly increased the investigators' powers, in many cases it is not available, particularly given conditions (a) and (c) above. Where it is not, the investigator might still be left standing on the doorstep. Consequently, in the 2004 Act a right of entry to premises was introduced which was not dependent on a warrant issued by a J.P., nor subject to onerous conditions. Whenever authorised by the Secretary of State to do so, and provided the investigator[23] thinks it will materially help in the exercise of his or her functions, the investigator may require entry to premises believed to be used wholly or partly for the purpose of the company's business and may remain there for such time as is necessary to discharge those functions.[24] The power of entry extends to accompanying persons whom the investigator thinks appropriate.[25] The section does not give the investigator powers of search but it does potentially give him or

her access to relevant persons from whom the production of documents or information can be demanded. Intentional obstruction of the exercise of this power of entry is an offence, punishable with imprisonment or a fine,[26] and non-compliance with a requirement imposed under the section may be certified to the court to be dealt with as a contempt of court.[27] The power is subject to some procedural safeguards, notably a requirement that the investigator and accompanying persons identify themselves,[28] and the investigator must give a written statement as soon as practicable after entry to the occupiers of the premises about the investigator's powers and the rights and obligations of the persons on the premises.[29]

18–4

The powers discussed above are cumulatively very considerable, but it is worth remembering that over three-quarters of the investigations initiated are prompted by allegations of fraudulent trading,[30] so that attempts to side-step the investigation are likely. Despite the width of the power to appoint investigators, this fact also illustrates the reluctance of the Department to use it unless wrongdoing and a strong public interest in taking action are present.

Part XIV also contains further provisions common to both departmental investigations and to inspections, but these are left until after a description of the latter. What should be emphasised, however, is that an investigation by the Department's officials under s.447 is very far from being merely a preliminary step towards the appointment of inspectors if the documentary evidence thus discovered justifies that. On the contrary, in most cases it will be the only investigation undertaken and will lead either to a decision that no further action is needed or that some non-inspection follow-up action should be taken.[31] The time taken to decide may vary from a few days to several months and, while the investigation continues, the officials will probe deeply and in a way which from the viewpoint of the company is just as traumatic as a formal inspection.

Formal Investigations by Inspectors

When inspectors can be appointed

Sections 431 and 432 set out circumstances in which the Secretary of State is empowered to appoint one or more competent inspectors[32] to investigate the affairs[33] of a company and to report the result of their investigations to him; and one situation where the Secretary of State is obliged to do so. This last is where the court by order declares that the affairs of the company ought to be so investigated.[34] The courts rarely make use of this power. As to those situations in which the Secretary of State has a discretion, s.431 deals with cases where the company, formally, takes the initiative to suggest the appointment (almost never used) and s.432 with cases where the Secretary of State acts of his or her own motion (as it turns out, rather rarely used).

Under s.431, the Secretary of State may appoint on the application of: (a) in the case of a company with a share capital, not less than 200 members or members holding not less than one-tenth of the issued shares; (b) in the case of a company not having a share capital, not less than one-fifth of the persons on the company's register of members; or (c) in any case, the company itself.[35] However, appointments under this section hardly ever occur.[36] This is due not only to the fact that, before appointing under the section, the Secretary of State may require applicants to give security to an amount not exceeding £5,000 for payment of the costs of the investigation,[37] but also because the application has to be supported by evidence that the applicants have good reason for the application.[38] If they have, the Secretary of State will normally have power to appoint of his own motion under s.432(2), below, and it is far better for those who have good reasons to draw them quietly to the attention of the Department, requesting that there should be an appointment under that section. Proceeding thus avoids the danger, inherent in s.431, that the malefactors in the company will tamper with the evidence once they learn of possible action under that section and thus frustrate effective intervention by the Department, whether by the appointment of inspectors or the appointment of an investigator under s.447 (see above).

Section 432(2) empowers the Secretary of State to appoint inspectors[39] if it appears that there are circumstances suggesting

one (or more) of four grounds, the first two of which are:

> "(a) that the company's affairs are being conducted or have been conducted with intent to defraud creditors or the creditors of any other person or otherwise for a fraudulent or unlawful purpose or in a manner which is unfairly prejudicial to some part of its members;[40] or
>
> (b) that any actual or proposed act or omission of the company (including an act or omission on its behalf) is or would be so prejudicial, or that the company was formed for any fraudulent or unlawful purpose."

These, it will be observed, in part adopt the wording of s.994 on unfair prejudice petitions,[41] but in addition they enable the Secretary of State to appoint where the company has been operated with intent to defraud creditors or was formed or conducted for a fraudulent or unlawful purpose.

In addition an appointment may be made on the ground:

> "(c) that persons concerned with the company's formation or the management of its affairs have in connection therewith been guilty of fraud, misfeasance or other misconduct towards it or towards its member; or
>
> (d) that the company's members have not been given all the information with respect to its affairs which they might reasonably expect."[42]

18–6

Given the availability of the more attractive, cheaper and speedier option of investigations (considered earlier), appointments of formal inspectors under s.432(2) have become far less common, except in major cases where there are circumstances suggesting malpractice (such as companies formed or used in unlawful, dishonest, fraudulent or improper ways) and a strong public interest in having an inspection. Had the reforms proposed in 2001 been implemented, this would have become the sole basis for the s.432(2) discretion.[43]

Conduct of inspections

Extent of the inspectors' powers

18–7

The Act itself contains a number of sections on the conduct of inspections. Under s.433, if inspectors appointed to investigate the affairs of a company think it also necessary for the purposes of their investigation to investigate the affairs of another body corporate in the same group, they may do so and report the

results of that so far as it is relevant to the affairs of the company.[44] Under s.434 inspectors have powers similar to those of investigators under s.447 (above) entitling them to require the production of documents and information. They may also require any past or present officer or agent of the company to attend before them and otherwise to give all assistance that he is "reasonably" able to give.[45] In addition, they may examine any person on oath.[46] If any person fails to comply with their requirements or refuses to answer any question put by the inspectors for the purposes of the investigation, the inspectors may certify that fact in writing to the court which will thereupon inquire into the case and, subject to the important defence of reasonableness, may punish the offender in like manner as if he had been guilty of contempt of court.[47]

Control of the inspectors' powers

18–8

This topic can be looked at from two points of view: control over the inspectors by the Secretary of State and control over the inspectors in the interests of third parties. The former control was considerably strengthened by Pt 32 of the Companies Act 2006, inserting new provisions in the 1985 Act, although to some extent they reflect what was probably already administrative practice. In any event, the inspectors are now under a statutory obligation to comply with any direction given to them by the Secretary of State as to the subject-matter of the investigation, the steps to be taken in the investigation, and whether to report or not report on a particular matter or in a particular way.[48] The Secretary of State may also terminate an investigation.[49]

Perhaps anticipating that exercise of these powers may lead to dissatisfaction among inspectors, they are given an express statutory right to resign, and the Secretary of State a corresponding power to revoke an appointment as inspector.[50] However, former inspectors are under an obligation to produce to the Secretary of State or a replacement inspector the documents and information obtained or generated in the course of the inspection.[51] These provisions make it very clear that the inspector is a creature of the Department.

As to control in the interests of the investigated, a number of matters have been established by practice and case law. The process of inspection is undoubtedly an inquisitorial one. However, as noted, since the aim of the inspection is to establish facts rather than to determine legal rights, in domestic law the process has been characterised as administrative rather than judicial, so that the inspectors are obliged to act fairly but are not subject to the full requirements of natural justice. The European Court of Human Rights has adopted a similar stance in relation to the applicability of art.6 of the European Convention (right to a fair trial) to inspections.[52] Consequently, it would seem that the use of compulsion in investigations and inspections to secure information from those investigated, including compulsion to answer questions put by inspectors, is not in principle unlawful, as a matter of either domestic or European Convention law. However, as we shall see below, European Convention law has had a significant impact on what can be done subsequently, for example by the prosecuting authorities, with compelled testimony obtained by inspectors, and the Act was amended by the Criminal Justice and Police Act 2001 to take account of the jurisprudence of the European Court of Human Rights.

Although the full rules of "natural justice" do not apply, the inspectors must act fairly. This involves letting witnesses know of criticisms made against them (assuming that the inspectors envisage relying on, or referring to, those criticisms in their report) and giving them adequate opportunity of answering. But the inspectors are not bound to show them a draft of the parts of their report referring to them, so long as they have had a fair opportunity of answering any criticisms of their conduct. Inspectors are free to draw conclusions from the evidence about the conduct of individuals, but should do so only with restraint.[53]

18–9

Inspectors sit in private (and probably do not have the power to sit in public),[54] but allow witnesses to be accompanied by their lawyers—although the latter's role is limited, since the questioning is undertaken by the inspectors and neither the witness nor his lawyers can cross-examine other witnesses. Although the range of persons whom the inspectors may question is very wide, the Act provides that such persons cannot

be compelled to disclose or produce any information or document in breach of legal professional privilege, except that lawyers must disclose the names and addresses of their clients.[55] A banker's duty of confidentiality is protected more narrowly.[56] In particular, it may be overridden by the Secretary of State.[57]

Reports

18–10

The inspectors may, and if so directed by the Secretary of State shall, make interim reports, and (subject to what is said below) on the conclusion of the investigation must make a final report.[58] If so directed by the Secretary of State, they must also inform the Minister of matters coming to their knowledge during their investigation.[59] The Secretary of State may, if thought fit, forward a copy of any report to the company's registered office and, on request and payment of a prescribed fee, to any member of the company or other body corporate which is the subject of the report, any person whose conduct is referred to in the report, the auditors, the applicants for the investigation[60] and any other person whose financial interests appear to be affected by matters dealt with in the report.[61] And the Secretary of State may (and generally will, though not until after any criminal proceedings have been concluded[62]) cause the report to be printed and published.[63]

There is one exception to this, however. Under s.432(2A), inspectors may be appointed under s.432(2) on terms that any report they make is not for publication, in which case s.437 does not apply. Since, under that section, a report does not have to be published unless the Secretary of State thinks fit, it might be thought that subs.(2A) was unnecessary. But it has two advantages: it protects the Secretary of State from pressure to publish even though advised that that might prejudice possible criminal prosecutions; and, since it is an ex ante rule, it makes it clear to the proposed appointees that they will not be able to bask in publicity resulting from their efforts.[64]

Power of Investigation of Company Ownership

18–11

The above provisions relate to the appointment of inspectors or investigators to examine the affairs of the company in general (even if in particular cases they may be given a more limited remit). There is, however, one situation in which the Secretary of State's powers to appoint inspectors or investigators are limited by the statute to a particular topic. This is the power of investigation into company ownership.[65] This may be a controversial issue and the facts may not be clear, because, although the name of the shareholder has to be entered on the company's share register, that shareholder may be a nominee rather than the beneficial owner of the share. The circumstances in which large beneficial shareholders are required to disclose their positions or in which a company may require a person to reveal the extent of a beneficial holding in the company are discussed in Chs 2,[66] 26[67] and 28.[68] The Secretary of State's investigatory powers are essentially supplementary to these provisions.

In the first instance, if the Secretary of State is persuaded that there may be good reasons for intervening, he or she will probably institute preliminary investigations under the powers conferred by s.444. Under this provision, the Secretary of State can require any person whom he or she has reasonable cause to believe to has, or is able to obtain, information as to the present and past interests in a company's shares or debentures to disclose this information.

If this fails to produce a satisfactory answer the Secretary of State may then appoint inspectors under s.442.[69] The Secretary of State may do so at will and must do so if application is made by members sufficient to instigate an appointment of inspectors under the general powers.[70] A fully-fledged investigation may afford the best chance of getting at the truth, but it is expensive and time-consuming.[71] Hence, the amendments to the section made by the 1989 Act provide that the Secretary of State shall not be obliged to appoint inspectors if satisfied that the members' application is vexatious and, if an appointment is made, may exclude any matter if satisfied that it is unreasonable for it to be investigated[72]; and the applicants may be required to give security for costs as in a general investigation initiated by the members.[73]

The inspectors' powers in this area are supported by the sanctions mentioned above[74] but what makes the foregoing sections more effective than they would otherwise be is that, if there is difficulty in finding out the relevant facts on an investigation under ss.442 or 444, the Secretary of State may by order direct that the securities concerned shall, until further notice, be subject to restrictions on their transfer and the exercise of rights attached to them. These restrictions are discussed further in Ch.28.[75]

Liability for Costs of Investigations

18–12

Under s.439, the expenses of any investigation under Pt XIV of the Act[76] are to be defrayed in the first instance by the Department, but may be recoverable from persons specified in that section. These expenses include such reasonable sums as the Secretary of State may determine in respect of general staff costs and overheads. The persons from whom costs are recoverable include: anyone successfully prosecuted as a result of the investigation; the applicants for the investigation where inspectors were appointed under s.431, to the extent that the Secretary of State directs[77]; any body corporate dealt with in an inspectors' report when the inspectors were not appointed on the Secretary of State's own motion, unless the body corporate was the applicant, or except so far as the Secretary of State otherwise directs.[78] Thus, in the case of investigations under s.447, the only persons at risk of costs are those subsequently prosecuted and, even where inspectors are appointed, the same is true if the Secretary of State takes the initiative to appoint the inspectors.

Follow-Up to Investigations

18–13

Following an investigation, whether by inspectors or otherwise, the Secretary of State has a number of powers. Apart from the obvious one of causing prosecutions to be mounted against those whose crimes have come to light, which prosecutions may be mounted by the Department itself or by others such as the Serious Fraud Office, the Secretary of State may petition under s.8 of the Company Directors Disqualification Act 1986 for the

disqualification of a director or shadow director on grounds of unfitness.[79] The Secretary of State may also petition the court for an appropriate order if unfair prejudice to all or some of the company's members has been revealed.[80] Alternatively, or in addition, he or she may petition for the winding-up of the company under s.124A of the Insolvency Act 1986. Under that section, if it appears to the Secretary of State as a result of any report or information obtained under Pt XIV of the Companies Act that it is expedient in the public interest that a company should be wound up, he or she may present a petition for it to be wound up if the court thinks it just and equitable. In 2014–15, 102 companies were wound up on the Secretary of State's petition, and 58 disqualification orders obtained as a result of investigations.[81]

What the Secretary of State can no longer do is initiate proceedings in the name and on behalf of the body corporate, indemnifying it against any costs or expenses incurred by it in connection with the proceedings. This power was removed by the 2006 Act,[82] perhaps on the basis that remedies for the benefit of the company should be a matter for its members.[83] By contrast, taking companies off the register and disqualifying unfit persons from future involvement in the management of companies may well be steps which no member has an interest in taking.

Since the majority of investigations and inspections are driven by allegations of potentially serious wrongdoing on the part of those involved in companies, it is hardly surprising that the Department does not simply receive the information produced by the investigation machinery, but makes use of the possibilities just described to take remedial steps of one sort or another. That this is contemplated by the Act is revealed by s.449, which contains a long list of exceptions to the starting proposition that information obtained under the s.447 investigation powers is confidential to the Department and cannot be disseminated more widely without the consent of the company.[84] These so-called "gateways" permit the information to be provided to those who are best placed to take the consequential action.

18–14

However, this possibility of subsequent action brings into sharp focus the rules which permit investigators and inspectors to secure information compulsorily. Although the domestic courts had held to the contrary (before the enactment of the Human Rights Act 1998), the European Court of Human Rights, in litigation arising out of the *Guinness* affair, concluded that evidence given to inspectors under threat of compulsion cannot normally be used in subsequent criminal proceedings against those investigated, on the grounds that this would infringe their privilege against self-incrimination.[85] The Act now provides that compelled testimony (but not documents produced under compulsion) may not be used in either primary evidence or cross-examination in a subsequent criminal trial of the person providing the testimony, unless the defendant him- or herself brought the compelled testimony in, or unless the offence in question is giving false evidence to the investigator or certain offences under the general perjury legislation.[86]

However, this restriction does not apply to subsequent use of the testimony in proceedings for disqualification under s.8 of the Company Directors Disqualification Act. Indeed, s.441 specifically provides that an inspectors' report can be evidence as to the opinion of the inspectors in such an application, and the courts have come to the same conclusion in respect of a report by investigators under s.447.[87] Both the domestic courts and the ECHR seem to be in agreement that disqualification applications are not criminal proceedings.[88] However, disqualification applications, if not criminal proceedings, clearly are proceedings falling within art.6 of the European Convention, because they determine the legal rights of the person to be disqualified. Unlike the investigation process itself, which lies outside art.6,[89] disqualification proceedings will have to comply with Convention standards appropriate for civil proceedings. These standards do not specifically include a privilege against self-incrimination, but they do involve general standards of fairness. Especially since disqualification has a penal element, the presumption of innocence might be relevant.[90] Presumably, the same considerations will apply where it is proposed to use compelled testimony in purely civil litigation[91]: there will be no ban in principle, but the court conducting the civil trial will need to have regard to general fairness issues. One such issue, already

identified by the English courts in the context of the Insolvency Act powers of compulsory examination, is the undesirability of allowing statutory powers to give one party a litigation advantage over another in purely civil litigation, which it would not have were the company not insolvent.[92]

Conclusion

18–15

Since the scheme of administrative remedies under the Act is dominated by the power of investigation, and this power is predominantly used in cases of suspected fraudulent trading or breach of the disqualification provisions, it is far from clear that these remedies constitute an important element in the British system of corporate governance, if that is defined as the accountability of the senior management to the shareholders as a whole. These provisions might be better seen as seen as supporting the provisions analysed in Part Two of this book, dealing with the abuse of limited liability. It would seem that the Department leaves allegations of breaches of the duties discussed in Ch.16 to be pursued by companies or shareholders themselves, perhaps now through the reformed derivative action procedure,[93] unless either there is a strong public interest in favour of intervention by the Department or the misconduct of the directors has been egregious. Nevertheless, administrative remedies are an important part of corporate law, and shareholders may benefit from them indirectly, as where inspectors' reports reveal matters which lead to the reform of company law.[94]

---

[1] And in earlier guises the Department of Business Enterprise and Regulatory Reform (BERR), the Department of Trade and Industry (DTI) and the Board of Trade (BoT).

[2] Unless indicated otherwise, the references below are to the 1985 Act.

[3] Although not to the extent recommended by the Department's own review: see DTI, *Company Investigations: Powers for the Twenty-First Century* (2001).

[4] DTI, *Company Investigations: Powers for the Twenty-First Century* (2001), gives details of the costs and length of the then most recent formal s.432 inspections. For example, the inspection into Mirror Group Newspapers Ltd took nearly nine years and cost £9.5 million. However, nearly half that time was taken up with waiting for criminal trials to be completed or with dealing with challenges in the courts to the inspectors by those sought to be inspected. See fn.45, below.

[5] Cmnd. 1749 (1962), paras 213–219.

[6] The Department does not normally announce that it has mounted such an investigation and all information about it is regarded as confidential. This has its disadvantages. If a team of officials is going through the company's books and papers, this cannot be concealed from its employees and will soon become known to the Press, thus putting the company under a cloud which may never be dispersed because the ending of the inquiries will not normally be announced nor their results ever be published, notwithstanding that the conclusion may be that all is well with the company.

[7] The various powers to appoint inspectors are used only very infrequently. And the number of informal investigations has remained relatively constant at about 150 investigations per year: see *Insolvency Service Annual Report 2013–14*, at p.18; and *Insolvency Service Annual Report 2014–15*, at p.15.

[8] 1985 Act s.447(8). "Document" is defined as "information recorded in any form". The requirement to produce documents includes the power, if they are produced, to take copies of them or extracts from them: s.447(7).

[9] The investigation is an administrative act to which the full rules of natural justice do not apply: *Norwest Holst Ltd v Secretary of State* [1978] Ch. 201 at 224 CA. But "fairness" must be observed and directions to produce should be clear and not excessive: *R. v Trade Secretary Ex p. Perestrello* [1981] 1 Q.B. 19 (a case which illustrates the problems that may be met if the documents are not held in the UK). See also *R. (on the application of 1st Choice Engines Ltd) v Secretary of State for Business, Innovation and Skills* [2014] EWHC 1765.

[10] The officer may be accompanied by a policeman with a search warrant: s.448.

[11] 1985 Act s.447(3). But this is without prejudice to any lien that the possessor may have.

[12] See *Re Attorney-General's Reference No.2 of 1998* [1999] B.C.C. 590 CA, decided on an earlier version of s.447 where this power was stated explicitly. The current version of the power is not confined to officers and employees.

[13] 1985 Act s.453C. cf. *Re An Investigation under the Insider Dealing Act* [1988] A.C. 660 HL, dealing with an analogous provision, where the court took a narrow view of reasonable excuse in the case of a journalist refusing to answer questions in order to protect his sources. This was because the information was needed for the prevention of crime, which is likely to, but need not, be the case under s.447.

[14] One effect of proceeding in this way is that the defendant is deprived of the automatic protection of legal professional privilege, which applies if, as previously, failure to comply is treated as an offence (s.1129 of the CA 2006), though the court might regard legal professional privilege as reasonable grounds for non-compliance.

[15] 1985 Act s.451. Prosecution requires the consent of the Secretary of State or DPP in England and Wales and Northern Ireland (CA 2006 s.1126(2),(3)).

[16] 1985 Act s.450(1). The same restriction on prosecution applies as under s.451: see previous note.

[17] 1985 Act s.450(2).

[18] 1985 Act s.448A.

[19] These powers apply also to inspectors, discussed below: s.448(1). Note also that there is a power under CA 2006 s.1132 whereby (on application of the DPP, the Secretary of

State or the police) a High Court judge, if satisfied that there is reasonable cause to believe that any person, while an officer of a company, has committed an offence in its management and that evidence of the commission is to be found in any books or papers of, or under the control of, the company, may make an order authorising any named person to inspect the books and papers or require an officer of the company to produce them: see *Re A Company* [1980] Ch. 138 CA (reversed by the House of Lords sub nom. *Re Racal Communications Ltd* [1981] A.C. 374, because, under the express provisions of subs.(5), there can be no appeal from the judge and it was held that this included cases where he had erred on a point of law—and, having discovered that other judges had taken a different view, had volunteered leave to appeal!).

[20] 1985 Act s.448(1).

[21] See fn.6 above.

[22] 1985 Act s.448(2).

[23] Or inspector (see below).

[24] 1985 Act.453A(1)–(3).

[25] 1985 Act s.453A(4).

[26] 1985 Act s.453A(5),(5A).

[27] 1985 Act s.453C(1); and see para.18–2, above.

[28] 1985 Act s.453B(3).

[29] 1985 Act s.453B(4)–(10); and the Companies Act 1985 (Power to Enter and Remain on Premises: Procedural) Regulations 2005 (SI 2005/684), which, together, go into considerably more detail than is indicated in the text.

[30] The two other main grounds for appointing an investigator after fraudulent trading are the involvement of a disqualified person or an undischarged bankrupt in the management of the company and using the company to promote an unlawful pyramid selling scheme.

[31] See para.18–13, below.

[32] As already mentioned, the usual appointees are a QC and a chartered accountant but less expensive mortals may be appointed in the rarer case when the Department appoints in relation to a private company.

[33] i.e. its business, including its control over its subsidiaries, whether that is being managed by the board of directors or an administrator, administrative receiver or a liquidator in a voluntary liquidation: *R. v Board of Trade Ex p. St Martin Preserving Co* [1965] 1 Q.B. 603.

[34] 1985 Act s.432(1). This seems to make the Secretary of State's refusal to appoint reviewable by the court if an application is made to it by anyone with locus standi, and to enable a court, in proceedings before it (e.g. on an unfair prejudice petition), to make an order declaring that the company's affairs ought to be investigated by inspectors. A copy of the inspectors' report will be sent to the court: s.437(2).

[35] 1985 Act s.431(2)(c).

[36] It is believed that there have been no appointments since 1990.

[37] 1985 Act s.431(4). The £5,000 can be altered by statutory instrument. In the 1948 Act

it was only £100 which, even then, would not have kept a competent QC and chartered accountant happy for the time that most inspections take.

[38] 1985 Act s.431(3).

[39] Even if the company is in the course of being voluntarily wound up: s.432(3).

[40] "Member" includes a person to whom shares have been transmitted by operation of law: s.432(4).

[41] See Ch.20. Although s.432(2)(a) refers only to "some part of the members", rather than using the CA 2006 s.994 wording of "members generally or some part of the members", this is unlikely to have the absurd result that, strictly speaking, the Secretary of State should not appoint inspectors if it is thought that *all* the members are unfairly prejudiced. This is especially so since the precise grounds for action do not have to be stated (see *Norwest Holst v Trade Secretary* [1978] Ch. 201 CA).

[42] This wording implies that members may "reasonably expect" more information than that to which the Act entitles them. But it seems that s.432(2) does not entitle the Secretary of State to appoint merely because the directors or officers of the company appear to have breached their duties of care, skill or diligence: see *SBA Properties Ltd v Cradock* [1967] 1 W.L.R. 716 (which, however, was concerned with an action by the Secretary of State under what is now s.438, below).

[43] DTI, *Company Investigations: Powers for the Twenty-First Century* (2001), para.97.

[44] Most major corporate scandals involve the use of a network of holding and subsidiary companies, the extent of which may only become apparent during the course of the investigation: s.433 avoids the need for a formal extension of the inspectors' appointment each time they unearth another member of the group. The extended power applies to bodies corporate (i.e. not just Companies Act companies) but does not extend to unincorporated bodies, which, however, may be subjected to investigation on the grounds that associated unincorporated bodies are part of the affairs of the corporate body with which they are associated.

[45] 1985 Act s.434(1) and (2). On the use of the "reasonableness" defence to protect a director against oppressive use by the inspectors of their powers, see *Re Mirror Group Newspapers Plc* [1999] 1 B.C.L.C. 690. Agents include auditors, bankers and solicitor (s.434(4)).

[46] 1985 Act s.434(3).

[47] 1985 Act s.436.

[48] 1985 Act s.446A.

[49] 1985 Act s.446B(1)—though in the case of inspectors appointed as a result of a court order, only if matters have come to light suggesting the commission of a criminal offence and those matters have been referred to the appropriate prosecuting authority: s.446B(2).

[50] 1985 Act s.446C—and the Secretary of State can fill any vacancy: s.446D.

[51] 1985 Act s.446E. The inspector is under a duty to comply but no sanction is specified —presumably *in extremis* the Department could obtain a court order.

[53] *Re Pergamon Press Ltd* [1971] Ch. 388 CA; *Maxwell v DTI* [1974] Q.B. 523 CA; *R.*

(on the application of Clegg) v Secretary of State [2003] B.C.C. 128 CA.

[54] *Hearts of Oak Assurance Co Ltd v Attorney-General* [1932] A.C. 392 HL.

[55] 1985 Act s.452(1),(5). This applies to Departmental investigations as well as to inspections: s.452(2).

[56] 1985 Act s.452(1A),(1B).

[57] 1985 Act s.452(1A)(c). The bankers' protection in relation to s.447 investigations is differently worded. It can be overridden by the Secretary of State only when it is thought necessary for the purpose of investigating the affairs of the person carrying on the banking business, or the customer is a person upon whom a s.447 requirement has been imposed: s.452(4).

[58] 1985 Act s.437(1).

[59] 1985 Act s.437(1A).

[60] This is not relevant to inspections under s.432(2) when the Secretary of State appoints of his or her own motion.

[61] 1985 Act s.437(3).

[62] For an unsuccessful attempt to force the Secretary of State to publish while criminal proceedings were still being considered: see *R. v Secretary of State Ex p. Lonrho* [1989] 1 W.L.R. 525 HL.

[63] 1985 Act s.437(3)(c). Thus making the reports available for purchase from HMSO by any member of the public so long as the reports remain in print. They often make fascinating reading for anyone interested in "the unacceptable face of capitalism".

[64] It may also tend to make the officers of the company more co-operative.

[65] There was also a power of investigation into share dealings (s.446), but this was repealed by the Companies Act 2006 from October 2007, but the Financial Conduct Authority has a like investigatory power and is now regarded as the more appropriate body to exercise this type of power. See para.30–48.

[66] At para.2–42.

[67] At para.26–17.

[68] At para.28–51.

[69] This section is directed not merely to determining share and debenture ownership but "the true persons who are or have been primarily interested in the success or failure (real or apparent) of the company or able to control or materially to influence its policy": s.442(1).

[70] 1985 Act s.442(3) and see above, para.18–2, though under s.442(3) the appointment is mandatory.

[71] It is believed that no appointments have been made since 1992.

[72] 1985 Act s.442(3A).

[73] See above, para.18–5.

[74] 1985 Act s.443.

[75] At para.28–53.

[76] Which in the case of inspections are likely to be heavy; the Atlantic Computers investigation cost £6.5 million and the Consolidated Goldfields one nearly £4 million: DTI, *Company Investigations: Powers for the Twenty-First Century* (2001), Annex A. And the total costs to the companies and their officers were probably as great or greater.

[77] Or the equivalent provisions relating to ownership investigations: s.439(5).

[78] 1985 Act s.439(4). Inspectors appointed otherwise than on the Secretary of State's own motion may, and shall if so directed, include in their report a recommendation about costs: s.439(6). Note also the provisions regarding rights to indemnity or contribution (s.439(8) and (9)).

[79] See para.10–5.

[80] See para.20–1.

[81] *Insolvency Service Annual Report 2014–5*, at pp.14 and 15. The winding-up application cannot be made on the basis of information supplied under the voluntary method (see para.18–2, above): Insolvency Act s.124A(1)(a).

[82] 1985 Act s.438 was repealed by s.1176 of the CA 2006 as from April 2007.

[83] For the same reason the Department seems to make little or no use of its power to bring unfair prejudice petitions.

[84] The gateways are set out in Schs 15C and 15D of the Act. The same provisions apply to information provided voluntarily: see para.18–2, above.

[85] *Saunders v United Kingdom* [1998] 1 B.C.L.C. 362 ECtHR; *IJL v United Kingdom* (2001) 33 E.H.R.R. 11 ECtHR. For a sceptical assessment, see P. Davies, "Self-incrimination, Fair Trials and the Pursuit of Corporate and Financial Wrongdoing" in B. Markesinis (ed.), *The Impact of the Human Rights Bill on English Law* (Oxford: OUP, 1998). The House of Lords refused to quash the convictions of those involved despite the breach of the Convention: *R. v Saunders*, *Times Law Reports*, 15 November 2002.

[86] 1985 Act s.447A. Nor do the amendments specifically exclude evidence to which the prosecuting authorities were drawn as a result of the compelled testimony, where the answers themselves are not used in the criminal trial.

[87] *Re Rex Williams Leisure Plc* [1994] Ch. 350 CA.

[90] *Albert and Le Compte v Belgium* (1983) 5 E.H.R.R. 533 ECHR. The Court of Appeal remains of the view that general fairness does not in principle require the exclusion of compelled testimony: *Re Westminster Property Management Ltd* [2000] 2 B.C.L.C. 396 CA.

[91] Where the inspectors' report is also admissible: s.441.

[92] *Cloverbay Ltd v BCCI SA* [1991] Ch. 90 CA.

[93] See Ch.17.

[94] Substantial elements in Pt X of the Act (see Ch.16) are the response to abuses

revealed in inspectors' reports.

PART 4

CORPORATE GOVERNANCE—MAJORITY AND MINORITY SHAREHOLDERS

An important determinant of behaviour in a company is the structure of its shareholding along the continuum between highly dispersed and atomised shareholdings to one person holding all the shares. Where there are many shareholders, each with only a very small shareholding, the risk to the shareholders is that the management will be the true controllers of the company and they may not give the shareholders' interests proper consideration. We looked at the legal mechanisms which may address those issues in Part Three. On the other hand, where there is a controlling shareholder—or a small group of shareholders who can exercise control—the management will certainly be accountable to the controlling shareholders, but the latter may act opportunistically towards the non-controlling shareholders. (Where there is only one shareholder, then neither problem exists.) Some consequences of majority control do not merit legal intervention. For example, in most cases the non-controlling shareholders will have to accept that the controlling shareholders will set the company's business policy. In return, the minority may benefit from being able to "free-ride" on the majority's efforts to ensure that its chosen policy is effectively implemented by the management of the company.

However, the majority shareholders may also use their power to divert to themselves a greater part of the company's earnings than their contribution to the company's share capital justifies. Such "private benefits of control" are probably impossible to eradicate without interventionist rules whose costs would probably outweigh the rewards—and, in any event, some benefits constitute legitimate returns for the majority's monitoring efforts. Nevertheless, if the law is to encourage investors to place their money in companies controlled by a small group of shareholders, then it must deal with the more outrageous examples of majority opportunism. Apart from the

unfairness of majority exploitation of the minority, there is a strong efficiency argument in favour of minority protection. If the holders of minority stakes of ordinary shares in companies are not so protected, they will protect themselves, probably by being prepared to buy such shares only at a lower price, thus in effect buying insurance against the majority's unfair treatment of them. This will raise the company's cost of capital, so that the cost of the unfair treatment is ultimately transferred back to the controllers of the company. On this argument, it is as much in the interests of the majority as it is of the minority shareholders that effective legal limits should be placed on the freedom of the majority to act opportunistically towards the minority.

Unfair treatment of the minority by the majority most obviously occurs through decisions taken by shareholders in general meeting. Thus the general meeting is one focus of the rules designed to protect the minority, and these rules are examined in the next chapter. However, the majority of shareholders has the power to replace the members of the board at any time and for any reason (see Ch.14), so the majority's influence may equally be articulated through decisions of the board. In fact, given the division of powers between the board and the general meeting, generally favouring the former in all but small companies, majority shareholder influence over the company is very likely to involve some element of board decision-making. Sometimes the rules on directors' duties will catch action by directors aimed at diverting corporate assets to themselves, for example, the rules on self-dealing.[1] However, effective control of the majority clearly requires rules which operate on the "controllers" of the company, whether they act through the board or through shareholder decision-making. In recent times the legislature has tried to provide such a remedy in the shape of the "unfair prejudice" provisions. We shall examine these rules in Ch.20.

[1] Above, paras 16–54 et seq.

CHAPTER 19

CONTROLLING MEMBERS' VOTING

Introduction	19–1
Review of Shareholders' Decisions	19–4
The starting point	19–4
Resolutions where the company's interests are centre stage	19–6
Resolutions more generally	19–7
Resolutions to expropriate members' shares	19–8
Other resolutions	19–10
The future	19–11
Voting at class meetings	19–12
Class Rights	19–13
The procedure for varying class rights	19–14
What constitutes a "variation"	19–16
The definition of class rights	19–18
Other cases	19–21
Self-help	19–22
Provisions in the constitution	19–23
Shareholder agreements	19–25
Conclusion	19–29

INTRODUCTION

19–1

In any company law system a number of techniques are in principle available to control the unfair exercise of voting power by the majority of shareholders. We have encountered several such techniques already, and it is useful to draw them together briefly, before going on to discuss in more detail some techniques not previously dealt with.

Perhaps most obviously, the law could identify specific decisions which the majority is simply not permitted to take. There are one or two examples of this approach in the Act and at common law. For example, s.25[1] provides that a member is not bound by an alteration of the articles after the date upon which he or she became a member if its effect is to require the member to take more shares in the company or in any other way increases the member's liability to contribute to the company's share capital or otherwise pay money to the company. In other words, the size of a shareholder's investment in the company is a matter

for individual, not collective, decision. Another is the admittedly controversial common law rule may be that certain majority shareholders cannot ratify wrongdoing by a director which involves the appropriation by the director of corporate property.[2] However, it is impossible for the legislature or the judges to identify in advance very many substantive decisions which should be prohibited on the grounds that they will always be unfair to the minority. Normally, fairness and unfairness are fact-specific assessments and therefore not appropriate for ex ante decision-making on the part of the rule-maker.

An obvious response of the rule-maker in this situation is to move from substance to procedure, and in fact the legislature does make much greater use of rules which determine *how* the shareholders are to decide than it does of rules which determine *what* they shall decide. Chapter 14[3] provides a list of decisions which the Act requires to be taken by the shareholders. Often those decisions must also be taken by a three-quarters majority of those voting (a "supermajority") rather than a simple majority (an "ordinary majority"). The statutory categorisation of decisions as requiring ordinary or supermajority voting is not entirely consistent in policy terms, but decisions affecting the rights of the shareholders under the constitution generally require a supermajority. Of course, a three-quarters majority requirement does not obviate all cases of unfair prejudice of the minority, but it reduces the incidence of such problems because, under a supermajority requirement, only a quarter of the votes is needed to block the resolution.

19–2

An approach lying in between the substantive and the procedural is to leave the shareholders largely free to take what substantive decision they will, but to control those elements of the decision which are most likely to cause prejudice to the minority. This policy is often effected through an equal treatment or sharing rule. Thus, when a company repurchases its shares and does so through market purchases,[4] the Listing Rules insist on equality of treatment of the shareholders, either by controlling the price at which the repurchase is made or by requiring the repurchase to be made by way of a tender offer to all shareholders.[5] This does something to prevent insiders from taking undue advantage of

the repurchase exercise or the repurchase having an effect on the balance of power within the company to the benefit of the majority. In the same vein, the common law requires dividends to be paid equally to shareholders according to their shareholdings. The common law took as its test for equality the nominal value of the shares, though the articles normally adjust this so as to use the amount paid up on the shares where the nominal value differs from the amount paid up.[6] This makes it difficult for the majority to use the mechanism of dividend distribution to allocate a disproportionate share of the company's earnings to themselves.[7]

Three further minority protection techniques are worth mentioning at this stage. The new statutory derivative action procedure makes it more difficult for a controlling shareholder/director to block access to the courts by the minority to enforce the company's rights against the controller acting as director.[8] The derivative action allows the minority to side-step the majority's control of the board or shareholder decision-making and to seek court (rather than corporate) approval to initiate litigation. Of course, the derivative action is not available if the shareholders have ratified the wrongdoing. However, the statute now prevents interested directors from voting on a shareholder resolution to ratify the wrongdoing.[9] Thus, two techniques are used. One is the essentially procedural one of structuring the vote at shareholder level by excluding the votes of those interested in the decision. The other is novel, i.e. shifting the litigation decision to an outside authority free of majority influence.

Excluding the controllers, when interested, from voting on the decision in question is a technique taken further by the Listing Rules of the Financial Conduct Authority and applying to companies listed on the Main Market of the London Stock Exchange. More importantly, those Rules impose a requirement for shareholder approval of transactions with significant shareholders which is not to be found in general company law. Under the rules for "related party" transactions, the Listing Rules exclude the related party from voting on the decision in question and require that party to take all reasonable efforts to ensure that associates do not vote either. Crucially, the term "related party"

is widely defined so as to include a person who can control 10 per cent or more of the voting rights in the company or who can exercise substantial control over the company. "Associate" is widely defined, rather in the manner of a "connected person" in s.252 of the Act. Finally, a "related party transaction" is widely defined so as to include not only transactions between the company and the related party but also transactions in which the company and related party together finance a transaction or project and any other similar transaction which benefits the related party.[10]

19–3

The final technique to be mentioned is that of giving the minority the right to exit the company at a fair price if certain decisions with which they disagree are taken by the majority. Such exit rights are usually referred to as "appraisal" rights. Crucially, they are not simply rights to exit the company, which in a listed company the shareholder hardly needs, but rights to leave at a fair price. Although in some company law systems this is a rather well-developed minority protection remedy,[11] the British legislation uses it only very sparingly. This is perhaps because, whether the right is to be bought out by the company or by the majority shareholder, the effect is to place a potentially substantial financial hurdle in the way of the decision which triggers the appraisal right. Nevertheless, an appraisal right can be found in ss.110 and 111 of the IA 1986 (reflecting provisions introduced in the nineteenth century) which deal with the reorganisation of companies in liquidation.[12] More important, it is also to be found in both the Companies Act and the Takeover Code where it provides an exit right at a fair price where there has been an acquisition or transfer of a controlling block of shares in the company. In this second situation, the exit right is not tied to the taking of a business decision but rather to a shift in the composition of the shareholder body, though the basis of the exit right is, in part, that the shift in the identity of the controller of the company may well have an adverse impact upon the minority shareholders.[13]

In this chapter, however, we shall look at two further minority protection techniques. The first consists of giving power to the court to review the decision of the majority on the grounds that it

is in some sense unfair to the minority. In specific instances we have seen that the Act gives such a right of appeal to the minority. The question now is whether the common law gives such a general right. The second is treating the shareholders whose interests are at risk from the decision as a separate group whose consent is needed for the decision to go ahead, whether or not under the company's constitution the separate consent of that group would be required. The first of these two techniques obviates the difficulty of having to predict in advance which decisions are acceptable and which not, for the decision is subject to ex post scrutiny on a case-by-case basis by the courts. The second technique is an extension of the policy of excluding interested parties from voting on a decision. Sometimes this negative technique is enough by itself. In other cases, however, the law may need to go further and specify those who are entitled to vote as well as those who are not, rather than leaving the determination of those entitled to vote to the rules contained in the company's articles.

Review of Shareholders' Decisions

The starting point

19–4

Scattered throughout the reports are statements that members must exercise their votes "bona fide for the benefit of the company as a whole",[14] a statement which, read casually, might suggest that shareholders are subject at common law to precisely the same basic principle as directors. This would be highly misleading, however, and the decisions do not support any such parallel. Indeed, to the contrary, it has also been repeatedly laid down that votes are proprietary rights, like other incidents of shares, which the holder may exercise in his or her own selfish interests even if these are opposed to those of the company.[15] A shareholder may even enter into a contract to vote or not vote in a particular way, and that contract may be enforced by injunction.[16] Moreover, as we have seen, directors themselves, even though personally interested, can vote in their capacity as shareholders at that general meeting,[17] unless the Act or the Listing Rules specifically deprive them of the right to vote.[18] And this is so also as regards the transactions which, under Chs

4 and 4A of Pt 10 of the Act, require the prior approval of the company in general meeting.

Thus, it is wrong to see the voting powers of shareholders as being of a fiduciary character. Unlike directors' powers, shareholders' voting rights are not conferred upon them in order that they shall be exercised in the way which prefers the interests of others over the interests of the voting shareholder where the two are in conflict (as the fiduciary rule requires), and this is so whether those others are seen to be "the company" or the minority shareholders or, indeed, any other group.

However, to deny the fiduciary character of shareholders' voting rights and to assert their proprietary nature is not to say that the exercise of shareholders' voting powers is, or should be, unconstrained by the law. The controlling shareholders may not be required to exercise their powers in the best interests of the non-controlling shareholders, but this does not mean they may trample over the interests of the latter with impunity. There are many situations in the modern law, and not just within company law, where the exercise of property rights or personal powers is subject to some sort of review by the courts. The issue which arises, therefore, is not the one of principle, but whether it has proved possible for the courts or the legislature to develop a set of criteria for the effective review of majority shareholders' decisions. As we shall see below, this task was addressed by the courts at an early stage in the development of British company law, but the results of that exercise have not been spectacularly successful. The courts have hovered uncomfortably between an unwillingness to determine how businesses should be run and an equally deeply felt unease that simple majoritarianism would leave the minority exposed to opportunistic treatment by the majority.

19–5

The principle which the courts have found so difficult to develop and apply to shareholder decisions was articulated as early as 1900 by the Court of Appeal in *Allen v Gold Reefs of West Africa Ltd*[19] in the context of a vote to alter the company's articles. The Court of Appeal held that because the power to alter the articles was a power which enabled the majority to bind the

minority, it must therefore be exercised "not only in the manner required by law, but also bona fide for the benefit of the company as a whole, and it must not be exceeded. These conditions are always implied, and are seldom, if ever, expressed". This explanation might be thought to embrace the ideas of absence of power, good faith, and abuse of power. Despite that, for much of the early development in this area, the focus was almost exclusively on "bona fide for the benefit of the company as a whole", and the difficult task of deciding what this required.

In examining the case law, it is useful to divide the cases into those where the shareholders' decision clearly concerns and affects the company's rights and those where it does not, but merely affects the members' rights as between themselves; and, with the latter, subdividing those cases into alteration of the articles involving an expropriation of the member's shares, and those not having that effect, although all these distinctions are becoming less marked in light of recent cases.

Resolutions where the company's interests are centre stage

19–6

We have already seen the tension in reviewing voting decisions brought to the fore in Ch.16. The company, like any legal person, can forgive directors for the wrongs they do to the company. This inevitably comes at a financial cost to the company, since it gives up an otherwise valuable claim. Nevertheless, the decision, typically taken by the general meeting on behalf of the company, can be taken for perfectly proper reasons. But we rightly doubt that the reasons are "perfectly proper" when the decision is carried by the votes of the wrongdoing directors themselves. This is true even if the range of "perfectly proper" reasons is very much at large; there is something unpalatable about forgiveness driven by the wrongdoers themselves. In this context we have seen the common law's struggle between holding certain decisions "un-ratifiable" (i.e. the general meeting simply does not have the power to act) and, alternatively, disenfranchising the interested shareholder directors (i.e. focusing on the propriety of their

decision-making).[20] We have also seen the modern statutory preference for the latter approach.[21] The same approaches are evident in other contexts: denying shareholders the right to dispose of corporate assets when the company is insolvent has parallels with "un-ratifiable" decisions[22]; occasionally disenfranchising shareholders thought to be inevitably conflicted is an example of the latter approach.[23]

Resolutions more generally

19–7

However intuitively compelling these approaches, they are rarely defended on the basis of principle. That makes it difficult to settle on the appropriate approach in the more difficult, and more common, cases. These are the cases where the general meeting has the undoubted power to take decision, but their objective is not straightforwardly to advance the interests of the company (although sometimes it can be framed that way), but merely to determine relative rights as between the shareholders. In this context, it is inevitable that the majority's preferences will be favoured, even in circumstances where there can be no rational complaint that the decision was somehow inappropriate or improper: consider decisions to sack directors, or change the articles. When are these decisions reviewable? It is clear that they are reviewable, but, as one judge put it with some understatement, the current British law is "somewhat untidy".[24]

Resolutions to expropriate members' shares

19–8

In expropriation (or compulsory transfer) cases, the arguments for judicial intervention might seem to be at their strongest, but the law falls far short of prohibiting changes in the articles aimed at introducing such clauses. On the contrary, it is clear that compulsory transfer articles may be introduced into the company's articles, and the debate is about the level of judicial scrutiny to which such amendments will be subject. The relevant authorities start with *Brown v British Abrasive Wheel Co*,[25] a decision at first instance in which a public company was in urgent need of further capital which shareholders, holding 98 per cent of the shares, were willing to put up but only if they could

buy out the 2 per cent minority. Having failed to persuade the minority to sell, they proposed a special resolution adding to the articles a provision to the effect that any shareholder was bound to transfer his shares upon a request in writing of the holders of 90 per cent of the shares. Although such a provision could have been validly inserted in the original articles,[26] and although the good faith of the majority was not challenged, it was held that the addition of a general provision enabling the majority to expropriate the minority could not be for the benefit of the company as a whole but was solely for the benefit of the majority. Hence an injunction was granted restraining the company from passing the resolution.

This decision, however, was almost immediately "distinguished" by the Court of Appeal in *Sidebottom v Kershaw, Leese & Co Ltd.*[27] There, a directorcontrolled private company had a minority shareholder who had an interest in a competing business. Objecting to this, the company passed a special resolution adding to the articles a provision empowering the directors to require any shareholder who competed with the company to sell his shares at a fair value to nominees of the directors. This was upheld on the basis that it was obviously beneficial to the company. In contrast, shortly thereafter in *Dafen Tinplate Co v Llanelly Steel Co*,[28] it was held at first instance that a resolution inserting a new article empowering the majority to buy out any shareholder as they thought proper, was invalid as being self-evidently wider than could be necessary in the interests of the company.

So far, all these decisions suggest that adding to the articles a provision enabling the shares of a member to be compulsorily transferred will be upheld only if passed bona fide in the interests of the company, with that judged not just by the members but also reviewable by the court, on a basis which in some ill-defined way goes beyond the general meeting merely showing good faith and rationality. However, in *Shuttleworth v Cox Bros Ltd*,[29] a case concerning not the expropriation of shares but the removal of an unpopular life director, the Court of Appeal, in upholding the validity of a resolution inserting in the articles a provision that any director should vacate office if called upon to do so by the board, held that it was for the

members, and not the court, to determine whether the resolution is for the benefit of the company and that the court will intervene only if satisfied that the members have acted in bad faith.[30] If the same applies to expropriation of shares, it is difficult to understand why what is now s.979 of the Act was needed. That section[31] enables a takeover bidder who has acquired 90 per cent or more of the target company's shares to acquire compulsorily the remainder. There would have been no need for that section if a bidder, having acquired a controlling interest, could then cause the target company to insert in its articles a similar power. That might suggest that mere bona fides, directed to the benefit of the company, does not quite capture the approach being applied by the court. And yet going further has proved controversial.

19–9

An issue akin to the *Brown* facts was considered by the High Court of Australia in *Gambotto v WCP Ltd*,[32] where it was proposed to alter the articles to allow a 90 per cent shareholder to acquire the shares of minority shareholders at an objectively fair price (the majority holder in fact holding 99.7 per cent of the shares). The motivation for the change was to convert the company into a wholly owned subsidiary, which would bring enormous tax advantages for the company. Nevertheless, the court refused to allow the change, holding explicitly that the majority's decision could only be upheld if it were taken in good faith *and* for proper purposes. In the court's view, the general meeting's power to expropriate shares could legitimately be used to save the company from "significant detriment or harm" (as in *Sidebottom v Kershaw, Leese and Co Ltd*) but not to advance the commercial interests of the majority (as in this case, where the tax advantages to the company would indirectly, but greatly, benefit its controlling shareholders). "English authority", presumably *Shuttleworth v Cox Bros Ltd*, was disapproved on the grounds that "it does not attach sufficient weight to the proprietary nature of a share".[33] On one view, there is something of this same approach implicit in *Brown*, in Astbury J's judgment, where he too could be seen as denying the majority the right to use their power to expropriate the minority to their own corresponding advantage.[34] And yet English courts have on occasion explicitly distanced themselves from the objective

"proper purposes" approach in *Gambotto*, even in the context of expropriation decisions.[35]

However, the recent decision of *Re Charterhouse Capital Ltd*[36] perhaps puts suggestions of continuing adherence to a more relaxed British test in doubt. The Court of Appeal approved an amendment of the articles to permit expropriation of shares, and affirmed the broadly subjective test in *Shuttleworth*, but, in setting out the full detail of the appropriate test, the court consistently referred to the test as embracing not only bona fides but also the intended proper purpose of the power,[37] here being a tidying-up exercise designed to implement the agreed terms of a shareholder agreement which was expressed to take priority over the articles.

In such circumstances it would seem difficult for any minority shareholder to argue that the amendment was either irrational or for improper purposes, or in bad faith.

Other resolutions

19–10

If it is not clear what English law requires in cases of compulsory transfer of shares, where the arguments can typically be framed in terms of corporate benefit even if there are also substantial benefits to the majority, then how much more difficult is the issue likely to be where that claim cannot be made, and it is simply a battle of wills between the majority and minority as to how their relations should be regulated by the articles? In these circumstances, many cases appear to adopt the view that the *only* test can be good faith, as in *Shuttleworth*, since the courts can have no objective standard of their own to judge whether a decision is for the benefit of the company (other than shareholder irrationality, perhaps, and even that requires some conception of "the interests of the company"). In the difficult case of *Greenhalgh v Arderne Cinemas Ltd*,[38] where the proposed amendment was to remove a pre-emption clause so as to facilitate a sale of control to a third party, Sir Raymond Evershed MR tried to preserve the application of the traditional test by saying that in such cases "the company as a whole" did not mean the company as a corporate entity but "the corporators as a general body", and that it was necessary to ask whether the

amendment was, in the honest opinion of those who voted in favour, for the benefit of a hypothetical member. Since the case was before the court precisely because of a division of opinion on the issue, this test is hardly illuminating. As was pointed out by the High Court of Australia in its famous inter-war decision, *Peter's American Delicacy Co Ltd v Heath*,[39] it is "inappropriate, if not meaningless" to ask whether the shareholders had considered the amendment to be in the interests of the company as a whole. Some other test of validity is required.

On what that might be, little progress has been made over the intervening 75 years. Thus, in *Citco Banking Corp NV v Pusser's Ltd*[40] the Privy Council upheld a change in the articles which entrenched the existing controller of the company (who before the change controlled 28 per cent of the company's shares) by permitting the conversion of his existing shares (carrying one vote per share) into a new class of share carrying 50 votes per share. This was said by those who supported the alteration to be a bona fide decision in the interests of the company because it enabled the company to raise further finance for expansion, the financiers requiring that the existing controller remain in charge. The genuineness of this belief on the part of the majority was not challenged by the other party to the litigation and the court found that a reasonable shareholder could have held this view about the proposed alteration. Applying the *Shuttleworth* test and reiterating that the burden of proof is on those who challenge the resolution, the court found the test of bona fide in the interests of the company to have been met.

This may all seem unexceptional, yet working through the potential ramifications must give some cause for concern. At face value, it appears to suggest that a majority could use its power to deliver differential benefits to itself to the exclusion of the minority (here, conversion of a tranche of A shares carrying one vote per share to a tranche of B shares carrying 50 votes per share). If that can be done, would it not be equally permissible to reclassify the majority's tranche of ordinary shares to give differential dividend rights, or rights to capital on winding up? Even if it is thought that does not offend the rules on amending a company's articles—which is doubted—it must surely fail the statutory requirements for protection of shareholders' class

rights and pre-emptive rights. The minority would effectively be reduced to advancing s.994 complaints of unfair prejudice. The remedies there are typically that the minority is bought out, and thus excluded completely from further participation in the company. Looking back to the problem, notice that what is intuitively objectionable is not that the minority is overpowered; that is inevitable with majority rule. It is that the majority can use its power for the purpose of delivering differential benefits *to itself* to the exclusion of the minority. Lord Hoffmann, in *Citco*, would not disenfranchise the interested shareholder (here one Tobias), especially as there was no attack on his bona fides, but he did note that, even without his votes, the resolution would still have been carried by 78 per cent of the shareholders. In these circumstances, there seems little cause for complaint by the losing minority. But absent these circumstances, and despite the prevailing analysis in the cases, surely there is a justifiable concern?[41]

The future

19–11

But perhaps, finally, the future is looking a little more certain. All the cases so far illustrate a set of common concerns in this area. Of itself, this suggests a common approach is warranted: there is little point in different tests for different sub-categories of shareholder decision-making, although of course, whatever the test, the particular power and the context for its exercise will be a material consideration.[42] In determining the appropriate tests for judicial review, there seem to be three broad ways forward in this area. The first is to demand little of shareholders in their decision-making other than rationality and bona fides. Many cases are illustrative,[43] but so too their problems. The second is to adopt a safe mid-way point, permitting an objective element in the test applied by the court, and keeping that test focused on "the interests of the company", but not going so far as to allow the court to substitute its own commercial view of what might have been best in the circumstances. *Brown v British Abrasive Wheel Co*,[44] discussed earlier, might be illustrative.[45] Whatever the merits, such an approach seems difficult to justify in principle and impossible to administer with certainty. The

third, and certainly the most interventionist approach, is to embrace the twin tests of subjective bona fides and objective proper purposes, as in *Gambotto.* Despite the criticisms visited on that case, this does increasingly appear to be the modern approach, both with shareholder decision-making and more generally.[46] It has a respectable pedigree: it is evident in the explicit language of the much-cited *Allen v Gold Reefs of West Africa Ltd*,[47] as well as in the more controversial *Gambotto*, and is also evident in all the most recent considered English decisions.[48] Moreover, although it was not the language used, it might be seen as a better explanation of some of the earlier English cases.[49]

Its starting point is the perfectly general one that no grant of power is absolute, at least when its exercise binds dissenting parties. The minimum constraints are that the power must be exercised rationally, in good faith, and for the purposes for which the power is granted. It is this last feature which typically provides the potential tripwire in authorisation and ratification decisions, in expropriation decisions, and in governance decisions such as *Citco.* But in different contexts the concerns (or "purposes") are different; for example, the relevant "proper purposes" might give free rein to shareholders in their appointment and dismissal of directors.[50] This variability might not make the relevant distinctions much easier to solve when presented in terms of improper purposes (or fraud on the power), rather than in terms of "bona fide in the interests of the company", but at least the principles being pursued are clearer.

As evidence of this trend, Sir Terence Etherton C in *Re Charterhouse Capital*, indicated, obiter, that he preferred the formulation in *Peters' American Delicacy Co Ltd v Heath*,[51] that in the case of an amendment in which the company as an entity has no interest, the test should be whether the amendment amounts to oppression of the minority or is otherwise unjust or is outside the scope of the power. This is the sort of test which also applies more broadly, to decision-making by other power-holders.[52]

Voting at class meetings

19–12

The rules discussed above apply not only to decisions by the shareholders at large but also to votes at meetings of classes of shareholders. These rules and their use are described in the next section, but we might immediately note that here, too, the cases adopt the same approach to decision-making as described immediately above. Sometimes this is very clearly so. *Re Holders Investment Trust*[53] concerned a capital reduction scheme requiring the confirmation of the court. Megarry J approached the matter on the basis that he had to be satisfied, first, that the resolution of the preference shareholders had been validly passed bona fide in the interest of that class; and then that, in the court's view, the scheme was fair to all classes.[54] The application failed at the first step. By analogy with the cases considered earlier, the law required members voting in class meetings to use their votes for the purpose of—or in the interests of—the class. Here, confirmation was refused because the resolution of the class meeting of the preference shareholders had been passed as a result of votes of trustees who held a large block of the preference shares but a still larger block of ordinary shares. In casting their votes, the trustees had deliberately voted in the way best designed to favour the ordinary shareholders, since that was what would best serve the interests of their beneficiaries (as of course their trustee obligations required). The court held that use of their power in this way was not permitted. We might now say it was contrary to the protective purposes underpinning the required class meetings.

Class Rights

19–13

We have already noted that the principle discussed in the previous section applies to class meetings as well as to general meetings of the shareholders. Now we need to turn to the question of when separate meetings of classes of shareholders are required and how the class in question is defined. The separate consent of shareholders particularly affected by a proposed resolution may be required by statute or by the company's own constitution. For example, as we shall see, the principle of separate consent is well-established in relation to proposed alterations of the articles where these alterations affect

the “rights” of a class of members.

The procedure for varying class rights

19–14

Where a proposed alteration of the articles involves “the variation of the rights attached to a class of shares”, the Act supplements the general supermajority provisions of s.21 with additional protective mechanisms for members of the affected class. The technique deployed in ss.630 and 631 is to require the separate consent of the class, usually by way of a 75 per cent majority, to any proposal to alter the articles in such a way as would vary the class rights. Without this important protective technique, the class might be swamped by the votes of other classes of shareholders. Indeed, the class in question might not otherwise have any say in the matter at all, if, for example, it was a class of non-voting shareholders. Preference shares are often non-voting, at least if their dividends are being paid on time, and classes of non-voting ordinary shares are not unknown. The alteration of their rights would otherwise be a matter entirely for the voting shareholders. The Act thus provides the class in question with a veto over the proposed change, even if the company’s constitution gave the class members no right to vote on the issue. Of course, the alteration must also be approved in the normal way under s.21 (approval by a three-quarters majority of those shareholders entitled to vote under the company’s articles), but that is not normally a problem in the cases considered in this section.

The statutory provisions on variation in the 2006 Act are considerably simpler than their predecessors. Section 630 in effect lays down a single default rule,[55] with equivalent provision being made in s.631 for companies without shares. Variation of the rights attached to a class of shares requires the consent of three-quarters of the votes cast at a separate meeting of that class or a written resolution having the support of holders of three-quarters of the nominal value of the class (excluding treasury shares) (s.630(4)). That default rule may be displaced by explicit provisions in the company’s articles, which may set a higher or a lower standard. This is very straightforward and is enough to deal with most cases which will arise.

The complexity of the section, such as it is, derives from its attempt to answer the question of what rules should govern any attempt to amend the procedure in the articles for the variation of class rights, if the articles contain such a procedure. If the variation procedure in the articles could be freely amended in the same way as any other article of the company, the protection intended to be afforded by the articles to the class could easily be undermined. The section begins by stating that any amendment to the variation procedure contained in the articles itself attracts the provisions protecting class rights (s.630(5)).[56] Without this provision, a variation procedure in the articles requiring a higher level of consent could be reduced to, or even below, the level of the statutory default by simply following the requirements of s.21 for general alterations to the articles (for example, no class meeting). This is now not possible as a result of s.630(5), unless, presumably, the articles themselves expressly provide a less demanding way of amending the variation procedure than the default rule in the statute.

In the same vein, the subsection also treats as a variation of class rights the introduction of a variation procedure into the articles, for that might set a lower standard than the statutory default rule previously applicable. Finally, the section is without prejudice "to any other restrictions on the variation of rights".[57] This appears to mean that a company could use the entrenchment mechanism of s.22[58] to set an even higher requirement for amendments to the variation procedure contained in the articles than that otherwise required by s.630. For example, the articles could provide that amendments to the variation procedure require the consent of all the members of the class.

19–15

So far, we have observed that the statutory provisions on class rights use two protective techniques, at least on a default basis: a separate meeting of the class (the main protection) and the supermajority protection of a three-quarters majority to obtain an effective decision of the class meeting. However, s.633 also makes use of a third technique analysed in the first part of this chapter, namely, court review of the majority's decision.[59] This acknowledges the fact that, even within a class meeting, it is possible for the majority of the class to act opportunistically

towards the minority of the class. Section 633 may be particularly useful where the articles adopt a variation procedure considerably less demanding than the default statutory one. As we have seen,[60] those voting at class meetings are subject to the general common law requirements as to proper decision-making, but s.633 (with equivalent provisions in s.634 for companies limited by guarantee) goes further. It affords a dissenting minority of not less than 15 per cent of the issued shares of a class,[61] whose rights have been varied in manner permitted by s.630, a right to apply to the court to have the variation cancelled. Application must be made within 21 days after the consent was given or the resolution passed, but can be made by such one or more of the dissenting shareholders as they appoint in writing. Once such an application is made, the variation has no effect unless and until it is confirmed by the court. If, after hearing the applicant "and any other persons who apply to be heard and appear to the court to be interested",[62] the court is satisfied that the variation would "unfairly prejudice"[63] the shareholders of the class represented by the applicant, it may disallow the variation but otherwise must confirm it.[64] It is expressly provided that "the decision of the court is final",[65] which presumably means that it cannot be taken to appeal.[66]

The dearth of reported cases on s.633, and earlier versions of it, suggests that applications under it are made rarely if at all. Nevertheless, it probably serves a useful purpose in specifically drawing the attention of boards of directors to the need to ensure that variations of class rights treat classes fairly. But, should they ignore that warning, they are more likely to face an application under the unfair prejudice rules in Pt 30 rather than under s.633.

The sections analysed above provide a procedure whereby the company can vary class rights. Sometimes, a variation of class rights is effected by an order of the court. Section 632 makes it clear that the courts' powers under Pt 26 of the Act (dealing with arrangements and reconstructions (see Ch.29)) and Pt 30 (unfair prejudice—see the following chapter) and, less importantly, s.98 (cancellation of resolution of public company to re-register as private) are not affected by ss.630 and 631.

What constitutes a "variation"

Although the Act deals at some length with the procedure for varying class rights, it says very little, if anything, about what a variation of class rights is or, indeed, what a class right is. Both these matters are defined principally by the common law. As a matter of logic, however, the statutory or constitutional procedure is only relevant once it is clear that there is to be a variation of a class right. We will look first at "variation" and then at "class right".

Prior to the enactment of statutory provisions in this area, it was commonly assumed that rules specified in the articles required class consent only of the class whose rights were being altered in a manner adverse to that class. But the statutory provisions on "variation" (even if coupled with the statement that it includes "abrogation") cannot reasonably be construed as meaning only "*adverse variation*", and, to avoid any subsequent attack on the validity of the resolution, the formal consent of the benefited class should be obtained, even though it might appear a foregone conclusion.

However, the real problem lies where a class is adversely affected by what is proposed, but the courts, by placing a narrow technical construction on what constitutes a variation of rights, have declined to hold that the proposal falls within the class rights provisions of either the statute or the articles. Thus a subdivision[67] or increase[68] of one class of shares has been held not to vary the rights of another class notwithstanding that the result was to alter profoundly the voting equilibrium of the classes. Similarly, where preference shares were non-participating as regards dividend but participating as regards capital on a winding-up or reduction of capital, a capitalisation of undistributed profits in the form of a bonus issue to the ordinary shareholders was not a variation of the preference shareholders' rights notwithstanding that the effect was to deny them their future participation in those profits on winding up or reduction.[69] In the contrary situation, where the shares were participating as regards dividends but not in relation to return of capital on a winding-up, a reduction of capital by repayment of irredeemable preference shares in accordance with their rights on a winding-up (i.e. at their nominal value) was not regarded as a

variation or abrogation of their rights, even though the shareholders were deprived of valuable dividend rights.[70] Even if the dividend rights of the preference shareholders were fixed, those rights might be valuable, if interest rates had fallen after the issuance of the preference shares. The obvious unfairness of this led to a contractual solution: the practice of providing, on issues by public companies of preference shares which are non-participating in a winding-up, that on redemption or any return of capital the amount repaid should be tied to the average quoted market price of the shares in the months before (the market price reflecting the value of the dividend rights rather than the nominal value of the shares). This, so-called "Spens formula", named after its inventor, affords reasonable protection in the case of listed companies but preference shareholders in unquoted companies still remain at risk.

Finally, an issue of further shares ranking pari passu with the existing shares of a class was not regarded as a variation of rights.[71] And, where there were preference and ordinary shares, an issue of preferred ordinary shares ranking ahead of the ordinary but behind the preference was not a variation of the rights of either existing class.[72] The principle applied in all the above cases was that the formal rights of the complaining shareholders had not been varied, even if the change had adversely affected the value of those rights.

19–17

However, just as it is possible for the articles to require a variation procedure which is more demanding than the statutory default procedure in terms, for example, of the level of approval required, so it is possible for the articles to require a wider range of variations to be subject to the procedure than the statute requires. Thus, in the wake of the decisions on reduction of capital referred to in the previous paragraph, it became common to introduce special provisions into a company's articles to protect preference shareholders. In *Re Northern Engineering Industries Plc*[73] a clause in the articles deeming a reduction of capital to be a variation of rights was upheld and enforced when the company proposed to cancel its preference shares. But very clear wording will have to be used if such a provision is to be construed as affording any greater safeguards. In *White v Bristol*

Aeroplane Co[74] and *Re John Smith's Tadcaster Brewery Co*,[75] the relevant clauses referred to class rights being "affected, modified, dealt with or abrogated". At first instance Danckwerts J[76] held that bonus issue to the ordinary shareholders could not be made without the consent of the preference shareholders because, although their rights would not be abrogated or varied, they would be "affected" since their votes would be worth less in view of the increased voting power of the ordinary shareholders. But the Court of Appeal reversed his decision. They said that the rights of the preference shareholders would not be affected; the rights themselves—to one vote per share in certain circumstances—remained precisely as before. All that would occur was that their holders' enjoyment of those rights would be affected. If that eventuality was to be guarded against, more explicit wording would have to be used, making it clear that the clause was intended to protect economic interests as well as rights.

It seems, therefore, that if s.630 is effectively to prevent class rights from being "affected as a matter of business",[77] it is necessary to find a formula for a variation of rights clause which will expressly operate in relation to an alteration which affects the enjoyment of their rights (as opposed to the rights themselves). In the absence of such a clause in the model articles, however, such rights are likely to be granted by companies only if it is thought that the securities on offer would not otherwise be acceptable to potential purchasers or, at least, not acceptable at the price the company wishes to issue them at.

The definition of class rights

19–18

Before it is possible to decide whether a class right has been varied, it is necessary to know what a class right is. This is a matter upon which there is a surprising degree of doubt. Section 629 tells us that shares are to be regarded as of one class if the rights attached to them "are in all respects uniform", so that merely attaching different names to groups of shares does not turn them into different classes of share if the rights attached to them are the same.[78] This definition of a class of shares applies to the Act generally, not just in relation to the variation of class

rights.

Beyond that, the statute gives no help. It does not even state expressly, as s.127(1) of the 1985 Act did, that class rights can arise only if there is more than one class of share. It seems likely that no change was intended on this point, since, where there is only one class of share, s.21 (alteration of the articles) and s.630 (variation of class rights) would overlap to an unacceptable extent, if s.630 applied in this case as well. However, assuming two or more classes of share, what then counts as a class right? The choices range from only the rights attached to any one of the classes which are unique to it (i.e. not held in common with any of the other classes of share) to all the rights attached to any of the classes. An intermediate position adds to the first group the core rights of shareholders (relating to voting, dividends and return of capital on a winding-up) whether or not those rights are unique to the class in that particular case. There is little authority on the choice to be made, although in *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd*[79] Scott J seemed to favour the first and narrowest view. The second view might be thought to protect more adequately the expectations of shareholders. On the first and narrowest view a shareholder seeking protection of dividend, voting and return of capital rights which were not unique to the class would have to ensure that there was a variation of rights clause in the articles and that that clause defined class rights in an appropriately broad way. This seems undesirable. The right to class consent at least for the variation of core rights would be what companies and, for example, preference shareholders would expect and the law should give effect to that expectation.

19–19

Whilst this basic issue about the definition of a class right continues unresolved, a more sophisticated aspect of the same question has been considered judicially and has received a surprisingly liberal response. The question is whether there are class rights where nominally the shares are of the same class but special rights are conferred on one or more members without attaching those rights to any particular shares held by that member or members. This was the question facing Scott J in the

Cumbrian Newspapers case.[80] Two companies, publishing rival provincial weekly newspapers in an area where it had become apparent that only one was viable, entered into an arrangement designed to ensure that one of the companies (Company A) would publish that one newspaper but that it would issue 10 per cent of its ordinary share capital[81] to the other company (Company B). Company B was anxious to ensure that the paper should remain locally owned and controlled, and to this end the articles of Company A were amended in such a way as to confer on Company B pre-emptive rights in the event of any new issue of shares by Company A or on a disposal by other shareholders of their shares in Company A. These rights were not attached to any particular shares but conferred on Company B by name. Further, another new article provided that: "If and so long as [company B] shall be the holder of not less than one-tenth in nominal value of the issued ordinary share capital of" Company A, Company B "shall be entitled from time to time to nominate one person to be a director of" Company A. Company A's articles contained a variation of rights clause. Eighteen years later, Company A's directors proposed to convene a general meeting to pass a special resolution deleting the relevant articles. Company B thereupon applied to the court for a declaration that Company B's rights were class rights that could not be abrogated without its consent.

Scott J pointed out that special rights contained in articles could be divided into three categories.[82] First, there are rights annexed to particular shares. The classic example of this is where particular shares carry particular rights not enjoyed by others, e.g. in relation to "dividends and rights to participate in surplus assets on a winding up".[83] These clearly were "rights attached to [a] class of shares" within the meaning of what is now s.630. He also held that this category would include cases where rights were attached to particular shares issued to a named individual but expressed to determine upon transfer by that individual of his shares.

The second category was where the articles purported to confer rights on individuals not in their capacity as members or shareholders.[84] Rights of this sort would not be class rights, for they would not be attached to any class of shares.[85] But

Company B's rights did not fall within this class; the articles in question were "inextricably connected with the issue to the plaintiff[86] and the acceptance by the plaintiff of the ordinary shares in the defendant".[87]

This left the third category: "rights that, although not attached to any particular shares were nonetheless conferred upon the beneficiary in the capacity of member or shareholder of the company".[88] In his view, rights conferred on Company B fell into this category.[89] But did they come within the words in the then equivalent of s.630(1) as "rights attached to any class of shares"? After an analysis of the various legislative provisions and of the anomalies which would result if they did not,[90] he concluded that the legislative intent must have been to deal comprehensively with the variation or abrogation of shareholders' class rights and that he should therefore construe what is now s.630 as applying to categories one and three. He accordingly granted the declaration sought.[91]

19–20

This decision of Scott J might have been easier to reach under the 2006 Act. In effect, the learned judge treated the expressions "the rights of a class of members" and the "rights…attached to a class of shares" as synonymous. The 2006 Act, by contrast, deals explicitly with variations of the former type in s.631, and the latter in s.630. In short, Scott J may have anticipated by a few decades the position now provided for by statute.

Other cases

19–21

There are some statutory procedures for taking corporate decisions which explicitly require the separate consent of each class of shares, for example, Pt 26 dealing with schemes of arrangement, but there the definition of a "class" of shares is interpreted functionally rather than literally, in contrast with the variation of rights cases.[92]

SELF-HELP

19–22

It is wrong to think that protection for minority shareholders is to

be found only in mandatory provisions of company law. Provided the minority shareholder has sufficient bargaining power, for example at the point a much-needed investment is made in the company, that shareholder may be able to negotiate for protections over and above those to be found in company law. These contractual protections may then be reflected in the company's constitution or in an agreement existing separately from and outside the constitution.

Indeed, across the board there is a considerable incentive for shareholders themselves to provide, in advance of a dispute arising, for a substantive or procedural rule which will govern the case. Individuals reading the previous pages would be justified in feeling somewhat gloomy about the extent to which minority shareholder interests are truly protected by the rules there analysed, and so might well feel that such contractual protections would be essential. Where class rights are not involved, the scope of the objective controls upon the voting decisions of the majority is still very unclear. Even where class rights are involved, the protection afforded still has its weaknesses, notably the limited view taken by the courts of what constitutes the variation of a class right. Indeed, the statutory class-rights procedure encourages self-help because it sets out only default rules and limited ones at that.[93]

As an added advantage, the techniques described below may be used quite generally to exert control in the interests of minority shareholders in any corporate decision, regardless of whether that decision needs to be taken by the shareholders or may be taken by the board of the company. As such, the following discussion constitutes a bridge to the statutory unfair prejudice provisions discussed in the following chapter.

Provisions in the constitution

19–23

The articles provide an obvious place in which to locate any agreements reached for the protection of minority shareholders, because the articles bind the company and its members as they exist from time to time (s.33) so that future members are bound by the provisions of the articles protecting the minority without further ado.

Protective provisions in the articles will be an effective way of safeguarding minorities only if they can be enforced. Often the minority shareholder will want to assert that a decision taken in breach of the protective provisions is not binding on the company and that an injunction should be granted to enjoin the company and its directors from acting on the invalid resolution. In principle, such an action should be available since, as we saw in Ch.3, the articles are enforceable as a contract, although the discussion in Ch.3 also set out several important and probably unexpected limits to the general principle.[94]

The weakness with protective provisions in the articles, however, is that they are alterable by special resolution of those entitled to vote on shareholder resolutions (s.21). This may provide a way to defeat the expectations of non-voting shareholders or even those of minority voting shareholders, because a previous protection may simply be removed from the articles, at least provided no class rights have been created.

The Act itself suggests one possible solution to the risk of future amendment, namely, use of the entrenchment powers contained in s.22. Under this section a provision in the articles can be declared to be alterable only through a more restrictive procedure than that required for a special resolution under s.21. The entrenchment provision may go so far as to require unanimity for a particular change, although it cannot render the provision unalterable if all the members agree to the change (s.22(3)). Thus, s.22 provides a mechanism whereby a provision protective of the minority can be included in the company's articles and that protective provision can be declared to be alterable only in the desired way, most obviously only if those it is intended to protect agree to the change. However, the entrenchment provision may have a powerful and adverse effect on those it does not benefit and so s.22(2) provides that entrenchment provisions may be included only in the company's articles on formation or, subsequently, with the consent of all the members of the company. Entrenchment is, thus, essentially a small company facility.

19–24

Consequently, it may be more attractive to provide the required

minority protection in a company already in existence by creating a new class of shares carrying the relevant protection, issuing those shares to the shareholder to be protected, and then including a broad variation of rights clause in the articles, so that, for example, the consent of the protected shareholder becomes necessary for the alteration of the protection. Alternatively, the shareholder may be given in effect control over the taking of any resolutions by the shareholders through provisions which in principle are alterable but in practice cannot be. An example would be a rule that the quorum for a meeting of the shareholders cannot be constituted unless the minority shareholder is present, either in person or by proxy. Thus, the shareholder would be given a veto over decisions of the shareholders, exercisable by refusing to participate in the meeting.[95] This provision would be ineffective where the shareholders decide by written resolution, but in that case it might be possible to provide a solution by requiring the particular shareholder's consent for a written resolution or through weighted voting rights.[96]

Shareholder agreements

19–25

Alternatively, the parties may prefer to proceed by way of an agreement existing outside and separate from the articles. This has the advantage of privacy because such an agreement, unlike the company's constitution, does not have to be filed at Companies House. However, an issue immediately arises as to whether the company can effectively be made party to such an agreement, as it would be if the agreement were embodied in the company's articles. Here, there are two apparently conflicting principles: first, that a company, like any other person, cannot with impunity break its contracts and, secondly, that a company cannot contract out of its statutory power under s.21 to alter its articles by special resolution.

The second proposition was favoured by the House of Lords in *Russell v Northern Bank Development Corp Ltd*.[97] It was clear to their lordships that "a provision in a company's articles which restricts its statutory power to alter those articles is invalid"[98] and they applied that principle to the agreement before them, existing

outside the articles among the shareholders and to which the company purported to be a party. That agreement provided that no further share capital should be created or issued in the company without the written consent of all the parties to the agreement. Consequently, it would seem that the company cannot validly contract independently of the articles not to alter those articles.[99] However, that proposition is heavily qualified by two further propositions which may render the initial proposition ineffective in practice, at least for those who are well advised.

Prior contracts

19–26

The first qualification is that the principle of invalidity, laid down in *Russell*, does not apply where the company has entered into a previous contract on such terms that for the company to act upon its subsequently altered article would involve it in a breach of the prior contract. In this situation the term of the earlier contract, which would be breached if the company acted upon the altered article, is not invalid. The *Russell* principle is not relevant here because the term in the earlier contract is not broken when the company alters its articles, but only when it acts upon the altered article. Although the case law has tended to focus on directors' service contracts, its implication for shareholder agreements is that a company would be a party to them and agree not to act in a particular way in the future, provided it did not agree to refrain from amending its articles. Thus, in *Southern Foundries (1926) Ltd v Shirlaw*[100] the company altered its articles so as to introduce a new method of removing directors from office and then used the new method to dismiss the managing director in breach of his 10-year service contract. The managing director successfully obtained damages for wrongful dismissal. The provision as to the term of the service agreement was thus clearly held by the House of Lords to be valid. Lord Porter said: "A company cannot be precluded from altering its articles thereby giving itself power to act upon the provisions of the altered articles—but so to act may nevertheless be a breach of contract if it is contrary to a stipulation in a contract validly made before the alteration".[101] In this case the contract protected a manager but the principle is

equally applicable to a contract protecting a shareholder.

19–27

The unresolved issue in relation to this first qualification is whether a claimant seeking to enforce his or her contractual rights against the company is confined to the remedy of damages or whether and, if so, how far, injunctive relief is available to enforce the earlier contract. In *Baily v British Equitable Insurance Co*,[102] the Court of Appeal granted a declaration that to act on the altered article would be a breach of the plaintiff's contractual rights. More surprisingly, in *British Murac Syndicate Ltd v Alperton Rubber Co Ltd*[103] Sargant J went so far as to grant an injunction to restrain an alteration of the articles which would have contravened the plaintiff's contractual rights. Although Sargant J's decision is generally regarded as based upon a misunderstanding of the previous authorities, some sympathy with this approach was expressed by Scott J in the *Cumbria Newspapers* case,[104] where he said that he could "see no reason why [the company] should not, in a suitable case, be injuncted from initiating the calling of a general meeting with a view to the alteration of the articles". To the extent that injunctive relief is made available in this way not simply to restrain acting upon the altered article but to restrain the operation of the machinery for effecting the alteration itself, the notion that the company cannot validly make a direct contract not to alter its articles becomes hollow. Such an extension of injunctive relief would also contradict the dictum of Lord Porter in *Shirlaw*[105]: "Nor can an injunction be granted to prevent the adoption of the new articles". However, injunctive relief merely to prevent the company acting upon the new articles would not fall foul of this principle.

Binding only the shareholders

19–28

The second qualification is that an agreement among the shareholders alone as to how they will exercise the voting rights attached to their shares is not caught by the principle that a company cannot contract out of its statutory powers to alter its articles. This rule was applied to save the agreement in *Russell*, the House of Lords benignly severing the company from the

agreement in question. Lord Jauncy said that “shareholders may lawfully agree inter se to exercise their voting rights in a manner which, if it were dictated by the articles, and were thereby binding on the company, would be unlawful”.[106] The claimant was granted a declaration as to the validity of the agreement, and it seems that their lordships would have been happy to grant an injunction had the claimant objected substantively to the course of action proposed by the company, as against wishing to establish the principle that his consent to the change was required.[107] This conclusion flows from the more general proposition that the vote attached to a share is a property right which the shareholder is prima facie entitled to exercise and deal with as he or she thinks fit.[108] Since the company can act only through its members to alter the articles, an agreement binding all the members is as effective as one to which the company is party as well.

However, in one respect a members’ agreement is less secure than one which binds the company as well. On a subsequent transfer of a shareholding covered by the agreement the new shareholder will not be bound without his or her express adherence to the agreement among the other shareholders.[109] Nevertheless, the shareholders’ agreement does play an important role in establishing the requirement for minority shareholder consent to important changes in the company’s financial or constitutional arrangements in situations such as management buy-outs, venture capital investments and joint ventures.[110]

Finally, a device analogous to the voting agreement should be noted. Closely associated with, but more sophisticated than, the voting agreement is the voting trust, not uncommon in the US but less common in the UK. Under this, in effect, voting rights are separated from the financial interest in the shares, the former being held and exercisable by trustees while the latter remains with the shareholders. Voting policy then becomes a matter for the trustees, who may use their powers to protect minority shareholders, though the voting trust may be driven by other considerations, such as a desire to make a takeover bid more difficult and thus protect the incumbent management.[111]

Conclusion

19–29

The mandatory protections for minority shareholders identified in this chapter are rather patchy. They apply only to voting at general meetings and not to majority control exercised via the board and, even then, only to certain types of shareholder decision. In the case of the requirements for shareholder voting, the protection provided manages to be, at once, both limited and uncertain in scope. It is perhaps not surprising that shareholders have resorted to private means, and that the legislature has attempted make more far-reaching protections available. The development and current status of these alternative means are considered in the next chapter.

[4] See above, at para.13–19.

[5] Listing Rules 12.4.1–2.

[6] *Birch v Cropper* (1889) 14 App. Cas. 525 HL; cf. art.71 of Model Articles for Public Companies. The Model Articles for Private Companies Limited by Shares needs no equivalent since art.21 requires all shares (other than those initially subscribed) to be fully paid as to nominal value and any premium.

[7] This provides a possible rationale for the exemption of dividends from the rules on financial assistance, especially as creditors are also protected by the rule that dividends are payable only out of profits. See above at para.13–45.

[8] See above, Ch.17.

[9] See above, para.16–121.

[10] See Listing Rules 11.1 et seq. The closest the general law comes to requiring shareholders' approval of transactions with significant shareholders is where that shareholder falls within the category of "shadow director" and thus is subject to the statutory rules on self-dealing contained in Ch.4 of Pt 10 (above, paras 16–54 et seq.).

[11] For example, the US (see R. Clark, *Corporate Law* (Little Brown, 1986) pp.444 et seq.

[12] See below, para.29–24.

[13] See paras 28–41 and 28–75. The statute recognises the exit right only if the new controller holds 90% of the voting rights after a takeover bid; the Code gives an exit opportunity at the 30% level, no matter how the 30% has been acquired and so goes much further than the statute.

[14] The original source of this oft-repeated (but potentially misleading) expression seems to be Lindley MR in *Allen v Gold Reefs of West Africa* [1900] 1 Ch. 671–2, and merits full citation: "The power thus conferred on companies to alter their articles is limited only by the provisions contained in the statute and the conditions contained in the company's memorandum of association. Wide, however, as the language of [the Act] is, the power conferred by it must, like all other powers, be exercised subject to those general principles of law and equity which are applicable to all powers conferred on majorities enabling them to bind minorities. It must be exercised, not only in the manner required by law, but also bona fide for the benefit of the company as a whole, and it must not be exceeded. These conditions are always implied, and are seldom, if ever, expressed".

[23] *Bamford v Bamford* [1970] Ch. 212 CA. The directors had issued shares for improper purposes. In a ratification by shareholders of this decision, it was conceded that the holders of the newly issued shares could not vote.

[24] *Constable v Executive Connections Ltd* [2005] 2 B.C.L.C. 638, the judge refusing to dispose of an expropriation claim summarily.

[25] *Brown v British Abrasive Wheel Co* [1919] 1 Ch. 290. For a stimulating analysis of these cases see Hannigan, "Altering the Articles for Compulsory Transfer" [2007] J.B.L. 471.

[26] *Phillips v Manufacturers Securities Ltd* (1917) 116 L.T. 209; in *Borland's Trustees v Steel Bros* [1901] 1 Ch. 279 an even wider article was inserted with the agreement of all the members. Presumably too a compulsory transfer article could be introduced by majority vote which would affect only shares acquired in the future.

[27] *Sidebottom v Kershaw, Leese & Co Ltd* [1920] 1 Ch. 154 CA.

[28] *Dafen Tinplate Co v Llanelly Steel Co* [1920] 2 Ch. 124.

[29] *Shuttleworth v Cox Bros Ltd* [1927] 2 K.B. 9 CA.

[30] The court conceded that if the resolution was such that no reasonable man could consider it for the benefit of the company as a whole that might be a ground for finding bad faith, [1927] 2 K.B. 9 at 18, 19, 23, 26 and 27. This exception was affirmed in *Re Charterhouse Capital* [2015] EWCA Civ 536. Another, it is submitted, would be if the majority was trying to acquire the shares of the minority at an obvious undervalue.

[31] Dealt with in Ch.28 at paras 28–68 et seq., below.

[32] *Gambotto v WCP Ltd* (1995) 182 C.L.R. 432.

[33] *Gambotto v WCP Ltd* (1995) 182 C.L.R. 432 at 444.

[34] *Brown v British Abrasive Wheel Co* [1919] 1 Ch. 290, 296, per Astbury J: "The defendants contend that it is for the benefit of the company as a whole because in default of further capital the company might have to go into liquidation. The plaintiff is willing to risk that. The proposed alteration is not directly concerned with the provision of further capital, nor does it insure that it will be provided. It is merely for the benefit of the majority. If passed, the majority may acquire all the shares and provide further capital. That would be for the benefit of the company as then constituted. But the proposed alteration is not for the present benefit of this company". It may be that the decision can be put on the basis, as found by the judge, that the majority did not think about the benefit to the company's business at all, but only their own benefit, for example, because financing was available on equivalent terms from those who did not require complete control.

[37] *Re Charterhouse Capital Ltd* [2015] EWCA Civ 536, see especially [90].

[38] *Greenhalgh v Arderne Cinemas Ltd* [1951] Ch. 286 CA; and [1950] 2 All E.R. 1120 where the judgment of Evershed MR is reported more fully.

[39] *Peter's American Delicacy Co Ltd v Heath* (1939) 61 C.L.R. 457, 512 (Dixon J). Here the amendment provided that shareholders should thenceforth receive dividends rateably according to the amounts paid up on their shares rather than, as previously, according to the number of shares (fully or partly paid) which they held. A fortiori the test is not useful if the group in question is made up of a number of distinct sub-groups: *Redwood Master Fund Ltd v TD Bank Europe Ltd* [2006] 1 B.C.L.C. 149, not an expropriation case and involving a "class" of creditors rather than of shareholders, but applying the same principles.

[40] *Citco Banking Corp NV v Pusser's Ltd* [2007] UKPC 13; [2007] 2 B.C.L.C. 483 PC.

[41] Note the different approach in *Rights & Issues Investment Trust Ltd v Stylo Shoes Ltd*

[1965] Ch. 250, cited in *Citco*, although not followed in its detail. In *Stylo*, along with a substantial increase in the issued ordinary share capital, the articles were amended to double the number of votes attached to special management shares so as to maintain the control of the existing management. In upholding the shareholders' resolution, Pennycuick J noted, at 255–256, that the rules on class rights needed to be followed, and that here the resolution was effective because the management shares had not voted, and yet nevertheless 92 per cent of the ordinary shareholders, being those with no personal interests to gain in the matter, had voted in favour.

[42] See also Completing, para.5.98.

[43] There is some indirect support for this approach in English law in *Citco Banking Corp NV v Pusser's Ltd* [2007] UKPC 13; [2007] 2 B.C.L.C. 483 at [20] PC, where a subjective approach was endorsed even in what came close to an expropriation case.

[44] *Brown v British Abrasive Wheel Co* [1919] 1 Ch. 290.

[45] And was criticised on precisely that basis in *Shuttleworth* and (perhaps) *Citco.*

[46] Any number of cases might be cited. The rule does not depend on the identity of the power-holder, and in particular does not depend on the power-holder being a fiduciary. See as illustrative *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71 SC (directors); *Asségnon Asset Management SA v Irish Bank Resolution Corp Ltd (formerly Anglo Irish Bank Corp Ltd)* [2012] EWHC 2090 (Ch) (creditors); *Burry & Knight Ltd v Knight* [2014] EWCA Civ 604 (shareholders).

[47] *Allen v Gold Reefs of West Africa* [1900] 1 Ch. 671.

[48] See especially the earlier discussion of *Re Charterhouse Capital Ltd* [2015] EWCA Civ 536. See also fn.46, above.

[49] In particular, the test applied by the courts is not to look at the controlling director-shareholder's *actual* bona fides, nor even to assert that *no* reasonable director-shareholder could have thought the decision to be bona fide in the interests of the company (i.e. either an irrationality test, or an indication that he court was simply not persuaded that bona fides were proven). Rather, it is, it seems, to apply a more objective test, and to assume an improper motivation, or a use of the power for improper ends.

[50] Although even here there are some constraints: the potential pay-back for appointment of a board of directors intended to serve as the appointer's puppet is classification of the appointer as a shadow director.

[51] *Peters' American Delicacy Co Ltd v Heath* (1939) 61 C.L.R. 457, 512 (Dixon J).

[52] See paras 16–26 et seq. (directors); and *Redwood Master Fund Ltd v TD Bank Europe Ltd* [2006] 1 B.C.L.C. 149; and *Asségnon Asset Management SA v Irish Bank Resolution Corp Ltd* [2012] EWHC 2090 (Ch) (bondholders).

[53] *Re Holders Investment Trust* [1971] 1 W.L.R. 583.

[54] See below, para.29–11.

[55] The Model Articles for private and public companies contain no variation of rights procedure, so, in effect, the statute is the default model.

[56] Both in relation to variation of rights and amendments to variation procedures, variation includes abrogation: s.630(6). Class rights and variation procedures contained in the memorandums of existing companies are treated as being contained in the articles: s.28.

[57] 2006 Act s.630(3).

[58] Discussed below at para.19–23.

[59] This court review applies to all variation procedures, whether specified in the Act or in the company's articles: s.633(1).

[60] See above, para.19–12.

[61] Provided that they have not consented to or voted in favour of the resolution—an unfortunately worded restriction which effectively rules out nominees who have not exercised all their votes in one way.

[62] This clearly includes representatives of other classes affected and of the company.

[63] This is the same expression as that used in Pt 30 (see Ch.20, below), which would seem to provide a better alternative remedy not demanding 15 per cent support and strict time limits and with a wider range of orders that the court can make.

[64] 2006 Act s.633(5). The company must within 15 days after the making of an order forward a copy to the Registrar: s.635.

[65] 2006 Act s.633(5).

[66] This was certainly the intention of the Greene Committee on whose recommendation the section was based: Cmnd. 2657, para.23. But the need for speedy finality seems no greater than on an application under the general unfair prejudice provisions where there is no such provision and cases can be taken to the House of Lords. But if the application under s.633 is struck out on the ground that the time-limit was not complied with, that can be taken to appeal and was in *Re Suburban Stores Ltd* [1943] Ch. 156 CA. See also *Re Sound City (Films) Ltd* [1947] Ch. 169 which seems to be the only officially reported case on the predecessors to s.633. Cases in which it might have been invoked (e.g. *Rights & Issues Investment Trust v Stylo Shoes Ltd* [1965] Ch. 250) have been taken instead under the unfair prejudice sections or earlier versions of those sections.

[67] *Greenhalgh v Arderne Cinemas* [1946] 1 All E.R. 512 CA, where the result of the subdivision was to deprive the holder of one class of his power to block a special resolution.

[68] *White v Bristol Aeroplane Co* [1953] Ch. 65 CA; *Re John Smith's Tadcaster Brewery Co* [1953] Ch. 308 CA.

[69] *Dimbula Valley (Ceylon) Tea Co v Laurie* [1961] Ch. 353. On the meaning of "participation" in this context see para.23–7 and on bonus shares see para.11–18. And see the startling decision in *Re Mackenzie & Co Ltd* [1916] 2 Ch. 450 which implies that a rateable reduction of the nominal values of preference and ordinary capital (which participated pari passu on a winding up) did not modify the rights of the preference shareholders notwithstanding that the effect was to reduce the amount payable to them by way of preference dividend while making no difference at all to the ordinary shareholders.

[70] *Scottish Insurance Corp v Wilson & Clyde Coal Co* [1949] A.C. 462 HL; *Prudential Assurance Co v Chatterly Whitfield Collieries* [1949] A.C. 512 HL; *Re Saltdean Estate Co Ltd* [1968] 1 W.L.R. 1844; *House of Fraser v AGCE Investments Ltd* [1987] A.C. 387 HL (Sc.); *Re Hunting Plc* [2005] 2 B.C.L.C. 211. But contrast *Re Old Silkstone Collieries Ltd* [1954] Ch. 169 CA, where confirmation of the repayment was refused because it would have deprived the preference shareholders of a contingent right to apply for an adjustment of capital under the coal nationalisation legislation.

[71] See the cases cited above, but contrast *Re Schweppes Ltd* [1914] 1 Ch. 322 CA, which, however, concerned s.45 of the 1908 Act, which forbade "interference" with the "preference or special privileges" of a class.

[72] *Hodge v James Howell & Co* [1958] C.L.Y. 446 CA; *The Times*, 13 December 1958.

[73] *Re Northern Engineering Industries Plc* [1994] 2 B.C.L.C. 704 CA.

[74] *White v Bristol Aeroplane Co* [1953] Ch. 65 CA.

[75] *Re John Smith's Tadcaster Brewery Co* [1953] Ch. 308 CA.

[76] Only his judgment in the latter case is fully reported: see [1952] 2 All E.R. 751.

[77] The words are those of Greene MR in *Greenhalgh v Arderne Cinemas* [1946] 1 All E.R. 512 at 518.

[78] This definition does not solve all the problematic cases. Suppose the only difference between the classes is a difference in par values (thought by the Court of Appeal in *Greenhalgh v Arderne Cinemas Ltd* [1946] 1 All E.R. 512 CA, to be enough to create separate classes); or suppose the par values are the same but some shares are fully paid-up and others only partly. The statute provides that its definition is satisfied even if the rights to dividends of shares in the 12 months after allotment are different from those of other shares with otherwise similar rights—as they might be if additional shares were issued part-way through a financial year.

[79] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 15. Earlier editions of this book have argued for the second view. For a full discussion see E. Ferran and L.C. Ho, *Principles of Corporate Finance Law*, 2nd edn (Oxford: OUP, 2014), Ch.6.

[80] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 15.

[81] It also had preference shares but nothing turned on that. Clearly an attempt to vary their class rights would have been subject to the equivalent of s.630.

[82] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 15A–18A.

[83] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 15.

[84] He instanced *Eley v Positive Life Assurance Co* (1875) 1 Ex.D. 20, on which see paras 3–16 and 3–23, above. It seems clear that in such a case the individual will have no enforceable rights in the absence of an express contract with the company additional to the articles.

[85] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 16A–E.

[86] i.e. Company B.

[87] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 16G.

[88] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 16A–17A.

[89] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and*

Printing Co Ltd [1987] Ch. 1 at 17. He instanced as other examples, *Bushell v Faith* [1970] A.C. 1099 (above, para.14–51); and *Rayfield v Hands* [1960] Ch. 1 (above, para.3–24).

[90] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 18A–22B.

[91] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 22F–G. But he refrained from granting an injunction on the ground that this would "prevent the company from discharging its statutory duties in respect of the convening of meetings" (instancing s.368—though there had not in fact been any requisition by its members under this section). The result was therefore that Company A could hold the meeting if it wished but, if the resolution was passed, it would nevertheless be ineffective in the light of the declaration unless Company B consented.

[92] See below, Ch.29.

[93] See above, para.19–16.

[94] See especially para.3–27 on "mere internal irregularities".

[95] As we have seen at para.15–53, the courts have been unwilling to undermine such arrangements through use of their powers under s.306 of the Act.

[96] See *Bushell v Faith* (above, para.14–51).

[97] *Russell v Northern Bank Development Corp Ltd* [1992] 1 W.L.R. 588 HL. See Sealy, [1992] C.L.J. 437; Davenport, (1993) 109 L.Q.R. 553; Riley, (1993) 44 N.I.L.Q. 34; Ferran, [1994] C.L.J. 343.

[98] *Russell v Northern Bank Development Corp Ltd* [1992] 1 W.L.R. 588 at 593.

[99] In this case what was proposed was an increase in the company's authorised capital laid down in the memorandum. Whether the quoted principle applies to all powers conferred on the company by the statute is unclear.

[100] *Southern Foundries (1926) Ltd v Shirlaw* [1940] A.C. 701 HL.

[101] *Southern Foundries (1926) Ltd v Shirlaw* [1940] A.C. 701 at 740–741.

[102] *Baily v British Equitable Insurance Co* [1904] 1 Ch. 373 CA.

[103] *British Murac Syndicate Ltd v Alperton Rubber Co Ltd* [1915] 2 Ch. 186. The case concerned the right of the plaintiff, under both the articles and a separate contract, to appoint two directors to the board so long as he held 5,000 shares in the company. Today, after the *Cumbria Newspaper* decision (see para.19–18, above) the claimant might be protected as the holder of a class right.

[104] *Cumbrian Newspapers Group Ltd v Cumberland and Westmoreland Newspaper and Printing Co Ltd* [1987] Ch. 1 at 24.

[105] *Southern Foundries (1926) Ltd v Shirlaw* [1940] A.C. 701 HL.

[106] *Russell v Northern Bank Development Corp Ltd* [1992] 1 W.L.R. 588 at 593.

[107] *Russell v Northern Bank Development Corp Ltd* [1992] 1 W.L.R. 588 at 595.

[108] On the enforcement of shareholder agreement see *Greenwell v Porter* [1902] 1 Ch. 530; and *Puddephatt v Leith* [1916] 1 Ch. 200, where a mandatory injunction was

granted to compel a shareholder to vote in accordance with his agreement. Some shareholder agreements may make their adherents "concert parties", thus triggering provisions which impose obligations on a member of the shareholder group because of the size of the group interest. See paras 26–19, 28–44 and 28–54, below.

[109] cf. *Greenhalgh v Mallard* [1943] 2 All E.R. 234 CA. Of course, the selling shareholder may be contractually bound to secure the adherence of the acquiring shareholder, but even so it is difficult to make the arrangement completely water-tight by purely contractual means, especially at the remedial level.

[110] See, for example, *Growth Management Ltd v Mutafchiev* [2007] 1 B.C.L.C. 645; and, generally, K. Reece Thomas and C. Ryan, *The Law and Practice of Shareholders' Agreements*, 4th edn (London: LexisNexis, 2014). If the power which it is sought to control is one which is exercisable by the board of directors, it may in addition be necessary to alter the articles so as to shift the power in question to the general meeting or to provide for its exercise by the board only with the consent of the general meeting or to provide that the shareholders shall take all appropriate action to prevent the company taking the steps to which a shareholder, exercising its rights under the agreement, objects.

[111] An offeror, where a trust is in operation, may acquire the majority of the shares but still not be able to dismiss the incumbent management. Such trusts are common in the Netherlands. See Ch.28, below.

CHAPTER 20

UNFAIR PREJUDICE

Introduction 20–1
Scope of the Provisions 20–4
Independent Illegality and Legitimate Expectations or Equitable Considerations 20–6
Informal arrangements among the members 20–7
The balance between dividends and directors' remuneration 20–10
Other categories of unfair prejudice 20–12
Prejudice and Unfairness 20–13
Unfair Prejudice and the Derivative Action 20–14
Reducing Litigation Costs 20–18
Remedies 20–19
Winding Up on the Just and Equitable Ground 20–21
Conclusion 20–23

INTRODUCTION

20–1

The statutory unfair prejudice provisions are surprisingly wide-ranging, especially viewed against the patchy protections considered in the previous chapter. Section 994(1),[1] the first of the six sections which constitute Pt 30 of the Act, provides that any member may petition the court for relief on the ground:

> "(a) that the company's affairs are being or have been conducted in a manner which is unfairly prejudicial to the interests of members generally or some part of its members (including at least himself), or (b) that an actual or proposed act or omission of the company (including any act or omission on its behalf) is or would be so prejudicial."

This provision repeats rather than reforms the provisions previously found in s.459 of the Companies Act 1985, so the older cases remain relevant.

Controlling shareholders are not in terms excluded from using the section, although normally any prejudice they are subject to will be remediable through the use of the ordinary powers they possess by virtue of their controlling position, and so the conduct of the minority cannot be said in such a case to be *unfairly* prejudicial to the controllers.[2] The section thus operates primarily as a mechanism for minority protection—or, at least,

for the protection of non-controlling shareholders, for petitions are often brought where there is an equal division of shares in the company.

By referring to the conduct of the company's affairs, the section is clearly wide enough to catch the activities of controllers of companies, whether they conduct the business of the company through the exercise of their powers as directors or as shareholders or both. The section can even apply to the conduct of corporate groups. Although the conduct of a shareholder, even a majority shareholder, of its own affairs is excluded from the section, nevertheless, where a parent company has assumed detailed control over the affairs of its subsidiary and treats the financial affairs of the two companies as those of a single enterprise, actions taken by the parent in its own interest may be regarded as acts done in the conduct of the affairs of the subsidiary; and in some cases conduct of the subsidiary's business may amount to conduct of the business of the parent.[3] The "outside" shareholders in the subsidiary may thus use the section to protect themselves against exploitation by the majority-shareholding parent company.

20–2

The right to petition for relief under s.994 is conferred upon the members of the company,[4] but s.994(2) extends this right to non-members to whom shares have been transferred[5] or transmitted by operation of law.[6] As in the case of the derivative action, where a similar extension applies, this provision is useful in small companies where the directors of the company may exercise the power they have under the articles to refuse to register as a member a person to whom shares have been transferred, especially as s.771 now requires directors to give reasons for their refusal. If not within this extension, however, a non-member will not be able to petition under the section.[7] For example, if the registered shareholder is a nominee, the person with the beneficial interest in the shares cannot petition; the nominee will, however, be a legitimate petitioner and the interests the nominee may seek to protect include those of the beneficiary.[8]

Section 995 permits the Secretary of State to petition if, as a

result of an investigation carried out into a company,[9] he concludes that the affairs of the company have been carried on in a way that is unfairly prejudicial to the members (or some part of them).

Finally, when an administration order is in force, s.994 is supplemented by para.74 of Sch.B1 to the Insolvency Act 1986, permitting any creditor or member to apply to the court on the grounds that the administrator has acted in a way which has unfairly harmed the interests of the applicant (or proposes to do so) or on the grounds that the administrator is not performing his or her functions as quickly or as efficiently as is reasonably practical.[10]

20–3

When this section was first introduced in its modern form in 1980, it posed a considerable challenge to the traditionally non-interventionist attitudes of judges in relation to the internal affairs of companies.[11] The extent to which the modern judges have thrown off that traditional attitude emerges very clearly in this chapter. The statutory remedy is capable of ranging very widely over the conduct of corporate affairs; it can address control of both shareholders' voting powers, examined in the immediately preceding chapter, and directors' powers, examined in Ch.14, as well as more subtle forms of unfairly prejudicial management.

Scope of the Provisions

20–4

Since the right to petition is drafted in deliberately wide terms, the first problem for the courts has been to define its scope. It is suggested that three main questions have arisen, all requiring the court to decide whether to give the section (or, more accurately, its predecessors) a wide or narrow operation.

First, should the reference to conduct which is unfairly prejudicial to "the interests of members" be interpreted as referring only to their interests "*as* members", as with the jurisprudence on the statutory contract in the articles?[12] Decisions under very early predecessors to s.994 transposed this restriction with full effect,[13] but modern courts now take a more

flexible view. The point is an important one, since one very common form of minority oppression is the expulsion of the minority shareholder from a position on the board. Under a narrow interpretation, this could not give rise to a remedy, since it amounts to oppression qua director, not qua member.[14] Now, however, although the qua member restriction remains as part of the unfair prejudice provisions, it is much more flexibly interpreted, and its practical significance is therefore much reduced. It is now accepted that the interests of a member, at least in a small company, may be affected by his or her expulsion from the board, whether because it was expected that the return on investment would take the form of directors' fees or because a board position, even in a non-executive role, may be necessary to monitor and protect the member's investment.[15] This approach is now settled, and not considered further.

Secondly, should the sections be seen simply as aimed at providing a more effective way of remedying harms which, independently of the unfair prejudice provisions, are in any case unlawful, or should the remit be wider? This may be termed the "independent illegality" issue. Once the modern statutory wording had been adopted, the courts opted quite early on for the wider approach,[16] holding that the provisions are not concerned simply with greater access and better remedies but, in addition, are designed to render unlawful some types of conduct which, apart from the sections, are not in any way unlawful. In many ways this constitutes one of their most important judicial contributions to the development of these provisions, although the move creates its own problems. Deprived of the familiar landmarks of established illegalities, what criteria should the courts deploy in determining whether conduct is unfairly prejudicial, i.e. unlawful in s.994 terms? This is the second main issue which has faced the courts and it is the one which has absorbed the greatest amount of judicial thought and effort. It is considered in more detail below. In the courts' handling of this issue we see most clearly what amounts to a partial revolution in judicial attitudes to becoming involved in the internal affairs of companies.

20–5

Finally, whether or not the courts had extended the range of

unfairly prejudicial conduct beyond conduct which is independently unlawful, there remains an important issue of the relationship between the unfair prejudice remedy and the derivative action. When a wrong *has* been committed against the company, may a shareholder leap over the restrictions on bringing a derivative action, formerly contained in the rule in *Foss v Harbottle* and now set out in the statute,[17] by presenting a petition founded upon unfair prejudice and obtaining in this way a remedy for the company? Or is the petitioner under s.994 confined to the recovery of personal losses? In other words, are the unfair prejudice petition and the derivative action aimed at redressing different wrongs and, if so, how does one distinguish between them? This is the third issue which we shall consider in more detail after taking a closer look at the second.

Independent Illegality and Legitimate Expectations or Equitable Considerations

20–6

In modern law, giving courts the power by statute to control the exercise of discretion by persons or institutions on grounds of "unfairness" is hardly novel.[18] Yet such open-ended legislation, which in effect involves a sharing of the legislative function between Parliament and the courts, always presents the courts with the challenge of how to develop on a case-by-case basis criteria by which the imprecise concept of "fairness" can be given operational content. As we remarked above, the challenge was particularly acute for the courts in relation to the unfair prejudice remedy, for the tradition of the courts was not to interfere in the internal affairs of companies.

The important steps taken by the courts can be characterised by saying that the courts recognised that s.994 protects expectations and not just rights. Borrowing from public law, it is sometimes said that the section protects the "legitimate expectations" of the petitioner, though more recently the courts have preferred the private law phrase "equitable considerations".[19] Whatever the language used, the difficult issue is to distinguish those expectations of the petitioner which are to be classified as "legitimate", and so deserving of legal recognition and protection, from those expectations which the

petitioner may harbour as a matter of fact but which the courts will not protect. Put in more modern terms, the task is to distinguish those equitable considerations which merit a judicial response from those which do not. It is suggested that the decisions of the courts to date have succeeded in identifying one clear class of legitimate expectation or equitable consideration, and have hinted at a range of other situations where s.994 may be prayed in aid, but without developing any of them in a comprehensive way. We begin with the clearly established category.

Informal arrangements among the members

20–7

This category of legitimate expectation or equitable consideration has been described as follows: it "arises out of a fundamental understanding between the shareholders which formed the basis of their association but was not put into contractual form".[20] What this principle recognises is that the totality of the agreement or arrangements among the members of the company may not be captured in the articles of association. This may be so for a number of reasons, but predominantly, it is suggested, because of a desire to avoid transaction costs when establishing a company or when admitting a new person to membership of the company. It will be cheaper to adopt some standard, or only slightly modified, form of articles rather than to bargain out in detail and then incorporate into the articles a customised set of rules dealing with every aspect of the company's present and likely future method of operation, the future being in any case inherently unpredictable. This is especially likely to be the case for small "quasi-partnership" companies where the incorporators[21] know each other well and may have worked out a successful method of operation when trading in unincorporated form whose translation into a formal document they would see as a needless expense. However, it would seem that the correct analysis is that a company is a quasi-partnership because of the particular understandings among its members, not that the understandings exist because the company is a quasi-partnership.

When things eventually go wrong—and small companies

emulate marriages in the frequency and bitterness of their breakdown—the precise provisions of the articles may seem almost irrelevant to the petitioner's sense of grievance. The unwritten understandings upon which the members of the company operate will come to the fore. Adding to the complications, these understandings will also include assumptions that, where powers are exercised, they are exercised within the law—for example, powers conferred upon the board will be exercised in accordance with the fiduciary duties of directors—with the result that breaches of fiduciary and other duties may be tied into the shareholders' arrangements as well.[22]

The range of expectations which may be protected in this way is open-ended, although the most common is undoubtedly the petitioner's expectation that he or she would be involved in the management of the company through having a seat on the board.[23]

20–8

It is important to grasp, however, that this category of legitimate expectation depends crucially upon the factual demonstration that an informal agreement or arrangement, generating the expectation relied upon, did exist outside the articles and supplementing them. The "starting point"[24] of the court's analysis will be the articles of association and "something more" will be required to move the court from the view that "it can safely be said that the basis of association is adequately and exhaustively laid down in the articles".[25] If that factual demonstration cannot be made, the petitioner's case will fail,[26] For example, in *Re Coroin Ltd*,[27] David Richards J refused to recognise legitimate expectations where the founding members of the company were a group of highly sophisticated and experienced investors with little by way of prior relationship, investing in a project worth many hundreds of millions of pounds, and governed by lengthy and complex formal documentation. As he put it, "I find it hard to imagine a case where it would be more inappropriate to overlay on those arrangements equitable considerations of the sort discussed by Lord Wilberforce[[28]] and Lord Hoffmann[[29]]". It follows from this that this category of protected expectations is almost wholly confined to companies with small, even very small, numbers of

members, probably with relatively unsophisticated governance arrangements. Beyond such companies it becomes increasingly difficult to demonstrate, first, that there was any relevant informal arrangement; and, secondly, that all the members of the company were parties to it.[30]

This approach on the part of the courts was confirmed, indeed re-emphasised, in the first decision of the House of Lords on what is now s.994, *O'Neill v Phillips*.[31] The leading judgment was given by Lord Hoffmann, whose own rise through the judicial hierarchy has roughly coincided with that of the unfair prejudice case law and who has had a particular influence upon its development. Their lordships' endorsement of the dominant approach in the lower courts was accompanied, however, by a shift in terminology from the public law language of "legitimate expectations" to the more traditional private law phraseology of constraining the exercise of legal rights by reference to "equitable considerations".

Although on its face not obviously more restrictive than "legitimate expectations", the purpose of the phrase "equitable considerations" was to anchor more firmly the courts' assessment of what might constitute unfair conduct in the face of the formal and informal bargain struck by the shareholders of the company. Their lordships feared that lower courts might treat the legitimate expectations test as a licence to "do whatever the individual judge happens to think fair"[32] in the light of the petitioner's expectations. Instead, the correct approach was to ask whether there were equitable considerations which required the exercise of the majority's undoubted powers under company law or the company's constitution to be constrained in any way by reference to the bargain which the members of the company had struck, a bargain which, in its totality, might be located in informal, non-legally enforceable understandings between the members as well as in the company's formal constitution.[33] This more "contractual" approach to the assessment of unfairness under s.994 might admit not only of an approach based on analogy with breach of contract but also with other doctrines for the discharge of contracts, for example, frustration, where the majority used its legal powers to keep the association on foot in circumstances in which the original agreement between the

parties had become fundamentally changed.[34]

Their lordships thought that legal certainty would be promoted by the expulsion from this area of "some wholly indefinite notion of fairness"[35] and the costs of litigation would be reduced by discouraging lengthy and expensive hearings which ranged over the full history of the company and the relationships among its members. They rejected the view of the Law Commission[36] that the contractual definition of unfair prejudice would unduly limit the scope of the section, but seemingly more on the grounds that some limitation was a price worth paying for legal certainty than on the grounds that all deserving cases would in fact fall within the section on the contractual approach.[37] The CLR endorsed the policy balance struck by the House of Lords,[38] and the 2006 Act thus seeks to repeat rather than to reform the unfair prejudice provisions previously contained in the 1985 Act.

20–9

In *O'Neill* itself, the not-uncommon situation arose in which the founding entrepreneur, who had built up the business, increasingly handed over control to a trusted employee (the petitioner), allowing him to acquire a quarter of the shares in the company. Later the petitioner became managing director of the company, receiving half its profits, and there were talks about his acquiring one-half of the share capital. However, an economic downturn occurred and the company began to falter; the founder removed the petitioner from his managing directorship, taking back the reins himself, and paid the petitioner only a salary and the dividends due on his 25 per cent shareholding. This treatment of the petitioner, who resigned, was held not to be unfairly prejudicial because there was no agreement between the parties, even at an informal level, that the petitioner should be entitled to receive half the profits, except for so long as he acted as managing director, or that he should be entitled to increase his shareholding to one-half.

The result is that the strict legal rights of the majority, deriving from the articles of association or the Companies Act, may be subject to "equitable considerations"[39] which channel and restrict the discretion which the majority would otherwise have, where it can be shown that the members came together on

the basis that those legal rights should not be entirely freely exercisable. It is suggested that putting the proposition in this way enables us to explain both the vigour with which the courts have developed this aspect of unfair prejudice and the limited conceptual nature of the development. As we have already said, the difficulty for the courts, when they abandon illegality as the touchstone of unfairness, is that the choice of criteria for judging whether s.994 has been breached seems to be at large. The “informal arrangement” category of unfair prejudice provides a partial answer to this problem. The courts can claim to be, and indeed are, using as the criteria for judging unfairness the standards laid down, albeit informally, by the members themselves, and the judges can thus avoid the more challenging task of developing their own criteria. These considerations explain, it is suggested, the emphasis in the *Ebrahimi* case[40] that the equitable considerations do not flow simply from the nature of the company as a quasi-partnership but require “something more” in the shape of proof of the existence of an informal agreement concerning, say, the participation by the minority in the management of the company. As we have seen, this requirement has been fully absorbed into the unfair prejudice case law. The company’s formal constitution is the “starting point” for judicial analysis because “keeping promises and honouring agreements is probably the most important element of commercial fairness”.[41] Informal qualifications and supplements to the written constitution must be proved to have been agreed. And even when they are proved, the “extended” agreement sets the boundaries of the courts’ intervention. Thus, in *Re JE Cade and Son Ltd*,[42] Warner J denied the proposition that:

“where such equitable considerations arise from agreements or understandings between the shareholders dehors the constitution of the company, the court is free to superimpose on the rights, expectations and obligations springing from those agreements or understandings further rights and obligations arising from its own concept of fairness. There can in my judgment be no such third tier of rights and obligations.”

The balance between dividends and directors’ remuneration

Where the petitioner has never been, or has ceased to be, a director of the company, a frequent cause of dispute is the payment of excessive remuneration to the directors of the company and the failure to declare dividends payable to all the shareholders. However, absent any special agreements (whether formal or informal), minority shareholders have no legitimate expectation that dividends will be paid just because they are shareholders, even shareholders in a quasi-partnership company.[43] On the other hand, there may be particular circumstances in which the payment of no or only derisory dividends (or the failure to consider properly whether or not dividends should be declared[44]) will amount to unfair prejudice, for example, where there was an arrangement that all the profits of the company would be taken out of the company in one way or another; that the fiscally efficient way of doing this had been to pay large remuneration to the directors; and that the fact that the petitioner was not a director deprived the petitioner of any share of the profits.[45] The court has also refused to strike out a petition alleging that the non-payment of dividends produced a disparity between the petitioner and the respondents as far as their participation in the profits of the company was concerned, because the respondents obtained their return through the payment of directors' remuneration and other benefits provided by the company to the directors, whilst the petitioners were excluded from any substantial return.[46]

As far as the payment of directors' remuneration to the controllers is concerned, which is often the other side of the coin of the non-payment of dividends, it is perhaps obvious that it may be a ground for a successful petition if the directors have fixed their remuneration in disregard of the provisions of the articles governing that matter.[47] Where the controllers have executive positions within the company and the petitioner does not, it may well be fair that the returns which the controllers receive via directors' salaries and perks exceed those of the petitioner, obtained via dividends. However, where the proper procedures for fixing the directors' remuneration have not been followed, the courts, perhaps surprisingly, have not shrunk from embarking on the exercise of determining whether the directors'

remuneration package is excessive in order to establish whether the petitioner has suffered from unfair prejudice. The appropriate level of remuneration for the directors is to be determined by reference to "objective commercial criteria" in order to see whether the remuneration was "within the bracket that executives carrying that sort of responsibility and discharging the sort of duties [the respondent] was would expect to receive".[48]

As described in the previous section, any consideration of breaches of the articles or general law in the context of unfair prejudice petitions must inevitably be modified in the light of the parties' own private agreements, both formal and informal. It seems that there are no special rules about unfair prejudice applicable in this situation, but rather that the principles discussed above should be applied.

20–11

Any charge of unwarranted intervention by the courts in the internal affairs of companies can be easily rebutted, because it is the members' own standards which the courts are purporting to enforce.[49] On the other hand, because, at least in small companies, the articles systematically fail to capture the full agreement between the members, the development of this case law has brought company law into much greater touch with corporate reality and, as the amount of litigation shows, has addressed a previously unmet legal need.

Other categories of unfair prejudice

20–12

Although the case law is dominated by the informal arrangement category of unfair prejudice, the wording of the section in no way permits the courts to confine its scope to such cases. However, beyond informal arrangements and the linked argument that the controllers have committed breaches of their fiduciary duties, the issue of how to set the bounds of the courts' intervention arises in an acute way. Probably for this reason alone, no further, clearly defined categories of unfair prejudice can be found in the case law, though one can find a number of cases where allegations of unfair prejudice have been accepted

outside the categories mentioned above. An examination of these cases is of particular importance in assessing the significance of s.994 outside the small company field.

A feature of some of them is reasoning by analogy from established standards, that is, using the unfair prejudice provisions to extend established rules into related areas where the provisions do not formally apply. Thus, in *Re A Company*[50] the court used the provisions of the City Code on Takeovers and Mergers as a guide to what s.994 requires the directors of a target company to do by way of communication with their shareholders, even though the target was a private company and so outside the formal scope of the Code.[51] In *McGuinness v Bremner Plc*[52] the judge found a useful analogy in art.37 of the then current version of Table A, even though the company in question had not adopted that version, when deciding whether delay on the part of the directors in convening a meeting requisitioned by the petitioners was unfairly prejudicial. Again, such reasoning by analogy plays a useful role in defending the courts against the charge of unwarranted or inexpert interference.

However, an appropriate analogy will not be available in all cases. Then the court may have to face the task of developing its own criteria of fairness. For example, the company may have adopted a policy of paying only low dividends, although financially able to do better and even though the controllers have been able to obtain an income from the company by way of directors’ fees. Is that unfairly prejudicial to the interests of the non-director shareholders, even in the absence of any informal understanding as to the level of dividend pay-outs or as to the participation of the petitioner in the management of the company as a director (thus entitling him to directors’ fees)? The courts have shown themselves willing to entertain such claims under s.994, but have not yet had to adjudicate on their merits in cases where there is otherwise no breach of general duties or private arrangements.[53] The issue could be approached on the basis that the court undertakes the task of working out the appropriate distribution policy for the company (or for companies of that type), which seems unlikely, or by asking the question whether the policy in question unfairly discriminated between the

insiders with their directorships and the outsiders who were only shareholders.[54]

Prejudice and Unfairness

20–13

In a number of cases the courts have stressed that the section itself requires prejudice to the minority which is unfair, and not just prejudice per se. Sometimes what was done to the petitioner was unfair, but it caused him or her no prejudice, for example, because no loss was inflicted: in these cases s.994 is not open.[55] Usually, however, prejudice, typically of a financial sort, is obvious in these cases.[56]

More commonly, it is the unfairness requirement which debated. In many cases "unfairness" is simply another way of putting the point that only legitimate expectations are protected by the section, not every factual expectation which the petitioner may entertain. Thus, a shareholder who needs the money may be prejudiced by the failure of the company to adopt a scheme for the return of capital to its shareholders, but it does not follow that there was anything unfair in the company's decision to retain the capital in the business, in the absence of a formal or informal understanding that the company's capital would be returned at a certain point in its life.[57]

In other and more interesting cases the petitioner appears to have a prima facie case for the protection of s.994, but the petitioner's own conduct means that he or she is not granted relief. There is no requirement that the petitioner come to the court with clean hands, but the petitioner's conduct might mean that the harm suffered was not unfair or that the relief granted should be restricted. Thus, in *Grace v Biagioli*[58] the petitioner had been removed from his directorship, contrary to the agreement between himself and the three other persons involved when the company was set up, which would normally be a clear example of unfair prejudice. However, the petitioner had put himself in a position of conflict by seeking to purchase a competing company, which act was held by the Court of Appeal to justify his removal in breach of the agreement, so that the prejudice to the petitioner could not be said to be unfair to him. Again, the petitioners may have consented to, and even benefited

from, the company being run in a way which would normally be regarded as unfairly prejudicial to their interests[59]; or they might have shown no interest in pursuing their legitimate interest in being involved in the company.[60]

The test of whether the prejudice was unfair is an objective one, but this means no more than that unfair prejudice may be established even if the controllers did not intend to harm the petitioners.[61] The question is whether the harm which the petitioner has suffered is something he or she is entitled to be protected from. It has been suggested that a fall in the value of the petitioners' shares is a touchstone of unfairness, but this seems to be incorrect. The exclusion of petitioners from the management of the company in breach of their legitimate expectation of involvement would not necessarily have any impact upon the value of the company's shares, whilst, on the other hand, those shares might fall in value as a result of a managerial misjudgement which was in no way unfair to the petitioners.

Unfair Prejudice and the Derivative Action

20–14

It may seem odd at first sight that a right of petition vested in the individual member might potentially be used to secure the redress of wrongs done to the company, especially those committed by its directors. Directors' duties are owed, normally, to the company, not to individual shareholders. However, the unfair prejudice provisions are drafted so as to protect the *interests* of the members and not just their rights,[62] and it cannot be denied that a wrong done to the company may affect the interests of its members. Before the introduction by the 1989 Companies Act of the words "of its members generally" into s.459 of the 1985 Act, there was an argument that a wrong done to the company, which affected all the members equally, fell outside the section,[63] but that argument is no longer available.

The Jenkins Committee, whose report recommended the introduction of the unfair prejudice remedy, envisaged that it would have a role in relation to wrongs done to the company:

"In addition to these direct wrongs[64] to the minority, there is the type of case in

which a wrong is done to the company itself and the control vested in the majority is wrongfully used to prevent action being taken against the wrongdoer. In such a case the minority is indirectly wronged."[65]

However, there is an ambiguity here: did the Committee mean simply that, where a wrong done to the company has also inflicted harm on the shareholder, the member should be able to use s.994 to obtain redress for that personal harm? If so, that seems uncontroversial: there are a number of reported cases under the current legislation in which petitions have been entertained by the courts where the wrongdoers' conduct consisted wholly or partly of wrongs done to the company.[66] The courts have even gone so far as to refuse to accept that the actual availability of a derivative action constitutes a bar to an unfair prejudice petition.[67] As Hoffmann LJ (as he then was) has said: "Enabling the court in an appropriate case to outflank the rule in *Foss v Harbottle* was one of the purposes of the section".[68]

Alternatively, the Committee may have meant that the court could award relief to the *company* in a s.994 petition to redress the harm done to it. This approach raises a difficulty in the light of the reforms to the derivative action made by the 2006 Act and discussed in Ch.17. Thus, the question is, what sort of "outflanking" of the derivative action rules is envisaged? Whereas it may just possibly have been legitimate to view the unfair prejudice remedy as designed to overcome the excessively strict limitations on the derivative action imposed by the common law, it will hardly conduce to a coherent reading of the statute to allow the unfair prejudice provisions to be interpreted so as routinely to side-step the reformed statutory regime governing the derivative action.

The problem is not material if the "outflanking" is merely that s.994 provides another route to a court-ordered derivative claim seeking a remedy for wrongs done to the company. This is expressly acknowledged in the Act.[69] In addition, the court, in the exercise of its remedial discretion under s.996, may have regard to the range of factors listed in Pt 11 of the Act as applying to the standard statutory derivative action. These recognise it is not always in the company's interests to enforce its legal rights, even when enforcement is likely to be successful. And in any event, it will not normally be attractive for a

shareholder to bring a petition to obtain authority to commence a second piece of litigation as opposed to seeking permission directly under Pt 11 to commence derivative litigation.

20–15

But even in this regard, notice that the pre-requisites for success on each route are different. An attempt to address this difficult problem by distinguishing between corporate and personal loss was made by Millett J in *Re Charnley Davies Ltd (No.2)*,[70] which involved a petition under the Insolvency Act claiming that the administrator had breached his duty of care to the company by selling its business at an undervalue and ought to pay compensation to the company. Whilst holding that on the facts there had been no breach of duty, he nevertheless went on to consider in dicta the relationship between a petition based on unfair prejudice and the derivative action. The learned judge thought that an allegation that the controllers as directors had breached their duties to the company was not sufficient to found a petition. What needed to be shown was that there was also conduct on the part of the controllers which was unfairly prejudicial to the minority. If the shareholder wished to complain simply of the breach of duty by the directors, this could not be done by petition. The shareholder must sue instead on behalf of the company and subject to the standing restrictions of the derivative action. In the petition the gist of the action is not the wrong done to the company but the disregard by the controllers of the interests of the minority.

This suggests that the answers to the difficult questions of which complaint the petitioner is seeking to make and of whether the petition is the appropriate vehicle turn very largely on the nature of the remedy sought. In *Re Charnley Davies* the petition sought compensation for the company, for which, it was said, an unfair prejudice petition was inappropriate, whereas a claim that the controllers purchase the petitioners' shares at an appropriate price would have indicated that the gist of the complaint was unfair prejudice to the minority.[71] In short, the suggestion was that, whilst an unfair prejudice petition might arise out of breaches of duty owed by directors to the company, unfair prejudice to the petitioner was the ground for any relief granted; and the relief that might be claimed in a petition was

confined to personal remedies and might not include corporate relief. This approach might be thought to fit in well with the view of the Jenkins Committee[72] that the harm to the shareholders in such cases is "indirect" and that the wrong to them consists, not in the wrong done to the company, but in the controllers' use of their position to prevent action being taken to redress the wrong done to the company. The remedy in the petition should thus address the indirect wrong to the shareholder, not the direct wrong to the company. Admittedly this might be done very straightforwardly by ordering pursuit of a derivative claim, but the analysis delivering this conclusion does rather suggest that the claimant has selected the wrong starting point, and should have commenced the claim under Pt 11. And this in turn seems to contradict the explicit inclusion in s.996(2)(c) of the remedial option of a derivative claim.

Whatever the answer to the previous question, it deals with process more than substance. On substance, the crucial questions in this area are two: first, in a s.994 petition, can the court order a remedy in favour of the company rather than the petitioner? And, secondly, if it does not do that, can it order a remedy in favour of the petitioner which might be characterised as representing an impermissible claim to recover reflective losses?[73]

20–16

Given the breadth of the courts' discretion as set out in s.996, the answer to the first question is surely yes. Despite initial caution, there have been a number of cases at appeal court level in which corporate remedies have been granted in an unfair prejudice petition. In *Anderson v Hogg*[74] the Inner House of the Court of Session (Lord Prosser dissenting) awarded relief to the company, where the unfair prejudice was based on an unlawful payment by the respondent director of remuneration to himself. Without detailed consideration of the point, the director was ordered to return the money to the company. More important, perhaps, the court came close to rejecting Millett J's proposition in *Re Charnley Davies* that proof of illegality on the part of the director as against the company is not by itself enough to demonstrate unfair prejudice to the petitioning shareholder. Since that case involved in essence a two-person company which

was in course of solvent liquidation, the distinction between illegality to the company and unfairness to the shareholder was in that instance very fine. *Clark v Cutland*[75] was a somewhat similar case involving a petition about a two-person company where the controlling director had made large and unauthorised payments to himself, this time by way of contributions to his pension fund. Although the decision was principally about other matters, the Court of Appeal did order the unauthorised payments to be restored to the company and indeed was prepared to contemplate that, as in a derivative action,[76] the costs of the litigation should be borne by the company. However, this decision may not be as dramatic as it seems, since the litigation began as separate derivative and unfair prejudice cases, which were later consolidated into the unfair prejudice application.[77] Thus, at an early stage in the derivative action the then applicable standing rules were presumably satisfied, so that granting corporate relief in the unfair prejudice petition would not be objectionable on the ground identified above.

In the corporate opportunity case, *Bhullar v Bhullar*,[78] which we considered in Ch.16 and which again concerned a two-person —or, at least, a two-family company—the litigation was always in the form of an unfair prejudice petition and, indeed, the petitioners sought the traditional personal relief in such a petition, namely, the compulsory purchase of their shares at a fair price by the respondents. However, the initial petition also sought permission to bring a derivative action in the company's name. The trial judge refused the compulsory purchase order but ordered direct corporate relief by declaring the property in question to be held on trust for the company. The Court of Appeal did not demur from this way of proceeding. It may be that in this case the court took the view that the facts upon which a derivative suit would be based and the petitioner's standing to sue derivatively had been clearly established in the petition and that it would be simply a waste of time and money to have a further action commenced by writ, and so corporate relief was granted immediately. However, it is notable that the Court of Appeal did not think it necessary to address this issue.

The most extensive discussion of the principles at issue in this area is to be found a decision of only persuasive authority, *Kung*

v Kou, a decision of the Court of Final Appeal of Hong Kong.[79] Although petition in the case was ill-conceived and there were some differences of emphasis in the judgments of Bokhary PJ and Lord Scott of Foscote NPJ, the issue of whether an unfair prejudice petition could be used to avoid the standing rules of *Foss v Harbottle* was addressed head-on and answered in the negative. This answer did not mean that allegations of breaches of duty by directors are irrelevant in unfair prejudice proceedings, for example, as a basis for making out a claim for relief to be granted to the member. Nor did it mean that the court can never at the end of an unfair prejudice petition hearing grant a remedy in the company's favour. However, in order to do that the court would have to hear both the company's claim and the member's claim together. This would be appropriate only in "rare and exceptional" circumstances (per Bokhary PJ) or where at the pleading stage of the petition it was clear that "the director's liability at law to the company can conveniently be dealt with in the hearing of the petition" (per Lord Scott of Foscote). Otherwise, the petitioner should seek an order in the petition to bring a derivative action on behalf of the company or, under the new Act, make such an application directly to the court rather than through the unfair prejudice petition.

20–17

It is submitted that the decision in *Kung v Kou* is based on the correct principles and that the unfair prejudice petition is normally confined to relief in respect of harm personal to the minority shareholder.

As to the second question, and whether personal remedies in favour of the petitioner are subject to the "no reflective loss" principle, the answer is less clear. The most common remedy in s.994 cases is an order for the compulsory purchase of the petitioner's shares. The purchase price may indeed contain an element which would otherwise constitute reflective loss, but that is by way of delivering a clean break to the petitioner in circumstances where it is the proven unfairly prejudicial conduct which has reduced the value of the petitioner's shares. The cases are considered below.[80]

Reducing Litigation Costs

20–18

A major issue which has emerged under the unfair prejudice jurisdiction is the length and, therefore, the cost of trials of these petitions. Although the decision of the House of Lords in *O'Neill v Phillips*[81] has done something to reduce the scope of the issues to be explored, the court may still find itself trawling through a great deal of the history of the relations between petitioner and respondent, to establish, first, the existence of any informal understandings and, secondly, whether they have subsequently been breached. All this will typically occur in relation to small companies, whose net value may not be large. Both the Law Commission and the CLR investigated a number of ways of reducing the costs of unfair prejudice litigation, but all were ultimately rejected as ineffective, either by the Commission or the Review,[82] except for a suggestion that an arbitration scheme be developed as an alternative to litigation before the High Court,[83] plus reliance on the newly introduced general system of case management in the civil courts for those cases not going down the arbitral route.

However, the courts themselves have developed a technique for encouraging an agreed solution to unfair prejudice claims. Where it is clear, as it will normally be, that the relationship between the petitioner and the remainder of the members cannot be reconstituted by the court and that the only effective remedy available to the minority is to have their shares purchased at a fair price, then if a suitable ad hoc offer is made to the petitioner for the purchase of the shares or there is a suitable mechanism to this effect in the company's articles, but the petitioner decides to proceed with the petition, rather than to accept the offer or use the mechanism, that will be seen to be an abuse of the process of the court and the petition will be struck out. In *O'Neill v Phillips*[84] Lord Hoffmann was as keen to endorse and encourage this procedure as he was to set out the basis of the unfair prejudice claim itself. His lordship thought that a petitioner could not be said to have been *unfairly* prejudiced by the respondent's conduct if:

(a) the offer was to buy the shares at a fair price, which normally would be without a discount for their minority status (see below);

(b) there was a mechanism for determination of the price by a competent expert in the absence of agreement;

(c) to encourage agreement the expert should not give reasons for the valuation;

(d) both sides should have equal access to information about the company and equal freedom to make submissions to the expert; and

(e) the respondent should be given a reasonable time at the beginning of the proceedings to make the offer and should not be liable for the petitioner's legal costs incurred during that period.

Cases where an offer from the respondent has not blocked a petition have usually involved offers which did not give the petitioner all he or she would get if successful at trial[85] or have involved valuation by a non-independent expert.[86] The offer which the court has to evaluate may be an ad hoc one or may result from the application of provisions in the company's articles laying down a mechanism to be used where a shareholder wishes to dispose of his or her holding. Although the courts once took a different view, it does not now appear that an offer arising out of the mechanism contained in the articles is to be treated differently from an ad hoc offer, in terms of its effect in excluding an unfair prejudice provision.[87]

Remedies

20–19

Section 996 gives the court a wide remedial discretion to "make such order as it thinks fit for giving relief in respect of the matters complained of". In addition to this general grant, five specific powers are given to the court by s.996(2), of which undoubtedly the most commonly used is an order that the petitioners' shares be purchased by the controllers or the company.[88] The reason for the popularity of this remedy, with both petitioners and courts, is readily explained. Unfair prejudice jurisprudence is most firmly established in relation to quasi-partnership companies. When business and, often, personal relations between quasi-partners have broken down and are incapable of reconstitution by a court, the only effective remedy

is the minority's exit. A share purchase order gives the petitioner an opportunity to exit from the company with the fair value of his or her investment, a result which is usually impossible in the absence of a court order, since often no potential purchasers of the shares are available or, even if they were, the purchase price a third party would be willing to pay would reflect, rather than remedy, the harm inflicted on the seller by the unfairly prejudicial conduct.[89]

The crucial question in this buy-out process is how the court is to assess the fairness of the price to be paid for the shares. Two important issues have emerged in the valuation process. The first is whether the petitioner's shareholding should be valued pro rata to the total value of the company or whether its value should be discounted on the basis that it is ex hypothesi a minority holding and so does not carry with it control of the company. In this context the notion of a "quasi-partnership" company has become important. Although many unfair prejudice proceedings concern such companies, the statutory provisions are not confined to them. However, in relation to whether a minority shareholding should be discounted, the courts have developed a presumption that it should not in a quasi-partnership company, whereas no such presumption applies for other categories of company.

In *Re Bird Precision Bellows Ltd*[90] it was established that the principle was pro rata valuation where the company could be characterised as a quasi-partnership. This is because, in a true partnership, upon dissolution of the partnership the court orders a sale of the partnership business as a going concern and divides the proceeds among the partners according to their interests in the former partnership.[91] However, the normal principle in company law of discounting a minority shareholding applies if the company is not a partnership carried on in corporate form or if the petitioner had bought the shareholding at a price which reflected its minority status or it had devolved upon him or her by operation of law.[92] The concept of a quasi-partnership involves more than simply the company having a small number of members. The members must have set up their association on the basis of mutual trust and confidence, expect to be involved in the management of the company (though the existence of clearly

defined “sleeping partners” would not defeat this requirement), and there must be some degree of lock-in of the members to the company,[93] although these are cumulative preconditions and the presence of one or more of these factors may suffice.[94]

20–20

The second question is whether the valuation should be on the basis that the company will continue as a going concern, or on a liquidation or break-up basis, which would normally yield a lower value for the company. The going concern basis will normally be appropriate, but this will depend to some degree on the facts of the case, as will the precise method to be adopted for valuing the going concern.[95]

A further issue concerns timing. The value put on shares, whether on a pro rata or a discounted basis, will often depend crucially on when the value of the company is assessed. The courts have given themselves the widest discretion to choose the most appropriate date. The competing dates are usually a date close to when the shares are to be purchased or the date when the petition was presented. In *Profinance Trust SA v Gladstone*,[96] the Court of Appeal thought that the former had become the presumptive valuation date, but that there were many circumstances when an earlier date might be chosen, for example, where the unfairly prejudicial conduct had deprived the company of its business, where the company had reconstructed its business or even that there had been a general fall in the market since the presentation of the petition. In *Re KR Hardy Estates Ltd*,[97] however, the court held that on the particular facts of that case, the date of the order was the most appropriate date since it had the advantage of certainty and seemed to be the most fair.

Although a buy-out of the minority is the most common remedy, it is not always the most appropriate one, and s.996 gives the courts a wide range of other possible remedies. These include compensation, to which it is not yet clear whether the “no reflective loss” principle applies.[98]

Winding Up on the Just and Equitable Ground

20–21

Legal protection for minority shareholders is now dominated by the unfair prejudice remedy, but, despite its remedial flexibility, the court cannot thereby order the winding-up of the company in question. The Law Commission recommended that this power should be added to the range of remedies available to the court for the redress of unfair prejudice,[99] but the CLR rejected this on the ground that it was open to abuse for the reasons discussed below.[100] There is, instead, a separate procedure by which a minority shareholder may seek to have the company wound up. A company may be wound up compulsorily by the court on a petition presented to it by a contributory[101] if the court is of the opinion that it is "just and equitable" to do so. This provision, now contained in s.122(1)(g) of the Insolvency Act 1986, has a long pedigree in the law relating to companies, and the power can be traced back to the Joint Stock Companies Winding-up Act 1848. The provision was influenced by (then uncodified) partnership law and was originally used mainly in cases where the company was deadlocked. In the course of the twentieth century it has been moulded by the courts into a means of subjecting small private companies to equitable principles derived from partnership law when they were in reality incorporated partnerships. The apotheosis of this use of the section, the decision of the House of Lords in *Ebrahimi v Westbourne Galleries Ltd*,[102] was also highly influential in the courts' development of their powers under the predecessors of s.994.

Despite its remarkable substantive development, the winding up provision always suffered from a weakness at the remedial level: if the company was prospering, presenting a "just and equitable" petition was tantamount to killing the goose that might lay the golden egg (although the threat of liquidation might induce the parties to negotiate an alternative solution to their dispute). So long as the oppression remedy was hobbled by the restrictive wording and interpretation associated with s.210 of the Companies Act 1948, the winding-up petition was better than nothing. But, with the introduction of the unfair prejudice remedy, one might argue that the role of the winding-up remedy should now be restricted.

A winding-up petition triggers s.127 of the Insolvency Act

1986, which requires the court's consent for any disposition of the company's property after the petition is presented. This ability to paralyse, or at least disrupt, the normal running of the company's business adds to the negotiating strength of the petitioner, but is hardly legitimate if an unfair prejudice petition could give him or her all that is warranted. Consequently, a Practice Direction[103] seeks to discourage the routine joining of winding-up petitions to unfair prejudice claims, unless a winding-up remedy is what is genuinely sought. The force behind the Practice Direction is provided by s.125(2) of the Insolvency Act 1986, to the effect that the court need not grant a winding-up order if it is of the opinion that some alternative remedy is available to the petitioners and that they have acted unreasonably in not pursuing it.[104] It would seem an appropriate use of this power for the courts to insist that, where a more flexible s.996 remedy is available, the petitioner should be confined to it. That would be a natural consequence of the fact that the statutory alternative to a winding-up order has finally come of age.

20–22

On the other hand, there are situations where a winding up order is the only option. This observation is sometimes taken as proof that the grounds of unfairness upon which a company can be wound up under s.122(1)(g) of the 1986 Act are wider than those which will found an unfair prejudice remedy under s.994 of the 2006 Act. Certainly the grounds do not overlap completely, but this in itself does not determine which has greater width. The cases, it is suggested, roundly accord that accolade to the unfair prejudice petitions. But the important point here is that there are reported cases in which the court has denied a petition based on unfair prejudice, because the conduct of the petitioner did not merit it, but has granted a winding-up order on the grounds that mutual confidence among the quasi-partners had broken down,[105] or that the substratum had failed.[106] In other words, in these cases the mere fact of breakdown or deadlock is sufficient to ground a winding-up order, whereas an unfair prejudice petition is seen as requiring some assessment of the comparative blame-worthiness of petitioners and controllers. This simply reinforces the legislative sense in providing two distinct options,

expressed in different terms and designed to deliver remedies in different circumstances.[107]

Conclusion

20–23

Part 30 of the Act does not provide, and on no conceivable interpretation could provide, a unilateral exit right for minority shareholders, i.e. a right for minority shareholders at any time to withdraw their capital from the company. Indeed, it might be thought that such a right would be inconsistent with the nature of shareholding in companies. The shareholder is locked into the investment in the company unless he or she is able to find someone else to purchase the shares and thus stand in the shareholder's shoes in relation to the company.[108] Compulsory purchase appears under Pt 30, not as a right for the minority, but as a remedy—and not even a remedy the minority can insist upon, though it is the most common—in respect of unfair prejudice committed by the company's controllers. Thus in *Re Phoenix Office Supplies Ltd*[109] the Court of Appeal refused a shareholder's petition to have his shares acquired at a non-discounted value, even though he had been removed from his directorship by the other two incorporators in breach of their common understanding. The reason for the decision was that the conduct of the others had been a response to the petitioner's unilateral decision to sever his relations with the company, which could be seen as a prior and more fundamental breach of the original understandings among the three people involved. Of course, members may bargain for rights of unilateral exit to be incorporated in the articles of particular companies[110]; but they are rare, since a general right for minority shareholders to withdraw their capital when they will would seem likely wholly to undermine the financing function of shares.

Finally, there is some evidence that the unfair prejudice remedy, whatever its imperfections, has successfully "crowded out" alternative techniques of controlling the exercise of majority power through board decisions. Thus, the Law Commissions' draft statement of directors' statutory duties[111] included a requirement that directors act fairly as between shareholders, a duty reflected at least at first instance in the

current case law.[112] The CLR's initial draft statement contained the same duty,[113] but fairness between shareholders was later reduced to one of the factors to be taken into account by the directors when discharging their duty to promote the success of the company for the benefit of its members.[114] The explanation given for this development was a desire to "make it clear that fairness is a factor in achieving success for the members as a whole, rather than an independent requirement which could override commercial success".[115] It is difficult to believe that this argument would have been accepted in the absence of Pt 30 as an overriding instrument of minority protection.

---

[1] The procedure for petitions is governed mainly by the Companies (Unfair Prejudice Applications) Proceedings Rules 2009 (SI 2009/2469), but also by the Civil Procedure Rules and the practice of the High Court, where not inconsistent with the 2009 Rules. Section 994(1A), somewhat bizarrely, specifically states that the removal of an auditor in certain circumstances falls within (a). The reasons for this provision are dealt with at para.22–18. Such claims should generally be heard in public open court: *Global Torch Ltd v Apex Global Management Ltd* [2013] EWCA Civ 819 CA.

[2] *Re Legal Costs Negotiators Ltd* [1999] 2 B.C.L.C. 171 CA; cf. *Parkinson v Eurofinance Group Ltd* [2001] 1 B.C.L.C. 720—majority shareholder, removed from the board, not able to use his shareholding to obtain redress in respect of a sale of the company's assets by the directors to a company controlled wholly by them, and so able to use the unfair prejudice provisions.

[3] On conduct of the parent as conduct of the subsidiary see *Nicholas v Soundcraft Electronics Ltd* [1993] B.C.L.C. 360 CA; expanding upon the approach taken in *Scottish Co-operative Wholesale Society Ltd v Meyer* [1959] A.C. 324 HL, by not confining the principle to companies engaged in the same type of business. See also *Re Dominion International Group (No.2)* [1996] 1 B.C.L.C. 634. On conduct of the subsidiary as conduct of the parent see *Rackind v Gross* [2005] 1 W.L.R. 3505.

[4] And, accordingly, members can agree to waive or vary those rights, or, as in *Fulham Football Club (1987) Ltd v Richards* [2011] EWCA Civ 855; [2012] Ch. 333, have disputes determined by arbitration instead.

[5] An agreement to transfer is not enough; a proper instrument of transfer must have been executed and delivered to the transferee: *Re a Company (No.003160 of 1986)* [1986] B.C.L.C. 391; *Re Quickdome Ltd* [1988] B.C.L.C. 370. However, the fact that the directors have refused to register the transfer does not deny the transferee standing: *Re McCarthy Surfacing Ltd* [2006] EWHC 832 (Ch).

[6] See *Re a Company (No.007828 of 1985)* [1986] 2 B.C.C. 98,951 at 98,954 (Harman J): "In my view, transmission by operation of law means some act in the law by which the legal estate passes even though there be some further act (such as registration) to be done; and in my view the mere allegation that there arises a constructive trust cannot possibly amount to a transmission by operation of law".

[7] Exceptionally, in *Re I Fit Global Ltd* [2013] EWHC 2090 (Ch), the court held that a person whose name was not entered in the company's register as required under s.112 was a shareholder and could bring a petition. This was because during the trading of the

company, there had been wholly inadequate formal corporate documentation and records.

[8] *Atlasview Ltd v Brightview Ltd* [2004] 2 B.C.L.C. 191. Also, the conduct of which a petitioner may complain embraces conduct occurring before the petitioner became a member, even if that conduct is not continuing (though it must prejudice the petitioner), so that the beneficial holder will be able to petition if the shares are transferred to him by the nominee: *Lloyd v Casey* [2002] 1 B.C.L.C. 454.

[9] See Ch.18, above. A petition under s.995 may be instead of, or in addition to, a petition by the Secretary of State to have the company wound up under s.124A of the Insolvency Act (see para.18–13, above), but it is notable that the Companies Act power does not require the Secretary of State to be of the opinion that the public interest would be furthered by the bringing of an unfair prejudice petition. The Secretary of State's power of petition also applies to any company capable of being wound up under the Insolvency Act (including in some cases companies not incorporated in the UK), whilst the general right to petition under s.994 applies only to companies incorporated under the Companies Acts and statutory water companies: s.994(3) and (4).

[10] The Insolvency Act provision is not considered in any detail in this chapter. For administration in general, see para.32–43. An unfair prejudice challenge may also be made to proposals adopted by way of a company voluntary arrangement (see s.6 of the Insolvency Act 1986) but the court's powers here are confined to setting aside the proposals adopted at the creditors' meeting and ordering meetings to consider revised proposals.

[11] See the lament of the Lord President (Cooper) in *Scottish Insurance Corp v Wilsons & Clyde Coal Co*, 1948 S.C. 376.

[12] See above, paras 3–23 et seq.

[13] *Re A Company* [1983] Ch. 178, decided under s.210 of the 1948 Act. Section 210 referred to "oppression" rather than "unfair prejudice", and was generally interpreted very narrowly, hence the statutory amendments delivering the form we now have, first in s.459 of the 1985 Act, and now s.994 of the 2006 Act.

[14] *Re Lundie Bros* [1965] 1 W.L.R. 1051; *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360 HL.

[15] *Re A Company* [1986] B.C.L.C. 376; *Re Haden Bill Electrical Ltd* [1995] 2 B.C.L.C. 280.

[16] Under s.210 of the 1948 Act, the House of Lords had defined "oppression" as conduct which was "burdensome, harsh *and wrongful*" (emphasis added): *Scottish Co-operative Wholesale Society Ltd v Meyer* [1959] A.C. 324. This was the point which gave rise to the notion that the oppression section was aimed only at providing better remedies for existing wrongs. The Jenkins Committee recommended that the restriction, if it existed, should be removed (Report of the Company Law Committee, Cmnd. 1749 (1962), paras 203–206), and the courts, from an early stage, interpreted the substitution of the words "unfairly prejudicial" for "oppressive" as intended to achieve that result: see Hoffmann J in *Re A Company (No.8699 of 1985)* [1986] B.C.L.C. 382 at 387. The courts had already arrived at this position some years previously in the case of petitions to wind up the company. See *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360 HL; below, para.20–21.

[17] Analysed in Ch.17, above.

[18] See, for example, the law relating to unfair dismissal of employees by employers,

introduced in 1971 and now contained in the Employment Rights Act 1996.

[19] “Legitimate expectations” was the phrase endorsed by the Court of Appeal in *Re Saul D Harrison & Sons Plc* [1995] 1 B.C.L.C. 14 at 19, per Hoffmann LJ; but in *O’Neill v Phillips* [1999] 1 W.L.R. 1092; [1999] 2 B.C.L.C. 1 HL, the same judge led the House of Lords to adopt the phrase “equitable considerations” for fear that the former phrase carried connotations which were too wide.

[20] *Re Saul D Harrison & Sons Plc* [1995] 1 B.C.L.C. 14 at 19.

[21] Though the legitimate expectation often arises when the company is formed, it may arise at a later date, for example, when the petitioner becomes a member: *Tay Bok Choon v Tahanson Sdn Bhd* [1987] 1 W.L.R. 413 PC; *Strahan v Wilcock* [2006] 2 B.C.L.C. 555 CA. Equally, a legitimate expectation based on informal agreement among all the members is most often recognised in a quasi-partnership company, but may arise in any small company, whether the company is to be operated as an incorporated partnership or not: *Re Elgindata Ltd* [1991] B.C.L.C. 959.

[22] *Re Saul D Harrison* [1995] 1 B.C.L.C. 14 at 18. This aspect of unfair prejudice is, of course, not peculiar to small companies but applies across the full range of companies. Hence, it is suggested, the importance of the question, discussed above at para.20–14, whether s.994 provides corporate or only personal relief to the petitioner.

[23] So that s.994 may qualify not only the formal articles, but also the statutory powers of the majority under s.168. In this respect the s.994 decisions reinforce the decision of the House of Lords in *Bushell v Faith*, above, para.14–51.

[24] *Re Saul D Harrison* [1995] 1 B.C.L.C. 14 at 18.

[25] *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360 at 379 HL.

[26] See *Re Saul D Harrison* [1995] 1 B.C.L.C. 14 itself; but also *Re Posgate and Denby (Agencies) Ltd* [1987] B.C.L.C. 8; *Re A Company* [1987] B.C.L.C. 562; *Re A Company* (1988) 4 B.C.L.C. 80; *Re Ringtower Holdings Plc* (1989) 5 B.C.C. 82; *Currie v Cowdenbeath Football Club Ltd* [1992] B.C.L.C. 1029; *Re JE Cade & Sons Ltd* [1992] B.C.L.C. 213; *Murray’s Judicial Factor v Thomas Murray & Sons (Ice Merchants) Ltd* [1993] B.C.L.C. 1437 at 1455; *Khoshkhou v Cooper* [2014] EWHC 1087.

[27] *Re Coroin Ltd* [2012] EWHC 2343 (Ch) at [636] (the point not disturbed on appeal, [2013] EWCA Civ 781; [2013] 2 B.C.L.C. 583).

[28] In *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360 HL.

[29] In *O’Neill v Phillips* [1999] 1 W.L.R. 1092; [1999] 2 B.C.L.C. 1 HL.

[30] *Re Blue Arrow Plc* [1987] B.C.L.C. 585; *Re Tottenham Hotspur Plc* [1994] 1 B.C.L.C. 655; *Re Astec (BSR) Plc* [1998] 2 B.C.L.C. 556.

[33] *O’Neill v Phillips* [1999] 2 B.C.L.C. 1 at 10–11 HL. In *Re Guidezone Ltd* [2000] 2 B.C.L.C. 321 at 356 Jonathan Parker J took the equitable analogy a stage further by requiring that non-contractual understandings be relied upon by the minority before they could form the basis of an unfair prejudice petition.

[34] *O’Neill v Phillips* [1999] 2 B.C.L.C. 1 at 11b–d HL.

[35] *O’Neill v Phillips* [1999] 2 B.C.L.C. 1 at 9a HL.

[36] *Shareholders' Remedies*, Cm. 3769 (1997), para.4.11. An example might be mismanagement of the company not amounting to a breach of directors' duties (see *Re Elgindata* [1991] B.C.L.C. 959; but cf. *Re Macro (Ipswich) Ltd* [1994] 2 B.C.L.C. 354); but with the rise in the standard of care required of directors (above, para.16–16) it may be that this is a declining problem, because such cases will fall within the category of "indirect" wrongs (below, para.20–14).

[37] *O'Neill v Phillips* [1999] 2 B.C.L.C. 1 at 8g–h HL.

[38] Final Report I, para.7.41; Completing, paras 5.77–5.79.

[39] *Ebrahimi*'s case [1973] A.C. 360 HL.

[40] *Ebrahimi*'s case [1973] A.C. 360 at 379. This was a winding-up case, but, as we shall see below at para.20–21, similar considerations apply there too and the winding-up case-law has strongly influenced the development of this category of unfair prejudice.

[41] *Re Saul D Harrison* [1995] 1 B.C.L.C. 14 at 18.

[42] *Re JE Cade and Son Ltd* [1992] B.C.L.C. 213.

[43] *Irvine v Irvine (No.1)* [2007] 1 B.C.L.C. 349, 421.

[44] *Re McCarthy Surfacing* [2008] EWHC 2279 (Ch); [2009] B.C.L.C. 622; *Re J&S Insurance & Financial Consultants Ltd* [2014] EWHC 2206 (Ch).

[45] *Irvine v Irvine (No.1)* [2007] 1 B.C.L.C. 349, 421; *Re McCarthy Surfacing* [2008] EWHC 2279 (Ch); [2009] B.C.L.C. 622; *Sikorski v Sikorski* [2012] EWHC 1613 (Ch).

[46] *Re Sam Weller & Sons Ltd* [1990] B.C.L.C. 80.

[47] *Irvine v Irvine (No.1)* [2007] 1 B.C.L.C. 349; *Re Ravenhart Services (Holdings) Ltd* [2004] 2 B.C.L.C. 375.

[48] *Irvine v Irvine (No.1)* [2007] 1 B.C.L.C. 349, 420. Guidance can be taken from guidelines on the remuneration of directors in listed companies: *Re Tobian Properties* [2012] EWCA Civ 998 at [36].

[49] This is not to deny that the degree of proof which the court requires of the informal arrangement may vary according to whether the alleged arrangement is usual or unusual in the type of company in question.

[50] *Re A Company* [1986] B.C.L.C. 382. See also *Re St Piran Ltd* [1981] 1 W.L.R. 1300; but cf. *Re Astec (BSR) Plc* [1998] 2 B.C.L.C. 556 at 579. Also see *Re Phoenix Contracts (Leicester) Ltd* [2010] EWHC 2375 (Ch).

[51] See below, para.28–15. The Code was used only as a guide. In particular, the judge borrowed from the Code the proposition that any advice given by the directors should be given in the interests of the shareholders, but he did not borrow the further proposition that the directors were obliged to give the shareholders their view on the bid.

[52] *McGuinness v Bremner Plc* [1988] B.C.L.C. 673. See also *Bermuda Cablevision Ltd v Colica Trust Co Ltd* [1998] A.C. 198 PC (analogy with the criminal law, though the directors were acting, presumably, in breach of fiduciary duty). However, the courts have not in general been prepared to use the unfair prejudice petition as a way of curing defects in the statutory protections conferred upon minorities: see *CAS (Nominees) Ltd v Nottingham Forest FC Plc* [2002] 1 B.C.L.C. 613 (avoidance of minority power to block share issue—see below, para.24–4); and *Rock Nominees Ltd v RCO (Holdings) Plc* [2004] 1 B.C.L.C. 439 CA (avoidance of minority's power to reject a "squeeze out"

after a takeover—see below, para.28–69).

[53] *Re Sam Weller Ltd* [1990] Ch. 682, where the judge refused to strike out the claim. The case was largely concerned with the now irrelevant issue of whether the dividend policy affected all the shareholders equally: cf. *Re A Company Ex p. Glossop* [1988] 1 W.L.R. 1068. Where the decisions on policy are in breach of the general law, see para.20–10, above, and *Re McCarthy Surfacing Ltd* [2008] EWHC 2279 (Ch); [2009] B.C.L.C. 622.

[54] *Re A Company (No.004415 of 1996)* [1997] 1 B.C.L.C. 479.

[55] *Guinness Peat Group Plc v British Land Co Plc* [1999] 2 B.C.L.C. 243 CA—exclusion of petitioner from an interest in a company where the shareholder's equity was negative. However, the case was mainly concerned with the inappropriateness of making such a determination at the strike-out stage of litigation where the experts on each side were in sharp disagreement as to the applicable valuation methodology.

[56] Some guidance on the broad meaning of "prejudice", and its possible financial and non-financial aspects, is usefully discussed in the judgment of David Richards J in *Re Coroin Ltd* [2012] EWHC 2343 (Ch) at [630]–[631] (affirmed on appeal, [2013] EWCA Civ 781).

[57] *Re A Company* [1983] Ch. 178; as explained in *Re A Company* [1986] B.C.L.C. 382 at 387; *Re Guidezone Ltd* [2002] 2 B.C.L.C. 321; *Re J&S Insurance & Financial Consultants* [2014] EWHC 2206 (Ch).

[58] *Grace v Biagioli* [2006] 2 B.C.L.C. 70 CA; following *Re London School of Electronics* [1986] Ch. 211. Also see *Re Home & Office Fire Extinguishers Ltd* [2012] EWHC 917.

[59] *Jesner v Jarrad Properties Ltd* [1993] B.C.L.C. 1032 Inner House; but note the qualifications in *Re J&S Insurance & Financial Consultants* [2014] EWHC 2206 (Ch).

[60] *Re RA Noble & Sons (Clothing) Ltd* [1983] B.C.L.C. 273.

[61] *Bovey Hotel Ventures Ltd, Re* unreported, but this view is set out and approved in [1983] B.C.L.C. 290; *Re Saul D. Harrison & Sons Plc* [1995] 1 B.C.L.C. 14 at 17.

[62] A point to which the courts have attached some importance. See above, para.20–6.

[63] The argument was accepted by Vinelott J in *Re Carrington Viyella Plc* (1983) 1 B.C.C. 98, 951, though the exact scope of the point was never finally settled.

[64] "Direct wrongs", i.e. where the harm is inflicted directly on the minority and not via a diminution in the value of their stake in the company.

[65] Report of the Company Law Committee, Cmnd. 1749 (1962), para.206.

[66] *Re Stewarts (Brixton) Ltd* [1985] B.C.L.C. 4; *Re London School of Electronics* [1986] Ch. 211; *Re Cumana Ltd* [1986] B.C.L.C. 430 (all involving various forms of diversion of the company's business to rival companies in which the majority were interested, i.e. situations of the type found in *Cook v Deeks* [1916] 1 A.C. 553 PC, above, at para.16–124); *Re A Company Ex p. Glossop* [1988] 1 W.L.R. 1068; and *McCarthy Surfacing Ltd* [2009] B.C.L.C. 622 (both involving exercise of directors' powers for an improper purpose); *Re Saul D. Harrison & Sons Plc* [1995] 1 B.C.L.C. 14 (failure of directors to act bona fide in the interests of the company). In not all these cases was the allegation in question made out on the facts. Indeed, so long as the "independent illegality" theory held sway, proving breaches of directors' duties was a way of bringing the controllers' conduct within the unfair prejudice provisions.

[67] *Re A Company (No.5287 of 1985)* [1986] 1 W.L.R. 281; *Re Stewarts (Brixton) Ltd* [1985] B.C.L.C. 4; *Lowe v Fahey* [1996] 1 B.C.L.C. 262.

[68] *Re Saul D Harrison & Sons Plc* [1995] 1 B.C.L.C. 14 at 18.

[69] Note that Pt 11 of the Act makes it clear that derivative actions can be brought only under its provisions or "in pursuance of an order of the court in proceedings under section 994": s.260(2). The provision for Scotland is in s.265(6)(b).

[70] *Re Charnley Davies Ltd (No.2)* [1990] B.C.L.C. 760.

[71] This is, of course, a remedy very commonly sought by s.994 petitioners (see below, para.20–19).

[72] See above.

[73] See *Atlasview Ltd v Brightview Ltd* [2004] 2 B.C.L.C. 191, para.20–20, below, and the discussion of reflective loss at paras 17–34, above.

[74] *Anderson v Hogg*, 2002 S.L.T. 354, Inner House.

[75] *Clark v Cutland* [2004] 1 W.L.R. 783 CA (considered by Payne, (2004) 67 M.L.R. 500 and [2005] C.L.J. 647).

[76] See above at para.17–13.

[77] *Clark v Cutland* [2004] 1 W.L.R. 783 at [2] CA.

[78] *Bhullar v Bhullar* [2004] 2 B.C.L.C. 241. The early stages of the litigation are recounted at [3]–[4]. See above at paras 16–95 et seq.

[79] *Kung v Kou* (2004) 7 HKCFAR 579. The decision was mentioned by the Privy Council in the case of *Gamlestaden Fastigheter AB v Baltic Partners Ltd* [2007] B.C.C. 272 PC, where the judgment of the PC, delivered by Lord Scott of Foscote, makes no reference to the restrictive conditions set out in the Hong Kong decision and seems to treat it as a general permission to award damages to the company. Even stranger, the company being hopelessly insolvent, the benefit to the petitioner from any payment by the directors to the company would be obtained only as lender to the company, whose loans would achieve a higher percentage recovery.

[80] See below, para.20–19, and the discussion of reflective loss, above, at paras 17–34 et seq.

[81] *O'Neill v Phillips* [1999] 1 W.L.R. 1092 HL.

[82] These were (a) a new unfair prejudice remedy for those excluded from the management of small companies (rejected by the Law Commission, *Shareholders' Remedies*, Cm. 3769 (1997), at para.3.25, as likely to lead to "duplication and complication of shareholder proceedings"; (b) a presumption of unfairness in certain cases of exclusion from management (recommended by the Commission but rejected by the CLR after the proposal received little support from consultees: Developing, para.4.104); (c) the development of a model exit article (recommended by the Law Commission, above, Pt V, but rejected by the CLR, Developing, para.4.103, on the grounds that it was not likely to be used by the well-advised and would be a trap for the ill-advised).

[83] Final Report I, para.2.27 (this proposal was not confined to unfair prejudice petitions).

[84] See above, fn.81 at pp.16–17. This approach was applied to the winding-up remedy (below, para.20–21) in *CVC/Opportunity Equity Partners Ltd v Demarco Almeida*

[2002] B.C.C. 684 PC.

[85] *North Holdings Ltd v Southern Tropics Ltd* [1999] 2 B.C.L.C. 624 CA; *Harbourne Road Nominees Ltd v Kafvaski* [2011] EWHC 2214 (Ch).

[86] *Re Benfield Greig Group Plc* [2002] 1 B.C.L.C. 65 CA, where, in fact, the non-independence of the expert constituted the alleged unfair prejudice.

[87] On the original approach see *Re A Company Ex p. Kremer* [1989] B.C.L.C. 365; and on the later developments *Virdi v Abbey Leisure Ltd* [1990] B.C.L.C. 342; *Re A Company Ex p. Holden* [1991] B.C.L.C. 597; *Re A Company* [1996] 2 B.C.L.C. 192.

[88] 2006 Act s.996(2)(e). In the latter case the company's share capital must be reduced. The statutory power is widely enough drawn to include an order that the minority purchase the majority's shares, which has occasionally been ordered: *Re Brenfield Squash Racquets Club Ltd* [1996] 2 B.C.L.C. 184. The other specific powers are the authorisation of proceedings to be brought in the company's name (s.996(2)(c) and above, para.20–14); requiring the company to do or refrain from doing an act (s.996(2)(b)); requiring the company not to make alterations to its articles of association without the leave of the court (s.996(2)(d)); and regulating the conduct of the company's affairs in the future (s.996(2)(a)). Whatever remedy is contemplated, the court must choose what is appropriate at the time it is granted: *Re A Company* [1992] B.C.C. 542. Indeed, the court is not limited to ordering the remedy requested by the petitioner: *Hawkes v Cuddy (No.2)* [2009] EWCA Civ 291; [2009] 2 B.C.L.C. 427 (although in this case, and as is specified now in the Companies (Unfair Prejudice Applications) Proceedings Rules (SI 2009/2469), the petitioner specifically requested particular remedies or "that such other order may be made as the court thinks fit"). Sections 757 and 758 give the court a further specific power in the case where the unfair prejudice consists of a public offer of shares by a private company: see para.24–2.

[89] See *Grace v Biagioli* [2006] 2 B.C.L.C. 70 CA, for a good example of the court's preference for a "clean break" via a share purchase as against a compensation order, which might have remedied the specific harm suffered by the petitioner but would have left him exposed in the future.

[90] *Re Bird Precision Bellows Ltd* [1984] Ch. 419, per Nourse J, approved on appeal [1986] Ch. 658.

[91] *CVC/Opportunity Equity Partners Ltd v Demarco Almeida* [2002] 2 B.C.L.C. 108 at [41]–[42]; *Strahan v Wilcock* [2006] 2 B.C.L.C. 555. The court might instead work out what the former partner's interest would be worth upon the hypothesis of a sale, without actually holding one.

[92] *Irvine v Irvine (No.2)* [2007] 1 B.C.L.C. 445; *Re Elgindata Ltd* [1991] B.C.L.C. 959 at 1007. See also *Re DR Chemicals* (1989) 5 B.C.C. 37.

[93] These criteria are taken from *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360, 371 (a winding-up case considered further below, para.20–21) and applied by the Court of Appeal to unfair prejudice valuations in *Strahan v Wilcock* [2006] 2 B.C.L.C. 555. What was initially a quasi-partnership may have ceased to be one by the time the facts supporting the petition take place, thus changing the basis of valuation: *Re McCarthy Surfacing Ltd* [2008] EWHC 2279 (Ch); [2009] B.C.L.C. 622.

[94] *Khoshkhou v Cooper* [2014] EWHC 1087 (Ch) at [25], where a company with no restriction on the transfer of shares was nevertheless held to be a quasi-partnership company since it was closely dependent on the personal relationship between the original members.

[95] *CVC/Opportunity Equity Partners Ltd v Demarco Almeida* [2002] 2 B.C.L.C. 108; *Parkinson v Eurofinance Group Ltd* [2001] 1 B.C.L.C. 720; *Guinness Peat Group Plc v British Land Co Plc* [1999] 2 B.C.L.C. 243 CA; *Re Planet Organic Ltd* [2000] 1 B.C.L.C. 366. See also *Re Annacott Holdings Ltd* [2013] EWCA Civ 119 CA, where it was held that there is no rule that a going-concern valuation can only be adopted for quasi-partnerships.

[96] *Profinance Trust SA v Gladstone* [2002] 1 B.C.L.C. 141 CA, where the earlier authorities are reviewed. Also see *Re McCarthy Surfacing Ltd* [2008] EWHC 2279 (Ch); [2009] B.C.L.C. 622, for a valuation taking into account the depreciation due to the wrongs complained of.

[97] *Re KR Hardy Estates Ltd* [2014] EWHC 4001 (Ch) at [89]–[93].

[98] *Atlasview Ltd v Brightview Ltd* [2004] 2 B.C.L.C. 191. This case, rightly it seems, suggests that proper quantification of remedies would be alert to double recovery. If so, the principle underpinning the rules on reflective loss would be upheld. This principle is discussed above at para.17–34.

[99] *Shareholders' Remedies*, Cm. 3769 (1997), paras 4.24–4.49.

[100] Developing, para.4.105.

[101] 2006 Act s.124(1). Petitions may also be brought by creditors, directors or the company itself, though such applications are rare. The Secretary of State may petition under s.124A in the public interest on the basis of information received as a result of an investigation into the company's affairs. See above, para.18–13. However, public interest grounds for a winding-up are not available other than to the Secretary of State: *Re Millennium Advanced Technology Ltd* [2004] 2 B.C.L.C. 77. The term "contributory" includes even a fully paid-up shareholder provided he or she has a tangible interest in the winding-up, which is usually demonstrated by showing that the company has a surplus of assets over liabilities, though that will not be required if the petitioner's complaint is that the controllers failed to provide the financial information from which that assessment could be made: see *Re Rica Gold Washing Co* (1879) 11 Ch. D. 36; *Re Bellador Silk Ltd* [1965] 1 All E.R. 667; *Re Othery Construction Ltd* [1966] 1 W.L.R. 69; *Re Expanded Plugs Ltd* [1966] 1 W.L.R. 514; *Re Chesterfield Catering Ltd* [1977] Ch. 373 at 380; *Re Land and Property Trust Co Plc* [1991] B.C.C. 446 at 448; *Re Newman & Howard Ltd* [1962] Ch. 257; *Re Wessex Computer Stationers Ltd* [1992] B.C.L.C. 366; *Re A Company* [1995] B.C.C. 705. The Jenkins Committee recommended (para.503(h)) that any member should be entitled to petition, presumably on the grounds that this remedy was aimed primarily at protecting minorities rather than at winding up companies.

[102] *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360 HL.

[103] CPR Practice Direction, Applications under the Companies Act and Other Legislation Relating to Companies, para.9(1). See *Re A Company (No.004415 of 1996)* [1997] 1 B.C.L.C. 479 where the judge struck out the alternative petition for winding up on the just and equitable ground on the basis that there was no reasonable prospect that the trial judge would order a winding up as against a share purchase under what is now s.996.

[104] The alternative remedy need not be a legal one. For example, it may be an offer to purchase the petitioner's shares on the same basis as the court would order on an unfair prejudice petition: *Virdi v Abbey Leisure Ltd* [1990] B.C.L.C. 342. See also *Maresca v Brookfield Development & Construction Ltd* [2013] EWHC 3151 (Ch), where the alternative remedy was for the shareholder to demand repayment of her interest from the

company.

[105] *Re RA Noble & Sons (Clothing) Ltd* [1983] B.C.L.C. 273; and *Jesner v Jarrad Properties Ltd* [1993] B.C.L.C. 1032 Inner House; *Loch v John Blackwood Ltd* [1924] A.C. 783 PC; and *Re Brand & Harding Ltd* [2014] EWHC 247 (Ch). See also *Re Full Cup International Trading Ltd* [1995] B.C.C. 682, where the judge found himself in the presumably unusual position of being unable to fashion an appropriate remedy under s.996 but of being prepared to wind up the company.

[106] *Re Kitson & Co Ltd* [1946] 1 All E.R. 435 CA.

[107] *Hawkes v Cuddy (No.2)* [2009] EWCA Civ 291; [2009] 2 B.C.L.C. 427 CA; overruling on this point, *Re Guidezone Ltd* [2000] 2 B.C.L.C. 321 at 357.

[108] Of course, if the company and the shareholder wish expressly to bargain for “redeemable” shares, they are free to do so (above, para.13–2).

PART 5

ACCOUNTS AND AUDIT

It has been accepted since the early days of modern company law that mandatory publicity about the company's affairs was an important regulatory tool. For shareholders in large companies with dispersed shareholdings it operates to reduce the risk of management incompetence or self-seeking. The non-director shareholders of a company will have a difficult task to judge the effectiveness of the management of the company if they do not have access to relevant data about the company's financial performance. For creditors it operates to reduce the risks of dealing with an entity to whose assets alone the creditors can normally look for re-payment. In fact, mandatory disclosure has long been seen as something which could legitimately be asked for in exchange for the freedom to trade with limited liability,[1] though there has been controversy throughout the history of company law about how extensive the disclosure rules should be. Today, therefore, there is a major difference between the disclosure rules applicable to ordinary partnerships (without limited liability) and those applicable to companies, with limited liability partnerships being rightly placed in the company category for these purposes, because they benefit from limited liability.[2] Given this range of interests in disclosure of information by companies, it is not surprising that successive company scandals have provoked demands for ever more far-reaching mandatory disclosure of information, and such demands have often been successful.

As far as the companies legislation is concerned, the main instrument for delivering mandatory disclosure has been the annual accounts and reports—which the directors are required to produce, have verified by the company's auditors (in most cases), lay before the members in general meeting (or otherwise distribute to them in the case of private companies) and register in a public registry. This development over the years has produced an elaborate body of rules. The desire of the Company

Law Review to use mandatory disclosure to promote an "enlightened shareholder value" approach to company law has led to reforms which require disclosure of information which is not directly financial, but concerns the quality of the company's relationships with those who are capable of making a major contribution to the success of the business or about the impact of the company's operations upon the community in which it operates. Further, at EU level the impact of various corporate scandals in the early years of this century only served to make those rules even more elaborate, especially in relation to the verification of the accounts through the process of audit. The recent financial crisis has ensured that these concern remains at the centre of public policy discussions. Accounts and audit are the subject of the two chapters in this Part.

However, mandatory disclosure can be seen as an instrument, not only of corporate law (for the benefit of shareholders, creditors and other stakeholders) but of financial services or securities law (for the benefit of investors and the efficient functioning of the capital markets). Consequently, we shall return to the issue of mandatory disclosure in Pt 6, where we analyse the additional disclosure requirements which apply to companies whose securities are traded on a public securities market.

---

[1] An unlimited liability company is not normally required to make its accounts available to the public: see para.21–36, below.

CHAPTER 21

ANNUAL ACCOUNTS AND REPORTS

Introduction **21–1**
- Scope and rationale of the annual reporting requirement **21–1**
- The classification of companies for the purposes of annual reporting **21–2**

The Annual Accounts **21–7**
- Accounting records **21–7**
- The financial year **21–8**
- Individual accounts and group accounts **21–9**
- Parent and subsidiary undertakings **21–10**
- Form and content of annual accounts **21–13**

Narrative Reporting **21–22**
- Directors' report **21–23**
- The strategic report **21–24**
- Verification of narrative reports **21–26**

Approval of the Accounts and Reports by the Directors **21–29**

The Auditor's Report **21–30**

Revision of Defective Accounts and Reports **21–31**

Filing Accounts and Reports with the Registrar **21–33**
- Speed of filing **21–34**
- Modifications of the full filing requirements **21–35**
- Other information available from the Registrar **21–37**
- Other forms of publicity for the accounts and reports **21–39**

Consideration of the Accounts and Reports by the Members **21–40**
- Circulation to the members **21–40**
- Laying the accounts and reports before the members **21–42**

Conclusion **21–43**

INTRODUCTION

Scope and rationale of the annual reporting requirement

21–1

On the basis that "forewarned is forearmed" the fundamental principle underlying the Companies Acts has always been that of disclosure. If the public and the members were enabled to find out all relevant information about the company, this, thought the founding fathers of our company law, would be a sure shield. The shield may not have proved quite so strong as they had expected and in more recent times it has been supported by

offensive weapons. However, disclosure still remains the basic safeguard on which the Companies Acts pin their faith, and every succeeding Act since 1862 has added to the extent of the publicity required, although, not unreasonably, what is required varies according to the type of company concerned. Not only may disclosure by itself promote efficient conduct of the company's business, because the company's controllers (whether directors or large shareholders) may fear the reputational losses associated with the revelation of incompetence or self-dealing, but the more interventionist legal strategies, going beyond disclosure, depend upon those who hold the legal rights being well-informed about the company's position. For example, those in a position to enforce the company's rights against directors for breach of duty[1] or to bring claims of unfair prejudice[2] or shareholders holding rights to remove directors,[3] if rational persons, will not turn their minds to the exercise of those rights unless they think there are grounds for so doing. Finally, self-help, such as taking contractual protection or altering the pricing of credit, depends upon good knowledge of risks embedded in the company's operations. Thus, disclosure is the bed-rock of company law.

This chapter is focused on what has always been the central disclosure mechanism of the British companies legislation, namely, the obligation laid on the directors to produce annual accounts (referred to in EU law as annual financial statements) relating to the financial position of the company and to accompany those accounts with a report on the company's activities, including their own stewardship of the company. Those accounts and reports are then typically considered by the shareholders at an annual general meeting of the company, though, as we have seen, only public companies are now required to hold an AGM.[4] Over the years, what is required of large companies by way of accounts and reports has expanded. By contrast, the recent tendency has been to reduce the reporting requirements of small companies.

The production of the annual accounts has generated an industry of professionals to help the company meet its statutory obligations. Notably, the accounting profession has played a major role in developing the standards which determine how the

raw financial data is to be analysed and presented in the accounts, the law having rightly shied away from doing more than setting the broad parameters for this task.[5] That profession then re-appears in the guise of auditors to verify that the accounts do meet those standards and the applicable legal rules and, in particular, present a "true and fair view" of the company's financial position.[6]

This is an area where the harmonisation programme of the EU has had a significant impact. This is hardly surprising since the utility of accounts is enhanced if they are comparable across companies and increasingly investors (shareholders and creditors) and others are interested in the financial position of non-domestic companies. The first EU rules related to the presentation of accounts,[7] and were extended later to the use of accounting standards[8] and to the provision of non-financial information.[9] In 2013 the core provisions were modernised and consolidated into Directive 2013/34/EU.[10] References to the "Directive" in this chapter are to the 2013 Directive as amended[11] (unless the context indicates otherwise). Since the leading EU instrument in this area is a Directive (rather than a Regulation), it needs to be transposed into domestic law. This is done partly by amendments to the Companies Act 2006 and, to a significant extent, by secondary legislation. Both the Act and the secondary legislation were recently amended by the Companies, Partnerships and Groups (Accounts and Reports) Regulations 2015/980, in order to implement the 2013 Directive.

The classification of companies for the purposes of annual reporting

21–2

As we have hinted, the accounting rules have developed a classification of companies which is more sophisticated than the core division deployed in the Act between public and private companies. That distinction turns on whether the company is permitted to offer its shares to the public or not.[12] The accounting classification turns mainly on the economic size of the company. However, the public/private distinction still plays a role because public companies are excluded from the two smallest categories of company (micro and small) for (most)

accounts purposes.[13] Since the ramifications of the classification run throughout the substantive rules on accounts, it is important to set it out at the beginning. The criteria upon which the classification is based are set out principally in the Directive and the Member States have only limited freedom to amend them.

There are five categories of company for accounts purposes: micro, small,[14] medium-sized, large and "public interest entities" ("PIE"). The criteria for identifying the first four categories are quantitative indicators of the economic size of the company and are designed to be capable of application in a fairly mechanistic way. The PIE category is a cross-cutting category but, for the general run of companies in the UK, it will form a sub-set of the large company category. The criteria used refer to the company's "balance sheet total", a perhaps not entirely clear phrase which refers to amount of the company's assets (without subtracting liabilities)[15]; its net turnover[16]; and the number of persons employed by it on average over the year.[17] In order to classified as micro, small or medium-size the company has to meet two of the three applicable criteria; the "large" category is a residual one into which companies otherwise fall; and the PIE classification turns on a different approach.

Micro companies

21–3

Micro companies are private companies[18] for which the balance sheet maximum is £316,000; the maximum net turnover £632,000 and the maximum number of employees is 10.[19] However, a micro company will not have access to the reporting relaxations if it is a member of a corporate group,[20] presumably because those relaxations might undermine the group accounts. In short, the micro exemptions are available to stand alone companies only, which reinforces their focus on very small businesses.

Companies on the borderline of the criteria might find themselves drifting in and out of qualification as micro companies. This problem is addressed, as it is with the other categories, by requiring that companies meet the criteria for two years in order to qualify as micro and equally by providing that micro status will not be lost unless the criteria are not met for

two consecutive years.[21] As is to be expected, the micro company benefits from the least demanding reporting regime. The category was the result of an EU level initiative in 2012.[22] It operates by giving Member States the option to remove from micro companies requirements that would otherwise apply to them under the regime for small companies. The UK chose to take up most of the options made available in the Directive.[23] Of course, the directors of micro companies may choose to report more fully.

Small companies

21–4

The criteria for small companies are also set out in the Directive, but, unlike with micro companies, Member States may increase the monetary criteria by up to 50 per cent. The UK chose to take advantage of this flexibility (i.e. to include more companies in the small category). The resulting numbers are: £5.1 million for balance sheet; £10.2 million for turnover; and 50 employees (this last being a number fixed in the Directive).[24] A company which qualifies as small can normally benefit from the "small companies regime" for the accounts and reports, which is less stringent than that for larger companies. Moreover, having qualified in a particular year, the company retains its status as "small" unless it fails to meet the criteria for two successive years.[25] Some 3 million of the approximately 3.5 million companies in the UK fall within either the "small" or "micro" categories, so that in numerical terms the relaxations for small companies are very important and the full accounting regime is of concern only to the numerical minority of companies.[26]

A company which meets the numerical criteria nevertheless cannot count as a small company if it is a public company or carries on insurance, banking or fund management activities or is a member of a group which contains an "ineligible" member.[27] The thought here appears to be that such companies (or groups of which they are members) are engaged in sufficiently sensitive activities that full disclosure is required, especially for the benefit of the relevant regulators, and, in the case of public companies, the fact that they are free to offer their shares to the public suggests that a full financial record should be available.

Medium-sized companies

21–5

Somewhat misleadingly placed some 80 sections away from the provisions on small companies is to be found, in the "supplementary provisions" to Pt 15, the definition of a medium-sized company. The criteria here are: balance sheet total of not more than £18 million, turnover not more than £36 million and not more than 250 employees.[28] There are similarly-motivated, but not identical, exclusions from this category as we saw in the small category, amongst which, crucially, are public companies.[29] In some ways, however, placing these definitions in the "supplementary provisions" of the Part dealing with accounts is appropriate, for medium-sized companies and groups benefit from rather fewer relaxations from the full accounts requirements, as compared with small companies. The CLR recommended the removal of this category on the grounds that it was neither much used nor valued, but this suggestion was not taken up.[30]

Large companies and public interest entities

21–6

Large companies are simply those which not meet the quantitative criteria needed to fall within the medium-sized category.[31] Public interest entities are companies whose securities are admitted to trading on a regulated market in the EU,[32] which the Act terms a "traded company".[33] In addition, the category includes any bank or insurance company (whether so traded or not), plus any other category of company added to the list for its jurisdiction by a Member State (the UK has not done so). PIEs are already subject to special audit treatment, as we shall see in the next chapter. As for core accounting, the principal requirement is that PIEs should always report as large companies even if otherwise qualified as medium-sized.[34] It is seriously open to doubt whether in the UK any PIE would qualify as medium-sized even without this express exclusion. The PIE category is, in fact, of most interest in the context of non-financial reporting, as we shall see below.

There is a further dimension to financial reporting by

companies traded on public markets. Those who introduced the annual reporting obligation in the nineteenth century probably saw it as informing two groups of people: the shareholders of the company, so that they could assess whether the company's management was doing an acceptable job; and the creditors of the company, whose claims are confined to the company's assets (except in the rare case of an unlimited company). However, the modern view includes a further group as having an interest in this matter. At least with companies whose securities are traded on a public market, disclosure of information about the company is crucial for the accurate pricing of the companies' securities and hence for the efficient operation of the securities market. This is true both of equity securities (shares) and debt securities (bonds) which are traded on public markets.

So strong is the markets' demand for information that it is not satisfied by the annual reporting obligations discussed in this chapter. As we shall see in Ch.26, publicly traded companies are now subject to extensive disclosure requirements which operate throughout the company's financial year. Such rules include more frequent periodic reporting than the annual requirements of the Companies Act, as well as significant requirements for the episodic or ad hoc reporting of particular events. Even in relation to the annual reports, which remain a very significant reporting occasion, it is the point at which the company makes a preliminary announcement to the market of its financial results for the previous year (the "prelims")[35] which moves the market. Such announcements—and the later full accounts and reports, though they are somewhat stale news by then—are pored over by analysts, whose task it is to generate advice for investors.

The Annual Accounts

Accounting records

21–7

The statutory provisions relating to the annual accounts begin by imposing on the company a continuing obligation to maintain accounting records.[36] This is logical enough, because, although these records are not open to inspection by members or the public, unless they are kept it will be impossible for the company

to produce verifiable annual accounts. Hence, s.386 provides that every company—no matter how categorised for other accounting purposes—shall keep records sufficient to show and explain the company's transactions, to disclose with reasonable accuracy at any time its financial position and to enable its directors to ensure that any balance sheet and profit and loss account will comply with the relevant accounting standards.[37]

A company which has a subsidiary undertaking to which these requirements do not apply[38] must take all reasonable steps to secure that the subsidiary keeps such records as will enable the directors of the parent company to ensure that any accounts required of the parent company comply with the relevant requirements.[39]

Failure to comply with the section renders every officer of the company (but not the company itself) who is in default guilty of an offence[40] unless he shows that he acted honestly and that, in the circumstances in which the company's business was carried on, the default was excusable.[41] More effective in practice is probably the duty laid on the auditor to check whether adequate accounting records have been kept and to reveal failure to do so in the auditor's report.[42]

Section 388 provides that accounting records are at all times to be open for inspection by officers of the company.[43] If any such records are kept outside the UK,[44] there must be sent to the UK (and be available for inspection there by the officers) records which will disclose with reasonable accuracy the position of the business in question at intervals of not more than six months and which will enable the directors to ensure that the company's balance sheet and profit and loss account comply with the statutory requirements.[45] All required records must be preserved for three years if it is a private company or for six years if it is a public one.[46]

The financial year

21–8

The first step in the production of the annual accounts is to fix the company's financial year. Sections 390–392 prescribe how this is to be done. Despite its name the financial year is not a

calendar year nor, necessarily, a period of 12 months. What period it is depends on its “accounting reference period” (“ARP”), which in turn depends on its “accounting reference date” (“ARD”), which is the date in each calendar year on which the company’s ARP ends. For companies incorporated after 1 April 1996, the company’s ARD will be the anniversary of the last day of the month in which it was incorporated.[47] However, the company may choose a new ARD for the current and future ARPs and even for its immediately preceding one.[48] This it may well want to do for a variety of reasons; for instance, if the company has been taken over and wishes to bring its ARD into line with that of its new parent.[49] The new ARD may operate either to shorten or to lengthen the ARP within which the change is made,[50] but in the latter case the company may not normally extend the ARP to more than 18 months[51] and may not normally engage in the process of extending the ARP more than once every five years.[52] These are necessary safeguards against obvious abuses, for constantly changing ARPs make comparisons across the years difficult. The company’s financial year then corresponds to its ARP, as fixed according to the above rules, except that the directors have a discretion to make the financial year end at any point up to seven days before or seven days after the end of the ARP.[53]

Individual accounts and group accounts

21–9

Subject to a very limited exception[54] s.394 imposes on the directors of every company the duty to prepare for each financial year a set of accounts of the company (its “individual accounts”). This duty applies even to the directors of small and micro companies, though the requirements as to what the accounts have to contain in those cases are less onerous. Section 399 imposes a duty on directors of a company which is a parent company additionally to prepare a consolidated balance sheet and profit and loss account (“group accounts”). Those group accounts must deal with the state of affairs of the parent company and its “subsidiary undertakings”—taken together.[55]

However, the obligation to produce group accounts is qualified by one very significant exception: it does not apply to

parents of groups subject to the small companies regime. Many businesses, even quite small ones, operate as groups. However, that exemption could undermine the requirement for group accounts, for example, where those in control of the business ensured that the operations of the group were carried on and its employees were employed principally in companies below the parent which itself was a small company. Consequently, in order to benefit from the small company group exemption, the test is not whether the parent is small, but whether the group as a whole meets the relevant criteria.[56] The size tests for a small group are the same as for a stand-alone company except that intra-group transactions may be eliminated when calculating turnover and balance sheet totals; alternatively, the parent company may choose instead to benefit from higher levels (by one fifth) without eliminating intra-group transactions.[57] However, the legislature recently expanded the group accounts exemption in one significant way, by extending it to small public companies. Provided the size criteria are met, it does not matter that the parent or the subsidiaries are public companies, provided none of them is a traded company.[58]

There is no special exemption for micro companies in relation to group accounts. Indeed, if a micro company is part of a group, the micro relaxations are not available for its individual accounts.[59] However, since, by definition, a micro company will also be a small company, it will be able to benefit from the small company regime when producing its individual accounts as a member of a group and will benefit from the small company exemption from the requirement to produce group accounts if it is the parent company.

There is a similar approach to the definition of a medium-sized group to that used for a small group—except, of course, that a medium-sized group is not exempted from the obligation to produce group accounts, but it may report less fully.[60]

Parent and subsidiary undertakings

21–10

The obligation to produce group accounts does not relieve the directors of the parent company from the obligation to produce individual accounts for the parent[61] nor, subject to one exception,

the directors of the other companies in the group from that obligation in relation to their company.[62] The individual and group accounts of companies within a group should be produced, in principle, using the same financial reporting framework.[63] The exception relates to subsidiaries which have been dormant throughout the relevant financial year (unless the subsidiary is a traded company—a rare situation). They are not required to produce individual accounts, subject to certain conditions, in particular that all the members of the subsidiary agree (easy enough if the subsidiary is wholly owned), that the parent is incorporated in the EEA and that the parent guarantees the liabilities of the subsidiary as they existed at the end of the year in relation to which the exemption applied (and all this is disclosed).[64] The principle that the production of group accounts should not normally remove the obligation to render individual accounts is as it should be. Creditors, in particular, may well have claims only against particular companies in the group, unless they have contracted for guarantees from other group members, and so the group picture alone might be misleading. By contrast, the shareholders of the parent have an economic interest in the performance of the group as a whole, since subsidiary profits may eventually come to them as dividends from the parent company, and so are interested primarily in the group accounts.[65]

The obligation to produce group accounts gives rise to the need to define a subsidiary undertaking. The situation may be clear when Company A holds all the voting shares in Company B, but suppose it holds only 30 per cent of them. What is then the position? The answer is provided by ss.1161 and 1162 and Sch.7. The term “undertaking” is used rather than “company” because consolidation of the accounts is required even if the subsidiary business does not take the form of a company or some other body corporate, but is a partnership or other unincorporated body.[66] Thus, although group accounts are required by the Act to be compiled only by entities which are companies,[67] the shareholders and creditors of and investors in those companies are to be provided with financial information relating to all the businesses the parent controls, no matter what legal form they may take.

But what is control? The Act, building on art.22 of the Directive, sets out five situations where control will be found to exist. Briefly summarised, these situations are where the parent company:

(a) holds a majority of voting rights in the undertaking[68];

(b) is a member of the other undertaking and has the right to appoint or remove a majority of its board of directors[69];

(c) by virtue of provisions in the constitution of the other undertaking or in a written "control contract", permitted by that constitution, has a right, recognised by the law under which that undertaking is established, to exercise a "dominant influence" over that undertaking (by giving directions to the directors of the undertaking on its operating and financial policies which those directors are obliged to comply with whether or not the directions are for the benefit of the undertaking)[70];

(d) has the power to exercise or actually exercises dominant influence or control over the undertaking or the parent and alleged subsidiary are actually managed on a unified basis[71];

(e) is a member of another undertaking and alone controls, pursuant to an agreement with other members, a majority of the voting rights in that undertaking[72]; and sub-subsidiaries are to be treated as subsidiaries of the ultimate parent also.[73]

Despite the complexities of this definition, which arise partly out of the need to address control structures across the EU, it is clear that the most important case in the UK is (a). Thus, the answer to our question is that a holding of 30 per cent by Company A in Company B will not, by itself, make Company B its subsidiary. However, companies are not permitted to remain entirely silent about their significant relationships with companies other than subsidiaries. Companies have to disclose in their individual or group accounts certain information about companies, not being subsidiaries, in which they have nevertheless a significant holding.[74] However, such affiliated companies do not have to be consolidated into the group accounts.

Parent companies which are part of a larger group

A parent/subsidiary relationship will exist even where the parent (the "intermediate parent") is itself the subsidiary of another company. In groups of companies this situation often exists. There may be a chain of companies in which all but the bottom company meet the statutory definition for being a parent of the company (or companies) below them in the chain. The resulting proliferation of group accounts of varying scope is not likely to be helpful. Consequently, there are exemptions which apply in such cases. The terms of the exemption vary according to the level of the parent's shareholding in the intermediate parent, since the "outside" shareholders in the intermediate parent have an economic interest in that company's subsidiaries and so may wish to have intermediate group accounts.

Subject to certain further conditions, an intermediate parent which is a wholly-owned subsidiary of another company is relieved of the obligation to produce group accounts.[75] Where the parent of the intermediate parent holds 90 per cent or more of the subsidiary's shares, the exemption needs the approval of (presumably a majority of) the remaining shareholders of the intermediate parent.[76] Where the parent of the intermediate parent holds more than 50 per cent of the allotted shares[77] (but less than 90 per cent), exemption is the default rule. However, if the holders of at least 5 per cent of the total allotted shares in the intermediate parent serve a notice, within six months of the end of the financial year in question, requiring the production of group accounts by their company, then those group accounts must be produced.[78] The higher level of protection where the "outside" shareholders constitute 10 per cent or less of the shareholders is perhaps explicable by reference to the fact that the governance rights of such shareholders are very limited. For example, they are unable to block a special resolution. None of the above exemptions is available, however, if the intermediate parent is a traded company.[79] This is particularly important in relation to the default exemption. For such companies, there will necessarily be a significant block of the company's shares which are not held by that company's parent but are in the hands of public investors. Their interests dictate that the traded company should produce accounts which cover its position together with

the position of the undertakings it controls, for that is the economic entity in which the public have invested.[80]

Even where the exemption is available in principle, certain other conditions have to be met. First, the intermediate parent must actually be included in the accounts of a larger group; those accounts must be drawn up in accordance with the standards contained in the Directive or equivalent standards, and must be audited.[81] Secondly, the individual accounts of the intermediate parent must disclose that it is exempt from the obligation to produce group accounts and give prescribed information in order to identify the parent undertaking that draws up the group accounts.[82] Thirdly, the intermediate parent must deliver the group accounts to the Registrar, translated into English, if necessary.[83]

Companies excluded from consolidation

21–12

Even if a company is in principle subject to the obligation to produce group accounts, nevertheless some subsidiary companies may be omitted from the consolidation. Subsidiaries may be omitted if (a) their inclusion is not material for giving a true and fair view of the group (for example, if they are inactive companies); (b) "severe long-term restrictions" substantially hinder the exercise of the parent's rights over the assets or management of the company (a situation most likely to arise from restrictions in foreign legal systems); (c) the necessary information cannot be obtained "without disproportionate expense or undue delay"; and (d) the parent's interest is held exclusively with a view to resale.[84] If all the subsidiaries fall within one or other of these categories, no group accounts need be produced—no doubt a rare situation.[85]

Form and content of annual accounts

Possible approaches

21–13

Broadly, there are two model approaches for the legislature to take to the rules governing the financial analysis of the transactions the company has engaged in during the year and the

presentation of the results of that analysis in the company's individual or group accounts. It could lay down one or more very general principles and leave it to the accounting profession to develop more specific rules (usually referred to as "accounting standards"), to which, however, legal force might or might not be attached; or the legislature could try to set out a detailed set of rules itself. The British tradition is closer to the former model. However, the continental European tradition, which is closer to the second model, had an impact on British law in the 1980s, because that tradition influenced the Fourth and Seventh Directives on companies' accounts,[86] though not to the extent by any means of a complete shift to the latter approach. However, in a later development, the EU moved towards giving standard setters a bigger role in the setting of the detailed rules, through the adoption of International Accounting Standards ("IAS"), though with the rider that standard-setting should no longer be purely a matter for the professions and the public interest should be represented in the standard-setting exercise.

The result is that the current rules are a mixture of legislative provision and accounting standards, to which different degrees of legal recognition are accorded. Moreover, there are two sets of rules, with different mixtures. Here lies the significance of the term "accounting framework". A company which is under an obligation to produce individual accounts is free to do so either by reference to the rules contained in the Companies Act and regulations made thereunder or by reference to IAS.[87] These accounts are called, helpfully if unimaginatively, "Companies Act individual accounts" and "IAS individual accounts" respectively. The same choice is available to companies under an obligation to produce group accounts, except that companies which in domestic terminology are traded companies[88] must use IAS for their group accounts, as required by EU law.[89] Thus, there are also "Companies Act group accounts" and "IAS group accounts".

The IAS Regulation permits Member States to permit or require domestic companies to use IAS more widely.[90] The UK adopted the permissive approach but made it widely available, for even small companies may use IAS.[91] Having switched to IAS, a company may change back to Companies Act accounts

provided it has not changed to Companies Act accounts during the five-year period leading up to the most recent year of IAS accounts. This rule is clearly aimed at preventing chopping and changing, which would reduce the comparability of the accounts. If the company wishes to change back to Companies Act accounts within that period, it must show that "there is a relevant change of circumstance".[92] Similar rules apply on a reconversion to IAS.[93]

We will now look at Companies Act accounts and IAS accounts in turn, but first it is necessary to look at a two provisions which applies to both Companies Act and IAS accounts.

True and fair view

21–14

The traditional British approach to the accounts has long focused around the general principle that the accounts must "give a true and fair view of the assets, liabilities, financial position and profit or loss"[94] of the individual company or the companies included in the consolidation in the case of group accounts. For many years this was virtually all the companies legislation said about the content of the accounts. It remains an overriding principle, no matter which accounting framework is used for the presentation of the accounts. The directors must not approve accounts unless they provide a true and fair view.[95] The overriding nature of the requirement is reflected in art.4 of the Directive.

If compliance with the Act or provisions made under it would not be sufficient to give a true and fair view, the necessary additional information must be given in the accounts or notes to them.[96] Further, if in "exceptional" or "special" circumstances compliance with the statutory provisions would put the accounts in breach of the "true and fair" requirement, the directors must depart from the statute or subordinate legislation to the extent necessary to give a true and fair view.[97] What this qualification seems not to permit, though standard-setters have sometimes taken a different view, is the issuance of a standard which gives a general dispensation to companies to depart from a provision in or made under the Act, on the grounds that a true and fair

view requires this. These provisions of the Directive and of the Act contemplate only ad hoc departures from the statutory requirements in the case of particular companies in particular circumstances.

The prohibition on signing accounts which do not give a true and fair view applies equally to IAS accounts as to Companies Act accounts. However, with IAS accounts, domestic law says nothing about what must or may be done to produce that view if the applicable standards by themselves do not achieve it.[98] Nevertheless, the position is probably the same, since the provisions of the Directive apply to all accounts, no matter what accounting framework is employed. IAS 1 requires that the accounts "present fairly" the company's or group's financial position, which presumably may be equated with a "true and fair view".[99] The application of IAS (or rather International Financial Reporting Standards ("IFRS"), as they have now become) is presumed to lead to fair presentation, but IAS 1 recognises that further disclosure may be necessary to achieve this result. Departure from IFRS in order to achieve fair presentation is recognised as permissible but only "in extremely rare circumstances".

Going concern evaluation

21–15

Much less obvious in the domestic legislation than the true and fair requirement, but often as important, is the requirement that directors form a view, when they draw up the accounts, whether the company is a going concern. Article 6 of the Directive lays down as one of its "general financial reporting principles" that "the undertaking shall be presumed to be carrying on its business as a going concern", so that, if the company is in danger of ceasing to be a going concern, this fact must disclosed and appropriate valuations made. This principle is important because the numbers in the accounts are likely to look very different where a company may have to sell assets off on a break-up basis. Both the national and international accounting standards (discussed below) require that the directors make this assessment when preparing financial statements.[100] In addition, the Listing Rules require the directors of a company with a premium listing

on the Main Market[101] of the London Stock Exchange to insert in its annual financial report a statement that the company is a going concern, together with any assumptions underlying that statement and any qualifications to it.[102] In the recent financial crisis, and especially when liquidity was in short supply, the issue came to the fore. The Financial Reporting Council (see below) established a committee to examine the lessons to be drawn from how this matter was handled in the crisis and later issued revised guidance.[103]

Companies Act accounts

21–16

At the core of Companies Act accounts are a traditional balance sheet and a profit and loss statement.[104] The balance sheet provides a statement of the company's assets and liabilities, as at a particular point in time, i.e. the last day of the financial year. If, as is to be hoped, the former are greater than the latter, the difference between the figures is sometimes referred to as the shareholders' equity. It is the theoretical amount which the shareholders would receive if the company's business were then sold as a going concern.[105] If the assets are less than the liabilities, the shareholders have no equity in the company and the people with the strongest interest in its economic performance are its creditors.[106] The profit and loss account indicates the company's performance over the financial year: has it generated more value than it has consumed? Profit is different from cash flow. A profitable company may have a negative cash flow over a particular period, for example, where it has used a previously large cash balance to buy a new (and profitable) business. Although the new business may have generated cash during the financial year in which it was bought, it is highly unlikely that this cash income will come anywhere near the amount expended to acquire the business. Conversely, a company which has been unprofitable over the year but has managed to dispose of a large fixed asset during that year may end the year with more cash than at the beginning of it.

What does the Act say about the format of these two accounts? With the enactment of the Fourth and Seventh Directives, UK law also adopted the Continental practice of

dealing with matters of form and content to some extent in the legislation itself, and so the domestic legal provisions dealing with the accounts were expanded. Those provisions are now in the Large and Medium-Sized Companies and Groups (Accounts and Reports) Regulations 2008,[107] and the Small Companies and Groups (Accounts and Reports) Regulations 2008,[108] both as subsequently amended. This account of the Regulations is necessarily brief and we shall omit entirely the special provisions applying to banking and insurance companies.

Following the Directive, Pt 1 of Sch.1 to both sets of Regulations[109] provides two alternative formats in which the balance sheet may be presented and four possible formats for the profit and loss account. However, the directors cannot shift from the formats adopted in the previous year "unless in their opinion there are special reasons for a change".[110] The formats concern simply the questions of how the accounting information is grouped and the order in which the information, so grouped, is presented to the reader. More important, therefore, are the provisions of the Schedule which go into issues relating to the proper accounting treatment of transactions carried out by the company or contain rules about the valuation of assets and liabilities. These are contained in Pt 2 of the Schedule under the heading "Accounting Principles and Rules". This is where the "going concern" principle of the Directive is transposed into domestic law. However, these rules are (strong) default rules, for the directors may depart from them if there are "special reasons" for so doing, provided the nature of the departure, the reasons for it and its effect are stated.[111] Furthermore, the Schedule explicitly provides a choice to the directors as to the fundamental accounting approach which will be adopted. No longer is a historical cost approach mandatory (under which, for example, assets are carried in the books at their original acquisition price, less depreciation, even though their current market price is much higher) but rather various forms of "marking to market" are permitted.[112]

Finally, it is clear that the "Accounting Principles and Rules" contained in the Schedule are not sufficient to produce a set of accounts for any particular company, except perhaps one of the simplest character. More detailed accounting standards need to

be deployed, which are not to be found in the Regulations implementing the Directives but in standards developed by the standard-setters, to which we now turn.

Accounting standards

21–17

In the UK the professional accountancy bodies had begun as early as 1942[113] to issue accounting standards. At that time and for a long while thereafter they provided the only authoritative guidance on what the "true and fair" requirement meant in particular situations. Those standards covered ever more topics and became ever more sophisticated over time; and, as we have seen, their centrality to the accounts-producing exercise was not ended by the transposition in the UK of the Fourth and Seventh Directives. Two important developments have accompanied the expansion of the role of accounting standards. These two developments are probably not unconnected with one another, their common feature being a recognition of the quasi-public role played by accounting standards. First, accounting standards have achieved legal backing; secondly, the professional bodies have lost their previously complete control over the standard-setting process.

Although the 1942 standards were termed "Recommendations", it became accepted in the accounting profession that compliance with the legal obligation to present a "true and fair" view of the company's financial position required in principle adherence to accounting standards – even if on rare occasions that legal obligation had the contrary effect of requiring directors to override the requirements of a particular standard.[114] A good example of this reasoning in action was provided on the occasion of the introduction of a set of extensive reporting relaxations for micro companies (see below). The Directive provides that where advantage is taken of these relaxations, the micro company's annual financial statements "shall be regarded as giving the true and fair view required by Article 4(3)[115] [which refers to the provision of additional information to give a true and fair view]". This was argued to rule out the application of accounting standards to the relevant items in the micro company's accounts, because these typically

would require additional information. But, if accounting standards could not be applied, directors and auditors would be in danger of not meeting the “true and fair” obligation. Consequently, the Act’s formulation of the directors’ true and fair obligation was amended specifically to require directors of micro companies to ignore accounting standards when making that judgement if those standards would require the provision of further information.[116]

This process described in the previous paragraph was supported by the courts’ acceptance of the professional standards as the best evidence of the standard of care required by the law of negligence in relation to accountants performing their professional duties, especially when acting as auditors, though the courts are not bound by the professionally developed standards.[117] In the case of large companies the resulting position was recognised legislatively in a provision added in 1989. This provides that “it must be stated whether the accounts have been prepared in accordance with applicable accounting standards and particulars of any material departure from those standards and the reasons for it must be given”.[118] This in effect puts accounting standards on a “comply or explain” basis, and it was probably the first example of the use of this technique in company law.[119]

The second development—the injection of a public element into the standard-setting bodies—occurred when the Companies Act 1989 conferred on the Secretary of State the power to determine which body or bodies have authority to issue accounting standards which have statutory recognition.[120] Under the current arrangements the Secretary of State has delegated this power to the Financial Reporting Council Ltd (“FRC”). The FRC is a private company (limited by guarantee), but the Chair and Deputy Chair of the FRC are appointed by the Secretary of State; the remaining directors, executive and non-executive, are appointed and removed by the board itself. Those who have practised in the accounting profession within the previous five years are excluded, so that the board appears to be weighted towards the users of accountants’ services. Some of the work of the FRC in the accounting standards area is delegated to a Codes and Standards Committee. The FRC is funded in its accounting,

audit and corporate governance activities by the accountancy profession and the preparers of financial statements, though the “preparers’ levy” paid by public traded and large private (i.e. non publicly traded) companies.[121] Overall, the public authorities, despite no longer making any significant contribution to the funding of the FRC, can be said to have considerable potential control over its activities. On the other hand, the governmental bodies do not interfere in the day-to-day running of the FRC. Thus, the current structure can be said to combine the technical competence and flexibility of setting rules through expert bodies exercising delegated powers with the safeguarding of the public interest through ultimate public control.

IAS accounts

21–18

If the Directive represents the use by the EU of (partial) legislative specification of the form of the accounts, the IAS Regulation[122] represents the EU’s adoption of the alternative strategy of reliance on the standard-setters. Companies subject to the IAS, whether mandatorily or by their own choice, are to prepare their accounts in conformity with international accounting standards as laid down by the International Accounting Standards Board and as adopted by the Commission.[123] True it is that such companies remain subject to the Directive, but the predecessors of the current Directive, the Fourth and Seventh Directives, were amended so as to ensure that they permitted companies to adopt the IAS approach. A good example is the fact that IAS 1 does not require the production of a profit and loss account but rather of income and cash flow statements, which necessitated an adjustment of the Fourth Directive.[124] At domestic level, since the IAS Regulation applies directly in the UK, the national provisions dealing with the form and content of the accounts are applied only to companies producing Companies Act accounts.[125] For IAS accounts, these matters are dealt with in the international standards themselves.

The effect of the IAS Regulation is to give the standards produced by the IASB (now called International Financial

Reporting Standards ("IFRS")) an even more explicit legal position than domestic standards. The appropriate IAS and IFRS must be followed under the terms of the IAS Regulation.[126] Not surprisingly, and in line with the domestic developments, the more prominent role afforded to the international standards was accompanied by the loss of purely professional control over the setting of those standards. The IASB became an independent body in 2001, having been founded in 1973 by the professional accountancy bodies of nine leading countries. However, close ties with a particular government, on the model of the FRC, were hardly feasible for the IASB, which adopted a different path away from professional control. In brief, its members are appointed by the trustees of a foundation,[127] which trustees are a self-perpetuating body (i.e. they appoint their own successors). However, this arrangement was subject to criticism, notably from the European Commission, and was modified by the addition of a Monitoring Board consisting of representatives of the public authorities (mainly regulators, including the European Commission).[128]

21–19

The IASB is not a European but an international organisation, as its name suggests. Given its wider scope, the obligation of companies within the IAS Regulation to apply IAS and IFRS, and the reluctance of the European Commission to lose all control over this important area, it is perhaps not surprising that there is a filter in place between the adoption of a standard by the IASB and its becoming mandatory for European companies subject to the IAS Regulation. The filter is that the standard produced by the IASB must have been adopted by the Commission of the European Union, which is advised by a technical committee (European Financial Reporting Advisory Group ("EFRAG")) and a committee consisting of representatives from the Member States (Accounting Regulatory Committee ("ARC")) before it endorses an international standard.[129] The nature of the filtration process is perhaps less clear. Adoption is not permitted if the IASB standard is contrary to the "true and fair view" principle,[130] but if the "fair presentation" principle of IAS 1 is the same as a true and fair view,[131] then that judgment will have been made already by the

IASB. Nor may the Commission adopt an IASB standard if it fails to "meet the criteria of understandability, relevance, reliability and comparability" required of such standards. However, it is highly unlikely that the IASB would adopt a standard which it considered infringed this principle either. In effect, the filter operates as an opportunity for the same issues to be debated again at EU level as were considered internationally in the adoption of the initial IAS or IFRS. Such a re-hashing of the arguments occurred in relation to the IAS standard on the market valuation of financial instruments. After a long debate IAS 39 was adopted but with two significant carve outs.[132] The other IAS and IFRS have been adopted straightforwardly, though not always on time.[133] It is clear that extensive use of the blocking power by the Commission would be likely to lead to a collapse of the IASB venture.

It may be wondered why the EU threw its weight behind the IAS and the IASB rather than keeping closer control over accounting standards itself. It seems to have recognised that producing accounting standards for the largest companies is necessarily a global rather than a regional activity.[134] Globalisation has led multinational companies to acquire not only cross-border business activities, but also cross-border groups of investors. Both investors, seeking to compare companies from different jurisdictions, and companies, seeking to raise money in more than one country, have generated a demand for international uniformity in accounting standards, so that accounts do not have to be constantly restated according to different countries' "generally accepted accounting principles" ("GAAP"). The only other contender for a global role is the US national standards (US GAAP). The IASB provides a platform from which convergence may be pursued with the US standards rather than a simple adoption of them.[135]

Applying the requirements to different sizes of company

21–20

We have seen that the form and content of the accounts result from a complex interaction of rules set out in legislation (which itself may be national or EU legislation and primary or

secondary legislation) and accounting standards (which may be national or international). This is a far cry from the days when there was only national legislation, when that legislation confined itself to the requirement of a true and fair view, and the rest was national accounting standards. It does not help that the balance between legislation and standards varies somewhat according to whether national or international standards are used by the company. There is one further cross-cutting set of divisions which we need to notice. This is the varying intensity of the rules and standards across companies of different sizes. We need to consider this point only briefly, since this is not a textbook on accounting. The rules we consider here relate to the different requirements for the production of accounts. As we shall see later, differences in economic size are also relevant a number of other accounting matters: what goes into the notes to the accounts and into narrative reporting or the level of publicity to be given to those accounts once produced (through their filing in a public registry). The full force of the rules and standards applies only to large companies and groups and PIEs which are required to report as large companies, even though they are only medium-sized.[136] Medium-sized companies and groups benefit from a modest set of derogations from the requirements for large companies. In particular, the UK has not taken up the permission in art.23 of the Directive to exempt the parent of medium-sized groups from the obligation to draw up group accounts.

For small companies the derogations are more substantial. As we have seen above, a small company is not required to produce group accounts, though it may choose to do so. Further, the Directive (art.14) permits Member States to allow small companies to produce only “abridged” profit and loss accounts and balance sheets. This means that some items normally required to be shown separately may be combined in a single heading. So, the accounts are less granular, but equally cheaper to produce and less helpful to competitors. Until recently, domestic law has permitted small companies to *publish* abbreviated accounts.[137] Drawing up abridged accounts raises additional issues because the accounts are then less useful for shareholders as well as outsiders (shareholders receive the accounts as drawn up and are not reliant on the published ones). The UK decided to take up the option to permit abridged

accounts to be drawn up only where all of the members of the company consent to this course of action.[138] This is designed to allow the company to cut costs when all the shareholders are insiders but to allow outside shareholders to protect themselves by withholding consent. Finally, the accounting standards applying to small companies have been simplified, both by the FRC and the IASB.[139]

The largest set of derogations is reserved for the smallest companies, i.e. micro companies. The permissible derogations from the accounts preparation requirements are set out in art.36 of the Directive, and the UK has taken advantage of nearly all of them[140] for free-standing micro entities.[141] Accounting standards are further simplified for micro entities.[142]

Notes to the accounts

21–21

Although the British tradition has been for the legislature not to specify the form and content of the accounts, but to leave that to standard-setters, the legislature has long seen the accounts as a useful place to require the disclosure of specific pieces of information. These are not required to be part of the accounts proper but are to be given in "notes" to the accounts.[143] The notes requirements apply whether the company has produced Companies Act or IAS accounts.[144] The information required to be disclosed is often designed to make the information contained in the accounts complete.[145] We have seen above the example of the requirement to give information in the notes about non-subsidiary companies in which the reporting company has a significant holding.[146] Another example is the requirement for companies (other than small ones) to disclose 'off balance-sheet' transactions, without knowledge of which the balance sheet may be entirely misleading.[147]

Most of what is required by way of notes in arts 16–18 of the Directive falls into the "completeness" category. However, in this context there is again room for debate about whether the notes requirements should apply uniformly across all sizes of company. The Directive requires compliance with the art.16 list by all companies, except that Member States may choose to exempt micro companies from nearly all of them, as the UK

did.[148] Small companies are in principle exempted from the more advanced disclosures required by art.17. However, Member States may choose to apply five of the more advanced disclosures to small companies, but may not impose notes requirements on small companies beyond this level.[149] The UK decided to apply all five additional disclosures to small companies, on the grounds that they were not burdensome and were needed to understand properly the financial position of the company, e.g. material post-balance sheet events.[150] Finally, art.18 (disclosure of turnover by reference to different geographical markets) applies only to large companies and PIEs.[151]

However, the information provided in the notes may reinforce the shareholders' governance rights as well as supplying potentially useful financial information. We have seen that the issue of transactions between companies and those who are in a position to influence the terms of those transactions or their associates is a central regulatory problem in relation to both directors and controlling shareholders. Transactions between directors and their companies are subject to special rules about disclosure to the board or even shareholder approval,[152] whilst similar transactions by controlling shareholders, though in general less well policed by British company law, may give rise to claims of unfair prejudice.[153] Article 17(1)(r) requires disclosure of information about material related party transactions not concluded under normal market conditions, and this is one of the provisions of art.17 which the UK has applied to small companies.[154] Shareholders reading the notes are thus in a better position to decide whether to seek to invoke their remedies in this area.

Narrative Reporting

21–22

The company's financial statements, naturally, are dominated by numbers. But the annual circulation by the directors to the shareholders includes some predominantly non-numerical documents. This is now conventionally referred to as "narrative reporting". Until about a quarter of a century ago, the only statutorily required narrative report was the directors' report, the

content of which was determined largely by the directors themselves. Since then, the mandatory content of narrative reporting has expanded enormously and, as part of that process, further reports have been added to the directors' report. Just as important, the notion of the audience to whom the narrative reports are addressed has expanded. Originally, directors thought of their report as addressed to shareholders and, perhaps, potential investors in the company. Today, it is common to say that the narrative reports are addressed to all "stakeholders" in the company—though the term "stakeholder" is usually undefined and the action which stakeholders might take in response to the information provided left unspecified.[155]

In consequence, the disclosures required are sometimes only indirectly linked to the financial interests of the shareholders.[156] Indeed, in some cases narrative reporting may be intended to induce changes in corporate behaviour which the shareholders might not wish to induce, if left to themselves. Thus, the recent addition of "extractive industry" reporting requires the directors of large companies and PIEs active in those industries to produce an annual report which discloses payments made to foreign governments. The purpose of this requirement is so that "we can provide citizens [of foreign countries] with the detailed information they need to hold their governments to account".[157] The implication is that such payments are often bribes to local politicians or senior officials. The shareholders' interests are not placed centre-stage in this case, but rather those of the foreign citizens. Indeed, if because of corruption or lack of democratic process in those countries, no such accountability occurs, the reporting companies will find themselves at a competitive disadvantage as against companies from jurisdictions which do not impose (or effectively enforce) this reporting requirement. If, on the other hand, the foreign citizens are successful, the benefits will accrue mainly to them rather than the company's shareholders.[158] Perhaps for this reason, the Directive and the domestic regulations, whilst requiring the payment report to be made public (through filing at Companies House), do not require it to be laid before the shareholders.[159] Narrative disclosure can thus be used to bolster policies whose drivers are located outside company law, as conventionally conceived.

In this section we consider the various items that contribute to narrative reporting, with the exception of the directors' remuneration report, important though that is. This has been dealt with in Ch.14[160] and need not be further considered here.

Directors' report

21–23

The directors' report ("DR"), to accompany both the individual and group accounts, has long been a statutory requirement in the UK. However there is no longer a requirement for micro companies to produce a directors' report[161] and small companies benefit from a lower disclosure regime.[162]

The statute requires the report to contain some fairly straightforward information, for example, a list of those who were directors of the company at any time during the year.[163] It must also state the amount the directors recommend to be paid by way of dividend to the shareholders.[164] However, this latter requirement does not apply to companies entitled to the "small company exemption". Presumably, this is because in small companies public disclosure of dividend recommendations may reveal the income of easily identifiable individuals, for example, where the directors are the only shareholders. This exemption is available not only to small companies falling within the small companies regime for the accounts but also to small companies which would so fall but for the fact that they are members of a group of companies which contains an ineligible member.[165] Thus, the relaxations for small companies in relation to the DR go somewhat wider than in relation to the accounts. More generally, the DR must state any important events which have affected the company since the end of the financial year and indicate the likely future development of its business.[166]

None of the above is very demanding. However, when one turns from the Act to Sch.7 of the Large Companies Regulations, one finds a number of disclosure requirements which are not closely related to the financial interests of the shareholders.[167] Thus Pt 3 requires information to be given about the employment, training and promotion of disabled persons.[168] Part 4 requires information about "employee involvement", i.e. the extent to which employees are systematically given information,

consulted, and encouraged to join employee share schemes. Part 7 requires traded companies[169] to disclose their greenhouse gas emissions. These provisions seek to co-opt large companies to support (usually laudable) non-corporate policies which the government is pursuing.

Even the requirement in Pt 1 for separate disclosure of the amounts of political donations is not generally necessary to form a view on the financial position of large companies in view of the minimal amounts needed to trigger this requirement and the modest amounts normally donated. However, this disclosure clearly facilitates the operation of the controls over political donations laid down in Pt 14 of the Act.[170] One can say the same of the buy-back disclosures required in Pt 2, which reinforce the rules in Pt 18 of the Act. One might even take the same view of Pt 6 of the Schedule, implementing for traded companies art.10 of the Takeover Directive on the disclosure of a company's control structures.[171] Such disclosures facilitate takeover bids.

The strategic report

Rationale and history

21–24

Section 414A requires all companies, other than those benefiting from the small companies regime,[172] to produce an annual strategic report ("SR"). The requirement for a SR reflects the perception that shareholders and investors need more than financial data to understand fully the prospects of the company. They need also to be able to gauge the quality of the company's relationships with those upon whose contributions or cooperation the success of the company depends (sometimes called "stakeholders"). For stakeholders, as well, this information may be useful, even if company law itself gives them no particular platform from which to take action on the basis of the information.[173] As the CLR put it, "companies are increasingly reliant on qualitative and intangible assets such as the skills and knowledge of their employees, their business relationships and their reputation. Information about future plans, opportunities, risks and strategies is just as important as the historical review of performance which forms the basis of

reporting at present”.[174]

The second argument for a broader review of the company by the directors was the need to provide a check on the discharge by directors of their “inclusive” duty[175] to promote the success of the company for the benefit of its members but on the basis of taking into account the company’s need to foster its relationships with stakeholders, its impact upon communities affected and environmental and reputational concerns. This duty is specifically referred to in s.414C(1). Thus, there was a close link between the shareholder-centred statement of directors’ duties recommended by the CLR and the desire to provide some mechanism whereby its “enlightened” elements meant something significant in practice and were not just self-serving.

Despite broad agreement on these principles, producing a steady-state set of rules to implement them proved surprisingly controversial. There have been three iterations of the rules, which have come close to going around in a circle. The first set of rules was recommended by the CLR under the name of an Operating and Financial Review. At first, all seemed to be going well with the OFR proposal. In fact, it was introduced by regulation in 2005 under powers contained in the Companies Act 1985 in advance of the enactment of the 2006 Act,[176] after extensive consultation among those affected.[177] Whilst the companies affected were preparing their first OFRs, the then Chancellor of the Exchequer, in a speech to the Confederation of British Industry,[178] and apparently after exiguous consultation with the Department of Trade and Industry (the then name of the governmental department responsible for company law),[179] announced the repeal[180] of the OFR on the grounds it was “a gold-plated regulatory requirement”—but without showing any appreciation of its place in the wider scheme of reforms proposed by the CLR. The DTI, re-stating its commitment to “strategic forward-looking narrative reporting”, then undertook consultation on how far this commitment could be implemented within what it called a Business Review requirement without imposing on companies “unnecessary burdens”. However, the coalition agreement of the government which took office in 2010 included a commitment to “reinstate” the OFR. The implementation of that commitment gave us the current strategic

review. In the meantime, the EU legislature became more involved in the area. The "management report" (in effect a DR) required by arts 19 and 29 of the Directive (for individual and group accounts respectively) contains some non-financial requirements and in 2014 those requirements were strengthened by an amending Directive, adding arts 19a and 29a to the 2013 Directive.[181]

Contents of the Strategic Review

21–25

Section 414C states that the purpose of the SR is to "inform members of the company" and to help them assess whether the directors have performed their duty under s.172 of the Act to promote the success of the company for the benefit of its members.[182] Although placing the emphasis on the members ties in well with the shareholder-centred focus of s.172, the CLR proposed that the OFR should not be so narrowly targeted.[183] Section 414C(2) requires the directors to produce a SR containing a fair review of the company's business and a description of the principal risks and uncertainties facing it—or them in the case of group accounts.[184] The review required is "a balanced and comprehensive" analysis of the development and performance of the company's business during the financial year and of its position at the end of the year.[185] To the extent that it is necessary for an understanding of the business the review must make use of "key performance indicators", both financial and non-financial.[186] This is an attempt to inject some quantitative analysis into what might otherwise be a set of generalities. These parts of the section simply track art.19(1) the Directive, whose requirements are indeed rather general.

For quoted companies[187] the SR must deal with further matters, largely as a matter of domestic law. At the most general level, the company is required to describe its strategy and its business model.[188] Then the SR must address "to the extent necessary for an understanding" of the company's business[189]—with KPIs where necessary—certain specific issues. The phrase in quotes does not give the directors a discretion whether to deal with a matter: it simply recognises that not all the additional matters will be relevant to the businesses of all companies,

though few will not have to comment, for example, on the employees. The list of additional matters potentially to be commented on is:

(a) "the main trends and factors" likely to affect the future of the company's business;

(b) the impact of the company's business on the environment;

(c) the employees;

(d) social, community and human rights issues.[190]

Finally, whether or not this is necessary to an understanding of the company's business, the SR must disclose the number of persons of each sex who were (i) directors; (ii) senior managers; and (iii) employees of the company. This is an example of disclosure being used to promote the government's diversity policies, this time at senior levels in companies. The amending Directive of 2014, operative from January 2017, requires some expansion of the additional information to be provided by public interest entities employing on average 500 employees over the financial year, but it will not bring any novel departures from the existing categories of additional disclosure. At the time of writing the government is consulting on the potentially significant move of confining all the additional elements of SR reporting to companies with this number of employees.[191]

None of these provisions requires disclosure of impending developments or matters in the course of negotiation if, in the directors' opinion, disclosure would be seriously prejudicial to the interests of the company.[192] Matters of strategic significance which are required by regulation to be included in the DR may be included instead, at the directors' choice, in the SR, a move likely to make discussion of strategic issues more coherent.[193]

Verification of narrative reports

21–26

There is a risk that narrative reporting requirements will produce only self-serving and vacuous descriptions rather than analytical material which is of genuine use to those who read the report. There are two traditional ways of dealing with this issue in relation to financial statements: audit and accounting standards.

The risk with applying audit to the DR and SR is that it will take away from the desirability of those reports constituting the directors' view of the business rather than that of its auditors. Consequently, the Act formerly restricted the audit requirement for the DR and SR to certification that the reports were consistent with the accounts (which are required to be audited). Under the current version of the Act[194] the auditor must state in addition whether he has identified material misstatements in the SR or DR (and describe their nature) in the light of the knowledge of the company acquired in the course of the audit.

The auditor must also state whether the SR and DR have been prepared in accordance with "applicable legal requirements". This phrase obviously covers statutory provisions but it also raises the question whether there are professional standards for these reports just as there are for the financial statements. The OFR Regulations in fact contained the familiar requirement from the accounts provisions that the Review must state whether it had been prepared in accordance with the relevant reporting standard and give reasons for any departure[195]; and a "reporting standard" was defined, as with an accounting standard, as a "statement of standard reporting practice" relating to OFRs and issued by a body authorised by the Secretary of State, i.e. (then) the Accounting Standards Board.[196] The ASB duly produced its reporting standard (RS 1) in May 2005. However, the Business Review provisions contained no statutory underpinning for reporting standards and so the ASB turned RS 1 into Reporting Statement of best practice, changing its language so as to reflect its new voluntary status, and that situation has continued with the SR.[197]

Liability for misstatements in narrative reports

21–27

An alternative approach to verification is to impose liability ex post for misstatements in narrative reports. There are two areas of potential negligence liability to be considered. First, there is liability on the part of the directors to the company under what is now s.174 of the Act. Secondly, there is liability on the part of the directors or the company (and conceivably others) to third parties, including investors in the market, under the general law

on misstatements, whether negligent or fraudulent. However, the extension of narrative reporting prompted reforms, now to be found in s.463, whose aim is not to strengthen the ex post liability regime but to circumscribe it. The case for providing a "safe harbour" in relation to directors' forward-looking statements is that no one can predict the future with certainty and if directors were to be exposed to litigation, or the threat of it, whenever their forward-looking statements turned out to be untrue, they would be very cautious in the statements they made This caution might undermine the value of narrative reporting to its users.[198]

Section 463, in fact, goes well beyond forward-looking statements, apparently on the grounds that it would be difficult to distinguish them from other types of statement. The section applies to the entire content of the three narrative reports: DR, SR and the directors' remuneration report.[199] The effect of s.463 is to exclude directors' liability in negligence to the company entirely. The director is so liable in respect of untrue or misleading statements in the reports or omissions from them only if the director has been fraudulent.[200] Fraud is defined in the way it is in the common law of deceit: the maker of the statement must know it is untrue or misleading or be reckless as to whether this is the case.[201] Thus, a genuine belief in the truth of the statement, no matter how unreasonable, will save the director from liability.

21–28

If the directors' liability to the company is preserved in the case of fraud, their liability to other persons is excluded entirely, even in the case of fraud.[202] Moreover, the liability which is excluded is the liability of "any person", not just of the directors, provided it is not a liability to the company. Thus, investors (including existing shareholders) cannot impose liability on the company in respect of unsuccessful investment decisions which are based on inaccurate information in the narrative reports. It is in fact very unclear whether, even without the section, liability in negligence towards investors on the part of the company or the directors would exist under the general law. The issue has been tested at the highest levels only in respect of auditors, where, as we shall see, the starting point of the courts is one of non-liability.[203] The

exclusion of liability towards third parties in the case of fraud in narrative reports is more questionable, since the common law does impose liability in principle for fraud and it is unclear why fraud should be condoned. In fact, however, the exclusion of liability to third parties is qualified by the provisions of s.90A of and Sch.10A to FSMA 2000, applying to companies with securities traded on a regulated market, which imposes liability in fraud on the company in relation to certain statements made to the market (which might include the narrative reports).[204]

Section 463 excludes the third-party liability of "any person", but it is not clear who might be liable beyond the directors and the company in respect of errors in the narrative reports. A number of professionals may be consulted and have a hand in the compilation of the reports but they are not normally identified in those reports as responsible for particular parts of it and thus as having particular statements attributed to them, since the reports are the reports of the directors. However, if this did occur, s.463 would protect these persons (other than in respect of their liability to the company). The auditors are required to report on the narrative reports to some extent, as we have seen, but the auditor's report is a separate document and so would not be covered by s.463.

Approval of the Accounts and Reports by the Directors

21–29

That the narrative reports are the reports of the directors is clear.[205] The accounts as well are the product of the directors: the directors must draw them up,[206] although in this case, because of the role played by the auditors in verifying the accounts and, in practice, in drawing them up, they are often misconceived as the auditors' accounts. With the collapse of the Enron Company and other companies renewed emphasis was placed on the directors' responsibility for the accounts. At EU level the Fourth and Seventh Directives were amended so as to impose on directors a "collective duty" to ensure that the annual financial statements and management report are drawn up in accordance with the Directive or the IAS Regulation.[207] The Government took the view that this requirement was met by the existing domestic provision that the annual accounts and narrative reports must be

approved by the directors and signed on behalf of the board by a director or the secretary.[208] If the directors approve accounts or reports that do not comply with the Act, every director who knows that they do not comply or is reckless as to whether or not they comply and who fails to take reasonable steps to secure compliance or to prevent the accounts being approved is guilty of an offence.[209]

The Member States are also required to ensure that their "laws, regulations and administrative provisions on liability" to the company apply to the directors who breach their collective duty.[210] This provision does not require the Member States to have any particular liability regime in place. In the case of the UK this requirement is met presumably through the general law on directors' duties and, in the case of the narrative reports, by the preservation of the directors' liability in fraud to the company.[211]

The Auditor's Report

21–30

The final document that has to accompany the annual accounts is the auditor's report thereon—assuming the company is one which is required to have its accounts audited or has chosen to do so. This has to be addressed to the company's members[212] and to state whether in the auditors' opinion on a number of matters, notably whether the annual accounts have been properly prepared in accordance with the Act or the IAS Regulation, as appropriate and whether they give a true and fair view of the company's financial position.[213] The rights and duties of the auditor in the preparation of the audit report are considered more fully in the following chapter. The auditors' report must state the names of the auditors and be signed by them.[214] However, those names need not appear on the published copies of the report or on the copy filed with the Registrar (see below) if the company has resolved that the names should not be stated on basis that there are reasonable grounds for thinking that publication would create a serious risk of violence to or intimidation of the auditor or any other person, and has provided that information instead to the Secretary of State.[215]

Despite the requirements for director and auditor approval, noted above, it is not inconceivable that accounts and reports will be produced by the company which are later discovered to be incorrect. Until the passing of the Companies Act 1989 there were no statutory provisions for revising incorrect accounts and reports. However, it has never been doubted that, if directors discover such defects, they can, and should, correct them. Section 454 makes it clear that the directors may revise the accounts and narrative reports on a voluntary basis. Where the accounts have not yet been sent to the Registrar or the members (see below), the directors have a pretty free hand as to revisions, but if either of those events has occurred, as is likely, the corrections must be confined to what is necessary to bring the accounts and reports into line with the requirements of the Act or the IAS Regulation.[216] Regulations made under the section provide that the revised accounts or reports become, as nearly as possible, the reports and accounts of the company for the relevant financial year, to which the other provisions of the Act apply. For example, they will be subject to audit.[217]

More significant are the statutory powers to compel revision of defective accounts. The Secretary of State has power to apply to the court for a declaration that the accounts or the DR or SR (but not, it seems, the remuneration report) do not comply with the Act or the IAS Regulation and for an order that they be brought into line, with consequential directions.[218] The court may order the costs of the application and of the production of the revised accounts to be borne by the directors in place at the time of the approval of the accounts or report, unless a director can show that he or she took all reasonable steps to prevent approval, though the court also has power to exclude from liability a director who did not know and ought not to have known of the defects.[219] Notice of the application and of its result must be given to the Registrar.[220]

However, in practice this is not an activity the Secretary of State undertakes. There is power under s.457 for authorisation to make applications to the court to be conferred upon persons

appearing to the Secretary of State "to have an interest in, and to have satisfactory procedures directed to securing, compliance by companies" with the Act and the IAS Regulation and "to have satisfactory procedures for receiving and investigating complaints" about annual accounts and the DR and SR and otherwise to be "fit and proper". Such authorisation is now conferred on the Conduct Committee of the Financial Reporting Council ("FRC").[221] In practice, the task of dealing with defective reports is discharged by the Conduct Committee, rather than by the Department, except in relation to small companies.[222] The Committee has statutory authority to require the production of documents, information and explanations if it thinks there is a question-mark over the compliance of a company's accounts or reports with the Act or IAS Regulation.[223] It must keep the information received confidential, except for disclosure to a list of approved recipients (relevant Government Departments and Regulators).[224]

21–32

The FRRP, predecessor of the Conduct Committee, was criticised for being reactive, i.e. acting only on complaints or media revelations that a particular set of accounts was defective rather than checking or investigating of its own motion. Partly because of EU pressure to produce equivalent mechanisms in the Member States for the enforcement of international accounting standards, the FRRP agreed in 2002 to adopt a proactive review policy,[225] though it did not have to resort to a court order to secure the necessary changes, a threat of an application being enough. In 2014/15 the Conduct Committee reviewed the reports of some 252 companies, sent letters raising queries to 76, and in nine cases there was a restatement of the numbers in the accounts or a significant change in disclosure policy.[226]

With regard to companies with securities traded on a regulated market, the obligation to secure compliance with the periodic reporting requirements of such companies (which include but extend beyond the annual reports and accounts)[227] is allocated by EU law to the Financial Conduct Authority ("FCA"), but the relevant Directive permits the FCA to delegate the tasks conferred upon it.[228] Accordingly, the Conduct Committee has been authorised[229] by the Secretary of State to keep under review

not only the accounts and reports required by the Act but also those required under the provisions of the Transparency Directive to be produced by companies whose securities are traded on regulated markets. In this case, there is an obvious need for close liaison with the FCA.[230] The Conduct Committee is under a duty to report its findings to the FCA in appropriate cases and the FCA may expand the Conduct Committee's remit.[231]

Filing Accounts and Reports with the Registrar

21–33

The statutory requirement to produce accounts and reports would be of little use if there were no provisions for the information so generated to reach the hands of those who might make use of it. This is done in two ways under the Act: circulation to the members (discussed below) and delivery of the accounts to the Registrar.[232] By delivery to the Registrar, the accounts and reports become public documents.

Speed of filing

21–34

A source of complaint in the past has been the length of the gap between the end of the financial year and the date laid down for filing the accounts and reports with the Registrar. The CLR thought that modern technology permitted speedier filing than had been required in the past and recommended that the period be reduced from seven to six months for public companies and ten to seven for private companies.[233] Section 442 implements the former reform but only marginally reduces the private company period (to nine months), which is a pity.[234] For public companies whose securities are traded on a regulated market[235] the period for publication of the annual accounts and reports is four months from the end of the financial year,[236] though the core elements in the accounts may have been made available earlier through a preliminary public announcement of the results.

A linked source of complaint has been non-compliance with the filing time-limits, though the UK's record in this area is superior to that of some Member States of the EU. The formal

sanctions are criminal liabilities on the directors and civil penalties on the company. If the filing requirements are not complied with on time, any person who was a director immediately before the end of the time allowed is liable to a fine and, for continued contravention, to a daily default fine, unless the director can prove that he took all reasonable steps for securing that the accounts were delivered in time.[237] Furthermore, if the directors fail to make good the default within 14 days after the service of a notice requiring compliance, the court, on the application of the Registrar or any member or creditor of the company, may make an order directing the directors or any of them to make good the default within such time as may be specified and may order them to pay the costs of and incidental to the application.[238]

To these criminal sanctions against directors, the Act adds civil penalties against the company.[239] The amount of the penalty, recoverable by the Registrar, varies according to whether the company is private or public and to the length of time that the default continues; the minimum being £150 for a private company and £750 for a public company when the default is for not more than one month, and the maximum £1,500 for a private and £7,500 for a public company when the default exceeds six months.[240] There are obvious attractions in affording the Registrar an additional weapon in the form of a penalty recoverable by civil suit to which there is no defence once it is shown that accounts have not been delivered on time. Presumably, the thought is that civil sanctions on the company will put pressure on shareholders to intervene and secure compliance on the part of the directors, but it is not clear how effective this mechanism is. It may be that the shareholders simply lose dividends as well as suffer from a failure on the part of the directors to perform a duty intended to protect them.[241] In 2014/15 the compliance rate was nearly 99 per cent across the UK but nevertheless some 2,100 convictions for failure to file accounts were obtained and late filing penalty worth over £81 million were issued (mainly in relation to private companies), but it is not clear how much was collected.[242]

Modifications of the full filing requirements

21–35

Filing with the Registrar is such a sensitive issue precisely because the information in the accounts and reports thus becomes publicly available. The Act itself makes some concessions to the fear of publicity in the case of small, medium-sized and unlimited companies, by way of derogations from the full filing regime. The full regime requires filing of the annual accounts, the directors' report, the strategic report and (in the case of a quoted company) the directors' remuneration report and conceivably a corporate governance statement, and the auditor's report on those accounts and reports (assuming the company is subject to audit).[243] If the company has been required to produce group accounts, then the full regime applies to both the group and individual accounts.[244] The balance sheet must contain the name of the person who signed it on behalf of the board.[245] As we have noted along the way, some categories of company are not required to produce the full range of these accounts and reports, especially small and micro companies. Naturally, they are not required to file a document they are not required to produce. The issue here is whether directors are required to give publicity to, i.e. file or file in full, a document they are required to produce for their shareholders.

21–36

Unlimited companies are in principle exempt from filing any accounts and reports, provided the unlimited company is not part of a group containing limited companies and is not a banking or insurance company.[246] This is a good example of the link between limited liability and public financial disclosure, i.e. the latter is dispensed with if the former is not present.[247] Of course, the unlimited liability company still has to produce and circulate accounts to the members, who have perhaps an even bigger interest in the proper running of the company if their liability is unlimited.

Small companies (and thus also micro companies) subject to the small company regime are required to produce only individual accounts and, in addition, they may choose to file only a balance sheet and not the profit and loss account and directors' report though they may make more publicly available,

if they wish.[248] Until recently, there was a further relaxation for small companies in that the filed copy of the balance sheet (and the filed copy of the profit and loss account, if one was filed at all) were permitted to be less detailed than the accounts made available to the members, at least where the company produces Companies Act accounts. These were the so-called "abbreviated" accounts.[249] However, in 2015 changes were made which withdrew this facility.[250] The CLR would have required small companies to file both balance sheet and profit and loss account as prepared for the members. It took the view that the filed accounts of small companies were "not meaningful".[251] The general conclusion that little insight into the financial position of a company subject to the small company regime will normally be obtained from consulting its filed accounts probably remains true, given that the option not to file a profit and loss account is still available.

Other information available from the Registrar

21–37

The annual accounts and reports are probably the most important documents filed with the Registrar[252] and thus made public, because they give reasonably current (though by no means completely up-to-date) information about the company's financial position.[253] However, the accounts and reports do not constitute the whole of the information about the company which is publicly available from the Registrar, as we see at various points in this work. The next most important document thus made available is probably the company's constitution, mainly its articles of association.[254] After that is the list of the company's directors, which must be updated as changes occur.[255] Amongst the other information available through the Registrar are the list of those with significant economic interests in the company,[256] the address of its registered office,[257] the amount of its issued share capital[258] and details of charges on its property.[259]

"Any person" has the right to inspect the register maintained by the Registrar, subject to certain limited limitations imposed in the interests of privacy.[260] There is also a right to obtain a copy of material on the register, subject to a fee,[261] and a copy duly certified by the Registrar is evidence in legal proceedings of

equal validity to the original.[262] The applicant has the choice in relation to the most central items of information to make the request for inspection or copy electronically or in hard copy, and to receive the information in either way.[263]

Confirmation statement

21–38

This document used to be called the "annual return" until the current term was substituted by the Small Business, Enterprise and Employment Act 2015. As the former name suggested, the confirmation statement is produced each year by the company. It is delivered to the Registrar by the company,[264] but, unlike the accounts and reports considered above, it is not a document sent to the members. The Registrar is the principal addressee of the annual return[265] (though, of course, any member may access it under the provisions discussed in the previous paragraph). Nevertheless it is convenient to consider it here. Moreover, it is a document required to be submitted by every company, whatever its obligations as to accounts and reports.

The 2015 Act reduced the significance of the previous annual return, which was already a rather historical document. The annual return collated much information that should have been, and probably had been, delivered to the Registrar when the relevant transactions occurred, so that an enquirer might find it unnecessary to search back beyond the latest annual return on the file. Since the annual return was often reduplicative of information already provided, the advantage to the company of the confirmation statement is that it simply requires the company to confirm to the Registrar that the information which the company is under a duty to supply to the Registrar has already been provided or is being provided along with the confirmation statement. In the first case, the statement will be a bare confirmation statement. Since we have noted at the appropriate points in the book when information must be supplied by the company to the Registrar, such as the statement of capital or the statement of persons with significant control, we need not rehearse those matters again here. With the 2015 reform, the confirmation statement ceases to be a significant piece of disclosure by the company and its main function is to jog the

corporate memory about its filing obligations. Despite the criminal sanctions[266] for non-compliance with the obligation to provide a confirmation statement and provision by the Registrar of electronic means for submitting it, companies are not always prompt in complying with this obligation. In fact, failure to file the annual return (or, in future, the confirmation statement) often alerts the Registrar to more fundamental issues with the company and may lead to the taking of steps which culminate in the company's removal from the register.

Other forms of publicity for the accounts and reports

21–39

Although filing with the Registrar is the only form of publicity for the annual accounts and reports mandated for all companies by the Act, in fact large companies often, and other companies sometimes, make their annual statements available more generally; and quoted companies are now required to provide website publication.[267] Where a company chooses to make its annual statements available in a way which is calculated to invite members of the public generally, or a class of them, to read it, then the Act requires the name of the person who signed the balance sheet or the narrative reports on behalf of the company to be stated.[268] If a company publishes its accounts in this way, they must be accompanied by the auditor's report (if there is one) and a company preparing group accounts cannot publish only its individual accounts.[269] In short, a non-quoted company is not required to publish its annual accounts other than via the Registrar, but if it does so, it must do so in full.

The accounts described above are known as the company's "statutory accounts". A company is not prohibited from publishing other accounts dealing with the relevant financial year, thought this is in fact rare. If the company does so, it must include with them a statement that these accounts are not the statutory accounts and disclose whether the statutory accounts have been filed and whether the auditors have reported on them and, if so, whether the auditors' report was qualified. Nor may an auditors' report on the statutory accounts be published with the non-statutory accounts.[270] If the company is listed on a

regulated market in the EU, it will be required by the Transparency Directive[271] to produce a set of (less elaborate) accounts and a management report six months into the financial year, as well as annual ones, though such accounts do not fall into the category of "non-statutory accounts" because they do not cover an entire financial year.

Consideration of the Accounts and Reports by the Members

Circulation to the members

21–40

Since the accounts and reports are communications from the directors to the members, it is not surprising that the Act requires their circulation to the members.[272] However, not only the members but also the company's debenture-holders (i.e. its long-term lenders holding the company's debt securities)[273] must receive copies, since their chances of being repaid depend upon the financial health of the company. Thirdly, so must anyone who is entitled to receive notice of general meetings of the company be sent the accounts and reports, a category which includes the directors themselves (hardly a necessary requirement) and anyone else entitled to notice under the particular company's articles.[274] This obligation arises only if the company has a current address for the person in question.[275] Finally, those nominated to enjoy information rights will receive copies of the accounts and reports.[276] Just to make sure, the Act also provides that shareholders and debenture-holders can at any time demand copies of the most recent annual accounts and reports and the company must comply with the request within seven days.[277]

Circulation of the Strategic Report only

21–41

There are two linked problems with the circulation requirements. First, the full accounts and reports may be grist to the mills of the analysts, but lots of individual shareholders find the full set more daunting than useful. Secondly, the circulation requirement is an expensive one for the company to meet.[278] Both these

concerns are addressed by the provisions which allow companies to circulate something less than the full accounts and reports. Initially, that something less was a "summary financial statement", but with the introduction of the strategic report,[279] that document became the substitute.

This facility was previously available only to companies whose securities were traded on certain public markets, but now it is in principle open to all companies.[280] Moreover, the burden is on the recipient to ask to continue to receive the full accounts and report. If, after being sent an appropriate notice from the company, the recipient does not respond with a contrary statement within 28 days, he or she will be deemed to have opted for the summary, though that "choice" can be reversed at any time.[281] The provisions are, however, default rules, in the sense that the company in its constitution or the instrument creating the debentures may deprive itself of this facility. The right to make use of the summary is also dependent on the company observing the relevant provisions of the Act relating to the audit, filing and approval of the full accounts and reports.[282] The SR must be accompanied by a warning that it is only part of the annual accounts and reports; informing the reader how to obtain full copies; stating whether any of the required auditor certifications was qualified; and containing one (clearly important) figure from outside the strategic report, i.e. the "single total remuneration" figure from the directors' remuneration report in the case of quoted companies.[283]

An alternative, or additional, way, of addressing circulation costs is to encourage members to receive communications (whether full accounts and reports or only the SR) from the company in electronic form or via the company's website. This has been discussed in Ch.15.[284] A quoted company is in any event required to put its current annual accounts and reports on its website and to maintain it there throughout the following financial year.[285]

Laying the accounts and reports before the members

21–42

Circulating the accounts and reports to the members and others allows them to consider them on an individual basis, but such consideration is not likely to lead to significant action in the case of companies with larger bodies of shareholders, unless there is some facility for collective consideration of the accounts and reports. As far as private companies are concerned, there is no longer any statutory requirement for such collective consideration, no matter how large a shareholding body that company may have. A private company is required by the statute to circulate its annual accounts and reports at the time it delivers them to the Registrar,[286] and any further action is a matter for the shareholders or the company's articles. The shareholders might seek to convene a meeting[287] or the articles might require annual consideration of the accounts and reports at a meeting, which the directors would be obliged to convene.

As far as public companies are concerned, the traditional obligation "to lay the accounts and reports before a general meeting" still applies.[288] This formulation implies that the shareholders are not required to consider a resolution to approve the accounts and reports (as is the case in many countries), but they must be afforded an opportunity to discuss them. Indeed, this item on the agenda is normally used to allow a wide-ranging discussion of the company's business.[289] The meeting at which the accounts and reports are considered is termed the "accounts meeting"[290] and it is in fact normally the company's annual general meeting. The accounts and reports must be circulated at least 21 days before the accounts meeting and the accounts meeting itself must be held not later than the end of the period for the filing of the accounts and reports with the Registrar, i.e. six months after the end of the financial year in the case of a public company. As we noted in Ch.15,[291] the Government backed away from the CLR's proposal that, after circulation, there should be a pause of two weeks, during which shareholders could formulate, if they wished, resolutions on the accounts and reports to be considered at the meeting.

Conclusion

21–43

Part 15 of the Act, dealing with the annual accounts and reports,

constitutes a substantial part of the Companies Act 2006, long though that Act is. Part 15 contains nearly 100 sections, and this is an indication of the central role played by annual reporting in the structure of the companies legislation. Excessive though the detail of the Act, subordinate legislation and accounting standards is to anyone not an accountant, an understanding of the central principles of the annual reporting process is central to understanding the philosophy of company law.

The developments in this part of company law reflect very well a broader trend in the subject towards greater refinement of the applicable rules according to the economic importance of different types of company. This classification proceeds broadly by reference to direct indicators of economic size (turnover, balance sheet total and number of employees) or by reference to the divorce between ownership and control (i.e. whether the shares are publicly traded) though this indicator is also correlated with economic size. For the largest publicly traded companies,[292] not only is financial reporting increasingly demanding, as International Financial Reporting Standards expand their scope, but so are the demands of narrative reporting. This expansion of reporting requirements is driven substantially by investor demand but also in part by a governmental desire to encourage investors (and in some cases pressure-groups) to engage with the management of their investee companies, even beyond what they might themselves do, if left to their own devices. At the other end of the scale, micro companies have obtained a further relaxation of the relaxed rules which apply to small companies. In between, medium-sized companies benefit from some relaxations whilst large, but not publicly traded, companies are subject to broadly the same reporting regime as publicly traded companies, but have to cover less in their strategic report.

[7] Notably the Fourth Council Directive on the Annual Accounts of Certain Types of Companies, Directive 78/660/EEC ([1978] O.J. L222/110), as amended (hereafter "Fourth Directive") and the Seventh Council Directive on Consolidated Accounts, Directive 83/349/EEC ([1983] OJ L193/1), as amended (hereafter "Seventh Directive") —both repealed by the 2013 Directive.

[8] Regulation (EC) No.1606/2002 on the Application of International Accounting Standards ([2002] O.J. L243/1) (hereafter "IAS Regulation").

[9] Directive 2003/51/EC ([2003] O.J. L178/16) (hereafter the "accounts modernisation directive"), which amended the Fourth and Seventh Directives.

[10] Directive 2013/34/EU [2013] O.J. L182/19.

[11] As it was by Directive 2014/95/EU ([2014] O.J. L330/1) on the disclosure of non-financial information.

[12] See para.1–8.

[13] 2006 Act ss.384(1)(a) and 384B(1)(a).

[14] Small Business Enterprise and Employment Act 2015 ss.33 and 34 envisage the use of the micro and small business definitions in subordinate legislation to relieve these categories of regulatory duties beyond the accounting area. If and when such regulations are made, the domestic definitions might shift from the Act to these regulations, but the controlling definitions would still be in the Directive.

[15] 2006 Act s.306(5) of the Act: "The balance sheet total means the aggregate of the amounts shown as assets in the company's balance sheet", implementing art.3(11) of the Directive.

[16] "'net turnover' means the amounts derived from the sale of products and the provision of services after deducting sales rebates and value added tax and other taxes directly linked to turnover" (Directive art.2; Act s.474(1)). The Directive (art.3(12)) allows Member States to add other items of income to the net turnover but the UK has chosen not to do so.

[17] Employed means only those employed under a contract of service (s.306(6)).

[18] Other than charities and financial companies which are excluded from the micro regime: s.384B.

[19] 2006 Act s.384A. The slightly odd amounts result from the translation into pounds of the more rounded figures set out in art.3 of the Directive, i.e. €350,000 and €700,000 respectively. The Member State not using the euro can adjust the figure upwards or downwards by 5 per cent when translating into their own currencies. The UK government chose to increase the number resulting from a strict application of the exchange rate, i.e. so as to increase the number of companies covered.

[20] 2006 Act s.384B(2). On group accounts see below para.21–9.

[21] 2006 Act s.384A(3). By way of qualification to this, in its first year of operation the company's status is determined by whether it meets the criteria at the end of that year (s.384A(2)), so that a small start-up does not have to wait for a second year to benefit.

[22] Directive 2012/6/EU [2012] O.J. L81/3, whose provisions are now incorporated into the 2013 Directive.

Implement The "Micros Directive": Government Response, September 2013 (BIS/13/1124).

[24] 2006 Act s.382.

[25] 2006 Act s.382(2).

[26] BIS, *UK implementation of the EU Accounting Directive: Chapters 1-9: Impact Assessment*, 2014 (BIS/14/1055).

[27] 2006 Act s.384(1). The definition of ineligibility for groups includes a somewhat wider range of financial companies (s.384(2)).

[28] 2006 Act s.465(3).

[29] 2006 Act s.467(1).

[30] Developing, para.8.35.

[31] Directive art.3.

[32] Directive 2013/34/EU art.2. For the meaning of a "regulated" market see para.25–8. In the UK the principal such market is the Main Market of the London Stock Exchange, but a company will be a PIE if it is traded on such a market anywhere in the EU.

[33] 2006 Act s.474(1).

[34] This is achieved by excluding "traded companies" from medium-sized status (s.467(2)(a)). Since public companies may not be small or micro companies (above, para.21–2) and private companies may not offer their securities to the public, explicit exclusion from only medium-sized status is necessary.

[35] Such a preliminary statement used to be obligatory for listed companies, but ceased to be so in January 2007, in the light of the implementation of the Transparency Directive, though companies continue to make such announcements and the Listing Rules regulate the form they must take, if made. See LR 9.7A.1 and Ch.26, below.

[36] 2006 Act ss.386–389.

[37] 2006 Act s.386(3) adds certain specific requirements the records must meet, but, except for unsophisticated businesses, the general standards are likely to be more important.

[38] e.g. because it is a foreign subsidiary or a partnership.

[39] 2006 Act s.386(5).

[40] Punishable by fine or imprisonment or both: s.387(3).

[41] 2006 Act s.387(2).

[42] 2006 Act s.498(2). Failure to keep adequate accounting records could also form the basis of a disqualification of a director under the general heading of unfitness (*Re Galeforce Pleating Co Ltd* [1999] 2 B.C.L.C. 705).

[43] For this reason, accountants may not exercise a lien for unpaid fees over such documents: *DTC (CNC) Ltd v Gary Sargeant & Co* [1996] 1 B.C.L.C. 529. Of course, other persons may also have the right of access to the records, for example, the company's auditors: s.499.

[44] e.g. because the company has a branch outside Great Britain.

[45] 2006 Act s.388(2),(3). The six-monthly requirement seems remarkably lax in the light of both modern management practice and modern electronic technology.

[46] 2006 Act s.388(4). An officer of the company is liable to imprisonment or a fine or both if he fails to take all reasonable steps to secure compliance with the preservation requirement or intentionally causes any default: s.389(4). If there has been villainy, destroying all record of it is all too likely.

[47] 2006 Act s.391(4). For companies in Northern Ireland the relevant date is 22 August 1997. For methods of determining the ARD for earlier incorporations see s.391(2),(3).

[48] 2006 Act s.292. This section applies no matter when the company was incorporated.

[49] Indeed, in this particular situation, in order to promote the production of group accounts, the directors of the parent company are under a presumptive duty to ensure that the financial years of subsidiaries coincide with that of the parent: s.390(5).

[50] 2006 Act s.392(2).

[51] 2006 Act s.392(5), unless an administration order is in force in relation to the company, presumably because the administrator, who is responsible to the court, can be trusted in a way the directors cannot.

[52] 2006 Act s.392(3), unless an administration order is in force (see previous note) or the step is taken to make the ARD coincide with that of an EEA undertaking which is the company's parent or subsidiary company, or the Secretary of State permits it.

[53] 2006 Act s.390(2),(3).

[54] The exception for dormant subsidiaries is discussed in para.21–10.

[55] 2006 Act s.404(1).

[56] 2006 Act s.383(1).

[57] 2006 Act s.383(4)–(7). The choice is available separately in relation to each of the turnover and balance sheet tests: s.383(6).

[58] 2006 Act ss.399(2A) and 384(2)(a). For the meaning of a "traded company" see para.21–6, above. The other accounting advantages of being a "small" company continue to be unavailable to "small" public companies.

[59] 2006 Act s.384B(2).

[60] 2006 Act s.466.

[61] 2006 Act s.399(2)—"as well as producing individual accounts". Section 408 permits certain relaxations for the individual accounts of a company which produces group accounts, notably that the company's individual profit and loss account need not be circulated to the shareholders or filed with the Registrar, if notes to the group accounts show the profit and loss of the company for the financial year.

[62] 2006 Act s.394—"the directors of every company".

[63] 2006 Act s.407. However, this section does not apply if the parent uses IAS for both the consolidated and its individual accounts. For the meaning of "financial reporting framework" see para.21–13.

[64] 2006 Act ss.394A–C. Even so, the usual financial companies cannot take advantage of the exemption nor may a dormant subsidiary which at any time in the relevant

financial year has been a traded company (see para.21–6, above). All this may seem rather elaborate for exempting a company from producing individual accounts when, by definition (see s.1169), it has engaged in no significant accounting transactions during the financial year. At times the authorities have considered a wider policy of exempting subsidiaries generally from producing individual accounts in exchange for a parent company guarantee. However, the policy has always failed on the basis that it would reduce the amount of information available about the activities of potentially economically important subsidiaries.

[65] Nevertheless, it is crucial to remember that dividends are paid on the basis of only individual accounts alone. If the profits of a subsidiary are paid directly to the shareholders of the parent, all sorts of legal problems arise. See Ch.12, fn.24.

[66] 2006 Act s.1161(1).

[67] 2006 Act s.399(2).

[68] 2006 Act s.1162(2)(a).

[69] 2006 Act s.1162(2)(b). Membership includes “indirect” membership, i.e. where a subsidiary of the parent is a member of the undertaking in question: s.1162(3).

[70] 2006 Act s.1162(2)(c) and Sch.7 para.4. This situation of “contractual subordination” is probably never found in the UK, though it is provided for in Germany, where, however, it is rarely found in practice. See paras 9–21 et seq. There would be great difficulties with the legality of such a contract under the law of the UK.

[71] 2006 Act s.1162(4). This is a reference to actual domination and the qualifications needed to establish contractual domination do not apply here: Sch.7 para.4(3).

[72] This brings in shareholder agreements which are an established way of exercising control over companies in some continental European jurisdictions, but note that the effect of the agreement must be to give the alleged parent sole control.

[73] 2006 Act s.1162(5). For this reason it is important that the section refers to parent undertakings, since the immediate parent of the indirect subsidiary might not itself be a company.

[74] See, for example, paras 4–6 of Sch.4 to the Large and Medium-Sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410, as amended) requiring a company’s individual accounts to give certain information about companies in which the reporting company has a “significant holding”—defined as 20 per cent or more of any class of shares in the other company. Similar rules apply to group accounts (para.20–22) with more detail being required in the cases where the “significant holding” makes the other company an “associated” undertaking or a joint venture with the reporting company (paras 18–19).

[75] 2006 Act ss.400(1)(a) and 401(1)(a).

[76] 2006 Act ss.400(1)(b) and 401(1)(b).

[77] It does not matter whether the allotted shares carry voting rights or not, but unless the “parent” undertaking controls 50 per cent of the voting rights, it will not be under an obligation to produce consolidated accounts in any event. See below. In effect, the requirement to hold 50 per cent of the allotted share capital means that the parent company, which passes the 50 per cent figure by holding weighted voting rights in the subsidiary, will have access to the exemption only if the parent also holds non-voting shares in sufficient quantities.

[78] 2006 Act ss.400(1)(c) and 401(1)(c).

[79] See para.21–6, above.

[80] Of course, those investors may also be strongly interested in the traded company's relations with its parent, for fear that the parent may seek to take a disproportionate share of the company's earnings. But that is a different issue.

[81] 2006 Act ss.400(2)(a)–(b), 401(2)(a)–(c). The requirement for audit is stated expressly in relation only to non-EEA parent companies, but in the case of EEA companies this requirement follows from the provisions of the Audit Directive (see Ch.22, below).

[82] 2006 Act ss.400(2)(c)–(d), 401(2)(d)–(e).This is not necessarily its immediate holding company, since that company, by operation of the same rules, might be exempt from the need to produce consolidated accounts. Thus, where there is a chain of three wholly-owned subsidiaries, only the top company will normally have to produce consolidated accounts.

[83] 2006 Act ss.400(2)(e)–(f), 401(2)(f)–(g).

[84] 2006 Act s.405.

[85] 2006 Act s.402.

[86] See fn.7, above.

[87] 2006 Act s.395. A company which is a charity must provide Companies Act individual and group accounts: ss.395(2) and 403(3).

[88] See para.21–6. By virtue of s.407 (above, fn.63) there is some pressure to use IAS for the individual accounts of group companies as well.

[89] IAS Regulation art.4. Since the Regulation is directly applicable in the Member States, the provisions of art.4 are not reproduced in the Act, though s.403(1) refers to the EU obligation. In fact, IAS accounts are mandatory on a wider basis than the Regulation suggests because the London Stock Exchange requires EEA-incorporated companies traded on the Alternative Investment Market to use them as well: LSE, *Aim Rules for Companies*, 2014, r.19.

[90] IAS Regulation art.5.

[91] 2006 Act s.403.

[92] 2006 Act ss.395(3)–(4B) and 403(4)–(5B). The changes identified in the Act, and they are apparently exclusive, are becoming a subsidiary of a company which does not prepare IAS accounts and the company or its parent ceasing to have securities traded on a regulated market: ss.395(4) and 403(5). Until 2012 the company always had to show a relevant change of circumstance in order to revert to Company Act accounts.

[93] 2006 Act ss.395(5) and 403(6).

[94] 2006 Act s.393(1).

[95] 2006 Act s.393(1). The strength of UK commitment to this principle is demonstrated by the modifications to it which were thought necessary when micro companies were relieved of compliance with many standards. See para.21–17.

[96] 2013 Directive art.4(3) and, for Companies Act accounts, ss.396(4) and 404(4) (for individual and group accounts respectively).

[97] 2013 Directive art.4(4) and ss.396(5) and 404(5).

[98] 2006 Act s.393(1) applies but not ss.396 and 405.

[99] If this is not the case, then there is a flat contradiction between the requirements of s.393 and art.4 of the Directive, on the one hand, and the obligations of companies under the IAS accounting framework. Furthermore, the Commission is to endorse an IAS for use in the EU only if it considers it will result in a true and fair view (Regulation, Recital 9). The FRC strongly argues that "true and fair" remains fully applicable to IAS accounts: FRC, *True and Fair*, June 2014.

[100] See International Accounting Standard 1 and Financial Reporting Standard 18.

[101] For the definition of these terms see para.25–6 and 25–9.

[102] LR 9.8.6(3).

[103] FRC, *Guidance on Risk Management, Internal Control and Related Financial and Business Reporting*, September 2014.

[104] 2006 Act s.396. See the similar s.404(1) for group accounts.

[105] Theoretical because what the shareholders will actually receive is what a buyer of the business is willing to pay for it.

[106] We saw at para.9–6 that this situation may induce directors responsive to shareholder interests to embark on projects with a low chance of a high return and high chance of making a loss.

[107] SI 2008/409 (hereafter the "Large Accounts Regulations"). They were previously in Schedules to the 1985 Act.

[108] SI 2008/410 (hereafter the "Small Accounts Regulations").

[109] Schedule 6 makes some additional provisions in relation to group accounts.

[110] Regulations Sch.1 para.2.

[111] Regulations Sch.1 para.10.

[112] See Sch.1 Pt 2 ss.C and D. The introduction of "fair value accounting" into the Fourth and Seventh Directives was effected by Directive 2003/53/EC ([2003] O.J. L178) as a direct result of the adoption by the EU of the IAS for companies on regulated markets, where this approach was required. See now art.8 of the 2013 Directive. In this way, IAS have expanded as well the scope of action of purely domestic standard-setters.

[113] In that year the Institute of Chartered Accountants in England and Wales began to issue Recommendations on Accounting Principles.

[114] See para.21–14, above.

[115] Ibid. The implementing domestic provision is s.396(2A).

[116] 2006 Act s.393(1A).

[117] *Lloyd Cheyham & Co v Littlejohn & Co* [1987] B.C.L.C. 303; but cf. *Bolitho v City and Hackney Health Authority* [1998] A.C. 232 HL (court not bound by professional standards where "in a rare case" it is convinced they are not reasonable or responsible).

[118] Large Accounts Regulations Sch.1 para.45. Medium-sized companies are exempt from this obligation (see reg.4(2A)) and the Small Accounts Regulations 2008 do not

contain a impose a similar rule.

[119] For its use in relation to the Corporate Governance Code, which was developed only in the 1990s, see above at para.14–69.

[120] Now s.464 of the 2006 Act. The current arrangements are set out in the Statutory Auditors (Amendment of Companies Act 2006 and Delegation of Functions etc) Order 2012/1741. Previously, the delegation was directly to an Accounting Standards Board which was a subsidiary of the FRC.

[121] See FRC, *Plan and Budget and Levies 2015/16*, March 2015. Section 17 of the Companies (Audit, Investigation and Community Enterprise) Act 2004 gives the Secretary of State the power to make the levy binding, but currently the levy is paid on a "voluntary" basis.

[122] Above, fn.8.

[123] IAS Regulation art.2.

[124] Thus, in the current Directive art.13(2) permits the use of a "statement of performance", as required by IAS, rather than a profit and loss account, whilst art.8(6) permits derogations from the Directive's fair value rules in order to facilitate compliance with IAS.

[125] Both Large (regs 3 and 9) and Small (regs 3 and 8) Accounts Regulations exempt companies from the operation of their Schs 1 (individual accounts) and 6 (group accounts) if they use IAS. Of course, a small company need not produce group accounts at all (see para.21–9) but may choose to do so.

[126] Companies using IAS shall produce their accounts "in conformity with the international accounting standards": Regulation arts 4 and 5.

[127] Currently termed the IFRS Foundation.

[128] The role of the Monitoring Board is described at: *http://www.iasplus.com/en/resources/ifrsf/governance/monitoring-board* [Accessed 27 April 2016].

[129] IAS Regulation arts 3 and 6.

[130] IAS Regulation art.3(2).

[131] See para.21–14, above.

[132] Commission Regulation (EC) No.2086/2004. The IASB later amended IAS 39 and one of the carve outs was dropped (Commission Regulation (EC) No.1864/2005), the hedge fund carve out remaining. The economic crisis has continued to keep this issue at the forefront of regulators' attention.

[133] The current state of play on endorsement is given by EFRAG, *The EU endorsement status report*, April 2012.

[134] Among the countries, outside the EU, which allow or require their companies to use IFRS are Australia, India, Japan and South Korea.

[135] The FRC also has a policy of producing convergence with IAS, so that in the end there may be relatively little difference between Companies Act and IAS accounts, though the IASB would be in the lead.

[136] See above, para.21–6

[137] See below, para.21–36.

[138] Small Accounts Regulations Sch.1 Pt 1 para.1A.

[139] The FRC's had previously operated a separate Financial Reporting Standard for Smaller Entities ("FRSSE"). The Directive required a change of approach but not of principle. See FRC, *Accounting Standards for Small Enterprises: Consultation Document*, September 2014 and *Consultation Overview*, February 2015. For the IASB, see *IFRS for SMEs* ("International Financial Reporting Standards for Small and Medium-sized Enterprises").

[140] See BIS, *Simpler Financial Reporting For Micro-Entities: The UK's Proposal To Implement The "Micros Directive": Government Response*, September 2013. The exception was the decision not to take up the option to relieve micro companies from the obligation to use accrual accounting. Cash accounting was thought to be potentially misleading: for example, pre-payments received in year 1 would show up without off-setting costs where the supply of the good or service was not due until year 2 (when the costs would show up without the associated income). The Directive itself prohibits micro companies benefitting from the derogations from using fair value accounting: art.36(3).

[141] 2006 Act s.394B(2)(b); see para.21–3, above.

[142] For the FRC see *Draft FRS 105 The Financial Reporting Standard applicable to the Micro-entities Regime*, discussed in the documents cited in fn.139, above.

[143] Unless it is a micro company, the company may, but is not required to, put them in a separate document annexed to the accounts: s.472.

[144] The Directive makes no derogation for IAS accounts, but in that case the notes requirements may be found in the international standards themselves rather than in domestic law transposing the Directive.

[145] Much of the information required to be disclosed in notes under Pt 3 of Sch.1 to the Large and Small Accounts Regulations 2008 is of this character.

[146] Above, fn.74. This part of the Regulations is made under ss.409 and 410 of the Act and extends to information about subsidiaries as well as about affiliates.

[147] 2006 Act s.410A, introduced in 2008, in the wake of the Enron collapse in the US which was in part brought about by the acquisition of liabilities by Special Purpose Vehicles ("SPVs") connected with Enron but not counting as its subsidiaries.

[148] The option is provided by art.36(1)(b). It is implemented in the UK in the Small Regulations reg.5A. The matters still required to be disclosed in the notes to micro companies' accounts relate to contingent liabilities and capital commitments: Sch.3 para.57.

[149] 2013 Directive art.16(2) and (3).

[150] BIS, *UK Implementation of the EU Accounting Directive*, August 2014 (BIS/14/1025).

[151] For smaller companies such disclosure might give competitors valuable information which could be used to undermine the company's business.

[152] Above, paras 16–54 et seq.

[153] Above, Ch.20.

[154] Small Companies Regulations Sch.1 para.66; Large Companies Regulations Sch.1 para.72. The requirements are applied more stringently to large than medium or small companies. These provisions apply formally only to companies preparing Companies Act accounts, but those preparing IAS accounts are under a similar obligation because of the provisions in IAS 24 (Related Party Disclosures). The two are further tied together by the adoption in paras 66 and 72 of the same definition of "related party" as in the IAS —though unhelpfully it does not reproduce it. IAS 24.9 defines a related party widely so as to include controlling shareholders as well as directors.

[155] A typical statement (in this case from BIS, *The Future of Narrative Reporting: Consultation*, September 2011 (BIS/11/945)) is: "Narrative reporting provides an important link between companies and their investors and wider stakeholders. It is a key element in the framework that allows investors to hold companies to account, both in terms of achieving sustainable long term returns and on the impact of the business to society and the environment." So, reporting is presented as addressed to stakeholders as well as investors, but only investors are mentioned in relation to accountability.

[156] See below, para.21–24.

[157] BIS, *UK Implementation of the EU Accounting Directive, Chapter 10: Consultation*, March 2014, p.4 (BIS/14/622).

[158] On the assumption that bribes do not increase the overall costs of the company but rather are recovered by a lower formal contractual payment to the foreign government. There may be some marginal gains to the company from operating in countries which have less corruption.

[159] See the Reports on Payments to Government Regulations 2014/3209, implementing Ch.10 of the Directive.

[160] At paras 14–44 et seq.

[161] 2006 Act s.415(1A).

[162] 2006 Act s.415A and contrast Sch.5 to the Small Companies Regulations with Sch.7 to the Large Companies Regulations.

[163] 2006 Act s.416(1).

[164] 2006 Act s.416(3).

[165] 2006 Act s.415A. For the meaning of "ineligible" companies see above, para.21–4.

[166] Large Companies Regulations Sch.7 para.7.

[167] This information may be laid out in the strategic report (below) instead.

[168] This disclosure and disclosure of political donations are required also of small companies: Small Companies Regulations Sch.5.

[169] See para.21–6, above.

[170] See para.17–29, above. Until recently the amount of charitable donations had to be stated as well.

[171] See para.28–25, below.

[172] The requirements are relaxed for medium-sized companies, but not excluded entirely. A small company excluded from the small company regime because a member of an ineligible group may also take advantage of this exemption: s.414B.

[173] Trade unions might use the information in collective bargaining with the company or they and other stakeholders might use it in making representations to government or taking other sorts of political action.

[174] Final Report I, para.3.33.

[175] See above at paras 16–37 et seq.

[176] Companies Act 1985 (Operating and Financial Review and Directors' Report etc.) Regulations 2005 (SI 2005/1011).

[177] DTI, *The Operating and Financial Review and Directors' Report: A Consultative Document*, May 2004 (URN 04/1003).

[178] Speech by the Rt. Hon. Gordon Brown MP, Chancellor of the Exchequer, at the CBI Annual Conference in London, 28 November 2005.

[179] Somewhat more is known about the internal workings of government on this issue than might be expected as a result of documents produced in judicial review proceedings brought by Friends of the Earth over the abolition decision. See *Financial Times*, UK Edition, 8 March 2006.

[180] Effected by the Companies Act 1985 (Operating and Financial Review) (Repeal) Regulations 2005 (SI 2005/3442).

[181] Directive 2014/95/EU [2014] O.J. L330/1.

[182] Above at para.16–37.

[183] Completing, para.3.33. Thus, non-shareholders would have been included among the addresses of the OFR.

[184] 2006 Act s.414C(13).

[185] 2006 Act s.414C(3).

[186] 2006 Act s.414C(4)(5), unless the company qualifies as medium-sized, or would do were it not for the fact that it is a member of an ineligible group, in which case it need not use KPIs in relation to non-financial matters: ss.414C(6) and 467(4).

[187] 2006 Act s.385. This definition includes not only companies included on the "official list" in an EU state (see para.25–9) but also those UK-incorporated companies traded on the New York Stock Exchange or Nasdaq. Nevertheless, this is a narrower set than proposed by the CLR which wished to apply the OFR requirement to most public and some large private companies as well.

[188] 2006 Act s.414C(8)(a)(b).

[189] 2006 Act s.414C(7).

[190] The BR required information about supply chains and out-sourcing arrangements (s.417(5)(c)). This was highly controversial because it was introduced only at a very late stage in Parliament, though it had been part of the OFR. It has not made its way into the SR.

[191] BIS, *The Non-Financial Reporting Directive*, BIS/16/35, February 2016. Since companies traded on a regulated market fall within the definitions of both "quoted company" and "public interest entity", the main impact of the change would be to remove the higher level reporting requirement from quoted companies with fewer than 500 employees. The consultation document also floats the proposal to allow some of the

non-financial reporting to be released on a more relaxed time-table than that for the annual accounts.

[192] 2006 Act s.414C(14).

[193] 2006 Act s.414C(11).

[194] 2006 Act s.496. This tracks art.35 of the Directive. The expanded audit requirement is more in line with what the CLR proposed: Final Report I, para.8.63.

[195] OFR Regulations reg.8.

[196] OFR Regulations reg.11.

[197] FRC, *Guidance on the Strategic Report*, June 2014. The question of developing reporting standards for the DR seems never to have been actively pursued.

[198] CLR, Final Report I, para.8.38.

[199] 2006 Act s.463(1). The inclusion of the remuneration report is particularly bizarre, since it requires statements of policies but very little in the way of forward-looking statements. See paras 14–44 et seq.

[200] 2006 Act s.463(2),(3). The liability excluded is only the liability to compensate the company, though it will be rare for any other liability to be in issue.

[201] Recklessness means making the statement not caring whether it is true or untrue, accurate or misleading: *Derry v Peek* (1889) L.R. 14 App. Cas. 337 HL. In the case of omissions there must be "a dishonest concealment of a material fact".

[202] 2006 Act s.463(4),(5). The liability here excluded is not confined to liability to compensate but embraces any civil remedy, including self-help remedies.

[203] See para.22–44.

[204] See below at para.26–25.

[205] See ss.414A, 415 and 420: directors' duties to prepare narrative reports.

[206] 2006 Act ss.394 and 399.

[207] Now art.33 of the Directive.

[208] 2006 Act ss.414(1), 414D(1) and 419(1). Section 419A imposes the same duty in relation to the corporate governance report, if it is a separate document, but lays down no specific penalties for non-compliance.

[209] 2006 Act s.414(4),(5), 414D(2)(3) and 419(3)(4). This re-states the previous law somewhat more simply by dropping the requirement that the director be a party to the approval and presuming the existing directors to be parties.

[210] 2013 Directive art.33(2).

[211] See above, para.21–27.

[212] 2006 Act s.495(1).

[213] See para.22–3 for more detail.

[214] 2006 Act s.503.

[215] 2006 Act s.506. The reasons for this measure or secrecy in relation to the auditors are

the same as those which led to the suppression of public information about directors' residential addresses: see above at para.14–23.

[216] 2006 Act s.454(2).

[217] Companies (Revision of Defective Accounts and Reports) Regulations 2008/373 (as amended).

[218] 2006 Act s.456(1)–(3).

[219] 2006 Act s.456(5)–(6).

[220] 2006 Act s.456(2)–(7).

[221] Supervision of Accounts and Reports (Prescribed Body) and Companies (Defective Accounts and Directors' Reports)(Authorised Person) Order 2012/1439 reg.4. Previously, the task was delegated to the Financial Reporting Review Panel.

[222] Where Companies House takes the lead: CLR, Completing, para.12.48.

[223] 2006 Act s.459.

[224] 2006 Act ss.460–462.

[225] DTI, *Final Report of the Co-ordinating Group on Audit and Accounting Issues*, URN 03/567, paras 4.11 et seq. Such a policy, including the identification of "priority sectors" for review, has been developed and since 2006 the FRRP included the directors' report, and so the business review, in its activities.

[226] FRC *Corporate Reporting Review 2014,* pp.7–9. The restatement occurs in the following year's accounts.

[227] These requirements are discussed in Ch.26, below.

[228] Directive 2004/109/EC art.24 (the Transparency Directive).

[229] See fn.221, made in part under s.14 of the Companies (Audit, Investigations and Community Enterprise) Act 2004. The tests laid down in s.14 of the 2004 Act are similar to those contained in s.457 of the 2006 Act.

[230] The FRRP concluded a "memorandum of understanding" with the FSA in 2005 about their joint working, which is available on the FRRP website. Indeed, there was some debate at the time as to whether these powers should not be retained by the FCA.

[231] 2006 Act s.14(2),(7). The Conduct Committee's power to apply for a court order appears to be limited to annual accounts and reports only (s.456(1)), so that it would fall to the FCA to take action in respect of the semi-annual reports required of companies on regulated markets.

[232] 2004 Act s.441.

[233] CLR, Final Report I, paras 4.49–4.32 and 8.80 et seq.

[234] 2006 Act s.442 deals with some exceptional cases as well.

[235] See para.25–8, essentially those traded on the Main Market of the London Stock Exchange.

[236] See FCA, Disclosure and Transparency Rule 4.1.3, implementing art.4 of the Transparency Directive 2004/109/EC. See Ch.26, below.

[237] 2006 Act s.451. But, to spike the guns of barrack-room lawyers, it is expressly stated that it is not a defence to prove that the documents required were not in fact prepared in accordance with the Act!

[238] 2006 Act s.452. If they fail to do so, they will be in contempt of court and liable to imprisonment. The subsection does not say who may serve such a notice so presumably anyone can: but in practice it is likely to be the Registrar who does so—though the subsection makes it pretty clear that a member or creditor could.

[239] 2006 Act s.453 and the Companies (Late Filing Penalties) and Limited Liability Partnerships (Filing Periods and Late Filing Penalties) Regulations 2008/497.

[240] The Scheme withstood judicial review in *R. (Pow Trust) v Registrar of Companies* [2003] 2 B.C.L.C. 295.

[241] The company could, presumably, sue the directors to recover its loss resulting from their default. But unless the company goes into liquidation, administration or receivership this is unlikely to happen.

[242] Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, Tables A7, A8 and D2. Curiously, late filing does not appear to be prosecuted in Scotland.

[243] 2006 Act ss.446 and 447.

[244] 2006 Act s.471.

[245] See above, para.21–30.

[246] 2006 Act s.448. There are certain other disqualifications set out in the section.

[247] The same distinction can be found between partnerships (accounts need not be made public) and limited liability partnerships (public disclosure required).

[248] 2006 Act s.444(1). On the exemption from group accounts see para.21–9. Small companies excluded from the small companies regime because a member of an ineligible group may choose not to file a directors' report, but must file a profit and loss account: s.444A.

[249] 2006 Act s.444(3)—as originally enacted.

[250] Companies, Partnerships and Groups (Accounts and Reports) Regulations 2015/980 reg.8. This step was less radical than it might seem at first sight, since a small company may prepare (and therefore publish) abbreviated accounts if all shareholders agree (see para.21–20) and, even if they do not, the disclosure requirements of the Small Regulations are much less demanding than those of the Large Regulations. These regulations also removed the facility for medium-sized companies to file an abbreviated profit and loss account (previously in s.445(3)(4)).

[251] CLR, Developing, paras 8.32–8.34. Although using the term "abbreviated accounts", the CLR appears to include in it the option not to file a profit and loss account at all. The CLR would have dealt with small company sensitivities through the simplified format rules for the accounts prepared for the members.

[252] Actually, there are three Registrars—one for each of the UK jurisdictions—though their functions are similar: s.1060.

[253] Hence with companies whose securities are traded on a regulated market the obligation on the company (a) to produce reports more often than annually and (b) to

report material changes as they occur. See Ch.26, below.

[254] See para.3–13.

[255] See para.14–23. Also to be disclosed is the identity of the company's secretary, if there is one: s.276.

[256] See para.2–42.

[257] See ss.9(5)(a) and 86–87. This is important because it is there that legal process can be served on it.

[258] See para.11–11. The returns of allotments will show to whom the shares were initially issued but not who now owns them.

[259] See Ch.32. This is likely to be more up-to-date than the filed accounts and so a better indicator of creditworthiness.

[260] See ss.1085 and 1087, the latter excluding access, for example, to directors' residential addresses (see para.14–23).

[261] 2006 Act s.1086.

[262] 2006 Act s.1091(3).

[263] 2006 Act ss.1089 and 1090. The information in relation to which this right exists is set out in s.1078, which implements art.3 of the First Company Law Directive (68/151/EEC) as amended by Directive 2003/58/EC art.1.

[264] 2006 Act s.853A. The return date is normally the anniversary of the company's incorporation.

[265] Hence the provisions about the confirmation statement are set out in a separate Part of the Act (Pt 24).

[266] 2006 Act s.853L: offence by company, every director, shadow director and secretary, and every other officer who is in default. Compliance with the annual return requirement was about one percentage point less than for the accounts filing requirement. Some 1,200 directors were convicted of this offence in 2014/15 in England and Wales: above fn.242, Tables A7 and D2.

[267] 2006 Act s.430 and para.21–40.

[268] 2006 Act ss.433 and 436.

[269] 2006 Act s.434.

[270] 2006 Act s.435.

[271] See Ch.26, below. This aspect of the Directive is implemented in the UK by Disclosure and Transparency Rule 4.2, made by the Financial Conduct Authority.

[272] 2006 Act s.423(1). The content of the "annual accounts and reports" is specified in s.471(2) separately for unquoted and quoted companies.

[273] See Ch.31, below.

[274] 2006 Act s.307. In the case of companies without share capital only this third category need be circulated: s.423(4).

[275] 2006 Act s.423(2),(3).

[276] 2006 Act s.146. See para.15–40.

[277] 2006 Act ss.431 (unquoted companies) and 432 (quoted companies). This right is also extended to those nominated to enjoy information rights: s.146(3)(b).

[278] It is reported that in 2006 postmen in the UK were restricted as to the number of sets of the annual accounts and reports of HSBC bank they were permitted to carry at any one time, because of the weight of the document.

[279] Above, para.21–24.

[280] 2006 Act s.426.

[281] 2006 Act s.426(2)(3) and Companies (Receipt of Accounts and Reports) Regulations 2013/1973. The consultation may take place as part of the circulation of the annual accounts and reports (and relate to future years) or be a free-standing consultation. Requesting to continue with the full set must be made easy, depending simply on ticking a box on a form, postage on which has been pre-paid by the company, at least if the recipient has an address in the EEA. Those who enjoy information rights are within this procedure as well: s.426(5).

[282] Receipt Regulations reg.5.

[283] 2006 Act s.426A. On the "single total remuneration" figure see para.14–45.

[284] At para.15–85.

[285] 2006 Act s.430.

[286] 2006 Act s.424(2). For delivery to the Registrar, see above, para.21–33. Of course, the company cannot evade this obligation simply by not filing the accounts and report with the Registrar: s.424(2)(a).

[287] See para.15–48.

[288] 2006 Act ss.437–438.

[289] See para.15–43.

[290] 2006 Act s.437(3).

[291] At para.15–58.

[292] A particular feature of the rules applying to these companies is the differences in the range of publicly traded companies caught by different rules. In descending order of breadth, sometimes the rules apply on to companies traded on "regulated" markets, sometimes to "quoted" companies and sometimes to companies on "prescribed" markets.

Introduction

22–1

The statutory accounts and reports discussed in the previous chapter are the responsibility of the directors. However, all modern company law systems have long accepted the principle that the reliability of the accounts and reports will be increased if there is in place a system of independent third-party verification of them. The temptation to present the accounts in a light which is unduly favourable to the management is one likely to afflict all boards of directors at one time or another—and the temptation is likely to be at its strongest when the financial condition of the company is at its weakest and shareholders, creditors and investors are most in need of access to the truth. To provide such third-party verification is the traditional role of the audit.

Sources of audit law

22–2

We saw in the last chapter that the global nature of modern large businesses creates a strong pressure for global accounting standards (though a single set of such standards is still some way off) and for regulation of accounts within the EU to be something which takes place to a significant extent at EU level. Equally this is the case with auditing, as an essential complement to accounts. Global auditing standards are being developed, as we shall see below, and auditing is a matter which has been regulated to an increasing degree at EU level. The process began with Directive 84/253 on auditors' qualifications, but in the wake of various corporate scandals at the beginning of the century (in the US as much as in Europe) that Directive was replaced by one which regulated in addition the process of auditing. Directive 2006/43/EC was in turn amended after the financial crisis in 2013 by Directive 2013/34/EU and, again, by Directive 2014/56/EU.[1] However, in 2014 an additional crucial step was taken. In respect of the largest companies, i.e. companies whose securities are traded on regulated markets, termed "public interest entities" ("PIEs"),[2] an extended supplementary set of rules was introduced. As important, that

supplementary set of rules was laid down in a Regulation,[3] whose provisions are, therefore, directly applicable in the UK (though domestic rules are needed to exercise any choices which the Regulation specifically gives to Member States). Domestic rules are still needed to transpose the amended Directive and to deal with matters not dealt with by either the Regulation or the Directive.[4] Domestic rules on auditing are contained in the Companies Act 2006, as amended, and the Statutory Auditors Regulations but also in rules ("standards") made by the Financial Reporting Council or by the relevant professional bodies.[5] The structure of the domestic institutional arrangement was changed (and simplified) in the light of the requirements of the Regulation and, to a lesser extent, the Directives, so that the 2014 EU level reforms were significant for structural as well as substantive reasons.

The duties of the auditor

22–3

To summarise briefly the role of the auditor, the core element of it is the production of a report to the members of the company which gives the auditor's opinion on a number of issues. The core opinion is whether:

(a) the annual accounts give a true and fair view of the financial position of the company (or the group in the case of group accounts)[6]; have been properly prepared in accordance with the relevant financial reporting framework[7]; and have been prepared in accordance with the requirements of the Act or the IAS Regulation[8];

(b) the directors' report is consistent with the accounts, has been prepared in accordance with the applicable legal requirements and whether any material misstatements have been identified[9] (the same or similar duties arise in relation to the strategic report and the separate corporate governance statement, if the company has produce either)[10]; and

(c) the auditable part of the directors' remuneration report (DRR) has been properly prepared in accordance with the Act.[11]

The auditor's report must be either "qualified" or

"unqualified".[12] An unqualified report is one where the auditor is able to give the opinions mentioned above; a qualified report (which is a serious thing for the company and its members) is one where one or more of the opinions mentioned above cannot be given.[13] The auditor's report to the members must contain opinions on matters (a)–(c) above. In addition:

(d) In relation to PIEs the Regulation requires discussion in the report of the risks of fraud or misstatement in the company's accounts.[14] This falls short of requiring an opinion on whether there has been fraud or misstatement, but the report must "explain to what extent the statutory audit was considered capable of detecting irregularities, including fraud".

Under domestic law and according to the circumstances, the auditor's report may also have to deal with further items. The most important potential matters that may need discussion are:

(e) those "which cast significant doubt about the company's ability to continue as a going concern".[15]

In addition, certain matters may need to be mentioned arising out of the auditor's duty, in preparing the report, to carry out investigations so as to be able to form a view as to whether:

(f) adequate accounting records have been kept by the company;

(g) the company's individual accounts are in agreement with the accounting records; and

(h) the auditable part of the DRR is in agreement with the accounting records.[16]

If all is well in relation to the above three issues, the auditor need say nothing in the report. If it is not, the auditor must state this fact.

(i) in addition, if the auditor has failed to obtain all the information and explanations which he or she believes to be necessary for the purposes of the audit, that fact must be stated in the report.[17]

Finally, there are two specific provisions relating to the small company accounts and the DRR:

(j) Where the directors have taken advantage of the relaxations for small companies when preparing the company's accounts or the directors' report, the auditor must state in the report his opinion that they were not entitled to do so, if he forms such an opinion.[18]

(k) If the auditor finds that the statutory provisions on the disclosure of directors' remuneration have not been complied with, there is a duty upon the auditor, so far as he or she is reasonably able, to provide the particulars which should have been given in the directors' report or the DRR.[19] Apart from this, however, the auditor is not under an obligation the revise the accounts and reports so as to bring them into line with the applicable requirements: that is the task of their authors, the directors.

In the not uncommon case where more than one person is appointed auditor, it must be disclosed whether they all agree on the matters contained in the report and the reasons for any disagreement must be given.

Undoubtedly, the most important and time-consuming of the auditor's tasks is that listed at (a) above, because it amounts to a general endorsement of the accuracy of the accounts, though (d) is likely to add considerably to the auditor's burdens (and the company's costs) in the case of a PIE. In some cases, the auditor may also be required to report facts uncovered to third parties, especially regulators, though this development has been controversial, as we shall see.[20]

Overarching issues

22–4

There are three main issues of principle about audits and auditors. First, is the benefit of the audit greater than its costs for all companies? If not, is there a case for exempting some classes of company from the requirement[21] to have an audit? Secondly, once an audit is required, the temptation on management to present the accounts in an unduly favourable light can be given effect only if they can persuade the auditors to accept such an unduly favourable presentation. What steps, then, can and should be taken to ensure the independence of the auditors from the

management of the company? Thirdly, even if the auditor is independent, what steps should be taken to ensure that a good job will be done, in particular what role should be played by civil liability in damages on the part of the auditor towards those who relied on the reports? We shall look at these issues in the remainder of this chapter.

The auditor today, at least in large firms, is not an individual practitioner but a member of a firm, often of international scale, and the audit is carried out by a team of auditors under the leadership of one or more partners in the firm. Where necessary, the text below will refer to these realities. Otherwise, the word "auditor" is used, but to cover both firms and sole practitioners, individuals and teams of auditors.

Audit Exemption

Small companies

22–5

Over a little more than a decade a very substantial set of audit exemptions has been introduced, to the point where some 88 per cent of non-dormant companies are exempt from audit of their annual accounts (both individual and group).[22] Of course, one must not exaggerate the economic significance of the companies so exempt, because the exemption is applied to small companies. Nevertheless, the definition of what counts as "small" for this purpose has been progressively enlarged over this relatively short period of time. This was a significant change of policy on the part of Government, for previously it had been committed to a universal audit requirement.[23] What triggered the reversal seems to have been the additional costs generated by the implementation in the Companies Act 1989 of Directive 84/253 on auditors' qualifications,[24] which was alleged to have a disproportionate impact on the audit costs of very small firms. Once begun, the exemption process seems to have acquired a life of its own. Despite the opposition from some users of accounts, notably the HM Revenue and Customs and some banks, the deregulatory pressure was successful.

An indication of the spread of the small company exemption from audit can be gained from looking at how the upper turnover

figure for exemption has increased over the years. In 1994, this was set at £90,000[25]; it was raised to £300,000 in 1997[26]; and in 2000 to £1 million.[27] The CLR recommended a further increase, namely, to the level of the requirement for being a small company for accounts purposes, and that at the same time the UK's definition of a "small" company should be revised upwards to the level permitted by EU law.[28] This raised the turnover figure to £4.8 million. With a further raising of the EU limit, we reach the current number of £10.2 million.[29] Thus, there has been a move from a very cautious approach to audit exemption, where the domestic rules remained well within the upper limit set by EU law, to one of taking full advantage of the exemption permitted at EU level.[30] In consequence, over a short period a very substantial process of removal of third party assurance in relation to the accounts of small companies has taken place.[31]

22–6

After a period in which access for small companies to the audit exemption was somewhat more restricted than access to the small company accounting regime, the government decided in 2012 to adopt the simple rule that companies which are small for accounts purposes are also entitled to the audit exemption.[32] Even if the company meets this condition, it may be excluded from the audit exemption, on grounds which parallel the loss of small company status for accounts purposes.[33] In particular, the company must not be a public company.[34] In addition, if the company is a member of a group, it will qualify for the exemption only if the group qualifies as small and is not an ineligible group.[35]

Further, even if a company is exempt from audit on the ground of its size (or the ground of dormancy, discussed below) members representing at least 10 per cent of the nominal value of the company's issued share capital (or any class of it)[36] may demand an audit for a particular financial year, provided the notice is given after the financial year commences and within one year of its end.[37] Thus, notice must be given on a year-by-year basis and the members cannot make a demand relating to future financial years (when they might not meet the size threshold).

Where the exemption applies and is used, the directors must confirm in a statement attached to the balance sheet that the company was entitled to the exemption, that no effective notice has been delivered requiring an audit and that the directors acknowledge their responsibilities for ensuring that the company keeps accounting records and for preparing accounts which give a true and fair view of the state of the company's affairs.[38]

However, none of this means that small companies will not have their accounts audited in fact. If a company sees value in providing such assurance to members, creditors or investors, it may choose to have an audit. More likely, banks or other large creditors may insist on an audit as part of the process of considering whether to make a loan to the company. Where the company which chooses to have an audit is a "micro" company, however, the audit will not cause the company to reveal more information where it has chosen to stick to the minimum standards for such companies.[39]

Subsidiaries

22–7

Subsidiary companies, of any size, are exempt from the audit requirement, under reforms introduced in 2012, subject to certain conditions.[40] The central requirement is that the parent company guarantees all the liabilities of the subsidiary as they stand at the end of the financial year, until they are satisfied, and that the guarantee is enforceable against the parent.[41] Apart from extensive publicity requirements, this exemption is confined in various ways. It is available only where the parent is incorporated in the EEA; it is not available to subsidiaries whose securities are traded on a regulated market—a rare, but not unknown, situation in the UK; all the members of the company must agree to forego the audit; and the subsidiary's accounts must be included in the consolidated accounts of the parent.[42] It is thus most easily available to wholly-owned subsidiaries of EEA parents. The underlying policy argument is that the audit of the subsidiary's accounts in such case adds little by way of value to the audit of the consolidated accounts—though, equally, given the requirement for audit at group level, the savings from omitting the subsidiary audit are probably not enormous.

Dormant companies

22–8

A further and less controversial type of company which is exempt from audit is the so-called "dormant" company.[43] A company is dormant during a period when there is "no significant accounting transaction" in relation to it, an accounting transaction being one which needs to be recorded in the company's accounting records.[44] Where the company has been dormant since its formation, no other conditions need be met before the exemption is granted.[45] The most obvious and common example of such a company is a "shelf company"[46] while it remains on the shelf (though there may be legitimate reasons for incorporating a company which is intended to remain dormant indefinitely). If the company becomes dormant after a period of activity, then its audit exemption is more circumscribed. It depends on the company not being a parent company required to produce group accounts and its being entitled to produce its individual accounts under the small companies regime[47] or being entitled to do so but for the fact that it is a public company or a member of an ineligible group.[48] In practice, the most important extension which the dormant company exemption makes to that already provided for small companies is that it extends to small public companies.[49]

Non-profit public sector companies

22–9

This exemption does not need detailed consideration because the companies entitled to it, although incorporated under the Companies Acts, are part of the public sector and are subject to public sector audit.[50] A company is non-profit making if it is so for the purpose of art.54 of the Treaty on the Functioning of the European Union—though that article in fact contains no definition of "non-profit making". Such companies are excluded from audit because they are outside the scope of art.50(1) TFEU, under which the audit Directives were made.

Auditor Independence and Competence

22–10

Although the issue of small company exemption from audit has been important over the past two decades, the most important policy issue relating to auditors concerns their independence. This was an issue brought to the fore by the collapse of the Enron Company and others in the US in the early years of this century, which collapses were thought to reveal weaknesses in the provisions on auditor independence.[51] At least in the eyes of the EU, the same issue arose out of the experience of the financial crisis 2007–9.[52] The essence of the independence issue is that the auditor is appointed and remunerated by the company whose accounts and reports are to be audited. Although companies are required to have their accounts audited (unless exempted), they are not required to employ any particular auditor or to pay that auditor any particular level of remuneration. There thus develops the possibility that auditors will compete for mandates on the basis that they will engage in only a cursory scrutiny of the company's accounts or that they will act in this way in return for excessive remuneration (which might be disguised as remuneration for the provision of non-audit services to the company). The traditional response to this argument is that in the long- or even the medium-term such a business model is self-destructive. The auditor will obtain a reputation for laxness, which will, perversely, destroy its business. Whilst the company's management may want a lax audit, it is crucial that those who rely on the audit believe that the appropriate checks have been carried out. A lax audit by an auditor known to be lax is no good, even for evasive management, because the management will not obtain the benefit it desires from the audit opinion. Whilst the reputation argument may have much force, recent experience suggests that it does not operate at all times and in all circumstances so as to guarantee an appropriate level of audit scrutiny. Individuals within the audit firm may have perverse short-term incentives which outweigh the firm's longer term incentive to do a good job or the investors may move away from attaching much importance to the audited accounts in periods of market exuberance.

Consequently, there is a case for regulation to reinforce the market incentives supporting auditor independence. Much the same arguments can be made in relation to auditor competence.

An audit firm has reputational reasons for providing a good service in general but in particular cases there may be incentives on individuals to operate inefficiently. Nor should the independence and competence issues be viewed as completely separate: a non-independent auditor displays dependence on management precisely by carrying out an inadequate audit. However, the fact the market cannot guarantee independence and competence does not mean that regulation can (some aspects of the problem might be insoluble) nor that all types of regulation are equally appropriate.

There are eight strategies which have been deployed by the law to address these problems.

(1) Laying down specific rules disqualifying persons from acting as auditor of a particular company on grounds of conflict of interest.

(2) Constraining the provision of non-audit services to audit clients.

(3) Requiring the mandatory rotation of auditors.

(4) On the basis that the board is the body within the company which has the greatest interest in a lax audit, increasing the role of the shareholders in relation to audit decisions.

(5) On the basis that, within the board, it is the executive directors who have the greatest interest in a lax audit and that shareholders have serious collective action problems, increasing the role of the non-executive directors in relation to auditor decisions, notably via an audit committee consisting wholly of independent non-executive directors.

(6) Attacking the problem not from the side of the company but from the side of the auditor by subjecting auditors to greater regulatory control and more effective disciplinary mechanisms.

(7) Increasing the powers of the auditors as against the company.

(8) Imposing civil liability on auditors to those who rely on the audited accounts and reports where the auditors have been negligent and imposing criminal liability for false statements

in audit reports.

Each has been deployed with greater vigour in recent years, except civil liability, where indeed the tendency has been to restrict liability.

Regulatory structure

22–11

Before we do so, however, a short word is necessary about the structure of the regulation. The Directive requires Member States to appoint a "competent authority" with the function of approving auditors and putting in place a system of "public oversight" of the work of those auditors who have been approved.[53] In the UK that competent authority is the Financial Reporting Council.[54] Whilst the competent authority has ultimate responsibility for the tasks assigned to it, the Directive permits delegation of its tasks to other bodies "authorised by law" to carry out the delegated tasks—though in the case of PIEs the Regulation forbids the delegation of many tasks beyond the FRC.[55] This delegation is subject to the condition that the competent authority may reclaim the delegated power on a case-by-case basis. Under the Statutory Auditors Regulations, the FRC must itself oversee the creation of the standards which auditors are required to meet and the manner of their application in practice, but "must consider whether and how" other aspects of the public oversight function (for example, quality assurance and discipline) can be delegated to "recognised supervisory bodies" ("RSBs").[56] The RSBs are, in brief, the professional accounting bodies which meet the standards set in the Act for recognition.[57] An elaborate system of regulation of auditors and auditing is thus envisaged. Some matters are determined in the Act or the Statutory Auditors Regulations (or in the EU Regulation in the case of PIEs), some in standards developed by the FRC and some matters by the RSBs. However, the division of powers between the FRC and the RSBs is not a novel feature of EU Regulation. It was in place before the recent elaboration of the EU requirements and, in fact, the impact of those requirements has been somewhat to simplify the domestic relationships. However, it is still the case that the obligation to comply with the FRC's standards flows from the requirements

that a statutory auditor be a member of a RSB[58] and that the RSB's rules require compliance with standards laid down by the FRC.[59]

Direct Regulation of Auditor Independence

Non-independent persons

22–12

A person may not act as an auditor if he is an officer or employee of the company to be audited or a partner or employee of such an officer or employee or, in the case of the appointment of a partnership, if any member of the partnership is ineligible on these grounds.[60] Nor may a person act if any of these grounds apply in relation to any associated undertaking[61] of the company. An auditor who comes within these provisions must immediately resign and give notice to the company of the reason for the resignation.[62] Failure to do so is a criminal offence. Further, the appointment or continuation in office of an auditor who is not independent within the statutory section triggers a power in the Secretary of State to require the company to appoint a proper person to conduct a second audit or to review the first audit, and the company may recover the costs of the additional audit work from the first auditor, provided that person knew he or she was not independent.[63]

Clearly, however, an employer-employee relationship with the company being audited is far from being the only type of relationship which might impair the independence of the auditor, e.g. a debtor-creditor relationship or a substantial shareholding[64] in the company might do so. The prohibition is clearly not a sufficient compliance with the requirements of art.22 of the Directive which imposes a general requirement upon Member States to ensure the independence of auditors and to exclude a person from acting as auditor if there is *any* relationship between the auditor and audited company "from which an objective, reasonable and informed third party would conclude that the statutory auditor's independence is compromised". To meet this requirement, the Statutory Auditors Regulations[65] require the FRC to make standards aimed at ensuring auditor independence on appointment and during the audit. This mandate is discharged

by the FRC through its ethical standards.[66]

Non-audit remuneration of auditors

22–13

Apart from remuneration for the audit itself, the most common conflicted relationship which an auditor may have with the audit client arises from the fact that the auditor is normally a member of a firm of accountants which is capable of providing a wide range of services—well beyond audit or even accountancy services—to clients. These non-audit revenues from audit clients of accountancy firms have increased substantially in recent years.[67] Disclosure of the amount of these payments is provided for under regulations requiring companies to disclose on a disaggregated basis in notes to the accounts the non-audit remuneration received by their auditors. The Regulations[68] divide the auditor's potential sources of remuneration into eight categories (including remuneration from the audit itself), require separate disclosure of remuneration earned from the company (and its subsidiaries) and from associated pension schemes,[69] and require disclosure of amounts paid to the auditor's "associates" as well as to the auditor.[70] The disclosure obligation imposed on small or medium-sized[71] companies extends only to the audit fee.

However, regulation of this issue extends beyond disclosure. For PIEs a long list of non-audit services is simply prohibited from the beginning of the period subject to audit to the completion of the audit. These are non-audit services where the risk of conflict of interest is thought to be high. They may not be provided by the auditor or any member of its network[72] or to a PIE or any member of its group, if incorporated in the EU.[73] Even permitted non-audit services are subject to controls. Their provision must be approved by the company's audit committee (see below).[74] In addition, the amount that is permitted to be paid for the non-audit services is capped at 70 per cent of the average audit fees paid over the previous three years.[75]

For non-PIEs the Directive applies its general principle that auditors must assess and handle appropriately threats to their independence, into which category non-audit remuneration falls. In the UK this requirement is implemented via ethical standards made by the FRC. However, these standards go beyond the

essentially procedural requirements of the Directive and make the provision of certain high-risk non-audit services inconsistent with an audit engagement.[76] This approach on the part of the FRC, which was in place before the most recent EU reforms, essentially follows, but makes binding, the recommendations contained in Commission Recommendation 2002/590/EC on statutory auditors' independence in the EU.[77]

Auditors becoming non-independent

22–14

It may be that, although the auditor may have no other relationship with the company, over a period of time the auditor relationship itself becomes a threat to independence. The auditor may build up personal relationships with the management of the audited company which make him or her reluctant to challenge the management's picture of events. The watchdog may have become a lap dog. This argument is accepted at EU level in relation to PIEs. The "key audit partners" are required to rotate every seven years and not to take up appointment again for three years.[78] The notion of a "key audit partner" is one derived from the Directive and it means the auditor designated by the audit firm as primarily responsible for carrying out the audit (normally referred to in the UK as the "engagement auditor") but also the auditor who signs the report, if different.[79] In fact, the FRC's rules take up the option to make the rotation rules more demanding and impose a five-year rotation and a five-year gap.[80] In addition, the Regulation requires the phased rotation of all the senior personnel in the audit team.

Rotation of the key audit partner has been required since 2006 Directive,[81] but the Regulation introduces in addition a requirement for the rotation of the audit firm of a PIE. The argument against mandatory rotation of firms is that it means the loss of the expertise of the whole of the existing audit team, which occurrence would be likely to reduce the quality of the audits immediately following a change of firm (unless, of course, the audit team simply changed firms, thus defeating the object of the exercise). In its 2011 proposals for an Audit Regulation the Commission put forward, nevertheless, a rule requiring for PIEs rotation of the audit firm every six years (or a

little longer in some cases).[82] As enacted, the firm rotation proposal survived but with considerably longer intervals. The provisions are complex, reflecting their heavy negotiation in the EU's legislative process. In principle, rotation of the firm is required every ten years, but Member States may opt for a 20-year rule, as the UK has done, provided a public re-tendering process is carried out after ten years.[83]

Firm rotation can be looked at as a competition issues as well as an independence issue. Since a mere four firms dominate the global accounting market, choice for large companies is necessarily limited. In an attempt to address this issue, the Competition and Markets Authority made an order in 2014 requiring mandatory re-tendering of audit engagements at least every ten years for the largest 350 companies on the Main Market of the London Stock Exchange.[84] The aim was to give second-tier audit firms an opportunity to break into the market for the provision of audit services to this class of company and to make it worthwhile for those firms to gear up to provide the audit services. The Regulation now goes further than the order in that it requires a change of auditor after 20 years, not just a re-tendering process, and matches the order's requirement of re-tendering within the first ten years.

Both independence and competition goals might be hindered if there were contractual restrictions in place on the choice of auditor. The Regulation renders such clauses "null and void";[85] the Statutory Auditors Regulations treats them as of "no effect".[86]

Auditors becoming prospectively non-independent

22–15

An auditor may have no current relationship with the company which creates a conflict of interest (nor may he or she have a long association with the company as auditor) but there may be an understanding, falling short of a contract, that the auditor will resign in due course and take up a role in the management of the company. Since accountancy skills are much prized in some areas of management, movement from professional practice to management is quite common. Article 22a of the Directive, however, imposes a two-year "cooling off" period between

ceasing to be the statutory auditor or key audit partner and the taking up of a "key" management position in a PIE and a one-year period in any other case. The same periods are applied if the new post is as a non-executive director of the client company or a member of its audit committee (without being either a key manager or a non-executive director—a rare situation). This rule too is implemented via ethical standards in the UK.[87]

The Role of Shareholders and the Audit Authorities

22–16

The traditional regulatory strategy deployed by the domestic legislation to reinforce auditor independence has been to enhance the role of the shareholders. In many ways this is an obvious strategy. The accounts and reports are statements from the directors to the members and so putting control over those who verify those statements in the hands of the recipients rather than the originators of the statements appears to be an appropriate strategy. The auditor's relationship with the shareholders is underlined by the provision which gives him or her a right to be sent all notices and other communications relating to general meetings, to attend them and to be heard on any part of the business which affects or concerns the auditor.[88] In the case of a private company which takes its decision by written resolution, the right transmogrifies into a simple right to receive the communications relating to the written resolution, but there is no general right to make representations to the shareholders before they decide.[89] This is a pretty ineffective provision—though it needs to be recognised that many private companies will be exempt from audit on grounds of being "small". However, the shareholders have limited opportunities to exercise control, since they meet infrequently, and in addition may face co-ordination problems in large companies over the exercise of the powers which are conferred on them. Perhaps for this reason, the auditor's information obligations to the shareholders are often extended to the audit authorities.

Appointment and remuneration of auditors

22–17

The normal rule is that the appointment of the auditors must be

done at each accounts meeting, normally the annual general meeting,[90] and the appointment is from the conclusion of that meeting until the conclusion of the next such meeting.[91] There are only exceptional circumstances in which the directors may appoint auditors.[92] However, the proposal to appoint the auditors, to re-appoint them or to appoint others in their place comes normally from the board (though it need not) and the meeting, almost invariably, will agree with the board's proposal. This is an example of a situation where the shareholders' co-ordination problems make it difficult, though not impossible, for them to generate a proposal of their own. They might do so if they had reason to believe that the auditor was in the board's pocket, but they rarely have grounds for so thinking, in which case accepting the board's proposal seems the rational course of action. In the case of PIEs the audit committee (see below) is required to put forward recommendations to the shareholders.[93] This both recognises shareholders' potential co-ordination problems and attempts to shift the de facto nomination role out of the hands of the executive directors of the company.

Where the auditors are appointed by the members in general meeting, their remuneration shall be fixed by the company in general meeting or in such manner as the general meeting shall determine.[94] This, too, is intended to emphasise that the auditors are the members' watchdogs rather than the directors' lapdogs. But in practice it serves little purpose since the members normally adopt a resolution proposed by the directors to the effect that the remuneration shall be agreed by the directors—as the provision permits them to do. Even if the shareholders actually fixed the auditor's remuneration, rather than fixing the method for fixing it, they would invariably act on a recommendation from the board. A more effective protection, perhaps, is that the amount of the remuneration, which includes expenses and benefits in kind (the monetary value of which has to be estimated) has to be shown in a note to the annual accounts, thus enabling the members to criticise the directors if the amount seems to be out of line.[95]

For private companies shareholder meetings are not required to be held, but, assuming the company is subject to audit, the principle of shareholder appointment and determination of

remuneration still applies, except that the shareholders may act by written resolution and the rules are re-drafted so as to apply with reference to, not the accounts meeting, which will probably not be held, but the period of 28 days beginning with the day on which the accounts and reports were circulated to the members or, if later, the last day for circulating them.[96] Suppose, however, that no resolution with regard to the auditors is circulated to the shareholders, a not inconceivable situation in a private company. The Act provides that, unless the auditor was appointed by the directors under their exceptional powers,[97] failure to re-appoint or to appoint someone else at the end of the year will mean the auditors in place are deemed to be re-appointed.[98] This process of deemed re-appointment in private companies, which may otherwise continue indefinitely, can be excluded by the company's articles.[99] More important in practice, the auditor in post may be required to undergo re-election as a result of a resolution adopted by the members[100] or a notice received from members holding at least five per cent of the voting rights entitled to be cast on a resolution that the auditor should not be re-appointed.[101] The last of these is the least demanding method of preventing deemed re-appointment.

Removal and resignation of auditors

Requirement for shareholder resolution

22–18

As in the case of directors,[102] a company may by ordinary resolution passed at a meeting at any time remove an auditor from office.[103] However, the auditor, unlike a director, may not be removed prior to the expiration of the term of office other than by resolution of the shareholders.[104] In this way the auditor is given some protection against management pressure. If management wish to remove the auditor prematurely, they must do so by means of a proposal to the shareholders. If management goes down that route, further provisions of the Act come into play designed to permit or even require the auditor to put the contrary case to the shareholders. Hence, not only has special notice (28 days)[105] to be given to the company of a resolution to remove an auditor, but notice of the proposed resolution has to be given to the auditor.[106] The auditor is entitled to make written

representations which, if received in time, have to be sent to the members with the notice of the meeting, and which, if not received in time, have to be read out at the meeting.[107] If the resolution is passed, the auditor still retains the right to attend the general meeting at which the term of office would otherwise have expired or at which the vacancy created by the removal is to be filled.[108] Nor does removal deprive the auditor of any right to compensation or damages, arising, for example, under the contract between auditor and company, in respect of the termination of the appointment as auditor or any appointment terminating with that as auditor.[109]

A feature of the above rules is that, whilst protecting the auditor to some degree against management pressure, they give the shareholders a free hand over the removal of the auditor. If, for example, the shareholders of their own motion wish to remove an auditor they regard as too friendly with management, they are free to do so, provided the special notice and auditor statement provisions are complied with. However, art.38 of the Audit Directive requires Member States to ensure that auditors may be removed only on "proper grounds". It provides that "divergence of opinion on accounting treatments or audit procedures shall not be proper grounds for dismissal". The aim is clearly to give the auditor further protection against management pressure where the auditor has fallen out with the management, but the provision appears to be general and makes it less easy for the shareholders to act where they think the auditor has become too cosy with the management.

In countries with controlling shareholders as the predominant form of shareholding even in large companies (common in continental Europe), it may have been thought unrealistic to regard the directors and the (majority of the) shareholders as two separate groups. However, it is not unrealistic in dispersed shareholding jurisdictions such as the UK, and the Government was clearly reluctant to implement the Directive in the obvious way, i.e. by building a "proper grounds" qualification into the shareholders' removal power in s.510.[110] Instead the Government opted to amend s.994 dealing with unfair prejudice.[111] Removal of an auditor on ground of divergence of opinion or any other improper ground is deemed to be conduct unfairly prejudicial to

the interests of some part of the members.[112] This approach has the merit of addressing the policy issue probably underlying the Directive, i.e. unfair treatment of minority shareholders. However, it is difficult to see that it transposes the Directive's formal requirement that the auditor "may be dismissed" only on proper grounds. The dismissal, even if challengeable under the unfair prejudice provisions by a shareholder, still seems to be effective as far as the auditor is concerned nor, whether the dismissal is effective or not, does the new provision give the auditor any rights as against the company. Further, there is no requirement that the court exercise its remedial powers under s.996 to secure the reinstatement of the auditor. Whether this way of proceeding meets the Directive's requirements must be open to doubt.

In the case of PIEs the Directive[113] requires that 5 per cent of the shareholders or the competent authority should be able to bring proceedings before a court for the dismissal of the auditor on proper grounds. Unlike the provision just discussed, this expands the powers of (minority) shareholders though in a rather cumbersome way.

A breakdown in relations between auditor and management is more likely to reveal itself in the resignation of the auditor rather than an attempt by the management to persuade the shareholders to remove the auditor. Few auditors will want to retain office if relations with the management of the company have become seriously strained. At first glance the Act makes resignation an easy matter: the auditor resigns by sending a notice to that effect to the company.[114] In this case what is needed are provisions which make it difficult for the auditor to "go quietly", i.e. to resign office without ensuring that any matters which have caused concern will be ventilated. The Act contains two sets of notice provisions designed to achieve this objective, requiring notice to be given to the company, on the one hand, and the regulatory authorities on the other. The information may put these bodies on the alert about possible mismanagement of the company. However, the Act also imposes notification requirements in the case of dismissal. We therefore discuss the notification requirements together in the following sub-section.

22–19

An auditor of a PIE who leaves office at any time and for any reason must send the company a statement of reasons for this occurrence.[115] In the case of a non-PIE such a statement may be required. It will not be required where the departure from office occurs in circumstance which the legislature has determined in advance raise no concerns.[116] Nor will it be required of an auditor who leaves office at the end of an accounts meeting,[117] i.e. the rule here is aimed a departures during a financial year. For both PIEs and non-PIEs the statement must include reference to matters connected with the departure from office which the auditor thinks should be brought to the attention of the company's members or creditors.[118] This is the "section 519 statement".

Having produced the statement, an auditor resigning from a PIE can seek to replicate the situation in relation to a dismissal by requiring the directors to convene a meeting of the shareholders to consider it,[119] though if "going quietly" was the motivation behind the resignation, the auditor is pretty unlikely to take this step.[120] Whether or not the resigning auditor triggers this right, the company must send circulate any s.519 statement received from a departing auditor to those entitled to receive copies of the company's accounts.[121] This too is unlikely to generate action on the part of dispersed shareholders, unless the statement reveals egregious conduct.

Of greater significance is the obligation to inform a regulator of the s.519 statement. The auditor must send the statement to the Registrar,[122] so that it gets onto the company's public file at Companies House, and to the appropriate audit authority,[123] both obligations being sanctioned by criminal sanctions. The appropriate audit authority for a PIE is the FRC and for a non-PIE a RSB. Where the s.519 statement is made by an auditor who is ceasing office other than at the end of an accounts meeting (or its private company equivalent), the company must forward to the appropriate audit authority a statement of its reasons for the occurrence of this event, though the company may simply say that it agrees with the reasons given by the

departing auditor. Thus the regulator is informed of both sides of the dispute, if there is one, and is perhaps more likely to take action than dispersed shareholders, at least where the dispute reveals a public interest element. Overall, the management cannot remove an auditor prematurely, whether by dismissal or forced resignation, without facing a serious risk of a row at the general meeting (and, in the case of a listed company, adverse press publicity) and with the auditing and accounting authorities.

Failure to re-appoint an auditor

22–20

Finally, a management which has fallen out with its auditors may simply wait until the end of the term of office and replace them. As we have seen, in the case of a public company this is an annual opportunity, since the term of office of the auditor runs, normally, from one accounts meeting to the next, and in the case of a private company the deemed re-appointment mechanism can be brought to an end by appointing substitute auditors during the annual period for appointing them.[124] Moreover, since a change of auditors, for good reasons, is not an uncommon event and is now encouraged by the authorities, failure to re-appoint may not be suspicious. Alternatively, auditors who have fallen out with the management may simply not seek re-appointment. However, the Act does take steps to flush out information about failures to re-appoint which are questionable. First, a resolution to appoint someone other than the existing auditors must be a resolution of which special notice (at least 28 days)[125] has been given to the company, and the company must make use of the advance notice to inform the outgoing auditor and the proposed replacement of the resolution.[126] The outgoing auditor then has the right to have representations circulated in advance of the meeting or read out at the meeting, similar to the rights arising on a resolution to dismiss.[127] If, in the case of a private company, the decision is to be taken by written resolution, the right is to have the representations circulated to the members of the company.[128]

More important, because obligatory, the rules applying to PIEs concerning the auditor's duty to deposit a statement of circumstances with the company apply to the outgoing auditor.[129]

Following on from that, the auditor must supply a copy of the statement to the Registrar and the FRC[130] and the company must circulate the statement to those entitled to receive the accounts,[131] but the company is not required to supply a statement of its reasons to the FRC.[132]

Whistle blowing

22–21

The auditor's relationship with the authorities is strengthened, possibility to the detriment of the quality of its relationship with the company, by whistle-blowing provisions, meaning a duty laid on the auditor to report certain categories of facts discovered in the course of the audit to the relevant authorities. In the case of PIEs the Regulation not surprisingly requires auditors to report suspected fraud or other irregularities to the company, but if the company does not investigate the suspicions, the auditor must report them to the relevant authorities.[133] This is supplemented by an obligation to report directly to the authorities evidence discovered in the course of the audit about "material" breaches of the law or regulation or which throws doubt on the continuous functioning of the PIE or which lead the auditor to form the intention not to issue an opinion on the financial statements or to issue a qualified opinion.[134] In the latter two cases the auditor is not necessarily reporting any wrongdoing to the authorities, but is giving them advanced notice of something which will necessarily become public in due course. Disclosure under the above provisions does not make the auditor liable under any contractual or legal restriction on the disclosure of information.[135] The relevant authority in the UK will often be the FRC but might be different body in some cases, such as the Serious Fraud Office.

Although general whistle-blowing provisions of this kind were previously not part of UK law, UK auditing standards have for some time required auditors to consider whether the public interest requires such action,[136] and on the basis of this professional guidance it has been held that the auditor's legal duties to the company could embrace, as a last resort, a duty to inform relevant third parties of suspected wrongdoing.[137]

Shareholders and the audit report

22–22

The focus on the shareholder role in relation to the appointment and removal of auditors rather obscures the fact that the audit report is a report to the shareholders, to which they might be expected to react. Until recently, the Act provided no specific channels for these reactions. It was assumed that the shareholders would use their general governance powers (for example, to remove directors) or impose market pressure on the company by selling their shares. We have seen above[138] that the Government did not take up the CLR's general proposal for a "pause" between the delivery of the annual accounts and reports to the members and the holding of the annual general meeting, during which period shareholders would have an opportunity, at no cost to themselves, to require the company to circulate resolutions for consideration at the AGM in relation to those documents. However, a weak form of that proposal is to be found in ss.527–531 of the Act. Shareholders of a quoted company[139] may require the company to post on its website a shareholder statement about the audit of the company's accounts or about the circumstances in which an auditor has ceased to hold office, for consideration at the company's accounts meeting (normally its AGM). The tests for defining the members entitled to require website publication are the same as those for requiring circulation of a resolution to be considered at an AGM,[140] that is, members representing at least 5 per cent of the total voting rights of those entitled to vote at the accounts meeting or 100 voting members holding shares upon which an average of at least £100 has been paid up.[141] The company is required to post the statement on its website within three working days of its receipt and to keep it there until after the accounts meeting,[142] unless the company persuades a court that the shareholders are abusing their rights.[143] A copy of it must be sent to the auditor at the same time as it is posted.[144] The company may not charge the shareholders for the costs of website publication, which will normally be negligible.[145] Finally, when it gives notice of the accounts meeting, the company must draw attention to the existence of this facility and that it is without cost to the members, which may encourage them to take it up.

Introduction

22–23

The argument in favour of conferring a greater role on directors in relation to the audit is that the board is able to give more continuous attention to the audit than are the shareholders, whose contribution is naturally episodic, normally at the annual general meeting when the auditors' report is considered and the auditors appointed or re-appointed. The conflict of interest which the board may have on audit matters can be dealt with, it is argued, by entrusting this supervisory role not to the board as a whole but to an appropriate committee of the board. Audit committees are now common among UK companies traded on public securities markets. This is partly because successive versions of the UK Corporate Governance Code ("CGC") have recommended, on a comply or explain basis, that companies with a premium listing[146] on the Main Market of the London Stock Exchange establish such committees of the board, along with remuneration and appointment committees.[147] However, in relation to public interest entities there is now a mandatory requirement for audit committees contained in the Directive. The provisions of the Directive in relation to audit committees are transposed into domestic law via rules made by the Financial Conduct Authority ("FCA"), notably its Disclosure and Transparency Rule ("DTR") 7.[148] Present practice is thus an amalgam of these two streams of rules, though their coverage is not exactly the same. Premium listing is a voluntary choice on the part of the listed company, whereas the definition of 'public interest entities' embraces all companies with securities traded on a regulated market.

Composition of the audit committee

22–24

Article 39 the Directive is headed "audit committee" and art.39(1) appears to require most PIEs[149] to establish an audit committee, so that this is no longer a "comply or explain" obligation for companies with securities listed on the Main Market of the London Stock Exchange. In fact, art.39(4) allows

Member States to dispense with the audit committee if there is some other body within the company performing equivalent functions. Consequently, DTR 7.1.1 is drafted in terms of requiring a listed company to have a "body" which discharges the functions assigned to the audit committee by the Directive. However, since the UK Corporate Governance Code (C.3.1) recommends the establishment of an audit committee of the board, we assume in this account that the "body" will take the form of such a committee.[150] It is possible, however, that in small companies the task could be discharged by the board as whole, since the drafting of DTR 7 permits this and the company could explain its non-compliance under the CGC.[151] Under the Directive the committee is to be composed of non-executive members of the board or of appointees of the shareholders, of whom the majority (including the chair) are to be independent of the company. The UK CGC does not envisage members of the audit committee being directly appointed by the shareholders but rather that the members should all be members of the board. Shareholder appointments directly to board committees is not part of UK practice and it is unlikely that the Directive will encourage the adoption of this approach.[152] However, the CGC recommends that all members of the audit committee be independent, and this is likely to continue to be UK practice. Both sets of rules agree that at least one member of the committee "shall have competence in accounting and/or auditing" (Directive) or "recent and relevant financial experience" (CGC).

Functions of the audit committee

22–25

The Regulation indicates the importance it attaches to the audit committee by conferring on it a list of functions which, together, make the audit committee the central focus for dealings between the auditor and the PIE:

(a) The appointment of the auditor is a process run by the audit committee.[153] That committee makes a recommendation for the appointment of the auditor and, except for the renewal of an existing engagement, that recommendation must contain at least two choices, with a reasoned statement of the

committee's preference among them. The choices must have resulted from an open and transparent tendering process organised by the committee.[154] Although the detail of the procedure are left up to the committee to determine, the selection is required to be made according to publicised selection criteria and to be capable of justification according to those criteria. The aim appears to be to avoid "sweet heart" deals between auditor and the company. Although the committee's recommendations go to the full board and the full board makes the final recommendations to the shareholders, it is likely that the board will simply follow what the committee recommends. If the full board makes a different proposal, it must justify its departure from the committee's proposals and, in any event, the board's list may not include an auditor who has not participated in the selection process.[155]

(b) Whilst the appointed auditor reports to the members of the company,[156] the audit committee must receive at the same time or earlier a more detailed report which delves into some sensitive matters.[157] These include the methodology underlying the audit, the quantitative criteria used to determine materiality,[158] the valuation methods used in the financial statements and the judgements underlying the auditor's 'going concern' conclusions. The report to the audit committee must also give details of any significant deficiencies in the financial statements and of any areas of non-compliance (actual or suspected) with the applicable legal rules or the articles of association, explain the grounds on which companies were included in or excluded from the consolidated accounts, report any significant difficulties arising during the conduct of the audit and, finally, describe the extent of the auditor's interaction with the management of the company. It is clear that this list adds considerably to the auditor's standard reporting duties but also that the audit committee will require a significant level of expertise to understand and evaluate the report it receives.

(c) The approval of the audit committee is required for the provision to the PIE of permitted non-audit services.[159]

(d) Where the audit fee received from the PIE exceeds 15 per

cent of the auditor's total fee income over a period of three years, the audit committee must decide whether the audit engagement should continue (in any case it may not continue for more than two years) and whether the audit report should be subject to review by another statutory auditor.[160] The danger here is perceived to be that the auditor has become too dependent on a single client and so is less likely to be rigorous in its scrutiny. Given the adverse consequences for the auditor of exceeding the 15 per cent threshold over the three year period, it is likely that auditors will not allow this situation to arise. Ironically, the risk of exceeding the threshold is greater for small auditors trying to break into the PIE market than it is for the established "big four" global auditing networks.

(e) In addition to the Directive's general independence requirements for auditors,[161] the Regulation requires a PIE auditor annually to confirm its independence in writing to the audit committee and to discuss with the committee any threats to its independence and potential safeguards.[162]

(f) Finally, audit committees are themselves subject to periodic review of their effectiveness by the FRC.[163]

In addition to these specific duties the Directive adds a group of more general duties to the list of the audit committee's tasks. These are to monitor the financial reporting process, the company's internal quality assurance and risk management systems and the conduct of the statutory audit and to report to the board as a whole on the outcomes of the statutory audit.[164] The inclusion of internal risk management review is a significant addition to the committee's tasks, since it gives the committee a very important internal governance role.

Despite this formidable list of tasks, it is doubtful whether the Regulation and the Directive substantially upgrade what has been expected from audit committees in the UK for some years. The UK CGC covers a lot of the same ground.[165] In addition the Code recommends that a separate section of the annual report to the shareholders should explain how the audit committee has discharged its obligations during the year and that the chair of the audit committee should be available at the AGM to answer

shareholders' questions.[166] In 2002, as a result of the efforts of a committee chaired by Sir Robert Smith, extensive extra-Code guidance for audit committees was produced, which, whilst having no formal status, even on a "comply or explain" basis, strongly indicates the enhanced importance of the audit committee.[167] The FRC has also produced guidance on risk management which stresses the potential role of the audit committee.[168] Nevertheless, the embodiment of these requirements in hard law may lead to greater regulatory, and potentially litigation, focus on these matters.

Auditor Competence

22–26

So far in this chapter we have focused on the issue of auditor independence. But competence is important as well. Shareholders, investors and creditors may suffer if the auditor, whilst not beholden to management, just does not do a good job and produces accounts which are not reliable. Moreover, as noted, one sign of lack of independence may be a lax audit which does not meet professional standards, so that tackling competence is an indirect way of tackling lack of independence. Rules aimed at increasing competence may be aimed at controlling those permitted to carry out audits, at controlling how audits are carried out or at sanctioning those who have carried out incompetent audits. The sanctions may be criminal, administrative or civil. Competence may also by enhanced by extending the auditor's powers.

Qualifications

22–27

An early concern of the EU law on auditors was to require that they be appropriately trained and qualified and continue to be so.[169] We do not need to go into the details in this book. It is enough to note that the rules of the recognised supervisory bodies (i.e. normally the professional institutes)[170] must provide for appointment as statutory auditor to be confined to those who hold appropriate qualifications (or in the case of appointment of a firm that each individual responsible on behalf of the firm is so qualified and that the firm is controlled by such persons).[171]

Schedule 11 then lays out in some detail the terms on which bodies may award professional qualifications. The discharge by the RSBs of this function is overseen by the FRC.[172] Since a person who acts as an auditor without the appropriate qualifications is ineligible to do so,[173] the POB has the power to require a second audit in such cases and the ineligible auditor may be liable for its costs.[174] An auditor may also be appropriately qualified by virtue of a qualification granted in another EEA State and of having passed an aptitude test and spent an adaptation period in the UK.[175] The FRC also has power to recognise qualifications obtained outside the EEA where it is thought that they are equivalent and where the country in question would provide reciprocal treatment of persons qualified in the UK.[176] The names of statutory auditors must be entered into a public register, which must include an indication of the other Member States (if any) in which the auditor is registered. It must also contain the names of third country auditors who sign the audit reports of third country companies whose securities are traded on a regulated market in the EU.[177]

Auditing standards

22–28

Auditing standards play a similar role in relation to the function of auditing as accounting standards play in relation to drawing up the accounts. An auditor is necessarily concerned with both sets of standards: the auditor must establish that the accounts have been drawn up properly (including in accordance with the relevant accounting standards) and he or she must carry out the job of checking the financial statements in a proper manner (in accordance with auditing standards). In the case of a negligence claim against the auditor, compliance with both accounting and auditing standards is likely to be a matter to which the courts attach great weight.[178] As with accounting standards, auditing standards are becoming internationalised. Article 26 of the Directive requires Member States to secure compliance on the part of statutory auditors (in all cases, not just the audits of PIEs) with international standards issued by the International Auditing and Assurance Standards Board ("IAASB"), based in New York, once these have been adopted by the Commission. In default of

adoption of international standards, Member States apply national standards though only "to the extent necessary to add to the credibility and quality of financial statements". However, the process of adoption of auditing standards for the EU lags behind that of adopting accounting standards, and, at the time of writing, none has been adopted. In the UK, this delay is of little consequence since the approach of the FRC to auditing standards has been to adopt those laid down by the IAASB, but with additional explanatory material.

Quality assurance, investigation and discipline

22–29

A central function of the FRC is to oversee the monitoring of audit quality in general and to carry out investigations into particular cases of suspected inadequate audit and to secure (subject to appeal) disciplinary sanctions.[179] This has been so since the substantial domestic reform of auditor regulation initiated by the Companies (Audit, Investigation and Community Enterprise) Act 2004, which effectively did away with professional self-regulation in these areas. In respect of PIEs the Regulation requires these functions to be carried out by the FRC itself.[180] In other cases, the task may be delegated by the FRC to or shared with the RSBs. Quality assurance means the periodic inspection of audits carried out in particular companies accompanied by possible recommendations for improvement—a process now familiar in many walks of life. Both the Directive[181] and the Regulation[182] require quality assurance arrangements to be put in place but the latter, applying to PIEs, is more prescriptive about the nature of the process, requires quality assurance reviews more frequently (every three years rather than every six) and makes the "recommendations" of the inspectors binding. In order to facilitate this work of the FRC the Regulation requires an "annual transparency report"[183] by the auditor to the authority, setting out information such as the PIEs for whom it acts, the firm's governance and remuneration structure and its practices designed to ensure independence.

In the case of suspected inadequate audits the Directive contains a series of provisions requiring effective investigation powers and a range of potential sanctions to be available, and

lays down criteria for determining the severity of the sanction in particular cases.[184] The Regulation adds information and access rights in the case of PIEs.[185] The disciplinary sanctions range from private censure, through public censure to a prohibition on acting as an auditor and imposing a financial penalty.[186] In important cases the disciplinary proceedings are commenced in the UK by the FRC, which initiates proceedings before Disciplinary Tribunal, established by but independent of the FRC. The Tribunal is chaired by an experienced lawyer, and appeal lies to an Appeal Tribunal.

Empowering auditors

22–30

Even if the statutory and professional rules produce loyal and competent auditors, auditors may fail to detect impropriety in the company if they are not given the co-operation of those who work for it. If an auditor does not receive the co-operation needed to assess the company's accounts, that fact can be reflected in the ultimate report to the shareholders,[187] but it is obviously more desirable that the auditor should be able obtain the necessary information. The issue of the auditor's powers as against the audited company and its management is one to which the legislature has given increasing attention in recent years.

Auditors have a right of access at all times to the company's books, accounts and vouchers.[188] They are entitled to require such information and explanations as they think necessary for the performance of their duties. Those under the obligation to provide the information and explanations now go beyond the company's officers and embrace (present or past): employees of the company; persons holding or accountable for the company's accounts (for example, where the company has outsourced this function); subsidiary companies incorporated in the UK; and persons falling within the above categories in relation to the subsidiary and the subsidiary's auditor (if different).[189] More problematic, though of great importance, is the position of subsidiaries incorporated outside the UK and the relevant persons connected with them. Here the problem of comity of legal systems is dealt with by putting an obligation on the parent, if required by its auditors to do so, to take such steps as are

reasonably open to it to obtain such information and explanations from the subsidiary and the relevant persons.[190] A failure to respond "without delay" to a request for information is a criminal offence, unless compliance was not reasonably practicable. Also criminal is knowingly or recklessly making to the auditors a statement which conveys or purports to convey any information or explanation which is misleading, false or deceptive in any material particular.[191]

The above rights for the auditor depend upon the auditor knowing which questions to ask. Since the auditor is by profession an investigator, it is reasonable to suppose that he or she will often be in a position to ask the right questions. However, the CLR[192] thought there was a good argument for requiring directors to "volunteer" information rather than leaving the auditor to find everything out. This reform was implemented via an addition to the matters required to be disclosed in the directors' report.[193] That report must contain a statement on the part of each director to the effect that (a) so far as the director is aware, there is no information needed by the auditor of which the auditor is unaware; and (b) the director has taken all steps he ought to have taken to make him- or herself aware of such information and to establish that the auditor is aware of it.[194] This may require the director to reveal his or her wrongdoing or that of fellow directors to the auditor.[195] The full extent of what is required of the director is to be assessed by reference to the director's objective duty of care,[196] but the Act specifically recognises that making enquiries of fellow directors and the auditor might be enough to discharge the duty (i.e. that the director can rely on satisfactory answers from such sources to appropriate questions).[197] A director is criminally liable if the statement is false but only if the director knew of the falsity or was reckless as to whether the statement was true or false and if he or she failed to take reasonable steps to prevent the (inaccurate) directors' report from being approved.[198] However, as we shall see below, failure to comply with this provision may also limit the auditor's civil liability towards the company by virtue of the doctrine of contributory negligence.

Liability for Negligent Audit

The nature of the issue

22–31

Imposing civil liability on an auditor towards the company in the case of a negligent audit is an obvious way of encouraging diligence on the part of auditors. It is also a liability which arises naturally out of the law of tort, once negligence liability was extended to misstatements. If an auditor produces an audit report which is misleading and the inaccuracy can be traced to a lack of care, skill or diligence on the part of the auditor, then those to whom the auditor owed a duty to take care will be in a position to sue the auditor for damages, if they can show that the inaccurate report caused them loss. In the case of a single auditor, the liability will lie with that person; in the more common case of a firm being appointed auditor, then the individuals who were negligent will be liable but so also will the firm, either because the negligence of the individuals is regarded as the negligence of the firm or because the firm is vicariously liable for the negligence of the individuals. Nevertheless, as we shall see below, the question of how wide that liability should be (both in terms of the range of potential claimants and the quantum of liability) raises difficult policy issues.

The rules for determining the underlying liability of the auditor rests, even after the 2006 Act, with the common law,[199] though statute has played a role in fashioning the way that common law liability applies to auditors. It is important to distinguish among the potential claimants against the auditor between the audit client and everyone else. That the audit client in principle has a claim against the negligent auditor is well-established, that claim being based either on the contract between the auditor and the company or on the tort of negligence.[200] In relation to claims by persons other than the audit client, however, the question of how widely the duty of care in tort is owed has been, as we shall see, fiercely debated in the courts and the upshot of the litigation is a rather restricted duty of care. Of course, the matter might be decided by contract even in relation to non-clients, but there is less likely to be an explicit contract between the auditor and the non-client upon which the claimant can rely. However, as we shall see, the thrust

of the court decisions on the tortious liability of auditors is that liability exists in relation to non-clients only where a relationship akin to a contract has arisen.

The formulation of the duty of care owed by auditors to non-client claimants is but one example of a generally cautious attitude on the part of legislators towards auditors' civil liability. One might have thought that increasing the civil liability of the auditor would be an effective way of providing incentives to auditors to be both independent and competent. However, unlike all the legal strategies discussed above, which in one way or another have seen some expansion in recent years, judicial decisions and legislative rules have ensured that there has been no such expansion in relation to civil liability; in fact, the tendency in recent years has been to rein in civil liability.

22–32

As regards liability to non-clients, there is a particular problem that liability arises out of the fact that the accounts and reports and the auditor's report thereon are placed in the public domain.[201] It is therefore possible that a very large number of people will rely on them in order to carry out a wide range of transactions. Unrestricted liability on the part of auditors to third parties who rely on the accounts thus raises the prospect, as it was once famously described, of "liability in an indeterminate amount for an indeterminate time to an indeterminate class".[202] We discuss this problem further below in relation to the decision of the House of Lords in *Caparo Industries Plc v Dickman*,[203] but, at its worst, the liability rules might cause the audit market to unravel through the withdrawal of financially sound auditors.

22–33

Even in relation to actions by audit clients, there are difficult issues about the proper scope of the liability rules. Thus, the general tort doctrine of joint and several liability may significantly increase the tort exposure of auditors. Under this doctrine, if two or more tortfeasors are liable in respect of the same loss, the injured party may recover from any one of them for the whole of the loss, leaving the defendant to seek contributions from the other tortfeasors. In the classic case, where the misstatements in the company's accounts result from

the fraud or negligence of someone within the company and the failure of the auditors to discover the wrongdoing, the claimant[204] may recover the whole of the loss from the auditor, leaving the auditor to bear the risk that the original wrongdoers (usually directors or employees of the company) are judgment proof. Thus, claimants are encouraged to sue the defendants with "deep pockets" for the recovery of the whole of their loss, even though the auditor may be only the minor party at fault. Again, there is a risk the audit market will unravel in these circumstances.

The above problems are only partially addressed (and may even be exacerbated) by the professional indemnity insurance (or equivalent arrangements) which audit firms are obliged to carry.[205] That insurance may be very expensive and so increase the cost of audits and it may not be available for the full extent of the claim, so that the liability risk is only partially collectivised through the insurance mechanism. More problematically, the presence of insurance may actually encourage litigation against auditors, since claimants will know that auditors are worth suing and auditors will have an incentive to settle quietly rather than fight the issue in court provided they keep the liability within the insurance limits. There has been some movement in the common law world towards the substitution of "proportionate" liability for joint and several liability for auditors (i.e. the auditor is liable only for the share of the loss which is fairly attributable to the auditor's negligence).[206] However, in the UK, despite pressure from the accounting profession, there has been resistance to such a move on the grounds that it simply shifts the risk of insolvency from the auditor to the wholly innocent claimant.[207] Nevertheless, a British solution has emerged in the 2006 reforms permitting a "liability limitation agreement" between auditor and audit client, as discussed below. A restriction of liability to the auditor's proportionate share of the loss is a permissible type of agreement. This reform, of course, does not address third party claims against auditors.

Providing audit services through bodies with limited liability

Where the auditor is an audit firm taking the form of a traditional partnership, further issues are raised. The assets of the firm as a whole become available to satisfy the claimant in the case of loss caused by a partner (or employee) acting in the ordinary course of the business of the firm.[208] In addition, given the absence of limited liability in the traditional partnership, the personal assets of both the negligent partner and fellow partners may be called on to meet the claim.[209] The prospect of personal liability (uncovered by insurance) might induce such defensive action on the part of auditors that utility of the audit is reduced, because, for example, auditors began to give qualified audit opinions based on trivial grounds. Something has been done to address the issue of personal liability. Audit services may now be provided to a company by an accounting firm which is not a partnership. The Act provides that both individuals and firms are eligible to be appointed as auditors[210] and then defines a "firm" as "any entity, whether or not a legal person, that is not an individual".[211] Thus, the old idea that it was the hallmark of a professional that he or she provided services on the basis of personal liability for their quality has gone. Some accounting firms have set up their auditing arms as limited companies, but, by and large, the company form of internal organisation is not attractive to professional partnerships. The accounting firms therefore pressed for, and ultimately obtained in 2000, a new corporate vehicle, the limited liability partnership,[212] which has the internal structure of a partnership but benefits from limited liability in its external dealings. The origins of this new vehicle are demonstrated by the fact that, when originally proposed, it was to be confined to professional businesses, but in the end it was made generally available.[213]

Conducting the audit through a vehicle with limited liability certainly protects the personal assets of the non-negligent partners. Whether the personal assets of the negligent partner are so protected depends on whether the negligent misstatement in the audit report is analysed as having been made by the member, for whose tort the corporate body is vicariously liable (personal assets of the negligent member not protected), or whether the negligent misstatement is analysed as having been made by the

corporate body through the auditor, in which case the personal assets of the negligent member are not at risk. The decision of the House of Lords in *Williams v Natural Life Health Foods*[214] suggests the latter analysis (personal assets not at risk) but it is unclear whether the *Williams* rationale extends to statements by professionals.[215]

22–35

Even if *Williams* does apply, the benefits of corporate personality and limited liability are restricted to the personal assets of the members: the business of the corporate body itself could still be destroyed by a large claim which exceeded the insurance cover and pushed the body into insolvency. This is, indeed, the public policy crux. If there were many competing firms of auditors, the occasional insolvency of one of them might not matter in public policy terms. However, there are now only four international networks of firms capable of carrying out the audits of the largest multinational firms, and the collapse of Arthur Andersen in the aftermath of the Enron scandal in the US is a reminder of how quickly such international firms can disintegrate.[216] The disappearance of another such firm would further reduce competition in the market for the audit of multinational companies from its already low level. However, this fear should not push legislators into hasty acceptance of arguments for the reduction of auditors' liability without rigorous scrutiny of the likely impact. For example, it was argued that a cap on auditors' liability would increase competition in the audit market, especially for large firm audits, on the grounds that a cap would encourage medium-sized audit firms to move up into the "big league". However, an analysis by the Office of Fair Trading concluded that such a result was not a likely impact of the reform.[217] A more robust approach might be to seek to open up the audit market, especially the market for the audit of the largest companies, to a wider range of firms. As we have seen above, rules relating to mandatory re-tendering of audit contracts were driven as much by competition concerns as by concerns for auditor independence.[218]

We now turn to the ways in which the current liability rules reflect the above concerns, looking separately at claims by the audit client and by others.

Establishing liability

22–36

As we have already noted, the audit client's cause of action in negligence is easily established in principle. Thus, the litigation is likely to focus on the question of whether the auditor has in fact been negligent and, if so, whether and how much loss has been caused to the claimant. As far as the standard of care is concerned, it is clear in law, though often not accepted in the commercial world, that the auditor is not a guarantor of the accuracy of the directors' accounts and reports. Indeed, in an old case the auditor was given a broad discretion to rely on information provided by management, so long as no suspicious circumstances had arisen which should have put the auditor on inquiry.[219] However, the modern law is different. As Lord Denning once put it, the auditor, in order to perform his task properly, "must come to it with an inquiring mind—not suspicious of dishonesty, I agree—but suspecting that someone may have made a mistake somewhere and that a check must be made to ensure that there has been none".[220] Auditor scepticism is now firmly established in audit regulation. The Directive requires Member States to ensure that the auditor "maintains professional scepticism throughout the audit".[221] As to what "scepticism" will require, the existence of accounting and auditing standards helps the courts to concretise the duty of care in any particular situation, even though they are not formally binding on the courts.[222] A court which relies on these standards can be sure that it is not imposing unexpected standards of care on auditors and that there has been some 'public interest' input into the formulation of the standards.

As to the quantum of liability, the auditor's failure to detect error in the company's financial statements deprives the directors (or shareholders) of knowledge which could have afforded them an opportunity to take remedial action or to prevent the company from proceeding with some action on a false basis (for example, by declaring a dividend or making representations and warranties in a contract for the sale of the company's business). That remedial action might take a number

of forms, ranging from preventing a continuance of mismanagement or fraud to deciding to sell a company whose business model a proper audit would have shown to be under serious threat from changing economic circumstances. However, the auditor is not liable on a simple "but for" test for the company's failure through ignorance to take such action. For liability to arise, the action which the company might have taken or avoided must be one that was within the scope of the auditor's duty of care. This principle will embrace liability in respect of decisions that companies normally take on the basis of the accounts, such as declaring dividends or paying bonuses, whether to staff or policy-holders.[223] Thus, the auditor's liability will embrace losses caused to the company where the directors would have acted differently in these areas if they had known the full facts, even if the decision actually taken was perfectly lawful. Beyond such decisions, the auditor's duty of care will depend in large part on the scope of the audit engagement. The auditor's liability may extend to wider classes of decision, including strategic corporate decisions, if it is clear that the audit engagement contemplated that the company needed the audit information to make such decisions.[224]

22–37

In many cases, for example where the remedial action was the possible sale of the company's undertaking, what the company will have lost is really the chance to take a particular step, i.e. to find a purchaser at an acceptable price—who might or might not have been forthcoming. The pecuniary value to be placed on that lost opportunity depends upon the degree of likelihood that action would have been taken and that it would have led to the outcome the company alleges would have been reached. The court will have to assess the value of that chance, awarding the chance no value if it thinks it purely speculative.[225] Even where there was a course of action the directors could have taken which was wholly within their own control, liability will depend on its being shown that the step would have been taken. Often this will be difficult to do, especially in the case of fraud or mismanagement, when those involved included the directors. Then, it would seem, to establish any loss the claimant would have to show on the balance of probabilities that, had the

auditors' report been properly qualified, action would have been taken by the shareholders which would have led to the removal of the directors. To recover any substantial damages, the claimant would have to establish, further, a probability that the ill-consequences of the former directors' negligent or fraudulent reign would have been effectively remedied by the steps which would have been taken. The difficulties of establishing all this are obvious.

Limiting liability

22–38

Even if the claimant can establish liability and substantial loss, there are two types of argument available to the auditors to reduce their liability for the whole of that loss, one based on general defences (full or partial) to tortious liability and the other on contract.

General defences

22–39

The most obviously available defence is contributory negligence, whereby a claimant, who suffers loss as a result partly of his or her own fault and partly of the defendant's fault, will have the damages payable by the latter reduced by such amount as the court thinks just and equitable, having regard to the claimant's share of the responsibility for the damage.[226] Thus, where harm has been inflicted on the company through fraud committed by its employees which the directors failed to discover because they had inadequate internal controls in place and which the auditors failed to discover because they did not realise the internal controls were inadequate, the failures of the directors are the failures of the company which the auditors can pray in aid to reduce the damages payable. The disclosure statement now required of directors in the directors' report is likely to increase the incidence of this defence being run by the auditors.[227]

In fact, a somewhat similar result seems to have been obtained before this reform through the use by auditors of "representation letters", which auditors require companies to sign before the auditors will certify the accounts. In these letters the company

typically promises “to the best of its knowledge and belief” that certain important matters concerning the company’s financial situation are in a particular state.[228] If such a representation letter is signed negligently on behalf of the company, the auditors will have the partial defence of contributory negligence if subsequently sued by the company and it can be shown that the auditors would not have certified the accounts, or not certified them without further investigation, had they known the true facts. If the representation letter is signed fraudulently, the auditors have a complete defence, because any damages due from the auditors to the company can be wholly set off in the claim the auditors have against the company for deceit committed by the company against the auditors.[229]

In the above cases the situation is one where the both the auditors and the directors or senior management of the company failed to discover the fraud or negligence of a subordinate employee and where both are at fault in failing to do so. Reducing the company’s recovery seems acceptable in this context for otherwise the existence of auditor liability would provide an incentive for companies not to manage their internal risk systems effectively. What is much less clear is whether the auditors should be permitted to build a defence of contributory negligence directly on the actions of the subordinate employee, i.e. in a situation where the only failure to discover the fraud or negligence is that of the auditors. The argument against allowing contributory negligence on this basis is that it reduces the incentive of the auditors to discover wrongdoing within the company—sometimes put as the argument that contributory negligence should not be based on conduct within the company which was “the very thing” (or one of those things) the auditors were under a duty to discover.

22–40

In *Barings Plc (In Liquidation) v Coopers & Lybrand*[230] the judge took account of both management failings and the undiscovered fraud of the employee (which was attributed to the company) in assessing the level of the company’s contributory negligence. Applying this approach the judge assessed the company’s contributory negligence at a high level, varying over the time of the fraud, beginning at a 50 per cent contribution and

ending at 95 per cent. However, the judge did recognise some force in "the very thing" argument,[231] for it appears that he would otherwise have attributed the employee's fraud to the company so as to allow the auditors to avoid all liability. We need thus to consider again the rules on attribution, which we looked at in Ch.7, but here in a different context. In Ch.7 we considered attribution in the context of litigation by third parties against the company; here we consider litigation by the company against third parties. It is not obvious that the attribution rules should be the same, at least where the third party is the auditor, precisely because of the protective function of the auditors as against the company, which a broad set of rules on attribution might undermine.

22–41

The issue arose in an extreme form in *Stone & Rolls Ltd v Moore Stephens*[232] where the defendant auditors sought to raise the defence of illegality as a complete defence to liability. In this case a person who was the sole beneficial shareholder and controlling shadow director of a company established it for the purpose of committing large-scale fraud on banks. The company, in liquidation, sought compensation through its liquidator (acting in the economic interests of the creditors) for the allegedly negligent failure the defendant auditor to discover the fraud. The defendant sought to strike out the claim on the basis of an illegality defence usually referred to by its Latin name: ex turpi causa non oritur actio (roughly translated as "disgraceful conduct does not give rise to a cause of action"). This is a rule of public policy that the court will not allow its processes to be used by a claimant to benefit from its own illegal conduct. In this case, the majority by three to two allowed the defence, because of the controller's fraud, though on rather different grounds. As the Supreme Court itself said in a later case, *Jetivia SA v Bilta (UK) Ltd*,[233] "it is very hard to derive much in the way of reliable principle from the decision" in the earlier case.

In the later case, however, all the judges seemed to agree on one proposition, namely, that the ex turpi defence is available only if there are no "innocent" (i.e. uninvolved in the fraud) shareholders or directors in the company. The decision thus affects only a limited number of claims by companies against

their auditors. There was disagreement, however, on whether the defence was always available in the absence of innocent shareholders (and, perhaps, directors).[234] This was the most significant dividing line among the judges in *Stone & Rolls* itself. Since the company was in liquidation at the time of the litigation, the persons with an economic interest in the success of the claim were its creditors (i.e. the defrauded banks), who were "innocent". If the presence of innocent shareholders would have been enough to prevent use of the ex turpi defence by the auditors, presumably on the grounds that a public policy defence should not be deployed to deprive non-involved persons of the value of their interest in the company, it can be argued that the presence of innocent creditors of a company in liquidation should have the same negative impact on the availability of the defence. This argument does not involve acceptance of the proposition that auditors' duties are owed to the company's creditors (an argument which, as we see in the next section, the courts have accepted only in limited situations). The duty here is still one owed by the auditors to the company; the litigation is brought by the body which has the management of the company —the liquidator in this case; and the basis of the auditor's liability remains restoration of the company's assets to the level they would have enjoyed had the auditors not been negligent. The point rather is that, so long as the company is a going concern, the residual economic interest in the company's assets lies with the shareholders, so that excluding liability where all the shareholders are involved in the fraud is understandable. However, once the company is in the vicinity of insolvency, the residual economic interest shifts to the creditors, as the law now clearly recognises.[235] If the interests of non-involved shareholders trump the ex turpi defence when the company is a going concern, it would be consonant with recent developments in company law that the interests of non-involved creditors should be taken into account in the same way.[236]

Limitation by contract

22–42

It was formerly impossible for auditors to limit their liability to the company by means of a contract with it or by provision in

the company's articles, or to obtain an enforceable promise of an indemnity from the company in respect of such liability,[237] but one of the main changes in the 2006 Act was to permit such contracts, subject to safeguards.[238] The indemnity prohibition did and does not apply if it relates to an agreement or provision to indemnify the auditor against a liability incurred in defending proceedings, criminal or civil, in which the auditor is successful or in making a successful application for relief under s.1157 of the Act.[239] This is a limited qualification to the prohibition which does no more than track the provisions relating to directors.[240]

The innovation is the permission for the auditor and company to contract to limit the amount of a liability the auditor owes to the company arising out of a breach of duty in the conduct of the audit. The section is widely enough drafted to permit the parties to introduce proportionate liability by agreement. This reform was recommended by the CLR but it is subject to reasonably strict safeguards. The principal ones are as follows:

(a) The agreement is effective to limit the auditor's liability only to the amount that is fair and reasonable in the circumstances, having regard, amongst other things, to the auditor's responsibilities under the Act and the professional standards expected of the auditor.[241] If the agreement goes further than is permitted by this provision, then it operates so as to limit liability to the permitted level, i.e. the agreement does not fail altogether.[242] The agreement is exempted from the control provisions of the Unfair Contract Terms Act 1977,[243] which applies a reasonableness standard to similar limitations of negligence liability in many contracts. In short, the auditor limitation clause is subject to ex post court control by reference to a broad standard, as under UCTA, but the significance of the exclusion from UCTA 1977 is that a clause which fails the test under the 2006 Act still operates, but at a lower level of substantive protection.

(b) The agreement may relate to only a single financial year, i.e. a new agreement is needed for each set of annual reports and accounts.[244]

(c) The agreement must be approved by the members, though in the case of a private company the members, before the

company enters into the agreement, may pass a resolution waiving the need for approval.[245]

To provide a check that these requirements have been met, a note to the companies accounts must set out the principal terms of the liability limitation agreement and the date on which it was approved by the members (or approval was waived).[246]

The FRC produced guidance on the operation of these provisions,[247] which contemplates three main types of agreement: proportionate liability, a "fair and reasonable" test and a cap on liability, which could be expressed in a number of ways, but most obviously as a multiple of the audit fee. However, institutional shareholders have indicated that they will normally vote in favour only of proportionate liability agreements and, in particular, will be opposed to caps on liability.[248] Further, they will expect an improvement in audit quality in exchange for the agreement, in particular, less defensive auditing.

Criminal liability

22–43

The 2006 Act reform, permitting auditor liability limitation agreements, was accompanied by an increase of criminal liability for an auditor who knowingly or recklessly makes a statement in the audit report which is misleading, false or deceptive.[249] In other words, the deterrent effect of unlimited liability in damages for negligence was to some extent replaced by a narrower criminal liability for intentional or reckless misstatements.[250] The liability applies to the statement that the accounts give a true and fair view[251] and to statements in the audit report about the compliance of the company's accounts with its accounting records, about whether the necessary information and explanations were forthcoming from management and others, and about whether the company was entitled to prepare accounts under the small companies regime.[252] Curiously, however, the liability applies only to that part of the auditor's report which deals strictly with the accounts. Thus, it does not apply to the auditor's report on the directors' or strategic report, the separate corporate governance statement or the auditable part of the directors' remuneration report. In this

respect, the criminal liability of auditors is narrower than that of directors, which extends to knowing or reckless authorisation of publication of non-compliant directors' reports as well as of accounts.[253] There was much pressure in Parliament from the auditing profession to remove the liability for recklessness, but the Government stoutly resisted it.[254]

Claims by Third Parties

The duty of care in principle

22–44

The issues discussed above relating to breach of duty and loss arise in relation to third-party claims (i.e. claims by anyone other than the audit client) as well, but the prior and most controversial issue has been to define the circumstances in which a duty of care will be owed at all by the auditors to third parties. Here the courts have applied in the auditing context the general common law rules governing the duty of care in relation to economic loss caused by negligent misstatement. Until less than 50 years ago, this was not a live issue, because until the decision in *Hedley Byrne & Co Ltd v Heller & Partners Ltd*[255] the law of negligence did not recognise a general duty to take care to avoid misstatements causing economic loss. Liability in damages could, and still can, be based on the tort of deceit, as had been recognised in the nineteenth century, but that liability is subject to two major restrictions. First, liability arises only if the maker of the statement knows that it is false or makes it not caring whether it is true of false, so that an honest, even if unreasonable, belief in the truth of the statement protects its maker from liability in deceit (or fraud).[256] Secondly, the maker of the statement must intend the claimant (or a class of persons of whom the claimant is one) to rely on the statement.[257] The effect of the first limitation is to restrict the circumstances in which liability in deceit will arise and the effect of the second is to restrict the range of potential claimants if it does arise. The impact of the decision in *Hedley Byrne* was to side-step both these limitations, which are not part of the tort of negligence. However, it was not at all clear from *Hedley Byrne* (which was not a case concerning the audit) when the new duty of care to avoid misstatements[258] causing economic loss would be imposed

on auditors.

22–45

The answer to these questions, at least in broad outline, was provided by what is undoubtedly the leading case on the application of these rules to auditors, the decision of the House of Lords in *Caparo Industries Plc v Dickman*,[259] and was provided in a way which gave greater comfort to auditors than to investors. The facts of the case are worth recounting briefly. Like many of the cases decided around this period, the factual background of *Caparo* involved the purchase of a company whose economic prospects were discovered after the purchase to be less promising than the purchaser had thought beforehand. The purchaser then looked around for someone to sue in respect of what was alleged to be the misleading information about the company which had been made available. In *Caparo* the purchase was of a target company listed on the London Stock Exchange by another such company through a takeover offer preceded by share purchases in the market. The target company had issued a profit-warning in March 1984, which caused its share price to halve. In May 1984 the directors of the target made a preliminary announcement of its annual results for the year to March 1984, which confirmed that profits were well short of expectations. This caused a further, though less dramatic, fall in the share price. In June the annual accounts were issued to the shareholders. Shortly before the June date, Caparo, which had previously owned no shares in the target, began acquiring shares in tranches until it reached a shareholding of 29.9 per cent, at which point (after the accounts had been circulated) it made a general offer for the remaining shares, as the Takeover Code required it to do if it was to acquire any more of the target's shares.[260] Caparo asserted that the 1984 accounts, although gloomy, in fact overvalued the company and that the auditors had been negligent in not detecting the irregularities or fraud which had led to the overstatements in the accounts and in certifying the accounts as representing a true and fair view of the company's financial position.

The House of Lords' examination of the statutory framework for company accounts and audits led them to the following conclusions. The statutory provisions establish a relationship

between those responsible for the accounts (the directors) or for the audit report (the auditors), on the one hand, and some other class or classes of persons, on the other, and this relationship imposes a duty of care owed by the directors or auditors to those persons. Among these "persons" is the company itself, to which, apart altogether from the statutory provisions, the directors are in a fiduciary relationship and the auditors in a contractual relationship by virtue of their employment by the company as its auditors. However, the statutory provisions do not establish such a relationship with everybody who has a right to be furnished with copies of the accounts or report or, a fortiori, with everybody who has a right to inspect or obtain copies of them from the Registrar of companies (i.e. the world at large).[261] If a relationship other than with the company is to be established so as to give rise to a duty of care, it can be only with the members of the company (and perhaps debenture-holders) and, even in their case, the scope of the resulting duty of care extends only to the protection of what may be described as the members' corporate governance powers to safeguard their interests in the company. Not within the scope of the duty are shareholders' decisions to buy further shares in the company even if it is a perusal of the annual accounts and reports that led them to do so.[262]

22–46

To establish a duty of care to members which is greater in scope than this, or to establish any duty of care to other persons, there must be an additional "special" relationship with the person who suffered loss as a result of relying on the accounts or report. To succeed in establishing that additional relationship, the claimant must show that the auditors (or directors) contemplated that the accounts and report:

> "would be communicated to the plaintiff either as an individual or as a member of an identifiable class, specifically in connection with a particular transaction or transactions of a particular kind (*e.g.* in a prospectus inviting investment)[263] and that the plaintiff would be very likely to rely on it for the purpose of deciding whether or not to enter upon that transaction or upon a transaction of that kind."[264]

Caparo thus represented a firm rejection by the House of Lords of the proposition that negligent auditors were liable to those who it was reasonable to foresee would rely on the audited

accounts and who suffered loss as a result of such reliance.[265] Instead, the House confined the common law duty of care more narrowly. For the reasons given below this policy has much to commend it. However, deducing it from the statutory framework set by the Companies Act for company accounts and their audit is not straightforward.[266] Their lordships' analysis of that framework gives very little weight to the purposes Parliament might have had in mind when steadily requiring ever greater levels of public disclosure of financial reports rather than just their circulation to members and other current investors in the company.

Assumption of responsibility

22–47

Not surprisingly, the case law after *Caparo* has concentrated on seeking to determine the basis or bases upon which it will be possible for claimants to establish a "special relationship" or, as it is now often called in the light of subsequent general developments in the law of negligence, an "assumption of responsibility" on the part of the auditors towards the claimant. Third parties naturally seek to point to facts from which liability could be inferred; auditors to include statements in their report which disclaim any liability to third parties. A crucial initial issue is that the special relationship does not require that the auditor should consciously have assumed responsibility. The test is an objective one and the question for the court is whether, in all the circumstances, it is appropriate for the auditors to be treated as having assumed responsibility.[267]

22–48

In *Barclays Bank Ltd v Grant Thornton UK LLP*[268] the judge held that a disclaimer in an audit report of liability to third parties was effective to negative[269] liability on the part of the auditor towards a sophisticated third party. The disclaimer was clear[270] and its inclusion in a short audit report was enough to bring it to the attention of the sophisticated third party. The main issue was whether the disclaimer satisfied the "reasonableness" requirement of s.2 of the Unfair Contract Terms Act 1977, from which a disclaimer, unlike a limitation of liability agreement,[271] is not exempted. The judge thought that the bank's argument that

the clause was unreasonable had no real hope of success and so struck out the claim. Not only was Barclays in general terms a sophisticated third party, but it was aware of the practice of auditors' disclaiming liability to third parties. Indeed, in other aspects of the same transaction the bank had expressly contracted with the auditors to accept liability, which the auditors had agreed to do, subject to a cap on their liability. The bank was in effect seeking to be better off for not having contracted (because liability would be uncapped) than it was in the situations where it had expressly contracted with the auditors to accept liability.

22–49

A number of different situations have been considered by the courts where no disclaimer has been present, though one may imagine that express disclaimers are becoming routine. First, within groups of companies, the courts have accepted that it is arguable that the auditors of a subsidiary company owe a duty of care to the parent company, since the production of individual accounts is an integral part of the process of producing both the parent's accounts and consolidated accounts.[272] However, the losses for which the auditors are potentially liable in such a case will be restricted by the uses to which it can be contemplated the accounts will be put by the parent. Thus, in the standard case the subsidiary's auditors should contemplate that the parent will use the consolidated or parent's accounts for the purposes to which parent companies normally put them (payment of dividends to shareholders of the parent or bonuses to senior staff), but this will not necessarily lead to the auditors being liable for other types of loss, in this case loss flowing from the parent's decision to continue to fund the subsidiary.[273] It is less obvious that, on the above argument, the auditors of the parent will owe a duty of care to subsidiary companies of which they are not the auditors, but the Court of Appeal refused to strike out such claim where, because of the way the group was run in practice, the auditors of the various group companies co-operated to a high degree.[274]

A second established area of tortious duty to "third" parties involves the directors of the company by which the auditors have been engaged. Although the Act presents the compilation of the accounts by the directors and their audit as consecutive and

separate events, in practice the two overlap, with the directors finalising the accounts at the same time as the audit is in progress on the basis of draft accounts. On this basis, it has been held to be arguable that the auditors are under a duty to alert the directors immediately if the auditors form the view that the directors' approach to the accounts is misconceived in some respect. The directors are not obliged to accept the auditors' views but are entitled to be informed before they commit themselves, with the risk that their approach may lead to the accounts being qualified by the auditors.[275]

22–50

However, the most obvious strategy suggested by the *Caparo* decision for investors in or lenders to the company (or, sometimes, its regulator), who do in fact propose to rely on the company's accounts, is to seek to make the auditors aware of their intentions in advance of the transaction and to secure from the auditors an ad hoc assumption of responsibility for the accounts in relation to the contemplated transaction. Where such an approach is made explicitly and openly and the auditors accept responsibility, there is little to be said against holding the auditors liable for negligent audit. The auditors have the opportunity not to accept wider responsibility or to do so on explicit terms, which may limit their liability and involve compensation being paid to them for assuming the additional risk. The question is whether the auditors can or should be made liable on the basis of anything less than a near-explicit bargain with the lender or investor. It has been held that it is not enough to attract liability to the third party that the auditor repeated its conclusions to that person. The crucial question is whether the terms of the request from the third party can be said to have made it clear to an auditor in the defendant's position the purpose for which the repetition was required and the fact that the auditor's skill and judgment were being relied upon.[276] Although this approach falls short of an explicit bargain, it does require that the auditor be made aware of the nature of its commitment before liability in tort is imposed for the benefit of the third party.

22–51

Although the *Caparo* decision was controversial amongst those interested in the general theory of the law of tort (because of its rejection of the foreseeability test in the area of negligent misstatements) and although the court's reliance on the statutory structure for the accounts seems overblown, the line drawn in that case has been followed by other top-level courts in the common law world, notably Australia and Canada.[277] Its effect, in the core case where no duty arises, is to insulate the audit transaction (and thus the fee charged by auditors to companies for carrying it out) from having to bear the investigation costs of other transactions which third parties may wish to carry out (whether by way of loan or equity purchase) with the company. Since the auditors are in a very poor position to estimate the risks associated with those other transactions, about which they will have little, if any, information, exclusion of liability is probably necessary for the maintenance of the market in audit services. The burden thrown on third parties by this approach is, by contrast, relatively slight. If the state of the company's finances is important to their transaction, as it often will be, they can either pay someone else to replicate the due diligence which the auditors have carried out or, more likely, seek through the special circumstances exception to persuade the auditors to accept responsibility for their report in the context of the third party's transaction. This gives the auditors the opportunity to assess the risks of the particular transaction and to respond appropriately.[278] In principle, there seems to be no reason why the audit should subsidise investigation activities necessary for transactions between third parties and the company in the absence of near-express agreement by the auditors to accept the potential liability.[279]

Other issues

22–52

Even if duty is established, the claimant will still have to satisfy the other ingredients for tortious liability which have been discussed above in relation to claims by the audit client. Thus in *JEB Fasteners Ltd v Marks Bloom & Co*,[280] which would today be regarded as a "special circumstances" case, Woolf J held that, although all the conditions necessary for success other than

causation had been established, the claimant failed on that since it would have entered into the transaction (a takeover) even if the accounts on which it had relied had presented a wholly true and fair view of the company's financial position, its main object having been to secure the managerial skills of two executive directors.[281]

Conclusion

22–53

The audit has been subject to two very different legislative policy influences in recent years: on the one hand, a desire to relieve small companies of the need to have one and, on the other, a desire to make the audit of large, especially listed, companies a more effective check on the financial probity and corporate governance standards of management. The former is easy to effect as a matter of legal technique, though conclusive cost/benefit analysis of the audit of small companies is not available to demonstrate where the line should be drawn and the audit should remain mandatory. The latter policy drive has had a positive consequence so that the status of company auditors has, in the course of the past century, been transformed from that of somewhat toothless strays given temporary house-room once a year, to that of trained rottweilers, entitled to sniff around at any time and, if need be, to bite the hands that feed them. However, even rottweilers may learn that biting the hand that feeds you is not a policy conducive to happiness for the biter. Through a combination of domestic and EU initiatives a substantial structure has been put in place aimed at addressing issues of independence and competence, using a wide range of legal techniques, some more firmly located in company law than others. In the course of this process EU law has come to play an increasingly central role.

---

[1] In this chapter references to the "Directive" are to the 2006 Directive as amended; where it is necessary to mention the other directives, they are referred to as the "2013 Directive" and the "2014 Directive" respectively.

[2] Regulation art.1, cross-referring to art.1(2)(f) of the Directive. The PIE definition embraces in addition banks and insurance companies, whether their securities are traded on a regulated market or not, but the special rules for financial institutions are ignored in this chapter. For the definition of regulated markets see para.25–8. In the UK one can think of the term as referring to the Main Market of the London Stock Exchange.

[3] Regulation (EU) No.537/2014. Some rules specific to PIEs had been included in the 2006 Directive. References in this chapter to the “Regulation” are to the 2014 Regulation.

[4] The 2014 Directive was transposed by the Statutory Auditors and Third Country Auditors Regulations 2016, which made changes to the Companies Act 2006 (hereafter “Statutory Auditors Regulations”). In addition, the domestic Regulations embedded the EU Regulation in domestic law and exercised the choices given to the UK under the Regulation. At the time of writing only a draft of this statutory instrument was available.

[5] See para.22–11, below.

[6] For the distinction between individual and group accounts see para.21–9.

[7] On the meaning of this term see para.21–16.

[8] 2006 Act s.495(3). On the role of the IAS Regulation see para.21–18. For micro-company accounts the requirement about accounting standards is qualified by s 495(3A) for the reasons explained in para.21–20.

[9] 2006 Act s.496. On the directors’ report see para.21–23.

[10] 2006 Act ss.496 and 497A. On the strategic report see para.21–24, and on the corporate governance statement Disclosure and Transparency Rules 7.2, made by the FCA. In the case of the latter the auditor must report whether the DTR of the FCA have been complied with. The mandatory report on this statement indicates, among other things, the increased importance attached to internal control and risk management, as does the requirement on the auditors to state whether a separate corporate governance statement has been prepared if the directors have not chosen to include in their report (s.498A).

[11] 2006 Act s.487. The auditable part of the DRR is that set out in Pt 3 of Sch.8 to the Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008/410 (see reg.11(3)). On the directors’ remuneration report see para.14–44.

[12] 2006 Act s.495(4).

[13] The auditor may refer to matters to which attention needs to be drawn without necessarily qualifying the report: s.495(4)(b).

[14] Regulation art.10.

[15] 2006 Act s.495(4)(c). This is a new requirement in the Act (as from 2016) but auditing standards previously required such discussion.

[16] 2006 Act s.498(1),(2).

[17] 2006 Act s.498(3).

[18] 2006 Act s.498(5). On the small business definition see para.21–4.

[19] 2006 Act s.498(4).

[20] Below, para.22–21.

[21] The basic principle of a mandatory audit of the statutory accounts is laid down in s.475.

[22] BIS, *Consultation on Audit Exemptions and Change of Accounting Framework*, October 2011 (URN 11/1193), para.32.

[23] DTI, *Accounting and Audit Requirements for Small Firms: A Consultative Document* (1985) and *Consultative Document on Amending the Fourth Company Law Directive on Annual Accounts* (1989). The Fourth Directive, however, permitted Member States to exempt small companies from the audit.

[24] Repealed and replaced by Directive 2006/43/EC as from June 2006.

[25] Companies Act 1985 (Audit Exemption Regulations) 1994 (SI 1994/1935).

[26] Companies Act 1985 (Audit Exemption) (Amendment) Regulations 1997 (SI 1997/936).

[27] Companies Act 1985 (Audit Exemption) (Amendment) Regulations 2000 (SI 2000/1430).

[28] Final Report I, paras 4.29–4.31 and 4.43–4.45.

[29] See para.21–4.

[30] Exemption from audit for small companies is permitted by art.34 of the 2013 Directive.

[31] However, all but the smallest charitable companies remain subject to audit under the Charities Act 2011. The reason for these more stringent requirements for charities appears to be that the persons with the strongest financial interest in whether a charitable company uses its money properly are its donors, but they are not typically members of the company and so do not have access to the control rights over the management of the company which members have. Thus, there is a stronger case for third-party verification than in the case of the accounts on non-charitable small companies. No doubt for this reason as well one sees in the charities legislation full use made of the technique of requiring auditors or reporting accountants to make reports to the regulator, the Charities Commission.

[32] 2006 Act s.477(1) and see para.21–4.

[33] 2006 Act ss.478–479.

[34] 2006 Act ss.478(a),(b). Also excluded are companies in the financial services sector.

[35] 2006 Act s.479(1). The concept of an “ineligible group” we have analysed at para.21–10.

[36] Or 10 per cent in number of the members if there is no share capital.

[37] 2006 Act s.476.

[38] 2006 Act s.475(2)–(4). This provision applies to the exemption on grounds of dormancy as well.

[39] 2006 Act s.495(3A). On the accounting standards for micro companies see para.21–20.

[40] 2006 Act s.479A.

[42] 2006 Act ss.479A(1)(2) and 479B(a).

[43] 2006 Act s.480(1).

[44] 2006 Act s.1169.

[45] 2006 Act s.480(1)(a).

[46] See above, para.4–9.

[47] See above, para.21–4.

[48] 2006 Act s.480(2).

[49] The dormant company exemption is not available to companies whose securities are traded on a public market, but it is rare for such a company to be dormant (s.481(za)).

[50] 2006 Act s.482(1).

[51] See J. Coffee Jr, *Gatekeepers* (Oxford: OUP, 2006), especially Ch.5.

[52] European Commission, "Proposal for a Regulation… on specific requirements regarding statutory audit of public interest entities", COM(2011) 779 final, 30 November 2011, p.2.

[53] Directive art.32.

[54] On the FRC see para.21–17.

[55] Directive art.32(4b) and Regulation art.24(1).

[56] Statutory Auditors Regulations reg.3(1)(2)

[57] 2006 Act s.1217 and Sch.10 Pt 1.

[58] 2006 Act s.1212(1)(a).

[59] 2006 Act Sch.10 para.9.

[60] 2006 Act s.1214(1)–(3). Section 1214(5) expressly states that, for this purpose, an auditor is not to be regarded as an "officer or employee". This hardly needs saying, for if he were, he would become ineligible immediately upon appointment! The definition of "officer" in the Act ("officer—includes a director, manager or secretary or, where the affairs of the company are managed by its members, a member": s.1261(1)) might seem in any event to exclude auditors. Nevertheless, they have been held to be "officers" in a number of corporate contexts: *Mutual Reinsurance Co Ltd v Peat Marwick Mitchell & Co* [1997] 1 B.C.L.C. 1 CA; *Re London & General Bank (No.1)* [1895] 2 Ch. 166 CA; *Re Kingston Cotton Mills (No.1)* [1896] 1 Ch. 6 CA.

[61] 2006 Act s.1214(6); i.e. a parent or subsidiary undertaking of the company or a subsidiary undertaking of any parent undertaking of the company.

[62] 2006 Act s.1215(1).

[63] 2006 Act ss.1248–1249. The provisions also apply—and in practice are probably more important—where the auditor is ineligible to be appointed (for example, because not qualified) rather than prohibited from acting on grounds of lack of independence: s.1248(3). The sections appear not to apply to lack of independence solely under the FRC's standards discussed below.

[64] Though the shareholding might make the auditor a more diligent watchdog over the members' interests—but members are not the only people whose interests he should protect.

[65] Statutory Auditors Regulations Sch.1 paras 3–6.

[66] FRC, *Ethical Standard*, 2016, §2, which devotes some twenty pages to the topic.

[67] See D. Kershaw, “Waiting for Enron: The Unstable Equilibrium of Auditor Independence Regulation” (2006) 33 Journal of Law and Society 388, 394. This is a valuable article on the whole issue of auditor independence.

[68] The Companies (Disclosure of Auditor Remuneration and Liability Limitation Agreements) Regulations 2008/489 (as amended by SI 2011/2198) reg.5(3) and Sch.2A, made under s.494 of the Act.

[69] Remuneration and Liability Regulations reg.5(4).

[70] Remuneration and Liability Regulations reg.5(1)(b)(ii) and Sch.1.

[71] Remuneration and Liability Regulations reg.4. For the definition of medium-sized, see para.21–5, above.

[72] The major accounting firms are organised as more or less closely linked partnerships operating under a single brand.

[73] Regulation art.5. Examples are tax advice and services involving taking management decisions. If the group member is incorporated outside the EU, the requirement is that the auditor assess the level of conflict and be able to justify the continued provision of the non-audit services—but some of the services prohibited within the EU are regarded as incapable of justification (art.5(5)).

[74] Regulation art.5(4).

[75] Regulation art.4(2). This constraint applies only if the auditor has supplied both types of service over a period of three consecutive years.

[76] FRC, *Ethical Standards*, §5.

[77] Commission Recommendation 2002/590/EC on statutory auditors’ independence in the EU [2002] O.J. L191/22.

[78] Regulation art.17(7).

[79] Regulation art.2(16), apparently translated in the Act as “senior statutory auditor”: s.504.

[80] FRC, *Ethical Standards*, para.3.10.

[81] 2006 Act Sch.10 para.10c(1) reflects the original Directive requirements but note para.10(1A) requiring compliance with the stricter rules of the FRC, taking up an option under the Regulation.

[82] Above fn.52, para.3.3.3. In 2012 the FRC amended the CGC to recommend that FTSE 350 companies put their audit business out to competitive tender at least every 10 years. In the light of the EU Regulation this recommendation has been removed from the 2016 CGC.

[83] Regulation art.17. The tendering process is governed by art.16. This Member State choice is implemented in the UK by s.491(1A)(1B). Although not absolutely clear from the Regulation, the UK rules allow a re-tendering process to occur after less than ten years and for the incumbent auditors, if successful, to remain for ten years after that process.

[84] The Statutory Audit Services for Large Companies Market Investigation (Mandatory Use of Competitive Tender Processes and Audit Committee Responsibilities) Order 2014.

[88] 2006 Act s.502(2).

[89] 2006 Act s.502(1).

[90] See para.21–42.

[91] 2006 Act ss.489(4) and 491(1)(b).

[92] 2006 Act s.489(3)—to fill a casual vacancy, after a period in which the company has not been required to have an audit, before its first accounts meeting.

[93] Regulation art.16.

[94] 2006 Act s.492(1).

[95] 2006 Act s.493 and the Companies (Disclosure of Auditor Remuneration and Liability Limitation Agreements) Regulations 2008/489 regs 4 and 5 (hereafter the "Remuneration and Liability Regulations"). Generally, they criticise only if the amount seems abnormally high; they should perhaps be more alarmed if it is abnormally low.

[96] 2006 Act ss.485, 487. We ignore the special rules which apply to private companies which are PIEs because this categories embraces only financial institutions (and probably very few of them). See fn.2, above.

[97] 2006 Act s.485(3).

[98] 2006 Act s.487.

[99] 2006 Act s.487(2)(b).

[100] 2006 Act s.487(2)(d).

[101] 2006 Act ss.487(2)(c) and 488.

[102] See para.14–49.

[103] 2006 Act s.510. A meeting is required, as for the removal of a director, even in the case of a private company: s.288(2).

[104] 2006 Act s.510(4). The articles often provide for directors to be removed by resolution of the board.

[105] 2006 Act s.511.

[106] 2006 Act s.511(2).

[107] 2006 Act s.511(3)–(5). The auditor should ensure that it is received in time since otherwise members may return proxy forms before they see his representations. But see subs.(6) regarding restraint by the court if the section is being abused "to secure needless publicity for defamatory matter". The auditor also has a general right to attend and speak at shareholder meetings. See para.22–24, below.

[108] 2006 Act ss.513 and 502(2).

[109] 2006 Act s.510(3).

[110] DTI, *Implementation of Directive 2006/43/EU: A Consultation Document*, March 2007, at paras 3.34 et seq.

[111] See Ch.20.

[112] 2006 Act s.994(1A).

[113] Directive art.38—an example of a PIE provision being contained in the Directive. This is implemented in the UK by 2006 Act s.511A.

[114] 2006 Act s.516(1).

[115] 2006 Act s.519(1). The statement must be virtually contemporaneous with the departure.

[116] These circumstance are set out in s.519A(3).

[117] 2006 Act s.519(2A)—or its equivalent in the case of a private company.

[118] 2006 Act s.519(3A). In the case of a dismissal this obligation to the company may be overtaken in practice by the auditor's entitlement (discussed above) to circulate representations to the meeting at which the dismissal is to be considered (an opportunity which arises before the dismissal whilst the statement of circumstances is to be made only after dismissal). A statement by a non-PIE auditor must state that there are no matters to be drawn to the attention of shareholders and creditors, if this is the case.

[119] 2006 Act s.518—or, without requisitioning a special meeting, the auditor might require the statement to be read out at the next regular accounts meeting: s.518(3).

[120] The section might be used by a resigning auditor who does not want to go quietly, but wishes to avoid the ignominy of being sacked.

[121] 2006 Act s.520—unless the statement says that there are no matters to be drawn to the attention of members or creditors. The company may alternatively apply to the court to be relieved of the circulation obligation if the auditor is using the provision to secure publicity for defamatory matter. The company must then send to members or debenture-holders a statement setting out the effect of the order. There is a risk that a company will use the appeal procedure simply to delay circulation of the auditor's statement, discontinuing the application just before it is due to be heard. Such action places the company at risk of having to pay the auditor's costs on an indemnity basis: *Jarvis Plc v Pricewaterhouse Coopers* [2000] 2 B.C.L.C. 368.

[122] 2006 Act s.521.

[123] 2006 Act s.522.

[124] Above, para.22–18.

[125] 2006 Act s.312.

[126] 2006 Act s.515(2),(3). The provisions of the section apply also where the period for re-appointment has passed without an appointment being made and the company later decides to appoint someone other than the outgoing auditors. Otherwise the section's requirements could be easily avoided.

[127] 2006 Act s.515(4)–(7).

[128] 2006 Act s.514.

[129] 2006 Act s.519(1), which applies where an auditor "ceases for any reason to hold

office”.

[130] 2006 Act ss.521(1) and 522(1).

[131] 2006 Act s.520(1). All this is somewhat pointless if the auditor is ceasing to hold office as the result of a re-tendering exercise.

[132] 2006 Act s.523(1) applies only where the auditor is ceasing to hold office other than at the end of an accounts meeting (or its private company equivalent).

[133] Regulation art.7.

[134] Regulation art.12. These provisions are reflected in International Standard on Auditing (UK and Ireland) 210, issued by the FRC.

[135] Regulation art.12(3).

[136] See International Standards on Auditing (UK and Ireland) No.110, *Fraud and Error*; and No.250A, *Consideration of Laws and Regulations in an Audit of Financial Statements*, both 2009. In the financial services area extensive reporting obligations are imposed on auditors in favour of the regulator: FSMA 2000 Pt XXII.

[137] *Sasea Finance Ltd v KPMG* [2000] 1 All E.R. 676 CA, where the court refused to strike out a claim for loss suffered by the company where the auditors discovered fraud on the part of those in control of the company and failed to report it to the relevant authorities.

[138] Ch.15 at para.15–58.

[139] One listed in the UK or any other EEA state or on the New York Stock Exchange or Nasdaq: ss.531 and 385.

[140] Above, para.15–56.

[141] 2006 Act s.527(2),(3). This is one of the sections where those to whom governance rights have been transferred may act: s.153(1)(d) and above, para.15–34.

[142] 2006 Act s.528(4). Failure to do so is a criminal offence on the part of every officer in default.

[143] 2006 Act s.527(5),(6).

[144] 2006 Act s.529(3).

[145] 2006 Act s.529(2).

[146] See para.25–6.

[147] See para.14–75.

[148] The core obligation to “comply or explain” in relation to the CGC is also embodied in FCA rules (Listing Rule 9.8.6(5)(6)). Since PIEs are essentially listed companies, use of FCA rules is a convenient way of focusing on the correct sub-set of companies as far as their governance structure is concerned.

[149] There are some exceptions in art.39(3), of which the most important for our purposes is a subsidiary where the requirements of the Directive are met at group level.

[150] Under art.39(1) it could be a “stand-alone” committee, but we ignore this possibility as unrecognised in UK practice.

[151] Because of the flexibility inherent in the “body” requirement the UK has not taken up the specific Member States option (art.39(2)) to assign to the board as a whole the audit committee’s functions in small and medium-sized companies and companies with small market capitalisation.

[152] Shareholder appointment to the audit committee fits more naturally with systems where the audit committee is a stand-alone committee.

[153] Regulation art.16.

[154] Except in the case of PIEs which are small or medium-sized or have a market capitalisation of less than €100 million. “Small or medium-sized” has a special meaning here which is not the same as for the accounts directives (see para.21–4) but is a more expansive set of criteria derived from the prospectus directive, involving meeting two of the following three criteria: an average number of employees during the financial year of fewer than 250, a total balance sheet not exceeding €43 million and an annual net turnover not exceeding €50 million (art.16(4)).

[155] Regulation art.16(5).

[156] See paras 22–4 and 22–5.

[157] Regulation art.11.

[158] Many accounting rules require the disclosure of only “material” items.

[159] Regulation art.5(4). See para.22–13, above.

[160] Regulation art.4(3).

[161] See para.21–12, above.

[162] Regulation art.6(3).

[163] Regulation art.27(1)(c), though this provision is placed in an article dealing predominantly with the operation of the market for audit services.

[164] Directive art.39(6).

[165] UK CGD, C.3.2-7.

[166] C.3.8 and E.2.3.

[167] For the present version of that guidance see FRC, *Guidance on Audit Committees*, 2012, likely to be revised soon in the light of the Directive and Regulation.

[168] FRC, *Guidance on Risk Management, Internal Control and Related Financial and Business Reporting*, 2014.

[175] 2006 Act Sch.10 para.6.

[176] 2006 Act s.1221.

[177] 2006 Act ss.1239–1247 and the Statutory Auditors Regulations Pt 4.

[178] For accounting standards see, above, at para.21–16.

[179] Statutory Auditors Regulations reg.3(1)(l)(m).

[180] Regulation art.24(1).

[181] Regulation art.29.

[182] Regulation art.26.

[183] Regulation art.13.

[184] Regulation arts 30–30b. The investigation provisions are transposed into domestic law by Sch.2 to the Statutory Auditors Regulations.

[185] Regulation art.23(3).

[186] Regulation art.30a, reflected in the Statutory Auditors Regulations reg.5.

[187] As the Act requires: s.498(3).

[188] 2006 Act s.499(1).

[189] 2006 Act s.499(2). Statements so made may not be used in subsequent criminal proceedings against the maker (except in respect of offences connected with the making of the statement) and the requirement is subject to an exception for legal professional privilege: s.499(3),(4).

[190] 2006 Act s.500.

[191] 2006 Act s.501. However, for the foreign subsidiary or those connected with it to make an inaccurate statement is not a criminal offence (s.501(1) applies only to s.499), probably an unavoidable loop-hole, since otherwise British law would be criminalising conduct committed abroad.

[192] CLR, Final Report I, paras 8.119–8.122.

[193] See para.21–22.

[194] 2006 Act s.418(2). Wilfully suppressing relevant information may be a ground for disqualification—potentially lengthy—of a director. See *Re TransTec Plc (No.2)* [2007] 2 B.C.L.C. 495; and Ch.10.

[195] A result which, as we have seen, the director's core duty of loyalty may also produce: above, para.16–78.

[196] See para.16–24.

[197] 2006 Act s.418(4).

[198] 2006 Act s.418(5),(6). For the process of approving the directors' report, see para.21–30.

[199] In the case of the appointment of a firm as auditor, the senior statutory auditor must sign the report (s.503(3)), but s.504(3) provides that the person identified as the senior statutory auditor is not thereby subject to any civil liability to which he or she would not otherwise be subject. Nor would it seem that members of the audit team who would

otherwise be liable are protected from liability by the signature of the senior statutory auditor.

[200] It makes little difference which way the claim is put, since the implied term in the contract to provide audit services will be, as in tort, only a duty to take reasonable care. In particular, the defence of contributory negligence is available whichever way the claim is put: *Forsikringsaktieselskapet Vesta v Butcher* [1989] A.C. 852 at 858–868 CA. Of course, the parties could by contract seek to increase the level of the duty (for example, to a warranty that the audit report was accurate), but their freedom to lower the duty is subject to the statutory provisions discussed below.

[201] See para.21–33.

[202] *Ultramares Corp v Touche* (1931) 174 N.E. 441 at 441, per Cardozo CJ.

[203] *Caparo Industries Plc v Dickman* [1990] 2 A.C. 605 HL.

[204] In the case of actions by the company, this position is significantly qualified by the defence of contributory negligence (see para.22–39), but the point provides a potential rationale for restricting auditor liability to third parties.

[205] 2006 Act Sch.10 para.17.

[231] Basing himself on *Reeves v Commissioner of Police of the Metropolis* [2000] 1 A.C. 360 HL.

[232] *Stone & Rolls Ltd v Moore Stephens* [2009] A.C. 1391 HL.

[233] *Jetivia SA v Bilta (UK) Ltd* [2015] 1 B.C.L.C. 443 at [46], per Lord Neuberger, a case involving attribution in a third context, i.e. where the company sues a director. “We conclude that *Stone & Rolls* should be regarded as a case which has no majority ratio decidendi” (per Lords Toulson and Hodge at [154]).

[234] Lords Mance and, less strongly, Neuberger thought the point was still open; Lords Sumption, Toulson and Hodge thought the defence was always available in this situation.

[235] See para.9–11.

[236] This was essentially the reasoning of Lord Mance in *Stone & Rolls*, except that he

attached significance to the fact that the company was insolvent at the time of the negligent audit. It might be that a better test is the presence of innocent creditors or shareholders at the time of the litigation. It would be odd if the presence of an innocent shareholder at the time of the negligence should facilitate an action by the company against the auditors even though that shareholder had left the company by the time of the litigation; and equally odd if the defence were available despite the fact that the fraudsters had sold out to a new set of shareholders by the time of the litigation.

[237] This is still the starting point of the Act: s.532.

[238] Limitation of liability is also promoted at EU level: see Commission Recommendation concerning the limitation of the civil liability of statutory auditors and audit firms ([2008] O.J. L162/39). However, in the US the Securities Exchange Commission opposes agreements on limitation, whilst accepting mandatory limits on auditors' liability, thus making the 2006 Act provisions unusable by UK-incorporated companies which are cross-listed in the US (*Financial Times*, 10 May 2009). The SEC fear apparently is that the need to negotiate a limitation undermines the independence of auditors (rather than giving clients the opportunity to obtain improvements in audit quality). This is somewhat ironic in view of the fact that the liability of auditors is limited by statute to proportionate liability in the US.

[239] Essentially, the auditor may rely on a promise by the company to pay the costs of a successful defence.

[240] See para.16–130.

[241] 2006 Act s.537(1). In determining what is fair and reasonable the court must ignore matters occurring after the loss or damage has been incurred (an attempt to restrain hindsight) and the possibility of recovering compensation from other persons.

[254] 2006 Act ss.508–509 provide for the Secretary of State or, in Scotland, the Lord Advocate to give guidance to the regulatory and prosecuting authorities about how misconduct should be handled which appears to fall both within the criminal prohibition and the regulatory provisions discussed above.

[255] *Hedley Byrne & Co Ltd v Heller & Partners Ltd* [1964] A.C. 465 HL.

[256] *Derry v Peek* (1889) 14 App. Cas. 337 HL. The terms "deceit" and "fraud" (in the civil sense) seem to be used interchangeably.

[257] *Bradford Equitable BS v Borders* [1941] 2 All E.R. 205 HL.

[258] The auditors' public statement is contained in their report (above, para.22–3) but in that they opine about the accuracy of the accounts and reports generally, so that their failure to pick up inaccuracies in those documents is inevitably in issue.

[259] *Caparo Industries Plc v Dickman* [1990] 2 A.C. 605 HL. The litigation concerned the preliminary issue whether on the facts pleaded a claim against the auditors could succeed. What the facts of the case actually were was never decided.

[260] See below at para.28–41.

[261] On the circulation and filing of the company's annual reports and accounts, see paras 21–33 et seq.

[262] This was the specific point that had to be determined in *Caparo.* The Court of Appeal had held unanimously that auditors owed no duty of care to members of the public who, in reliance on the accounts and reports, bought shares (in the absence of a special relationship—see below) but, by a majority, that they did owe such a duty to existing shareholders who, in such reliance, bought more shares. The House of Lords thought the distinction between liability for investment decisions made by shareholders and investment decisions made by non-shareholders unsustainable.

[263] As pointed out below at para.25–32 the statute law on prospectus liability has gone beyond the common law which will normally be irrelevant. But it remains highly relevant where the statute does not apply. See *Al-Nakib Investments Ltd v Longcroft* [1990] 1 W.L.R. 1390; and the comment thereon at para.25–37, below.

[264] Per Lord Bridge at 621E–F. This was clearly the unanimous view, adopting the dissenting judgment of Denning LJ in *Candler v Crane Christmas & Co* [1951] 2 K.B. 164 CA; and affirming the decision of Millett J in *Al Saudi Banque v Clark Pixley* [1990] Ch. 313; but rejecting the wider views expressed in *JEB Fasteners Ltd v Marks Bloom & Co* [1981] 3 All E.R. 289; and in *Twomax Ltd v Dickson, McFarlane & Robinson*, 1982 S.C. 113; and by the majority of the New Zealand Court of Appeal in *Scott Group Ltd v McFarlane* [1978] N.Z.L.R. 553.

[265] The case concerned only the purchase of shares and the court left open the question of whether sales of shares (for example, where the accounts negligently undervalued the company) were within the scope of the duty, on the grounds that only shareholders could sell shares so that sales were necessarily a shareholder activity. However, the judges showed little enthusiasm for this argument; and a thorough-going governance analysis would seem to exclude sales as well as purchases on the grounds that both are investment, not governance, decisions.

[266] For a similar refusal to use the common law to supplement the statutory framework but within an analysis of the statutory purposes which seems more faithful to the legislative intent (in this case the New Zealand Securities Act 1978) see *Deloitte Haskins & Sells v National Mutual Life Nominees* [1993] A.C. 774 PC.

[267] *Electra Private Equity Partners v KPMG Peat Marwick* [2001] 1 B.C.L.C. 589 CA; *Caparo Industries Plc v Dickman* [1990] 2 A.C. 605 at 638 HL, per Lord Oliver.

[268] *Barclays Bank Ltd v Grant Thornton UK LLP* [2015] 2 B.C.L.C. 537.

[269] Because the clause operated to negative liability (rather than being an exemption clause) it was not subject to the convention that it should be construed narrowly.

[270] "To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the company and the company's directors … for our audit work, for this report, or for the opinion we have formed." Although given in the context of an audit of the company's accounts for non-statutory purposes, the clause was a variation of the formula recommended by Institute of Chartered Accountants in England & Wales for statutory audit reports (with the substitution of "members" for "directors").

[271] See para.22–42. In particular, if the disclaimer is caught by s.2 it fails entirely.

[272] *Barings Plc (In Administration) v Coopers & Lybrand* [1997] 1 B.C.L.C. 427 CA.

[273] *Barings Plc (In Liquidation) v Coopers & Lybrand (No.1)* [2002] 2 B.C.L.C. 364; *MAN Nutzfahrzeuge AG v Freightliner Ltd* [2008] 2 B.C.L.C. 22 at [56].

[274] *Bank of Credit & Commerce International (Overseas) Ltd v Price Waterhouse* [1998] B.C.C. 617 CA, where, as is often the case in groups, the group's activities were arranged and carried on along lines which cut across the separate companies in the group and their respective auditors.

[275] *Coulthard v Neville Russell* [1988] 1 B.C.L.C. 143 CA. The claimant directors, who were subsequently disqualified, sought compensation from the auditors for the losses caused by the disqualification. The court refused to strike out the claim. If the loss as a result of the failure to inform the directors is suffered by the company, then no issue of liability to a third party arises.

[276] *Andrew v Kounnis Freeman* [1999] 2 B.C.L.C. 641 CA (where the tests were held to have been satisfied); *James McNaughton Papers Group Ltd v Hicks Anderson & Co* [1991] 2 Q.B. 113 CA (where they were not); *Galoo Ltd v Bright, Grahame Murray* [1994] 1 W.L.R. 1360 CA (claims partly struck out and partly allowed to proceed). For the application of this approach to circulars issued in the course of takeover bids, see para.28–64.

[277] *Essanda Finance Corp Ltd v Peat Marwick Hungerford* (1997) 188 C.L.R. 241 High Court of Australia; and *Hercules Management Ltd v Ernst & Young* (1997) 146 D.L.R. (4th) 577 Supreme Court of Canada.

[278] This analysis depends, of course, on the courts not expanding the special circumstances exception so as to swallow up the *Caparo* rule. Contrast the sophisticated approach in *Peach Publishing Ltd v Slater & Co* [1998] B.C.C. 139 CA with the rather easy way in which assumption of responsibility was found in *ADT Ltd v BDO Binder Hamlyn* [1996] B.C.C. 808.

[279] If those costs were imposed on auditors, it is likely companies would end up paying them (by way of higher audit fees), so that, for example, the company would be subsidising the due diligence efforts of a potential acquirer. In some cases, the company might want to do so (see for an example para.13–49) but that can again be done through express contract.

[280] *JEB Fasteners Ltd v Marks Bloom & Co* [1981] 3 All E.R. 289; affirmed on other grounds [1983] 1 All E.R. 583 CA.

[281] Who, in fact, resigned!

PART 6

EQUITY FINANCE

In the course of the book we have referred frequently to the rights of shareholders but less often to the function which they perform in the company. In Part Four, for example, we discussed the accountability of management to the shareholders, but did not investigate in any detail what the shareholders contribute in return for that ultimate control over the company. In very small companies, the purpose of issuing shares may indeed be simply to give the shareholders control over the company. In a two-person quasi-partnership, for example, the founders of the company may take one low-value share each, and no other shares may be issued by the company. The issue of shares in such a case operates to give the partners complete control over the running of the company, for, in all likelihood, they will use their voting rights as shareholders to appoint themselves as directors of the company. Financing for the company will come from elsewhere, probably in the form of a bank loan secured on the partners' personal assets.

However, in larger companies the purpose of share issues is not simply, or even primarily, to allocate control over the company but also to raise finance for it, and it is on that function of the share issue that we concentrate in this part. As we have seen,[1] ordinary shares constitute a particularly flexible form of finance for companies, because, so long as the company is a going concern, the shareholders are entitled to no particular level of return by way of dividend and cannot withdraw the contribution made in exchange for their shares without the company's consent, given either at the time of issue of the shares (e.g. where the shares are issued as redeemable at the option of the shareholder) or later (e.g. where the company offers to re-purchase some of its shares). During periods of economic strain the company can hang on to the finance provided by the shareholders but reduce or eliminate its dividends, whilst the shareholders hope that things will turn around eventually and

they will be well rewarded for their patience. Even where the company is wound up and the shareholders obtain rights to repayment of their investment, they stand at the end of the queue after the creditors and so may find that their rights are in fact worthless.[2] The economic exposure of the ordinary shareholders goes a long way to explain the traditional practice of allocating control rights over the management to those shareholders.

However, not all shares are “ordinary” or “equity” shares, though it is rare for a company not to issue some shares of this type. The economic and control rights of shareholders are a matter largely of contract between company and investor, rather than of statutory stipulation, so that a company may issue several classes of share, with differing rights attached to them. As we have already seen,[3] this can create risks of oppression of one class of shareholder by another, to combat which the statute has developed special protective mechanisms. More important for this Part, the rights conferred upon “preference” shares may make it difficult to distinguish in practice between share-based finance of companies and debt-based finance, considered in the final Part of this book. A preference shareholder may have a right under the terms of issue of the share to a particular level of dividend each year (assuming the company has profits to cover the dividend entitlement). This makes the preference shareholder look in some ways like a lender, entitled to interests on a loan (though that interest is payable whether or not the company has profits to cover it). However, a lender to a company does not become a member of it and thereby obtain control rights over it. Nevertheless, since the terms of a loan contract can be structured so as to give the lenders considerable control over what the management of the company does, whilst preference shareholders may have limited voting rights, the line between debt and equity is sometimes difficult to identify. Even the feature that a loan is normally repayable after a fixed period may be replicated by making the preference shares redeemable, and even if the preference share is, at least on the surface, a permanent contribution to the company’s capital, the preference shareholders can usually be squeezed out if the company (ie the management and the ordinary shareholders) so wishes.[4]

Since the ordinary shareholder’s contribution to the company

is normally "locked in" until the point of winding up, an investor is likely to look more favourably shares which can easily be sold to another investor if the holder of them wishes to exit from the shareholding. Thus, large companies, contemplating a public offer of shares, are likely to ensure that the public offer is accompanied by an introduction of the shares to trading on a public securities market. This will restore liquidity to investors by enabling them to dispose of the shares to another investor at any time through the "stock exchange" (if not necessarily at an attractive price). This has generated a demand for rules regulating public offerings of shares. In addition, it has generated a strong interest in the proper regulation of secondary trading on public markets (i.e. trading among investors, not with the company), especially continuing disclosure requirements. This regulatory impulse extends to the "market for corporate control", whereby control of a company passes into new hands through the acquisition by a bidder of a majority of the shares traded on a public exchange. Finally, the price at which the shares trade in the secondary market may reveal important information about the company's prospects, which may not only influence investors' decisions, but also the exercise of governance rights by shareholders or directors. At the same time, with the goal of creating a single market, much of the regulatory initiative has passed from domestic bodies to the EU. In fact, the EU has had a much bigger impact on the laws governing the public share markets than it has had on general company law. As a result of both domestic and European initiatives there has been a not insignificant revolution in the structure and content of the relevant rules, to which the financial crisis of 2007 onwards has given further impetus. By contrast, shareholders in non-publicly traded companies must rely for protection on the mechanisms discussed in Chs 19 and 20.

CHAPTER 23

THE NATURE AND CLASSIFICATION OF SHARES

Legal Nature of Shares	23–1
The Presumption of Equality Between Shareholders	23–4
Classes of Shares	23–6
Preference shares	23–7
Ordinary shares	23–9
Special classes	23–10
Conversion of shares into stock	23–11

LEGAL NATURE OF SHARES

23–1

What is the juridical nature of a share? At the present day this is a question more easily asked than answered. In the old deed of settlement company, which was merely an enlarged partnership with the partnership property vested in trustees, it was clear that the members' "shares" entitled them to an equitable interest in the assets of the company. It is true that the exact nature of this equitable interest was not crystal clear, for the members could not, while the firm was a going concern, lay claim to any particular asset or prevent the directors from disposing of it. Even with the modern partnership, no very satisfactory solution to this problem has been found, and the most one can say is that the partners have an equitable interest, often described as a lien, which floats over the partnership assets throughout the duration of the firm, although it crystallises only on dissolution. Still, there is admittedly some sort of proprietary nexus (however vague and ill-defined) between the partnership assets and the partners.

At one time it was thought that the same applied to an incorporated company, except that the company itself held its assets as trustee for its members.[1] But this idea has long since been rejected. Shareholders have ceased to be regarded as having equitable interests in the company's assets; "shareholders are not, in the eyes of the law, part owners of the undertaking".[2] As a result, the word "share" has become something of a misnomer,

for shareholders no longer share any property in common; at the most they share certain rights in respect of dividends, return of capital on a winding up, voting, and the like.

Today it is generally stated that a share is a chose in action.[3] This, however, is not helpful, for "chose in action" is a notoriously vague term used to describe a mass of interests which have little or nothing in common except that they confer no right to possession of a physical thing, and which range from purely personal rights under a contract to patents, copyrights and trade marks.

It is tempting to equate shares with rights under a contract, for as we have seen[4] the articles of association constitute a contract of some sort between the company and its members and it is this document which directly or indirectly defines the rights conferred by the shares. But a share is something more than a mere contractual right in personam. This is suggested by the rules relating to infant shareholders (minors), who are liable for calls on the shares unless they repudiate the allotment during infancy or on attaining majority,[5] and who cannot recover any money which they have paid unless the shares have been completely valueless.[6] As Parke B said[7]:

> "They have been treated, therefore, as persons in a different situation from mere contractors for then they would have been exempt, but in truth they are purchasers who have acquired an interest not in a mere chattel, but in a subject of a permanent nature."[8]

23–2

The definition of a share which is, perhaps, the most widely quoted is that of Farwell J in *Borland's Trustee v Steel*[9]:

> "A share is the interest of a shareholder in the company measured by a sum of money, for the purpose of liability in the first place, and of interest in the second, but also consisting of a series of mutual covenants entered into by all the shareholders *inter se* in accordance with [s.33]. The contract contained in the articles of association is one of the original incidents of the share. A share is not a sum of money …but is an interest measured by a sum of money and made up of various rights contained in the contract, including the right to a sum of money of a more or less amount."

It will be observed that this definition, though it lays considerable stress on the contractual nature of the shareholder's rights, also emphasises the fact that the holder has an interest *in* the company. The theory seems to be that the contract

constituted by the articles of association defines the nature of the rights, which, however, are not purely personal rights but instead confer some sort of proprietary interest in the company though not in its property. The company itself is treated not merely as a person, the subject of rights and duties, but also as a res, the object of rights and duties.[10] It is the fact that the shareholder has rights in the company as well as against it, which, in legal theory, distinguishes the member from the debenture- or bond-holder whose rights are also defined by contract (this time the debenture itself and not the articles) but are rights against the company and, if the debenture or bond is secured, in its property, but never in the company itself.

Farwell J's definition mentions that the interest of a shareholder is measured by a sum of money. Reference has already been made to this[11] and it has been emphasised that the requirement of a nominal monetary value is an arbitrary and illogical one which has been rejected in certain other common law jurisdictions. The nominal value is meaningless and may be misleading, except insofar as it determines the minimum liability. Even as a measure of liability, it is of less importance now that shares are almost invariably issued on terms that they are to be fully paid-up on or shortly after allotment and are frequently issued at a price exceeding their nominal value. But reference to liability is valuable in that it emphasises that shareholders *qua* members may be under obligations to the company as well as having rights against it.

23–3

This analysis may seem academic and barren, and to some extent it is, for a closer examination of the rights conferred by shares and bonds or debentures will show the impossibility of preserving any hard and fast distinction between them which bears any relation to practical reality. Nevertheless, the matter is not entirely theoretical, for in a number of cases the courts have been faced with the need to analyse the juridical nature of a shareholder's interest in order to determine the principles on which it should be valued. The most interesting of these cases is *Short v Treasury Commissioners*[12] where the whole of the shares of Short Bros were being acquired by the Treasury under a Defence Regulation which provided for payment of their value

"as between a willing buyer and a willing seller".[13] They were valued on the basis of the quoted share price, but the shareholders argued that, since all the shares were being acquired, stock exchange prices were not a true criterion and that either the whole undertaking should be valued and the price thus determined apportioned among the shareholders, or the value should be the price which one buyer would give for the whole block, which price should then be similarly apportioned. The courts upheld the method adopted and rejected both the alternatives suggested, the first because the shareholders were not "part owners of the undertaking" and the second because the regulation implied that each holding was to be separately valued. It is the rejection of the first argument which supports the view that the shareholder has no proprietary interest in the company's assets.[14]

One thing at least is clear: shares are recognised in law, as well as in fact, as objects of property which are bought, sold, mortgaged and bequeathed. They are indeed the typical items of property of the modern commercial era and particularly suited to its demands because of their exceptional liquidity. To deny that they are "owned" would be as unreal as to deny, on the basis of feudal theory, that land is owned—far more unreal because the owner's freedom to do what he likes with his shares in public companies is likely to be considerably less fettered.

Nor, today, is the bundle of rights making up the share regarded as equitable only. On the contrary, as Ch.27 will show, legal ownership of shares is recognised and distinguished from equitable ownership in much the same way as a legal estate in land is distinguished from equitable interests therein. Nor must this emphasis on the proprietary and financial aspects of a shareholder's rights obscure the important fact that shares cause their holder to become a member of an association, with rights, at least in relation to ordinary shares, to take part in its deliberations by attending and voting at its general meetings.

The Presumption of Equality Between Shareholders

23–4

A company limited by shares must necessarily issue some shares, and the initial presumption of the law is that all shares

issued by the company confer the same rights and impose the same liabilities. As in a partnership[15] equality prevails in the absence of agreement to the contrary. Normally the shareholders' rights will fall under three heads: (i) dividends; (ii) return of capital and participation in surplus assets on a winding up (or authorised reduction of capital); and (iii) attendance at meetings and voting. Unless there is some indication to the contrary, all the shares will confer the like rights to all three. So far as voting is concerned this is a comparatively recent development, for, on the analogy of the partnership rule, it was felt in the early days that members' voting rights should be divorced from their purely financial interests in respect of dividend and capital, so that the equality in voting should be between members rather than between shares. A stage intermediate between these two ideas was reflected in the Companies Clauses Act 1845[16] which provided that, in the absence of contrary provision in the special statute, every shareholder had one vote for every share up to ten, one for every additional five up to a hundred and one for every ten thereafter, thus weighting the voting in favour of the smaller holders. However, attempts to reduce the proportion of voting rights as the size of holdings increased were doomed to failure since the requirement could be easily evaded by splitting holdings and vesting them in nominees. Whilst "voting caps" may still be inserted into the articles, it is today more usual to create separate classes of shares if voting rights are to vary, so that the different number of votes can be attached to the shares themselves and not to the holder. Even today, however, the older idea still prevails on a vote by a show of hands, when the common law rule is that each member entitled to vote has one vote irrespective of the number of shares held; a rule which, although it can be altered by the constitution, is normally maintained, because it provides a speedy, if somewhat inaccurate, way

of establishing the views of the meeting.[17]

There is in fact a strong argument in favour of applying the equality rule to the voting rights attached to shares which otherwise have the same rights and duties, because a shareholder's influence in the company is then linked to the size of his or her investment in it. Governance rights are then

coterminous with the financial risk to which each holder is exposed. In 1962 the Jenkins Committee on Company Law considered the adoption of a rule which would have prohibited non- or restricted-voting ordinary shares. The majority rejected the proposition as an interference with freedom of contract, but three members of the committee, including the original author of this book, dissented.[18] More recently, the EU tried, but failed, to build support for the principle of "one share one vote".[19] So, the equality rule is not mandatory and companies are free to issue shares with no, restricted or, even, weighted voting rights. It is relatively rare for listed companies to do so because institutional shareholders have traditionally been reluctant to buy shares whose votes do not reflect the financial risk. The solution to the problem in the UK is thus a market driven rather than a regulatory one.

23–5

There is a similar presumption of equality in relation to shareholders' liabilities but it too can be altered by provisions in the articles. In the case of a company limited by shares, normally the only liability imposed on a shareholder as such will be to pay up the nominal value of the shares and any premium insofar as payment has not already been made by a previous holder. This, however, does not mean that all the shares, even if of the same nominal value and of the same class, will necessarily be issued at the same price, or that, even if they are, all shareholders will necessarily be treated alike as regards calls for the unpaid part. Section 581 provides that a company, if so authorised by its articles, may: (a) make different arrangements between shareholders on an issue of shares as to the amounts or times of payments of calls; (b) accept from any member the whole or part of the amount remaining unpaid although it has not been called up; or (c) pay a dividend in proportion to the amount paid up on each share where a larger amount is paid up on some shares than on others.[20] Subject to that, however, calls must be made pari passu.[21]

Classes of Shares

23–6

As will have become apparent, the prima facie equality of shares

can be modified by dividing the share capital into different classes with different rights as to dividends, capital or voting or with different nominal values. Even this way of proceeding was once open to doubt. For many years it was thought that, in the absence of express provision in the original constitution, the continued equality of all shares was a fundamental condition which could not be abrogated by an alteration of the articles so as to allow the issue of shares preferential to those already issued.[22] This idea was, however, finally destroyed in *Andrews v Gas Meter Co*[23] where a company, whose original constitution provided for only one class of shares, was permitted to alter it so as to issue a second class of shares with rights which ranked to some extent ahead of the existing shares.

Today, the number of possible classes is limited only by the total number of shares issued by the company, since the number of available combinations of the incidents attached to shares is infinite. On the whole, however, it is not the present fashion for publicly traded companies to complicate their capital structures by having a large number of share classes. But, both in the case of public and private companies, there may well be two or three different classes and sometimes more. The division of shares into classes and the rights attached to each class will normally be set out in the company's articles but, in contrast with the Companies Acts of some other common law countries, that is not compulsory.[24] However, steps have been taken to ensure that the classes and their rights can be ascertained from the company's public documents. For this purpose the "return of allotments" (i.e. the information which the company has to provide to the Registrar of companies within one month of the allotment of shares)[25] is used. This must give the "prescribed particulars" of the rights attached to the shares in relation to each class of shares.[26] If the company assigns a class a name or other designation or changes an existing one, that too must be notified.[27] The same applies if and when there is any variation of the class rights.[28]

Preference shares

23–7

Where the differences between the classes relates to financial

entitlement, i.e. to dividends and return of capital, the likelihood is that the classes will be given distinguishing names, though these may be no more informative than “preference” and “ordinary” (perhaps, in the case of the former, preceded by “first” or “second” where there are two classes of preference shares). The preference normally is that the preference shareholder receives a fixed dividend and/or a return of capital before (in preference to) any payment to the ordinary shareholders. If a potential investor should assume that “preference” means that he should prefer them to the ordinary shares he would be sorely in need of professional advice. The advice received would probably not be couched in terms of relative merits and de-merits of preference and ordinary shares but of security and levels of risk. And if the client’s needs suggested the former, the investor would probably be advised to invest not in shares but in bonds or debentures. For preference shares may often be virtually indistinguishable from bonds except that they afford less assurance of getting one’s money back or a return on it until one does. On the other hand, if in addition to being “preferential” the shares are also “participating” (i.e. have a right, beyond the preference, to share in the profits of the company after the ordinary shareholders have received a specified return), they may be regarded rightly as a form of equity shares with preferential rights over the ordinary shares (and in consequence should be, and often are, designated “preferred ordinary”). The Act defines the company’s equity share capital as all its issued share capital except that part which “neither as respects dividends nor as respects capital, carries any right to participate beyond a specified amount in a distribution”.[29] Participating preference shares will thus normally fall within the definition of equity capital, even if the right to participation is confined to surplus assets when the company is wound up, whilst the shareholders’ dividend right is limited to a fixed (and perhaps not very generous) amount.

The truth of the matter is that an enormous variety of different rights, relating to dividends, return of capital, voting, conversion into ordinary shares,[30] redemption and other matters, may be attached to classes of shares, all of which are conventionally described as “preference” shares. What these rights are in any particular case and whether any particular issue of preference

shares is located more at the debenture end or the ordinary share end of the spectrum will depend on the construction of the articles or other instrument creating them. Unfortunately, in the past the drafting of these documents has often been deplorably lax.[31] Hence the courts had to evolve various “canons of construction” of the documents which, even more unfortunately, have themselves fluctuated from time to time, with the courts overruling earlier decisions and defeating the legitimate expectations of investors who purchased preference shares in reliance on the construction adopted earlier.[32] In former editions of this book the story of these vacillations was traced in some detail,[33] starting with the virtually irreconcilable decisions of the House of Lords[34] and the Court of Appeal[35] relating to the winding-up of the Bridgewater Navigation Company in 1889–1891. Since, at long last, a reasonably clear finale now appears to have been reached, there is no longer a justification for that indulgence. It suffices to summarise what the present canons of construction appear to be.

Canons of construction

23–8

1. Prima facie all shares rank equally. If, therefore, some are to have priority over others there must be provisions to this effect in the terms of issue.
2. If, however, the shares are expressly divided into separate classes (thus necessarily contradicting the presumed equality) it is a question of construction in each case what the rights of each class are.[36]
3. If nothing is expressly said about the rights of one class in respect of (a) dividends, (b) return of capital, or (c) attendance at meetings or voting, then, prima facie, that class has the same rights in that respect as the residuary ordinary shares. Hence, a preference as to dividend will not imply a preference as to return of capital (or vice versa).[37] Nor will an exclusion of participation in dividends beyond a fixed preferential rate necessarily imply an exclusion of participation in capital (or vice versa) although it will apparently be some indication of it.[38]

4. Where shares are entitled to participate in surplus capital on a winding-up, prima facie they participate in all surplus assets and not merely in that part which does not represent undistributed profits that might have been distributed as dividend to another class.[39]
5. If, however, any rights in respect of any of these matters are expressly stated, that statement is presumed to be exhaustive so far as that matter is concerned. Hence if shares are given a preferential dividend they are presumed to be non-participating as regards further dividends,[40] and if they are given a preferential right to a return of capital they are presumed to be non-participating in surplus assets.[41] The same clearly applies to attendance and voting[42]; if shareholders are given a vote in certain circumstances (e.g. if their dividends are in arrears), it is implied that they have no vote in other circumstances. It is in fact common to displace the preference shareholders' presumed equality in relation to voting by expressly restricting their voting rights to situations in which their dividends have not been paid for a period of time, on the basis that only in such cases will the preference shareholders need to assert their voice in the management of the company.[43]
6. The onus of rebutting the presumption in 5 is not lightly discharged and the fact that shares are expressly made participating as regards either dividends or capital is no indication that they are participating as regards the other—indeed it has been taken as evidence to the contrary.[44]
7. If a preferential dividend is provided for, it is presumed to be cumulative (in the sense that, if passed in one year, it must nevertheless be paid in a later one before any subordinate class receives a dividend).[45] This presumption can be rebutted by any words indicating that the preferential dividend for a year is to be payable only out of the profits of that year.[46]
8. It is presumed that even preferential dividends are payable only if declared.[47] Hence arrears even of cumulative dividends are prima facie not payable in a winding-up unless previously declared.[48] But this presumption may be rebutted by the slightest indication to the contrary.[49] It may thus be

advantageous to specify that the dividend is automatically payable on certain dates (assuming profits are available) rather than upon a resolution of the directors or shareholders. When the arrears are payable, the presumption is that they are to be paid in the winding up provided there are surplus assets available, whether or not these represent accumulated profits which might have been distributed by way of dividend,[50] but that they are payable only to the date of the commencement of the winding-up.[51]

The effect of applying these canons of construction has been, as Evershed MR pointed out,[52] that over the past 100 years:

> "the view of the courts may have undergone some change in regard to the relative rights of preference and ordinary shareholders and to the disadvantage of the preference shareholders whose position has …become somewhat more approximated to [that] of debenture holders."

Unless preference shareholders are expressly granted participating rights they are unlikely to be entitled to share in any way in the "equity" or to have voting rights except in narrowly prescribed circumstances. Yet they enjoy none of the advantages of debenture-holders; they receive a return on their money only if profits are earned[53] (and not necessarily even then), they rank after creditors on a winding-up and they have less effective remedies against the company. Suspended midway between true creditors and true members they may get the worst of both worlds, unless the instrument creating the preference shares is carefully drafted.

Ordinary shares

23–9

Ordinary shares (as the name implies) constitute the residuary class in which is vested everything after the special rights of preference classes, if any, have been satisfied. They confer a right to the "equity" in the company and, insofar as members can be said to own the company, the ordinary shareholders are its proprietors. It is they who bear the lion's share of the risk and they who in good years take the lion's share of the profits (after the directors and managers have been remunerated). If, as is often the case, the company's shares are all of one class, then these are necessarily ordinary shares, and if a company has a

share capital it must perforce have at least one ordinary share whether or not it also has preference shares. It is this class alone which is unmistakably distinguished from debentures both in law and fact.

But as we have seen, the ordinary shares may shade off imperceptibly into preference, for, when the latter confer a substantial right of participation in income or capital, or a fortiori both, it is largely a matter of taste whether they are designated "preference" or "preferred ordinary" shares. Moreover, distinctions may be drawn among ordinary shares, ranking equally as regards financial participation, by dividing them nevertheless into separate classes with different voting rights. In this event they will probably be distinguished as "A" "B" "C" (etc.) ordinary shares. Some public companies have issued non-voting A ordinary shares. Alternatively, both classes of ordinary share may have voting rights but the votes of a share of one class may be a high multiple of the votes attached to a share of another. In either case, control may be retained by a small proportion of the equity leading to a further rift between ownership and control.[54]

Special classes

23–10

Although in most cases the shares of a company will fall into one or other of the primary classes of preference or ordinary, it is, of course, possible for the company to create shares for particular purposes and containing terms which cut across the normal classifications. An example of this is afforded by employees' shares. Frequent references have already been made to "employee share schemes". Under the present definition of such schemes,[55] the beneficiaries of them may include not only present employees of the company concerned, but also employees, or former employees, of it or any company in the same group, and the spouses, civil partners, children or stepchildren under the age of 18, of any such employees. When employees' share schemes first came to be introduced, the normal practice was to create a special class of shares with restricted rights regarding, in particular, votes and transferability; only in relation to share option schemes,

designed as incentives to top management, were ordinary voting equity shares on offer. Now, however, that is usual in all cases[56] in order that employees' share schemes may enjoy the special tax concessions conferred on "approved" schemes. Hence, today such schemes will rarely lead to the creation of a special class of share; it is only in relation to their allotment, financing, and provision for re-purchase by the company or the trustees of the scheme that there will be special arrangements which the Act facilitates by exclusions from the normal restrictions on purchase of own shares and on the provision of finance by a company for the acquisition of its shares.[57]

Conversion of shares into stock

23–11

Shares may no longer be converted into stock.[58] This is a change made by the 2006 Act, though one of minor, almost undetectable, significance, since companies had abandoned the practice for the reason that, today, stock has no advantage over shares. In the case of shares the size of a person's holding in the company is measured by the number of shares held, whereas with stock the person's holding is measured by the total par value of the stock held, the stock not being divided into separate units. From the stockholder's point of view this makes it easier to transfer very small proportions of the holding, whereas a shareholder can never transfer less than one share. However, this is a small advantage since companies tend to take steps to keep the market value of the shares to a manageable size (for example, through bonus issues[59] if the market value becomes large). From the company's point of view there were until the 1948 Act some administrative savings associated with stock.[60] The 2006 Act still permits stock to be re-converted to shares by ordinary resolution of the shareholders, but this is now an irreversible decision.[61] Thus, the phrase "stock exchange" becomes even more of a misnomer than it was previously. However, turning debentures into debenture stock does retain some advantages and may still be done.[62]

---

[1] *Child v Hudson's Bay Co* (1723) 2 P. Wms. 207. As in the case of partnerships it was clear long before the express statutory provisions to this effect (see now s.541) that shares were personalty and not realty even if the company owned freehold land.

[2] per Evershed LJ in *Short v Treasury Commissioners* [1948] 1 K.B. 122 CA. See also the discussion of "asset partitioning" in para.8–3, above.

[4] See above, at paras 3–18 et seq.

[5] *Cork & Brandon Railway v Cazenove* (1847) 10 Q.B. 935; *N.W. Railway v M'Michael* (1851) 5 Exch. 114. If they repudiate during infancy it is not clear whether they can be made liable to pay calls due prior thereto: the majority in *Cazenove*'s case thought they could, but Parke B in the later case (at 125) stated the contrary.

[6] *Steinberg v Scala (Leeds) Ltd* [1923] 2 Ch. 452 CA.

[7] *N.W. Railway v M'Michael* (1851) 5 Exch. at 123.

[8] Later he suggested that the shareholder had "a vested interest of a permanent character in all the profits arising from the land and other effects of the company" (at 125). This can hardly be supported in view of later cases.

[9] *Borland's Trustee v Steel* [1901] 1 Ch. 279 at 288. Approved by the Court of Appeal in *Re Paulin* [1935] 1 K.B. 26, and by the House of Lords ibid., sub nom. *IRC v Crossman* [1937] A.C. 26. See also the other definitions canvassed in that case.

[10] "A whole system has been built up on the unconscious assumption that organisations, which from one point of view are considered individuals, from another are storehouses of tangible property": T. Arnold, *The Folklore of Capitalism* (New Haven, Conn., 1959), p.353. The proprietary analysis of the share (even if it does not extend to the company's assets) sometimes makes courts resistant to compulsory acquisition of shares, even at a fair price. See *Gambotto v WCP Ltd* (1995) 127 A.L.R. 417 High Ct, Australia, above para.19–9.

[11] See above, para.11–3.

[12] *Short v Treasury Commissioners* [1948] 1 K.B. 116 CA; affirmed [1948] A.C. 534 HL.

[13] This popular formula is much criticised by economists who argue with some force that the willingness of the buyer and seller depends on the price and not vice versa.

[14] The rejection of the second argument illustrates the expropriatory nature of the legislation. Had the willing buyer been characterised as a buyer of control, there is no doubt that a premium to the market price would have been payable, even though no individual seller had control, because some sharing of the benefits of control would have been necessary to induce the shareholders to sell. See Ch.28, below.

[15] Partnership Act 1890 s.24(1).

[16] Companies Clauses Act 1845 s.75.

[17] As we have seen above (para.15–75), the rule has been criticised, and it is tolerated only because it is easy for a shareholder who thinks the result would be different on a poll to trigger the poll process.

[19] See Commission of the European Communities, *Impact Assessment on the Proportionality between Capital and Control in Listed Companies*, SEC(2007) 1705, 12

December 2007.

[20] Table A 1985 appeared to authorise (a) only (see art.17) probably rightly in view of the complications which (b) and (c) would cause a public company.

[21] *Galloway v Halle Concerts Society* [1915] 2 Ch. 233.

[22] *Hutton v Scarborough Cliff Hotel Co* (1865) 2 Dr. & Sim. 521.

[23] *Andrews v Gas Meter Co* [1897] 1 Ch. 361 CA.

[24] This is now true even in relation to redeemable shares, provided the articles or a resolution of the company authorises the directors to determine the terms of redemption: s.685. See para.13–10. Shareholders' rights are sometimes set out on the back of the share certificate (where such is issued) but a misstatement of the rights on the certificate will not override the statement in the articles or in the offer document: *Re Hunting Plc* [2005] 2 B.C.L.C. 211.

[25] On allotment see the following chapter at para.24–18.

[26] 2006 Act ss.555(4)(c) and 556(3), applying to limited and unlimited companies respectively, and the Companies (Shares and Share Capital) Order 2009/388.

[27] 2006 Act s.636.

[28] 2006 Act s.637. The question of how class rights may be varied is discussed in Ch.19, above.

[29] Thus, a limitation on either dividends or a return of capital on a winding up will take the share out of the ordinary class.

[30] The apparently simple matter of converting preference shares into ordinary shares can become one of considerable complexity, at least where the nominal value and number of the ordinary shares into which the preference shares are to be converted differ from those of the preference shares to be converted, so that there is a danger that the transaction will involve an unauthorised return of capital, on the one hand, or the issue of shares at a discount, on the other. For a clear explanation of the ways of avoiding this result, see (1995) VI *Practical Law for Companies* (No.10) at p.43.

[31] Even to the extent of simply providing that the share capital is divided into so many X per cent Preference Shares and so many Ordinary Shares and issuing them without further clarification.

[32] The classic illustration is the overruling, by the House of Lords in *Scottish Insurance v Wilsons & Clyde Coal Co* [1949] A.C. 462, of the Court of Appeal decision in *Re William Metcalfe Ltd* [1933] Ch. 142.

[33] 4th edn (1979), pp.414–421.

[34] *Birch v Cropper* (1889) 14 App. Cas. 525 HL.

[35] *Re Bridgewater Navigation Co* [1891] 2 Ch. 317 CA.

[36] *Scottish Insurance v Wilsons & Clyde Coal Co* [1949] A.C. 462; *Re Isle of Thanet Electric Co* [1950] Ch. 161 CA.

[37] *Re London India Rubber Co* (1868) L.R. 5 Eq. 519; *Re Accrington Corp Steam Tramways* [1909] 2 Ch. 40.

[38] This is implied in the speeches in *Scottish Insurance v Wilsons & Clyde Coal Co*

[1949] A.C. 462; and in *Dimbula Valley (Ceylon) Tea Co Ltd v Laurie* [1961] Ch. 353.

[39] *Dimbula Valley (Ceylon) Tea Co Ltd v Laurie* [1961] Ch. 353; *Re Saltdean Estate Co Ltd* [1968] 1 W.L.R. 1844. These cases "distinguished" *Re Bridgewater Navigation Co* [1891] 2 Ch. 317 CA (on the basis that the contrary decision of the Court of Appeal depended on the peculiar wording of the company articles) but it is thought that *Bridgewater* can now be ignored; in *Wilsons & Clyde Coal Co* Lord Simonds pointed out the absurdity of supposing that "parties intended a bargain which would involve an investigation of an artificial and elaborate character into the nature and origin of surplus assets": [1949] A.C. at 482.

[40] *Will v United Lankat Plantations Co* [1914] A.C. 11 HL.

[41] *Scottish Insurance v Wilsons & Clyde Coal Co* [1949] A.C. 462; *Re Isle of Thanet Electric Co* [1950] Ch. 161 CA.

[42] Quaere whether attendance at meetings and voting should not really be treated as two separate rights. It seems, however, that express exclusion of a right to vote will take away the right to be summoned to (or presumably to attend) meetings: *Re MacKenzie & Co Ltd* [1916] 2 Ch. 450. If, under this canon shareholders have votes but the articles do not say how many, the effect of s.284 appears to be that they have one vote per share or, if their shares have been converted to stock (on which see para.23–11, below) per each £10 of stock and that if the company has no share capital each member has one vote.

[43] See, for example, *Re Bradford Investment Ltd* [1991] B.C.L.C. 224.

[44] *Re National Telephone Co* [1914] 1 Ch. 755; *Re Isle of Thanet Electric Co* [1950] Ch. 161 CA; and *Re Saltdean Estate Co Ltd* [1968] 1 W.L.R. 1844. This produces strange results. If, as the House of Lords suggested in the *Scottish Insurance* case, the fact that shares are non-participating as regards dividends is some indication that they are intended to be non-participating as regards capital (on the ground that the surplus profits have been appropriated to the ordinary shareholders), where the surplus profits belong to both classes while the company is a going concern, both should participate in a winding-up in order to preserve the status quo.

[45] *Webb v Earle* (1875) L.R. 20 Eq. 556.

[46] *Staples v Eastman Photographic Materials Co* [1896] 2 Ch. 303 CA.

[47] *Burland v Earle* [1902] A.C. 83 PC; *Re Buenos Ayres Gt Southern Railway* [1947] Ch. 384; *Godfrey Phillips Ltd v Investment Trust Ltd* [1953] 1 W.L.R. 41. *Semble*, therefore, non-cumulative shares lose their preferential dividend for the year in which liquidation commences: *Re Foster & Son* [1942] 1 All E.R. 314; *Re Catalina's Warehouses* [1947] 1 All E.R. 51. But, if the terms clearly so provide, a prescribed preferential dividend may be payable so long as there are adequate distributable profits in accordance with Ch.12, above: *Evling v Israel & Oppenheimer* [1918] 1 Ch. 101.

[48] *Re Crichton's Oil Co* [1902] 2 Ch. 86; *Re Roberts & Cooper* [1929] 2 Ch. 383; *Re Wood, Skinner & Co Ltd* [1944] Ch. 323.

[49] *Re Walter Symons Ltd* [1934] Ch. 308; *Re F de Jong & Co Ltd* [1946] Ch. 211 CA; *Re E.W. Savory Ltd* [1951] 2 All E.R. 1036; *Re Wharfedale Brewery Co* [1952] Ch. 913.

[50] *Re New Chinese Antimony Co Ltd* [1916] 2 Ch. 115; *Re Springbok Agricultural Estates Ltd* [1920] 1 Ch. 563; *Re Wharfedale Brewery Co* [1952] Ch. 913; not following *Re W.J. Hall & Co Ltd* [1909] 1 Ch. 521.

[51] *Re E.W. Savory Ltd* [1951] 2 All E.R. 1036.

[52] *Re Isle of Thanet Electric Co* [1950] Ch. 161 at 175.

[53] This necessarily follows from the principle laid down in s.830(1) that “a company shall not make a distribution except out of profit available for the purpose”. See above, para.12–2.

[54] See para.23–4.

[55] 2006 Act s.1166.

[56] But it would be rare indeed for this to have led to employees controlling a large public company—as has occurred in the USA.

[57] See paras 13–5 and 13–50. And note also the special treatment in relation to pre-emptive rights: below, para.24–7.

[58] 2006 Act s.540(2). See also the prohibition in s.617 on a company altering its share capital, except as permitted by that section, which permissions no longer include conversion into stock.

[59] See para.11–59.

[60] This was the requirement that, throughout its life, each share had to have a distinctive number, thus creating some bureaucratic work for the company, whilst stock did not. However, this is no longer required of shares which are fully paid up and rank pari passu (s.543).

[61] 2006 Act s.620.

[62] See para.31–12.

CHAPTER 24

SHARE ISSUES: GENERAL RULES

Public and Non-Public Offers 24–2
Directors' Authority to Allot Shares 24–4
Pre-emptive Rights 24–6
Policy issues 24–6
The scope of the statutory right 24–7
Waiver 24–10
Sanctions 24–12
Listed companies 24–13
Pre-emption guidelines 24–14
Criticism and further market developments 24–15
The Terms of Issue 24–17
Allotment 24–18
Renounceable allotments 24–19
Failure of the offer 24–20
Registration 24–21
Bearer shares 24–22
Conclusion 24–23

24–1

In the previous chapter we examined how the company attaches rights to shares. We now need to look at the process by which a company issues shares to those who wish to invest in it. The crucial regulatory divide is between offers to the public to acquire the company's shares and offers which are non-public. The regulatory regime is much more elaborate in the former case. In addition, since a public offer is often combined with the provision of a trading facility for the shares on a stock exchange or other trading platform (though it need not be), the rules governing that process become of crucial importance as well. Where there is no public offer, the relevant rules are still to be found mainly in the Companies Act and the common law of companies, rather than in the Financial Services and Markets Act 2000 and in rules made by the FCA. In this chapter we deal with the rules that apply to offers of securities, whether the offer is a public one or not. The additional requirements applying only to public offers are treated in the following chapter. However, some of the rules discussed in this chapter, for example, the pre-emption rules, have their greatest impact when the offer is a

public one. The domestic law considered in this chapter has been substantially influenced by the Second Company Law Directive of the Community,[1] but, in contrast with its provisions on legal capital, its rules on share issuance have generally been welcomed by shareholders as strengthening their position, though, often, not as strongly as they would wish.

Public and Non-Public Offers

24–2

A public company has a choice whether to make a public offer of its shares. It is not obliged to do so and if it refrains from making a public offer, it will escape the regulation analysed in the following chapter, although it will find that its fund-raising possibilities are much constrained. Hence arises an ambiguity in the meaning of the term "public company". By those concerned with capital markets the term is used to refer to companies which have indeed made a public offering of their securities and introduced those shares to trading on a public market. However, under the Companies Act a public company is simply one that may lawfully make a public offering of its securities, whether it has actually done so or not. In this book, the term "public company" means one that is public in the Companies Act sense of the term, whilst one which has actually made a public offer of its securities is referred to as a "publicly traded"[2] company or one which has "gone public". Under the Companies Act the contrast between a "public" and a "private" company is that a private company is prohibited from offering securities[3] to the public, either directly or through an offer for sale via an intermediary.[4] Thus, a private company may make only a non-public offer of its shares, and, indeed, this is the defining characteristic of a private company; but a public company (under the Companies Act) may or may not have made a public offer.

If a private company does make a public offer, the validity of any agreement to sell or allot securities or of any sale or allotment is not affected by breach of the prohibition, thus protecting innocent third parties who wish to enforce their rights under the contract of issuance of the shares,[5] and the criminal sanctions which previously underlay the prohibition have been removed. Nevertheless, the court has a wide range of powers to

deal with the consequences of a breach or potential breach, on application of any member or creditor of the company or the Secretary of State or on its own motion in an unfair prejudice application. The court may enjoin the proposed issue[6]; require the company to re-register as a public company (the statute's preferred ex post remedy)[7]; and, if it decides against re-registration, it may wind the company up or make a remedial order.[8] The purpose of the remedial order is to put the person in whose favour it is made (who may be a subsequent holder of the share) in the position they would have been in had the breach of the prohibition not occurred.[9] The court has a wide discretion as to the contents of the remedial order, including the power to order the company and any others "knowingly concerned" in contravention of the prohibition to offer to purchase the securities at a price determined by the court.[10] For a private company to contemplate breaching the prohibition is, thus, a highly risky business, both for it and its officers and advisers. On the other hand, the requirements for becoming a public company are not onerous and the company can even leave conversion until after the issue has succeeded, provided conversion is part of the terms of issue.[11]

24–3

The definition of what is a public offer for the purpose of the Act is in s.756. This section makes it clear that "public" includes a section of the public ("however selected").[12] On the other hand, the definition excludes an offer which "can properly be regarded, in all the circumstances, as not being calculated to result, directly or indirectly, in the shares or debentures becoming available for subscription or purchase by persons other than those receiving the offer or invitation".[13] Also excluded are offers which are of "domestic concern" to the company, into which category fall, presumptively, offers to the company's existing members or employees, their families, debenture-holders of the company or a trustee for any of the above.[14]

The main issue with this definition is that it does not correspond exactly to the definition of a "public offer" used for the purposes of determining the applicability of the additional regulation discussed in the next chapter. In particular, it does not replicate the definition of a public offer in the Prospectus

Directive,[15] which determines whether a prospectus is required (and regulates its contents, if it is). On the one hand, some offers regarded as private under the Act might be public under the Directive. This is because the "offerees only" exemption of the Act appears to set no limit on the number of people who receive the offer nor to impose any qualification as to their experience or qualifications as investors, whilst the central exemptions in the Directive are based on one or other of these limitations.[16] In other words, a private company might make what is a public offer for the purposes of the Directive without contravening the prohibition in the Act. In such a case, of course, the private company will have to comply with the requirements of the Directive, as transposed into domestic law, and so no real conflict arises, provided those concerned realise that private companies may fall within the prospectus rules in some cases.

On the other hand, a private company may be prevented by the Act from making an offer in respect of which, if it were a public company, it would not need to produce a prospectus, because the offer would fall within one of the exemptions contained in the Directive. The Company Law Review, whilst recommending that some alignment of the definition of "public offer" in the Act with that in the Directive, did not think that the lack of fit was in principle objectionable, because different policies were being pursued by the two sets of rules. There might be good reasons for preventing a private company from making a public offer, even if such an offer would not attract the requirement for a prospectus under EU law. The CLR's view was that some of these exemptions from the prospectus requirement were "wholly inappropriate" for a private company, because they might allow the private company to reach "very large economic scale". This should be permitted only if the company were prepared to undertake the burdens of a public company.[17] Of course, most share issues by private companies come nowhere near being classified as public for the purposes of either the Act or the Directive.

Directors' Authority to Allot Shares

24–4

Issuance of shares by a company involves essentially three steps.

First, the company must decide to make an offer of shares, public or non-public, and set the terms of the offer. Secondly, some person or persons must agree with the company to take the shares (at which point the shares are said to have been "allotted"). Thirdly, in implementation of that contract, those persons must take the shares and be made members of the company, thus completing the process of issuance. We shall look at each stage in turn.

The first question is whether the decision to allot shares[18] is one for the board alone or whether the shareholders' concurrence is required. We have seen that the company's decision to allot shares ranking along with or even ahead of the company's existing shares does not normally amount to a variation of the rights of the existing shareholders, so that their consent will not be required under the variation of class-rights procedure,[19] even though the practical value of those rights may well be affected by such an issue. Even if the new shares are to rank behind the existing shares, the shareholders may still have doubts about the directors' plans for the use of the finance which will be raised. Thus, it is a matter of some importance whether the Act requires the shareholders' consent to a share issue or whether the matter is left entirely to the company's articles of association. If the Act does not intervene, the situation is likely to be that the board has power to issue shares as part of its general management powers, and the articles may or may not give the shareholders a role in the decision-making process. Thus, the question becomes whether the Act should make shareholder consent mandatory or leave this issue to be determined by the company's articles.

The Second Company Law Directive[20] contains the principle that consent of the shareholders is required. The Directive applies only to public companies, although the Government, when transposing it into domestic law in 1980, chose to apply the principle to private companies as well, albeit in a more flexible way. However, the CLR proposed[21] to remove the requirement of shareholder authorisation for the issuance of shares by private companies, except where the company already had or the directors' proposal would create more than one class of shares. This would be a default rule, for private companies' articles might restore the requirement of shareholder approval.

This reform was implemented in the 2006 Act.[22] The requirement for shareholder consent was thought to be an unnecessary formality in private companies, with their greater overlap of directors and members. However, such overlap would not necessarily obtain, and there would be the risk of greater opportunism, if the company had, or was about to create, more than one class of share.

24–5

Except in relation to the private company with only one class of share, however, shareholder consent, in one form or another, is still required for the allotment of shares. Not to obtain it is a criminal offence on the part of the directors knowingly involved,[23] although such failure does not affect the validity of the allotment.[24] The requirement is applied not only to the allotment of shares but also to the grant of rights to subscribe for or to convert a security into shares in the company in the future, for example, a convertible bond.[25] Otherwise, the requirement of shareholder consent could be avoided easily, for example, by issuing a debt security convertible at a later stage into shares. In this case, the requirement for shareholder approval is imposed at the stage of issuance but is not repeated at the conversion stage.[26] However, if, unusually, a convertible bond is convertible into existing, rather than new, shares of the company, then shareholder consent would not be needed at the allotment stage either.[27]

Shareholder authorisation may take the form of the directors putting before the shareholders a proposal for the issuance of a particular amount of shares to fund a specific project, with full details of how the finance raised will be used. This is authorisation for “a particular use of the power”.[28] However, authorisation can be given generally, either in the articles or by (ordinary) resolution, for (renewable) periods of up to five years.[29] With general authorisation, where no specific use of the power may be under contemplation at the time, information about how the funds raised will be used will necessarily be very general and will be phrased so as to give management maximum freedom of action. However, the authority, whether general or particular, must state the maximum number of securities which can be allotted under it and the date at which the authority will

expire.[30] Moreover, the authorisation may be made conditional,[31] and it may be revoked or varied at any time by resolution of the company, even if the original authority was contained in the articles.[32] Institutional shareholders do attach importance to the general requirement for shareholder authorisation of share issues by the board. Guidance from the Association of British Insurers indicates that its members will not vote in favour of resolutions giving authority above a certain size. That size used to be one third of the company's existing issued share capital. In 2008 the limit was increased, under the pressures discussed in the next section, to two thirds, provided that the second third could be issued only on a pre-emptive basis and the authorisation for the second third was renewed yearly.[33]

Pre-EMPTIVE Rights

Policy issues

24–6

Whether or not collective shareholder consent is required for allotment of shares, there is a further issue whether the existing shareholders individually should have a "right of first refusal" over the new shares or, in company law terms, whether the shares should be issued on a pre-emptive basis. The basic principle underlying the pre-emption rules is that a shareholder should be able to protect his or her proportion of the total equity by having the opportunity to subscribe, in proportion to the existing holding, for any new issue for cash of equity capital or securities having an equity element.[34] There are two main reasons why a shareholder might wish to exercise this right and thus to prevent the "dilution" of his or her holding of equity shares. First, if new voting shares are issued and a shareholder does not acquire that amount of the new issue which is proportionate to the existing holding, that person's influence in the company may be reduced because he or she now has control over a smaller percentage of the votes. In listed companies this is likely to be of concern only to large, often institutional, shareholders, but in small companies the issuance of new shares may well have a significant impact upon the balance of power within the company, and perhaps be motived by a desire to bring this change about. Here, pre-emptive rights operate as a potential

limit on the freedom of the directors to affect a shift in the balance of control in the company by issuing new equity shares carrying voting rights to new investors.[35]

Secondly, large issues of new shares by a publicly traded company are likely to be priced at a discount to the existing market price, in order to encourage their sale. Once the new shares are allocated, all the shares of the relevant class, new and old, will inevitably trade on the market at the same price. This new price will be somewhere between the issue price of the new shares and the previous market price of the existing shares, depending upon the size of the discount and the size of the new issue. In the absence of protective regulation, if an existing shareholder does not acquire the relevant proportion of the new shares, the loss of market value of the existing holding will be uncompensated. The new shareholders, in effect, will have been let into the company too cheaply, and the existing shareholders will have paid the price for that decision.[36]

The protection against voting dilution afforded by a bare pre-emptive right is only partial. The shareholder must also be in a position financially to take up the shares on offer.[37] A financially constrained existing shareholder is thus not protected against voting dilution by pre-emption. The same might seem to be true of financial dilution. However, here the addition of a further feature to the basic pre-emption model can help. If the shareholder is able to sell his or her pre-emptive rights in the market, that will provide compensation for the loss suffered. The rights will have a value equal to the difference between the issue price of the new shares and the (higher) price at which the whole class will trade after the issue, which will compensate the shareholder for loss caused by the difference between the pre-issue value of that person's holding and the (lower) value it will have after the new issue.[38] However, for the rights to be marketable they must be transferable to third parties. There is an established way of providing this facility. The company issues a "renounceable" letter of allotment, which gives the shareholder the option to subscribe for the new shares or to transfer the right to subscribe to a third party, the overall process being known as a "rights issue".[39] Provided the shareholder transfers the right to acquire the new shares before the time for exercising it expires

(i.e. "renounces" it) the third party will pay the company for the new shares, having paid the shareholder for the acquisition of the right to subscribe.[40]

The scope of the statutory right

24–7

The Act creates a pre-emptive right in favour of existing shareholders, but it does not require companies to add the additional feature of a rights issue.[41] The company may simply make what is usually termed an "open" offer to its existing shareholders: the shareholder either takes the shares at the price asked or passes up the offer altogether. It is, however, common practice in listed companies for pre-emptive offers to be made on a renounceable basis.[42] We will first examine the shareholder's legal entitlements and then see how institutional pressure has moved practice beyond the statute in many cases.

The ambit of the statutory pre-emptive provisions extends only to issues for cash of "equity securities". These are defined as ordinary shares (and rights to subscribe for or convert securities into ordinary shares); and an ordinary share is any share other than one where the holder's right to participate in a distribution (whether by way of dividend or return of capital) is limited by reference to a fixed amount.[43] It does not matter whether the existing shares carry votes or not, and in fact it can be argued that pre-emptive rights are particularly important for the holders of non-voting shares, who will obtain no protection from the rules on shareholder authorisation discussed in the previous section. Certain types of share issue are excluded from the pre-emption rules, even if they arguably involve the issue of equity shares for cash: bonus shares (where the pre-emption problem does not arise)[44] or shares to be held under an employees' share scheme.[45] Nor do the rules apply to shares taken by subscribers on the formation of a company.[46]

Moreover, pre-emptive rights will be triggered only if the proposed issue is exclusively for cash.[47] For example, if a company wishing to acquire a business proposed to allot ordinary shares as consideration to the vendor, it would be impracticable to make a pre-emptive offer to the existing shareholders on the same terms. Nevertheless, the restriction of

the statutory pre-emptive provisions to cash issues, even if compelled by necessity, does make a severe hole in the principle of protecting shareholders against dilution, especially dilution of their voting position. In relation to financial dilution some alternative protection is provided by Ch.6 of Pt 17 of the Act, requiring an independent valuation report in the case of share issues by public companies for a non-cash consideration,[48] but, even so, that section does not confer individual rights upon shareholders in the way that the pre-emption rules do.

24–8

Futhermore, the exclusion of share issues which are wholly or partly other than for cash gives rise to possibilities of manipulation so as to avoid the pre-emption rules. For example, if any part of the consideration, even a minor part, is not cash, then it appears that the pre-emption rules are excluded. This may be of particular interest to private companies. In other cases it may well be possible to restructure the transaction so that the cash is provided otherwise than to the issuer in exchange for its shares. Thus, where Company A wishes to acquire part of the business of Company B, the latter wishing to receive cash, Company A might issue new shares to raise the necessary money, if it does not have sufficient available cash, thus attracting the pre-emption provisions in relation to its shareholders. Instead, however, Company A might issue its shares to Company B, in exchange for the latter's assets and thus without attracting the pre-emption provisions, Company A having previously arranged for an investment bank to offer to buy the shares from Company B at a fixed price and to place them with interested investors. Such a "vendor placing" gives Company B the cash it wanted, whilst relieving Company A of the need to abide by the pre-emption rules.[49]

24–9

Assuming none of the above limitations apply, the pre-emption obligation requires the company not to allot equity securities to any person unless it has first offered, on the same or more favourable terms, to each person who holds shares covered by the right a proportion of those equity securities which is as nearly as practicable equal to the shareholder's existing

proportion in nominal value of the existing shares.[50] Only if the period for the existing shareholders to accept the offer has expired (now at least 14 days)[51] without the offer being accepted (or if it was positively rejected within this period) may an offer be made to outsiders. If the pre-emptive offer is not accepted in full, shares not taken up may be allotted to anyone; accepting existing shareholders do not have further pre-emptive rights in respect of those unaccepted shares.

Waiver

24–10

The shareholders collectively can forego their statutory pre-emption rights: they can be excluded or disapplied. Exclusion means the statutory provisions do not operate at all; disapplication may mean that but it also embraces the situation where the statutory provisions apply "with such modifications as the directors may determine"[52] or such modifications as are specified in the disapplication resolution.[53] Not surprisingly, both exclusion and disapplication are easier for private than for public companies. A private company may exclude the obligation to offer pre-emptive rights (or a provision relating to the method of offering, most likely the time during which the offer must be open) through a provision in its articles—either generally or in relation to allotments of a particular description.[54] As for disapplication, if the private company has only one class of shares, so that the directors do not need shareholder authority to issue new shares, its articles or a special resolution of the shareholders may remove the pre-emptive obligation or give the directors power to modify the statutory scheme.[55]

In relation to public companies exclusion is available only where the articles provide a pre-emptive alternative to the statutory scheme. This provision is designed to deal with situations where the company has more than one class of ordinary share.[56] The statutory pre-emptive obligation[57] is drafted in such a way as not to differentiate among different classes of ordinary shares, so that an offer of ordinary shares of one class would have to be made pre-emptively to all classes of ordinary shareholder. Section 568 permits a company to substitute an alternative pre-emption scheme in its articles which

operates on a class basis. Non-compliance with the procedure in the articles carries the same consequences as non-compliance with the statutory procedure.[58]

As for disapplication, the provisions applicable to public companies (and private companies with more than one class of share) are built onto the rules on directors' authority to issue shares, discussed above. Where such authorisation is needed and has been given "generally",[59] the articles or a special resolution may disapply the pre-emption rights entirely or give the directors a discretion to apply them with such modifications as they may determine.[60] The disapplication lasts only so long as the general authority and, if the authority is renewed, the disapplication will need renewal as well. In other words, the disapplication can be for a maximum period of five years.

Alternatively, where authorisation is required, and it has been given either generally or specifically, a special resolution may disapply the statutory provisions in relation to a particular issuance of shares or determine that they shall apply only with such modifications as are specified in the resolution.[61] Again, the disapplication lasts only so long as the authorisation to which it relates, though this is a less important provision in relation to specified allotments. Unusually for British company law, a special resolution in relation to a specified allotment may not be proposed unless it has been recommended by the directors, and there is circulated a written statement by the directors of their reasons for making the recommendation, the amount to be paid to the company in respect of the proposed issue, and the directors' justification of that amount.[62] A person, director or otherwise, who knowingly or recklessly authorises or permits the inclusion in the statement of information which is misleading, false or deceptive commits a criminal offence.[63]

24–11

It is relatively common for public companies to make use of the disapplication provisions, even where the directors have every intention of respecting the principle of pre-emption, because greater flexibility can be built into the arrangements. A common desire is to exclude from the offer shareholders in foreign jurisdictions whose securities laws are regarded as excessively

burdensome in relation to the number of the company's investors located there.[64] Even if the statutory rules have been disapplied, however, a publicly traded company is likely to be subject to the Listing Rules,[65] but these specifically permit pre-emptive offers to exclude holders whom the company considers "necessary or expedient to exclude from the offer on account of the laws or regulatory requirements of" another country.[66] Finally, there may be disapplication in relation to treasury shares, whether held by a public or a private company.[67] The directors do not require shareholder consent to sell treasury shares (since they are already in issue) but such sales are caught in principle by the statutory pre-emption right.[68] However, the directors may be given power to allot free of that right, either generally (by the articles or by special resolution) or in relation to a specified allotment (by special resolution).[69] One of the arguments for permitting treasury shares was that it gave companies freedom to raise relatively small amounts of capital quickly, which a pre-emption right would hinder, so that it seems correct policy to facilitate the disapplication of the pre-emption right to treasury shares.[70]

Sanctions

24–12

A civil (but not a criminal) sanction is provided by the Act. When there has been a contravention of the pre-emption right (either by not providing it all or by not providing it in the way required by the Act), the company and every officer of it who knowingly authorised or permitted the contravention are jointly and severally liable to compensate any person to whom an offer should have been made for any loss, damage, costs or expenses.[71] Where under the provisions discussed immediately above, the statutory provisions are applied in a modified way, these sanctions will equally apply to a contravention of the modified provisions.[72] The Act does not invalidate an allotment of shares made in breach of the pre-emptive provisions, no doubt in order to protect the legitimate interests of third parties. However, in *Re Thundercrest Ltd*[73] the judge was prepared to rectify the register[74] as against the directors of a small company, with only three shareholders, where the directors responsible for

the breach of the pre-emptive provisions had allotted the shares in dispute to themselves.

Listed companies

24–13

Institutional shareholders (pension funds and insurance companies in particular) have traditionally held a very significant proportion of the shares of publicly traded companies.[75] For a long time they have placed a high value on pre-emptive rights. Consequently, market practice, influenced by the institutional shareholders, goes beyond the statutory rights embodied in the Act. Indeed, pre-emptive rights were a feature of market practice in London before the statutory pre-emption right was introduced into legislation in 1980. There are two channels through which the institutional shareholders have been able to advance their views. First, they have been able to influence effectively the rules made by the FCA relating to the listing[76] of companies and the rules made by the London Stock Exchange relating to the admission of securities to trading (though the former are the more important source of rules). Secondly, they have taken collective action to draw up rules to govern what action they will or will not support as shareholders in the pre-emption area. We will look first at the Listing Rules.

The most important Listing Rule in this area is probably the one which limits the discount at which a company may issue shares, other than by way of a rights issue, to 10 per cent of the prevailing market price, unless the shareholders approve a higher discount.[77] This means that, if the company sticks to the bare pre-emptive entitlement set out in the statute, those shareholders who cannot afford to take up their rights face only a limited financial loss, as a result of the cap on the discount. To put the matter from the company's point of view, if the success of the pre-emption offer is thought to require a greater discount than 10 per cent, the directors will need the shareholders' consent to proceed with the issue other than as a rights issue.[78] The rule is thus an important restraint on the directors' powers to proceed with an open offer and pushes them instead in the direction of a rights issue, where the shareholders' financial interests are protected.

Pre-emption guidelines

24–14

The overall picture which emerges of the above analysis is that existing shareholders' right to pre-emption, which the Act creates, and to pre-emption on a rights basis, which the Listing Rules indirectly create, may be removed by collective decision of the shareholders. So the impact in practice of both the statute and the Listing Rules turns on shareholders' willingness (or otherwise) to forego their rights. Since institutional shareholders are strongly opposed to dilution of their positions, they have sought to agree guidelines determining the circumstances in which consent to disapplication will be given. Originally, the institutions acted alone in drawing up the guidelines but, given their importance for the financing of companies and the operation of the capital markets, an element of public interest has been injected by conducting the discussions under the auspices of, first, the Bank of England, then the London Stock Exchange and, now, the Financial Reporting Council.[79] Institutionally, this development has resulted in the creation a Pre-emption Group,[80] which issues the guidelines which determine institutional shareholders' attitudes to disapplication resolutions, whether under the statute or the Listing Rules. The guidelines have no legal status but they articulate a strongly held and practically significant attitude on the part of the institutions about the value of pre-emptive rights. This policy of the institutional investors has turned pre-emption on a rights basis into an example of a "strong" default rule whose alteration creates a significant hurdle for the management of the company. Thus, the statutory provisions and the Listing Rules have much more bite because of the difficulty of securing shareholder consent to their disapplication other than in accordance with the guidelines. On the other hand, if there were no default rules in the statute and Listing Rules, the institutional shareholders would face the more demanding task of securing an amendment to a company's articles of association, introducing a pre-emption right.[81]

The guidelines, currently in the form of a Statement of Principles,[82] distinguish between general and specific

disapplication resolutions. The institutional investors will vote in favour of general disapplication resolutions where the authority is limited to no more 5 per cent of the ordinary share capital of the company in any one year (plus a further 5 per cent for an acquisition or capital investment which is identified at the time the resolution is put forward). When acting under the general disapplication resolutions, the company should raise no more than 7.5 per cent in any rolling period of three years (excluding the capital investment addition), without consulting with its shareholders. Authority should not be sought for more than 15 months or until the next AGM, whichever is the sooner.[83] In consequence, disapplication resolutions have become a common feature of the AGM agenda.

Controversy has raged over the rules relating to specific, non-routine (often large-scale) disapplication resolutions, where the institutions need to be persuaded to vote in favour of the disapplication resolution and so need to be presented with the business case for proceeding on a non-rights basis. It used to be thought in some corporate circles that institutions would normally vote against specific disapplication resolutions, but after criticism from a government review,[84] the rules were re-drafted to make it clear this was not the case. What is abundantly clear from the Principles, however, is that, where the institutional shareholders hold sway, the company will have no chance of securing a general, large-scale disapplication of the pre-emption requirement. The Principles envisage specific resolutions being supported only in the context of a specific project, where the need for non-pre-emptive finance can be demonstrated and justified.[85]

Criticism and further market developments

24–15

The pre-emptive right, and the rights issue in particular, have always been unpopular amongst management, just as it has been popular amongst shareholders. Two main criticisms are advanced. First, that it reduces the pool of investors to whom a company may turn for additional equity finance and so it pushes up the cost of equity finance. Secondly, a rights issue takes longer to carry out than either an open offer or a placing (i.e.

raising finance from a small number of investors without making a public offer) and so exposes the company to market risk during the offer period. The arguments in principle for and against the rights issue were examined in the Myners Review of 2005.[86] Paul Myners came out in favour of rights issues. He was particularly impressed by the corporate governance argument in favour of pre-emption. This is that this doctrine makes it difficult for a management, which has failed its existing shareholders, to obtain finance from a new group of investors, letting them into the company cheaply (and at the expense of the existing investors) as part of an implicit bargain to back the existing management against the complaints of the first group of investors. By contrast, pre-emption makes management seeking further equity finance sensitive to the views of the existing investors from whom it must be raised.

In 2008, the first full year of the financial crisis, the issue came to fore again as a number of banks had to raise large sums of fresh capital. All succeeded in doing so, but often only after great difficulties. The Rights Issue Review Group[87] was appointed to see if the principle of rights issues could be maintained whilst mitigating the associated fund-raising difficulties. The main issue was perceived to be one of timing. If the length of the rights issue process could be reduced, the issuer's exposure to market risk (possibly even to market manipulation)[88] would also be reduced, an important development in turbulent markets.[89]

24–16

An obvious first step, already implemented, was to reduce the period for shareholders to decide whether to take up their rights from 21 to 14 days, the minimum specified in the Second Directive.[90] However, the main timing problem was seen to flow from the need to both secure shareholders' consent and to provide the (now) 14-day period for shareholders to decide whether to take up their rights, and the inability to have those two activities running concurrently. It may not be clear why shareholder consent should be needed if what is proposed is a rights issue. There are three possible answers. First, the directors may not have in place a large enough authority to issue shares (in any way) without shareholder consent, though the changes

recently made to the Investment Association Guidance[91] make that now less likely. Second, the directors may wish to make a non-statutory pre-emption offer and so need shareholder consent to disapply the statutory pre-emption provisions.[92] Thirdly, the Pre-emption Group's Principles suggest, though not clearly, that institutional shareholders expect shareholder approval for deeply discounted rights issues (above 5 per cent), even though the statute does not specify any cap on the level of discount nor does the Listing Rules cap apply if a rights issue is proposed.

Assuming shareholder approval is required, the difficulty about making the offer to the shareholders before that approval is obtained is that trading in the rights (so-called "trading in nil paid form") necessarily begins as soon as the offer is made (since the trading must be completed within 14 days). If, however, shareholder approval for the issue is not ultimately obtained, unscrambling the trading may prove very difficult. Consequently, practice is to obtain approval before making the offer. An open offer does not suffer from this difficulty and so the offer can be launched and shareholder approval sought at the same time, the offer being conditional upon shareholder approval being obtained. However, the open offer gives no protection against dilution to the shareholder who cannot take up the offer. Consequently, market practice has developed recently the "compensatory open offer", under which any shares not take up by the shareholder are sold by the company (or its underwriters) into the market and any premium obtained over the offer price is paid to the shareholder who did not take up the offer.[93] In effect, the burden of trading the rights to the new shares passes from the shareholder under a rights issue to the company under the compensatory open offer, but the economic impact on the shareholder should be very similar.[94] This may be a burden the company is happy to accept in order to speed up the fund raising process.[95]

The Terms of Issue

24–17

As noted in the previous chapter,[96] the rights attached to the shares to be issued are likely to be set out in the company's articles. What will not be set out there is the price or other

consideration to be asked in exchange for the shares. Here the directors have a free hand, subject to the rules on capital raising discussed in Ch.11.[97] As far as private companies are concerned, these rules are not demanding, consisting mainly of the rules on commissions and requiring shares not to be issued at a discount to their nominal value (not to be confused with a discount to the market price, against which the pre-emption right, as we have just seen, aims to provide protection). With regard to public companies, the rules, implementing the Second Directive, are more constraining, though they have recently been relaxed somewhat.

ALLOTMENT

24–18

The process by which the company finds someone who is willing to become a shareholder of the company is not something about which the law says very much if there is no offer to the public of the company's shares[98]—although, as we shall see in the next chapter, this is in fact now a very heavily regulated area, if there is a public offer. What the Act does assume is that the process of becoming a shareholder is a two-step one, involving first a contract of allotment and then registration of the member. As Lord Templeman said in 1995:

> "The Act of 1985 preserves the distinction in English law between an enforceable contract for the issue of shares (which contract is constituted by an allotment) and the issue of shares which is completed by registration. Allotment confers a right to be registered. Registration confers [legal] title."[99]

This is consistent with the 2006 Act which defines the point at which shares are allotted as the time when a person acquires the unconditional right to be included in the register of members, but does not require actual entry in the register.[100]

Renounceable allotments

24–19

In the case of a private company the processes of agreement and registration will be achieved with little formality and without the issue of allotment letters. If someone wants to become a shareholder and the company wants him to, he will be entered on the register and issued with a share certificate without more ado.

However, the advantage of constituting the agreement to become a member in a formal letter of allotment is that it facilitates the process described above in relation to rights issues[101] of “renouncing” the entitlement to be registered as a member in favour of someone else, though the technique is not confined to rights issues. Printed on the back of the letter there will be forms enabling, for a short specified period, the allottee to renounce the right to be registered as a member and the person to whom they are ultimately renounced to confirm that he or she accepts the renunciation and agrees to be entered on the register. Normally the original allottee will not insert the name of the person to whom they are to be renounced and the effect is then to produce something similar to a short-term share-warrant to bearer.[102] It is not a negotiable instrument but once the renunciation is signed by the original allottee, the rights can be assigned by manual delivery of the allotment letter without a formal transfer. Before the stated period ends, however, it will be necessary for the name of the ultimate holder to be inserted, a signature obtained, and the allotment letter lodged with the company or its registrars.

Failure of the offer

24–20

Implementing art.32 of the Second Directive, the Act lays down a default rule for public companies that no allotment of shares shall be made pursuant to an offer to subscribe[103] for shares (whether the offer is to the public or not) unless the shares on offer are taken up in full.[104] This rule is designed to prevent an investor ending up holding shares in a company which is less fully capitalised than was expected when the offer was accepted. If a full take-up of the shares is not achieved within 40 days of making the offer, the money[105] received from the offerees becomes repayable in full, though without interest,[106] and must actually be repaid within a further eight days. The sanction for this latter requirement is that the directors then become jointly and severally liable to repay the money, with interest.[107] If the company actually proceeds with an allotment in breach of the Act then the allotment is voidable by the offeree within one month of the allotment (even if the company is in course of

winding up),[108] and any director who knowingly contravenes or permits the contravention of the prohibition on allotment becomes liable to compensate the allottee and the company for any loss, damages, costs or expenses.[109] Despite these fearsome sanctions, the rule is not enormously important in practice, for two reasons. First, if the offer in terms says that the allotment will proceed, even if not fully subscribed, or will proceed if conditions falling short of full subscription are met, the prohibition on allotment does not apply.[110] So, the rule is really one which requires only that the investors be told what risk they run in relation to the take-up of the offer. Secondly, in relation to offers to the public, failure to achieve a full take-up of the offer is a serious matter, not only for the investors, but also for the issuer, so that companies will arrange for the offer to be "underwritten" in some way (i.e. normally an investment bank agrees to take up the shares which are not bought by the public).[111]

Once the shares have been allotted, the company must make a return of allotment to the Registrar of companies, as discussed in the previous chapter.[112]

Registration

24–21

As Lord Templeman indicated, allotment does not make a person a member of the company. Entry in the register of members is also needed to give the allottee legal title to the shares. Section 112(2) says explicitly that a person "who agrees to become a member of the company and whose name is entered on the register of members is a member of the company".[113] The Act now requires registration "as soon as practicable" and in any event within two months of the date of allotment.[114] Even when registered, the shareholder will find difficulty in selling the shares, if they are to be held in certificated form, until a share certificate is received from the company. If the shares are to be held in uncertificated form,[115] then by definition no share certificate will be issued. Instead, the company, by computer instruction, will inform the operator of the electronic transfer system of the identity of those to whom the shares have been allotted and of the number of shares issued to each person.[116]

The lapse of time between allotment and registration in the share register by informing the operator of the electronic transfer system of what the company has done should be very much shorter than the gap between allotment and the issue of share certificates, where the Act gives the company up to two months to complete the process.[117]

Bearer shares

24–22

A major exception in principle, though much less so in practice, to the requirement of entry on the register in order to become a member of the company was created by share-warrants to bearer. Section 779 provided that a company, if so authorised by its articles, could issue with respect to any fully paid shares a warrant stating that the bearer of the warrant is entitled to the shares specified in it. If similarly authorised, it could provide, by coupons attached to the warrant or otherwise, for the payment of future dividends.[118] Title to the shares specified then passes by manual delivery of the warrant,[119] which is a negotiable instrument.[120] On their issue, the company removed from its register of members the name of the former registered holder and merely states the fact and date of the issue of the warrant and the number of shares to which it relates.[121] The bearer of the warrant from time to time was unquestionably a shareholder but to what extent, if at all, he was a member of the company depended on a provision to that effect in the articles.[122] Hence shareholding and membership are not necessarily coterminous if share warrants are issued. However, again subject to the articles, the bearer of the warrant was entitled, on surrendering it for cancellation, to have his name and shareholding re-entered on the register.[123] In practice this exception was unimportant because bearer securities have never been popular with British investors or British companies and are rarely issued and hardly ever in respect of shares, as opposed to bearer bonds (i.e. debt securities which are sometimes issued to attract continental investors who have a traditional liking for securities in bearer form). It is fortunate that bearer shares were such a rarity for, if they became common, it would play havoc with many provisions of the Act. In the end, amendments made by the Small Business, Enterprise

and Employment Act 2015 prohibited companies from issuing share warrants in the future and made provision for the mandatory conversion of existing warrants back into shares, precisely because they were thought likely to undermine that Act's enhanced provisions on disclosure of share ownership.[124]

Conclusion

24–23

Where a company makes a non-public offer of shares, a situation which will necessarily include most share offers by private companies, the rules discussed above are all that the company will need to concern itself with. Where, however, a public offer of shares is to be made, the extensive regulation considered in the next chapter will come into play. Even then, the relevant regulation is additional to the rules considered in this chapter and, though it may supplement, does not replace them. In fact, rules discussed in this chapter, for example those relating to pre-emptive rights, can be very important in public offers, but the point is that such rules are not confined to public offers but apply to share issues of a non-public type as well. Protection of the position of existing shareholders through pre-emption is as important in a private as in a public company, indeed arguably more so in the absence of a market upon which the shares of a disgruntled shareholder can be disposed of.

---

[1] Directive 77/91/EEC ([1997] O.J. L26/1), subsequently amended and re-stated as Directive 2012/30/EU ([2012] O.J. L315/74). The references in this chapter are to the re-stated Directive.

[2] Even this term is not fully precise, since a company may make public offer of its shares without securing their admission to a trading facility.

[3] 2006 Act s.755. The prohibition applies to both shares and debentures: s.755(5). Nor may a private company secure admission of existing securities to the official list without making a public offer: FSMA 2000 s.74 and the Financial Services and Markets Act 2000 (Official Listing of Securities) Regulations 2001 (SI 2001/2956) reg.3. On the "official list" see the following chapter at para.25–9.

[4] See para.25–12 for a discussion of direct and indirect share offerings.

[5] 2006 Act ss.755(1) and 760.

[6] 2006 Act s.757.

[7] 2006 Act s.758(2)—but not if it is "impracticable or undesirable" to do so.

[8] s2006 Act s.758(3). The remedial order may be make whether or not the company is

ordered to be wound up.

[9] s2006 Act s.759(1).

[10] 2006 Act s.759(3) and (5). Those involved could include advisers, such as investment banks. Where the company is ordered to re-purchase, the court may reduce its capital.

[11] 2006 Act s.755(3)(b)(4). On the requirements of converting to a public company see para.4–40.

[12] 2006 Act s.756(2).

[13] 2006 Act s.756(3)(a). If the securities do in fact end up in public hands within six months of their initial allotment or before the company has received the whole of the consideration for the shares, the company is presumed to have allotted them with a view to their being offered to the public: s.755(3).

[14] 2006 Act s.756(3)(b)–(6). Such offers may be renounceable in favour of other persons, provided such persons also fall within the "domestic" category.

[15] Discussed at paras 25–18 et seq.

[16] See para.25–19.

[17] Completing, paras 2.77–2.82; Final Report I, paras 4.57–4.58. Examples of exemptions under the Directive which might be thought inappropriate for private companies were offers to professional investors, as part of takeovers, and of large denomination shares.

[18] The rules discussed in this section, unlike those relating to public offers, do not apply to debt securities which have no equity element.

[19] See para.19–16.

[20] Directive art.29. Even then, only the consent of shareholders with voting rights under the company's articles.

[21] Developing, paras 7.28–7.33.

[22] 2006 Act s.550.

[23] 2006 Act s.549(3)–(4).

[24] 2006 Act s.549(6).

[25] 2006 Act s.549(1). This may help to explain in part why the "shareholder rights plan" or "poison pill" against takeovers is uncommon in the UK, for the effectiveness of the plan depends heavily upon the directors being able to issue warrants to subscribe for shares without shareholder approval.

[26] 2006 Act s.549(3).

[27] When the section talks about rights to "convert any security into shares in the company" it means newly created shares, not shares already in existence.

[28] 2006 Act s.551(2). The section does not in terms require details of the use to which the funds will be put to be given to the shareholders. However, if the directors are also seeking authority in relation to a specific allotment to remove pre-emption rights, they are obliged to put forward a justification: see s.571(6) and fn.62, below. Moreover, the general rules on resolutions at meetings of shareholders may require it. See para.15–47. The resolution need only be an ordinary resolution, even if it amends the company's

articles (s.551(8)), but the resolutions must be notified to the Registrar (s.551(9)). Authorisation can be given in the articles, but this is unlikely in the case of "particular" authorisation.

[29] 2006 Act s.551(2), (3), (4). Renewals of authority are to be given by resolution, even if the original authority was contained in the articles: s.551(4)(a). As s.551(7) makes clear, the time limit relates to the directors' authorisation of the share offer, not to the allotment of the shares (which might occur after the time limit had expired). A time limit is required even for particular exercises of the power.

[30] 2006 Act s.551(3). In relation to allotments of rights to subscribe or to convert, what has to be stated is the maximum number of shares that can be allotted pursuant to the rights: s.551(6).

[31] 2006 Act s.551(2).

[32] 2006 Act s.551(4)(b). This will be a case of an ordinary resolution amending the articles. See fn.28, above.

[33] See now Investment Association, *Share Capital Management Guidelines*, 2014, 1.1 (available at *https://www.ivis.co.uk/media/11164/Rebranded-Share-Capital-Management-Guidelines-3-June-2015-.pdf* [Accessed 26 January 2016].

[34] This principle is also to be found in the Second Directive (art.33) but has again been applied in the UK to private as well as public companies. Pre-emption in relation to new shares issued by the company should be sharply distinguished from pre-emption on the transfer of shares by a shareholder, common in private companies, but entirely a matter for private contracting through the articles. See para.27–7.

[35] See also para.16–26 on the collateral purposes doctrine which has a similar effect but operates only when the directors' predominant purpose is an improper one, and Ch.20 on the unfair prejudice remedy.

[36] See the distinction drawn between the loss suffered by the company and that by the shareholders when shares are issued for an inadequate consideration in *Pilmer v Duke Group Ltd* [2001] 2 B.C.L.C. 773 Aus. HC.

[37] In the case of small companies, the shareholder may be able to challenge the decision to issue new shares under the unfair prejudice procedure. See *Re A Company* [1986] B.C.L.C. 362; and *Re Sam Weller Ltd* [1990] Ch. 682.

[38] For a worked example of this analysis see Bank of England, *Guidance on Share Issuing*, 1999, Technical Annex, showing that the total value of the rights will always match the loss of value on the holding, no matter the size of the discount or the proportion of the existing shares to be issued on a discounted basis. At the time of the trading of the rights the actual post-issue price is unknown but a "theoretical ex rights price" can be easily calculated.

[39] See para.25–14.

[40] A third course of action is for the shareholder to sell part of the rights and to exercise the other part, so as to maintain the value of his or her shareholding in the company (but not the proportion of the shares held), rather than simply to receive compensation for that drop in value by selling all the rights. This action is called, obscurely, "tail-swallowing". The "discount" referred to in this discussion is, of course, a discount to the prevailing market price of the shares, not to their par value, which is not permitted (see para.11–4, above).

[41] It recognises, of course, that a rights issue is a permissible way of providing the pre-emptive right. See the reference to renouncement of rights to allotment in s.561(2).

[42] For further discussion see E. Ferran, "Legal Capital Rules and Modern Securities Markets" in K.J. Hopt and E. Wymeersch (eds), *Capital Markets and Company Law* (Oxford: OUP, 2003).

[43] 2006 Act s.560(1). There is no upper limit to this amount (and it would be impracticable to set one) with the result that it is possible to fix a dividend limitation so high that the holders would in fact be entitled to the whole or the lion's share of profits without affording existing shareholders pre-emptive rights.

[44] 2006 Act s.564. See para.11–20. Since issuance of a bonus share involves the capitalisation of the company's reserves, no payment by shareholders is involved and the shares must be allotted pro-rata to those entitled to the reserve, were it distributed, or, in the case of an undistributable reserve, whose contributions constituted the reserve (as in the case of the share premium account).

[45] 2006 Act s.566. Even if those scheme members may be entitled to renounce or assign their rights so that, if they do, the shares when allotted will not be "held in pursuance of the scheme". Employees' share schemes would be unworkable if every time a further allotment was to be made pursuant to them all equity shareholders had to be offered pre-emptive rights. If, however, equity shares have been allotted under the scheme, the employee holders should have the same rights to protect their proportion of equity as any other shareholder.

[46] 2006 Act s.577. Indeed, it is difficult to see how the rules could be so applied.

[47] 2006 Act s.565.

[48] See above, para.11–16. But the chapter does not apply to private companies or to share issues even by public companies in connection with takeover offers or mergers, where there is in fact a considerable risk of financial dilution. Listed company shareholders are better protected, for the rule restricting discounts to 10 per cent (see para.24–13) applies also to a "vendor consideration placing".

[49] It is difficult to regard this scheme with great disapprobation, since, if Company B had been prepared to take the shares of Company A in exchange for its assets, and then immediately sold them, no question of pre-emption would have arisen. A legitimate concern of the existing shareholders in such a case arises if the shares are placed with their new holders at a discount to the market price. For listed companies, the Listing Rules restrict the discount to 10 per cent, unless the shareholders have approved something larger: LR 9.5.10.

[50] 2006 Act s.561. Treasury shares are excluded from the calculations required by this section: s.561(4). The details of how communication is to be made with the shareholders are set out in s.562.

[51] 2006 Act s.562(5). Nor can the offer be withdrawn, once made: s.562(4).

[52] 2006 Act ss.569(1), 570(1).

[53] 2006 Act s.571(1).

[54] 2006 Act s.567. A provision in the memorandum or articles which is inconsistent with ss.561 or 562 has effect as an exclusion of that subsection: s.567(3).

[55] 2006 Act s.569. On shareholder authority to issue in private companies see para.24–4, above.

[56] 2006 Act s.568. The problem does not arise if the other classes of share are not ordinary but preference shares, because they will not benefit from a pre-emption right.

[57] 2006 Act s.561.

[58] 2006 Act ss.568(4),(5), on which see below.

[59] See para.24–5, above, for the meaning of "general" authorisation.

[60] 2006 Act s.570.

[61] 2006 Act ss.571.

[62] 2006 Act ss.571(5)–(7). These provisions track art.33.4 of the Directive, but the common law would produce a similar disclosure requirement.

[63] 2006 Act s.572.

[64] *A Report to the Chancellor of the Exchequer by the Rights Issue Review Group*, November 2008, 6.5.

[65] See para.24–13.

[66] LR 9.3.12. This is primarily designed to deal with the situation where a company has shareholders resident in the USA. Under the Federal securities legislation it may have to register with the SEC if it extends the offer to such shareholders. Hence the present practice is to exclude such shareholders and to preclude those to whom the offer is made from renouncing in favour of a US resident. This practice was upheld in *Mutual Life Insurance of N.Y. v Rank Organisation* [1985] B.C.L.C. 11, but a fairer arrangement would surely be for the rights of the American shareholders to be sold for their benefit?

[67] On which see para.13–26, above.

[68] 2006 Act s.560(2)(b).

[69] 2006 Act s.573.

[70] However, existing shareholders in listed companies are protected against dilution by the imposition of a limit of 10 per cent to any discount applied on the sale of the treasury shares: LR 9.5.10.

[71] 2006 Act s.562. Proceedings must be commenced within two years of the filing of the relevant return of allotments or, where rights to subscribe or convert are granted, within two years from the grant: s.563(3). As noted, the same applies to contraventions of the substitute right in the company's articles relating to classes of ordinary shares: s.568(4), (5).

[72] 2006 Act ss.569(2), 570(2), 571(2), 573(3),(5).

[73] *Re Thundercrest Ltd* [1995] 1 B.C.L.C. 117.

[74] See para.27–19.

[75] See para.15–25.

[76] On listing see para.25–9.

[77] LR 9.5.10. This rule applies only to companies with a premium listing, on which see para.25–6.

[78] Since the requirement is that "the terms of the offer or placing at that discount have

been specifically approved by the issuer's shareholders", the shareholder approval cannot be given in practice in advance of the decision to issue.

[79] On which see para.21–17.

[80] *http://www.pre-emptiongroup.org.uk* [Accessed 26 January 2016]. The first guidelines were adopted in 1987. The Principles are supported by the National Association of Pension Funds and the Investment Association.

[81] Hence the reported opposition of the institutional investors to the removal of the pre-emption requirement from the Second Directive: *Financial Times*, UK edn, 22 October 2007, p.18 and ibid. 23 October 2007, p.23. Of course, the removal of the right from the Second Directive would not prevent the UK from maintaining the statutory default.

[82] The latest version dates from 2015 and is available on website identified in fn.80. The Principles are said to apply formally only to companies listed on the Premium Listing segment of the Main Market of the London Stock Exchange, but standard listing companies and those on the Alternative Investment Market are "encouraged" to apply them.

[83] Principles, Pts 2A and 2B.

[84] DTI, *Pre-Emption Rights: Final Report*, February 2005 (URN 05/679). It was in this re-drafting process that the "Guidelines" became "Principles", perhaps to emphasis this point.

[85] Principles, Pt 3.

[86] See fn.84.

[87] Above, fn.64.

[88] On which see para.30–39.

[89] The discussion below focuses on speeding up the formal offer process.

[90] 2006 Act s.562(5). The change was made in 2009. Similar changes were made to LR 9.5.6 to cater for non-statutory rights issues and to the *AIM Rules for Companies* (notes to rr.24 and 25).

[91] Above para.24–5.

[92] See para.24–11.

[93] See above para.24–6 as to why the market price can be expected to be higher than offer price. LR 9.5.4 already imposed this rule in favour of offerees in a rights issue who did not take up the offer, so that those unfamiliar with the rights issue procedure were not disadvantaged.

[94] However, a shareholder cannot engage in tail swallowing (above fn.40) under the compensatory open offer.

[95] Because of these market developments the FSA recommended against some of the more radical suggestions from the RIRG which would allow offer and approval periods to run simultaneously. See FSA, *Report to HM Treasury on the implementation of the recommendations of the Rights Issue Review Group*, April 2010.

[96] See above, para.23–6.

[97] See above, paras 11–13 et seq.

[98] The general common law rules on fraud, misrepresentation and negligence will provide some protection to investors: see paras 25–31 et seq., below.

[99] *National Westminster Bank Plc v IRC* [1995] 1 A.C. 111 at 126 HL. From this, Lord Templeman reasoned that shares were not "issued" (the Companies Act does not define the term) for the purposes of a taxing statute until the applicants for the shares were registered as members of the company.

[100] 2006 Act s.558.

[101] See above, para.24–7. Of course, a private company may not want to grant this facility, which might be inconsistent with its articles (see para.27–7, below). The statutory scheme of pre-emption rights does not *require* renouncing to be made available.

[102] See below, para.24–22.

[103] The section thus does not apply to offers for sale of shares (see para.25–12) and does not need to because the issue has been in effect underwritten.

[104] 2006 Act s.578(1). In fact, however, the rule has a much longer pedigree: CA 1948 s.47.

[105] The rule applies, mutatis mutandis, where the consideration for the offer is wholly or partly otherwise than in cash: s.578(4),(5).

[106] 2006 Act s.578(2).

[107] 2006 Act s.578(3). A director can escape liability if it can be shown that the failure was not due to misconduct or negligence on the director's part. If the company promises to keep the monies advanced by a subscriber in a separate bank account and does so, it seems that the monies will be held on trust by the company in favour of the investors: *Re Nan wa Gold Mines Ltd* [1955] 1 W.L.R. 1080.

[108] 2006 Act s.579(1),(2). This means the assets contributed by the allottee are taken out of the insolvent company's estate, but only if the allotee acts within the one-month period.

[109] 2006 Act s.579(3), subject to a two-year limitation period: s.579(4).

[110] 2006 Act s.578(1)(b)—or if the offer is stated to be subject only to certain conditions (such as a 75 per cent acceptance) and those conditions are met.

[111] See para.25–11.

[112] At para.23–6.

[113] On which, see *Re Nuneaton Football Club* [1989] B.C.L.C. 454 CA, holding that "agreement" requires only assent to become a member. The subscribers to the memorandum of association (above, para.4–5) are the first members of the company and should be entered on its register of members, but in their case it appears that they become members, whether this is done or not: *Evans' Case* (1867) L.R. 2 Ch. App. 247; *Baytrust Holdings Ltd v IRC* [1971] 1 W.L.R. 1333 at 1355–1356.

[114] 2006 Act s.554. Failure to register is a criminal offence on the part of the company and every officer in default.

[115] See Ch.27.

[116] Uncertificated Securities Regulations 2001 (SI 2001/3755) reg.34.

[117] 2006 Act s.769.

[118] 2006 Act s.779(3). Share-warrants to bearer must be distinguished from what is perhaps the more common type of warrant, which gives the holder the right to subscribe for shares in the company at a specific price on a particular date or within a particular period. Such warrants are a form of long-term call option over the company's shares. They may be traded, but their transfer simply gives the transferee the option and does not make him or her a member until the option is exercised.

[119] 2006 Act s.779(2).

[120] *Webb, Hale & Co v Alexandria Water Co* (1905) 21 T.L.R. 572.

[121] 2006 Act s.122(1).

[122] 2006 Act s.122(3).

[123] 2006 Act s.122(4)—now repealed.

[124] 2006 Act s.779(4), as added; 2015 Act s.84 and Sch.4. The prohibition operated from May 2015; the period for mandatory reconversion ended a year later.

Cross-Border Offers and Admissions 25–44
De-listing 25–45

INTRODUCTION

25–1

This chapter is concerned with a subject that takes us into the area of securities regulation or capital markets law. Nevertheless, it is not a subject which books on company law can ignore; how public companies go about raising their capital from the investing public and the legal regulations that have to be complied with when they do are central to the operations of large companies. An elaborate discussion of this specialised branch of legal practice is inappropriate in a book of this sort but an outline is essential. The rules considered in this chapter generally apply to "securities", i.e. both to shares and debt instruments (for example, bonds). The focus of this chapter will be on share issues but we will notice the major divergences when debt

securities are issued, as and when is relevant. Debt securities are the lesser subject in this chapter, because they are less often offered to the public even by companies which issue shares to the public and because bonds are less frequently traded on public markets (as opposed to "over the counter"). Nevertheless, to an extent, this chapter crosses the divide between Pts 6 and 7 of the book.

Public offers and introductions to public markets

25–2

There are two distinct, though usually combined, operations which may take place when a large company seeks to raise finance from the investing public. In the first place, it needs to make its case to those people who may be interested in investing in it by purchasing its securities. As we shall see below, the company may choose among a number of different ways of putting itself before investors. The most heavily regulated of these methods is the public offer of securities, simply because the company addresses its publicity to a wide range of persons who may include the ill-informed and the gullible as well as the experienced and well-informed. When a company makes a public offer of its shares for the first time, that is usually termed an "initial public offering" ("IPO"), and this is often a major event in the life of the company. But it may well make further public offerings at a later stage ("secondary" offers). The document (the "prospectus") through which public offers are made is regulated heavily by the law. From this perspective, the law relating to prospectuses can be viewed as a branch of consumer protection legislation, but concerning a product which is very difficult to evaluate. The value of shares depends heavily upon the future performance of the company and cannot be ascertained, as with a motor car, for example, by visual inspection and a test drive.

It will normally be the case that a company seeking to raise substantial funds from investors will also secure that the securities to be issued will be admitted to trading on a public securities market, such as one of the markets operated by the London Stock Exchange. The reason the company will normally take this extra step is that the willingness of investors to buy its

securities will be increased if there is a liquid market upon which those securities can be traded after they have been issued. As we have seen, a shareholder is normally “locked into” the company after the shares have been purchased, in the sense that the investor, short of winding up, cannot require the company to buy back the shares, even at the later prevailing market price, except in the case of some types of redeemable share. Equally, bonds are not normally redeemable at the request of the investor until after some specified period has elapsed and perhaps not before they reach their maturity date. Therefore, a person who wishes to withdraw from an investment will normally be constrained to find another investor willing to purchase the securities. A liquid securities market will facilitate this operation, to the benefit of both investors and the company, which is likely to be able to sell its securities at a higher price if they have access to the liquidity afforded by a public market.

However, the mere admission of securities to trading on an public market also involves putting those securities before the investing public, even if there is no concomitant public offer, since it is now open to the public to acquire the company’s securities, this time not directly from the company but from those who already hold them. Hence, there is a strong argument for having the same information disclosure upon admission of securities to a public market as when the company offers its securities directly to the public. The argument is even stronger if, as is usual, both events occur at the same time. However, there is no legal requirement that this should be so. A company may offer its securities to the public without securing their admission to public market (for example, where it does not expect or want the securities to be traded to any significant degree and so is content to rely on sellers seeking out potential purchasers privately). Or the driving force[1] behind the admission of the securities to the market may be an existing large shareholder (for example, the Government in a de-nationalisation issue) which wishes to liquidate or reduce its holding, but the company does not intend at that time to raise additional finance.

Our main concern in this chapter is with the financing of the company and the public offer of securities as a form of corporate finance. Consequently, the core transaction which we examine is

one in which the company both makes a public offer of its shares and, at the same time, secures the admission of the shares to trading on a public market.

Regulatory goals

25–3

We have referred above to the law relating to public offers as consumer law and that is a very strong strand in the thinking of those responsible for the rules in this area. However, it would be wrong to see the regulation as nothing but a form of consumer protection. In fact, scholarship today stresses the function of regulation in this area as a way of promoting "allocative efficiency", that is, of promoting investment on the basis of an accurate understanding of the risk and reward profile of particular projects which the issuance of the shares will finance. This objective furthers the interests not only of investors but of companies and of the economy generally, for effective regulation promotes the allocation of scarce investment resources to the projects with the highest returns. But what sort of regulation will best facilitate the accurate assessment of different projects?

It is conventional in this branch of law to make a distinction between "merit" regulation and disclosure of information. Under the former approach, a regulator permits an offer to be made to the public only if the securities on offer or the company issuing them ("the issuer") pass certain quality tests, whereas the latter simply puts information in the hands of investors and leaves it up to them to make up their own minds about investing. Although the early regulation of public offers (at state level in the US) adopted the merit regulation approach,[2] the disclosure approach has been the predominant one in all jurisdictions since its adoption by federal US law in the great reforms of 1933 and 1934.[3] However, disclosure has never driven out all elements of merit regulation. Although what is required varies from market to market, disclosure is never all that is required. As a Canadian committee once remarked, with heavy irony, "it would be improbable that a securities commission in a disclosure regime would approve a prospectus that said, truthfully, that the promoters of the company intended to abscond with the proceeds

of the public offering, or that the company's business enterprise had no hope of success".[4] Thus, elements of merit regulation, referred to in the UK as "eligibility requirements", survive in even the most disclosure-oriented regime.

The triumph of disclosure as the predominant regulatory philosophy in this area is probably a reflection of the decision the investor has to make. Prospective subscribers to the ordinary shares to be issued by a company normally obtain no legal entitlement to a return on their investment and so they are essentially making a judgment about the company's business prospects in the future and the appropriate price to pay in the light of those prospects. If the company makes good profits, the ordinary shareholders will benefit; if it makes heavy losses, those will fall first on the same people. The prospective purchaser of shares has to take a view about how the industry in which the company is active will evolve and about the qualities of the company's management.[5] Nobody can be sure about the future. Using merit regulation to exclude certain public offers risks excluding a company whose track record is not good but which has a perfectly decent story to tell about its future. Further, heavy merit regulation may carry the implication that those offers that are permitted to proceed benefit from some sort of public guarantee of the company's future success, something the public authorities are unlikely to wish to provide. Merit regulation thus tends to play a limited role. Even disclosure of information does not make the investor's task easy, because the one piece of hard information the investor requires—what will be the issuer's financial results in the future?—is by definition not available. However, information about the company's present and recent activities, its proposals for the future and the terms of the securities on offer can help to guide the investment decision, even if it cannot take all risk out of the process. Indeed, if all risk could be eliminated, there would be no need for equity finance in the first place.

25–4

A further question about the disclosure regime, which has been hotly debated, is whether production of the requisite level of information requires mandatory disclosure rules. It can be argued that, a prospectus being a selling document, those

companies with good stories to tell would make full disclosure of information and use private “bonding” mechanisms (such as certification by independent third parties) to convince investors of the truth of what they say. Companies with less good stories would follow suit, for fear that investors would deduce from inadequate disclosure that the prospects for the company were dire. Only companies with truly dire prospects would make inadequate disclosure and investors would draw the correct conclusions from such inadequate prospectuses. Whether this theory works in practice seems never to have been tested satisfactorily, but even if self-interest would generate extensive disclosure, mandatory disclosure rules have certain advantages over leaving it to the issuers to decide for themselves the extent of the disclosure. First, the state sanctions available for breaches of the mandatory rules (criminal, civil and regulatory sanctions) may be more credible to investors than the private bonding mechanisms companies themselves could produce. Secondly, mandatory rules may produce more uniformity in disclosure than disclosure decisions taken by issuers on an individual basis (thus helping investors to compare different public offerings). Thirdly, mandatory rules may overcome forces acting against full disclosure even when, from one point of view, disclosure is in the company’s interest. An example is the disclosure of information which, whilst it would make the company attractive to investors, would also help the company’s competitors.[6]

In any event, the detail required by the disclosure rules applicable on public offerings is now staggering. Since, as we have noted, the information available is only indirectly relevant to the future-oriented decision the investor has to make, there comes a point where the marginal gain from more information may outweigh the costs of providing it. This issue has been debated especially in relation to small and medium-sized entities (“SMEs”) since the financial crisis. SMEs traditionally relied on bank funding, which became difficult to obtain post the crisis. Many advocated greater use by SMEs of the financial markets to raise capital. However, the largely fixed costs of capital raising from the public markets absorb a relatively high proportion of the funds raised in the case of small offerings. So, the question of a relaxed disclosure regime for SMEs moved centre stage, as we discuss below.

Turning to the admission of securities to trading on public markets, a regulatory goal has been to ensure that those who control the operation of public markets exercise their admission and expulsion powers fairly. This might be thought necessary to protect the interests of both issuers which wish to make public offerings and investors who have bought the securities on the basis that they would continue to be publicly traded. In practice, this has turned out to be a less important regulatory objective, since competition among public markets for offerings has itself constrained any impulse to act unfairly.

Listing

25–5

The meanings of a public offer and admission to trading on an exchange are easy enough to grasp. Somewhat less obvious is the concept of "listing". This is partly because of the varying ways in which the term is used. Sometimes it is used to refer to any security which is traded on a public market (i.e. it is on the "list" of securities traded on that market), in which case it adds nothing to what we have already said. In this book, however, we use the term in a narrower sense: a listed security is one which has been admitted to the "official list". The first point to note is that inclusion in the official list is not a pre-requisite for admission to trading on all public markets. For example, it is possible to make a public offer of "unlisted" securities and to secure the admission of those securities to trading on the Alternative Investment Market ("AIM") of the London Stock Exchange ("LSE"). On the other hand, the Main Market of the LSE is a market for listed securities only. So, the question arises as to why a company should wish its securities to be included in the official list. The answer to that is that admission to the official list constitutes a quality mark, which companies may be anxious to have in order to encourage investors to acquire their securities.[7] For this reason, admission to the official list is an important element in the public offer and admission to trading process.

Inherent in the concept of an official list is the idea that somebody controls admission to it in order to ensure that the standards for admission are met. That task used to be discharged

by the LSE itself, but, with the demutualisation of the LSE, the Exchange no longer wished to carry out this regulatory function, which was transferred,[8] in consequence, to what is now the Financial Conduct Authority ("FCA"),[9] established under the Financial Services and Markets Act 2000,[10] as amended. Section 74 of FSMA requires the FCA to maintain the "official list" and to include securities in it only in accordance with the provisions of the Act and it gives the FCA the power to make listing rules ("LR") for the purpose of governing admission to the official list and the subsequent conduct of listed companies.[11] However, as is generally true in the area of public offers of securities, much of the controlling legislation is now made at EU level. Under art.5 of the Consolidated Admissions Requirements Directive[12] (or "CARD") Member States are required to "ensure [that] securities may not be admitted to official listing" on a stock exchange operating in their territory "unless the conditions laid down by this Directive are satisfied" and it is from this Directive that certain "merit" or "eligibility" requirements flow, as we shall see below. Article 105 requires that Member States appoint a "competent authority" for the purposes of the Directive, and in the UK that authority is the FCA, acting as the UK Listing Authority ("UKLA").

Premium and standard listing

25–6

However, it would be wrong to think that the FCA's Listing Rules exist only for the purpose of implementing the CARD Directive in the UK. The Listing Rules are of some antiquity and deal with many matters falling outside the scope of CARD or any other EU Directive or add to the requirements of those Directives.[13] For example, the LR contain corporate governance rules and rules on related-party transactions which, as we have seen, add significantly to the Companies Act requirements.[14] These additional requirements substantially contribute to the "quality mark" impact of admission to the official list. On the other hand, the additional requirements add to the regulatory burdens on a company and may discourage it from listing in London—as opposed to New York or Hong Kong. Consequently, in 2010 the FCA's predecessor introduced two

classes of listing. Companies may choose between "standard" and "premium" listing for equity shares, standard listing requiring compliance only with the minimum EU standards and not with the additional domestic rules.[15] Those additional rules concern predominantly corporate governance requirements to be observed after listing, but to a lesser extent they relate to the process of listing itself. Companies may choose a premium share listing for reputational reasons or under investor pressure.

Types of public market

25–7

Most people, if asked, would probably say that there is one stock market in the UK and that is the LSE. However, this is not the case. The LSE itself runs two separate markets for shares, namely the "Main Market" and the "Alternative Investment Market" ("AIM")[16] for well-established and less well-established companies respectively; and two separate markets for bonds (the Gilt-edged and Fixed-Interest Market ("GEFIM") and the Professional Securities Market ("PSM")).[17] However, the LSE has no monopoly on the operation of public markets in securities, even in the UK, and there exist a number of smaller share markets, of which the best known are probably those operated by ICAP Securities & Derivatives Exchange ("ISDX"), which operates partly in competition with those run by the LSE and partly to provide a market for companies needing to raise smaller sums of money than is usual on AIM. However, there is no legal reason why a British registered company should not have its securities traded on a public market in another country. A number of large British companies have primary listings in London and secondary listings elsewhere, usually in continental Europe or the US, and some non-British companies equally have secondary listings in London. More interestingly, a small number of British companies have their primary listings outside the UK and a somewhat larger number of foreign companies have their primary listings in London. Indeed, there has been a certain international competition in recent years among the exchanges to secure such listings, notably from Chinese and Russian companies. Bonds issued by UK-incorporated companies are often listed in Luxembourg.

25–8

Carrying on the business of operating a stock market is, not surprisingly, one of the activities regulated under the FSMA. Those who operate the exchange must either be persons authorised to carry on financial business in the UK or the investment exchange must be a "recognised" investment exchange ("RIE").[18] Applications for recognition can be made under Pt XVIII of FSMA to the FCA, which is the primary regulator in the area covered by this chapter. The requirements[19] which have to be met relate to both the initial setting up of the exchange and its continued operation. Thus, any public market in securities operating in the UK will be subject to the regulation of the FCA.

The purpose of the above regulation of investment exchanges is to ensure the security of their operation. Thus, the recognition requirements deal with matters such as the suitability of the persons running the exchange and the level of financial resources available to them. As with the minimum requirements for listing, the underlying rules for exchange regulation are set out in EU law, in this case the Directive on Markets in Financial Instruments ("MIFID").[20] This Directive distinguishes a regulatory point of view between "regulated" markets and "multilateral trading facilities" ("MTF"). The Community requirements for a regulated market are now set out in Title III of MIFID. Article 44 states that "Member States shall reserve authorisation as a regulated market to those systems which comply with the provisions of this Title". The Title then sets out a number of requirements for acquiring the status of a regulated market, many of which cover the same ground as is to be found in the domestic rules governing the award of recognised investment exchange status.

It might therefore be thought that all RIEs would seek to have all the markets they run characterised as regulated markets.[21] However, there is no obligation on an RIE to apply for regulated status for all or any of its markets and not having regulated status does not prevent that market from continuing to operate in the UK, provided it continues to meet the domestic law

requirements. In the language of MIFID a market which is not a regulated market is a MTF.[22] On the other hand, a market which does not obtain regulated status under MIFID loses the benefits and the burdens placed by EU law on regulated markets, those benefits and burdens being found across the EU law governing securities. For RIEs, therefore, the question is whether the benefits EU law attaches to a regulated market outweigh the burdens. The LSE decided not to seek regulated status for AIM,[23] but the Main Market of the LSE is a regulated market. For bonds, GEFIM is a regulated market and PSM is not.[24]

Listing and regulated markets

25–9

Although official listing is a concept which refers to the quality of the securities and the issuer, whilst regulated markets are markets of a particular quality, there is a close link between them, at least in the case of shares. The Listing Rules provide that "equity shares must be admitted to trading on a regulated market for listed securities operated by a RIE".[25] Thus, the listing process is not complete unless the shares have been admitted to trading on a regulated market. On the other side, it is only companies whose shares are in the official list which will be admitted by the LSE to its Main Market.[26] Thus, listed shares must be traded on a regulated market and the Main Market of the LSE will admit only listed securities. The FCA (or the competent authority in some other EEA State in the case of companies incorporated there) controls inclusion in the official list and the LSE controls admission of the securities to trading on the Main Market.[27] The company has to satisfy both sets of requirements in order to give its securities the status of being on the official list and its shareholders the facility to trade in those securities.

By contrast, listed debt securities must be admitted to trading on a market for listed securities operated by a RIE, but that market need not be a regulated market. On the LSE, GEFIM is a regulated market and the PSM is exchange-regulated, but nevertheless trades listed debt securities.

The regulatory structure

The document containing the information which must be put before potential investors in a public offering is termed a prospectus. Domestic statutory law regulating prospectuses has a long history: the Directors' Liability Act 1890,[28] imposing liability for negligent misstatements in prospectuses, was an advanced piece of legislation for its time and significantly influenced the US Securities Act 1933. However, over the past 30 years EU law has gradually occupied the legislative space in relation to public offers, admission of securities to public markets and listing, as part of a broader strategy to create a single European financial market[29]—though remedies for breaches of the rules still remain substantially in the hands of the Member States. The result of EU occupation of the field, together with the additional rules adopted at national level, has been a multi-layered regulatory structure, where six distinct layers can be identified: primary community law; secondary community law; primary domestic legislation; secondary domestic legislation; FCA rules; and rules generated by stock exchanges.

The modern EU legislative instruments aimed at regulating this area were proposed in the Financial Services Action Plan ("FSAP"),[30] adopted in 1999 for the period up to 2005 and substantially achieved in that period. We shall look at some of the FSAP instruments in this and the following chapter. As far as disclosure of information in prospectuses is concerned the central piece of EU law is currently Directive 2003/71/EC on prospectuses (the "Prospectus Directive" or "PD") as amended in 2010,[31] whilst admission to listing is regulated by CARD.[32]

As far as the PD is concerned, it has two features which need to be noted. First, it is what is inelegantly referred to as a "maximum harmonisation" Directive. This means that it sets out not only standards below which the Member States may not fall but also standards above which they may not rise. Since it is also a very detailed Directive, especially when taken with the subordinate EU legislation—see below—the Member States have rather little discretion over its implementation in domestic law and it functions more like a Regulation than a Directive.[33] The reason for this approach was the EU's desire to produce a

prospectus which, without changes other than translation, could be used simultaneously in more than one Member State in a cross-border offer. We shall look at this "EU passport" concept in more detail below.[34]

The second notable feature of the PD results from an adaptation of the EU legislative process introduced for FSAP instruments and known as the "Lamfalussy process", after the name of the chairman of the committee which put forward this proposal. An important part of this process is that the European Commission obtained the power to make what we would call subordinate legislation (through *Commission* Directives or Regulations), without going through the full EU legislative process but after consulting the Member States,[35] where the parent Directive provides for such "second-tier" legislation. In fact, in the case of disclosure of information in public offers the detailed information required is to be found in Commission Regulation (EC) No.809/2004,[36] as amended, a document of some 100 pages and being, as a Regulation, directly applicable[37] in the Member States and so not requiring transposition by them. The purpose of this shift of legislative power to the Commission was said to be to enable the details of the FSAP legislation to be adapted more quickly to changing market practices than would be the case if the full EU legislative process had to be used. Law-making by the Commission thus constitutes the second layer of rules in this area, after the adoption of the parent legal instrument by the EU legislature.

However, the PD, the parent EU instrument in our area, and Commission instruments taking the form of a Directive do require transposition into national law. This gives rise to the third level of law-making, i.e. by the British legislature (which itself may take the form of primary or secondary legislation). The most obvious expression of the domestic law-making process is FSMA 2000, as subsequently amended, especially its Pt VI. FSMA 2000 contains three broad types of rules: those simply transposing the EU law, those both transposing and adding to the EU requirements (where EU law permits this) and those dealing with matters not subject to EU regulation. However, from the outset of domestic financial services regulation, the policy of embodying all the relevant rules in a

statute or even in statutory instruments was rejected in favour of conferring broad rule-making and enforcement powers on a regulator, now the FCA. This is a statutory body[38] but funded by market participants and designed to be more attuned to the needs of the markets than would be a governmental department. It has a very wide remit in the financial services area but for the purposes of this chapter we concentrate on its role in public offerings. Rules made by the FCA or its predecessor thus constitute the fifth level of rule-making. For the purposes of this chapter particularly important are its Prospectus Rules ("PR"), though on some matters its Listing Rules ("LR") are relevant as well.

The sixth layer of regulation is that done by the exchanges themselves, as a matter of private contract with the issuers which seek to have their securities traded on a securities market.

It is likely that the balance within the above structure will change in the future. In November 2015 the European Commission proposed to replace the PD with a Prospectus Regulation, as well as making some changes to the substantive rules, which we note as appropriate below.[39] This proposal was part of a more general scheme to create a "capital markets union" within the EU. To the extent that this proposal is successful, EU rules would become relatively more important and domestic rules relatively less so, since a Regulation does not need transposition into domestic law.

Types of public offer

25–11

The EU and domestic rules discussed in this chapter are concerned with public offers of transferable securities. The whole of this body of regulation can be avoided by offering non-transferable securities to the public.[40] However, the illiquidity embodied in non-transferable securities is likely to make them unattractive to investors. Assuming an issue of transferable securities, the company's choices appear to be as follows. On an initial public offering of shares, a company's choice of method will be severely restricted. If the issue is large it will have to proceed by way of an offer for sale or subscription coupled with admission to listing (or admission to AIM), whilst smaller

amounts may be raised via a placing plus an introduction to a public market. (A placing is an offer to a selected group of investors and so is not a general offer.) In the case of bonds, even large amounts are normally raised by means of a placing, because bonds are traditionally bought by institutional, not retail, investors. In the case of shares, a third way of proceeding may be available. Where the company's shares have somehow become sufficiently widely held (which is unlikely without a public offer but conceivable) it may be possible to raise the new money needed by a rights or open offer to its existing shareholders, but this course of action is normally available only on subsequent offers, not on an IPO. We shall look briefly at each type of offer.

Offers for sale or subscription

25–12

A full-blown public offer will prove to be an expensive and time-consuming operation. The company's finance director (and probably other executives) and representatives of the advising investment bank and their respective solicitors will for weeks or months devote most of their time to working as a planning team. At a later stage the services of a specialist share registrar will generally be needed to handle applications and the preparation and dispatch of allotment letters. The offer will have to be made through a lengthy prospectus which will have to be published. To ensure that the issue is fully subscribed, arrangements will have to be made for it to be underwritten. Today this is normally achieved by the sponsoring investment bank agreeing to subscribe for the whole issue and for it, rather than the company, to make the offer. Thus, large public offers are normally in the form of offers for sale not offers for subscription, the investment bank having already subscribed for all the shares on offer.[41] In major offerings, such as the privatisation issues,[42] a syndicate of investment banks may be employed. The banks will endeavour to persuade other financial institutions to sub-underwrite. Ultimately the cost of all this, including the commissions payable to underwriters and sub-underwriters,[43] will have to be borne by the company.

The most ticklish decision that will have to be made is the

price at which the securities should be issued and, for obvious reasons, this is normally left to the last possible moment. If it proves to have been set too low, so that the issue is heavily over-subscribed, the company will be unhappy, while, if it is set too high so that much of the issue is left with the underwriters, it is they who will be unhappy since their commission rates will have assumed that they will end up with a handsome profit and not be left with securities that, initially, they cannot sell except at a loss. Nor, probably, will the company be best pleased since it is generally believed that an under-subscribed issue will reduce the company's prospects of raising further capital in the future. The nightmare of all concerned is that there will be an unforeseen stock market collapse between the date of publication of the prospectus and the opening of the subscription list.[44] The sweet dream is that the issue will be modestly over-subscribed and that trading will open at a small premium.

If the issue is over-subscribed it will obviously be impossible for all applications to be accepted[45] in full. The issuer decides how to deal with this situation and the prospectus will need to say how it intends to do so. Normally this will be by accepting in full offers for small numbers of shares and scaling down large applications, balloting sometimes being resorted to. The company will probably wish to achieve a balance between private and institutional investors. To succeed in that aim multiple applications by the same person will probably be expressly prohibited.[46] An abuse which also needs to be guarded against is that "stags" will apply but seek to withdraw and stop their cheques if it seems likely that dealings will not open at a worthwhile premium to the offer price. However, offer documents will require applications to be accompanied by cheques for the full amount of the securities applied for, the cheques being cleared immediately on receipt and any refund sent later. This means that an applicant may not only fail to get all or any of the shares he hoped for but may, for a period, lose the interest that he was earning on his money.[47]

The offer price is normally stated as a fixed and pre-determined amount per share. It can however, be determined under a formula stated in the offer, though this is uncommon except in offers addressed to professional investors.

Alternatively applicants can be invited to tender on the basis that the shares will be allocated to the highest bidders. This, however, is rarely used in relation to issues of company securities.

Placings

25–13

Obviously, the expense of an offer for sale plus introduction to listing is prohibitive unless a very large sum of money is to be raised. For lesser amounts the placing may be more attractive (and may be used for large amounts in the case of bonds). Under this method the investment bank or other adviser to the issuer obtains firm commitments, mainly from its institutional investor clients (instead of advertising an offer to the general public), coupling this with an introduction to trading. The absence of the need for newspaper advertisements, "road-shows" and the like makes this a much less expensive procedure. On the other hand, it prevents the general public from acquiring shares at the issue price. Another way of proceeding is the "intermediaries offer", whereby financial intermediaries take up the offer for the purpose of allocating the securities to their own clients. This way of proceeding should be only marginally more expensive than a straightforward placing, but has the advantage that it is more likely to result in a wide spread of shareholders and a more active and competitive subsequent market. Although these are not "public" offers as far as the financial community is concerned, unless carefully controlled they may end up being public offers under the prospectus rules (as we see below).

Rights offers

25–14

Once a company has made an initial public offering of shares it will have additional methods whereby it can raise further capital and, even if it proceeds by an offer for sale, this will be less expensive if the securities issued are of the same class as those already admitted to listing or to the AIM. More often, however, it will make what is called a "rights issue" and, if it is an offering of equity shares for cash, it will generally have to do this, or make an open offer, unless the company in general meeting

otherwise agrees. This is because of the pre-emptive provisions discussed in the previous chapter.[48] In one sense a rights issue is considerably less expensive than an offer for sale: circulating the shareholders is cheap in comparison with publishing a lengthy prospectus in national newspapers and mounting a sales pitch to attract the public. But in another sense it may be dearer: if the issue price is deeply discounted the company will have to issue far more shares (on which it will be expected to pay dividends) in order to raise the same amount of money as on an offer. In any event, as we shall see, a rights issue will normally be a public offer for the purposes of the prospectus rules.

Other methods of issue, which can be used in appropriate circumstances, include exchanges or conversions of one class of securities into another, issues resulting from the exercise of options or warrants, and issues under employee share-ownership schemes—though these will not necessarily raise new money for the company. Nor, of course, will capitalisation issues, dealt with in Ch.13, above. We do not discuss them further in this chapter.

Admission to Listing and to Trading on a Public Market

Eligibility criteria for the official list

25–15

We have already noted that admission to trading on a public market is a normally a concomitant feature of a public offer. Although it might seem logical to look at the rules on disclosure of information in relation to offers before looking at the rules governing admission to trading, there are good reasons for the opposite approach. First, the admission rules are generally less elaborate. Secondly, the admission rules contain merit requirements, i.e. rules permitting securities resulting from only certain types of public offer to be publicly traded. The admission requirements therefore feed back into decisions about the types of public offers than can considered and the public markets available for the resulting securities to be traded.

The principal source of admissibility requirements are the Listing Rules made by the FCA, partly transposing into domestic law the EU rules from CARD on admission to the official list

and partly adding to those minimum requirements. Chapter II of Title III of CARD lays down certain conditions for the admissibility of shares to the official list, and Ch.III lays down a lesser set of requirements for debt securities.[49] Since securities admitted to the official list must also be admitted to trading on a regulated market,[50] the rules on admission to the official list in effect control admission to trading as well. However, the operators of any market may lay down conditions for the admission of securities to trading on that market, though competition considerations constrain operators from going very far in controlling admissions. We look first at the rules on admission to the official list.

The admissibility conditions may be divided into those related to the issuer and those related to the securities on offer. In relation to both equity and debt securities one of two major policy concerns of CARD and the LR is to ensure that there should be a liquid market in the securities in question after listing, so that subsequent trading in the securities is not unacceptably volatile.[51] The following requirements promote this goal.

(i) The expected market value of the securities to be admitted must be at least £700,000 for shares and £200,000 for debt securities.[52]

(ii) All the securities of the class in question must be admitted to listing.[53]

(iii) The securities must be freely transferable.[54] Without this requirement the development of a market in the securities would clearly be inhibited.

(iv) In the case of shares a "sufficient number" of the class of shares in question must be distributed to the public (as opposed to being held in non-trading blocks by insiders), which is translated as a rule of thumb into 25 per cent of the shares for which admission is sought.[55]

The other main driver of the CARD rules is that the issuer should have a certain quality. These requirements apply to the issue of shares only.

(v) The company must produce audited accounts for a period of

three years, ending not earlier than six months before the application for admission.[56]

(vi) Going beyond CARD, for premium listing the company must show that "at least 75% of the applicant's business is supported by a historic revenue earning record" for the three years in question and that it will be carrying on an independent business as its main activity.[57] The aim of these requirements is not that the applicant show that it has been profitable over the three years (though it may not find takers for its shares if it has not been) but that its current business has a three-year track record and is not contingent on some other person's consent.[58] As a result of opportunistic behaviour on the part of controllers of certain listed companies, the LR were modified in 2015 so as to require controlling shareholders (30 per cent of more of the voting rights) to enter into a written and legally binding agreement with the company, designed to safeguard its independence, especially in relation to related-party transactions and the election of independent directors, in the absence of which the LR's standard related-party transactions are applied to the issuer with particular rigour.[59]

(vii) Again going beyond CARD and for premium listing, the applicant must show, subject to exceptions, that it will have sufficient working capital to meet its requirements for the 12 months after listing.[60] This is some protection against the company suffering a "cash crunch" in the short-term after listing. Of course, where the admission is coupled with a public offer, the working capital is likely to be raised in that offer. The purpose of this requirement is that the applicant shows it has made a realistic forecast of what needs in the near term.

In addition to these specific requirements in relation to the company and its securities, there is a general power in art.11 of CARD for Member States to reject an application for listing "if, in their opinion, the issuer's situation is such that admission would be detrimental to investors' interests". This is transposed into domestic law by FSMA 2000 s.75(5), which gives the power of rejection to the FCA as the competent authority. It is unclear in what circumstances this power might be used, though

no doubt it is a useful back-stop to deal with the unexpected.

Exchange admission standards

25–16

Since admission to listing requires admission to a market for listed securities, the admission standards of the exchange are also relevant to the listing process. Taking the admission standards of the LSE for its Main Market as an example, these largely track the eligibility requirements of the LR but add to them in some ways. Thus, the shares sought to be traded "must be capable of being traded in a fair, orderly and efficient manner" and the Exchange may refuse an application for listing if the applicant's situation is such that admission "may be detrimental to the orderly operation of the Exchange's markets or to the integrity of such markets".[61]

In the case of unlisted securities, the eligibility rules of the exchange to which admission is sought are naturally central, since the LR have no application. For the AIM, run by the LSE, the exchange in fact lays down no general eligibility requirements for admission other than the appointment of a "nominated adviser".[62] This is because the responsibility for assessing the suitability of the applicant for AIM is placed by the Exchange on the adviser (usually referred to as the "nomad").[63] However, eligibility requirements are laid down in certain specific cases. For example, r.7 of the *AIM Rules for Companies* stipulates:

> "Where an applicant's or quoted applicant's main activity is a business which has not been independent and earning revenue for at least two years, it must ensure that all related parties and applicable employees as at the date of admission agree not to dispose of any interest in its securities for one year from the admission of its securities."

This rule obviously reflects in a muted way the independence requirements of the LR. The Exchange has also reserved to itself the power to subject any applicant for admission to a special condition.[64]

The Prospectus

25–17

The core mechanism by which the law achieves its disclosure

objectives is the prospectus. The relevant EU rules are in the PD, a maximum harmonisation Directive,[65] and in subordinate EU law made by the Commission. They are transposed, as necessary, into domestic law by amendments to FSMA, statutory instruments and through rules made by the FCA—the Prospectus Rules ("PR"). There are two triggers for the requirement to produce a prospectus: a public offer and the admission of shares to trading on a regulated market.[66] Where, as is usual, shares are both offered to the public and at the same time admitted to trading on a regulated market, both triggers will be pulled, but either will do. We have also noted that AIM is not a regulated market and so simple admission to trading on AIM will not trigger the prospectus requirement. However, the PD rules will be triggered if the admission is accompanied by a public offer. To escape the PD the issuer must both avoid admission to trading on a regulated market and make an offer which falls outside the definition of a public offer, as certain types of placing, for example, will.

Even in this case the issuer must normally meet some disclosure requirements. For example, the LSE's own rules for AIM have disclosure obligations built into them. Those rules require an applicant for admission to AIM to produce a publicly available "admission document". This document is a slimmed down version of what is required under the PD: in fact the information required for the admission document is defined by express reference to the annexes of Commission Regulation which contain the detailed requirements for disclosure under EU law.[67]

The same two-trigger mechanism applies in relation to bonds. Thus, if the bonds are admitted to the PSM (an MTF or exchange regulated market), rather than the GEFIM (a regulated market), and there is no public offer, then no prospectus is required. However, there is a twist here. The PSM, although exchange-regulated, is a market for listed securities only, and the process of listing entails disclosure obligations under CARD for the applicant.[68] The disclosure is effected not through a prospectus but through listing particulars.[69] However, the detail of what is required for particulars, laid down in the LR,[70] is in general less demanding than that required for a prospectus.

FSMA makes it clear that listing particulars are the more junior instrument, for the FCA has no power to require listing particulars in any situation where a prospectus is required.[71] Consequently, where shares are admitted to the official list as part of a public offer, it is the prospectus rules which count, not those governing listing. The same is true if bonds are to be admitted to the official list as part of a public offer. However, because bonds are often offered in a placing which does not constitute a public offer and then admitted to trading on the PSM (an exchange-regulated market), the disclosure obligations attached to listing are more important for bonds than shares. In this chapter, however, the core of our analysis will be the prospectus, because our focus is on capital raising through share issues.[72]

The public offer trigger

25–18

Producing an acceptable definition of a public offer has long proved a difficult exercise. The predecessor of the current PD[73] did not even attempt the exercise, noting rather disarmingly in its preamble that "so far, it has proved impossible to furnish a common definition of the term 'public offer' and all its constituent parts". It was lauded as one of the achievements of the current PD that it does contain such a definition. That definition is as follows:

> "'offer of securities to the public' means a communication to persons in any form and by any means, presenting sufficient information on the terms of the offer and the securities to be offered, so as to enable an investor to decide to purchase or subscribe to these securities."

This, it will be observed, is not a great example of the drafter's art, for it is hardly helpful to define the trigger for a disclosure obligation in terms of the information which is in fact disclosed. Thus, as before, one has to proceed by taking an essentially broad and imprecise concept ("communication to persons in any form and by any means") and then seeking to give meaning to it by examining the specific provisions in the Directive which state when something is not a public offer, even though on the general approach it might otherwise be.

Of central importance, therefore, are the reasons for excluding

some types of offer from the category of a “public” offer. Producing and verifying the information required for a prospectus is a costly and time-consuming business. There is therefore a strong argument for not requiring a prospectus if its recipients do not need the information it contains. This could be for a number of reasons. Even if the information would be of benefit to the recipients, the costs of providing it may outweigh the benefits of having it provided. This is likely to be true of small offers. The provisions of the PD can be seen to reflect these concerns.

Exemptions from the prospectus requirement on a public offer

25–19

The policies underlying the various exemptions from the requirement to produce a prospectus can be roughly categorised as follows.

First there are exemptions which seek to identify the investors who can look after themselves and so do not need the mandatory prospectus information:

(i) Offers addressed to “qualified investors” only.[74] These are defined so as to include legal entities authorised to operate in the financial markets (for example, fund managers or investment banks); governmental bodies at both national and international level; institutional investors and, large companies.[75] Member States are also given the power to include in the category of qualified investors individuals who satisfy two of the following criteria and who ask to be considered as qualified investors. The criteria are: having carried out at least ten transactions of significant size per quarter over the previous four quarters; having a securities portfolio of at least half a million euros; working or having worked for a year in the financial sector in a position requiring knowledge of securities investment.[76] Member States may also apply the exemption to SMEs which asked to be so considered, the criteria then applying to those taking financial decisions on behalf of the SME. A register of these last two categories of qualified investor has to be kept by the

competent authority. The UK has taken up both these options.[77] The British legislation makes an important clarification that included in the category of qualified investor is the offeree who is not qualified but whose agent is, provided the agent has authority to accept the offer without reference to the client.[78] To avoid a rather obvious way around the prospectus requirements, it is provided that, if there is a subsequent resale of the securities by a qualified investor, the question of whether that resale counts as a public offer is to be tested afresh.[79]

(ii) Offers of securities where each investor is to pay at least €100,000 in response to the offer.[80] The idea is that such a large consideration will deter all but investors who can look after themselves.

(iii) Offers of securities in denominations of at least €100,000—another way of expressing the same point.[81]

A second category of those who, it can be said, do not need the prospectus information, are those who will receive the relevant information through some other mechanism. The PD identifies[82] on this basis the target's shareholders in a share-exchange takeover bid[83] and the shareholders of companies involved in a merger.[84] Controversy has surrounding the question whether rights issues[85] should fall into this category. In principle an offer to existing shareholders is a public offer, but it is argued that the continuing disclosure obligations of listed companies, discussed in the following chapter, make a prospectus unnecessary in this case. Initially, the PD made no concessions to this argument but in 2010 the full prospectus requirement was reduced to a "proportionate level"[86] (fixed in secondary EU legislation). However, there is continued debate about what that proportionate level should be.[87]

The third category where a prospectus is not regarded as useful is where those who receive the offer do so other than as part of a fund-raising exercise by the company. The PD identifies[88] on this basis those receiving new shares in substitution for their existing shares, if there is no increase in the issued share capital; bonus shares and script dividends[89]; and shares issued under employee or directors' share schemes.

The fourth and most contentious case is where the prospectus information is admittedly useful to potential recipients but the cost of providing it is thought to be out of proportion to the benefits flowing from it. The Directive as a whole does not apply where the total amount to be raised in the offer is no more than 5 million over a period of 12 months.[90] Somewhat oddly, there is then a separate exemption from the definition of a public offer for "an offer of securities with a total consideration of less than EUR 100,000" over a period of 12 months.[91] The policy seems to be to leave the Member States free to impose or not their domestic prospectus rules on offers below the 5 million limit, but to prohibit them from so doing in the case of offers below 100,000.[92] A further important example of this policy is the exclusion from the prospectus requirement of offers addressed to fewer than 150 persons (natural or legal) per EEA State, and any qualified investor offerees do not count against this number.[93]

A contentious issue has been how far SME offerings fall within the category of "useful but too expensive" information. Initially, no concession was made to SMEs but in 2010 the size of the issuer was made a criterion for determining the extent of the required disclosure.[94] This is a difficult issue: provision of what investors regard as inadequate information might reduce their willingness to subscribe for the securities of such issuers, even if the reform cuts down the costs of making public offers, so that SMEs overall could be worse off. The Commission's reform proposals of 2015[95] propose to solve the problem by offering substantial relaxations to SMEs but only where the securities are not to be listed on a regulated market. Those using MTFs are thought to better understand the risks they run.

Probably the most practically significant of these exemptions, to date, are those for offers to qualified investors and to small numbers of investors. An offer made by a company to institutional investors and brokers operating discretionary portfolios for clients, followed by admission to trading on AIM, can escape the statutory prospectus requirements, though not the Exchange's own disclosure rules.

The admission to trading trigger

25–20

The second trigger for the prospectus is a request for admission of securities to a regulated market.[96] Thus, if shares are to be introduced onto the Main Market of the LSE, even though there is no offer to the public by the company, a prospectus will normally be required. However, there are exemptions from the second trigger as well. Consequently, if an issuer can bring itself within both the public offer and the admission to trading exemptions, it may avoid the need for a prospectus even though it appears to have pulled both triggers. Some of the admission exemptions[97] repeat those available in relation to public offers, mainly those noted in categories two and three above. Thus, the takeovers and mergers exceptions to the public offer trigger appear again in relation to the admission trigger. Otherwise, in the case of share-exchange takeover, a prospectus would often have to be produced because the securities offered in the bid are to be admitted to trading on a regulated market.

25–21

On the other hand, the first category of exemptions for public offers (qualified investors) is missing in the case of admission to trading, presumably because, once the securities are admitted, they are in fact freely available to everyone. The fourth category (burdens outweigh benefits) is present in the case of admission but formulated in a rather different way. Again a limitation on the number of offerees will not work effectively once there is trading on a public market. Instead, the exemption applies to the admission of shares representing less than 10 per cent of the number of shares of the same class already admitted to trading on that regulated market (measured over a 12-month period).[98] The policy argument is that, if the class of share is already traded on the market, there will be a lot of information about them and the issuer in the market[99] and a relatively small offering of additional shares will not mark a dramatic change of direction for the company. Combined with the qualified investor exception for public offers, the 10 per cent rule enables companies to raise relatively small amounts of new capital via a carefully structured placing, even if the shares in question are admitted to trading on a regulated market.[100]

In order to encourage a single financial market in the EU, securities already admitted to trading on one regulated market to

be admitted to trading on another without the production of a prospectus.[101] This facility is subject to conditions, notably that securities of the same class shall have been traded on the other market for at least 18 months[102] and that the ongoing obligations for trading on that other market have been complied with.

The form and content of prospectuses

25–22

Subject to the exemptions discussed above, a prospectus must be made available before an offer is made to the public or a request is made for admission of securities to trading on a regulated market.[103] The prospectus is a disclosure document and the overriding rule to which it is subject is that it "shall contain all information which is necessary to enable investors to make an informed assessment of the assets and liabilities, financial position, profit and losses, and prospects of the issuer and of any guarantor, and of the rights attaching to [the] securities".[104] However, the PD does not content itself with this important general rule: far from it. This is an area where the Commission is given law-making powers in relation to the format and content of the prospectus and in pursuance of this power has produced a Regulation,[105] containing more than 40 articles (more than the PD itself) and, remarkably, some 19 annexes. The Regulation is directly applicable in Member States (and so does not need transposition).[106] The purpose of the "sweeping up" rule in the Directive is thus to require those drawing up a prospectus, after they have complied with the detailed rules in the Regulation, to ask themselves, as a final check, whether overall it gives the investors all the information they require. In some cases the competent authorities may—or must—add to the minimum disclosure requirements if this is necessary to meet the standard of "all information necessary".[107]

In a work of this nature the Commission Regulation does not need to be analysed in detail. Despite its formidable size it is not quite as fearsome as it seems. First, it contains rules which to some extent were previously to be found in Directives[108] and so it is not as big a regulatory extension as it seems. Indeed, one of the purposes of giving the Commission law-making powers in this area was to remove a lot of the detail from EU Directive to

Commission subordinate law, which could more easily be adjusted to changing needs. Secondly, the annexes contain "building blocks" to be used in the construction of the prospectus, but only some, often a small number, of those building blocks will be relevant to any one prospectus.[109]

Despite these disclosure requirements, there is likely to be one crucial piece of information which it may not be possible to insert into it, namely, the price of the security. For the reasons given above,[110] those involved will want to leave this to the last possible moment, in order to be able to react to late changes in the market. Connected with the price uncertainty, it may not be possible to say how many securities will be on offer. Omission of these matters is permissible provided either the prospectus contains the criteria by which these matters will be determined or anyone who has accepted the offer before the final price and amount of securities on offer have been published is allowed to withdraw their acceptance during the following two working days.[111]

Summary

25–23

Overall, a prospectus is likely to be a forbiddingly long and detailed document, a tendency to which the civil liability rules, discussed below, only contribute. It is doubtful whether many retail investors read it in full or at all before deciding whether to invest. Professional investors and analysts may pore over it, but most retail investors will not find it a user-friendly document, despite the requirement that the information in it "shall be presented in an easily analysable and comprehensible form".[112] It is therefore sensible that a summary is required to be part of the prospectus, conveying "the essential elements of the securities concerned" but with a warning that it should be read only as an introduction to the prospectus.[113] The significance of the summary was underlined in the 2010 revisions which require the summary to be drawn up in a common form and to contain "key information" (both to be determined by subordinate EU legislation)[114] and impose civil liability for the omission of key information.[115]

Supplementary prospectus

25–24

It is also not a rare event that information becomes available after the prospectus has been published which requires the published information to be qualified. Article 16 of the PD requires "every significant new factor, material mistake or inaccuracy" relating to the information contained in the prospectus which "arises or is noted" after its approval and before the closing of the offer to be the subject of a supplementary prospectus, if the new information is capable of affecting the investors' evaluation of the offer. In the case of an offer to the public investors have a right of withdrawal during the two working days after the supplementary prospectus is published. The transposing British legislation puts any person responsible for the prospectus who knows of the change under a duty to notify it to the company or the applicant for admission, if different.[116] It is unclear whether duty to produce a supplement arises if the issuer is unaware of the event and it cannot be said that it should have been.[117]

Registration statement and securities note

25–25

The traditional British prospectus has been a single document containing all the relevant information. Under the Directive it may consist of two documents (the summary is in addition) and incorporate some information by reference. Where there are two documents, the prospectus will consist of a "registration statement" and a "securities note".[118] The registration statement, containing information about the issuer, can be filed with the relevant authority and, if approved, be valid for 12 months. This is sometimes termed "shelf registration". The securities note can then be produced later and contain the information about the securities on offer plus updated information, if any is needed, about the issuer. When the securities note and the summary are produced they can be put together with the registration statement to form a valid prospectus (which will in turn be valid for 12 months).[119] The purpose of this facility is to cut down the time needed between the decision to raise capital and the making of

the public offer by obtaining approval in advance for part of the required information.[120]

Incorporation of information by reference was not previously permitted in the UK, on the grounds that it makes the information less accessible to the reader of the prospectus. Article 11 of the PD now requires Member States to allow certain information to be incorporated in this way (other than in the summary) and art.28 of the Commission Regulation spells out which information may be incorporated by reference. The list is reasonably long, though most of it ought to be available electronically, for example, the company's audit reports and financial statements and earlier approved prospectuses.

Verifying the prospectuses

25–26

As we shall see below, the law provides ex post remedies for those who suffer loss as a result of omissions or inaccuracies in a prospectus or supplementary prospectus. However, it is obviously more desirable if the law or regulation can provide ex ante mechanisms designed to ensure that the information as provided is complete and accurate before it is published. A number of such mechanisms are to be found in the PD or domestic rules.

Reputational intermediaries

25–27

A first mechanism, long relied on in the UK, not regulated by the PD but evidently not regarded as prohibited by it, is the use of a "sponsor" as a reputational intermediary. The sponsor guides the applicant for admission to trading through the applicable rules and certifies that there has been compliance. Certification of compliance with the requirements by the intermediary may be more reliable than that by the company alone because of the intermediary's greater experience in the field and because the intermediary's business model depends on its certifications being accurate, for otherwise future issuers will not have an incentive to use that intermediary, as opposed to one of its competitors and the intermediary may be removed from the list

of sponsors. Use of an intermediary in this way involves in effect a partial delegation by the FCA or the Exchange of its supervisory powers to an adviser to the company, who is of course paid for by the company.

A company applying for a premium listing of its equity securities on the Main Market of the LSE must appoint a sponsor[121] whose role is defined in general as being to "(1) provide assurance to the FCA when required that the responsibilities of the listed company or applicant under the listing rules have been met"; (2) to provide the FCA with any requested explanation or confirmation to the same end; and (3) guide the listed company or applicant in "understanding and meeting its responsibilities" under the FCA's rules.[122] The sponsor thus owes duties to both its client (to use reasonable care in guiding it through the application process) and to the FCA when providing assurance to the regulatory body that those requirements have been met. It is the sponsor (normally an investment bank) which submits the application for listing to the FCA and accompanies it with a "sponsor's declaration" that it has fulfilled its duties and provides information to the FCA about the outcome of the offer.[123] In the case of an application for listing of equity securities where the production of a prospectus is required, the sponsor must not submit such an application "unless it has come to a reasonable opinion, after having made due and careful enquiry" that the applicant has satisfied all the requirements of the Listing and Prospectus Rules.[124]

Secondly, certain specific items of information in the prospectus may be subject to third-party verification. We have already noted the requirement on applicants for admission to the official list to produce three years' of accounts which have been audited.[125] However, backward-looking information is less useful to—or at least less likely to impress itself upon—investors than future-regarding statements, which directly address their concerns about how well is the company likely to do in the future. On the other hand, a requirement to state the company's prospects gives the directors a golden opportunity to present the company in a rosy light for the future, without the check which historical data provides on their descriptions of the

past. Accordingly, the Commission Regulation is keen to expose to public light and professional scrutiny the assumptions upon which statements about the future are based. This is especially true of profit forecasts, which are likely to be especially influential with unsophisticated investors. The assumptions underlying profit forecasts contained in prospectuses must be stated and a distinction made between assumptions directors can influence and those outside their control. The assumptions must be specific and precise and readily understandable by investors. The company's auditors or reporting accountants must confirm that the forecast has been properly compiled on the basis stated in the forecast; that the accounting presentation used in the forecast is compatible with the issuer's general accounting policies; and that the forecast is compatible with the company's historical accounts.[126]

Vetting by the FCA

25–28

Before publication, the prospectus must be vetted by the FCA.[127] Submission of a draft prospectus, and indeed various other documents, to the FCA must occur at least 10 business days prior to the intended publication date.[128] The purpose of the vetting is to put the FCA in a position to assure itself that the information is complete before it is published.[129] Inevitably, given the time and resources available, the FCA can concern itself only to a limited extent with the accuracy of the information put forward by the company, for example, it should spot glaring inaccuracies appearing on the face of the document. Nor can the FCA guarantee even completeness, except to the extent of seeing that something is said on all the matters upon which the Commission Regulation requires information and that, once again, the information is not obviously inadequate. Nevertheless, the obligation to obtain the prior approval of the FCA is, no doubt, a valuable discipline upon the issuer and its professional advisers, especially the sponsor. It should also be noted in this regard that the FCA and its officers are protected from liability in damages for acts and omissions in the discharge of the functions conferred upon them, unless bad faith is shown or there has been a breach of the Human Rights Act 1998 s.6

(unlawful for a public authority to act in a way incompatible with a convention right), so that it will be rare for the FCA to be worth suing if the prospectus turns out to be incomplete or inaccurate.[130] A refusal of approval on the part of the FCA must be accompanied by reasons and the applicant may appeal to the Tribunal (see below) against the decision.[131] The regulator is more likely simply to require that information be corrected or provided and to refuse approval only if that is not forthcoming.[132]

Authorisation to omit material

25–29

A particularly important part of the approval role of the FCA is the power given it by, to authorise omissions from the prospectus of information which would normally be required to be included.[133] Given the range of information which the Commission Regulation requires to be included, it is likely that the applicant will regard some disclosure to be commercially harmful, because, for example, it will aid competitors. Apart from omission of information "in the public interest" on a certificate from the Treasury,[134] however, the grounds for omission are limited, in the sense that the interests of investors are given predominant weight in the balance over the interests of the issuer and its current shareholders. Omissions may be authorised only if (a) the disclosure would be "seriously detrimental" to the issuer *and* the omission would be unlikely to mislead the public over matters "essential" for an informed assessment of the offer; or (b) if the information is only of minor importance for the offer and unlikely to influence an informed assessment of the offer.[135] One might summarise the policy underlying these rules as being that, where the information is important to investors, they should be provided with it, despite the harm to the company.

Publication of prospectuses and other material

25–30

All the effort involved in drawing up a prospectus and having it approved by the FCA is, of course, simply a prelude to its publication when the securities are offered to the public. The

issuer is given a choice of methods of publication to the public (except that some form of electronic publication is mandatory): insertion in a widely circulating newspaper; in hard copy available free of charge to the public from the issuer, its financial advisers or the regulated market in question; in electronic form on the website of the issuer, financial adviser or regulated market. Where publication is in electronic form, any member of the public is entitled to a hard copy upon request.[136]

Despite the requirement that the prospectus include a summary, designed to be more easily accessible to unsophisticated investors, it is likely that an issuer will want to publish documentation in addition to the prospectus, designed to generate interest in the offer. Such "advertisements", as the PD terms them, run the risk of subverting all the careful regulation of the prospectus, if unsophisticated investors read only the advertisements and those documents are carelessly constructed. Consequently, any advertisement[137] must be clearly recognisable as such; must state that a prospectus is or will be available and how it may be obtained; must not contain inaccurate or misleading information; and the information in it must be consistent with the prospectus.[138] However, unlike previously,[139] advertisements do not need to be submitted to the FCA in advance or to be approved by it. On the other hand, s.85 makes it unlawful to offer securities to the public before publication of the prospectus required by FSMA, so any "warm-up" material will have to stop short of actually offering the securities to the public.[140]

Sanctions

25–31

The rules examined above aim to put at the disposal of investors a considerable amount of information about companies and their securities when the latter are offered to the public. Although there may be adverse market consequences for companies which issue misleading prospectuses (their future fundraising efforts are likely to be greeted with scepticism), nevertheless an effective prospectus regime is likely to require legal sanctions as well. There are three categories of sanctions in principle available for breach of the disclosure regime: criminal, civil and

administrative or regulatory. However, the criminal and regulatory sanctions are today effectively in the hands of the FCA and so can be looked at together. We start with an analysis of the civil sanctions.

Compensation under the Act

25–32

Before turning to the statutory provisions which create a compensation remedy for those who have suffered loss as a result of misstatements in or omissions from prospectuses, we should note that the Act provides a civil remedy also for a person who has suffered loss as a result of a breach of the prohibition on offering shares to the public before a prospectus is published. The contravention is treated as a breach of statutory duty.[141] As for misstatements and omissions in the prospectus, art.6 of the PD requires Member States to apply "their laws, regulations and administrative provisions on civil liability" to those responsible for the information contained in the prospectus, but it does not seek to stipulate what that liability regime shall be. Consequently, despite the maximum harmonisation characteristic of the PD, the impact in practice of the rules may vary from Member State to Member State, because of differences in their enforcement regimes. The same point can be made in relation to enforcement by the "competent authority": art.21(3) of the PD stipulates the powers each regulator must have but not the sanctions available to enforce them.

In relation to compensation the UK has long had a strong regime in place, basing liability on negligence and, indeed, reversing the burden of proof on this matter. That regime dates back to the Directors' Liability Act 1890, passed in reaction to the decision of the House of Lords in *Derry v Peek*[142] which, by insisting upon at least recklessness, exposed the inadequacy of the common law tort of deceit as a remedy for investors who suffered loss as a result of misleading prospectuses. The modern version of liability under the 1890 Act is now located in s.90 of FSMA.

(a) Liability to compensate

25–33

Subject to the exemptions in (b), below, those responsible for the prospectus (or supplementary prospectus)[143] are liable under s.90 to pay compensation to any person who has acquired any of the securities to which it relates and suffered loss as a result of any untrue or misleading statement in it or of the omission of any matter required to be included under the Act.[144] This is a considerable improvement on the former provisions, contained most recently in the Companies Act 1985, which applied only in favour of those who subscribed for shares and therefore excluded from protection those who bought on the market when dealings commenced. Now anyone who has acquired[145] the securities whether for cash or otherwise and whether directly from the company or by purchase on the market and who can show that he or she suffered loss as a result of the misstatement or omission will have a prima facie case for compensation.[146]

This may seem at first sight an unreasonable extension of liability from the company's point of view, but in fact the prospectus is normally intended to influence not only applications to the company for shares but also the initial dealings in them in the market (the "after market"), since the company has an interest in the securities not trading at below the offer price after issue.[147] In addition, whereas the former version applied only to misleading "statements", the new provisions specifically include omissions. Furthermore, the provisions do not require the claimant to show that he or she relied on the misstatement in order to establish a cause of action: it is enough that the error affected the market price, even if the claimant never read the prospectus. This is sometimes referred to as the "fraud on the market" theory of liability.[148] Obviously, however, a causal connection between the misstatement or omission and the loss will have to be proven. So, for example, market purchasers who buy after such a lapse of time that the prospectus would no longer have a significant influence on the price of the securities will not be able to satisfy this causal test. Finally, the statute does not require the maker of the statement to have "assumed responsibility" towards the claimant, a requirement that limits the operation of the common law of negligent misstatement.[149]

On the other hand, as far as public offers are concerned, the

statutory provisions under discussion apply only to misstatements in prospectuses. This will now include the summary, which is part of the prospectus, but here liability is restricted to situations where the summary is misleading when read together with the rest of the prospectus or where liability is based on the omission of key information.[150] However, the section does not apply to advertisements issued in connection with a public offer but separately from the prospectus. Nor, it seems, does the section apply to the Admission Document required for an AIM admission (assuming no public offer triggering the requirement for a prospectus, even for admission to AIM). In such cases compensation might be available at common law or under the Misrepresentation Act but, as the origins of the current legislation suggest, investors in that situation will in all likelihood benefit from a lower level of protection than if they could invoke the civil liability provisions of FSMA.[151]

(b) Defences

25–34

Schedule 10 provides persons responsible for the misstatement or omissions with what the headings in the schedule describe as “exemptions”, but which are really defences that may be available if a claim for compensation is made. The purpose of Sch.10 is to implement the policy of imposing liability on the basis of negligence but with a reversed burden of proof. The overall effect[152] of these defences is that defendants escape liability under s.90, if, but only if, they can satisfy the court (a) that they reasonably believed that there were no misstatements or omissions and had done all that could reasonably be expected to ensure that there were not any, and that, if any came to their knowledge, they were corrected in time; or (b) that the claimant acquired the securities with knowledge of the falsity of the statement or of the matter omitted. Defence (a) disproves negligence and defence (b) disproves a causal link between the defendant’s conduct and the claimant’s loss. Where the statement in question is made by an expert and is stated to be included with the expert’s consent, the rules are that a non-expert escapes liability on the basis of a reasonable belief that

the expert was competent and had consented to the inclusion of the statement. The expert will be subject to the same test for liability as any other responsible person, but what is "reasonable" is likely to be assessed at a higher standard.

(c) Persons responsible

25–35

The sensitive question of who are "persons responsible" and thus liable to pay the compensation is now dealt with by the PR.[153] In the case of an offer of equity shares, they are[154]:

(a) the issuer—a further improvement on earlier versions which did not afford a remedy against the company itself;

(b) directors of the issuer, unless the prospectus was published without the director's knowledge or consent;

(c) each person who has authorised himself to be named, and is named in the prospectus, as having agreed to become a director, whether immediately or at a future time;

(d) each person who accepts, and is stated as accepting, responsibility for, or for any part of, the prospectus, but only in relation to the part to which the acceptance relates[155];

(e) each other person who has authorised the contents of the prospectus or any part of it, but again only in relation to the part authorised; and

(f) the offeror of the securities or the company seeking admission and its directors where it is not the issuer.[156]

In the case of offers of other types of security,[157] directors of the issuer or offeror are excluded, unless they fall within one of the other categories (stated as accepting responsibility for the prospectus, for example), whilst the guarantor (if there is one, as there might be for offers of debt securities) is made liable for information relating to the guarantee. However, nothing in the rules is to be construed as making a person responsible by reason only of his giving advice in a professional capacity.[158]

A crucial problem facing misled investors is to identify all the "persons responsible" so as to be in a position to decide whether any of them is worth powder-and-shot. The PD requires those

responsible to be identified in the prospectus and it must also contain a declaration by them that, to the best of their knowledge, the prospectus is not misleading. Somewhat stealthily, the Commission Regulation requires the declaration to state that it is made after "having taken all reasonable care to ensure that such is the case".[159] In some Member States this by itself might be used to ground liability, but in the UK s.90 of FSMA would seem to be a more secure basis for liability.

Civil remedies available elsewhere

25–36

The liability created by s.90 is not exclusive. Section 90(6) says that the section "does not affect any liability which any person may incur apart from this section", but s.90(8) limits the disclosure obligations of promoters and other fiduciaries to those required under the statutory regime.[160]

As explained above, the damages remedy available under the Act is superior to that available under the general law. However, there may be cases where the legislation does not apply. The most obvious examples are non-prospectus material issued in connection with public offers or, where there is no public offer, an Admission Document issued in connection with an application for admission to AIM, which Document does require, as we have seen,[161] significant disclosure by applicants, even if less than under the PD. Alternatively, the claimant may want a remedy other than damages, such as rescission. Thus, a brief examination of the law relating to misrepresentation as it applies to issue documents is in order, but only a sketch of the relevant principles will be provided.

(a) Damages

25–37

The common law provides civil remedies for misrepresentations which have caused loss to those who have relied upon them. A misrepresentation is understood at common law as being a misstatement of fact rather than an expression of opinion or a promise or forecast. There must be a positive misstatement rather than an omission to state a material fact. However, this

requirement is heavily qualified by a further rule that an omission which causes a document as a whole to give a misleading impression or falsifies a statement made in it is actionable.[162]

Historically, the common law has provided a damages remedy only for fraudulent misstatements through the tort of deceit. This requires the maker of the statement to know that it is false or at least to be reckless as to its truth. An honest, even if wholly unreasonable, belief in the truth of the statement will not amount to deceit. As we have seen, it was the decision of the House of Lords to this effect in *Derry v Peek*[163] which led to the introduction of the predecessor of the statutory provisions relating to misstatements in prospectuses which we discussed above. In addition, the tort of deceit requires reliance by the recipient on the statement and, further, that the maker of the statement should have intended the recipient to rely on it. These are formidable hurdles to liability.

Since then, however, there have been two significant developments. Section 2(1) of the Misrepresentation Act 1967 introduced a general statutory remedy for negligent misstatement, which also reverses the burden of proof. The 1967 Act was in effect a generalisation of the principle contained in the statutory provisions relating to prospectus liability, and will therefore be of use where the misstatement was not contained in a prospectus but in some other document issued in connection with the offer. However, the generalisation in s.2(1) extends only to misstatements made by a party to the subsequent contract[164] and the section gives a cause of action only to the other party to it, so that it would seem impossible to use it to sue directors or other experts or advisers who are involved in public offers of shares by the company.

The company itself may be sued, certainly in an offer for subscription or a rights issue or an open offer and perhaps even on an offer for sale, since a new contractual relation between a purchaser and the company comes into existence when the purchaser is registered as the holder of the securities. Where the subsection applies, it makes the misrepresentor liable as if fraudulent. This had led the Court of Appeal to conclude that the measure of damages under s.2(1) is a tortious, rather than a

contractual, one, but that the rules of remoteness are those applicable to actions in deceit, so that the person misled can recover for all losses flowing from the misstatement.[165]

25–38

Because of these limitations on the new statutory cause of action, it can be said that the more significant development in recent times has been the acceptance of liability for negligent misstatement at common law following the decision of the House of Lords in *Hedley Byrne & Co Ltd v Heller & Partners Ltd*.[166] This is a general principle of liability, not confined within the precise words of a statutory formulation, and so capable of being used against directors and advisers as well as the company itself in the case of negligent misstatements in prospectuses and other documents associated with public offers. Nevertheless, the burden of proof is not reversed under the common law rule, so that the FSMA provision will be more attractive where it is available; and in the case of individual defendants it will be necessary to show that they accepted personal responsibility for the statements made.[167]

There is also uncertainty, which emerged in the nineteenth century fraud cases, about the range of possible claimants, in particular whether there is a firm rule that only subscribers may sue[168] or whether this is only a presumption, perhaps not a very strong one, capable of being rebutted on the facts.[169] The issue continues to trouble modern judges. In *Al-Nakib Investments Ltd v Longcroft*[170] it was held that allegedly misleading statements in a prospectus issued in connection with a rights issue could form the basis of a claim by a shareholder who took up his rights in reliance upon the prospectus but not when the (same) shareholder purchased further shares on the market. By contrast, in *Possfund Custodian Trustees Ltd v Diamond*[171] the judge refused to strike out a claim that an additional and intended purpose of a prospectus issued in connection with a placing of securities was to inform and encourage purchasers in the aftermarket, so that such purchaser could sue in respect of misstatements. Drawing a distinction between subscribers and market purchasers in the immediate period after dealings commence is, in commercial terms, highly artificial. Companies have an interest not only in the issue being fully subscribed but

also in a healthy aftermarket developing so that subscribers can easily dispose of their shares, if they so wish.[172] The statutory provisions on liability for misstatements recognise the force of this argument.[173] Perhaps the way forward in the common law would be for the courts to take a more inclusive view of the issuer's purposes.

(b) Rescission

25–39

The common law has traditionally permitted rescission (i.e. reversal) of contracts entered into as a result of a misrepresentation, whether that misrepresentation be fraudulent, negligent or wholly innocent (so that no damages remedy is available). This remedy is a potentially useful supplement to the right to claim damages, even when an extensive damages remedy is provided through the special statutory provisions relating to prospectuses. In many cases, all the investor may wish or need to do is to return the securities and recover his or her money. However, there are two significant limitations on its use. First, s.2(2) of the Misrepresentation Act 1967 gives the court a discretion in appropriate cases to substitute damages for the rescission, a provision included largely for the benefit of misrepresentors.[174] This subsection might be invoked, for example, where the court thought that the rescission was motivated by subsequent adverse movements in the stock market as a whole rather than the impact of the misrepresentation as such.

Secondly, and more important, the right to rescind expires in practice much more quickly than the right to damages, which is subject only to a long limitation period. By contrast, the right to rescind is quickly "barred". If, after the truth has been discovered, an investor accepts dividends, attends and votes at meetings or sells or attempts to sell the securities, the contract will be taken to have been affirmed,[175] and even mere delay may defeat the right to rescind. The reason for this strictness is that the company may well have secured loans from third parties who have acted on the basis of the capital apparently raised by the company, which appearance the rescission of the shareholder's contract would undermine. A rescission claim is also defeated by

the liquidation of the company (at which point the creditors' rights crystallise), or even perhaps by its becoming insolvent but before winding up commences,[176] so that the shareholder must have issued a writ or actually had his name removed from the register before that event occurs.[177] Finally, inability to make restitutio in integrum will bar rescission, though in the case of shares that principle would seem to be relevant mainly where the shareholder has disposed of the securities before discovering that a misrepresentation has been made.[178]

(c) Breach of contract

25–40

Finally, in the general law of contract it not uncommonly occurs that the courts treat a misrepresentation as having been incorporated in the subsequent contract concluded between the parties. The advantage of establishing this would be that the misrepresentee would have a claim to damages to be assessed on the contractual basis, rather than on a tortious basis as is the position with claims based on the statutory prospectus provisions, the Misrepresentation Act or, of course, the *Hedley Byrne* principle. In particular, the shareholder might be able to claim for the loss of the expected profit on the shares. However, a difficulty facing such claims against the company is that the processes of allotment of shares and entry in the register entail a complete novation, i.e. the substitution of a new contract with the company upon registration for the old contract based on the prospectus.[179] It has to be said, too, that prospectuses normally stop short of making explicit promises about future value or performance, so that the basis for finding a promise to be enforced may not be available.

Criminal and regulatory sanctions

25–41

Criminal sanctions play a rather limited role in the area of public offers, but it is to be noted that the central obligation in this area —not to make a public offer of securities or to request admission of securities to a regulated market unless an approved prospectus has been made publicly available—is supported not only by civil but also by criminal sanctions.[180] The principal non-civil

sanctions, however, are regulatory ones in the hands of the FCA, which also has power to invoke the criminal law just mentioned.[181] The FCA's sanctions vary considerably according to whether or not the breach of the rules is discovered before or after the public offer or introduction has been completed.

Ex ante controls

25–42

The FCA has two veto powers relevant to the public offering process. It must refuse admission to listing where the applicant does not meet the eligibility requirements and may or must do so in certain other cases.[182] The decision must be taken by the Authority normally within six months of the application and failure to do so may be treated by the applicant as a refusal to admit. If the FCA proposes not to accept an application for listing, it must give the applicant a "warning notice", giving the applicant a reasonable period within which to make representations, and if the proposal is confirmed, the matter may be referred to the Upper Tribunal.[183] Secondly, the FCA must not approve a prospectus if it does not contain the required information or other breaches of the applicable rules are detected, thus preventing the public offer or admission to a regulated market from proceeding.[184] These are both potentially significant enforcement powers, though, as suggested above, it is probably easier for the FCA to determine whether the eligibility criteria for listing have been met than to make a comprehensive determination at the vetting stage whether the prospectus contains any misrepresentations or omission.

Admission to listing is a binary decision. If the securities are admitted to listing, but should not have been because, for example, they did not meet the eligibility requirements, it appears that the admission is effective. However, the Authority may discontinue listing "if it is satisfied that there are special circumstances which preclude normal regular dealings in them",[185] but it may need to proceed carefully if the securities subsequently have been offered to the public and admitted to trading, since investors will find themselves holding an illiquid security as a result of the cancellation.[186] By contrast, approval of a prospectus is a step in a process of making a public offer

and it may be possible to halt the process, even after the prospectus has been approved, if breaches of the rules are later discovered. Thus, even after approval, the FCA has power to suspend the offer for a period of up to 10 days, if it has reasonable grounds for suspecting that a provision of Pt VI of FSMA (the relevant Part for most of the sections considered in this chapter) or of the PR or any other provision required by the PD has been infringed. If it finds that such a provision has been infringed or even if it concludes that such infringement is likely, it may require the offer to be withdrawn or the market operator to prohibit trading in the securities.[187] The suspension or prohibition decision of the FCA may take effect immediately, without the issuer or other involved person having the opportunity to make representations, for such action may be urgent. However, in these cases, or where the FCA refuses to approve the prospectus, the FCA must issue a notice, stating the reasons for the action and giving the applicant or other person involved the possibility of making representations (which may cause the FCA to vary or revoke its decision).[188] The notice must also notify the person of the right to refer the FCA's decision to the Tribunal.

Where admission to trading is refused under the LSE's own rules,[189] an appeal process is also provided. There is now a fairly elaborate system for appeals against both disciplinary and non-disciplinary decisions of the Exchange. This tracks the FCA arrangements but with an Appeal Committee, established by the Exchange, acting as the final appeal body instead of the Upper Tribunal.[190] Further, judicial review of the Exchange's exercise of its powers is a possibility and the elaboration of the Exchange's disciplinary and appeals procedures in recent years constitutes an obvious response to that legal risk.[191]

Ex post sanctions

25–43

The sanctions discussed in the previous paragraph can be applied effectively only to breaches of the rules which the FCA picks up in advance of completion of listing, the public offer or admission to trading. The FCA will obviously be reluctant to use its powers to prohibit trading once admission has been secured, and cannot

do anything about a public offer which has been carried through to the point of the allotment of securities. Furthermore, it can be said that the regulatory sanctions considered so far impose costs on the issuer (i.e. its shareholders) rather than on the officers of the company who may be those responsible for the non-compliance. It is therefore of some significance that the FCA has the power to impose monetary penalties where there has been a breach of Pt VI of FSMA or the prospectus or listing rules.[192] The FCA may impose a penalty of such amount as it considers appropriate on the corporate bodies involved. Significantly, this penalty-imposing power extends to any person who was a director of the company where the director was "knowingly concerned" in the contravention.[193] The FCA may engage in public censure in lieu of imposing a penalty.[194] In the case of suspected breaches of Pt VI of FSMA or of the PR or LR the FCA also has formal investigatory powers which may help it to uncover the truth.[195]

This penalty-imposing power is naturally surrounded by some safeguards. The FCA is required to develop outside the context of a particular case a policy about the circumstances in which it will exercise its powers and the amount of the penalty it will impose.[196] A proposal to impose a penalty must be communicated to the person in question by means of a "warning notice", giving at least 28 days for representations to be made, and a decision to impose a penalty may be appealed to the Tribunal.[197]

Cross-Border Offers and Admissions

25–44

We have noted above that the EU's strong drive to remove obstacles to cross-border offers and admissions to regulated markets led to the maximum harmonisation character of the PD. The notion is that an issuer should be able to use the same documentation (subject in some cases to translation requirements) when it makes offers or seeks admission to trading in more than one Member State. Since there is not currently a single EU regulator, an immediate question which arises is where regulatory responsibility should be allocated in cross-border offers. The basic choice in the PD is to allocate

responsibility to the state in which the company is incorporated (has its registered office) in the case of companies incorporated within the EU (the "home state"). The competent authorities of "host states", i.e. states in which an offer to the public is made or admission to trading is sought, "shall not undertake any approval or administrative procedures relating to prospectuses".[198]

This choice, which applies even if there is to be no public offer or admission in the home state, is controversial. It potentially puts regulatory responsibility in the hands of inexperienced regulators in countries with undeveloped markets and prohibits the authority in the jurisdiction where the offer or trading will occur from taking action, even though the latter has the stronger incentive to discharge its regulatory functions effectively. If the host state regulator finds that breaches of the relevant rules have occurred or are taking place, it is obliged to refer the matter to the home state authorities, and, only if this is ineffective, may the host state regulator act, informing the Commission at the same time.[199] Equally, if the host state authority forms the view that a supplementary prospectus is needed, it is the home state authority which must require it and the host state authority is permitted simply to draw the home state authority's attention to the need.[200] Consequently, FSMA is drafted so that the obligation to seek FCA approval of a prospectus is applied only to issuers whose home state is the UK,[201] and most of the PR apply only to offers and admissions involving issuers whose home state is the UK.[202] It follows as well that the regulatory sanctions for breach of the PR apply only to issuers incorporated in the UK, but the domestic statutory and common law compensation regimes may apply (subject to the relevant conflicts of law rules).

There are two exceptions to the rule of home state regulation. First, a home state has to be attributed to companies incorporated outside the EEA, and this is the state in which securities are first offered to the public or where the first admission to trading on a regulated market is made, at the issuer's choice.[203] For non-EEA issuers, therefore, the home state is what would be the host state for an EEA issuer. However, third-country issuers may also benefit from a further relaxation. The chosen EU regulator may permit the third-country issuer to draw up a prospectus under the

third country's laws if the information is equivalent to that required by the PD and the third country rules meet international standards.[204] No doubt this is done in the expectation that EEA issuers will be treated similarly, so that international offerings will be promoted. Secondly, even for EU-incorporated issuers, issuers of debt securities denominated in amounts of at least €1,000 may choose as regulator the state of incorporation, the state of offer or the state of admission to trading.[205]

The second contentious issue with cross-border offerings is that of language. If a translation is required in all the official languages of the states in which the offering is to take place and where the securities are to be admitted to trading and in the language of the state of incorporation, then the additional costs of the cross-border offer are likely to be substantial. On the other hand, the Member States can hardly be expected to agree a single language in which alone prospectuses need be circulated. The result, however, is a complex set of rules. The language issue is solved in the following way in art.19. Where the offer or admission takes place in the home state only, then the competent authority of the home state determines the appropriate language. Where the offer or admission takes place in one or more Member States *not including the home state*, then the offeror or person seeking admission has a choice between a language acceptable to each the competent authorities in those Member States or "a language customary in the sphere of international finance" (though the competent authorities of the host states can require the summary to be translated into its official language). How far this Delphic phrase goes to embrace languages other than English is anyone's guess—and, indeed, that was probably the primary virtue of the phrase in the EU legislator's mind. Of course, the issuer will need home state approval of the prospectus, even if it is not issuing there, and for that purpose it may choose either a language acceptable to the home state authority or a customary language. Thus, where the offer is not made in the home state, the incentive created by these rules is clearly for the offeror, etc. to use "a language customary in the sphere of international finance", since that language can be used for both home and host state purposes (unless home and host states share a language which does not fall within the "customary" category).

Where the offer or admission to listing is to take place in two or more Member States, *including* the home state, then the prospectus must be produced in a language acceptable to the home state competent authority and, in addition, in either a language acceptable to each host state or a language customary in the sphere of international finance. Here, therefore, the burden of translation costs turns on the home state's willingness to accept a "customary" language.

However, in the case of admission to trading of heavy-weight debt securities (i.e. those denominated in amounts of €100,000 or more), the offeror, etc. always has the choice of using a customary language only, even where admission will occur in the home state, or it may instead choose a language acceptable to both home and host state competent authorities.

De-listing

25–45

This chapter has focused on the processes by which the securities of a company become publicly held and traded on a public market. Whilst a completed public offering cannot easily be reversed,[206] admission to trading is a reversible process. Companies may seek voluntarily to retire from a market upon which their securities are traded, notably after a successful takeover bid (discussed in Ch.28), as a result of which the majority of its shares are held by the bidder. If the securities of the company are all held by one person as a result of the bid, this is a straightforward exercise. If, however, there are some outside shareholders, they may oppose the proposal to de-list because it will reduce the liquidity of the securities even further. Indeed, the proposal to de-list may be part of an attempt by the controllers of the company to squeeze out the minority in a situation where the statutory squeeze-out provisions (also discussed in Ch.28) would not operate. The requirement previously was that companies simply inform their shareholders of the decision to de-list, but the LR now require requests from companies with a premium listing for the cancellation of a primary listing of equity shares to be approved by a three-quarters majority at a meeting of the class of shareholders in question and, where there is a controlling shareholder, a majority

of the non-controlling shares, after the circulation to them of a statement, approved by the FCA, of the reasons for this step.[207] This is a significant increase in minority shareholder protection and should increase the willingness of investors to take minority stakes in companies that are controlled by a single investor or are likely to become so.

---

[1] Securities cannot be admitted to the official list (see below) without the consent of the issuer (FSMA 2000 s.75(2)), but the impetus for the listing may come from the shareholder.

[2] Often referred to as "blue sky laws" because the securities on offer were backed, it was said, only by the blue sky. The first significant State law in the US seems to have been that of Kansas in 1911.

[3] The Securities Act 1933 and the Securities Exchange Act 1934.

[4] Toronto Stock Exchange, *Toward Improved Disclosure*, Interim Report of the Committee on Corporate Disclosure, 1995, para.3.9.

[5] For debt issues the investor's concern is whether the debt will be re-paid on time and in full. Because debt has priority over equity in an insolvency and because debt has no exposure to the up-side of a company's performance, less disclosure is generally required for bond issues in comparison with share issues. See para.25–17.

[6] J. Coffee Jr, "Market Failure and the Economic Case for a Mandatory Disclosure System" (1984) 70 Virginia L.R. 717.

[7] Indeed, some investment institutions may be permitted only to acquire listed securities or may be restricted in the proportion of unlisted securities they may hold in their portfolio.

[8] By the Official Listing of Securities (Change of Competent Authority) Regulations 2000 (SI 2000/968). In other European countries the exchange typically still acts as the competent authority.

[9] Previously the Financial Services Authority.

[10] This is the primary piece of domestic legislation considered in this chapter.

[11] FSMA s.73A.

[12] Directive 2001/34/EC ([2001] O.J. L184).

[13] CARD art.8 makes it clear it is a "minimum harmonisation" Directive, to whose requirements the Member States may add.

[14] Above, paras 14–77, 16–77 and 19–6.

[15] LR 1.5. This choice, which had previously been available only to foreign-incorporated issuers, was made available to domestic issuers in 2010. The choice may be changed subsequently, but subject to supermajority shareholder approval in the case of transfer from premium to standard listing (LR 5.4A). Bonds will always be listed on the standard basis.

[16] AIM replaced the previous and more usefully entitled Unlisted Securities Market (USM) in 1995.

[17] There are also a number of other markets or segments of markets run by the LSE which, however, need not concern us here.

[18] Otherwise they will fall foul of the "general prohibition" in s.19 of FSMA 2000 on carrying on regulated financial activities in the UK.

[19] Set out in more detail in the Financial Services and Markets Act 2000 (Recognition Requirements for Investment Exchanges and Clearing Houses) Regulations 2001 (SI 2001/995).

[20] 2014/65/EU ([2014] O.J. L173/349). This is "MIFID II" replacing "MIFID I" (Directive 2004/39/EC) as from January 2017.

[21] Especially as the requirements for recognition were upgraded in response to Title III of MIFID: see subs.(4A) to (4E) inserted into FSMA 2000 s.286 by SI 2006/2975.

[22] See MIFID, Title II. Where trading takes place outside both a regulated market and a MTF, it is generally called "over the counter" trading (OTC).

[23] This decision was taken in 2004 under the then applicable Directive concerning regulated markets, i.e. Directive 93/22/EEC, the investment services Directive, which was repealed by MIFID.

[24] MIFID also identifies "organised trading facilities" ("OTF"), but since these are not venues for share trading, we shall ignore them: MIFID art.4(23).

[25] LR 2.2.3.

[26] LSE, *Admission and Disclosure Standards*, June 2013, para.1.1 note.

[27] Just to complicate things further, the fact that a listed security has been admitted to a regulated market does not mean that trading has to take place on that market. It was reported that less than 50 per cent of the trading in FTSE 100 companies (all listed) had taken place in certain weeks in the middle of 2011 on the Main Market of the LSE, the main competitors being the MTFs (above, para.25–8) or private markets organised by large investment banks ("dark pools") (*Financial Times*, 19 September 2011, p.20 (UK edn)).

[28] The modern version of that law can be found in FSMA 2000 s.90.

[29] For an excellent general analysis of this process see E. Ferran, *Building an EU Securities Market* (Cambridge: CUP, 2004).

[30] COM(1999) 232, 11 May 1999. It was succeeded by a less ambitious White Paper on Financial Services Policy 2005–2010, which is also less relevant to the concerns of this book than its predecessor.

[31] Directive 2003/71/EC on prospectuses [2003] O.J. L345/64, as amended by Directive 2010/73/EU ([2010] O.J. L327/1).

[32] Above, fn.12. This Directive consolidated Directives going back to 1979, when the EU first became interested in regulating the admission of securities to public markets. Substantial parts of the 2001 Directive have now been themselves replaced by Directives adopted under the FSAP.

[33] The PD is thus some distance from the description of a Directive in art.288 TFEU as an instrument "which is binding as to the result to be achieved but shall leave to the national authorities the choice of form and methods".

[34] See para.25–44.

[35] This consultation takes place through the European Securities and Markets Authority ("ESMA"). In fact, directives today make a distinction between "delegated acts", where ESMA only gives advice to the Commission, and "technical standards", where ESMA draws up draft rules.

[36] Commission Regulation (EC) No.809/2004 [2004] O.J. L215/3.

[37] Article 288 TFEU.

[38] Established under FSMA 2000, as amended by the Financial Services Act 2012 Pt IA.

[39] COM(2015) 583 final.

[40] As Caxton*fx* did in September 2011 when it offered to the public non-transferable debt securities with a four-year maturity, but paying a high interest rate. The main regulation in such a case lies in FSMA s.21, which requires the offer document to be approved by a person authorised by the FCA. The authorised person will need to be concerned with the adequacy of the disclosures contained in the invitation document.

[41] In an offer for subscription the underwriters simply take up the shares for which the public have not subscribed. Even if there is no underwriting, large offers are often distributed to the public by financial intermediaries, perhaps over a period of weeks. Even in an offer for sale the prospectus is normally drawn up by the issuer and then relied on by the intermediaries, but some difficult issues have to be resolved to bring this result about. See ESMA, Consultation Paper 2011/444, Pt 3 and art. 5 of the Commission's 2015 reform proposals (above, fn.39).

[42] Most of the UK privatisation offers were not primary distributions (i.e. offers of securities by the company) but secondary distributions (i.e. offers by a large or sole shareholder of its shares to the public). This chapter is concerned mainly with the raising of capital by a public offer by the company.

[43] On which see para.11–14, above.

[44] Which came true in the case of one of the privatisation issues in the "Crash of 1987". Yet thousands of small investors continued to put in applications notwithstanding that the media were warning them that trading would open at a massive discount.

[45] The so-called "offer" by the issuer is normally not an offer (as understood in the law of contract) which on acceptance becomes binding on the offeror. It may be in the case of a rights issue (see below) but on an offer for sale or subscription it is an invitation to investors to make an offer which the company may or may not accept.

[46] Breaches are difficult but not impossible to detect where applications are made in different names.

[47] This causes bona fide applicants who are unsuccessful understandable resentment.

[48] Discussed at paras 24–6 et seq., above.

[49] The merit requirements are less for debt securities presumably because the security itself will normally give the investor greater contractual protections than in the case of an equity security.

[50] See para.25–9.

[51] Where there is only a thin market in a security, the prices at which those securities can be traded may be volatile.

[52] CARD arts 43 and 58; LR 2.2.7. This rule does not apply if the shares on offer are of

a class already listed; and, in any event, the FCA may grant a derogation if satisfied that nevertheless there will be "an adequate market for the securities concerned".

[53] CARD arts 49, 56, 62; LR 2.2.9. The LR do not avail themselves of the exemption in art.49(2) for the non-admission to listing for "blocks serving to maintain control of the company".

[54] CARD arts 46, 54, 60; LR 2.2.4. The FCA may make arrangements to accommodate the transfer of partly paid shares. In exceptional cases where it is convinced the market in the shares will not be disturbed the FCA may list shares whose transfer needs the consent of the issuer (rare in listed companies but found in some denationalised companies in order to subject control transfers to scrutiny).

[55] CARD art.48; LR 6.1.19, 14.2.2. The rule applies on an EU-wide basis.

[56] CARD art.44; Commission Regulation (EC) No.809/2004 Annex 1, 20.1; LR 6.1.3 (premium listing only). For premium listing the accounts must normally have an unqualified audit certificate (not a requirement of CARD).

[57] LR 6.1.3B, 6.1.4.

[58] The FCA may dispense with the requirements of LR 6.1.3 and 6.1.4 where it thinks this desirable in the interests of investors and that investors have the necessary information to arrive at an informed judgment: CARD art.44 and LR 6.1.13.

[59] LR 6.1.2A, 6.1.4B & D, 11.1.1A & C. The related party transactions are discussed in para.16–77.

[60] LR 6.1.16. This is a more effective protection for investors than the minimum capital rule for public companies. See para.11–9.

[61] LSE, *Admission and Disclosure Standards*, April 2013, 1.4 and 1.5.

[62] LSE, *AIM Rules for Companies*, May 2014, r.1.

[63] LSE, *AIM Rules for Nominated Advisers*, 2014, especially Sch.3.

[64] Above, fn.61, r.9.

[65] See above, para.25–10.

[66] PD art.3; FSMA s.85(1),(2). The meaning of a regulated market is discussed above at para.25–6.

[67] Above, fn.62, r.3, Sch.2 and Glossary.

[68] This is by way of contrast with AIM, to which non-listed securities are admitted, which explains why the LSE has to stipulate its own disclosure requirements for AIM.

[69] CARD art.20; FSMA s.80(1).

[70] Notably LR4.2.

[71] FSMA s.79(3A).

[72] In any event, the admission of bonds to listing and to trading on a public market is a somewhat artificial exercise, driven by the fact that many institutions are unable to purchase non-listed securities. Much of the trading in bonds is done between institutions over the counter. So, this is an example of listing and admission being driven by a regulatory requirement rather than a need for liquidity.

[73] Directive 89/228/EEC.

[74] PD art.3(2)(a); FSMA s.86(1)(a). Even though no prospectus is required, information given to some qualified investors must be given to them all: PD art.15(5). Bond issues are often directed only at financial institutions which fall within this category. Offers to the public of debt securities are relatively rare, though not unknown.

[75] This is a default classification; such investors may ask to be treated as non-professional investors. This exemption was originally stated in arts 2(1)(e) and 2(2) of the PD but now that directive operates by reference to the (slightly wider) definition of "professional investors" in the Markets in Financial Instruments Directive (2004/39/EC), Annex II Part 1. This is to be replaced from January 2017 by MIFID II (2014/65/EU) but with only minor changes in relation to the definition of a professional investor.

[76] ibid.

[77] FSMA ss.86(7) and 87R and PR 5.4.

[78] FSMA s.86(2).

[79] PD art.3(2).

[80] PD art.3(2)(c); FSMA s.86(1)(c). The original figure of 50,000 was increased to 100,000 by Directive 2010/73/EU as from July 2012.

[81] PD art.3(2)(d); FSMA s.86(d). But the Commission's 2015 proposals (above, fn.39) seek to remove this exemption on the grounds it has had a distorting effect on the size of issued securities (especially debt securities) which has reduced market liquidity.

[82] PD art.4(1)(b),(c); FSMA s.85(5)(b); PR 1.2.2.

[83] See below at para.28–61. Where, as is common, the offer is in cash, the issue does not arise, because the target's shareholders are not acquiring any securities.

[84] See below at para.29–7. The provision introduced in 2010 ensuring that only a single prospectus is required for "retail cascades" falls within this category as well: PD art.3(2).

[85] See para.24–6.

[86] PD art.7(2)(g).

[87] For the Commission's latest contribution see above fn.39, p.16.

[88] PD art.4(1)(a),(d),(e); FSMA s.85(5)(b); PR 1.2.2.

[89] See para.11–20.

[90] PD art.1(2)(h); FSMA s.85(5)(a) Sch.11A para.9. In the UK this figure was raised to its present level from 2.5 million in July 2011.

[91] PD art.3(2)(e); FSMA s.86(1)(e),(4).

[92] This interpretation is confirmed in the Commission's 2015 reform proposals (above, fn.39) which propose to increase the relevant amounts to €500,000 and €10 million respectively.

[93] PD art.3(2)(b); FSMA s.86(1)(b). Section 86(3) treats as an offer to a single person as an offer made to the trustees of a trust, the members of a partnership as such and two or more persons jointly.

[94] PD art.7(2)(e), implemented by Commission Delegated Regulation (EU)

No.486/2012.

[95] Above, fn.39, p.16.

[96] PD art.3(3); FSMA s.85(2).

[97] PD art.4(2); PR 1.2.3.

[98] PD art.4(2)(a); PR1.2.3(1). The 2015 reform proposals (above, fn.39, p.7) are to raise the percentage to "at least 20%".

[99] As we have noted above, this argument has now been extended to justify reducing the level of disclosure on pre-emption issues.

[100] The LSE does not normally require an admission document for a further issue of shares of any size on AIM (above, fn.61 at r.26) and so in the case of an AIM company only the exceptions to the public offer trigger are relevant in the standard case.

[101] PD art.4(2)(h); PR 1.2.3(8).

[102] Reflecting the EU's traditional fear that otherwise there would be a regulatory "race to the bottom" with a companies securing admittance to the laxest market and then immediately moving to the market of choice. Given that the PD is a maximum harmonisation Directive, this may be thought an over-blown worry.

[103] PD art.3; FSMA s.85(1),(2).

[104] PD art.5(1); FSMA s.87A(2). Although this sounds like a strict liability provision, the rules governing civil liability for omissions and misstatements (see below paras 25–33 et seq.) are negligence based (albeit with the burden of proof reversed).

[105] Commission Regulation (EC) No.809/2004, as amended.

[106] In a number of places the PR (made under powers conferred by FSMA s.84) repeat rules from the Commission Regulation but do not seek to transpose it into domestic law.

[107] Commission Regulation arts 3 and 4a.

[108] Most recently in Directive 2001/34/EC Annex 1 (now repealed).

[109] Commission Regulation art.3. For example, the Regulation distinguishes between offers of equity and debt securities and has special provisions for asset-backed securities, depository receipts, derivative securities, closed-end collective investment schemes and public authority offerors, some or all of which will be irrelevant in many cases.

[110] At para.25–12.

[111] PD art.8; FSMA s.87Q. In practice, companies will structure matters so that acceptances are received only after the final price has been announced. However, they will probably have given an indicative price range to investors whilst drumming up support for the offer. Somewhat similar reasoning underlies the notion of a "base prospectus" which, however, is confined to the issuance of debt securities on "a continuous and repeated manner": art.5(4).

[112] PD art.5(1); FSMA s.87A(3). This is not to say that the prospectus may not influence retail investors' decisions indirectly, for example, through the comments of financial journalists or financial advisers who, one hopes, have read it.

[113] PD art.5(2); FSMA s.87A(5),(6). The Directive does not require the production of a summary in the case of "heavy weight" debt securities (denominations of €100,000 or

above) except in cross-border offerings where Member States may require a summary in their official language if the prospectus is not in that language. The argument, presumably, is that these securities are likely to be bought only by professional investors who can be expected to read the whole prospectus. Although offers of such securities do not count as public offers (see above, para.25–19), a prospectus is required if they are to be admitted to trading on a regulated market.

[114] Nevertheless, the Commission's 2015 proposals (above, fn.39) are based on the proposition that the summary provision have not been a success and a further, and more elaborate attempt, is to be made to standardise them, using an approach which is to be applied across all packaged retail investment and insurance products (the so-called "PRIIPS" products).

[115] PD arts 5(2) and 6(2); FSMA s.90(12). On civil liability generally see below.

[116] FSMA s.87G.

[117] The phrase "is noted" might suggest knowledge is required but "arises" does not. Section 81 creates a similar obligation to produce supplementary listing particulars, but s.81(3) makes it clear that knowledge of the new event is required to trigger the obligation.

[118] PD art.5(3).

[119] PD arts 12 and 9(3); PR 2.2–6.

[120] This two-part arrangement is particularly convenient for "programme" sales, i.e. where similar securities are offered in relatively small batches on a relatively frequent basis. Short- and medium-term debt instruments ("commercial paper" and "notes") are often offered in this way. The Commission's 2015 proposals aim to increase the speed advantages of the registration statement, renaming it the "universal registration document".

[121] LR 8.2.1, made under FSMA s.88. Since the sponsor is a purely domestic requirement, the relevant rules are found in the LR rather than the PR. The "nominated adviser" (or "nomad") plays a similar role in relation to the admission document (see above, para.25–17) required for admission to AIM. A sponsor is also required on certain other occasions, for example, when the company issues a "Class 1" circular (see para.14–20), but a listed company is not required to have a sponsor at all times, unlike a company admitted to AIM where a condition for continued admission of the company is that it always has a nomad: LSE, *AIM Rules for Companies* 2014, r.1. The nomad has similar responsibilities to the sponsor at admission stage and must give the Exchange the same assurance: *AIM Rules for Nominated Advisers*, 2014, Sch.2.

[122] LR 8.3.1.

[123] LR 8.4.3. Given the importance of sponsors, provisions have to be made for their independence, qualifications and supervision. See, for example, LR 8.6 and 8.7, but those matters do not need to be considered further in this book.

[124] LR 8.4.2 and 8.4.8. And has procedures in place to facilitate compliance with the Transparency and Disclosure Rules discussed in the following chapter.

[125] Above, para.25–15.

[126] Commission Regulation (EC) No.809/2004, Annex 1, para.13.

[127] PD art.13; FSMA s.87A.

[128] FSMA s.87C: 20 days if the issuer has no securities traded on a regulated market and has never previously made a public offer. This follows from the fact that s.87C determines the periods within which the FCA must make its decision. The submitted information must include the documents which the prospectus incorporates by reference: PR 3.1.1.

[129] PD art.13(4).

[130] PD art.13(6); FSMA Sch.1ZA para.25.

[131] FSMA s.87D.

[132] FSMA s.87J, following art.21(3)(a)–(c) of the PD.

[133] PD art.8(2); FSMA s.87B.

[134] FSMA s.87B(1)(a),(2).

[135] FSMA s.87B(1)(b),(c). The same two exemptions are found for AIM admissions documents: *AIM Rules for Companies*, r.4. A similar exemption power also exists in relation to listing particulars (s.82).

[136] PD art.14; PR 3.2.4–5. There is further detail in arts 29, 30 and 33 of the Commission Regulation.

[137] Widely defined in art.34 of the Commission Regulation.

[138] PD art.15; PR 3.3.2–3. The FCA's guidance is that the advertisement should state that it is not a prospectus and contain the warning that investors should not subscribe for securities without reading the prospectus.

[139] FSMA s.98, requiring prior approval, was repealed in 2005 when the PD was transposed in the UK. The wide definition of "advertisement" makes such a requirement impractical.

[140] FSMA s.102B. This is not necessarily straightforward, since the Commission does not accept that merely refraining from inviting offers removes the advertisement from the category of prospectus. The 2015 reform proposals (above fn.39) give the Commission power to issue delegated legislation in this area.

[141] FSMA s.85(4). There is no equivalent in relation to listing particulars.

[142] *Derry v Peek* (1889) 14 App. Cas.337 HL. At this time, of course, liability in the tort of negligence for purely economic loss caused by misstatements was not accepted either (and that remained in effect the case until the House of Lords' decision in *Hedley Byrne & Co Ltd v Heller & Partners Ltd* [1964] A.C. 465), so that the tort of negligence could not be used to circumvent the restrictions on liability under the tort of deceit.

[143] The rules discussed in this section also apply to misstatements and omissions in listing particulars. Indeed, the section is drafted in terms of listing particulars and only s.90(11) makes it clear that it covers prospectuses.

[144] FSMA s.90(1). Where the rules require information regarding a particular matter or a statement that there is no such matter, an omission to provide either is to be treated as a statement that there is no such matter: s.90(3).

[145] "Acquire" includes contracting to acquire the securities or an interest in them: s.90(7).

[146] To be assessed presumably on the tort measure, i.e. to restore the claimant to his or

her former position: *Clark v Urquart* [1930] A.C. 28 HL, i.e. normally the difference between the price paid and the value of the securities received.

[147] For the difficulties the common law has had with this point, see below, para.25–38.

[148] This is the securities litigation term deployed in the US. It is not really apt in this context: “negligence on the market” would be more accurate if less resonant.

[149] See above, para.22–44 in relation to auditors, and below, para.25–38.

[150] PD art.6(2); FSMA s.90(12). On key information see para.25–23.

[151] The common law rules are discussed briefly below. It is not entirely unarguable that s.90 applies to an AIM admission document, which is a cut-down version of the PD prospectus. The function of the two types of document is the same. The section does not in terms say that it applies only to prospectuses required by the PD. Nor is it clear that a “prospectus” (not defined for the purposes of s.90) is confined to the documentation accompanying a public offer of shares. Nevertheless, s.90 is probably understood by most people to be limited in the way stated in the text.

[152] This sentence merely summarises the very complex drafting of Sch.10.

[153] PR 5.5. In the case of listing particulars the persons responsible are set out in FSMA 2000 (Official Listing of Securities) Regulations 2001 (SI 2001/2956) reg.6.

[154] PR 5.5.3.

[155] For example, the reporting accountant and any other “experts”.

[156] This takes account expressly of secondary offers (above, fn.42), but the offeror will not be liable if it is making the offer in association with the issuer and the issuer has taken the lead in drawing up the prospectus.

[157] PR 5.5.4.

[158] PR 5.5.9. This clearly does not exclude the main functions of sponsor required by the Listing Rules.

[159] PD art.6; Commission Regulation, Annex I para.1.

[160] No person, by reason of being a promoter or otherwise, is to incur any liability for failing to disclose in a prospectus information which would not have had to be disclosed by a person responsible for the prospectus or which a person responsible would have been entitled to omit by virtue of the Act.

[161] Above, para.25–17.

[162] *R. v Kylsant* [1932] 1 K.B. 442 CCA.

[163] *Derry v Peek* (1889) 14 App. Cas. 337.

[164] Or his agent, but even then not so as to make the agent liable but only the principal: *The Skopas* [1983] 1 W.L.R. 857—though presumably the agent’s state of mind is relevant in establishing the reasonableness of the belief in the truth of what was said. In the case of statements in the prospectus, even by experts, it seems that the company will be prima facie liable for them and that it carries a heavy burden to disassociate itself from them. See *Mair v Rio Grande Rubber Estates Ltd* [1913] A.C. 853 HL; *Re Pacaya Rubber Co* [1914] 1 Ch. 542 CA.

[165] *Royscot Trust v Rogerson* [1991] 2 Q.B. 297 CA. However, in *Smith New Court*

Securities Ltd v Scrimgeour Vickers (Asset Management) Ltd [1997] A.C. 254, a case of deceit, where the consequences of adopting the fraud measure were particularly onerous for the defendant, the House of Lords refused to commit themselves to acceptance of the proposition laid down in the *Royscot Trust* case.

[166] *Hedley Byrne & Co Ltd v Heller & Partners Ltd* [1964] A.C. 465.

[167] This last requirement is discussed further in para.28–64.

[168] As suggested by *Peek v Gurney* (1873) L.R. 6 H.L. 377 HL.

[169] As suggested by *Andrews v Mockford* [1892] 2 Q.B. 372 CA, where the jury were held to be entitled to conclude that the false prospectus was only one of a series of false statements made by the defendants, whose purpose was not simply to induce subscriptions but also to encourage purchases in the market when dealings began.

[170] *Al-Nakib Investments Ltd v Longcroft* [1990] 1 W.L.R. 1390.

[171] *Possfund Custodian Trustees Ltd v Diamond* [1996] 1 W.L.R. 1351. At the time the relevant provisions of the companies legislation conferred a statutory entitlement to compensation only upon subscribers.

[172] "The issue of a prospectus establishes a basis for valuation of the securities and underpins the development of a market in them, irrespective of the precise circumstances of the initial offer": DTI, *Listing Particulars and Public Offer Prospectuses: Consultative Document* (July 1990), para.10.

[173] Above, para.25–33.

[174] However, in *Thomas Witter Ltd v TBP Industries Ltd* [1996] 2 All E.R. 573 there is a dictum of Jacob J to the effect that the court's power to award damages under s.2(2) is not limited to situations where the misrepresentee still has the right to rescind, thus opening up the possibility of damages under the statute for non-negligent misstatements, a development which would benefit misrepresentees. This dictum was not followed in *Government of Zanzibar v British Aerospace (Lancaster House) Ltd* [2000] 1 W.L.R. 2333.

[175] *Sharpley v Louth and East Coast Railway Co* (1876) 2 Ch. D. 663; *Scholey v Central Railway of Venezuela* (1869) L.R. 9 Eq. 266n; *Crawley's Case* (1869) L.R. 4 Ch. App. 322.

[176] *Tennent v The City of Glasgow Bank* (1879) 4 App. Cas. 615.

[177] *Oakes v Turquand* (1867) L.R. 2 H.L. 325; *Re Scottish Petroleum Co* (1882) 23 Ch. D. 413. Whether this would apply in the case of rescission as against a transferor (rather than the company) is less clear, but the liquidator's consent would be needed for the re-transfer: Insolvency Act 1986 s.88.

[178] Even in this context one should note the dictum of Lord Browne-Wilkinson in *Smith New Court Securities Ltd v Scrimgeour Vickers (Asset Management) Ltd* [1996] 4 All E.R. 769 at 774: "if the current law in fact provides that there is no right to rescind the contract for the sale of quoted shares once the specific shares purchased have been sold, the law will need to be carefully looked at hereafter. Since in such a case other, identical shares can be purchased on the market, the defrauded purchaser can offer substantial *restitutio in integrum* which is normally sufficient". However, this comment was made in the context of a purchase from a shareholder, not a subscription to shares issued by the company.

[179] The possibilities and problems arising out of breach of contract claims against the

company are illustrated by *Re Addlestone Linoleum Co* (1887) 37 Ch. D. 191 CA, which, however, must now be read in the light of the abolition of the rule that a shareholder cannot recover damages against the company unless the allotment of shares is also rescinded. See CA 2006 s.655.

180 FSMA s.85(3): on indictment the maximum penalty is a prison term of not more than two years or a fine or both.

181 FSMA s.401.

182 FSMA s.75(4). See para.25–15, above. Other cases include issues of securities by private companies (s.75(3) and FSMA 2000 (Official Listing of Securities) Regulations 2001/2956 reg.3) and securities already listed in another EEA state where the issuer is in breach of those listing rules (s.75(6)).

183 The warning notice procedure is laid down in s.387 of FSMA 2000 and fleshed out in the following provisions of Pt XXVI of the Act. In 2010 the Upper Tribunal replaced the Financial Services and Markets Tribunal, which had previously discharged this function. Appeal lies on a point of law to the Court of Appeal or Court of Session.

184 FSMA s.87A.

185 FSMA s.77(1). A more common use of this power is where the “free float” has fallen below 25 per cent (above, para.25–15) and is not likely to return to that level in the near future. See further, LR 5.2.2.

186 The issuer may refer the cancellation to the Upper Tribunal (s.77(5)), but the shareholder has no right of appeal, nor even to be consulted by the Authority before the decision is taken, even though his or her financial position is crucially affected. In *R. v International Stock Exchange Ex p. Else (1982) Ltd* [1993] Q.B. 534 CA it was held that the EU Directives did not require that access to the courts be granted to the shareholders. The Court was influenced by the argument that to decide otherwise would enormously slow down decision-taking by the competent authority.

187 FSMA ss.87K and 87L. In the case of admission to trading, there is no withdrawal power where the FCA concludes only that it is likely a requirement will be infringed. This is presumably because of the adverse impact of ending trading on those who have invested in the company’s securities, whereas if an offer is withdrawn, the securities on offer are simply not taken up. These provisions follow those of art.21(3)(d)–(h) of the PD.

188 FSMA ss.87D and O. The “person” (other than the offeror) could be, for example, the operator of the market.

189 See para.25–16.

190 LSE, *AIM Disciplinary and Appeals Handbook*, 2014.

191 cf. *R. (on the application of Yukos Oil Co) v Financial Services Authority and London Stock Exchange* [2006] EWHC 2044.

192 FSMA s.91(1) and (1A). Section 91(1) includes breaches of the listing rules other than at the public offer stage, as we shall see in the next chapter. Section 91(1A) implements art.25 of the PD. It will be recalled that an FCA penalty is one of the matters against which a company may not agree in advance to indemnify the director: above, Ch.16 at para.16–130.

193 FSMA s.91(2). Since 2012 sponsors are also subject to FCA disciplinary powers: s.88A.

[194] FSMA s.91(3).

[195] FSMA s.97 and Pt XI. The investigatory powers are not confined to authorised persons, as they normally are under Pt XI.

[196] FSMA s.93.

[197] FSMA s.92 and s.387 on warning notices.

[198] PD arts 17(1) and 2(1)(m)(n). There are procedures to be followed by the home State to certify to the FCA its approval of the prospectus: PD art.18; FSMA s.87H.

[199] PD art.23.

[200] PD art.17(2).

[201] FSMA s.87A(1)(a).

[202] PR 1.1.1. However, the FCA does have the task of applying the eligibility requirements (above, para.25–15) to all applicants, for CARD does not insist on home state regulation.

[203] PD art.2(1)(m)(iii).

[204] PD art.20; PR 4.2. See Commission Regulation (EC) No.1569/2007. An issuer using IFRS will always be in the clear since this is the EU requirement.

[205] PD art.2(1)(m)(ii). This rule applies to non-EU incorporated issuers as well, who, however, cannot choose the State of incorporation because they are not within the EU. The advantage for them of being within (ii) rather than (iii) appears to be that the choice arises each time a relevant issue of debt securities is made, under (iii) the choice is otherwise a once-and-for-all one.

[206] See the constraints on companies' acquisition of their own shares discussed in Ch.13.

[207] LR 5.2.5. For the meaning of a controlling shareholder see text attached to fn.59, above. There are certain exceptions to the requirement for shareholder approval, for example, where the shares are already traded on a regulated market in another EEA State (though this may be a significant event for shareholders); if the company is in severe financial difficulties; or the securities in question are debt securities; or the controller has reached a 75 per cent holding as a result of a takeover bid in which the offer document made clear the offeror's intention to de-list.

CHAPTER 26

CONTINUING OBLIGATIONS AND DISCLOSURE OF INFORMATION TO THE MARKET

Introduction 26–1
Periodic Reporting Obligations 26–3
Episodic or Ad Hoc Reporting Requirements 26–5
Disclosure of Directors’ Interests 26–9
Who has to disclose? 26–11
What has to be disclosed, to whom and when? 26–12
Disclosure of Major Voting Shareholdings 26–14
Rationale and history 26–14
The scope of the disclosure obligation 26–16
Sanctions 26–24
Compensation for misleading statements to the market 26–25
Compensation via FCA action 26–28
Administrative penalties for breaches 26–29
Criminal sanctions 26–32
Conclusion 26–33

INTRODUCTION

26–1

Even after a company has been admitted to a public market, in accordance with the rules discussed in the previous chapter, the law imposes “continuing obligations” in relation to disclosure *by* publicly traded companies. These obligations are discussed in the first half of this chapter. In addition, however, the law requires those associated with the company, as directors or major shareholders, to make certain disclosures *to* the company and, through the company, to the market. We turn to them in the second half.

26–2

The continuing obligations laid on the company largely reflect the disclosure philosophy which dominates the rules on public offerings and admission to trading,[1] but that theory is applied now to the post-admission period so as to inform trading among investors in the securities of the company. Investor protection and allocative efficiency are most obviously advanced by

continuing disclosure when a traded company returns to the market to raise further capital, especially in cases where it may do so without issuing a new prospectus.[2] More generally, investors' willingness to purchase securities in publicly traded companies (whether on a public offering or from existing shareholders) is likely to be enhanced if they think that market prices reflect the true state of the company's business.[3] In addition, the prompt disclosure of significant information by the company will reduce the opportunities for insiders to trade in the securities before the market is aware of new developments. Further, disclosure rules may benefit shareholders, whether or not they contemplate trading in the company's securities. The market price of the stock may indicate to shareholders (or independent directors acting on their behalf) whether all is well with the company's business and whether the exercise of their governance rights would be appropriate—though it would be unwise for shareholders to react to short-term movements in share prices. Continuing disclosure by the company thus has both market and corporate governance implications, which we will explore in this chapter.[4]

Insider trading may also be discouraged by requiring those closely associated with the company's central management (notably its directors) to make disclosures *to* the company and to the market about their trading in the company's securities, since directors are structurally well placed to acquire inside information. Finally, within the shareholder body disclosure of beneficial ownership of shares may also reveal who is really in a position to influence decisions in shareholder meetings and so to determine the future course of the company (for example, through the selection of directors). So, the rules about disclosure to the company and the market have market "cleanliness" and corporate governance objectives as well as the rules on disclosure by the company.

As with the disclosure rules operating at the time of admission to the market, the structure of domestic law is now heavily influence by EU law, notably the Transparency Directive ("TD")[5] and the Market Abuse Regulation ("MAR").[6] The TD has generated the same multi-layered rule-making structure which we identified in relation to the Prospectus Directive.[7] At

the bottom of the structure, but very important in practice, are the Transparency Rules ("TR") made by the FCA. Under the TD the domestic rules are somewhat more important than under the PD because, unlike the PD, the TD is not a maximum harmonisation instrument. In principle Member States can add to its provisions, which the UK, because of its long history of regulating continuing obligations, has often done. Market abuse was previously dealt with at EU level through directives, generating the same multi-layered structure. However, in the post-crisis reforms the EU moved to a Market Abuse Regulation[8] which, as a regulation, does not require transposition into domestic law but operates directly as part of UK law. However, it too provides largely minimum standards to which domestic law may add.

Periodic Reporting Obligations

26–3

We saw in Ch.21 that all companies must report on an annual basis to their shareholders and that such reporting is now extensive, especially for "quoted" companies.[9] However, for a long time companies with securities[10] traded on public markets have been subject to more frequent reporting requirements, for the market's appetite is not satisfied by yearly reporting. Such companies may be required to report half-yearly and even quarterly. In the case of regulated markets[11] these obligations currently stem from the TD.

Article 4 of the TD requires the publication of audited annual accounts and reports. By and large, the requirements of this article are met by the rules contained in the Companies Act 2006 and considered in Chs 21 and 22.[12] However, the Directive's requirement for speedier publication of accounts than the 2006 Act requires (four, rather than six, months from the end of the financial year) is implemented domestically in the DTR.[13] Further, TD art.4 requires a more explicit "responsibility statement" than is to be found in the case of accounts approved by the directors and signed by a director on behalf of the board under the Act.[14] The TD requires the names of all those responsible within the issuer for the accounts and reports to be stated and the responsibility statement must certify that, to the

best of their knowledge, the accounts have been prepared in accordance with the relevant standards and give a true and fair view of the company's financial position, and the management report includes a fair review of the company's business.[15]

More significant is the TD's requirement for half-yearly reports, to which there is no Companies Act equivalent, to be published within two months of the end of the half year. The half-yearly reports are required to be less detailed than the annual ones and are not required to be audited (though if they are audited or reviewed, the audit report or review must be published).[16] The accounts required to be produced are a condensed set of financial statements, the directors' report is an "interim review" and the responsibility statement is adjusted accordingly.[17]

26–4

The issue of quarterly reporting has been contentious. Some argue that it adds to the efficiency of securities markets; others than it encourages management to focus on the short-term. The original TD required, not a set of quarterly accounts but only a quarterly "interim management statement", giving an explanation of material events and transactions which had taken place and their impact on the issuer and a general description of the company's financial position and performance.[18] However, in the 2013 amendments the short-termism argument won out and the quarterly reporting requirement was removed.[19]

As we have noted in Ch.21, the power to review the accounts and reports of companies for compliance with the relevant requirements is one which has been delegated by the Government to the Financial Reporting Council; and that body's powers extend to all the periodic reports required to be produced by listed companies, whether annual or otherwise.[20]

Episodic or Ad Hoc Reporting Requirements

26–5

In addition to the requirement to make reports every six months, publicly quoted companies are required to report events as they occur. There are two main arguments behind this requirement. First, it can be seen as a way of keeping shareholders and

investors up-to-date about developments in the business of the company or about other factors which affect its business. The information should be disclosed because it is relevant to investors and shareholders. The second argument, reflected in the fact that at EU level this disclosure obligation is located in MAR rather the TD, is that the information should be disclosed publicly in order that it shall no longer be known only to a small group of persons who may be tempted to trade on the basis of the information to their profit precisely because it is not known to the market in general. On this rationale disclosure is a way of reducing opportunities of "insider trading", i.e. trading in securities on the basis of price-sensitive information which is not generally available. On both arguments, the purpose of the rules is to have the information disclosed to the market, but, in the first argument because market participants and shareholders need the information to inform action they might take and, on the second argument, because disclosure is the way of depriving the information of its "inside" character.

26–6

The current version of these disclosure requirements is to be found in art.17 of MAR, applying to companies whose securities are traded on a multi-lateral trading facility as well as on a regulated market.[21] The emphasis in MAR is on disclosure by the company of inside information "as soon as possible". The essence of inside information is that it is information which is not known to the market but, if it were known, would have a significant effect on the price of the company's securities.[22] This is discussed further in Ch.30.

In the design of any rules relating to the disclosure of events "as soon as possible", there are two problems which have to be faced. One is to define the point at which the event has crystallised and so triggers the disclosure obligation. If impending developments or matters under negotiation are disclosed too soon, their completion may be jeopardised and the market possibly be given information whose value is difficult to assess because it relates to inchoate matters. The injunction to act "as soon as possible" gives the issuer some leeway, for example, where it receives unexpected information whose ambit is not clear and which it needs to clarify. Beyond that, MAR

permits issuers “on their own responsibility” (i.e. they cannot require the national regulatory authority to give advance clearance of non-disclosure, though the regulator must be informed of the decision not to disclose)[23] to delay disclosure to protect their “legitimate interests”, but subject to the riders that the non-disclosure must not be likely to mislead the public and that the company can ensure the confidentiality of the information on the part of those to whom it will have to be disclosed.[24] This permission is particularly important since art.7(2) states that, in principle, “an intermediate step in a protracted process shall be deemed to be inside information if, by itself, it satisfies the criteria of inside information as referred to in this Article”.[25]

MAR provides for the European Securities Markets Authority (“ESMA”) to produce guidelines on the tricky issues of what constitutes a legitimate interest and action likely to mislead, though some examples of legitimate interest are given in Recital 50 to the Regulation. The indicative list of such legitimate interests produced in the draft guidance from ESMA[26] focuses on the negotiation or implementation of transactions which are likely to be prejudiced if they are revealed, for example, negotiations for a major contract or negotiations to sell a major holding in the company. However, even where the issuer has a legitimate interest in non-disclosure, it may refrain from disclosing only if non-disclosure is not likely to be misleading to the market. Here the indicative list suggests non-disclosure will be misleading if (i) the information is inconsistent with some prior public statement by the issuer to the market; (ii) casts doubt on the issuer’s prospects of meeting its financial objectives where these have been the subject of prior public guidance from the company; or (iii) the information goes against the market’s current expectations where these have been set by signals from the issuer. As is to be expected, investors’ interests appear to receive more weight than issuers’ concerns.[27]

26–7

The second problem is that public disclosure of adverse developments may make it more difficult for the issuer to handle them. In principle, this situation is also handled under the above rules, but in one case the balance is re-weighted in favour of the

issuer. Where the issuer is a financial institution and disclosure of the information would threaten the financial viability of the issuer *and* of the financial system, disclosure can be delayed, subject to the confidentiality test and a public interest test and the consent of the competent financial regulator.[28] The reason for downgrading investors' interests in this case is that instability in the financial system is likely to be more costly to society as a whole than the costs to investors of non-disclosure. This provision reflects experience in the financial crisis where, at least in the UK, the regulators interpreted the prior EU law strictly so as to require immediate disclosure of the existence of banks' liquidity problems whilst permitting non-disclosure only of the state of the negotiations to solve them—arguably the worst of both worlds.[29]

26–8

Where information is required to be disclosed the Regulation requires that to be done in a way which "enables fast access and complete, correct and timely assessment of the information by the public".[30] It also requires it to be displayed on the company's website for an appropriate period, but this is not in fact a very good way of disclosing information simultaneously to all market participants. In practice, Dissemination will occur in the UK via a "Primary Information Provider" ("PIP"), i.e. one approved by the FCA, which carries news about all companies in the market and so does not favour those who happened to be logged onto a particular company's website at the time the information was posted. Further, information required to be disclosed under art.17 of MAR constitutes "regulated information" which, by virtue of art.21 of TD, is subject to additional requirements, notably that it be disseminated to the public simultaneously, as nearly as possible, in all EEA Member States.[31]

Somewhat bureaucratically, art.18 of MAR[32] requires issuers to draw up and keep updated, lists of those working for them (whether as employees or self-employed persons) who have access to inside information; and to send the lists to the relevant national regulator, if so requested. Each list must be kept for five years. Those acting on behalf of the issuer (for example, an investment bank or law firm) must also draw up such a list.[33] The list must give the reason why a particular person is on the

list. All those on the list must be acknowledge in writing their duties under the insider dealing rules and of their awareness of the sanctions for breaking them.

Disclosure of Directors' Interests

26–9

In the previous sections we have examined the disclosure obligations imposed on publicly traded companies. We now turn to the obligations imposed on those associated with the company as either directors or major shareholders.

Since shortly after the Second World War the Companies Acts required directors to disclose to their companies their interests in the securities of the companies of which they are directors, an obligation which was later extended so as to impose upon the director the duty to disclose the interests of spouses, civil partners and children. In the case of a company with securities listed on a recognised investment exchange[34] the company was then under an obligation to notify the exchange, which was permitted to publish the information to the market. Following the implementation of the Market Abuse Directive[35] in the UK, these disclosure obligations were transferred wholly to rules made by the FCA[36] and confined to companies whose securities were admitted to trading on a regulated market (or where an application for admission has been made). With the adoption of MAR[37] to replace the Directive the controlling obligation is now to be found in art.19 of that instrument and, as we have noted, MAR applies to multi-lateral trading facilities as well as to regulated markets.[38] However, the substantive provisions of the Regulation are not enormously different from the prior combination of EU and domestic law.

29–10

The principal, though not the exclusive, rationale behind this disclosure requirement is to combat insider trading. Although directors are not the only people under a temptation to engage in insider dealing, they are particularly at risk because their relationship with the company will routinely generate inside information, i.e. information which, at least for a short while, is known to them but not outside the company. The original

provisions requiring disclosure of directors' securities dealings were introduced following a recommendation from the Cohen Committee (1945), which identified the insider dealing rationale for requiring the disclosure:

> "The best safeguard against improper transactions by directors and against unfounded suspicions of such transactions is to ensure that disclosure is made of all their transactions in the shares or debentures of their companies."[39]

Insider dealing is now a prohibited activity,[40] but the disclosure provisions still operate to supplement the operation of the prohibition, by making detection of improper transactions easier. However, these disclosure rules should not be regarded as aimed solely at insider trading. As the Law Commissions put it:

> "the interests which a director has in his company and his acquisitions and disposals of such interests convey information about the financial incentives that a director has to improve his company's performance and accordingly these provisions form part of the system put in place…to enable shareholders to monitor the directors' stewardship of the company".[41]

So, there are two rationales for director disclosure, insider dealing and corporate governance.

Who has to disclose?

26–11

The disclosure obligation is imposed on any "person discharging managerial responsibilities" ("PDMR") and those "closely associated" with them. PDMRs are defined so as to go somewhat wider than just directors so as to include senior (but non-directorial) executives who (i) have regular access to inside information relating to the issuer; and (ii) have power to make managerial decisions affecting the future development and business prospects of the issuer.[42] This is a welcome recognition of the importance of senior executives, though condition (ii) will bring only a small number of non-directorial executives within the definition. In this respect the current law goes beyond the scope of the former companies legislation. On the other hand, the prior law applied the disclosure obligation to shadow directors,[43] who would not seem to fall within the definition of a PDMR, since they will not typically be executives of the company. For example, a large shareholder will not fall within this definition, though its transactions may be caught by the less

demanding rules on "vote holder" disclosure, discussed below. "Closely associated" persons are, in relation to natural persons, spouses and partners, dependent children and any relative who has shared the same household for at least twelve months at date of the transaction. A complex definition of connected artificial persons adds any legal person, trust or partnership, which is managed by a PDMR or a connected natural person and which is directly or indirectly controlled by the PDMR or connected person or which is set up for that person's benefit.[44] The notification obligation is imposed on the person who engages in a relevant transaction (see below); a director who does not transact is not obliged to disclose the information relating to connected person's transactions. However, the PDMR must inform connected persons of their obligations under the Regulation, which means the PDMR must identify them, but the connected person's disclosure obligation is not expressly conditioned upon such notification. Equally, the issuer must notify the PDMRs of their obligations, which again involves identifying them, a useful exercise in relation to non-board PDMRs in particular.[45]

What has to be disclosed, to whom and when?

26–12

MAR requires those subject to it to disclose "transactions on their own account relating to the shares or debt instruments" of the issuer. Transactions "relating to" securities clearly embraces much more than their purchase of sale. In addition, transactions relating to "derivatives or other financial instruments linked to" those securities are covered—an important extension. Nevertheless, this is narrower in one respect than the former domestic rules. Those required disclosure of interests in the securities of other companies in the same corporate group by a person who was a director of any one group company.[46]

The Commission is required[47] to produce "delegated acts" specifying what constitutes a transaction on own account, although art.19(7) already includes pledging or lending of securities and the execution of transactions by a third party where that third party acts on behalf of the PDMR or connected person. ESMA's advice[48] devotes a lot of attention to the

situation where the director or connected person buys or sells units or otherwise invests in a fund which itself has invested in securities of the issuer. In principle, such transactions should be disclosed, unless information about the fund's investments is not available to the PDMR. Assuming access to this information, transactions are to be disclosed where the issuer's securities constitute at least 20 per cent of the value of the fund. This means that most retail fund investments are excluded, because such funds are not normally allowed such a high degree of investment concentration. Moreover, the test is applied at the point of investment or disinvestment by the PDMR. If the test is not met on acquisition, for example, the PDMR will not have to disclose if the fund manager later buys securities which take the fund over the threshold, unless the situation is an unusual one where the PDMR can influence the managers' investment decisions.

In addition to funds, the ESMA advice suggests the disclosure obligation should apply, amongst others, to contracts for differences (equity swaps),[49] options under directors' remuneration schemes, gifts and donations and share borrowing. The transactional scope of the disclosure obligation is in fact very wide, though Member States are free to add to it. However, the Regulation contains one limitation not previously present in UK law. If the value of the transactions in a calendar year does not exceed €5,000, then no disclosure is required and, once that threshold is reached, only transactions above it are disclosable.[50]

26–13

The Regulation[51] requires information about the transaction to be disclosed to the company (issuer) and, normally, to the competent authority of the issuer's state of registration (in the UK the FCA).[52] The information to be given to the issuer includes "the price and volume of the transaction" (so that the director cannot simply say that he or she has bought some shares in the company).[53] Given the complexity of the connected persons definition the information is wisely required to specify "the reason for the notification", which both requires the notifying person to work out how the definition applies to them and enables the company to check the reasoning. The financial instrument and the nature of the transaction must also be

described. The transaction must be notified to the FCA and the issuer not later than three business days after the day of the transaction, and the issuer must release the information to the market (throughout the EU) within the same time-scale (unless national law transfers that obligation to the competent authority).[54] The information disclosed by directors and others under the above mechanism, is regulated information under art.21 of TD and so Member States must ensure it is held in a central database.[55]

Disclosure of Major Voting Shareholdings

Rationale and history

26–14

This is a further area where British law has long required disclosure but where EU legislation (via the TD) has now become dominant, leading to a transfer of a substantial part of the disclosure requirements from the Companies Acts to FSMA. There is an initial puzzle about why these provisions are necessary at all. It is rare for companies in the UK to issue "bearer" shares, and the Small Business, Enterprise and Employment Act 2015 now prohibits their issuance,[56] so that shares are issued instead in the name of a person (natural or corporate) and are referred to as "registered" shares. The names of the holders of such shares, as we have seen,[57] must be entered in a register, which is kept by the company, and reported to Companies House in the confirmation statement, so that the names of the shareholders are public knowledge. It may be wondered why further provision is required. However, the requirement that the shareholder's name be registered in the company's share register does not mean that the name of the beneficial owner needs to be registered. The use of nominee names has long been popular among big investors and now the dematerialisation of shares[58] has put some pressure upon even small investors to use nominees. Thus, inspection of the share register will not necessarily, perhaps not even typically, reveal who has the beneficial interest in the share.[59] Finally, the list of shareholders in the confirmation statement may not be up-to-date.

Granted this, it is still necessary to say why holders of large shareholdings should be required to reveal their interests publicly. In part, but only in small part, these provisions aim to deter insider dealing, as with those discussed in the previous section. However, the main purpose of these provisions is better put as follows:

> "A company, its members and the public at large should be entitled to be informed promptly of the acquisition of a significant holding in its voting shares in order that existing members and those dealing with the company may protect their interests and that the conduct of the affairs of the company is not prejudiced by uncertainty over those who may be in a position to influence or control the company."[60]

This statement explains the concentration in the successive legal regimes on disclosure of holdings of voting shares, because it is disclosure of actual or potential control of the company that is aimed at, rather than interests in its securities in general.

However, the statement might also be thought to run together two rationales for the disclosure provisions. One is protection of the management of the company and its members, by making them aware of who is building up a stake in the company. Disclosure here operates as an early-warning device about potential takeover bids in particular. But the statement refers also to the protection of "the public". Public disclosure may be said to be promoting the conceptually separate goal of "market transparency". The argument here is that disclosure of the identity of those with important share stakes in the company is (or could be) an important element in the market's assessment of the value of the company. Obviously, a single set of disclosure rules might aim to promote both policies.

26–15

The current law in fact contains two different types of disclosure rule. One requires the disclosure of shareholdings once a certain size threshold has been crossed. This is an obligation generated automatically by the law once the appropriate threshold has been reached. The second, still contained in the Companies Act, is triggered by the company asking any person to reveal the extent of their interest in the company's voting shares. This latter set of disclosure rules we discuss not in this chapter but in Ch.28 dealing with takeovers, because their main impact is in that context.

The principle of automatic disclosure of major shareholdings was introduced as a result, again, of the recommendations of the Cohen Committee[61] in 1945 that the beneficial ownership of shares be publicly disclosed. Over time, the starting threshold has been lowered, the speed of the required disclosure increased and the range of interests to be disclosed made more sophisticated. EU law also showed an interest in this topic at an early stage.[62] The current EU principles are laid down in the TD.[63] The main impact of the TD in the UK was, once again, to spark off a fundamental review of the purposes of these disclosure rules. In particular, the emphasis in the Directive upon disclosure as an instrument to improve the functioning of the securities markets[64] led the DTI to propose[65] that the "market transparency" rationale be given pre-eminence over the others. This policy was implemented by the removal of the automatic disclosure requirements from the companies legislation whilst at the same time the Companies Act 2006 Act amended FSMA so as to permit the area to be regulated by FCA rules, thus giving rise to the current regulatory structure.[66] The result, as with directors' disclosures, was an overall narrowing of the range of companies covered by the regime. At this point the domestic rules still went beyond the minimum EU requirements in a number of ways, but that gap has been substantially narrowed by the TD amendments of 2013.[67]

The scope of the disclosure obligation

Which companies are subject to the regime?

26–16

The 1985 Act regime applied to all public companies (in the company law sense of that term—Plcs).[68] The Directive applies only to companies (issuers) whose securities are admitted to trading on a regulated market.[69] The domestic regime implementing the Directive applies to all companies with securities traded on a prescribed market, which includes any market operated by a Recognised Investment Exchange, on the grounds that transparency of shareholding is as important on exchange-regulated as on regulated markets.[70] Thus, both the Main Market of the LSE and AIM are covered by the current domestic disclosure obligation, but not Plcs which are not

publicly traded.

When does the disclosure obligation arise?

26–17

The rules are concerned with disclosure of the percentage of voting rights held in a company, as certain thresholds are passed, rather than just holdings of shares. For that reason DTR 5 is entitled "Vote Holder Notification". Holdings of non-voting shares do not have to be disclosed, because they do not contribute to the ability to exercise control over the company. Nor do holdings of shares which are entitled to vote only in particular circumstances have to be disclosed, for example, non-voting preference shares whose shareholders can nevertheless vote when class rights are being varied under the statutory procedure[71] or which are entitled to vote if their preference dividend has not been paid, provided, of course, that the event has not occurred which gives the class of shares general voting rights.[72] By contrast, those exercising managerial responsibilities do have to disclose holdings in non-voting shares under the rules discussed in the previous section, because opportunities to engage in insider dealing can easily arise in relation to such shares, and holdings of non-voting equity shares may provide economic incentives for directors to act in particular ways, despite the absence of a vote.

The disclosure thresholds are three percent of the total voting rights in the company and every 1 per cent increase thereafter. Decreases must also be notified on the same scale.[73] These disclosure triggers are more demanding than those in the TD,[74] but reflect the prior domestic law. Almost as important as the definition of the threshold is the question of how soon after the threshold has been crossed does the notification obligation have to be discharged. A notification obligation which did not have to be discharged until, for example, a month after the threshold had been crossed would be of very little use to the company, its shareholders or the market in general. In fact, the current regime, following the 1985 Act, imposes a "two-day" rule, i.e. disclosure as soon as possible but in any event by the end of the second trading day following the day on which the obligation to disclose arose.[75]

26–18

In the simple case, the event giving rise to the obligation to disclose will be the purchase or sale of the voting shares of the issuer by an investor who is then obliged to make the notification. However, if the disclosure rule did not extend beyond this, it would be inadequate. For example, Company A, holding 2 per cent of the voting shares of Company X, acquires control of Company B, which also holds two per cent of the shares. Neither company had a notifiable interest in Company X beforehand, but after the acquisition Company A will have a notifiable interest. The notification obligation in relation to X's shares is thus triggered by the acquisition of B's shares by A, not the acquisition of X's shares by A or B, which could have occurred much earlier. Much more complex cases are possible to imagine, which is why, no doubt, the obligation to disclose is imposed on a person who "learns of the acquisition or disposal or the possibility of exercising voting rights" or "having regard to the circumstances, should have learned of it", rather than the date on which the acquisition, disposal or possibility actually occurred or arose.[76]

The obligation to disclose might even arise as a result of events with which the person upon whom it falls is wholly unconnected. For example, a company engages in a share buy-back programme in relation a class of voting shares. The shareholder does not participate in the buy-back, but as a result of other shareholders' decisions the shareholder finds that his or her holding now exceeds one of the notification thresholds. The opposite development could occur if the company issued new voting shares other than to the existing shareholders. The scheme of the FCA rules on this point is that the company is required at the end of the month in which there has been an increase or decrease in the number of its voting shares to give details of the resulting voting structure; and that is the event which causes the disclosure obligation to arise.[77]

Indirect holdings of voting rights

26–19

In order to bring in situations other than the simple acquisition or disposal the Directive contains two provisions extending its

scope. First, art.10 brings in certain holdings of shares of the issuer where the holding is indirect. Among them are[78]:

(i) Voting rights held by an undertaking controlled by a person are to be treated as voting rights of that person.[79] The FCA rules suggest the use of the definition of parent and subsidiary in the 2006 Companies Act to identify a controlled undertaking, with the extension that the controller can include a natural person and not be confined to a controlling company.[80] The controlled undertaking would also have to notify its holding, if one of the triggering events applied.

(ii) Voting rights attached to shares held by a nominee on behalf of another will constitute an indirect holding of voting rights by that other person.[81] The nominee will be a direct holder of the voting rights unless, as will often be the case, the nominee may exercise those rights only on the instructions of the beneficial owner.[82]

(iii) Voting rights attached to shares deposited with someone are to be treated as voting rights of the depositee, if the depositee has the right to exercise the votes at its discretion in the absence of instructions from the shareholder.[83] In the same way, a person engaged in investment management is to be treated as the holder of voting rights if it can effectively determine the manner in which voting rights attached to shares under its control are exercised, in the absence of specific instructions from the shareholders.[84] One or other of provisions (ii) and (iii) is likely to be applicable in the common situation in the UK where an institutional shareholder has outsourced the management of its investment portfolio to a fund manager, though the shares themselves may be vested in a custodian.[85] The fund manager will be an indirect holder of voting shares, assuming, as will usually be the case, the relevant discretion. The custodian will not have to disclose if, as is usual, it can vote only upon instruction (see (ii) above).

A further issue arises where, as is common, the investment management company is part of a larger financial conglomerate. The rules on controlled undertakings ((i)

above) would suggest the parent of the group must aggregate the fund-management subsidiary's indirect holdings with its own. However, art.12(5) of the TD provides an exemption from this further aggregation, subject to certain conditions, notably that the fund management subsidiary exercises its voting rights independently of the parent.[86] This seems correct in principle, since the fund manager will be required to exercise the voting rights attached to the shares it controls in the interests of the beneficial owner (the institutional shareholder) and not those of its parent.

(iv) Where there is an agreement between two or more people under which they are obliged to implement "a lasting common policy" towards a company through a concerted exercise of voting rights, then each of the parties to the agreement will have the voting rights of the other parties attributed to it.[87] Such "concert parties" are a common feature of the long-term governance of companies in some continental European jurisdictions. Although they are less popular in the UK, they do arise, for example in connection with takeover bids, where the Takeover Panel has developed its own sophisticated and more far-reaching definition of "acting in concert".[88]

(v) A person will be regarded as an indirect holder of voting rights if he or she has concluded an agreement with the shareholder for the temporary transfer of voting rights.[89] A linked question concerns disclosure obligations in relation to stock lending,[90] which does not fall conceptually within this category (because the shares are transferred as well as votes), but which serves a similar function. The borrower will be treated as acquiring voting rights if such are attached to the stock borrowed. However, will the lender of the stock be regarded as disposing of voting rights, thus potentially triggering a disclosure obligation? When implementing the original TD the FSA was anxious to continue the prior rules which relieved the lender of the duty to notify on the grounds that its right to call for the re-delivery of the stock was an acquisition of voting rights and that acquisition could be netted off against the loss of voting rights arising out of the stock-lending agreement, thus producing no overall change

in its position. However, the ESMA indicative list of financial instrument under the amended art.13 of the TD (discussed below) made it clear that "the right to recall lent shares" was a notifiable event which must be disclosed.[91]

Financial Instruments

26–20

The second extension, contained in the revised art.13, relates to interests in the voting shares of the issuer acquired via holdings of other types of financial instrument which are linked to the issuer's securities. The operation of some of these linked instruments is easy to grasp because they generate rights to acquire or dispose of the issuer's voting rights. Thus an option to buy from or sell the issuer's voting shares to a third party must be disclosed at the time the option is acquired, even though it has not been exercised (and my never be).[92] However, whilst financial instruments generating "an unconditional right to acquire a share carrying voting rights" have been within the scope of the TD from the beginning,[93] more recent debate has focussed on instruments which do not give a right to acquire or dispose of the issuer's voting shares but rather which, in the words of ESMA, "exposes the holder to the benefits of an upward movement and/or the damages of a downward movement of the price of these shares (i.e., the value of the financial instrument is positively correlated with the underlying equity instrument)".[94] In this case, the holder of the financial instrument does not have the right to acquire (dispose of) ownership of the underlying voting shares, but does have the economic exposure of an owner.

The classic example of such a financial instrument are "contracts for differences" ("CfDs"). In these contracts, as more fully explained in Ch.28,[95] the subject-matter of the contract is the difference in the price of a security at two points in time, rather than the actual security itself. As such, it would seem to give rise to no disclosable issue at all, since the holder of the CfD does not acquire a share and, in particular, its voting rights but only an economic interest in it. However, in relation to "long"[96] CfDs the counterparty to the contract (usually an investment bank) will often hedge its position under the contract

by buying the underlying security. In some cases this will enable the other person entering into the CfD contract to influence the way the votes attached to those shares are exercised by the bank or to acquire the shares from the bank when the CfD is settled. If that person has a contractual right to either of these things under the CfD, then there is no doubt that there is a potentially disclosable interest, assuming the CfD relates to voting shares. The debate concerned the much more common situation where no such contractual right exists, but in practice the CfD holder can either acquire the shares or influence the exercise of voting rights.

26–21

The UK decided to include CfDs before this step was taken by the EU in the amending Directive of 2013. Consulting on the issue the FSA, noting that today some 30 per cent of equity trades are by way of CfDs, usually in order to increase leverage or to avoid stamp duty, concluded that investment banks normally require the CfDs to be "closed out" with cash (rather than the delivery of the underlying shares) and are resistant to CfD holders seeking to influence voting rights attached to the shares bought as a hedge. Nevertheless:

> "There are some instances of CfDs being used in ways which the intention of the current regulatory regime is designed to catch …Specifically, we conclude that CfDs are sometimes being used, firstly, to seek to influence votes and other corporate governance matters on an undisclosed basis and, secondly, to build up stakes in companies, again without disclosure. We have therefore decided that we should take action now to address these failures."[97]

After some havering about how to implement this policy, the FSA changed the rules so as the require disclosure of all "long" positions under CfDs.[98] The amended TD followed suit. Article 13(1) includes not only financial instruments giving an entitlement to acquire or dispose of ownership of voting shares ("point (a) instruments") but also "financial instruments which are not included in point (a) but which are referenced to shares referred to in that point and with economic effect similar to that of the financial instruments referred to in that point, whether or not they confer a right to a physical settlement". ESMA had no difficulty in concluding that this included CfDs.[99] The contrary argument is that, since most CfDs are settled for cash and the bank's voting behaviour is usually not influenced by the CfD

holder, requiring disclosure of all CfDs potentially gives the market a great deal of useless information. However, no one has been able to find a reliable method of distinguishing between those CfDs which will and those which will not be used to build up a stake in the issuer.

Exemptions

26–22

Given the range of notifiable interests, some exemptions needed to be provided, in the interests of both disclosers and recipients of disclosures. We have already noted the one relating to custodians.[100] Another is the acquisition of shares for the purposes of clearing and settlement, i.e. of completing a bargain to buy and sell shares.[101] Probably the most significant is that relating to "market makers", i.e. those who hold shares (usually in a particular range of companies) on their own account in order to be able to offer continuous trading opportunities to those who want to buy or sell those shares.[102] Market makers enhance the liquidity of public securities markets but they do not provide this service for altruistic reasons but in the hope of making a profit overall out of the difference between the prices at which they acquire and dispose of the securities. If they were obliged to disclose the details of their purchases and sales, their ability to make this profit and so their willingness to offer their services as market makers would be reduced. Even this exemption is limited: it does not apply when the market maker's holding in a particular company reaches 10 per cent and it is conditional upon the market maker not intervening in the management of the company or exerting any influence over the company to acquire its shares. There is a similar exemption for financial instruments held in the trading books of banks and related institutions, but in this case the disclosure obligation bites at the 5 per cent level.[103] The amendments of 2013 added an exemption for acquisitions during the price stabilisation process after a new issue.[104]

The disclosure process

26–23

Assuming a disclosure obligation has arisen, the person upon whom it falls must act within the time limits discussed above

and give the required information. In the case of a direct acquisition or disposal of voting shares the required information is straightforward: simply the "resulting situation in terms of voting rights", i.e. the percentage of shares now held and the date upon which the threshold was crossed. Unlike in the case of disclosure by directors there is no obligation to disclose information about the terms upon which the shares were acquired or disposed of. In the case of indirect holdings of shares, some further information is required. For holdings via controlled companies the chain of control must be identified, partly, no doubt, to encourage disclosers to give their mind to this issue. The identity of the shareholder must be given (even if that shareholder has no notification obligation, for example a custodian voting only under instructions) and that of the person entitled to exercise the voting rights, if not the shareholder.[105] For voting rights exercisable through financial instruments, some basic information about those instruments must also be given, notably, the name of the underlying issuer and details about the exercise period (if any) and the date of maturity or expiry of the instrument.[106]

This information must be given to the company. However, the purposes of the disclosure rules can be met only if the information given to the issuer is publicised further. The DTR require issuers on a regulated market to make public the information received as soon as possible and, in any event, by the end of the following trading day, as is the rule for directors' notifications. In the case of issuers whose securities are traded on a prescribed (but not a regulated) market the maximum period for the further disclosure is the end of the third trading day following.[107] There must be a single national storage point for the information and, in due course, the national registers will be linked up via an EU portal.[108]

Overall, it can be said that the rather simple objective of achieving disclosure of vote-holdings at and above the three per cent level has generated a fearsomely complex set of rules.

Sanctions

26–24

Although EU law is the controlling law in relation to the

continuing obligations discussed in this chapter, enforcement action is still a matter for national authorities and litigants. The link between the substantive obligations and national enforcement is made through provisions in the TD and MAR which require certain sanctions to be made available in national law, though those provisions do not purport to determine when the sanctions should be deployed. Broadly, sanctions may be private or public. Private remedies are sought by persons who have suffered loss as a result of the breaches of the disclosure obligations (and so are usually aimed at compensation). Public sanctions are initiated by the public authorities, notably national regulators (the FCA in the case of the UK), normally seeking to punish infringers.[109] Those sanctions may be administrative or criminal.

Compensation for misleading statements to the market

26–25

The most obvious basis for a private claim for compensation is where an issuer is required to make a disclosure to the market but fails to disclose, delays disclosure in circumstances where it is not legitimate to do so or makes a misleading disclosure. Assuming full disclosure would have moved the price of the security, those who bought or sold shares[110] during the period before the emergence of the truth might have a claim for the difference between the actual price and the price the securities would have had if the disclosure obligations had been complied with.[111] The EU instruments actually say rather little about private actions for compensation. The TD states, but only in relation to its periodic reporting requirements, that Member States "shall ensure that their laws, regulations and administrative provisions on liability apply to the issuers, [the administrative, management or supervisory bodies of the issuer] or the persons responsible within the issuers".[112] The reference to the "laws" of the Member States means that they must enable private litigants to sue on the basis of their domestic civil liability rules, but does not require any alteration to the domestic liability regime. Moreover, the TD gives the Member States a choice in relation to the defendants against whom the liability

may be asserted. Furthermore, this provision on civil liability in the TD does not apply to the disclosure of major shareholdings under that Directive. Nor is there any equivalent to it in MAR, i.e. in relation to episodic disclosures and disclosure of interests by directors and others. Member States are thus have considerable freedom in fashioning civil liability rules.

After extensive policy debate, the UK introduced an explicit liability regime (in Sch.10A to the FSMA) but for issuers only and only for intentional or reckless statements. The statutory liability applies to information notified or communicated to the market by issuers through a PIP[113] or other recognised communication service.[114] It thus embraces communications to the market by issuers of information communicated to them by PDMR or major vote-holders and to the market-moving episodic disclosures required by MAR as well as to the issuer disclosures required by the TD. However, the issuer is unlikely to attract liability if it accurately passes on the information communicated to it, unless it is aware of the inaccuracy of the information it received. The main focus of the debate was in relation to communications where the issuer is both the generator and communicator of the information, i.e. in relation to periodic and episodic disclosures by the issuer.

26–26

It is a controversial issue whether compensation should be available to investors in relation to misleading periodic or episodic statements put out by companies. Until 2006, FSMA 2000 made no specific provision for compensation to be available directly to investors as a result of misleading statements or non-disclosure to the market—in contrast to the extensive statutory liabilities created in the case of misstatements in prospectuses.[115] It was possible to bring an action in the common law of deceit, but the requirements for that head of tortious liability are particularly demanding, notably the requirements for knowledge of the falsity of the statement or recklessness as to its truth on the part of the maker of the statement, for reliance on the statement by the claimant and that the defendant should have intended the claimant to rely on the statement. An action in common law negligence for purely economic loss reduces the first and third requirements, but

brings with it an additional high hurdle for liability, namely, that the defendant should have assumed responsibility to the claimant for taking care in relation to the truth of the statement.[116] Thus, actions for compensation by investors who had taken investment decisions on the basis of false statements to the market were extremely rare.[117]

By and large, government was content with this situation, and it moved to legislate only in the light of art.7 of the TD, which was thought capable of undermining the "assumption of responsibility" requirement in the domestic law of negligence. After enacting a stop-gap measure in 2006, a more considered solution was put in place as from October 2010.[118] The purpose of the new regime was slightly to relax the requirements for liability in fraud (for fear that the domestic remedies would not otherwise meet the EU requirement for "effectiveness"), whilst confirming the virtual absence of a role for negligence liability in this area.[119] The new statutory scheme applies to statements made on multi-lateral trading facilities as well as regulated markets and covers statements required by MAR as well as the TD.[120] The aim was to put in place a comprehensive statutory regime for misstatements to the market.

As far as liability on the part of the company for knowing or reckless misstatements is concerned, it is enough under the statutory scheme that the claimant's reliance on the statement was reasonable.[121] It does not matter whether the company intended to induce reliance. Furthermore, the scheme imposes liability for dishonest delay in making a required announcement, even though at common law failure to speak would not normally trigger liability.[122] The other requirements for the common law of deceit are, however, maintained under the statutory scheme.[123] In principle, the issuer is liable for misleading statements to the market only under the special statutory regime, whilst any other person (e.g. a PDMR who was responsible within the company for the statement) is relieved of all responsibility, except to the company.[124] However, certain other liabilities are preserved.[125] Liability for negligent misstatement is maintained provided there has been an assumption of responsibility on the part of the issuer or PDMR for the truth of the statement (thus preserving the common law of tort). Liability will also arise where the issuer

(or, much less likely, the PDMR) has contractually promised the truth of its statement to the claimant, where the requirements of liability under the Misrepresentation Act 2007[126] are satisfied, or where the statement falls within the prospectus liability provisions and in certain other limited cases.[127] In short, the idea is the issuer and a PDMR should not be liable in negligence to an investor unless they have promised, formally or informally, to that investor to take care in making statements.

26–27

The principal argument for excluding liability on the part of the issuer for misstatements to the market is that shifting the loss from claimant to issuer (i.e. its shareholders) has very little social utility. A generous liability rule in effect shifts the loss from a sub-set of the shareholders to the shareholders as a whole, i.e. from the investors who bought shares on the basis of a false statement to the market and were still holding the shares when the truth emerged to the shareholders as a whole.[128] A regular investor in the market is as likely, over the long term, to find itself a shareholder in the company who did not buy shares in the company whilst the misstatement was operative in the market as among those who did. That investor would rationally favour a rule which leaves the loss where it lies rather than transfers it, at considerable transaction costs (the costs of litigation), from one group of shareholders to the shareholders as a whole. This argument might be thought to apply as much to liability in fraud as to liability in negligence, and yet the statutory scheme shifts the loss in the case of fraud. One response might be that the TD does not permit Member States to remove liability completely; a more principled response might be that fraud has a corrosive effect on markets and the deterrent impact of imposing liability for fraud is useful addition to the law’s armoury against fraud.

A striking feature of the new statutory scheme is that, whilst it makes the company liable in fraud to investors, it removes liability to third parties entirely, including for fraud, from PDMR who were involved in making the false statement or were responsible for the dishonest delay.[129] At first sight this seems odd, for the argument against transferring loss does not apply if the loss is transferred from investors to PDMR, rather from investors to shareholders as a whole. Why not make the PDMR

liable for both fraudulent and negligent misstatements to the market so as to encourage them to provide accurate statements on behalf of the company? There are two arguments against negligence liability to investors on the part of PDMR in respect of misstatements to the market. First, liability might encourage the PDMR to be excessively cautious in what they say to the market and thus deprive investors of useful information.[130] Secondly, given the prevalence of insurance bought by companies to protect their directors against negligence claims,[131] liability for PDMR would again shift the loss to the shareholders as a whole, through the cost of the insurance premiums payable over the years. There is probably a stronger case for maintaining individual liability to investors in the case of fraud. The statutory scheme does impose that liability, but it lies only to the company.[132] Deterrence of misleading statements is thus to be achieved, not under the statutory compensation scheme, but, if at all, as a result of penalties imposed by the FCA, as discussed below.

Compensation via FCA action

26–28

An alternative route to compensation for investors is via FCA action on their behalf. FSMA 2000 appears to provide such a mechanism. Under ss.382 and 383 the FCA has the power to apply to the court for an order, in cases of market abuse or contravention of its rules,[133] where profits have accrued to the person in breach, or loss or other adverse consequences were suffered by other persons.[134] The order may be sought against the issuer itself or individuals, including directors of the company.[135] The court may order the person in breach to pay to the FCA such amount as it thinks just, having regard to the profits made or loss suffered. That amount is to be paid out by the FCA to such persons as the court may direct who fall within the categories of those who have suffered loss or are the persons to whom the profit is "attributable".[136] This provision is potentially important. It constitutes a form of class action for investors, with the costs paid by the FCA. However, the FCA's Enforcement Guide suggests that it will not use its powers to seek restitution whenever they are available but only when it regards their use as

more effective than alternative courses of action, open to the FCA or to the potential beneficiaries of FCA action. In particular, "instances in which the [FCA] might consider using its powers to obtain restitution for *market counterparties* are likely to be very limited."[137]

Were the FCA to use its restitution powers in this area, the court would be faced with two difficult questions: how much should be paid and to whom should it go? Depriving the issuer of the profit made may be uncontroversial, but losses may have been suffered on a wide scale in the market which go far beyond the profit made. For example, where a company makes an inaccurate statement to the market which moves the market price upwards, but the price later falls when the truth emerges, losses may well have been suffered by all those who bought shares in the market after the statement and still held them at its correction. Making the company or individuals provide compensation for all those losses might be disproportionate to the wrong involved. As to who should share in the restitution, here the difficulties are the other way around. Those who have suffered loss should presumably share in the pay-out, but where there are no losses but only profits made, to whom are those profits "attributable"? If all those who traded in the market at the relevant time, whether with the defendant or not, share in the profits, then the share of any individual beneficiary will be limited, thus reducing the FCA's incentives to make use of the procedure in the first place.

The above powers to seek restitution extend to the situation where the defendant has committed the criminal offence of making an intentionally or recklessly misleading statement considered below.[138] If such conduct leads to an actual conviction, a further avenue to compensation may be opened up, namely compensation orders made under the general criminal law provisions.[139]

The Act also gives the FCA power to seek injunctions from the courts in respect of apprehended or repeated violation of its requirements.[140]

Administrative penalties for breaches

26–29

The TD and the MAR are more prescriptive in relation to administrative sanctions for breaches of their provisions, though not to an extent which adds significantly to the sanctions already developed domestically. The original TD required competent national authorities to have certain essentially investigative powers,[141] but the amending Directive added requirements as to sanctions. These relate to all breaches of the TD, not just the periodic disclosure requirements, and by all persons, not just issuers, but the required penalties are of an administrative nature.[142] The general principle underlying the extended sanctioning powers is now expressed as follows:

> "Member States shall lay down rules on administrative measures and sanctions applicable to breaches of the national provisions adopted in transposition of this Directive and shall take all measures necessary to ensure that they are implemented. Those administrative measures and sanctions shall be effective, proportionate and dissuasive."[143]

MAR follows a similar approach. "Member States shall, in accordance with national law, provide for competent authorities to have the power to take [sic] appropriate administrative sanctions and other administrative measures",[144] though it goes into considerable detail about the required minimum. It should be noticed that, even though MAR is a Regulation, this part of it requires transposition by the Member States because it is addressed to them.

26–30

The rules and procedures governing the imposition of penalties and the FCA's investigatory powers[145] have been described in the previous chapter in relation to breaches of LR and PR.[146] The FCA's powers are further discussed in Ch.30 on market abuse. In this chapter we note only those provisions which are particularly relevant to misstatements to the market.

First, where the issuer or a PDMR has contravened the FCA's transparency and disclosure rules, they are liable to the imposition of penalties[147] or to public censure by the FCA.[148] Moreover, even where the breach is the issuer's alone, directors may be penalised where they were knowingly concerned in the contravention by the issuer.[149] Thus, directors and PDMR are more exposed to liability under the administrative regime than they are under the rules on compensation.[150]

Secondly, the standard for liability is lower for breaches of the FCA rules than under the "intention or recklessness" standard for compensation under Sch.10A. Breach of the rules might involve the company not disclosing on time or disclosing on time but inaccurately or incompletely (or, of course, both). Whereas complete non-disclosure seems to be subject to strict liability under the FCA's rules, in relation to inaccurate or partial disclosure the standard is one of negligence:

> "An issuer must take all reasonable care to ensure that any information it notifies to [the market] is not misleading, false or deceptive and does not omit anything likely to affect the import of the information."[151]

The FCA makes relatively light use of its penalty-imposing powers.[152] However, it has used them to pick up egregious cases of misleading statements to the market[153] or of failure to disclose market-moving information.[154]

26–31

Thirdly, in relation to breaches of the major vote-holding disclosure obligation, the 2013 amendments to the TD introduced an additional sanction not previously available to the FCA. This is the sanction of suspension of the voting rights attached to the shares whose beneficial ownership has not been revealed.[155] As we shall see in Ch.28, a similar, in fact somewhat broader, power exists under domestic law in relation to non-disclosure under the company-triggered provisions there discussed. In relation to major vote-holding disclosure, the FCA now has power to apply to the court (High Court or Court of Session) for a suspension of voting rights, which the court may impose in the case of a "serious" breach of the disclosure provisions.[156]

Fourthly, the TD applies only to companies with securities admitted to trading on a regulated market, for example, the Main Market of the LSE.[157] The same was true of the Market Abuse Directive, repealed by MAR. However, the AIM rules impose similar disclosure obligations in relation to market-moving information (episodic disclosures) and a negligence standard of care in relation to the disclosure, but enforcement of that obligation is a matter for the LSE, as the market operator, rather than the FCA.[158] The implementation of MAR will change this:

the disclosure rules of MAR will apply directly to AIM-listed companies, thus displacing the AIM rules, and enforcement will move to the FCA.

Fifthly, we have discussed MAR in this chapter because it contains specific disclosure rules, notably in relation to market-moving information. However, quite apart from the specific disclosure requirements, supplying misleading information to the market may constitute conduct which amounts to breach of the substantive market abuse provisions of MAR (discussed more fully in Ch.30). The definition of market abuse includes "disseminating information…which gives, or is likely to give, false or misleading signals as to the…price of a financial instrument".[159] This reflects the prior substantive law on market abuse, which, in contrast to the disclosure requirements, the UK had applied to AIM as well as to regulated markets.[160] Thus, AIM securities were covered by the substantive market abuse rules, but not by the MAD disclosure rules. A striking example of the operation of the substantive market abuse provisions can be seen in the fine of £17 million imposed by the then FSA on Shell in August 2004 in relation to misstatements made to the market over a number of years about the extent of its oil and gas reserves.[161]

Criminal sanctions

26–32

In extreme cases non-disclosure or inaccurate disclosure might also constitute the offence now contained in s.89 of the Financial Services Act 2012. Breaches may be prosecuted by the FCA.[162] This offence can be traced back to s.12 of the Prevention of Fraud (Investments) Act 1939 and consists of making a statement knowing it to be false or misleading or reckless whether it is so, or dishonestly concealing material facts. The statement or concealment must be for the purpose, among others, of inducing someone[163] (or reckless whether it may induce someone) to deal in securities (whether as principal or agent).[164] The section is a useful weapon in the prosecutor's armoury since only recklessness (not intent) needs to be established.[165] However, the misleading disclosure must be made for the required purpose: the fact that a recipient of the statement makes

an investment decision on the basis of a statement which its maker knows to be false would not be enough to secure a conviction. Conviction on indictment may lead to a sentence of imprisonment of up to seven years.[166] All the ingredients for criminal liability were found in *R. v Bailey and Rigby*,[167] where the chief executive and chief financial officers of a company were convicted of issuing a misleading trading statement[168] which caused its share price to rise and investors to purchase its shares when the contracts on which the trading statement had been based had not been concluded and in fact never were. The basis of the conviction was recklessness, both as to the truth of the statement and as to whether investors would rely on it. When the truth emerged the share price fell to one-fifth and then one-tenth of its pre-correction level.

Conclusion

26–33

There is more than one way in which the efficient functioning of the market is promoted by the requirements discussed in this chapter. The reduction of insider trading opportunities is promoted by rules requiring price-sensitive information about the company to be made public or revealing directors' trading in the shares of their companies. However, continuous disclosure of information about companies also helps the accuracy of the price-formation process in securities markets, whilst information about directors' holdings helps shareholders assess the financial incentives to which the management is subject—and perhaps reveals information about the company's prospects. Thus, both market efficiency and corporate governance objectives are promoted by the disclosure requirements. The vote-holder disclosure rules address a different need of investors: to know who is in a position to control the company or, perhaps more importantly, who may be building up a stake in the company as a prelude to effecting a change in the current control position. As so often in company law, the substance of the legal requirement may be the modest one of disclosure, but the underlying objectives, which the disclosure requirements are aimed to promote—it is unclear how effectively—are fundamental.

---

[1] See para.25–3.

[2] See para.25–21.

[3] The “semi-strong” version of the efficient capital market hypothesis states that all publicly available information about the company is immediately incorporated into market prices. The ongoing mandatory disclosure rules are a crucial mechanism whereby corporate information becomes public. See R. Gilson and R. Kraakman, “The Mechanisms of Market Efficiency” (1984) 70 Virginia L.R. 549, and see later by the same authors on the same topic: (2003) 28 Journal of Corporation Law 215 and (2014) 100 Virginia L.R. 313.

[4] But we shall not deal in any detail with companies incorporated in other EEA States or outside the EU whose securities are traded on a London market or with UK-incorporated companies whose sole or primary listing is outside the UK.

[5] Directive 2004/109/EC ([2004] O.J. L390/38), as amended, notably by Directive 2013/50/EU ([2013] O.J. L294/13). The necessary changes to the FSMA 2000 were made by the Transparency Regulations 2015/1755.

[6] Regulation (EU) No.596/2014 ([2014] O.J. L173/1), in effect in part from July 2016 and in part from January 2017. The non-disclosure aspects of this Regulation are discussed in Ch.30.

[7] See para.25–10.

[8] One impact of this change is that the FCA loses its power to make Disclosure Rules (though it may provide guidance) so that “DTR” will come to stand for “Disclosure Guidance and Transparency Rules” rather than, as previously, “Disclosure and Transparency Rules”.

[9] “Quoted companies” are those officially listed in any EEA State or admitted to trading on the New York Stock Exchange or Nasdaq: CA 2006 s.385.

[10] The provisions discussed in this section normally apply whether the traded securities are equity or debt instruments.

[11] For the meaning of a “regulated market” see para.25–8. In the case of shares, the term can be equated in the UK, with some degree of inaccuracy, with the Main Market of the LSE. The Alternative Investment Market (“AIM”) is not a regulated market, but the LSE’s own rules for that market require half-yearly statements (but not quarterly reports): LSE, *AIM Rules for Companies*, 2014 r.18.

[12] The CA contains some rules specific to quoted companies, for example, the requirement for website publication: s.430.

[13] DTR 4.1.3. Some statutory material is repeated in the DTR in order to make it applicable to companies not incorporated in the UK but which have their securities traded on a regulated market in the UK.

[14] See para.21–29.

[15] DTR 4.1.12.

[16] TD art.5(4). The FRC has produced guidance on the review of interim statements.

[17] TD art.5(2). Some detail about what is required in the half-yearly accounts and reports is set out in Commission Directive 2007/14/EC ([2007] O.J. L69/27) art.3. The transposing domestic legislation is in DTR 4.2.

[18] Original art. 6.

[19] The UK might have chosen to retain the requirement as a domestic rule but in fact opted not to do so.

[20] See para.21–32.

[21] MAR art.2. The domestic provisions on insider trading, however, have always applied to public, not just regulated, markets. For the meaning of MTF and regulated market see para.25–8.

[22] MAR art.7.

[23] In addition to the fact of delay art.17(4) states that the national competent authority must require the notification to be accompanied by an explanation of how the conditions set out in the text are met or require the issuer to provide the explanation upon request of the regulator. The UK seems likely to take the second option: FCA, *Policy proposals and Handbook changes related to the implementation of the Market Abuse Regulation*, November 2015, 2.8. The definition of the relevant competent authority is likely to give somewhat greater role to the authority of the state in which the securities are traded than under the PD (see para.25–44). Unless the issuer has securities traded in the state of registration, the competent authority will be (one of the) the states where trading occurs even if that is different from the state of registration: ESMA, *Technical advice on possible delegated acts concerning the Market Abuse Regulation: Final Report*, 2015, §4.

[24] MAR art.17(4). Where confidentiality has been breached, the withheld information must be disclosed as soon as possible, including in some cases of market rumours relating to the information: 17(7).

[25] Following the prior CJEU decision in Case C-19/11 *Geltl v Daimler AG*, decision of 28 June 2012.

[26] ESMA, *Draft guidelines on the Market Abuse Regulation*, Consultation Paper, January 2016. This follows the guidance issued under the pre-MAR law.

[27] The third category is the most controversial since inside information, if it is to move the market, will necessarily alter the market's expectations, so much depends on what is understood by "signals from the issuer".

[28] MAR art.17(5)(6).

[29] The strongest case in point was the run on the Northern Rock Building Society in 2007, when it appeared that the immediate cause of the run was the required disclosure by Northern Rock that it had approached the Bank of England for liquidity support, after it was no longer able to fund itself in the inter-bank market, even though, logically, the provision of the Bank support increased the Rock's stability. See HM Treasury, *Financial Stability and Depositor Protection*, Cm 7308, January 2008, paras 3.41 and 3.43. Article 17(5) does not in terms appear limited to liquidity problems, though that is the only example of a threat to financial stability which it gives.

[30] MAR art.17(1).

[31] DTR 6.3.4. "Regulated information" is any information required to be disclosed under art.6 of MAD, the TD, the LR or the DTR (FSA Handbook, Glossary). There must also be a central storage system for regulated information: TD art.21; FSMA s.89W.

[32] SMEs whose securities are traded on a SME growth market need draw up a list only if requested by the regulator to do so (art.18(6)).

[33] ESMA, *Final Report: Draft technical standards on the Market Abuse Regulation*,

2015, §8 and Annex XIII.

[34] For the meaning of this term see para.25–5.

[35] Directive 2003/6/EC ([2003] O.J. L96/16).

[36] Or rather the FSA, as it then was.

[37] At the time of writing the Commission and domestic rules required to fully implement the Regulation exist only in draft form.

[38] Above, para.26–5. So, it will apply to companies traded on AIM, which, however, already imposed a disclosure obligation in respect of directors' dealings: *Aim Rules for Companies*, 2014, r.17 and Sch.5.

[39] Board of Trade, *Report of the Committee on Company Law Amendment*, Cmd. 6659, June 1945, para.87.

[40] See Ch.30, below.

[41] Law Commission and Scottish Law Commission, *Company Directors: Regulating Conflicts of Interest and Formulating a Statement of Duties: A Joint Consultation Paper* (1998), para.5.2.

[42] MAR art.3(1)(25).

[43] Companies Act 1985 s.324(6). However, a de facto director is probably within the definition.

[44] MAR art.3(1)(26); or, the definition Delphically adds, "the economic interests of which are substantially equivalent to those of such a person".

[45] Regulation art.19(5).

[46] Companies Act 1985 s.324(1). A director of a parent company may well be able to influence what a subsidiary does, even though s/he is not an executive of the subsidiary. However, unless the subsidiary's shares are publicly traded, the point is not important.

[47] Regulation art.19(14).

[48] Above fn.23, 5.2.

[49] See para.26–23.

[50] Regulation art.19(8). National competent authorities may raise the threshold to €20,000, but the FCA does not propose to do so: FCA, above fn.23, 2.16.

[51] Regulation art.19(1).

[52] Regulation art.19(2), assuming the company is registered in the EEA.

[53] Regulation art.19(6)(g).

[54] Regulation art.19(2)(3).

[55] Above para.26–8.

[56] See para.24–22.

[57] See above, at paras 21–37 et seq.

[58] See Ch.27, below.

[59] We have discussed in Ch.15, above, the problems which this causes in relation to shareholders' governance rights.

[60] Department of Trade, *Disclosure of Interests in Shares* (1980), p.2.

[61] Report of the Committee on Company Law Amendment, Cmd. 6659 (1945), pp.39–45. It is to be noted that the domestic legislation has still not been lowered to the one per cent threshold recommended by that Committee.

[62] Its first Directive on disclosure of major shareholdings was Directive 88/627/EEC, [1988] O.J. L348/62 (17 December 1988), later consolidated into Directive 2001/34/EC, arts 89–97.

[63] Chapter III, as amended. The fact that the major shareholding rules are in the TD and not MAR perhaps shows that insider trading is the lesser rationale for the required disclosure.

[64] See especially the preamble to the TD.

[65] DTI, *Proposals for Reform of Part VI of the Companies Act 1985* (April 1995). The CLR touched only lightly on this topic, largely endorsing the 1995 proposals: Completing, para.7.32.

[66] Companies Act 2006 s.1266, introducing new FSMA 2000 s.89A–G.

[67] By Directive 2013/50/EU. This directive required relatively little in the way of substantive amendment to the UK rules. See Treasury and FCA, *Implementation of the Transparency Directive Amending Directive (2013/50/EU) and other Disclosure Rule and Transparency Rule Changes*, March 2015.

[68] Companies Act 1985 s.198.

[69] TD art.2(1)(d).

[70] FSMA 2000 s.89A(1),(3)(a); DTR 5.1.1(3); Glossary, *Issuer* (2B); Financial Services and Markets Act 2000 (Prescribed Markets and Qualifying Investments) Order 2001 (SI 2001/996) art.4. For the distinction between "regulated" and "prescribed" markets see para.25–8.

[71] See para.19–25.

[72] DTR 5.1.1(3).

[73] DTR 5.1.2.

[74] TD art.9(1), which has triggers only at 5, 10, 15, 20, 25, 30, 50 and 75 per cent. Only these triggers are used by the British law in relation to non-UK incorporated companies on a regulated market for which the UK is nevertheless the Home State.

[75] DTR 5.8.3. This applies to UK incorporated companies only; for non-UK companies the rule is the Directive minimum "four-day" rule (i.e. the end of the fourth trading day following—art.12(2)).

[76] DTR 5.8.3, following art.12(2) of the TD.

[77] DTR 5.8.3, 5.1.2(2), 5.6, following TD arts 12(2), 9(2) and 15.

[78] Article 10 of the TD is "copied out" in DTR 5.2.1.

[79] TD art.10(e). See the example given above.

[80] FSA, *Handbook, Glossary*; FSMA 2000 s.420.

[81] TD art.10(g).

[82] DTR 5.1.3(3).

[83] TD art.10(f).

[84] TD art.10(h).

[85] See above at para.15–31.

[86] These provisos are fleshed out in Commission Directive 2007/14/EC art.10. Both art.12 of TD and art.10 of the implementing Directive are transposed in DTR 5.4.

[87] Directive art.10(a). The requirement for a "lasting common policy" means that this disclosure rule will not apply to temporary coalitions of shareholders designed to bring about specific changes in the running of the company.

[88] See para.28–44. "Acting in concert" is defined in the Code so as to include "understandings" as well as agreements and the Code contains an extensive list of "presumed" cases of acting in concert (see *The Takeover Code*, C1). On the other hand, the Code only applies where the common policy towards the company is to obtain or consolidate control of it.

[89] Directive art.10(b).

[90] See above at para.15–81.

[91] See ESMA, *Indicative list of financial instruments that are subject to notification requirements according to Article 13(1b) of the revised Transparency Directive*, December 2015. The ESMA list is produced under the provisions of art.13(1)(b).

[92] However, options to subscribe to new shares to be issued by the company appear to be excluded from art.13(1), though actual acquisition would need to be notified (subject to the thresholds).

[93] Commission Directive 2007/14/EC art.11(1), containing "second level" implementing rules.

[94] ESMA, *Consultation Paper on Draft Regulatory Technical Standards on major shareholdings and indicative list of financial instruments subject to notification requirements under the revised Transparency Directive*, 2014, para.178.

[95] At para.28–45.

[96] If the investment bank has to pay the CfD holder any increase in the value of the share, the holder can be said to have a "long" position and the bank can protect itself by buying the underlying share; if the bank has to pay the holder the decrease in the value of the share, the holder can be said to have a "short" position, but purchasing the underlying share does not protect the bank in that case. It must hedge its exposure in some other way.

[97] FSA, *Disclosure of Contracts for Difference*, CP 07/20, November 2007, para.1.24.

[98] DTR 5.3.3(2). For its earlier preference see previous note at paras 1.28 and 5.32–5.34.

[99] ESMA, *Final Report on draft Regulatory Technical Standards on major shareholdings and an indicative list of financial instruments subject to notification requirements under the revised Transparency Directive*, 2014, Part IV. This involved

minor changes to ss.89A, 89C and 89F of FSMA. The interests falling within art.13 must be aggregated with those falling within arts 9 and 10 for the purpose of calculating thresholds (art.13a).

[100] See para.26–19, above.

[101] Directive art.9(4); DTR 5.1.3(1). On clearing and settlement see para.27–2. This is a limited exemption since it applies only to acquisitions made for the sole purpose of settlement and is limited to acquisitions made during the three trading days following the striking of the bargain to which it relates.

[102] Directive art.9(5); DTR 5.1.3(3) and 5.1.4.

[103] Directive art.9(6) (as amended); DTR 5.1.3(4). This exemption will normally permit the bank party to the CfD (see above, para.26–22) which buys the underlying shares as a hedge not to disclose its holding of the shares. The FCA had previously included a free-standing "client-serving intermediary" exception, not subject to a cap, but art.13(2) makes no mention of it and so it was deleted in the post-amendment UK reforms.

[104] Directive art.9(6a); DTR 5.1.3(7). On stabilisation see para.30–45, below.

[105] DTR 5.8.1.

[106] DTR 5.8.2. For some types of CfDs calculating the number of shares the counterparty would buy for hedging purposes may not be straightforward and may involve an excursion into option pricing. See art.13(1a) and Commission Regulation (EU) 2015/761 art.5.

[107] DTR 5.8.12 (the period for prescribed markets is that required by the TD art.12(6)).

[108] Directive arts 21, 21a, 22.

[109] There is, however, some overlap. See para.26–28, below.

[110] Whether buyers or sellers would sue would depend on the direction of the price movement had the information been disclosed.

[111] There are also issues of causation here. If I buy at an artificially high price (because the issuer has concealed adverse information) but sell before the truth emerges, I have suffered no loss. If I sell at an artificially low price (because the issuer has concealed positive information), it can be argued that I have suffered a loss only if the price was the main motivation for my sale (rather than some personal financial emergency).

[112] TD art.7.

[113] Above para.26–6 and FSMA s.89P.

[114] 2006 Act Sch.10A para.2.

[115] See paras 25–32 et seq.; and, at least at first instance, the courts refused to find a breach of statutory duty on the basis of FSMA's disclosure rules: *Hall v Cable and Wireless Plc* [2010] 1 B.C.L.C. 95.

[116] *Caparo Industries Plc v Dickman* [1990] 2 A.C. 605. See para.22–36.

[117] The pre-2006 position is described in HM Treasury, *Davies Review of Issuer Liability: Discussion Paper*, March 2007.

[118] 2006 Act s.90A and Sch.10A.

[119] See HM Treasury, *Davies Review of Issuer Liability, Final Report* (June 2007).

[120] 2006 Act Sch.10A paras 1 and 2.

[121] 2006 Act Sch.10A para.3(4)(b).

[122] Unless the failure to speak rendered a previous statement misleading. The statutory provision is in para.5. It was a controversial decision to impose liability for delay, but, since liability is confined to dishonest delay, defined narrowly (para.6), it is unlikely to be widespread.

[123] For the purpose of the issuer's liability the attribution rule (see para.7–2) used is whether "a person discharging managerial responsibilities" within the company knew of the falsehood, was reckless as to its truth or was dishonest as to the concealment (paras 3(2) and 8(5)).

[124] 2006 Act Sch.10A para.7(1)(2).

[125] 2006 Act Sch.10A para.7(3).

[126] See para.25–37.

[127] 2006 Act Sch.10A paras 7(1) and (3).

[128] If the investor disposes of the shares before the truth emerges, then of course no loss is suffered by that investor. See *Hall v Cable and Wireless Plc* [2010] 1 B.C.L.C. 95 at [43]–[46]. This argument assumes the typical situation, i.e. that the company's statement was falsely optimistic.

[129] 2006 Act Sch.10A para.7(2). Of course, individuals will be liable if they have assumed responsibility to the claimant for the truth of their statement or contractually bound themselves in that respect.

[130] See the similar argument developed in para.21–27.

[131] See para.16–129.

[132] For these arguments in greater detail see P. Davies, "Liability for Misstatements to the Market: Some Reflections" (2009) 9 J.C.L.S. 295; and for comment Ferran, ibid., 315.

[133] FSMA 2000 s.382 applies to breaches of the FCA's rules or a "qualifying EU provision" (s.382(9)(a)) and s.383 to market abuse. The powers conferred are similar as far as the company's liability for non-disclosure is concerned.

[134] FSMA 2000 s.384 empowers the FSA to make a restitution order under its own authority, but only in relation to persons authorised by it to carry on financial business, a category into which neither issuer nor director is likely to fall.

[135] In respect of directors, liability for breach of the FCA's rules is imposed on a person "knowingly concerned" in the company's contravention (s.382(1)), whereas for market abuse the liability is on the basis that a person "has required or encouraged" another person [the company] to engage in behaviour which, if engaged in by the person would amount to market abuse (s.383(1)(b)).

[136] FSMA 2000 ss.382(3),(8), 383(5),(10).

[137] FCA, *Enforcement Guide* (EG) 11.2.

[138] See below, para.26–32.

[139] See *R. v Rigby and Bailey* [2006] 1 W.L.R. 3067 (though the FSA's attempted use of

general confiscation powers was unsuccessful). Some £200,000 was paid to Morley Fund Management and £120,000 to Standard Life.

[140] FSMA 2000 ss.380 and 381.

[141] TD art.24.

[142] New TD arts 28–28b.

[143] TD art.28(1), but there is a list of more specific requirements for the core obligations under the TD (arts 28a and 28b).

[144] TD art.30(1).

[145] Under s.97.

[146] See above, para.25–43.

[147] Both the TD (art.28(1)(c)) and MAR (art.30(2)(i)(j)) lay down substantial maximum penalties, whose purpose seems to be, not to protect infringers, but to ensure that competent authorities have sufficiently deterring penalty powers available to them.

[148] FSMA 2000 s.91(1ZA),(1B),(3). The implementation of MAR will require the Disclosure Rules to be replaced with Disclosure Guidance (above fn.8) but it assumed that the FCA's penalty-imposing powers will be amended so as to refer to breaches of MAR. However, this has not been done at the time of writing.

[149] FSMA s.91(2A)(2B).

[150] The civil penalty liability is expressly preserved in Sch.10A para.10(3)(b).

[151] DTR 1.3.4 and 1A.3.2. Again with the change from disclosure rules to disclosure guidance, the latter obligation will need to be reformulated. See FCA above fn.[44], 4.100.

[152] See HM Treasury, *Davies Review of Issuer Liability: Discussion Paper*, March 2007, Table 1: nine cases over four years, including the cases on breach of s.397, discussed below. The FCA increased its enforcement activity after the financial crisis and adopted a much stronger approach to the size of penalties (see FCA, *Decision Procedures and Penalties Manual*, Pt 6).

[153] For example, FSA, *Cattles Ltd*, Final Notice, March 2012 (and its directors) for misleading statements in the annual report, penalties imposed on directors but not on the company because of its parlous financial state.

[154] For example, FSA, *Entertainment Rights Plc*, January 2009, delay of 78 days, fine of £224,000 on the company; FSA, *Photo-Me International Plc*, Final Notice, June 2010, delay of 44 days, fine of £500,000.

[155] TD art.28b(2). This is most likely to happen where an intermediary states that it is holding the shares on behalf of another person but refuses to reveal the identity of that other person, possibly because the laws of the jurisdiction in which the intermediary is situated prohibit disclosure without the consent of the other person.

[156] FSMA s.89NA. The criteria for assessing seriousness are set out in subs.(4).

[157] DTR 1.1.1.

[158] *AIM Rules for Companies*, February 2014, rr.10, 11 and 42; and *AIM Rules for Nominated Advisers*, February 2014, r.17.

[159] MAR art.12(1)(c).

[160] FSMA 2000 s.118(1); Financial Services and Markets Act 2000 (Prescribed Markets and Qualifying Investments) Order 2001 (SI 2001/996) reg.4.

[161] In the *Shell* case (FSA, Final Notice, 24 August 2004, *The "Shell" Transport and Trading Company Plc and The Royal Dutch Petroleum Company NV*) that company was fined for misleading disclosures to the market on the basis that its actions constituted market abuse, the DTR not being in force at the relevant time. Clearly Shell is a listed company but the analysis would seem equally applicable to an AIM company.

[162] FSMA s.401 (except in Scotland).

[163] The person thus persuaded to act need not be the same person as the one to whom the statement is made: s.89(2).

[164] FSA 2012 s.89(2) and the Financial Services Act 2012 (Misleading Statements and Impressions) Order 2013/637 art.2.

[165] Where the statement is true, but designed to create a false or misleading impression, it may fall within s.90 of FSA 2012. This section is discussed in Ch.30.

[166] FSA 2012 s.92.

[167] *R. v Bailey and Rigby* [2006] 2 Cr. App. R.(S.) 36. Although custodial sentences were upheld, the CA reduced them from three-and-a-half years to 18 months and from two-and-a-half years to nine months. The case was decided on an earlier version of the prohibition.

[168] A statement updating the market on the company's trading performance.

CHAPTER 27

TRANSFERS OF SHARES

Certificated and Uncertificated Shares 27–3
Transfers of Certificated Shares 27–5
  Legal ownership 27–5
  Estoppel 27–6
  Restrictions on transferability 27–7
  The positions of transferor and transferee prior to registration 27–8
  Priorities between competing transferees 27–10
  The company's lien 27–11
Transfers of Uncertificated Shares 27–12
  Title to uncertificated shares and the protection of transferees 27–14
The Register 27–16
  Rectification 27–19
Transmission of Shares by Operation of Law 27–21

27–1

Once shares have been issued by the company, it is only infrequently that the company will buy them back. Moreover, this cannot happen without the company's consent, either at the time the shares were issued (as with shares which are issued as redeemable at the option of the shareholder)[1] or at the time of re-acquisition (as in the case of shares redeemable at the option of the company or a re-purchase of shares).[2] In any event, the re-acquisition cannot occur unless the rules on capital maintenance, imposed for the benefit of creditors, are observed.[3] Although companies occasionally use surplus cash to re-purchase shares rather than to pay a dividend, a shareholder who wishes to realise his or her investment in the company will normally have to find, or wait for, another investor who will purchase the shares and take the shareholder's place in the company. This is precisely the reason why a company which secures the admission of its shares to a public market is likely to find it easier to persuade investors to buy the shares in the first place.

Although the above principle is true of all types of company, there is a major difference between companies with large and fluctuating bodies of shareholders whose shares are traded on a

public exchange ("listed" companies) and companies with small bodies of shareholders whose composition is expected to be stable and where the allocation of shares is as much about the allocation of control in the company as it is about its financing ("non-listed" companies). In the former case, the law or the rules of the exchange will require the shares to be freely tradable as far as the issuer is concerned,[4] so that except in a few cases the transfer of the shares will be simply a matter between the existing shareholder and the potential investor. Free transferability tends to be taken for granted in listed companies, but it does become controversial when what is proposed is the wholesale transfer of the shares to a single person, in the shape of a takeover bidder, because in that situation, even in an open company, the transfer of the shares has clear implications for the control of the company. We shall examine takeovers in the following chapter.

In non-listed companies, by contrast, even the transfer of shares by a single shareholder may have implications for the control of the company and often also for its management, since a shareholding in such a company may be perceived as giving rise to a formal or informal entitlement to membership of the board of directors and participation in the management of the company.[5] In those companies, therefore, it is common for the articles of association to contain some restrictions on the transferability of the shares, perhaps by making transfers subject to the permission of the board or requiring the shares to be offered initially to the other shareholders before they can be sold outside the existing shareholder body. The latter obligation is normally referred to as giving the other shareholders pre-emption rights, but these are pre-emption rights arising on transfer and are to be distinguished from pre-emption rights arising on issuance, which are discussed in Ch.24. The latter bind the company; the former the selling shareholder.

27–2

Share transfers involve a two-step process. In the first step the buyer and the seller conclude a sales contract where they agree on the price which the shares are sold for and on other terms of the transaction. Bankers sometimes refer to this first step as "trading". In the second step the transfer is carried out. At the

end of the second step the buyer becomes the owner of the shares that formed part of the sales transaction. This second step is sometimes referred to as “settlement”. Settlement is a process which in itself consists of two or more stages depending on whether certificated or uncertificated shares are sold.

When shares in private companies and non-listed public companies are sold the buyer and the seller frequently know each other’s identity and are often personally involved in negotiating the terms of the transaction. Sales transactions are completed by way of delivery of certain transfer documents from the seller to the buyer and by way of registering the buyer’s name on the shareholder register.

When listed shares are sold, the transaction is frequently more standardised. In most cases, the seller does not go out to find a buyer him- or herself, but enlists the services of a broker who sells the shares for him or her. The broker does this either through the electronic trading system operated by a stock exchange or by making a contract with another financial services provider directly. In both cases buyer and seller rarely know each other’s identity. After the contract has been concluded, the buyer’s name is also entered on the shareholder register, but this settlement process is carried out electronically through a settlement system known as CREST.

In this chapter we will focus on the second step of the transfer process, the completion of the sales transaction. We shall examine the difference between certificated and uncertificated shares, transfers of certificated and transfers of uncertificated shares as well as the rules governing the shareholder register and transmission of shares by operation of law. We shall first address the difference between uncertificated and certificated shares.

Certificated and Uncertificated Shares

27–3

In the UK, shares are predominantly issued in registered form. Companies issuing registered shares keep a register of the names of their shareholders. Until 1996 all registered shares were issued in what is now called the “certificated form”. This means that, in addition to having his or her name noted on the

shareholder register, every shareholder receives a paper certificate evidencing his or her shareholding. When shares are transferred the seller completes and signs a transfer form and delivers this together with the share certificate to the buyer. The buyer then lodges the certificate with the company to have his or her name entered on its shareholder register.

This paper-based transfer process still applies to non-listed shares. These are shares in private companies and shares in public companies which are not listed on the London Stock Exchange (“LSE”).

Until 1996 listed shares were also transferred by means of paper documents. The LSE operated a transfer system entitled TALISMAN. Under the TALISMAN regime, the LSE received transfer forms and share certificates from buyers and ensured that the sellers’ names would be registered on the shareholder register. There was a gap of two to three weeks between trading and settlement. If shares were sold in the meantime, TALISMAN would keep track of that transaction and arrange for the name of the ultimate buyer to be registered.

In the years leading up to the introduction of CREST in 1996, the UK privatised a large number of previously state-owned enterprises. The number of listed shares and with that the number of share transactions increased significantly. When share prices fell sharply on 19 October 1987, trading volumes soared and substantial delays in settlement occurred. Delays in settlement pose a significant risk to a share market. The longer the delay between trading and settlement the greater the risk that parties suffer loss by transactions not completing successfully. In many cases, the law will provide remedies if the transaction comes to a halt part way through, but the enforcement of those rights will be expensive and in some cases, for example, in the insolvency of an involved party, the rights may not have any value.

27–4

In the discussion following the 1987 market crash, it became apparent that the paper-based transfer process was unable to cope with large volumes of share transactions. It was decided that paper transfers should be phased out for listed shares and

that a new electronic share transfer system should be introduced. This process of replacing paper with electronic shares transfers is referred to as dematerialisation. Listed shares were dematerialised in the UK in 1996 when the CREST system went live. Since then, all UK shares listed on the LSE must be compatible with electronic settlement.[6] CREST operates on the basis of ss.784–790 of the 2006 Act and of the Uncertificated Securities Regulations 2001 (USR 2001).[7] These Regulations have termed electronic shares as uncertificated shares and paper shares as certificated shares.[8]

The introduction of uncertificated shares requires the consent of a number of parties. CRESTCo, as the operator of the electronic system, must agree to admit the securities of the company in question to the system, though it clearly has a strong commercial incentive to do so, if the shares are heavily traded. Moreover, since an operator of an electronic system of share holding and transfer requires the approval of the Treasury and that approval requires the operator's rules not to distort competition,[9] it will not be in a position to set rules which discriminate improperly among companies.

In addition, the company itself must agree to permit its securities to be held in uncertificated form. Shares or individual classes of shares are in principle admissible to the electronic system only where the holding of shares in uncertificated form and their transfer electronically is permitted by the company's constitution.[10] The standard constitution requires the company to issue shareholders with a certificate of their holding.[11] To facilitate the change-over to uncertificated shares, USR 2001 reg.16 permits such provisions in the articles to be disapplied by resolution of the directors, rather than by the normal route for altering the articles by resolution of the shareholders,[12] provided the shareholders are given prior or subsequent notice of the directors' resolution. The Regulations then provide that the shareholders by ordinary resolution may vote to overturn the directors' resolution, but, unless they do so, the articles will be modified pro tanto without the shareholders' positive approval. Thus, the Regulations encourage uncertificated shares by putting the burden of objection on the shareholders.

For the time being shareholders can opt to have uncertificated

shares converted into certificated shares. If a shareholders exercises this option conversion is recorded on the central CREST register, the company is notified, updates the register and issues the shareholders with a share certificate.[13] On July 2014 the EU adopted a Regulation requiring all securities that are transferable on a regulated market to be issued in book entry form.[14] The Regulation will come into force on 1 January 2023 by which point the UK will have to abolish the option to convert shares into certificated form for those shares who are transferable on regulated markets.[15]

Having briefly looked at the characteristics of certificated and uncertificated shares in this section, we shall examine transfers of certificated shares in the following section. After that transfers of uncertificated shares will be addressed.

Transfers of Certificated Shares

Legal ownership

27–5

To transfer certificated shares, the seller needs to complete a transfer form and deliver that form together with the share certificate to the buyer. The transfer form needs to comply either with the requirements contained in the company's constitution or with the simplified requirements put in place by the Stock Transfer Act.[16]

This, however, is not enough to make the transferee a member of the company. Neither the agreement to transfer nor the delivery of the signed transfer form and share certificate will pass legal title to the transferee (though it may pass an equitable interest in the shares to the transferee).[17] The normal rule is that a person becomes a member of a company and the legal owner of the shares when they have agreed to this and their name has been entered into the company's register of members. The company enters the transferee's name on the register of members in place of the transferor's name.[18] It is precisely this requirement which gives a closed company the opportunity to control the process of transfer of shares to new holders.

It also follows from this analysis that a share certificate is not

a negotiable instrument. Legal title does not pass by mere delivery of the certificate to the transferee but upon registration of the transferee by the company. In fact, even registration is not conclusive of the transferee's legal title. Section 127 provides that the register of members is only "prima facie evidence" of matters directed or authorised to be inserted in it and s.768 correspondingly says that a share certificate issued by the company (for example, to the transferee) is "prima facie evidence" of the transferee's title to the shares.[19] Where there is a conflict between the register and the certificate, the former is stronger prima facie evidence than the latter but neither is decisive. Ownership of the shares depends on who is entitled to be registered. Suppose, say, that A, who is registered and is entitled to be registered, loses his certificate, obtains a duplicate from the company[20] and transfers to B who is registered by the company. Subsequently A finds the original certificate and, either because he has forgotten about the sale to B or because he is a rogue, then purports to sell the shares to C. The company will rightly refuse to register C whose only remedy will be against A (who may by this time be a man-of-straw).

More importantly, suppose D loses the certificate to E, a rogue, who forges D's signature and secures entry on the register in place of D. D will nevertheless be entitled to have the register rectified[21] so as to restore D's name, because D is still the holder of the legal title to the shares and so is entitled to be entered on the register. This appears to be so, even if D's conduct has been such as to provide the opportunity for E to commit the fraud, for example because D had deposited the certificate with E.[22] Furthermore, D will be entitled to insist on rectification if, as is all too likely, E has made a further transfer of the shares to a wholly innocent third party, F, who is registered before D learns of the fraud. D may still rectify the register against F. This system of rules provides a high level of protection of D's legal rights, but is hardly conducive to the free circulation of shares.

Estoppel

27–6

However, the position of people such as F is ameliorated by the doctrine of estoppel by share certificate, which may give F a

right to an indemnity against the company, if D insists on rectification of the register. In other words, the risk of fraud (or other unauthorised transfer) falls on the company, which is perhaps defensible on the grounds that it is the company which benefits from legal rules which encourage the free circulation of shares.[23] The doctrine of estoppel by share certificate produces what has been termed "quasi-negotiability".[24]

A share certificate contains two statements on which the company knows that reliance may be placed. The first is the extent to which the shares to which it relates are paid up. The second is that the person named in it was registered as the holder of the stated number of shares. The company may be estopped from denying either statement if someone in reliance upon it has changed his position to his detriment. This may afford a transferee who, in reliance on the transferor's share certificate, has bought what he believed, wrongly, to be fully paid shares a defence if the company makes a call upon him.[25] The company will also be estopped if the transferee has relied on a false statement in his transferor's certificate that the transferor was the registered holder of the shares on the date stated in the certificate.[26] Thus, F, the transferee from the rogue, will be entitled to an indemnity from the company if the company rectifies the register in favour of D, the legal owner, because F will have relied upon the certificate issued by the company to the rogue.

However, this argument will rarely[27] benefit an original recipient of the incorrect certificate because receipt of the certificate normally marks the conclusion of the transaction and is not something which was relied on in deciding to enter into it. In the example above, E, the rogue, is the original recipient of the incorrect certificate and we need have no regrets about the weakness of E's legal position. However, suppose E, instead of transferring the shares fraudulently into his own name and then disposing of them to F, in fact, as is all too likely, short-circuited this procedure by transferring them directly to F, and the company then issued a new certificate to F. F could not claim to have relied on the new certificate when entering into the transaction which pre-dated its issue. F did rely on the certificate issued to D but E's fraud did not turn on a denial of D's

ownership of the shares but rather upon E pretending to be D. In this situation, only a transferee from F would be able to rely on the doctrine of estoppel by share certificate. Perhaps this result may be justified on the basis that D is in a better position to detect E's fraud than is the company.

Restrictions on transferability

27–7

The directors of non-listed companies are frequently empowered by the articles to refuse to register transfers or there will be provisions affording the other members or the company[28] rights of pre-emption, first refusal or even compulsory acquisition. This does not apply to listed shares because the Listing Rules require there to be no restrictions of the transfer of shares.[29]

Provisions restricting share transfers require the most careful drafting if they are to achieve their purpose; and have not always received it, thereby facing the courts with difficult questions of interpretation. The following propositions can, it is thought, be extracted from the voluminous case law:

(a) The extent of the restriction is solely a matter of construction of the company's constitution. But, since shareholders have a prima facie right to transfer to whomsoever they please, this right is not to be cut down by uncertain language or doubtful implications.[30] If, therefore, it is not clear whether a restriction applies to any transfer or only to a transfer to, say, a non-member,[31] or to any type of disposition or only to a sale[32] the narrower construction will be adopted.

(b) However, this does not help the courts much when faced with a common provision in the articles that a shareholder "desirous" or "intending" or "proposing" to transfer his or her shares to another must give notice to the company to trigger pre-emption procedures. On the one hand, the provision would be unworkable if the courts had held that as soon as a shareholder formed the relevant intention, the provision in the articles was triggered, especially as the shareholder is normally permitted to withdraw the notice, if he or she does not wish to sell to the person who comes forward to buy the shares. There must be something in addition to the required

intention. On the other hand, a shareholder who enters into an agreement with an outsider to sell the shares to that person or to give that person an option to buy them will fall within the provision in the articles, even if the outsider has not completed the agreement (and so has only an equitable interest in the shares) or has not taken up the option to purchase.[33] Drafters have spent much ingenuity on producing agreements which do not fall within the second category and have been rewarded. The courts have held that agreements do not trigger the notice provision if they transfer only the beneficial interest in the shares and entitle the transferee to be registered as the legal owner of the shares only once the pre-emption right has been removed from the articles.[34] The execution of a transfer form and its deposit with the company's auditor, however, can amount to a transfer which triggers pre-emption rights contained in the company's constitution.[35]

(c) Where the regulations confer a discretion on directors with regard to the acceptance of transfers, this discretion, like all the directors' powers, is a fiduciary one[36] to be exercised bona fide in what they consider—not what the court considers—to be in the interest of the company, and not for any collateral purpose. But the court will presume that they have acted bona fide, and the onus of proof of the contrary is on those alleging it and is not easily discharged.[37]

(d) Prior to the Companies Act 2006 it was possible for the articles of association to stipulate that the directors shall not be bound to state their reasons for not registering a transfer.[38] The Companies Act 2006 now states in s.771 that the company must provide the transferee with such further information about the reasons for the refusal as the transferee may reasonable request. This, however, does not include minutes of the meetings of directors. The CLR hopes that this will make it possible to apply the fiduciary tests and s.994 on unfair prejudice in a transparent way to such refusals.[39]

(e) If, on the true construction of the articles, the directors are entitled to reject only on certain prescribed grounds and it is proven that they have rejected on others, the court will intervene.[40] If the directors state their reasons (as they are

now obliged to do) the court will investigate them to the extent of seeing whether they have acted on the right principles and would overrule their decision if they have acted on considerations which should not have weighed with them, but not merely because the court would have come to a different conclusion.[41] If the regulations are so framed as to give the directors an unfettered discretion the court will interfere with it only on proof of bad faith.[42]

(f) If, as is normal, the regulations merely give the directors power to refuse to register, as opposed to making their passing of transfers a condition precedent to registration,[43] the transferee is entitled to be registered unless the directors resolve as a board to reject. Hence in *Moodie v Shepherd (Bookbinders) Ltd*[44] where the two directors disagreed and neither had a casting vote, the House of Lords held that registration must proceed. The directors have a reasonable time in which to come to a decision,[45] but since s.771(1) imposes an obligation on them to give to the transferee notice of rejection within two months of the lodging of the transfer, the maximum reasonable period is two months.[46]

The positions of transferor and transferee prior to registration

27–8

It may be of importance to determine the precise legal position of the transferor and transferee pending registration of the transfer which, if there are restrictions on transferability, may never occur. As we have seen, only if and when the transfer is registered will the transferor cease to be a member and shareholder and the transferee will become a member and shareholder. However, notwithstanding that registration has not occurred, the beneficial interest in the shares may have passed from the transferor to the transferee. In the case of a sale of certificated shares the transaction will normally go through three stages: (1) an agreement (which, particularly if a block of shares conferring de facto or de jure control is being sold, may be a complicated one); (2) delivery of the signed transfer form and the certificate by the seller and payment of the price by the buyer and; (3) registration of the buyer’s name on the shareholder

register.

Notwithstanding that the transfer is not lodged for registration or registration is refused, the beneficial interest in the shares will, it seems, pass from the seller to the buyer at the latest at stage (2) and, indeed will do so at stage (1) if the agreement is one which the courts would order to be specifically enforced.[47] The seller then becomes a trustee for the buyer and must account to him for any dividends he receives and vote in accordance with his instructions (or appoint him as his proxy).[48] This, however, begs several questions. The first arises because at stage (2) delivery of the documents may not necessarily be matched by payment of the full price; the agreement may have provided for payment by instalments[49] and the seller will then retain a lien on the shares as an unpaid seller. This will not prevent an equitable interest passing to the buyer but the court will not grant specific performance unless the seller's lien can be fully protected,[50] and until paid in full he is entitled to vote the shares as he thinks will best protect his interest.[51] Instead of being a bare trustee his position is analogous to that of a trustee of a settlement of which he is one of the beneficiaries.

The second begged question is whether the foregoing can apply when the articles provide for rights of pre-emption or first refusal when a shareholder wishes to dispose of his shares. In such a case the transferor (perhaps with the full knowledge of the transferee[52]) has breached the deemed contract under s.33 between him and the company and his fellow shareholders. There are observations of the House of Lords in *Hunter v Hunter*[53] to the effect that accordingly the transfer is wholly void, even as between the transferor and transferee.

However, in later cases[54] courts have refused to follow this and, it must surely be right (at any rate if the price has been paid) that the buyer obtains such rights as the transferor had. This will not benefit the buyer if all the shares are taken up when the transferor is compelled to make a pre-emptive offer, but it does not follow that all of them will be taken up and, if not, the transferee has a better claim to those shares not taken up than has the transferor.

27–9

When the transaction is not a sale but a gift, there need be no agreement. Even if there is, it will not be legally enforceable under English law because there will be no valuable consideration and because, under the so-called rule in *Milroy v Lord*,[55] "there is no equity to perfect an imperfect gift". One might have supposed, therefore, that if the donor has chosen to make the gift by handing to the donee a signed transfer and the share certificate, rather than by a formal declaration of trust in favour of the donee, the gift would not be effective unless and until the transfer was registered. In modern cases,[56] however, it has been held that so long as the donor has done all he needs to do, or there has been detrimental reliance by the donee, the beneficial interest passes from him to the donee.[57]

Priorities between competing transferees

27–10

Questions may also arise in determining the priority of purported transfers of the same shares to different people. In answering these questions the courts[58] have relied on two traditional principles of English property law: i.e. (1) that as between two competing holders of equitable interests, if their equities are equal the first in time prevails; and (2) that a bona fide purchaser for value of a legal interest takes free of earlier equitable interests of which he has no notice at the time of purchase.

In applying these principles to competing share transfers, a transferee prior to registration is treated as having an equitable interest only but registration converts his interest into a legal one.[59] Hence if a registered shareholder, A, first executes a transfer to a purchaser, B, and later to another, C, while both remain unregistered B will have priority over C. If, however, C succeeds in obtaining registration before B, he will have priority over B so long as he had no notice, at the time of purchase, of the transfer to B. If C did have notice, although he has been registered, his prima facie title will not prevail over that of B, who will be entitled to have the register rectified (assuming that there are no grounds on which the company could refuse to register B) and in the meantime C's legal interest will be subject to the equitable interest of B.[60] If both transfers were gifts, the position would presumably be different; the gift to B[61] would

leave A without any beneficial interest that he could give to C and, not being a "purchaser", C could not obtain priority by registration; his legal interest, on his becoming the registered holder, would be subject to the prior equity of B.

It should perhaps be pointed out once again that even registration affords only prima facie evidence of title. If the registered transferor, A, was not entitled to the shares, what will pass when he transfers to B or C is not, strictly speaking, either a legal or equitable interest but only his imperfect title to it, which will not prevail against the true owner. If, for example, the transfer to A was a forgery the true owner will be entitled to be restored to the register.[62] Hence a transferee can never be certain of obtaining an absolute title in the case of an off-market transaction. But his risk is slight so long as he promptly obtains registration of the transfer. And this he can do unless there are restrictions on the transferability of the shares or unless there are good reasons for failing to apply for registration.

The principal example for the latter occurs when the shareholder wants to borrow on the security of his shares. This can be done by a legal mortgage, under which the shareholder transfers the shares to the lender (who registers the transfer) subject to an agreement to retransfer them when the loan is repaid. Generally, however, this suits neither party; the lender normally has no wish to become a member and shareholder of the company and the borrower does not want to cease to be one. Hence a more usual arrangement is one whereby the shareholder deposits with the lender his share certificate and, often, a signed blank transfer, this usually being accompanied by a written memorandum setting out the terms of the loan. The result is to confer an equitable charge which the lender can enforce by selling the shares if he needs to realise his security. Custody of the share certificate is regarded as the essential protection of the lender.[63] In the case of shares, dealt with through CREST,[64] its rules provided for uncertificated shares to be held in "escrow" balances, which provision appears to give the bank an equivalent security.[65]

The company's lien

27–11

As we have seen,[66] a public company is not permitted to have a charge or lien on its shares except (a) when the shares are not fully paid and the charge or lien is for the amount payable on the shares; or (b) the ordinary business of the company includes the lending of money or consists of the provision of hire-purchase finance and the charge arises in the course of a transaction in the ordinary course of its business.[67] Neither exception is of much importance in the present context.

Hence it is only in respect of private companies that problems are still likely to arise when their articles provide, as they frequently do, that "the company shall have a first and paramount lien on shares, whether or not fully-paid, registered in the name of a person indebted or under any liability to the company". Since the decision of the House of Lords in *Bradford Banking Co v Briggs, Son and Co*[68] it appears to be accepted that the effect of such a provision is that:

(a) once a shareholder has incurred a debt or liability to the company, it has an equitable charge on the shares of that shareholder to secure payment which ranks in priority to later equitable interests and, it seems, to earlier ones of which the company had no notice when its lien became effective; and

(b) in determining whether the company had notice,[69] s.126 has no application; if the company knows of the earlier equitable interest (because, for example, a transfer of the shares has been lodged for registration even if that is refused) it cannot improve its own position to the detriment of the holder of that known equitable interest.

An interesting modern illustration is afforded by *Champagne Perrier-Jouet v Finch & Co*.[70] There the company's articles provided for a lien in the above terms. One of its shareholders[71] had been allowed to run up substantial debts to the company resulting from trading between him and the company and it had been agreed that he could repay by instalments. Another creditor of the shareholder subsequently obtained judgment against him and a charging order on the shares by way of equitable execution. It was held that the company's lien had become effective when the debts to it were incurred (even though they were not then due for repayment) and as this occurred before the

company had notice of the charging order,[72] the company's lien had priority.[73]

As this case shows, an equitable charge on shares in a private company with articles conferring a lien on the company is likely to be an even more undesirable form of security than shares in private companies always are. It may, however, be the only security obtainable, for an attempt to obtain a legal charge will almost certainly be frustrated by the refusal of the directors to register the transfer. If, *faute de mieux*, it has to be accepted, notice should immediately be given to the company, making it clear that this is a notice which it cannot disregard in relation to any lien it may claim, and an attempt should be made to obtain information about the amount, if any, then owed to the company.

Transfers of Uncertificated Shares

27–12

We have seen in the previous section that certificated shares are transferred by way of delivery of certain transfer documents to the company. The company being so notified of a transfer then registers the transferee's name on the shareholder register. When uncertificated shares are sold, the register is updated through electronic instructions.

For a transfer of uncertificated shares to be possible, both the seller and the buyer need to have access to the CREST system. There are three ways in which investors can access CREST. They can either hold an account with CREST themselves and acquire the hard- and software necessary to establish a safe connection with CREST. The cost involved in doing this makes this option unappealing to small scale private investors. An investor can also have his or her account with CREST operated by a broker who accesses the system or his or her behalf. This option is referred to as personal membership in the CREST documentation. With both options, the account is operated in the name of the investor who holds legal title to the shares. The third option for an investor is not to hold an account with CREST but to instruct a broker to act as a nominee on his or her behalf. In that case, the investor's name does not appear on the company's register. The nominee rather than the investor has an account with CREST and holds legal title to the shares. This form of

holding shares has recently come under scrutiny (BIS Research Paper 261, *Exploring the Intermediated Shareholding Model*, January 2016).

When uncertificated shares are transferred, both the selling and the buying account holder need to instruct the system to carry out the transfer. When shares are sold through the Stock Exchange's electronic trading system, the sales information is transferred into the CREST system automatically and the selling and the buying account holder have an opportunity to verify the data before the transfer is effected.

Upon receiving transfer instructions, CREST verifies them, matches them and carries them out on the day specified by the parties. On that day CREST transfers the shares from the seller to the buyer and causes the purchase price to be paid over to the seller. The buyer becomes the legal owner of the shares when they are credited to his or her account. This is because, since 2001, CREST not only operates an electronic transfer system, but also keeps the shareholder register for all UK uncertificated shares.[74] Having updated the register, CREST needs to immediately inform the issuing company which keeps a record of all transfers relating to uncertificated shares.

27–13

In order to preserve the integrity of the shareholder register, the USR 2001 stipulates that the Operator must not amend the shareholder register, except on completion of a trade in uncertificated units, unless ordered to do so by a court[75] or unless shares have been transferred by operation of law.[76] Equally, there are only limited circumstances in which the Operator may or must refuse to alter the operator register if it has received appropriate instructions from system members. Of course, the Regulations recognise that, in rare cases, events outside the system may impinge on the Operator's freedom of action in relation to the Operator register, just as they do on the issuer register kept by the company (for the uncertificated shares) or the share register, also kept by the company, for companies which have not entered the electronic transfer system. Thus, unless it is impracticable to stop it, CREST must not make a change in the Operator register which it actually knows is

prohibited by an order of a court or by or under an enactment or involves a transfer to a deceased person.[77] There are further cases where CREST may refuse to make a change, for example, where the transfer is not to a legal or natural person or is to a minor.[78] Section 771(1)[79] applies in cases where CREST refuses to register a transfer,[80] but a two-month limit for notifying transferees of a failure to register hardly seems an appropriate one for an electronic system.

Title to uncertificated shares and the protection of transferees

27–14

The CREST system has reduced the time that lapses between trade and settlement. It has also caused transfers of uncertificated shares to be carried out almost simultaneously with payment of the purchase price. This has significantly reduced the transactional risk investors in shares are exposed to. The risk involved in shares transaction has, however, not been eliminated completely. In particular, the Regulations do not introduce a rule to the effect that entry on the Operator register confers title to the shares on the person registered. On the contrary, reg.24(1) provides, in the same way as the Act,[81] that "a register of members" is simply prima facie evidence of the matters directed or authorised to be stated in it, and "register of members" is defined to include both the issuer and Operator register of members.[82] In principle, therefore, a legal owner of shares may seek rectification of the Operator register if CREST removes his or her name from it without cause, and a court order restoring the legal owner to the register would be, as we have seen, something to which the Operator is obliged to respond.[83] In fact, it is doubtful whether the statutory provision under which the Regulations were made is wide enough to effect a general change in the rules as to the status of the register.

This is not to say, however, that the protection of transferees is provided in the same way or to the same extent under the Regulations in relation to uncertificated shares as it is in relation to certificated shares. As we have seen, that protection in relation to the latter class of shares depends heavily upon the doctrine of estoppel by share certificate. Since, by definition, there is no

share certificate in relation to uncertificated shares, the immediate position seems to be that the third party cannot be protected by this doctrine. Is this in principle a problem for the transferee of shares? The answer is that, if the matter were not dealt with in the Regulations, it would be. There are obvious risks that either an unauthorised person obtains access to the system or a person with authorised access uses the system in an unauthorised way, in both cases sending an instruction to transfer shares not belonging to him or her to an innocent third party. Can the former holder of the shares secure the restoration of his or her name to the Operator register to the detriment of the third party?

One technique for protecting the third party might be to transfer the doctrine of estoppel by share certificate to the entry on the register, but it is no accident that, in relation to certificated shares, the doctrine is based on the certificate, not on the register entry, even though both are available. This is because it is rare for a transferee to rely on the register entry before committing him- or herself to the transaction. This is true of both the Operator register and the issuer register, and so estoppel does not seem an effective protective device as against either the company or CREST.

27–15

In fact, the Regulations take an entirely different approach to the protection of transferees. If the unauthorised instruction in the situations above is sent in accordance with the rules of the Operator, the recipient of the instruction is entitled, subject to very few exceptions, to act on it and the person by whom or on whose behalf it was purportedly sent may not deny that it was sent with proper authority and contained accurate information.[84] Unlike at common law, where even careless conduct does not prevent the legal owner from asserting his or her title to the shares,[85] even a legal owner who was in no way to blame for the fraud may find that title to the shares has been lost. The transferor may have a remedy in such a case against the system participant whose equipment was used to send the unauthorised instructions.[86] There may also be a liability of the Operator in such a case, but only if the instruction was not sent from a system computer or the system computer it purported to be sent

from. Thus, purely unauthorised activity by a broker's employee is not caught.[87] In any event, the liability is capped at £50,000 in respect of each instruction[88] and falls away entirely if the Operator identifies the person responsible, even if the transferor is not able to recover any compensation from that person.[89]

Thus, it seems right to conclude that transferees are somewhat better protected under the Regulations than under the common law doctrine of estoppel, since even first transferees from the rogue are protected. However, that protection is provided at the expense of the transferor, rather than of the company, as at common law, and it is certainly arguable that company liability is the better principle because of the benefit companies obtain from effective markets.[90]

Because the transfer of legal ownership is so closely linked to payment, the rules on beneficial ownership have less practical relevance in relation to transfers of uncertificated shares.[91] When uncertificated securities are used as collateral, however, equity continues to play an important role. Moreover, the Financial Collerateral Directive,[92] which aims at reducing the formalities required to create a security interest over securities, has had significant impact on English law.[93]

The Register

27–16

We have already seen that companies issuing registered shares must keep a register containing the names of their members.[94] We shall now examine the rules governing the shareholder register more closely. The register of companies which issue only certificated shares is subject to the 2006 Act. Companies which issue only uncertificated shares or both certificated and uncertificated shares are subject to the Uncertificated Securities Regulation 2001 (USR 2001).[95]

Under both regimes, the register contains the name and address of each member and the date on which each person was registered as a member and the date on which any person ceased to be a member.[96] It also states the number and class[97] of shares held by each member and the amount paid up on each share.[98] In the case of a private company there must also be noted on the

register the fact and the date of the company becoming, or ceasing to be a single member company.[99]

The register of members of both certificated and uncertificated shares constitutes prima facie evidence of any matters which are by the respective regulatory regime directed or authorised to be inserted in it.[100]

In order to become a member or shareholder of a company an investor has to have his or her name entered on that shareholder register. A buyer normally acquires legal title to shares at the point in time at which his or her name is entered on the shareholder register.[101] This rule applies irrespective of whether shares are held in the certificated or in the uncertificated form.

27–17

Certificated and uncertificated shares differ in terms of who maintains the shareholder register. The register for certificated shares is maintained by the company itself or by a registrar on behalf of the company. The register for uncertificated shares is maintained by the Operator of the uncertificated transfer system, CREST. The register of companies which issue certificated shares and uncertificated shares consists of two parts. Entries relating to certificated shares are maintained by the company. They are referred to as the "issuer register of members". Entries relating to uncertificated shares are maintained by the Operator of the uncertificated transfer system, and are referred to as "Operator register of members". The company maintains a "record" relating to uncertificated shares. This record does not constitute a shareholder register. It must be regularly reconciled with the Operator register of members.[102] In relation to uncertificated shares, the Operator register prevails over the record kept by the company.[103] The record does not provide for prima facie evidence. It enables the company to inform those inspecting the register about entries that have been made on the register maintained by CREST.

The issuer register may be kept at the company's registered office or at a place specified in regulations under s.1136.[104] If kept otherwise than at the company's registered office, notice must be given to Companies House (and thus to the public) of the place where it is kept and of any change of that place.[105]

If a company has more than 50 members then, unless the register is kept in such a form as to constitute an index of names of members, such an index must be kept at the same place as the register.[106]

27–18

The shareholder register and the index are available for public inspection. Any member of the company may inspect the register free of charge.[107] Any other person may inspect the register on payment of such fee as may be prescribed.[108] In the case of uncertificated shares, the inspection right is granted against the record held by the company rather than against the Operator register itself.[109] This exposes the searcher to the risk that the company's record will not accurately reflect the Operator register. Provided the company regularly reconciles its record with the Operator register, except insofar as matters outside its control prevent such reconciliation, the company is not liable for discrepancies between the record and the register.[110]

The right to inspect the register is a legitimate help to a takeover bidder and makes it possible for members to communicate with each other. It also has, in the past, been abused by traders who advertised their wares by unsolicited mail or telephone calls and who were able to obtain more cheaply than in any other way a list of potential victims by buying a copy of the shareholder register of, say, British Telecom or British Gas. With a view to putting an end to this illegitimate use of the shareholder register, the 2006 Act revised the right to inspect the register. The right to inspect the register may now be denied by the Court if it is satisfied that the request was not sought for a proper purpose.[111]

Under s.358 of the 1985 Act a company had the power to close the shareholder register for any time or times not exceeding in total 30 days in any year. The provision enabled companies to draw up a list of those who are entitled to attend the annual general meeting or to receive dividends. The 2006 Act does not contain a power to that effect.

Under the USR 2001, companies participating in CREST are entitled to specify a time not more than 48 hours before a general meeting by which a person must have been entered on the

register in order to have the right to attend and vote at the meeting and may similarly choose a day not more than 21 days before notices of a meeting are sent out for the purposes of determining who is entitled to receive the notice.[112] This way of proceeding enables transfers to continue in the period before the meeting (thus reducing the risk to transferees) without landing the company in the position of having to deal with a constantly changing body of shareholders.

Rectification

27–19

The register is "prima facie evidence of any matters which are by this Act directed or authorised to be inserted in it".[113] It is not, however, conclusive evidence for, as we have seen, membership is dependent both on agreement to become a member and entry in the register, and it may be that other requirements in the company's articles have to be met. If they are not, it seems that the registered person does not become a member.[114] In any event, if the entry does not truly reflect the agreement or other requirements, the register ought to be rectified. Hence s.125 provides a summary remedy whereby:

> "(a) the name of any person is without sufficient cause entered in or omitted from a company's register of members, or
>
> (b) default is made or unnecessary delay takes place in entering on the register the fact of any person having ceased to be a member, the person aggrieved or any member of the company, or the company may apply to the court for rectification of the register."[115]

This wording is defective because it ignores the fact that the register is not just a register of members but also a register of shareholdings and that a likely error is in the amount of a member's shareholding. However, common sense has prevailed and in *Re Transatlantic Life Assurance*[116] Slade J felt able to hold that "the wording is wide enough in its terms to empower the court to order the deletion of some only of a registered shareholder's shares".[117] It must follow that it is similarly empowered to order an addition to the registered holding.

On an application the court may decide any question relating to the title of any person who is a party to the application whether the question arises between members or alleged

members,[118] or between members or alleged members on the one hand and the company on the other hand,[119] and may decide “any question necessary or expedient to be decided for rectification…”.[120] A rectification may also be carried out with retrospective effect.[121] Moreover, the court may order payment by the company of “damages sustained by any party aggrieved”.[122]

27–20

There is some uncertainty as to the extent to which the company can rectify the register without an application to the court. But in practice here again commonsense prevails. Sections 113, 115 and 122 envisage, and indeed demand, alterations without which the register could not be kept up-to-date and fulfil its purpose, and although there is no express provision for alterations of members’ addresses that takes place all the time. Indeed it would be quite absurd if companies could not correct any mistake if all interested parties agree.

The USR 2001 also contemplate that a company may rectify the issuer register other than by order of a court, but, in order to preserve the integrity of the electronic transfer system, require the company in such a case to have the consent of the Operator of the system if the change would involve rectification of the Operator register. Equally, the Operator may rectify the Operator register, but must inform the issuer and the system-members concerned immediately when the change is made.[123]

It must be emphasised, however, that although the register provides prima facie evidence of who its members are and what their shareholdings are, it provides no evidence at all, either to the company or anyone else, of who the beneficial owners of the shares are.[124]

Transmission of Shares by Operation of Law

27–21

The Act[125] recognises that shares may be transmitted by operation of law and that, when this occurs, the prohibition on registering unless a proper instrument of transfer has been delivered does not apply.[126] The principal examples of this are when a registered shareholder dies or becomes bankrupt. As

regards the death of a shareholder, the Act further provides that a transfer by the deceased's personal representative, even if he is not a member of the company, is as valid as if he had been.[127] The company is bound to accept probate or letters of administration granted in any part of the UK as sufficient evidence of the personal representative's entitlement.[128] However, he or she does not become a member unless he or she elects to apply to be registered and is registered as a member. In the meantime, the effect is that he has the "same rights as the holder had".[129]

> "But transmittees do not have the right to attend or vote at a general meeting, or agree to a proposed written resolution, in respect of shares to which they are entitled by reason of the holder's death or bankruptcy or otherwise unless they become the holders of those shares."[130]

If the shares are those of a listed company, this anomalous position can be ended rapidly because, unless the shares are not fully paid, there will not be any restrictions on transferability and the personal representative will either obtain registration of him- or herself or execute a transfer to a purchaser or to the beneficiaries. In relation to a private company, however, it may continue indefinitely and prove detrimental to the personal representative, the deceased's estate and, sometimes, the company. The personal representative may suffer because it may not be possible for him fully to wind up the estate and to obtain a discharge from his fiduciary responsibilities. The estate may suffer because it may be impossible for the personal representative to sell the shares at their true value, especially if any attempt to dispose of them would trigger rights of pre-emption or first refusal.[131] The company may suffer because, as we have seen,[132] unless such rights have been most carefully drafted, they will not come into operation so long as no action regarding registration is taken by the personal representative. In order to assist personal representatives, the statute has extended the remedies afforded to members so that they can be invoked by personal representatives of members.[133] It is also now obligatory for the company to give reasons explaining the refusal to register a transferee.[134]

The position on bankruptcy of an individual shareholder[135] is broadly similar. His rights to the shares automatically vest in the trustee in bankruptcy as part of his estate.[136] But, as in the case of

a personal representative, until he elects to become registered and is so registered, he will not become a member of the company entitled to attend meetings and to vote. In contrast, however, with the position on the death of a member, the bankrupt will remain a member and be entitled to attend and vote—though he will have to do so in accordance with the directions of the trustee. As in the case of personal representatives, the company's articles will probably provide that any restrictions on transferability apply on any application to be registered and to any transfer by him or her[137] and these restrictions may handicap the trustee in obtaining the best price on a sale of the shares, particularly if the articles confer pre-emption rights.[138] If a personal representative or trustee in bankruptcy elects to be registered, and is, he becomes personally liable for any amounts unpaid on the shares and not merely representationally liable to the extent of the estate. Trustees in bankruptcy, but not personal representatives, may disclaim onerous property,[139] which the shares might be if they were partly paid or subject to an effective company lien.

[14] Regulation (EU) No.909/2014 of the European Parliament and of the Council on improving securities settlement in the European Union and on central securities depositaries (CSDs) (CSDR) ([2014] O.J. L257/1) art.3(1).

[15] CSDR art.76(2).

[16] Stock Transfer Act s.770(1).

[17] See below, para.27–8.

[18] And, it seems, what then occurs is a novation (i.e. the relationship between the company and the transferor is ended and is replaced by a new relationship between the company and the transferee) rather than an assignment of the transferor's rights to the transferee (*Ashby v Blackwell* (1765) 2 Eden 299 at 302–303; 28 E.R. 913 at 914; *Simm v Anglo-American Telegraph Co* (1879) 5 Q.B.D. 188 at 204; E. Micheler, "Legal Title and the Transfer of Shares in a Paperless World—Farewell Quasi-Negotiability" [2002] J.B.L 358). If this is the rule, it is favourable to transferees, for in general on assignment the assignee is in no better position than was the assignor.

[19] Or in Scotland "sufficient evidence unless the contrary is shown". It is not thought that the reference in s.768 to a certificate "under the common seal of the company" requires the use of the common seal, if it instead uses an official seal which is a facsimile of its common seal (see s.50) or has the certificate signed by two directors or one director and the secretary (see s.44). Section 768 (2) makes the position clear for Scotland.

[20] Companies do this readily enough so long as the registered holder makes a statutory declaration regarding the loss and supplies the company with a bank indemnity against any liability it may incur.

[21] On rectification, see below, para.27–19.

[22] *Welch v Bank of England* [1955] Ch. 508; *Simm v Anglo-American Telegraph Co* (1879) 5 Q.B.D. 188.

[23] The company may in turn be entitled to an indemnity from the person who asked it to register the transfer which led to the issuance by the company of the misleading certificate. An indemnity against the fraudster is likely to be worthless, but the entitlement embraces also the broker who acted on behalf of the fraudster, who may well be worth suing. See *Royal Bank of Scotland Plc v Sandstone Properties Plc* [1998] 2 B.C.L.C. 429, where the earlier cases are reviewed. Presumably, the rationale for the company's entitlement is that the broker is in a better position to detect unauthorised transfers than is the company. No liability arises, however, if the broker who instructed the issuer to amend the register did so in reliance on genuine but inaccurate share certificates issued by the issuer or its registrar (*Cadbury Schweppes Plc v Halifax Share Dealing Ltd* [2007] 1 B.C.L.C 497).

[24] E. Micheler, "Farewell to Quasi-negotiability? Legal Title and Transfer of Shares in a Paperless World" [2002] J.B.L. 358.

[25] *Burkinshaw v Nicholls* (1878) 3 App. Cas. 1004 HL; *Bloomenthal v Ford* [1897] A.C. 156 HL. If the reason why the shares were not fully paid up is a contravention of the provisions regarding payment in ss.553 et seq. of the Act (see Ch.11, above, at para.11–14) a bona fide purchaser and those securing title from him will be exempted from liability to pay calls by virtue of s.588(2) and s.605(3) and will not have to rely on estoppel.

[26] *Cadbury Schweppes Plc v Halifax Share Dealing Ltd* [2007] 1 B.C.L.C 497; *Dixon v Kennaway & Co* [1900] 1 Ch. 833; *Re Bahia and San Francisco Railway Co* (1868) L.R. 3 Q.B. 584. This, in contrast with resisting a call, may seem to be committing the heresy of using estoppel as a sword rather than a shield. The justification is that a purchaser who has bought from the registered owner has a prima facie right to be

registered in his place and that the company is estopped from denying that the transferor was the registered owner.

[27] But in exceptional circumstances it may do so: *Balkis Consolidated Co v Tomlinson* [1893] A.C. 396 HL; *Alipour v UOC Corp* [2002] 2 B.C.L.C. 770 (where the holder was even held entitled to be registered as a member, since no innocent party was thereby prejudiced).

[28] Acquisition by the company itself will, of course, be lawful only if it is able to comply with the conditions enabling a company to buy its own shares: see above, at para.13–7. Less usually, the provision may impose an obligation on other members to buy.

[29] Except for any restrictions imposed for failure to comply with a notice under CA 2006 s.793 (notice by company requiring information about interests in its shares): Listing Rules r.2.2.4.

[35] *Hurst v Crampton Bros (Coopers) Ltd* [2003] 1 B.C.L.C. 304; *Re Claygreen* [2006] 1 B.C.L.C. 715.

[36] For the application of the fiduciary principle to the transfer of shares in the context of takeover bids, see paras 28–26 to 28–36, below.

[37] In *Re Smith & Fawcett Ltd* [1942] Ch. 304 CA, the directors refused to register but agreed that they would register a transfer of part of the shareholding if the transferor agreed to sell the balance to one of the directors at a stated price. It was held that this was insufficient evidence of bad faith but it might today be "unfairly prejudicial" under s.994; see Ch.20. See also *Village Cay Marina Ltd v Acland* [1998] 2 B.C.L.C. 327 PC.

[38] *Berry & Stewart v Tottenham Hotspur Football Co* [1935] Ch. 718; see also *Sutherland v British Dominions Corp* [1926] Ch. 746.

[39] Final Report I, paras 7.42–7.45.

[40] *Re Bede Steam Shipping Co* [1917] 1 Ch. 123; see also *Village Cay Marina Ltd v Acland (Barclays Bank Plc third party)* [1998] 2 B.C.L.C 327 PC; and *Sutherland v British Dominions Corp* [1926] Ch. 746.

[41] *Re Bede Steam Shipping Co* [1917] 1 Ch. 123; *Re Smith & Fawcett Ltd* [1942] Ch. 304 CA. Indeed, if there are rights of pre-emption at a fair price to be determined by the auditors the court can investigate the adequacy of this price only if the auditors give a

"speaking valuation" stating their reasons: *Dean v Prince* [1954] Ch. 409 CA; *Burgess v Purchase & Sons Ltd* [1983] Ch. 216.

[42] *Re Smith & Fawcett Ltd* [1942] Ch. 304 CA; *Charles Forte Investments Ltd v Amanda* [1964] Ch. 240; *Village Cay Marina Ltd v Acland (Barclays Bank Plc third party)* [1998] 2 B.C.L.C 327 PC.

[43] It is common to state that transfers have to be passed by the directors but under normal articles that is not so (the Companies (Model Articles) Regulation 2008 Sch.1 reg.26) and in the light of s.771 it is doubtful if the articles could make the directors' approval a condition precedent.

[44] *Moodie v Shepherd (Bookbinders) Ltd* [1949] 2 All E.R. 1044 HLSc.

[45] *Shepherd*'s case (1866) L.R. 2 Ch. App. 16.

[46] *Re Swaledale Cleaners Ltd* [1968] 1 W.L.R. 1710 CA; *Tett v Phoenix Property and Investment Co Ltd* [1986] B.C.L.C. 149; *Re Inverdeck Ltd* [1998] 2 B.C.L.C. 242. And normally it seems that they will not be treated as acting unreasonably if they take the full two months: *Re Zinotty Properties Ltd* [1984] 1 W.L.R. 1249 at 1260.

[47] The fact that the agreement is subject to fulfilment of a condition beyond the control of the parties will not prevent it from being specifically enforceable, notwithstanding that the condition has not been fulfilled, if the party for whose benefit the condition was inserted is prepared to waive it. In *Wood Preservation Ltd v Prior* [1969] 1 W.L.R. 1077 CA, where the condition was for the benefit of the buyer, the court was prepared to hold that the seller ceased to be "the beneficial owner" on the date of the contract notwithstanding that the buyer did not become the beneficial owner until he later waived the condition. In the interim, beneficial ownership was, apparently, in limbo! See also *Michaels v Harley House (Marylebone)* [1997] 2 B.C.L.C. 166; *Philip Morris Products Inc v Rothmans International Enterprises Ltd* [2001] All E.R. (D) 48 (Jul); *Re Kilnoore Ltd (In Liquidation) Unidare Plc v Cohen* [2006] 1 Ch. 489.

[48] *Hardoon v Belilios* [1901] A.C. 118 PC; distinguished in *Wise v Perpetual Trustee Co* [1903] A.C. 139 PC.

[49] The normal practice then is to provide that the transfer and share certificate shall be held by a stakeholder and not lodged for registration until released to the buyer on payment of the final instalment.

[52] As in *Lyle & Scott Ltd v Scott's Trustees* [1959] A.C. 763 HLSc.

[53] *Hunter v Hunter* [1936] A.C. 222 HL.

[54] *Hawks v McArthur* [1951] 1 All E.R. 22; *Tett v Phoenix Property Co* [1986] B.C.L.C. 149, where the Court of Appeal was not required to rule on this point because the appellants did not argue that the decision on it at first instance was wrong. *Re Walls Properties Ltd v PJ Walls Holdings Ltd* [2008] 1 I.R. 732; *Cottrell v King* [2004] 2 B.C.L.C. 413; but see *Re Claygreen Ltd; Romer-Ormiston v Claygreen Ltd* [2006] 1 B.C.L.C. 715.

[55] *Milroy v Lord* (1862) 4 De G.F. & J. 264.

[56] *Re Rose* [1949] Ch. 78; *Re Rose* [1952] Ch. 499 CA; *Pennington v Waine* [2002] 2 B.C.L.C. 448 CA; *Kaye v Zeital* [2010] 2 B.C.L.C. 1; *Curtis v Pulbrook* [2011] 1 B.C.L.C. 638.

[57] Thus, until the transfer is registered, placing the donee in the same position as if the donor had instead made a declaration of trust.

[58] The leading cases are *Shropshire Union Railway v R.* (1875) L.R. 7 H.L. 496; *Société Générale v Walker* (1885) 11 App. Cas. 20 HL; *Colonial Bank v Cady* (1890) 15 App. Cas. 267 HL. For more recent decisions, see *Hawks v McArthur* [1951] 1 All E.R. 22; *Champagne Perrier-Jouet v Finch & Co* [1982] 1 W.L.R. 1359; *Macmillan Inc v Bishopsgate Investment Trust Plc (No.3)* [1995] 3 All E.R. 747.

[59] Notwithstanding a suggestion by Lord Selbourne (in *Société Générale v Walker* (1885) 11 App. Cas. 20 HL) that "a present absolute right to have the transfer registered" might suffice, it seems that nothing less than actual registration will do. In *Ireland v Hart* [1902] 1 Ch. 521 the transfer had been lodged for registration and the directors had no power to refuse but it was held that the legal interest had not passed.

[60] *France v Clark* (1884) 26 Ch.D. 257 CA; *Earl of Sheffield v London Joint Stock Bank* (1888) 13 App. Cas. 332 HL; *Rainford v James Keith & Blackman* [1905] 2 Ch. 147 CA.

[61] So long as it has been "perfected"—as interpreted in the cases following *Re Rose* [1949] Ch. 78; and *Re Rose* [1952] Ch. 499 CA.

[62] The transferee will have no remedy against the company based on estoppel by share certificate: it made no false statement: see para.27–6, above. The Forged Transfers Acts 1891 and 1892 enabled companies to adopt fee-financed arrangements for compensating innocent victims of forged transfers but this is purely voluntary and seems to have been virtually a dead-letter since its inception.

[63] Banks usually grant their clients overdrafts on the security of an equitable charge by a deposit of share certificates without requiring signed blank transfers.

[64] Shares not listed or dealt with on the AIM are rarely accepted as security for loans because of their illiquidity and, usually, restrictions on their transferability. Banks will instead want a charge on the undertaking and assets of the company itself plus, probably, personal guarantees of the members or directors.

[65] See Evans, (1996) 11 J.I.B.F.L. 259; see also in relation to the Financial Collateral Directive and its implementation in the UK: Ho, [2011] J.I.B.L.R. 151; and *Cukurova Financial International Ltd v Alfa Telecom Turkey Ltd* [2009] 3 All E. R. 849 PC; *Mills v Sportsdirect.com* [2010] 2 B.C.L.C. 143.

[66] See para.13–2, above.

[67] 2006 Act s.670; for listed companies see also Listing Rules r.2.2.4.

[68] *Bradford Banking Co v Briggs, Son and Co* (1886) 12 App.Cas.29, HL.

[69] It is not altogether clear why notice should be relevant. Since the company's lien is merely an equitable interest, its priority over another equitable interest should depend on the respective dates of their creation. But the decisions seem to assume that the company's lien will have priority over an equitable interest if the company has not received notice of the latter.

[70] *Champagne Perrier-Jouet v Finch & Co* [1982] 1 W.L.R. 1359.

[71] He had also been a director and it was argued that the debt he incurred to the company was a loan unlawful under what is now s.197 so that the company could not have a valid lien. It was held that it was not a loan; it would, however, today be “a quasi-loan” as defined in s.198 and as such unlawful if the company was a “relevant company” (e.g. a subsidiary of a public company) as defined in s.198.

[72] It also ante-dated the charging order but the court seems to have regarded the date of notice as decisive: see at s.1367B–E.

[73] It was also held that if the company enforced its lien by selling the shares it would have to comply with provisions in the articles conferring pre-emptive rights on the other members of the company.

[74] USR 2001 reg.27(1) obliges the Operator upon settlement of the transfer to amend the operator register (unless the shares thereafter are to be held in certificated form). The Operator must also, immediately after making the change, notify the company: reg.27(7).

[75] USR 2001 reg.27(5)—for example, upon rectification of the register. Or unless it receives an issuer instruction to the effect that the shares have been converted into uncertificated form or there has been a compulsory acquisition of shares after a takeover (see para.28–69): reg.27(1).

[76] USR 2001 reg.27(6). On transfer by operation of law, see below, para.27–21.

[77] USR 2001 reg.27(2) and (3).

[78] USR 2001 reg.27(4).

[79] See above at para.27–7.

[80] USR 2001 reg.27(8) and (9).

[81] 2006 Act s.127; below, para.27–16. Naturally, s.768 (certificate to be evidence of title) has no application to uncertificated shares, though the section seems still to apply to certificated shares of participating companies.

[82] USR 2001 reg.3(1).

[83] USR 2001 reg.27(5).

[84] USR 2001 reg.35.

[85] See above, para.27–5.

[86] The Regulations do not create such a liability but do preserve it if it exists under the general law (USR reg.35(7)), for example, as between the transferor and his or her broker.

[87] See the definition of “forged dematerialised instruction” in USR reg.36(1). In effect, the Operator is liable for security defects in its system but not for unauthorised use of the system.

[88] USR reg.36(6).

[89] USR reg.36(4), unless the Operator has been guilty of fraud, wilful neglect or negligence (USR reg.36(9)).

[90] E. Micheler, fn.18, above.

[91] Equitable ownership arises, however, when uncertificated securities are transferred to

a person who opts to have them converted in to certificated securities (USR 2001 reg.31(2)).

[92] Directive 2002/47/EC of the European Parliament and of the Council of 6 June 2002 on financial collateral arrangements [2002] O.J. L168/43 implemented in the UK by the Financial Collateral Arrangements Regulation (No.2) 2003 SI 2003/3226.

[93] Ho, [2011] J.I.B.L.R. 151; *Mills v Sportsdirect.com* [2010] EWHC 1072 (Ch); [2010] 2 B.C.L.C. 143; see also *Cukurova Financial International Ltd v Alfa Telecom Turkey Ltd* [2009] 3 All E.R. 849 PC.

[94] 2006 Act s.113; The Small Business, Enterprise and Employment Act 2015 (2015 c. 26) s.94 and Sch.5 amend the Companies Act 2006 to give private companies the option of keeping the register of members on the register kept by the registrar instead of keeping it on their own register. This will come into force at a date to be appointed (SBEE Act 2015 s.164(1)). Companies House’s website contains information suggesting that this will be in June 2016 (*https://www.gov.uk/government/news/the-small-business-enterprise-and-employment-bill-is-coming* [Accessed 26 May 2016].

[95] The USR 2001 (SI 2001/3755) was introduced to bring forward the point in time at which an investor acquires legal title to uncertificated shares from the moment at which the company amends the shareholder register to the moment at which the Operator of the uncertificated transfer system credits the shares to the buyer’s securities account (HM Treasury, *Modernising Securities Settlement*, 2001; Bank of England, *Securities Settlement Priorities Review*, September 1998 and March 1998). This was done by entrusting the Operator of the uncertificated transfer system with the maintenance of the shareholder register for uncertificated shares.

[96] 2006 Act s.113; USR 2001 Sch.4 paras 2(1), (2) and 4(1).

[97] In the case of a company without a share capital but with different classes of membership the register has to state the class to which each member belongs (s.113(3); USR 2001 Sch.4 para.2(2)). This fills the lacuna revealed in *Re Performing Right Society Ltd* [1978] 1 W.L.R. 1197.

[98] 2006 Act s.113(3); USR 2001 Sch.4 paras 2(2), (3), 4(1) and 5(1). In the case of the amount paid up, this appears only on the issuer’s record.

[99] s2006 Act s.123(2); USR 2001 Sch.4 para.3. It is rather unlikely that a company issuing uncertificated shares would fall into the state of having only one member, but it might do if it became part of a group of companies.

[100] 2006 Act s.127; USR 2001 reg.24(1).

INTRODUCTION

28–1

A takeover bid consists of an offer from A (an acquirer—usually another company) made generally to the shareholders of T Co (the "target" company) to acquire their shares for a consideration which may be cash or securities of the offeror or a mixture of both. The legal mechanism at the heart of the bid is thus a contractual transfer of shares, but the rules on transfers of shares, discussed in the previous chapter, although relevant, do not capture the significance of the takeover bid. A takeover offer has the aim not simply of a transfer of shares but a shift in the

control of the T Co—or at least a consolidation of control. Previously, T Co may have been under the control of its board (for example, where its shareholdings were widely dispersed) or of one or a few shareholders with a controlling block of shares. After a successful bid (i.e. one where all or most of the T Co's shareholders accept A's offer) T Co will be controlled by A. Depending upon who previously had control of the company, that change of control will therefore be a matter of some moment to the board of T Co (who will have lost control) or the minority shareholders[1] of T Co (who will be faced with a new controller, unless they themselves have accepted a cash offer). The change of control may also affect other stakeholders in the company (for example, employees) because bidders do not normally expend large resources to obtain control of companies simply to run them in the same way as previously. The change of control of T Co may thus have wide ramifications for those who have interests in the businesses run by T Co.

This little description reveals the two main issues which takeover regulation has to address. First, should it seek to prevent the management of the target company from taking any steps to discourage a potential bidder from putting an offer to its shareholders or from discouraging those shareholders from accepting it? In other words, is the takeover bid to be analysed as a transaction purely between bidder and target company shareholders or as one in the outcome of which the management of the target company also has a legitimate self-interest which it may take steps to defend? As we shall see, the rules in the UK have traditionally been based on the former view (no frustration of the bid by the target management). This rule is expressed in a strong form once a bid is imminent, and somewhat less strongly and more diffusely in relation to defensive action taken by target management in advance of any specific offer. This policy gives the acquirer or offeror a free run at the target shareholders and prevents the board from using its management powers so as to frustrate the bid. It is a policy which can be justified on the grounds that it supports the principle of free transferability of the shares of listed companies and, more importantly, on the grounds that it is a significant element in the British system for disciplining management and reducing the agency costs of dispersed shareholders. A board, it is argued, which is at risk of

an unwelcome takeover bid will be sure to promote the interests of its shareholders, in order to decrease the chances of a bid being made (because the share price will be high) and increase the chances that those shareholders will reject an offer if one is made (because they think they will be at least as well off with the current management). In this way, the accountability of the board to the shareholders is promoted by the threat of takeovers, especially "hostile" ones, i.e. offers not recommended by the target board to its shareholders but rather made over the heads of the incumbent management to the shareholders.[2]

The second major issue for takeover regulation concerns the steps to be taken to protect non-controlling shareholders if a bid is launched. Obviously, the transfer of shares could be left, like any other commercial transaction, to be regulated by the ordinary law of contract. In the case of controlling shareholders, who are well-placed to take care of themselves, this is probably sensible policy. However, in the typical case in the UK, where the shareholdings in the target are dispersed, the shareholders may lack information needed to evaluate the offer which has been made to them (especially information about the likely benefits of the takeover to the acquirer). Moreover, if left to its own devices, the offeror may be able to put pressure in various ways on the shareholders of the target company to accept the bid, often by proposing to treat some groups of target shareholders more favourably than others. To counter these risks we shall see that takeover regulation puts considerable emphasis on two policies: disclosure of information (by both bidder and target) to the shareholders of the target, and equality of treatment of the target shareholders. Equality means that some shareholders of the target cannot be offered a better deal than is available generally. As we shall see below,[3] this second policy is taken even to the point of requiring a bid to be launched where an offeror company has acquired in the market or by private treaty a sufficient shareholding in the target to give it control. The "mandatory bid" permits non-controlling shareholders to exit the company at a fair price upon a change of control, even though the bidder would prefer not to acquire any further shares.

28–2

Thus, the two central tenets of the British regulation of takeovers

are that the shareholders alone decide on the fate of the offer and equality of treatment of shareholders. The regulation is both orthodox and rigorous in putting the target shareholders centre stage, and in this respect it differs from takeover regulation in both the US and some, though not all, continental European countries (for example, Germany). However, these are not the only objectives of takeover regulation. A takeover offer is disruptive of the normal running of the target company's business and it is therefore politic that this period of disruption should be minimised by the setting of a firm timetable for the bid. Thus, a bidder which has indicated it might make a bid is required to do so or to withdraw within a relatively short period ("put up or shut up"); the offer, if made, remains open only for fixed period; and a bidder whose offer fails is not permitted immediately to come back with another bid. Thus, the bid is a relatively quick and self-contained event and is not capable of infinite repetition.

We shall look at these and other aspects of the substantive rules for the regulation of takeover bids below, but we begin by examining the rather special machinery which exists in the UK for the creation and application of those rules.

The Takeover Code and Panel

28–3

Since the takeover does not require a corporate decision on the part of the target company,[4] there is no obvious act of the target upon which company law can fasten for the purposes of regulating the transaction.[5] For this reason, most European countries treat takeover regulation as part of their securities laws, i.e. they rightly take the transfer of the shares as the central act. The UK follows this pattern, but it developed takeover regulation long before statutory regulation of the securities markets was established, and so the regulation of takeovers took initially a quasi self-regulatory approach. In the 1950s and 1960s, bidders took full advantage of the absence of regulation.[6] Alarmed by what was happening,[7] a City working party published in 1959 a modest set of "Queensberry Rules" entitled *Notes on Amalgamation of British Businesses*, which was followed in 1968 by a more elaborate *City Code on Takeovers*

and Mergers and the establishment of a Panel on Takeovers and Mergers to administer and enforce it. It is this Code, in its various editions, which has since constituted the main body of rules relating to takeovers, with the Companies Act and the Financial Services and Markets Act, and rules and regulations made thereunder, performing an accessory role. However, the element of self-regulation in this arrangement could easily be overestimated. Although the Panel had no statutory authority, its success as a regulator depended largely on the recognition on the part of those routinely involved in advising on takeovers (mainly investment banks and large law firms) that to flout its authority would probably induce Parliament to replace the Code and Panel with something they liked even less.

The Panel and its methods of operation

The status and composition of the Panel

28–4

In any event, discussion of the self-regulatory status of the Panel is now rather beside the point. The regulation of takeovers is a further area where EU Law has come to be a significant source of the relevant rules. After a very long gestation period the EU eventually adopted Directive 2004/25/EC on takeover bids (hereafter the "takeover directive").[8] One of the requirements of the Directive is that Member States should "designate the authority or authorities competent to supervise bids" (art.4(1)), so that the UK was required to place the takeover rules on some sort of a statutory footing. In fact, the proposed change in the legal status of the Panel was the basis for the UK Government's initial opposition to the Directive, despite the fact that the Directive's substantive content was heavily influenced by the City Code.[9] During the EU legislative process changes were made in the draft Directive so as to allay, as far as possible, the Government's fears that the Panel's flexible way of working would be undermined by the statutory basis required by the Directive. The Government's goal when implementing the Directive was to produce a situation in which the Panel could carry on in practice much as before, even though now with its powers derived from statute. Article 4 of the Directive makes it clear, which might otherwise be in doubt, that the designated

authorities may be “private bodies recognised by national law”.[10] Thus, s.942 of the Companies Act 2006 simply confers certain statutory powers upon the Panel but does not seek to regulate the constitution of the Panel, in contrast to the way in which, for example, the constitution of the FCA is regulated by FSMA 2000. The composition of the Panel is to be found, not in legislation, but in the Code itself.[11] It consists of a Chairman and up to three Deputy Chairmen appointed by the Panel itself, up to a further 20 members appointed by the Panel, and individuals appointed by representative bodies of those involved in takeovers, such as the Association of British Insurers, the National Association of Pension Funds, the Association of Investment Companies and other investor groups, the British Bankers’ Association, the Institute of Chartered Accountants and the Confederation of British Industry. The Panel appointees come from similar backgrounds as those of the representative appointees, though they include a former general secretary of a large trade union.

Internal appeals

28–5

However, the Panel’s and the Government’s central concern, when implementing the Directive, was not with the formal status of the Panel but with preserving in the statutory framework its way of working, in particular its freedom to give flexible and speedy binding rulings in the course of the bid, which could not be easily challenged in litigation before the ordinary courts. A particular concern was to discourage “tactical litigation”, i.e. litigation designed to disrupt the bid timetable or to delay the operation of a decision of the Panel which is against the interests of a particular party, but at the same time providing a method of appeal for those with a genuine grievance. Before the implementation of the Directive, this result was achieved through a system of speedy appeal within the Panel itself, coupled with the courts’ adoption of a limited and after-the-event approach to judicial review of the Panel’s decisions. Article 4(6) of the Directive does its best to preserve the viability of this system by providing that:

> “this Directive shall not affect the power of the Member States to designate judicial

> or other authorities responsible for dealing with disputes and for deciding on irregularities committed in the course of bids or the power of Member States to regulate whether and under which circumstances parties to a bid are entitled to bring administrative or judicial proceedings. In particular, this Directive shall not affect the power which courts may have in a Member State to decline to hear legal proceedings and to decide whether or not such proceedings affect the outcome of a bid."

Thus fortified, the relevant government department decided to maintain the Panel appeal system rather than seek to devise a new system.[12] The Panel Executive (i.e. its full-time employees, some of whom are seconded from investment banks, law firms, accountancy firms and similar bodies) gives rulings on the Code in the course of a bid, either on its own initiative or at the request of one or more parties to the bid.[13] Rulings of the Executive may be referred to the Panel's Hearing Committee (or the Executive may refer a matter to the Hearing Committee itself), and disciplinary proceedings for breach of the Code or a ruling may be initiated before the Hearing Committee by the Executive. The Executive may require any appeal to the Hearing Committee to be lodged within a specific period, possibly a period as short as a few hours. The Hearing Committee normally sits in private and operates informally, but does issue public statements of its rulings.

A party to the hearing before the Hearing Committee may appeal to the Takeover Appeal Board, normally within two business days of receipt in writing of the ruling of the Hearing Committee. The Board was formerly known as the "Appeal Committee" and the change of name indicates that the Board is now an organisation independent of the Panel.[14] This is a rather wider right of appeal than existed previously when many appeals required leave of the Appeal Board. The Appeal Board is an independent body, whose chairman and deputy chairman, appointed by the Master of the Rolls, will usually have held high judicial office[15] and whose other members (normally four) are experienced in takeovers. The Appeal Board operates in a similar way to the Hearing Committee, including the publication of its decision. It may confirm, vary, set aside or replace the ruling of the Hearing Committee. This was, broadly, the system in operation before the Act came into force and s.951 requires that system to be maintained. The section requires, as was the previous practice, that a Panel member who is or has been a

member of its Code Committee (responsible for drawing up the Code) may not be a member of the Hearing Committee or Appeal Board. The separation of the Code Committee from the committees involved in administering the Code and the organisational separation of the Appeal Board were responses to the Human Rights Act 1998.[16]

Judicial review

28–6

The second limb of the pre-Directive system for dealing with tactical litigation consisted of restraint by the courts in exercising their powers of judicial review. Article 4(6) (above) of the Directive permits the British courts to maintain their restraint, but, of course, does not require it. The Act does not seek explicitly to regulate the process of judicial review of the Panel by the courts, probably wisely, and so the matter is left to the domestic courts themselves. It was perhaps surprising that the pre-Directive Panel, as a body which, as it was put in *R. v Panel on Take-overs and Mergers, Ex p. Datafin Ltd*,[17] performed its functions "without visible means of legal support", was made subject to judicial review at all. However, that was the step taken in the *Datafin* case on the grounds that the Panel, although then a private body, was performing a public function. Its susceptibility to judicial review is now beyond doubt. Having taken that decision of principle, the then Master of the Rolls set out his "expectations" as to how judicial review of the Panel would operate, emphasising its limitations.

First, it was expected that the Panel would require obedience to its rulings and the parties would abide by them, even if one of them had signalled it was intending to seek judicial review. Secondly, the grounds for review would be limited: an argument that the Panel had propounded rules which were ultra vires was "a somewhat unlikely eventuality"; the Panel in its interpretation of its rules must be given "considerable latitude"; attacks on the Panel's dispensing powers would be successful only in "wholly exceptional circumstances"; and the Panel's exercise of its disciplinary powers would not be open to attack "in the absence of any credible allegation of lack of bona fides". Thirdly, and most importantly, the expectation was that the courts would only

intervene after the bid was concluded (“the relationship between the panel and the court [would] be historic rather than contemporaneous”), perhaps to relieve individuals of disciplinary sanctions, perhaps to deliver a declaratory judgment to guide the Panel in the future. Thus, a party involved in a bid (most obviously the board of the target company) was given little incentive to seek judicial review during the offer in order to secure a tactical advantage (most obviously delay, during which the target’s defences could be better organised), but the Panel was not given an entirely free hand in interpreting the Code or its own jurisdiction.

It seems likely that this attitude of deference on the part of the courts to the Panel (and especially the Takeover Appeal Board) will continue, despite the statutory framework within which the Panel is now placed. The statute does one or two things to encourage the courts in that direction. The Panel is given power to “do anything that it considers necessary or expedient for the purpose of, or in connection with, its functions”, thus protecting the Panel’s vires in its new statutory guise; it is given a wide rule-making power; it is explicitly given a dispensing power; and it is explicitly given the power to make rulings and give directions.[18] Overall, the Government’s policy seems to have been to fit the requirements of the Directive to the existing practice of the Panel, rather than vice versa.[19]

Nevertheless, the fact of putting the Panel on a statutory footing potentially opens up avenues of civil litigation not previously available. The Act seeks to block off these paths to the courts. This seems to be permitted by the further sentence in art.4(6) of the Directive that “this Directive shall not affect the power of the Member States to determine the legal position concerning the liability of supervisory authorities or concerning litigation between the parties to a bid”. Consequently, no action for breach of statutory duty lies in respect of contravention of a requirement imposed by or under the Panel’s rules or a requirement imposed by the Panel to produce information or documents.[20] Contravention of a rule-based requirement does not render the transaction in which it occurs void or unenforceable or affect the validity “of any other thing” (unless the rules so provide).[21] However, civil litigation between the parties is not

entirely excluded by these provisions. A claim based on fraudulent or negligent misstatement, for example, arising out of the documentation put out by bidder or target, is not excluded, but, as we shall see below, such claims were in any event possible before the Directive, though they were, and are, constrained by the general law of misstatement.

Finally, the Panel itself is not liable in damages in connection with the discharge of its functions, unless it was acting in bad faith or there is a claim against it for breach of s.6(1) of the Human Rights Act 1998 (which in the circumstances laid down in s.8 of that Act could lead a court to award damages for breach by a public authority of the rights guaranteed by the European Convention on Human Rights).[22] This protection extends to members, officers and employees of the Panel and any person authorised by the Panel to act under its information disclosure powers. Thus, the risk of tactical litigation is minimised, but cannot be entirely eliminated (see below).

Powers of the Panel

28–7

This and the following section deal with the areas where there has been the biggest formal change in the Panel's position as a result of its being put on a statutory basis. At least the basic elements of the Panel's powers and the sanctions to support them had to be set out in, or provided for by, the legislation, since art.4(5) of the Directive requires that "supervisory authorities shall be vested with all the powers necessary for the purpose of carrying out their duties, including that of ensuring that the parties to a bid comply with the rules made or introduced pursuant to this Directive". Again, however, the aim of the legislation was to reflect, rather than substantially to alter, the Panel's existing methods of working. The main powers of the Panel are as follows.

First, the Panel is given both an obligation and a power to make rules to govern the conduct of bids.[23] Thus, the legislation does not purport to discharge that rule-making function itself but requires or empowers the Panel to do so. The Panel is required to make rules in those areas where the Directive requires Member States to introduce rules, thus ensuring that the UK is not in

breach of its obligations under the Directive, but the Panel is empowered to make rules more generally, a power which is very widely formulated.[24] In consequence, the whole of the Panel's regulatory activity is placed on a statutory basis. It would have been possible to confine the statutory structure to the bids and topics covered by the Directive, leaving the remainder of the Panel's activities to continue on a non-statutory basis, but that was thought likely to cause confusion.[25] The Panel is permitted to arrange for its rule-making power (and, indeed, any of its functions) to be discharged by a committee of the Panel, so that there can be a further stage of delegation before the power to make rules is actually exercised.[26] This reflects the fact that, since the enactment of the Human Rights Act 1998, responsibility for the rules has been assigned to a Code Committee of the Panel and that membership of the Hearing Committee (see above) and of the Code Committee does not overlap. Thus, the "legislative" and "judicial" functions of the Panel have been separated.

Secondly, the Panel "may give rulings on the interpretation, application or effect of rules", in the way described in above, such rulings having binding effect.[27] This is the Panel's "judicial" function. Giving the Panel's rulings binding effect is, of course, new, and the sanctions available to support this provision are discussed below. Further, art.4(5) of the Directive permits Member States to give supervisory authorities powers to waive national rules, either to "take account of circumstances determined at national level" or "in other specific circumstances, in which case a reasoned decision must be required", provided in either case that the derogation does not contravene the general principles laid down in art.3(1) of the Directive (see below). Section 944(1)(b) takes up the former option by authorising the Panel to make rules which are "subject to exceptions or exemptions" in the rules themselves. Section 944(1)(d) takes up this latter option by authorising the Panel "to dispense with or modify the application of rules in particular cases and by reference to any circumstances", subject to the requirement to give reasons. This reflects the Panel's traditional practice to use its dispensing power where a rule "would operate unduly harshly or in an unnecessarily restrictive or burdensome, or otherwise inappropriate, manner".[28]

The rules may, and do, also confer upon the Panel the power to give directions to secure compliance with the rules. In practice, this is a very important power for the Panel. Having identified a breach of the rules, its focus in practice is on requiring remedial action which will enable the bid to continue in the normal way.[29] This is the great virtue of having a regulator which can give rulings during the course of a bid, as contrasted with a body which comes to the matter only after the bid has succeeded or failed and so no longer has the possibility of getting the transaction back on track.

28–8

Thirdly, the Panel may require a person by notice in writing to produce to it specified documents or to provide specified information, where such disclosure is "reasonably required in connection with the exercise by the Panel of its functions".[30] This again is a new legal power for the Panel, which in the past has been able to survive without it. There is the usual protection for legal professional privilege (or confidentiality of communications in Scotland).[31] There is also the usual requirement that the Panel keep confidential information disclosed to it (whether under the compulsory disclosure power or not) which relates to the private affairs of an individual or to any particular business. A person who breaches this requirement is guilty of a criminal offence unless that person had no reason to suspect that the information had been provided to the Panel in connection with its functions or that the person took all reasonable steps and exercised all due diligence to avoid disclosure in breach of the statute. However, this confidentiality provision is subject to the usual long list of permitted "gateways" for disclosure of the information to other official bodies, and to disclosure by the Panel itself for the purpose of facilitating the carrying out of any of its functions (so that some such information may be found in the public rulings of the Hearing Committee or Takeover Appeal Board).[32]

Sanctions

28–9

Thus, the Act confers upon the Panel three core powers: to make rules for takeover bids, to interpret those rules and to require the

disclosure of information. None of these functions is new for the Panel: all were previously carried on, though without legislative support. Having put those powers in place, the statute was required by the Directive to go on and provide sanctions for non-compliance with them on the part of bid participants. As a self-regulatory body and, in particular, as a body with not even a contractual relationship with those involved in takeovers, whether as participants or advisers, the Panel's formal sanctions were previously extremely limited. The Panel itself could administer only a private reprimand or public censure if there was non-compliance with the Code. For more pressing measures it was dependent on the action of other regulatory authorities, such as the Department of Trade and Industry, the FCA or the Stock Exchange. However, these bodies, even if willing to act, might not have appropriate sanctions at their disposal.[33] In the early days of the Panel such problems threatened the Panel's credibility and even its future, but gradually the Panel gained acceptance for its rulings, partly because of a realisation among advisers in particular that an ineffective Panel was likely to lead to the transfer of its functions to a statutory regulator.[34] Further, the Panel's relationship with the FSA in particular was placed on a more explicit footing when FSMA was enacted in 2000.[35]

Perhaps the strongest expression of the new policy of giving the Panel statutory sanctions is to be found in s.955 which confers upon the Panel a power to apply to the court (High Court or Court of Session) where a person has contravened or is likely to contravene a requirement imposed by or under a Code rule or has failed to comply with a disclosure requirement under the statutory provisions just discussed. The court may then make such order as it thinks fit to secure compliance with the requirement, which order will be backed by the sanctions for contempt of court. The Panel, no doubt, expects not to have to make use of this new power, just as it has operated effectively in the past without it.

One important question which arises is whether this section will provide an avenue whereby a party can obtain judicial scrutiny of the Panel's or Appeal Board's rulings during the course of the bid. Of course, the decision to apply to the court for an enforcement order is in the hands of the Panel, so that a

party cannot trigger the procedure.[36] However, if the Panel does so apply, the question will be whether the courts in this new context will maintain the after-the-event approach which has been adopted for judicial review and simply enforce the Panel's ruling without scrutinising its legality or without scrutinising it rigorously. This may be a more difficult line for the court to take where the court's order is backed by the sanctions for contempt of court than when the Panel's rulings lacked extensive formal sanctions. Further, if the question is raised whether the Panel's ruling is compatible with the Directive, the court would have to consider making a preliminary reference to the Court of Justice of the European Union (with all the delay that implies).

28–10

The statute places at the disposal of the Panel two other important sanctions, relating to compensation and discipline, but they both require adoption by Panel rules in order to be brought into force. Section 954 provides that the rules may confer power on the Panel to order a person to pay such compensation as it thinks just and reasonable if that person is in breach of a rule "the effect of which is to require the payment of money". This power thus falls short of a general remit to require compensation for breaches of the rules, but it covers the situations where in the past the Panel has required monetary payments.[37] The Code now applies this section to those rules which determine the price at which an offer has to be made or the form of the consideration (for example, where cash or a cash alternative is required).[38]

As to discipline, there is a general provision in s.952 that the rules may give the Panel the power to impose sanctions on a person who has acted in breach of the rules or of a direction given by the Panel to secure compliance with the rules (see above). This is the section on which the Panel now bases its disciplinary powers, which are exercised, except in case of agreement with the offender, by the Hearings Committee (with appeal to the Takeover Appeal Board). The Code sets out the Panel's disciplinary powers and they are the established ones of private or public censure, reporting the offender's conduct to another body for that body to take action against the offender if thought appropriate, and triggering the "cold shouldering" of the offender.[39] It is clear that s.952 permits the rules to adopt a wider

range of penalties, notably financial penalties of the type available to the FCA. However, where the Panel adopts a sanction of a kind not previously provided for by the Code, it must produce, again following the FCA model, a policy statement with respect to the imposition of that sanction and, in the case of a financial penalty, the amount of the penalty.[40] So far, the Panel has not ventured into this territory.

The "cold shoulder" and criminal sanctions

28–11

Where the Panel reports conduct to a third party, it is up to that regulator (domestic or overseas) or a professional body to decide whether it is appropriate to take further action. The most likely recipient of such a report from the Panel is the FCA. The FCA might conclude that a person who has broken the Takeover Code is also in breach of its obligations under the FCA's rules and impose sanctions upon that person. The persons most obviously within the FCA's scope are those who need its authorisation to carry on their professional activities within the financial services sector. This will cover the principal advisers to bidders and target companies (notably investment banks) but not bidder and target companies themselves or their directors. To deal with this lacuna, a system of FCA-required "cold shouldering" was introduced in FSMA 2000 and is carried forward under the new arrangements. Cold shouldering involves advisers within the scope of the FCA's powers being required not to deal with those who are likely not to observe the Code. In this situation, there is no suggestion that the adviser is in breach of the Code. Indeed, the "cold shoulder" operates generally and covers all those who might act for persons likely not to observe the Code, whether they have acted for that person in the past or not. In this way, the range of the FCA's sanctions is extended to companies and their directors: if they act, or are likely to act, in breach of the Code, they may find that they are denied the facilities of the City of London in relation to takeover bids. The FCA's rules, as contained in its Code of Market Conduct ("MAR"), require firms not to act in connection with transactions to which the Takeover Code applies if they have reasonable grounds to believe that the person in question is not likely to act in accordance with the

Takeover Code.[41] The Hearing Committee has the power, as a disciplinary sanction under the Code, to make a public statement that a person is, in its view, not likely to comply with the Code. In such a case the FCA "expects" that the above rule will require the firm not to act for the person in question.

28–12

Apart from the sanctions which the Act places in the hands of the Panel, the legislation creates a criminal offence in addition to the one we have already discussed in relation to the disclosure of confidential information. This concerns non-compliance with the Code's rules on bid documentation. As we shall see below, much of the Code is concerned with specifying the information a bidder or target must provide, and failure to comply with these rules will clearly fall within the powers and sanctions of the Panel, discussed above. It is also the case that there might be civil litigation between those involved in the bid in the case of misstatements in the bid documentation. Despite this, the Government was convinced that the Directive's (standard) requirement that the sanctions provided for breaches of the transposing national rules should be "effective, proportionate and dissuasive" (art.17) necessitated an additional criminal sanction to be provided in domestic law. The Government feared that inadequacies in the bid documentation might emerge only after the bid had been completed (and when the Panel might be reluctant to involve itself again) so that the Panel's sanctions could not be relied upon, whilst the possibilities of civil litigation were uncertain. Consequently, s.953 creates a narrow criminal offence. It applies only to offers for companies whose voting securities are quoted on a regulated market (which is the scope of the Directive) and it imposes liability on a person only if he knew the offer documentation did not comply with the Code's requirements (or was reckless as to that) and failed to take all reasonable steps to secure compliance. In the case of a response document, the liability falls on any director or officer of the target company; in the case of an offer, which need not be made by a company, on the person making the bid and, in the case of a bid by "a body of persons", any director, officer or member of the body who caused the document to be published. Typically, this will be the directors and officers of the bidder

company.[42]

Overall, the policy of the Act in relation to the Panel and the Code can be said to have been that of "replicating, to the greatest extent possible, the Panel's current jurisdiction, practices and procedures within a statutory framework".[43]

The Scope of the City Code

28–13

The scope of application of the City Code (i.e. the types of companies and types of transactions to which it applies) is wider than that of the Directive. The latter applies to public offers to the holders of securities in the target company, where those securities are traded on a regulated market in the EEA and where the objective of the offer is to secure control of the target company.[44] For present purposes it is enough to equate a "regulated market" in the UK with the Main Market of the London Stock Exchange. The Code is not confined to companies whose securities are traded on a regulated market (and thus covers companies whose securities are traded on AIM) and it takes in certain transactions which are analogous to public offers. The expanded scope of the Code (or, alternatively put, the narrow scope of the Directive) would raise no particular problems in the light of the decision (discussed above) to put the whole of the Panel's operations on a statutory footing, were it not for the fact that the two take a different approach to the regulation of takeovers which have a cross-border element. The approach of the Directive, as laid down in art.4, is to divide jurisdiction in such cases among the relevant regulators. By contrast, the Panel's approach, as a national body, is either to accept jurisdiction over all aspects of the offer or not to accept it at all. Consequently, it is necessary to identify not only the offers to which the Code applies (anything outside this set is not regulated at all by the Code) but also the narrower set of offers to which the Directive applies, at least in cross-border takeovers, in order to establish the precise jurisdiction of the Panel (is it all or only some aspects of the bid process?).[45]

Transactions in scope

28–14

Let us turn first to the range of transactions covered. The crucial point here is that the Directive applies only to the core method of implementing a takeover, namely a public offer by the bidder to the holders of the securities of the target, which “follows or has as its objective” the acquisition of control of the offeree company (art.2.1(a)). This is, at bottom, a contractual mechanism. The Code traditionally has applied more widely, i.e. beyond takeover offers, though obviously it includes them. It is, in fact, not uncommon for non-hostile takeovers to be implemented in the UK via a scheme of arrangement, to which the Code in principle applies.[46] The scheme of arrangement, which is not confined to control-shift transactions, is discussed in Ch.29, but the essence of the scheme, when used as a substitute for a takeover offer, is that the company, through a decision of its shareholders in general meeting, adopts a proposal the end result of which is the same as that achieved by the contractual offer (the shares in the target company end up with the bidder and the shareholders receive a consideration in exchange). The scheme has certain advantages in the case of a non-hostile offer (notably that all the shareholders are bound once the scheme is adopted and approved by the court), so that the squeeze-out mechanism referred to later in this chapter does not have to be used. However, technically the offer is implemented not through each individual shareholder’s decision to accept a contractual offer made for the transfer of their shares but by the shareholders collectively, acting as the company, voting to adopt a scheme of arrangement. In this case, a mechanism of corporate law is used to effect the takeover. For this reason, a takeover effected by a scheme of arrangement appears not to fall within the Directive’s definition of a takeover,[47] so that a scheme is outside the scope of the Directive, even if it involves companies whose securities are traded on a regulated market. For this reason, the jurisdiction splitting provisions of the Directive will not apply to a takeover effected by a scheme of arrangement which has a cross-border element, which may itself be regarded as an advantage by the parties involved.

The Code also applies to offers by a parent company to acquire outside shares in its subsidiary. It is unclear whether this transaction is within the Directive because it is not clear how

closely the Directive requires the public offer to "follow" the acquisition of control. The Code applies as well to other mechanisms which have "as their objective or potential effect (directly or indirectly) obtaining or consolidating control". This covers a wide range of possible methods, not involving a general offer to acquire securities, such as the issue of new shares and share capital reorganisations, which, if structured appropriately, could shift control of the company into new hands. Although not much invoked in practice, the inclusion of these analogous control-shift mechanisms removes any temptation for the parties to seek to avoid the Code's provisions by adopting one or other of them.

Companies in scope

Full jurisdiction to the Panel

28–15

The range of companies within scope of the Directive or the Code is defined by focusing on the status of the target company. Let us look first at the cases where the Panel will be the sole regulator, i.e. where the target is what might be called a purely UK company. The Code divides such companies into two categories.[48] The first category consists of those companies incorporated in the UK (i.e. they have their registered offices in the UK) and having any of their securities admitted to trading on a regulated market or multilateral trading facility (such as AIM) in the UK.[49] The second category consists of companies registered in the UK, which do not have their securities traded on a public market in the UK but do have their place of central management and control within the UK. Whereas the first category is necessarily confined to companies which are public in the Companies Act sense of the term, the second category is capable of embracing private companies. However, private companies are brought within the Code only where in the previous decade their securities have been traded in a public or semi-public way or a prospectus has been issued in relation to them. In quantitative terms, the second category is subject to takeover offers, but their inclusion at least means the Code's provisions cannot be evaded by first de-listing the target company from a public market.

Thus, the Panel's sole jurisdiction extends far beyond companies traded on regulated markets. Before the adoption of the Directive, the Code applied only to companies "resident" in the UK, i.e. both incorporated in the UK and having their central management in the UK. That requirement for jurisdiction was ruled out by the Directive in the case of UK companies traded on regulated markets and the Code has now abandoned it in respect of companies traded on multilateral trading facilities. To this extent, the Directive expanded the jurisdiction of the Panel compared to the pre-Directive position. However, the residence requirement has been retained in relation to the second category of companies.[50]

Divided jurisdiction

28–16

In the above cases Panel has jurisdiction over all aspects of the bid. In the cases now to be examined the Panel's jurisdiction will be shared with another regulator, because there is some "cross-border" element in the target. This division results from the approach adopted by art.4 of the Directive. Because division of competence is a Directive concept, it applies only to bids for target companies whose securities are traded on a regulated market. The issue arises where the two factors the Directive uses to identify its scope (incorporation in the EU; trading on a regulated market in the EU) are satisfied in different jurisdictions, for example, a target incorporated in one Member State but having its securities traded on a regulated market in another Member State. The Directive could have allocated jurisdiction wholly to the State of incorporation, as is done with the Prospectus Directive,[51] but this is hardly feasible with takeover regulation, which involves much more than information disclosure and is in parts intimately related to the operation of the market on which the target's securities trade. Alternatively, jurisdiction could have been allocated wholly to the State where the target's securities trade. In fact, art.4 of the Directive appears initially to proceed in this way by identifying the competent authority to supervise the bid as the one in the Member State where the company's securities are admitted to trading on a regulated market (even if the company is incorporated

elsewhere). If the securities are admitted to trading on a regulated market in more than one Member State, the competent authority is the State where the securities were first admitted. If the securities are admitted to markets in more than one Member State (other than the State of incorporation) simultaneously, the company makes the choice of competent authority from among the various Member States, but must do so in advance, that is, the choice must be made on the first day of trading, and the choice seems subsequently to be unalterable.[52]

However, art.4(2)(e) then proceeds to say, not simply that the takeover rules of the Member State of incorporation shall be the operative ones for certain matters, but also that in respect of those matters the competent authority shall be that of the State of incorporation. In this way, the Directive does end up with a divided jurisdiction. In particular, what the Directive refers to as “company law” matters are allocated to the competent authority of the State of incorporation. These include the definition of the threshold at which a mandatory bid shall be launched and any derogations from the obligation to launch such a bid, the rules governing frustrating action by the directors of the target company and the provision of information to employees. By contrast, the competent authority of the Member State where the securities are traded will deal with the rules relating to the price to be offered, bid procedure, disclosure and the contents of the offer document.

For the Panel this means that (a) where a company is incorporated in the UK but traded on a regulated market in another EEA Member State, the Panel will deal with the “company law” aspects of the bid, including the rules on information to be provided to employees. (b) Where the company is incorporated in an EEA Member State (other than the UK) but traded only on a regulated market in the UK, the Panel will deal with the “bid procedure” aspects of the offer. (c) Where the company is incorporated as in (b) but traded on regulated markets in more than one Member State of the EEA, including the UK but excluding its state of incorporation, the Panel will be the competent authority to deal with the “bid procedure” aspects of the offer, provided the UK is the state of first admission or has been chosen by the target in the case of

multiple first admissions.[53]

28–17

The division of applicable rules and competent authorities is very important, both because the Directive itself gives the Member States significant choices about how they implement the Directive's provisions and because Member States are free to add to those provisions in many cases. For example, as we have noted,[54] the UK has a strong "no frustration" rule, which a company incorporated in the UK will be subject to even if its shares are listed and its shareholders mainly located in a jurisdiction where this rule is not applied; whereas a company incorporated in a Member State which does not impose the "no frustration" rule will not become subject to it by listing its securities on a regulated market in the UK.

Finally, it should be noted that, for the Directive to apply the target company must be both incorporated in a Member State of the EEA and have some of its securities traded on a regulated market in the EEA.[55] However, the Code, as we have seen, does apply to target companies incorporated and having their central management and control in the UK, no matter where, or indeed whether, their securities are publicly traded. Thus, a bid for a company incorporated outside the EEA will escape British regulation even if its securities are listed on a public market in the UK; whilst a bid for one which is incorporated in and has its central management in the UK will be regulated by the Panel, even if its securities are traded on a public market outside the EEA or, even, on a non-regulated market within the EEA (but outside the UK). For this reason, no doubt, s.950 requires the Panel to co-operate not only with foreign national authorities designated for the purposes of the Directive but also with any foreign regulator that appears to exercise functions similar to those of the Panel.

The Structure of the Code

28–18

The Code consists, in its eleventh edition of 2013 (as amended), and always has consisted, of a small number of General Principles and a larger number of Rules. Currently, there are six

General Principles ("GPs") and 38 rules. Before the amendments made in 2006 to accommodate the Directive, there were 10 General Principles and the same number of rules as currently. The current six GPs are simply a copy out of the general principles laid down in art.3 of the Directive. The decision simply to substitute the Directive's GPs for those previously in place seems to have been driven in part by the consideration that the Panel's derogation powers must be exercised in such a way as not to contravene the Directive's GPs. It was thought that the cleanest way of implementing this requirement was to simply adopt the Directive's list of GPs.[56] The original notion behind the GPs was that they constituted high-level standards, compliance with which was required even though no specific rule of the Code had been broken. This was thought to be a desirable regulatory technique because, as it was put in the seventh edition of the Code, "it is impracticable to devise rules in sufficient detail to cover all the circumstances which can arise in offers".[57] However, the reduction in the number of GPs in the current Code has somewhat reduced the force of this regulatory argument, not simply because the current GPs cover less ground than those previously in place and because, where they cover the same ground, the Directive's GPs are in general more weakly expressed, but also because the Rules have been amended to take account of the loss of coverage at GP level.[58] This movement of material between GPs and Rules casts some doubt on the significance of the distinction between those two types of norm.

In any event, it is also the case that, over successive editions of the Code, the Rules had become more detailed and elaborate, so that the gap-filling rationale given for the GPs had become less convincing. The Rules acquired sub-rules and both acquired "notes", some of which are prescriptive and not just explanatory. It is perhaps not surprising that the view just quoted about the role of GPs is not repeated in the current version of the Code. The best view is probably now that the GPs are there because the Directive requires them to be and that they serve to highlight some, but not all, of the fundamental principles underlying the Code. It seems likely in the future that the Rules will continue to grow in importance in comparison with the GPs. Both Rules and GPs are interpreted by the Panel purposively,[59] so that no penalty in terms of rigidity of interpretation is paid by dealing with a

matter in the Rules. Further, if the content of the GPs is effectively controlled by the Directive, the responses to domestic pressures for change or elaboration of takeover regulation will have to be revealed in changes to the Rules. Such changes in the Rules can be readily made through the Code Committee of the Panel, whose task it is to keep the Code under review and to propose changes, after public consultation,[60] whereas, on the Panel's current approach, changes to the GPs would require legislation at EU level.

The current General Principles are as follows:

1. All holders of securities in the offeree company of the same class must be afforded equivalent treatment. Where a person acquires control of a company, the other holders of securities must be protected. These are the two limbs of GP 1 and they constitute a partial expression of a more elaborate notion of equality which underlies the Code and which is discussed below.

2. Holders of securities in the offeree company must have sufficient time and information to enable them to reach a properly informed decision on the bid. When advising the shareholders, the board of the offeree company must give its views on the effects of the implementation of the bid on employment, conditions of employment and the location of the company's place of business. The first part of GP 2 is clearly central to any takeover regulation; the second part, specifically requiring the provision of employee-related information, constitutes a relatively minor protection of the interests of the employees. They or their representatives are given no formal role in the takeover decision, but the provision of the required information may enable them to apply pressure outside the formal requirements of the Code. Although the second part of the GP is conditional upon the board of the offeree company giving advice to the shareholders of the target company, in fact, as we shall see, the Code requires such advice to be given.

3. "The board of an offeree company must act in the interests of the company as a whole and must not deny the holders of securities the opportunity to decide on the merits of the bid."

The phrase “the company as a whole” is, as ever, ambiguous as to whether it means only the shareholders as a whole or includes stakeholder interests.[61] The answer to that question may not be very significant since the second part of the principle puts the decision on the bid in the hands of the shareholders, to whom the “company as a whole” duty does not apply. As already noted, the allocation of the decision on the bid as between target board and target shareholders is a crucial question for takeover regulation. The City Code has always allocated that decision to the shareholders, though, somewhat oddly, the Directive permits Member States to opt out of art.9 of the Directive, which gives effect to GP 3 (see below).

4. False markets should not be created, whether in the securities of the offeror, offeree or any other company concerned in the bid.
5. An offeror may announce a bid only if has ensured that it can meet in full any cash consideration payable and after taking “all reasonable steps” to secure the implementation of any other type of consideration. Thus, offers may be opportunistic in some ways (for example, a bid for a target which is suffering from a temporary set-back) but not in terms of financing.
6. The offeree company should not be hindered in the conduct of its affairs by the bid for longer than is reasonable. This is a GP not expressed in the Code before the transposition of the Directive, though the policy underlying it was certainly implemented in the Code, and so it was rather odd that it was not there. The point is that a bid is likely to cause the senior management of the target to divert their attention wholly to the bid from the moment it is imminent to the point where it succeeds or fails, so that there is a strong argument that this distraction from the other aspects of company’s activities should be subject to limits.

The Allocation of the Acceptance Decision

28–19

As already indicated at the beginning of this chapter, a, perhaps

the, crucial question for takeover regulation is whether the decision on the bid should be that of the shareholders alone or one to which both shareholders and the target board must consent. Allocating the decision to the shareholders alone facilitates the creation of a market in the control of companies, which acts as a powerful incentive for the managements of companies, at all times and not just when a bid is imminent, to act in the interests of the shareholders. Bidders are able to make "hostile" takeover offers, i.e. offers which the board of the target opposes but which it is not able to prevent being put to the shareholders. The market in corporate control is probably a much more powerful mechanism for the promotion of the interests of shareholders than all the corporate governance techniques discussed in Part Three of this book, including the law of directors' duties. On the other hand, some have argued that the threat of a takeover makes management too responsive to shareholder needs, in particular by inducing management to take a short-term view of the company's success, which may be detrimental to the longer term development of its business and thus to the long-term interests of the shareholders themselves. Those taking this latter view would wish to permit management to have some say in whether the bid is successful and would not allocate the decision wholly to the shareholders. Those concerned about the impact of takeovers on non-shareholder groups, notably employees, tend to support this managerialist stance, as being the best protection they can secure in the absence of a stakeholder input into the acceptance decision.[62]

Since the standard takeover transaction is necessarily one between the bidder and the shareholders of the target company (there is no corporate decision), how can the board of the target company, which is not a party to the transaction, have a say on whether the bid is to succeed? The answer is that the board has many possibilities to exercise its general powers of management so as to discourage an offeror from making or continuing with a bid. Thus, the question is whether, in the particular context of a takeover bid, the board should be permitted to use its normal management powers, for example by issuing new shares to a friendly investor or by disposing of assets the bidder is anxious to acquire. This is usually referred to as the issue of whether takeover regulation should adopt a "no frustration" rule, i.e.

whether the board of a target is to be prohibited from taking action which constrains the freedom of the shareholders as a whole to decide to accept an offer, even though such action would normally be within the scope of the board's powers of management. This issue needs to be addressed at two different points of time: when a bid is imminent and when no bid is in prospect. The reason for this distinction is that the imposition of a strict no frustration rule is feasible once a bid is imminent, because it will operate only so long as the bid is current. The imposition of a strict "no frustration" rule where no bid is imminent (i.e. at all times) would limit the board's powers of management in a way which is undesirable even from the shareholders' point of view (because it reduce the benefits shareholders obtain from centralised management), whilst the risk of self-serving decisions by management is less severe when a bid is not imminent. Thus, even those in favour of the "no frustration" principle would not necessarily want the same rules to apply both pre- and post-bid. In the UK this distinction in point of time is reinforced by a division in terms of regulatory responsibility, for the Takeover Code applies only once a bid is imminent.

Post-bid defensive measures

28–20

The Code has always adopted a strong "no frustration" rule, thus helping to make the UK a very active takeover market. The principle used be expressed in GP 7, which said that after a bona fide offer had been communicated to the board of the target or the board had reason to believe that such an offer was imminent, no action might be taken by the board without the approval of the shareholders in general meeting which could result in the offer being frustrated or to shareholders being denied an opportunity to decide on its merits.[63] This language no longer appears in the GPs, though there is a paler version of it in the current GP 3. In a strong example of the GP to Rule transfer brought about by the Directive, however, this exact formulation can be found in r.21.1(a) of the current Code. This rule makes it difficult for the existing controllers to erect any of the defences against being ousted from control by an unwelcome takeover

unless they have succeeded in doing so in advance of a threatened takeover. Even then, the pre-bid defence must be one that does not require board action post-bid, for the post-bid action will be caught by r.21.[64] It is a particularly strict rule. Unlike the common law relating to improper purposes,[65] r.21 requires shareholder approval for any action proposed by the directors of the target company which could have the result of preventing the shareholders of the target company from deciding on the merits of the bid. Whether the directors of the target had this purpose in mind or whether it was their predominant purpose in proposing the action in question is beside the point under the rule. The rule looks to consequences, not to purposes. Equally important, the rule requires shareholder approval to be given for the specific defensive measure proposed by the target board and thus to be given in the context of the bid; it cannot be given in general and in advance of the bid.

Rule 21.1(b), together with r.37.3, spells out some common specific situations where the approval of the shareholders will be required, for example, in relation to share issues; acquisition or, more likely, disposals of target company assets of a “material amount”[66]; entering into contracts other than in the ordinary course of business (which may include the declaration and payment of interim dividends); and the redemption or purchase of shares.[67] But r.21.1(a) covers any frustrating action, whether specifically mentioned in the rules or not, and it has been held by the Panel to cover even the initiation of litigation on behalf of the target once an offer is imminent.[68] The overall effect of the rule is to reduce the defensive tactics available to the management of the target company to three general categories: convincing the shareholders that their future is better assured with the incumbent management than with the bidder; persuading the competition authorities, at national or EU level, that the bid ought to be referred on public interest grounds; and encouraging another bidder to come forward as a “white knight” and make an alternative offer to the shareholders. In all three situations the directors of the target are thrown back on their powers of persuasion: in all three cases the final decision on the success of these defensive moves rests with others. However, the board of the target company is not required as a general rule to co-operate with the bidder and to smooth its path. Rule 21 is

framed by way of stipulations about what the board must not do, not about how it should act positively. Thus, the board may find itself in a stronger negotiating position than r.21 might suggest if either (a) a recommendation in favour of the offer from the target board is, for one reason or another, important to the bidder; or (b) the bidder needs the target board's cooperation to launch the bid. We discuss such situations below under "bid procedure".

The requirement for shareholder approval for frustrating action is reflected in art.9 of the Directive, but this is one of the articles out of which Member States are permitted to opt by choosing not to apply the "no frustration" rule to companies within their jurisdiction. Not surprisingly, the UK chose not to opt out, since art.9 reflects the established policy of the Code. However, there is a further issue about opt outs from the no-frustration rule. Although not completely clear on the point, art.12(3) can be interpreted so as to permit Member States to permit companies to opt out of the no-frustration rule of art.9 in limited circumstances, namely, when faced with a bid from a company to which art.9 does not apply (for example, because the bidder is from a Member State which has opted out of art.9). This is the so-called "reciprocity" principle, i.e. a target should be subject to the ban on frustrating action only where the bidder is subject to it. However, the UK chose not to adopt this more limited form of company-level opting-out either, on the grounds that it was not part of the existing Code structure and that the benefits to the UK of an open market for corporate control obtained even if the bidder is not an available target.[69]

In short, r.21 is a mandatory rule out of which companies may not opt, either generally or on a reciprocity basis. It is arguable that a strictly mandatory "no frustration" rule does not fit well with policies to encourage shareholder engagement, as discussed in paras 15–30 et seq. There may be a case for permitting the shareholders of the company, by an appropriate majority, to opt out of the "no frustration" rule for a period of time. This would enable the management of a company to embark on the implementation of a strategy which might not benefit the share price in the short-term, secure in the knowledge that they would be free from the risk of an opportunistic takeover offer, at least

where the shareholders also conferred upon the board the power to put in place an effective takeover defence.

Defensive measures in advance of the bid

28–21

This is an area where the Code does not operate. Rule 21 applies only once the "board has reason to believe that a bona fide offer might be imminent". Before that point regulation is left to general company law,[70] which, however, has not developed a single rule to deal with pre-bid defensive tactics. Rather, a number of rules may be relevant, depending upon the precise action the directors of a potential target company wish to take. The most general of these company law rules is s.171 of the Companies Act requiring the directors to exercise their powers for a proper purpose or to obtain shareholder approval of action not proposed for a proper purpose. As we have noted in relation to pre-bid defences, however, because that section focuses on the directors' purpose, rather than on the effects of their acts, and indeed on their predominant purpose, where there is more than one, the section is a weaker control than r.21. Provided there is a commercial justification which the directors can plausibly put forward as the predominant purpose of their action, it will be difficult for a shareholder to challenge it on the grounds that an effect of the decision will be to make the company less attractive to a bidder or less easy to acquire. In the absence of a current bid, there is also less incentive for a shareholder to seek to challenge the directors' action through a derivative action. An example of a board decision, having the effect of making the company less easy to take over but having also a plausible commercial justification, might be the creation of a joint venture with another company, to which each commits part of its existing assets, on terms that a change of control in either partner permits the other partner to buy the first partner out.[71] Alternatively, the board of a company might seek to make it less attractive to a bidder by gearing up its balance sheet (i.e. altering the ratio of debt to equity in the company's financial structure) and distributing the immediate gains of that exercise to the shareholders, on the basis that the opportunity of carrying out this exercise is what makes the company attractive to a private

equity bidder. It is not surprising that s.171 is less stringent than r.21. Rule 21 is very restrictive of managerial initiative, because of its requirement for shareholder consent. This is a policy which may be sustainable for the short period after a bid has been launched and before its fate is decided, but applied to corporate decision-making across the board it would subvert the delegation in the articles of managerial powers to the board whenever a decision might have the effect of making the company a less attractive bid target.[72]

Other rules can be pointed to which require shareholder consent in specific circumstances for pre-bid defences. Thus, s.551 requires shareholder authorisation for decisions by the directors of public companies to issue shares or to grant rights to subscribe for or convert any security into shares.[73] This section, together with the improper purposes doctrine, makes it much more difficult for a British company to adopt a US-style “poison pill” or “shareholder rights plan”. In the US the efficacy of that device depends crucially on the board being able to adopt the plan without the consent of the shareholders and upon the courts not regarding the adoption of such a plan as a breach of fiduciary duty on the part of the directors. Section 551 lays down the principle of shareholder consent for the conferment of such rights, and a poison pill might well be regarded by British courts as falling foul of the proper purposes doctrine, since the pill has no commercial rationale except in the context of the bid and its role then is simply to make it very unattractive for a bidder to put an offer to the shareholders of which the target board does not approve.[74] However, s.551 is again a less rigorous provision than r.21 of the Code, because it allows shareholders to approve the issuance of shares by directors up to five years in advance, though institutional shareholders are in fact reluctant to give a blank cheque to the directors for such a long period. Asking shareholders to approve share issues in advance, for which permission there may well be good commercial reasons, does not focus shareholders’ attention as sharply on the potential costs to them as where approval is required, as under r.21, in the course of a bid, when the shareholders know the terms of the offer they will be rejecting if they adopt the defensive measures.[75]

However, it should be noted that pre-bid and post-bid

defensive measures do not fall into fully separate categories. For example, a pre-bid defensive tactic (obtaining authority to issue shares to defeat a bidder) which requires action by the directors post-bid (actually to issuing the shares) will be caught by r.21 at the point of exercise of the share-issue power. Thus, r.21 has some chilling effect on pre-bid defensive measures despite its post-bid operation.

The break-through rule

28–22

The drafters of the Takeover Directive, however, were concerned with a different form of pre-bid defensive measure. This was the creation by companies of capital structures in which the voting rights attached to equity shares are not proportionate to the economic interests held by the equity shareholders, or where there were restrictions on the transferability of the shares. Both arrangements make future bids less likely to succeed, in the former case because the voting shares may be concentrated in the hands of those, for example members of the founding family, who oppose a change of control in principle; and in the latter because it may simply not be possible for shareholders to accept the bidder’s offer. A disjunction between voting and economic rights can be achieved in a number of different ways, of which the most obvious are the creation of a class of non-voting equity shares or a class of shares with multiple voting rights. Let us assume that in each case there is also a class of equity shareholder having one vote per share, but with rights and obligations otherwise the same as those of the other class of equity shareholder. In the case of non-voting shares, the class with one vote per share will control the company, even though they have contributed only a part of the company’s equity share capital. In the case of multiple vote shares, this class will have a disproportionate influence over (perhaps even control) the company, even though the holders of the shares with multiple votes have not contributed a proportion of the company’s equity capital that is equivalent to their votes. In either case, by ensuring that the voting or multiple voting shares are in “friendly” hands, no bid will succeed, even if a majority of the equity shareholders (by capital contributed)

would wish it to.

In the discussions on the drafts of the Takeover Directive the concern was with deviations from the proportionality principle in the specific context of takeovers. The "Winter group",[76] to whom the issue was referred by the EU, wished, putting the matter broadly, to assert the mandatory operation of a "one share, one vote" rule in two bid situations. These were: (a) any vote by shareholders called to approve or not post-bid defensive measures; (b) at a general meeting called after the bidder has acquired a specified proportion of the company's equity for the purpose of installing its own nominees as directors of the target or changing the target's articles of association. This so-called "breakthrough" rule would also apply to restrictions on the transferability of shares, whether to be found in the company's articles or in contracts with or among shareholders. The aim of the break-through rule was to render nugatory the defensive qualities of the capital structures or of the transfer restrictions once a bid emerged. This was a controversial proposal, which was ultimately implemented in art.11 of the Directive only in an optional form.

28–23

There is no doubt that the issue identified in art.11 of the Takeover Directive is an important one. To take an extreme example, r.21 of the Code, requiring shareholder approval of post-bid defensive measures, would be of little value if the company's articles allocated the voting rights on such a question entirely to the board of the target company. However, this theoretical problem has never loomed large in British policy-making. As we have seen in Ch.23 there is nothing in British law that prohibits or regulates such capital structures. Nevertheless, they are uncommon, mainly because of the opposition of institutional shareholders to acquiring non- or limited-voting equity shares. This is not to say that such capital structures do not exist in British companies, but that, broadly, where they continue, institutional shareholders have been convinced that there is a good reason for that situation. In other words, the solution to the problem in the UK has traditionally been market-led rather than to be found in the law, and British law, in consequence, has not regulated disproportionate voting

arrangements, either generally or in the context of a takeover bid, for example, through a break-through rule. In those Member States which make extensive use of disproportionate capital structures or restrictions on transfer, there was strong opposition to an EU rule which would set them aside, even in the limited, if important, context of a takeover bid. The result was that art.11 of the Directive, like art.9, was made optional for the Member States at the final point in the EU's legislative process.

The British Government decided to opt out of art.11 (not to apply it to UK companies), contrary to its decision in relation to art.9. However, in policy terms the reasoning was consistent, i.e. the choices made in relation to both articles reflected the prior position in UK law.[77] One might think, therefore, that the break-through rule needs no further attention in this book. Unfortunately, art.12, which provides for the opt-out, also stipulates that where a Member State has opted out, it must permit opting back in on a company-by-company basis.[78] In short, a company may override the decision of the Member State to opt out of art.11, so far as that particular company is concerned. Article 12 further provides that Member States may permit companies, which have opted back in, to opt out again on the reciprocity principle, i.e. when faced with a bid from a company that is not subject to art.11. Here, as with art.9, the British Government decided not to permit opting out at company level on the basis of the reciprocity principle, though, as we shall see, the decision on the part of a company to opt into the break-through rule is reversible under certain conditions. Thus, the choice for a company incorporated in the UK and having its securities traded on a regulated market is, during any single period of time, to be wholly within or wholly outside the break-through rule. This choice, which the Directive requires to be provided, is given not in the Code, but in the Companies Act (in Ch.2 of Pt 28), since it involves the amendment of vested rights, and the choice is made available only to companies falling within the Directive's scope, i.e. companies with voting shares admitted to trading on a regulated market.

28–24

The eighth edition of this book dealt with the break-through rule in some detail.[79] However, it appears that no UK company has

chosen to opt into the break-through rule and so a shorter treatment is justified in this edition. A number of reasons could be put forward for this lack of take up of the break-through rule by individual companies. First, the incentives to do so are not strong. As already indicated, disproportionate voting rights are not a major issue in the UK. A company which has them has presumably managed to convince its shareholders (at least when it raised new capital) that it is useful to retain them. If the shareholders cease to be convinced, they are likely to press the board to remove them entirely and not just in the context of a takeover. A company which has proportionate voting rights and an absence of restrictions on the transfer of shares might still wish to opt into the break-through rule in order to prevent a target in another Member State from taking defensive measures against it on the reciprocity basis. However, since most Member States have opted out of the break-through rule and apparently no companies in those states have opted back in, this incentive is very weak.[80]

Secondly, the break-through rule deals with restrictions in both the articles and restrictions in private contracts. As far as restrictions in the articles are concerned, the Act deals with them by simply making their removal a pre-condition for a company to opt into the break-through rule.[81] However, this puts those shareholders likely to lose from the removal of restrictions in the articles in a strong position to prevent the necessary changes. If the necessary changes to the articles involve an amendment of the rights of any class of shareholder (for example, reducing the votes attached to their shares to one from some higher number), the separate consent of that class by supermajority resolution will be required—and may not be obtainable.[82] If the necessary changes to the articles cannot be obtained, the company will not be in a position to opt into the rule.

Thirdly, while the removal of restrictions on voting rights or on the transfer of shares which are contained in contracts (either contracts with the company or contracts wholly among the shareholders) is not a pre-condition for opting into the rule, nevertheless compensation is required to be paid when those contractual rights are infringed by the company's adherence to the break-through rule. For the purposes of compensation,

therefore, the contractual provisions are not in fact broken through. The significance of the break-through rule is thus that it excludes the possibility of a contracting party seeking an injunction to prevent the transfer of shares or the argument that a shareholder decision is void because not taken in accordance with the agreed arrangements for voting. Section 968(6) deals with compensation by providing a right to compensation for loss (of such amount as the court thinks just and equitable) from those persons who, but for the statutory break-through, would be liable to the claimant in contract for breach of contract or in tort for inducing breach of contract. The "just and equitable" formula for the assessment of the compensation renders the extent of the liability uncertain and will thus act as a disincentive to opting in. In practice, the compensation may be offered by the bidder, but the bidder is not formally liable to pay compensation unless it is a party to the contract or has committed the tort of inducing breach of contract.

However, the Act does provide one incentive for opting in. This is that it is not an irreversible decision. Subject to a minimum period of one year, a company which, by special resolution of its shareholders, has opted into the break-through rule may opt out of it, again by special resolution—and presumably opt back in again and out again as many times as it wishes.[83]

Disclosure of control structures

28–25

Given the optional nature of the break-through rule, it may well be in practice that art.10 of the Directive turns out to be more important than art.11. The purpose of this article, as Recital 18 of the Directive recounts, is to make "defensive structures and mechanisms" more transparent. Consequently, companies within the scope of the Directive (i.e. with securities admitted to trading on a regulated market) are required to give information on them as part of their annual report and the board must give an "explanatory report" on them, though it is rather unclear what sort of explanation is called for and how far it should include elements of justification. In the UK the mechanism used for this disclosure is the directors' report.[84] The domestic rules,

following the Directive, require a wide range of information to be given, though some of it will either not be relevant to British companies or is already required to be disclosed. The main items to be covered are:

(a) the structure of the company's capital, notably the rights and obligations of each class of share, whether all those classes of capital are traded on a regulated market or not;

(b) restrictions on the transfer of securities (i.e. both shares and debentures);

(c) the identity of persons with significant direct or indirect holdings of securities in the company and the size and nature of that holding, so far as known to the company[85];

(d) similar information about a person with "special rights" with regard to the control of the company;

(e) how control rights are exercised under employee share schemes, where the rights are not exercisable by the employees directly;

(f) restrictions on voting rights, notably voting caps (restricting the percentage of total votes a shareholder has, no matter that the shareholding exceeds that percentage) or arrangements for splitting the financial and control rights of securities and placing them in different hands, where the company cooperates in making these arrangements;

(g) agreements between holders of securities, if known to the company, which contain restrictions on transfer or the exercise of voting rights[86];

(h) powers of the board to issue or buy back shares in the company[87];

(i) significant agreements to which the company is party which will operate differently if there is a change of control (such as loans containing repayment covenants upon a change of control—sometimes referred to as "poisoned debt"), but subject to the exception that disclosure is not required if that would be "seriously prejudicial" to the company;

(j) agreements between the company and its directors or employees for compensation payments to be made upon a

change of control.[88]

Target Management Promotion of an Offer

28–26

In the previous section we have proceeded on the assumption that the target board's conflict of interest in relation to a bid leads them to seek to maintain the independence of the target company and thus of their positions within it, and hence the "no frustration" rule. This does indeed constitute the most obvious expression of the target board's conflict of interest, but it is not the only one. The board might perceive its future interests as being best served by the company coming under a new controller, especially, for example, where the bidder is a private equity group which wishes to retain the existing senior management of the target and give them a much larger financial stake in the company than they had when it was in public ownership and traded on a stock market.[89] It is thus incorrect to think that the conflict of interest of the target board will always take the form of resisting the bid, to the detriment of the interests of the shareholders. The board may promote the bid—or, if there are competing bids, one of the bids—to the shareholders, again possibly to their detriment. The Code and the general law use a number of different techniques for addressing the problem of conflicted promotion of a bid by target management.

Disclosure and independent advice

28–27

One technique is to inject an element of independence into the advice which the board is required to give to the shareholders on any offer made to the shareholders by a bidder. Under r.3.1 the board is required to obtain competent independent advice[90] on any offer and the substance of that advice must be made known to the shareholders.[91] Independent advice is regarded as of particular importance on a management buyout or an offer by controlling shareholders.[92] However, r.25 requires the board to circulate its own opinion on the offer to the shareholders (that is, they cannot simply hide behind the independent advice). If there is a divergence of views within the board or between the board and the independent adviser, this must be disclosed and the

arguments for and against acceptance given.[93]

Where directors have a conflict of interest, they should not normally join with the other members of the board in expressing a view on the offer. In the case of a management buy-out, the director will normally be regarded as having a conflict of interest if he or she is to have a continuing role in either offeror or offeree company.[94] Thus, where the whole of the executive director team of the target is to be taken on by the bidder, the conduct of the target company's response falls on the non-executive directors and if, as happened in a one case, the non-executives are conflicted because they are involved with the bidder as well, the chair of the board may become largely responsible for the target board's response to the bid. Some help is provided to the independent directors by r.20.3, which requires the offeror to provide to the independent directors, on request, all the information which the offeror has furnished to the potential external providers of finance in relation to the buy-out. This does something to equalise the information available to the independent directors and the executive directors who are part of the bidding team. Overall, the distinction between executive and independent non-executive directors, which has become formalised in the Corporate Governance Code, is used by the Takeover Code to handle the most pressing examples of conflict of interest which might lead the board to promote a bid, though at the cost of the non-executive directors suddenly finding themselves more heavily involved in the affairs of the company than they probably contemplated when taking on that role.

Looking at these matters from the bidder's point of view, r.24.6 requires the bidder to disclose in its offer document "any agreement, arrangement or understanding" between it (or any person acting in concert with it) and any of the target's directors or recent directors which are connected with or dependent on the offer, giving full particulars of them. This would clearly include the details of any proposed arrangement concerning employment of the directors of the target in either the target or the offeror after the bid. Rule 16 requires Panel consent for special deals offered by the bidder to some shareholders where that deal is not being extended to all shareholders. This rule creates a potential problem for management buy-outs, where, as will be usual, the

target management holds shares in the target company but is also part of the bidding entity and is being offered the special deal that it will continue to be involved in the running of the target if the bid is successful or if only the management shareholders in the target company are being offered shares in the acquirer (the other shareholders being offered cash). In practice, the Panel will give its consent so as to facilitate management buy-outs where the management of the target can be regarded as a joint bidder with the other bodies which are financing the bid. For this reason "joint offerors may make arrangements between themselves regarding the future membership, control and management of the business being acquired".[95]

Compensation for loss of office

28–28

A much cruder form of conflict of interest which gives rise to managerial promotion of a bid arises out of the compensation which a director may expect to receive if the bid is successful and he or she is removed from office. The anticipation of a large windfall may shape the directors' response to the bid, consciously or unconsciously. Moreover, a part of the consideration which the bidder is willing to pay for the target may be diverted to the directors in such a case. In those jurisdictions which allocate to the target board a major role in the determination of the fate of an offer, such monetary incentives to accept the bid may well be viewed with favour, as aligning shareholder and directors' interests. However, in the UK, where the decision on the fate of the bid is allocated primarily to the shareholders, such financial incentives for target directors have been viewed as distorting the direction of the consideration the bidder is willing to pay and the incentives of the target management to advise the target shareholders dispassionately.

The Act has long contained provisions which require shareholder approval for payments in respect of loss of office.[96] These clearly catch "gratuitous" payments for loss of office (i.e. payments to which the director has not contractual entitlement) where the risks of distortion are significant. In the past, contractual entitlements to loss of office compensation were

excluded from the member approval requirement, but the Act has now taken modest steps to include some of these within the principle as well.

Gratuitous payments

28–29

The provisions on gratuitous transfers apply to takeovers of both public and private companies. Where the loss of office accompanies a takeover bid, two features of the shareholder approval requirement show that the offeree shareholders are the persons the Act aims to protect. First, approval is required from the holders of the shares to which the offer relates ("relevant" shareholders), and the bidder and associates are excluded from voting in respect of any shares they hold.[97] Obtaining such consent may be problematic indeed in the case of payments made under an arrangement entered into after the transfer of the shares to the bidder and in such cases the requirement for shareholder consent may operate in practice as a prohibition on such payments.[98] Even in the course of the bid the bidder and target management may regard holding a meeting to obtain shareholder approval as a very unwelcome distraction, although it is possible for the approval to be sought by way of a written resolution where the target company is a private company. Information about the proposed payment, notably its amount, must be made available to the shareholders in advance of the vote.[99] Secondly, if approval is not obtained but a payment is nevertheless made, it is treated as held on trust by the recipient for those who have sold their shares as a result of the offer and the expenses of making the distribution to those entitled to it are to be borne by the recipient.[100] Here, therefore, the legislation has avoided the absurdity illustrated in *Regal (Hastings) Ltd v Gulliver*,[101] by providing restitution to those truly damnified, rather than to the company when, in effect, that would result in an undeserved reduction of the price that the successful offeror has paid.

28–30

These provisions apply also to payments made in connection with a takeover bid for the shares of a subsidiary of the paying company. This extension might be important where there are

outside minority shareholders in the subsidiary.[102] "Takeover bid" is not defined for the purpose of this section, and so it is unclear whether the section embraces a takeover effected by means of a scheme of arrangement. The requirements ought to apply, since the risks are the same, and they are easier to comply with in a takeover by way of a scheme since a shareholder meeting is an essential part of the scheme procedure. However, "payment for loss of office" is defined. Among other things, s.215(1) includes payments for loss of any other office or employment held in conjunction with the directorship which involves the management of the company or its subsidiaries. This is a very important provision, since compensation payments are often made to executive directors in connection with the loss of their management positions in the company, rather than in connection with the loss of the directorship itself. For this reason, it is also sensible to bring shadow directors within the scope of s.219. Although loss of the status of shadow director itself is not within the section, compensation payments for the loss of other offices or employment within the company held by the shadow director will be caught.[103]

28–31

Although the payer is typically the target company after the takeover has succeeded, the requirement for shareholder approval applies to payments for loss of office made by "any person".[104] This will clearly include payments by a parent company (i.e. the successful bidder) or a subsidiary of the target. Payments to a director include payments to a person connected with a director and payments to any person at the direction or on behalf of the director or connected person.[105] Payments are rebuttably presumed to be payments for loss of office if made in pursuance of an arrangement (not necessarily a contract) made within the period extending from one year before to two years after the transfer of the shares and either bidder or target is privy to the arrangement.[106] So, the provisions cannot be avoided simply by waiting for the transaction to be concluded. If the price paid to the director for his or her shares is in excess of that available to other shareholders or if, in connection with the transfer of the shares, any valuable consideration is given to the director by any person, the excess is irrebuttably treated as a

payment for loss of office.[107] Finally, compensation is treated as including benefits otherwise than in cash, though cash is in fact the typical form of compensation provided.[108] On the other hand, there is a de minimis exception for payments by the company or its subsidiaries where the amount or value of the payment does not exceed £200, a very small amount.[109]

Contractual compensation

28–32

Although r.25.5 of the Code requires disclosure in the target's first circular to the shareholders of particulars of the directors' service contracts and of any earlier contract which has been replaced in the six months preceding the circulation, it contains no shareholder approval requirement for contractual payments. Nor does the Act, as a matter of general principle, but there are two situations where it does require shareholder approval.

First, the contract might explicitly say that upon a takeover the director is entitled to the payment of a sum of money by the company. These are sometimes referred to as "covenanted payments".[110] Whilst payments "in discharge of an existing legal obligation"[111] are in principle excluded from the approval requirements of Ch.4 of Pt 10, this is so only if the obligation "was not entered into for the purpose of, in connection with or in consequence of' the takeover".[112] Thus, covenanted payments entered into in the face of a bid (even, in appropriate circumstances, before the bid is formally announced) will need shareholder approval under the provisions discussed above. The Act accurately assesses the risks to the offeree shareholders in this case to be substantially the same as with a gratuitous payment.

Secondly, payments to directors by way of damages for breach of an existing legal obligation or by way of settlement of a claim arising in connection with the termination of a director's office or employment were and remain excluded from the provisions discussed above. Thus, payments to directors, especially executive directors, representing compensation for dismissal without the proper notice due to them under their service contract or settlements of claims for such payments fall outside the provisions of Ch.4.[113] This is a significant exemption,

since large sums may be payable to an executive director by way of breach of a fixed-term or long-notice service contract, even if it contains no “covenanted payments”. In addition, payments “by way of pension in respect of past services” are exempted from the need for shareholder approval,[114] apparently even if they are gratuitous. Directors towards the end of their careers may positively welcome compensation payments which take the form of a pension.

However, under the provisions of Ch.4A, introduced in 2013[115] and applying only to “quoted companies”,[116] payments for loss of office must either be “consistent with” the company’s remuneration policy, as approved by the shareholders,[117] or receive specific shareholder approval.[118] Thus, if the director’s contractual notice period or contractual term exceeds that stated in the remuneration policy, payment of damages for breach will need shareholder approval, at least in relation to the “excess” period, as will the payment of a pension beyond what the policy contemplates. The new rule applies in principle to all payments for loss of office, but it is made clear that, if the payment falls within Ch.4, Ch.4A does not apply.[119] So the relevance of Ch.4A is for payments excluded from Ch.4. The detailed provisions of Ch.4A largely track those of Ch.4. In particular, the recipient of an inconsistent and unauthorised payment holds it on trust for those who sold their shares into the offer.[120]

Competing bids

28–33

One post-bid defensive measure which the Code does permit is the search by the target board for an alternative bidder. Such action is not held to breach the non-frustration rule, because the decision on the bids still rests with the shareholders of the target company, whose choices have in fact been widened by the presence of the so-called “white knight”. The Directive makes it clear that “seeking alternative bids” is not caught by the prohibition on post-bid defensive action.[121] However, conflicts of interest on the part of the target board may arise here also, either because the board wishes to discourage a competitor because its interests will be better served by the initial bidder or, vice versa, where the target board seeks a competitor because it does not

favour the initial bidder. Of course, in either case the board's decisions may be driven by a desire to promote the interests of the shareholders of the target, rather than the directors' interests, and so the Code and other rules need to focus on this problem with some degree of sophistication. Another troublesome question is whether it is, in fact, in the interests of the shareholders to encourage competing bids. In the context of a particular offer, that is clearly so, since the competitor drives up the price and may even trigger an auction. However, the initial bidder often loses out in the auction, thus throwing away the costs it has incurred in identifying a target and mounting a bid. Knowing of this risk, companies may be less willing to bid initially than if they could be sure that there would be no competitor, thus reducing the incidence of bids, arguably to the detriment of shareholders. It is thus conceivable that the encouragement of competing bids would mean fewer bids overall. In this situation, devising an appropriate policy for competing bids is not easy.

A duty to auction or a duty to be even-handed?

28–34

A conceivable policy would be to require the target board to seek out any available competing offers. In bid situations there will often be pressure from shareholders on the board of the target to do this. However, the Code itself contains no such obligation, only a permission for the target board to take this step. In the case law on fiduciary duties the question has sometimes arisen, but the upshot of that limited case law seems to amount to no more than the proposition that, if a competing bid does in fact emerge, the directors may not obstruct the shareholders from accepting the bid the latter prefer, but the directors are not obliged to further that offer by, for example, assenting their own shares to it. In *Heron International Ltd v Lord Grade*[122] there were two competing bids for a company whose directors held over 50 per cent of the shares and where, unusually for a public company, the consent of the directors was required for the transfer of shares. The directors had given irrevocable undertakings to accept what turned out to be the lower bid and stood by those undertakings, so that the higher

bidder was defeated. The Court of Appeal declared that:

> "Where directors have decided that it is in the best interests of a company that the company should be taken over and there are two or more bidders the only duty of the directors, who have powers such as those in [the company's articles], is to obtain the best price. The directors should not commit themselves to transfer their own voting shares to a bidder unless they are satisfied that he is offering the best price reasonably available."[123]

This dictum clearly suggests that the directors' freedom to assent their own shares to the bidder favoured by them is restricted by their duty as directors to the other shareholders. In *Re A Company*,[124] where a similar issue arose in the context of unfair prejudice petition but involving this time a small private company, Hoffmann J, however, refused to accept "the proposition that the board must inevitably be under a positive duty to recommend and take all steps within their power to facilitate whichever is the highest offer", especially where that alleged duty restricted the directors' freedom of action in relation to their own shares. Their duty went no further than requiring them not to exercise their powers under the articles so as to prevent those other shareholders, who wished to do so, from accepting the higher offer, and requiring them, if they gave advice to the shareholders, to do so in the interests of those shareholders and not in order to further the bid preferred by the directors. The view of Hoffmann J seems more in accord with generally accepted principles of fiduciary law and with the Code which, as we have seen above, requires the directors to give advice to the shareholders in order to promote the interests of the latter, but stops short of requiring directors to take decisions in relation to their shares other than in their own interests.

More generally in relation to the exercise of directorial discretion, the Code can be said to adopt the policy of requiring the directors to be even-handed as between competing bids: they are not required to seek out alternative offers but, if such emerge, the choice between them should be one for the shareholders. This can be seen as an application or, perhaps, extension of the "no frustration" principle in the context of competing bids. The central provision here is r.20.2 which requires the target board to provide information to an offeror or potential offeror which it has made available to another offeror or potential offeror "even if that other offeror is less welcome".

This is an important provision, because, as we shall see below, the target board is not normally under an obligation to provide information to a potential bidder to help it decide whether to make an offer or on what terms. However, if the board decides to do so for one offeror or potential offeror, it cannot refuse this facility to a competitor. This principle is applied not only to the information itself but also to the terms on which it is made available (for example, confidentiality requirements). However, the rule does not permit the competitor to ask simply for all the information given to the initial offeror: the competitor has to specify the questions to which it wants answers, and the target company must answer them if it has done so for the other bidder.[125] There is an obvious difficulty in applying this rule in relation to a management buy-out, because the existing management element of the bidder will have comprehensive knowledge of the target company. Note 3 to r.20.2 confines the disclosure obligation in such a case to the information provided to the external providers of finance for the buy-out bid.

28–35

Quite apart from regulation of the conduct of the target board towards competing bidders, the question can be asked whether the design of the takeover Code facilitates the emergence of competitors. In many ways it does, though mainly as a side-wind from the implementation of policies designed to further other goals. Thus, as we shall see below, the timetable for the offer (the gap between the initial approach and the formal offer, the need for the formal offer to be open for a minimum period of time) does create a space in which competing bidders have the opportunity to put together an alternative offer. The offeror may seek to dilute this risk by buying shares in the target on the market in advance of the public announcement of the approach or offer. The insider dealing legislation is so drafted as not to catch a bidder who buys shares in the market knowing that it intends to make a bid at a higher price in the near future.[126] Nevertheless, market purchases on any scale are likely to drive up the price of the potential target's shares very rapidly as they become disclosable under the major shareholdings rules. Alternatively, the bidder may deal privately with the larger shareholders in the target (if there are any) and seek their

agreement, in advance of the bid, to accept an offer if one is made (i.e. to give what are known as "irrevocable commitments"). However, those who give such commitments normally in fact reserve the right to withdraw the acceptance if a competitor emerges. More simply, the bidder might simply seek to buy the shares of any large shareholders in advance of the bid, but their willingness to sell might be forthcoming only in situations where they think the company is unlikely to attract rival bids.[127] Moreover, as we shall see below, pre-bid purchases may restrict the freedom of the bidder to determine the level of its offer. Overall, the Code does expose a bidder to a significant risk that a rival bid will emerge.[128]

Binding the target board by contract

28–36

Given the risks just alluded to, the initial bidder may well seek, by contract, to enlist the directors of the target on its side in dealing with any future competitor. There are two main contractual techniques which have been used to this end, though obviously they are potentially available only where the target board approves of the proposed bid. First, the initial bidder may wish to secure from the directors of the target company a legally binding undertaking to recommend the bid to the shareholders of the target in any event and not to seek, encourage or co-operate with any "white knight". Such an agreement with the directors is not necessarily against the interests of the target's shareholders, for the initial bidder may not be willing to make a bid at all for the target unless such undertakings are forthcoming. The courts, however, have been unwilling to give full effect to such agreements, especially the commitment always to recommend the initial offer, even if a better one emerges. They have subjected the contractual undertaking to recommend the bid to an implied limitation, which in fact deprives the undertaking of most of its utility to the offeror, that the directors should be free to recommend the competing bid if they form the view that it would be in the best interests of the shareholders that the bid be accepted.[129] There is in fact a lot to be said for this approach, for to hold otherwise would be to undermine both the basic allocation of decision-making power on the fate of the bid to the

shareholders and General Principle 2 of the Code that the shareholders must be given the information necessary to enable them to reach a properly informed decision on the bid.

Given the uncertainties surrounding agreements which seek to control the target board's actions towards competing bidders, it is not surprising that alternative contractual arrangements were developed. A common form of agreement was the "break fee" or "inducement fee", i.e. an agreement between the target company (through its directors) and the initial bidder that, if the bidder's offer is not accepted for one of a number of reasons, which might include the shareholders' acceptance of an alternative offer, the target company becomes liable to pay a sum of money to the disappointed bidder. In this way, the initial bidder seeks to protect itself against the financial costs of its failed bid. However, the effect of a large break fee may be to discourage a competing bidder, since it effectively reduces the value of the target in the hands of the competitor, but not in the hands of the bidder which has negotiated the break fee.

The break fee was always regarded with some suspicion by the Code, which imposed a cap on the level of the fee (or similar inducement) at 1 per cent of the offer price. However, in the course of the Panel's 2010 review of the Code it was concluded that break fees and other "deal protection measures", including "no cooperation" agreements, should be prohibited, except in very limited cases. The Code Committee was sceptical about the benefits to target shareholders of inducement fees and other deal protection devices, which it regarded as often imposed by the acquirer for its benefit.[130] Rule 21.2 now prohibits in most situations "offer-related arrangements",[131] a term which includes but goes beyond inducement fees and embraces commitments by the offeree board not to cooperate with competing bidders.[132] However, the potentially adverse impact upon shareholder choice of prohibiting inducement fess is recognised in two situations. Subject to the 1 per cent cap and disclosure, the target company may agree an inducement fee with a competing offeror where an initial, but not recommended, bid has been launched (so that a competitor can be encouraged). Further, where the board of the target had initiated a formal sale of the company before any firm offer for the target was announced, and sought

bidders in that context, it will normally be permitted to agree an inducement fee (and perhaps other arrangements) with a bidder who participated in that process in order to encourage it to make a formal bid.[133] Here, the formal sale process operates as the assurance that all serious offers have been flushed out.

Equality of Treatment of Target Shareholders

28–37

Since the UK Code places the decision on the offer firmly in the hands of the target shareholders, it follows that there is a strong regulatory interest in protecting the target shareholders from being manipulated by the offeror into accepting an offer they think is sub-optimal. The possibility of manipulation arises, on the one hand, from the bidder's freedom under the law of contract to formulate the offer as it wishes (in the absence of regulation) and, on the other, from the dispersed nature of the shareholders in a typical UK target company, so that coordination amongst them is too costly to be effective. Although "the Code is not concerned with the financial or commercial advantages or disadvantages of a takeover",[134] it does contain a wide range of rules designed to preserve the integrity of the target shareholders' decision-making and these rules do shape the substantive content of the offer. The most obvious (but not the only) technique the bidder might deploy to manipulate the target shareholders' decision-making is unequal treatment of the offerees. For example, a bidder might make an attractive offer for target shares, but only for a certain percentage of them, with the offer being open only for a short-time. Once this offer is satisfied, the bidder might make a lower offer to the remaining shareholders or no offer at all. Although the shareholders collectively might be better off if they all refused the offer and forced the acquirer to bid for all the target shares on the same terms, any individual shareholder will maximise his returns by accepting the partial offer. Or the inequality strategy may be implemented the other way around. The acquirer makes a low-level bid for all the shares. Having picked up the unsophisticated shareholders in this way, it makes a higher offer to those who hold out. From the beginning the Code has addressed these "divide and rule" issues though the requirement

for equal treatment of target shareholders, a notion which has now been developed to a considerable degree of sophistication. Reflecting the Directive, GP 1 of the Code stipulates that "all holders of the securities of an offeree company of the same class must be afforded equivalent treatment" but the Rules in fact go beyond this. The equality principle, in all its manifestations, is another demonstration that, whilst the Code facilitates takeovers, it does not make the maximisation of the number of bids its goal, for otherwise it would permit differential offers. However, this policy is not without its costs. Some of the bids which are discouraged by the equality rules would come from financially constrained bidders who nevertheless would run the company more efficiently than the current controllers.

Partial bids

28–38

Perhaps the most obvious way of implementing the equality principle is to prohibit partial bids, i.e. offer for only some of the outstanding shares in the target. Through a partial bid the offeror acquires sufficient shares to obtain control of the company, but not all the shares are acquired. If the offer is made on a "first come, first served" basis, offerees may rush to accept it, either because it is pitched at an attractive level or, even though it is not, offerees wish to exit the company because of doubts about how well the acquirer will run it in the future. As we shall see in para.28–58 a floor is put under the partial bid strategy by the requirement that the bidder must end up with at least 50 per cent of the voting rights in the target; otherwise the bid will be ineffective. However, the Code goes much further: by r.36 the Panel's consent is needed for partial offers. Consent will normally be given if the offer could not result in the offeror being interested in shares carrying 30 per cent or more of the voting rights of the target company, since at this level the acquirer is not regarded as having control.[135] If the partial offer could result in the offeror holding more than 30 per cent but less than 100 per cent, consent will not normally be granted if the offeror or its concert party has acquired, selectively or in significant numbers, interests in shares in the target company during the previous 12 months or if any shares were acquired

after the partial offer was reasonably in contemplation.[136] Nor, without consent, may any member of the concert party purchase any further interests in shares within 12 months after a successful partial bid.[137] Both rules promote equality of treatment, since the sellers outside the offer may have been able to dispose of the entirety of their shareholdings and at a better price.

If the Panel does give its consent to a partial offer, some restrictive conditions apply to it. First, all the accepting shareholders must be able to dispose of the same proportion of their holdings.[138] Secondly, the offer must state the precise number of shares bid for and the offer must not be declared unconditional unless acceptances are received for not less than that number.[139] Thus, the offeror does not have freedom to relax the acceptance condition, which is normally possible in a full offer. More interestingly, where the partial offer could result in the offeror being interested in more than 50 per cent of the votes, shareholders are asked to vote on two questions. The first is, as ever, whether to accept the offer for their shares; and the second is whether they approve of the offer, irrespective of their decision to sell their shares. Given the "same proportion" rule, the existing shareholders will remain members of the target company, at least as to part of their shareholdings, even if the bid is successful. They may well regard this as unsatisfactory: hence the requirement that shareholders should have a double opportunity to vote. Shareholders may vote to accept the offer in relation to the relevant proportion of their shares, thus enabling them to benefit from the disposal of part of their holding if the bid does go through, whilst voting not to approve the bid. The partial bid will be successful only if the acquirer obtains at least 50 per cent approval for the bid as well the number of shares bid for. Finally, to induce shareholders to exercise both voting opportunities, an offer which could result in the offeror holding shares carrying over 50 per cent of the votes must contain a prominent warning that, if the offer succeeds, the offeror will be free, subject to the twelve-month post bid prohibition, to acquire further shares without incurring an obligation to make a mandatory offer.[140]

These Rules of the Code display an obvious antipathy to

partial offers, even though formal equality of treatment is maintained by the requirement that all shareholders who accept the offer must have the same proportion of their holdings acquired by the bidder. In consequence, partial bids are infrequent, though not unknown.

Level and type of consideration

28–39

In pursuit of the equality principle the Code contains rules which determine the minimum level of consideration which is required to be offered for the shares, even when the offer is made to all target shareholders. The purpose of these equality rules is to prevent the offeror from distorting the decision of the target's shareholders by offering an attractive price to some shareholders to gain control whilst offering an inadequate price to the remainder, who then have the choice of accepting the low offer or being locked into the company under a new controller. The first and most obvious expression of the equality principle is to be found in the requirement that, if the offer is revised upwards after an initial offer at a lower price, the original acceptors are entitled to the higher consideration.[141] This rule probably does more to protect inexperienced shareholders (who accept early) than to prevent opportunistic behaviour on the part of offeror companies.[142] The function of the rule giving an entitlement to offer increases is supported by r.16.1, whereby, except with the consent of the Panel, the offeror may not make any special arrangements, either during an offer or when one is reasonably in contemplation, whereby favourable conditions are offered to some shareholders which are not extended to all of them.[143]

A more significant expression of the equality principle is between those who accept the offer and those who sell their shares to the offeror outside the offer, either before the offer is made or during the offer period. Again, r.6 of the Code seeks to prevent private and favourable deals being done with a few shareholders. An offeror (or person acting in concert) which purchases shares of a relevant class in the three months before the offer period[144] or during that period[145] must make or raise the level of the offer for that class to that paid outside it, if it is higher.[146] However, r.6 distinguishes between purchases made

before the offer period begins and those made after a firm intention to make an offer has been announced. In relation to purchases made beforehand, it is clear that the rule does not necessarily require that the offer be in cash even if the prior acquisitions have been for cash. To that extent, r.6 permits inequality: the offer later made may be on a share-exchange basis but the securities offered by the bidder must have the value equal to the highest consideration paid outside the offer. However, if the post-announcement acquisitions at above the offer price are for cash, the offer will have to be (or become) a cash offer or be accompanied by a cash alternative.[147]

28–40

However, even in respect of acquisitions made before the offer period, the subsequent offer will have to be in cash (or accompanied by an alternative cash offer, probably provided by the offeror's investment bank rather than the offeror itself), if the conditions of r.11.1 are met. Where the offeror and persons acting in concert acquire "for cash" shares of a class in the target company, which carry at least 10 per cent of the voting rights of the class, in the 12 months prior to the offer, the subsequent offer must be in cash or be accompanied by a cash alternative at the highest level of the prices paid outside the offer.[148] In this rule "cash" has an extended meaning in its application to acquisitions "for cash", though it bears its ordinary meaning in relation to the requirement that the offer be "in cash". In relation to acquisitions the phrase includes acquisitions by the offeror company in exchange for securities, unless the exiting shareholder is not free to dispose of the securities until the offerees in the general bid receive their consideration (or the offer lapses).[149] The thinking is that, since securities are saleable, they are the equivalent of cash. The overall effect of r.11.1 is that the offer must be in cash or accompanied by a cash alternative because the sellers prior to the bid have received cash (or its equivalent). The rule is triggered only at the 10 per cent level and so it can be argued that r.11.1 is not a full implementation of the equality principle. Beneath the 10 per cent threshold, r.6.1 applies, not normally requiring a cash offer and applying only in the three-month period before the bid. The contrary argument is that a stronger rule would discourage bids because bidders would either have to

forgo pre-bid acquisitions or always launch cash bids where they had made previous acquisitions for cash. Building up a pre-bid stake is a way of obtaining some degree of protection against a competing offer, either because the stake will deter a competitor or because, if the initial bidder fails, it can recoup some of its costs by selling its stake at a profit to the successful bidder.

Rule 11.1 does not deal with the converse case, i.e. where the prior acquisitions were in exchange for securities but the bid is in cash and the target shareholders claim they should be offered the securities provided in the prior acquisitions. This is a rarer situation than the one where the general offerees claim cash, because cash is in general more attractive than securities, but there might be exceptional circumstances where the securities were attractive but not readily available on the market. In the light of this, a new rule was introduced in 2002, similar, but not identical, to r.11.1, but requiring securities to be offered in the general bid. Under r.11.2, if, during the three months prior to the commencement of the offer and during the offer period, the offeror has acquired shares of a class in the target which carry 10 per cent of the voting rights of the class in exchange for securities, then the general bid must offer the same number[150] of securities to the target shareholders. However, this will not displace the obligation to offer cash or a cash alternative under r.11.1, if the securities accepted outside the bid have triggered r.11.1.[151] Rule 11.2 is less far-reaching than the combined effect of rr.6.2 and 11.1 because it is triggered only by the 10 per cent threshold (even if the securities have been offered during the bid) and because it reaches back only to the three months before the bid.

Mandatory offers

28–41

The strongest expression of the equality rule, however, is to be found in the mandatory bid rule. Here, a bidder is obliged to make an offer in a situation where it has obtained without a general offer what the Code regards as effective control of the company and might not therefore wish to make a general offer to the shareholders of a company it already controls. However, because the sellers to the new controller were able to exit the

company upon a change of control, the Code requires the remaining shareholders to be given the same opportunity. A mandatory bid rule is now required of Member States by art.5 of the Takeover Directive. This led to some minor changes to the Code rules, though in general the mandatory bid rule contained in the Code is tougher than that required by the Directive.

Under r.9.1 a mandatory bid is required when:

(a) Any person acquires an interest in shares which (with any shares held or acquired by any persons acting in concert) carry 30 per cent or more of the voting rights of a company.

(b) Any person who, with persons acting in concert, already holds not less than 30 per cent but not more than 50 per cent of the voting rights and who, alone or with persons acting in concert, acquires an interest in additional shares.

In those cases, unless the Panel otherwise consents, such a person must extend offers, on the basis set out in subsequent provisions of r.9, to the holders of any class of equity share capital, whether voting or non-voting, and also to the holders of any other class of transferable securities carrying voting rights. Offers for the different classes of equity share capital must be comparable and the Panel should be consulted in advance.

The effect of this Rule is that, once acquirers have secured "control" (circumstance (a)) or acquisitions have been made to consolidate control[152] (circumstance (b)), a general offer must be made, thus giving all equity shareholders an opportunity of quitting the company and sharing in the price paid for the control or its consolidation. However, the force of the requirement lies not in the obligation to make an offer by itself, but in the supplementary rules which determine the level and nature of the offer which has to be made. After all, an obligation to make an offer which none of the offerees would find attractive would be a futile gesture on the part of the rule-maker. Crucial here are the requirements that a mandatory offer must be a cash offer, or with a cash alternative, and be pitched at the highest price paid by the offeror or a member of his concert party within the 12 months prior to the commencement of the offer.[153] As we have seem, in a voluntary offer this level of consideration is required only if shares carrying 10 per cent or more of the voting rights of that

class were purchased in the previous 12 months. An acquirer cannot escape the cash requirement for a mandatory bid by waiting a year before acquiring the shares which carry it over the 30 per cent threshold. In addition, a mandatory bid must not contain any conditions other than that it is dependent on acceptances being such as to result in the bidder holding 50 per cent of the voting rights;[154] on a voluntary offer, there may well be further conditions.[155]

Furthermore, where directors of the target company (or their close relatives and family trusts) sell shares to a purchaser as a result of which the purchaser is required by r.9 to make a mandatory offer, the directors must ensure that, as a condition of the sale, the purchaser undertakes to fulfil its obligations under the rule and, except with the consent of the Panel, the directors must not resign from the board until the closing date of the offer or the date when it becomes wholly unconditional, whichever is the later. Further, whether the directors have been involved on the sell side of the acquisition or not, a nominee of the new controller may not be appointed to the board of the target company nor may it exercise the votes attached to any shares it holds in the target company until the formal offer document has been posted.[156]

28–42

The mandatory bid requirement of the Code is one of its outstanding features, even if relatively few mandatory bids are made. Being aware of the rule, acquirers normally sit just below the 30 per cent threshold and then make a voluntary bid when they want to go further. This is because, as we have just seen, the acquirer has more flexibility with the formulation of a voluntary bid, so that it is normally desirable to avoid triggering a mandatory one. Even so, a bid made in these circumstances is not truly “voluntary”: the acquirer might really have wanted to go to 40 per cent and then rest satisfied that it had enough votes to control the company, but that option is not open to it. The effect of the mandatory bid rule is, usually, to require a person who wishes to obtain control of a company to do so by offering to acquire all or most of the equity share capital of the company. This discourages acquirers who aim to extract benefits from the company personally (“private benefits of control”) rather than

increase the value of the company for the benefit of all shareholders. The personal benefit strategy clearly has little attraction for someone who in any event owns all or most of the company. On the other hand, it discourages acquisitions by those who would increase the value of the company for the benefit of all shareholders but who are wealth constrained and so cannot raise the finance needed to bid for all the outstanding shares. Non-controlling shareholders might be better off if the latter sort of partial bid were allowed to proceed.[157]

Exemptions and relaxations

28–43

Given the major financial consequences for an acquirer of triggering a mandatory bid, one can expect acquirers to take great pains to avoid it. In some cases this may discourage activities which are viewed as entirely legitimate. In this situation, a great deal of attention comes to be focused on the Panel's discretion to exempt acquirers, wholly or partly, from the mandatory bid obligation, which the notes to r.9 indicate it is prepared to do in certain circumstances, sometimes on its own decision and sometimes only if a majority of the shareholders of the potential target company agree, though these notes do not constrain the Panel's discretion to grant exemptions in other cases. For example, if a shareholder envisages that a particular financial operation, such as a share issue via a placing,[158] will take it over the 30 per cent limit, it may escape the obligation to bid if it adopts in advance firm arrangements to off-load the shares to non-connected parties within a very short period after their acquisition.[159] Otherwise, the company's capital raising abilities might be reduced. Again, a redemption or repurchase by a company of its shares may take a shareholder over the 30 per cent mark without the shareholder having taken any action at all. This situation is given a rule of its own (r.37), in which the Panel states that it will normally[160] waive the bid obligation, provided the Panel is consulted in advance and the independent shareholders of the target agree and the stringent "whitewash" procedure (set out in App.1 to the Code) is followed. Finally, a Note on Dispensations from r.9, appended to the Rules, lists six situations where a mandatory bid is not normally required, either

because the policy behind the rule has not in truth been infringed or because it is subordinated to other policies regarded as of greater value to the company and its shareholders than the equality policy. Into the first category fall (a) inadvertent mistakes, provided the holding is brought below the threshold within a limited period; and (b) situations where, in addition to the person who would otherwise be required to launch a mandatory bid, another single person holds 50 per cent of the voting rights (so that the acquisition of the 30 per cent or more does not in fact confer control on the acquirer).[161]

Into the second category fall situations where the 30 per cent threshold is breached as a result of (c) a rescue operation of a company in a serious financial position, even if the independent shareholders of the target have not approved the acquisitions, since insolvency is a more serious threat to shareholder wellbeing than a new controller; (d) where a lender enforces its rights and acquires shares given as security (for otherwise the value of shares as collateral would be undermined); (e) where a holding of more than 30 per cent of the voting rights results from an enfranchisement of previously non-voting shares (showing that enfranchisement is to be encouraged); and (f) where a company issues new shares either for cash or in exchange for an acquisition, provided a majority of the independent shareholders agree to removal of the bid obligation, through what is known as the "whitewash" procedure.[162] This last covers a variety of situations, including that where an offeror company makes a share exchange offer as a result of which a large shareholder in the target, who is perhaps already a significant shareholder in the offeror, ends up with more than 30 per cent of the combined entity.[163] Thus, the mandatory bid rule, although strictly formulated in r.9, is applied with some flexibility by the Panel.

Acting in concert

28–44

Although the definition of "acting in concert" is relevant to the percentage tests used in all the rules which implement the equality principle, the consequences of the mandatory bid rule focus particular attention on the concept in this context. Indeed, in its introduction to the notes on r.9.1 the Code states that "the

majority of questions which arise in the context of r.9 relate to persons acting in concert", and the notes then provide five pages of guidance on the concept in the context of r.9, in addition to what is said in the "Definitions" section of the Code about the concept in general. When a group of persons act in concert to acquire control of a company, r.9.2 and the note thereto impose the obligation to make a general offer on the person whose acquisition takes the group's holding over the relevant threshold, but also extend the obligation to each of the "principal members" of the group, if the triggering acquirer is not such a member. It appears that the offer need not be made to the other members of the concert party, but only to the outside shareholders.

The "Definitions" section lays down the following general principle:

> "Persons acting in concert comprise persons who, pursuant to an agreement or understanding (whether formal or informal) co-operate to obtain or consolidate control of a company or to frustrate the successful outcome of an offer for a company."

The "Definitions" section then goes on to provide that six categories of persons are presumed to be acting in concert unless the contrary is proved.[164] In the context of r.9, a troublesome question has been the relationship between shareholder activism, which the Government encourages,[165] and acting in concert and the mandatory bid obligation. Shareholders are likely to be deterred from coming together to influence the board if they fear that they will be required by the Code to make a general offer for the company's shares. In principle r.9 does apply to shareholders who obtain control of a company by pooling their existing shares. However, there is one limitation on the pooling rule. Note 1 makes it clear that shareholders are not caught by the mandatory bid obligation at the moment they come together in order to obtain control of a company, even if at that point their prior and independently acquired shareholdings together exceed the 30 per cent threshold. What will trigger the mandatory bid is their subsequent acquisition of further interests in shares. However, it may discourage institutional shareholders from coming together to exercise their rights as shareholders if the price of so doing is their inability to acquire further shares in the company. Since successful activism will increase the share price, an important method for the activists to gain some reward for

their activism is to invest in the company in advance of their intervention but after they have decided to intervene. If they are prohibited from making such acquisitions, a greater part of the benefits of intervention will simply go to the non-intervening shareholders who free ride on the activists' actions.

The relationship between shareholder activism and the mandatory bid rule has received explicit attention from the Code Committee[166] and the results of its deliberations are now reflected in Note 2 to r.9.1. The Panel's prior position was that shareholders who come together to seek control of a company's board are presumed to be acting in concert in respect of their subsequent actions. (If the intervention contemplated falls short of seeking control of the company's board, for example, voting against the Directors' Remuneration Report, then the issue of conflict with r.9 does not arise.) The Panel was clearly under some pressure not to place obstacles in the way of an important government policy and the new Note means that "the Panel will be less likely than it has been in the past to rule that activist shareholders are acting in concert".[167] Although not altering its fundamental approach in this area, the Panel through the new Note makes the crucial clarification that, even where the shareholder coalition seeks to change the whole of a company's board, their efforts will not be classified as "board control seeking" if there is no "relationship" between the activist shareholders and the proposed directors. Thus, voting a new management team into place, or even finding it as well, will not trigger a finding of acting in concert if the new directors' relationship with the activists does not go beyond the normal board/shareholder relationship. Even if such a relationship does exist, the acting in concert rule may not be triggered, depending on the circumstances.

Interests in shares

28–45

A second notable feature of the percentage tests to be found in the equality rules of the Code is that they apply, not just to the acquisition of shares, but to the acquisition of "interests in shares". A definition of "interests in shares" was introduced as part of a major reform of the Code in 2005. The "Definitions"

section of the Code sets out a list of situations which will be regarded as involving the acquisition of an interest in a share. Some of them are quite obvious, such as the acquisition of the right to control the exercise of voting rights attached to shares, without actually owning them, as where a shareholder agrees, as is permissible, to vote in the way the other party to a contract directs.[168] However, the main impetus for the 2005 changes was to deal with the issue of derivatives, and, in particular, with the form of derivative known as a "contract for differences" (CfD), the only form of derivative which will be discussed here. The essence of the problem of the CfD is that it is a contract which, on its face, gives the holder of it only an economic interest in the movement of the market price of the security over a period of time and not an entitlement to exercise any of the rights attached to the share. On this basis, a CfD is irrelevant to control of a company. In practice, however, the holder of a CfD is often able to control the exercise of voting rights attached to the shares in question and sometimes even to acquire them at the end of the contract. In brief, the holder of a "long" CfD contracts to receive from the counterparty any upward difference between the market prices of the security at two points in time (or the contract may be based on a starting "reference" price, which is something other than the then current market price). The counterparty, usually an investment bank or securities house, will normally hedge its position, but is not obliged to do so, by acquiring a corresponding number of underlying securities at around the "start" price of the CfD. It is this action on the part of the counterparty, usually found but not legally required, that generates the problem for control rights. The counterparty holds the shares only for hedging, and will normally be prepared to exercise its voting rights as the holder of the CfD requires (if only to obtain repeat CfD business from the holder) and at the end of the contract may well be happy to close out its position by transferring the shares to the holder of the CfD, if the holder so requires.[169]

Thus, a person seeking to exercise control over a company, but being aware of the restrictions in the Code, could have sought to circumvent its restrictions by exercising some or all of its control rights via CfDs. The changes made prevent that step. The definition of "interests in securities" now provides,

generally, that "a person who has long economic exposure, whether absolute or conditional, to changes in the price of securities will be treated as interested in those securities", and, in particular, that a person will be regarded as having an interest in securities if "he is party to any derivative: (a) whose value is determined by reference to their price; and (b) which results, or may result, in his having a long position in them". It should be noted that the Panel's rules contain no "safe harbour" for a person who does have a purely economic interests in shares arising out of CfDs, for example, where the counterparty has not bought the shares in question as a hedge. A person might trigger the mandatory bid rule purely on the basis of such interests, and would be reliant on the consent of the Panel to escape the consequences of that rule.

Conclusion

28–46

The mandatory bid rule is a very strong expression of the Code's principle that all shareholders in the target company must be treated equally upon a change of control. Without it, those to whom the offeror makes approaches when building the controlling block might be under pressure to sell for fear that no comparable later general offer will be forthcoming. From a more corporate law point of view the mandatory bid rule might be seen as a form of minority shareholder protection. The prospects of minority equity shareholders in a company depend crucially upon how the controllers of the company exercise their powers and the provisions of company law proper, even after the enactment of the new "unfair prejudice" provisions of the Companies Act (discussed in Ch.20), could be seen as incapable of providing comprehensive protection of minority shareholders against unfair treatment. Consequently, when there is a change of control of a company, it could be said that all the shareholders should be given an opportunity to leave the company and to do so on the same terms as have been obtained by those who have sold the shares which constitute the new controlling block.[170]

It should be noted that there are two aspects of the policy underlying r.9. The first is the opportunity for all shareholders to exit the company upon a change of control by selling their shares

to the new controller, and the second is the opportunity to do so on the most favourable terms that have been obtained by those who sold to the holder of the 30 per cent block. Of these two aspects it is the second which is the more controversial. In particular, the latter aspect of the Rule makes it impossible for the holder of an existing controlling block of shares to obtain any premium for control upon the sale of the shares. Since the purchaser of the block will know that the Code requires it to offer the same price to all shareholders, the purchaser is forced to divide the consideration for the company's securities rateably among all the shareholders. In the UK, where shareholdings in listed companies are widely dispersed, this is probably not an important issue, but in countries where family shareholdings in even listed companies are of significant size, the Rule might operate as a disincentive to transfers of control.

To whom must an offer be made?

28–47

A final form of equality is as between voting and non-voting shares in all types of bid. Where the target company has more than one class of equity share capital, r.14 requires a "comparable" offer[171] to be made for each class, including non-voting classes, if the acquirer decides to offer for at least one of the classes. Thus, an offeror company may not bid only for equity shares carrying voting rights but must bid for all classes of equity share. This reflects the policy that a change of control in a company is a significant event for equity shareholders (whose returns depend on the discretion and success of the controllers) and so all such shareholders should be given the opportunity to exit the company on fair terms when a change of control is in prospect.[172] The rule is a protection of non-voting shareholders rather than aimed at controlling coercive offers. Separate offers must be made for each class of equity share. The offer for the non-voting equity must not be made conditional upon any particular level of acceptances by that class, unless the offer for the voting shares is conditional upon that same level of acceptances by the non-voting equity shareholders. In other words, the non-voting equity shareholders may not be left locked into the target if the offeror company obtains control through

acceptance from the voting shareholders. Either there will be no acceptance condition for the non-voting shares or, if there is and it is not met, the offer for the voting shares will lapse as well. However, the offeror can protect itself against ending up with a majority of the non-voting equity but too little of the voting equity by inserting identical conditions, relating to the voting equity, into both (or all) offers.

In a voluntary bid, classes of non-equity shares need not be the subject of an offer, even if they carry voting rights.[173] Of course, an offeror company may wish to make an offer for non-equity shares carrying voting rights, but an offer is not required, presumably on the theory that the non-equity shareholders are normally protected by their contractual entitlements.[174] However, r.15 requires that, on an offer for voting equity share capital, an appropriate offer or proposal must be made to holders of securities convertible into equity shares (who clearly are potentially affected by the change of control).

Wait and see

28–48

It is possible to create pressure on shareholders to accept an offer, even though the same offer is made to all the shareholders. From the point of view of an offeror, there are only two possible outcomes: the offer is accepted by the majority of the shareholders or it is not. From the point of view of an individual shareholder, considering whether to accept an offer and unable to predict the actions of fellow shareholders, there are three possible outcomes. First, the bid may not be accepted by the majority, in which case it does not matter how the individual votes. Secondly, it may by accepted by the majority and the individual is among the accepting majority. Thirdly, the bid is accepted by the majority and the individual is among the non-accepting minority. Where the bid is not particularly attractive in the eyes of the individual but that shareholder has misgivings about how the bidder will run the company if it obtains control, the individual's preferences may be ranked in the same order as the outcomes just listed. But since that shareholder has only one decision (accept/not accept) he or she cannot rank those preferences fully. In order to avoid the worst outcome (three), he

or she may vote for the second outcome, even though the first outcome is the preferred one. If many shareholders considering the offer have the same set of preferences and reason in the same way, the offer may be accepted, even though their first choice is rejection.

There is in fact a simple procedural solution to this problem, which the Code adopts. As we see in para.28–75, the Code requires the bidder to keep the offer open for a further 14 days after it has achieved the level of acceptances the bidder requires and this fact has been publicly announced. During that period those who had previously not accepted the bid can change their minds. Since the offeree shareholders now have two decisions, they can rank the three preferences fully. When the offer is first made, it is not accepted (decision 1); if and when it becomes clear the majority are in favour of the bid, the offer is accepted (decision 2). Decision 1 gives effect to the first preference; when it becomes clear that the first preference is not available, decision 2 gives effect to the second preference.

The Procedure for Making a Bid

28–49

Having dealt with the two central features of the Code, the allocation of decision-making on the bid to the shareholders of the target company and equal treatment of target shareholders, we now turn briefly to the procedure for making the offer. Much of this is concerned with putting the shareholders of the target in a position in which they can effectively take the decision which has been allocated to them, but other policy goals are also evident, such as that the company should not be subject to a bid or bid speculation for an excessive period of time or that false markets in the securities involved should not be created. However, since the Code applies only once a potential acquirer has decided it wishes, or might wish, to put an offer to the shareholders of the target company, there is a prior period which may be important for the success of the bid but where the relevant rules are not to be found in the Code. We divide the bid process into three periods: before an approach is made by the bidder to the target board; before a firm offer is made to the target shareholder; and after a firm offer has been made to the

target shareholders.

Before the approach to the target board

28–50

The main issues here relates to the acquisition of shares in the potential target company. A potential acquirer, although not yet committed to making a bid, may want to increase the chances of the bid ultimately succeeding by building up as large a stake in the company as possible before hand. As we have seen, the mandatory bid rule puts a cap of 30 per cent on this strategy, but, in fact, long before that stage is reached, the potential bidder's stake in the company will have become public knowledge in the market and the share price will have responded appropriately. A more important question, therefore, may be how far the potential bidder can go in acquiring shares in the company without knowledge of the acquisitions seeping into the market. Such shares may be particularly valuable to the potential bidder, not only because they are acquired cheaply but also because, if the bidder is defeated in the event by a "white knight" competitor, the defeated bidder can assent these shares in the competitor's bid and make a profit, which may help to off-set some of the costs of its failed bid.[175] So, the central question is one of disclosure of acquisitions of shares. Conversely, the board of a potential target company will want to keep a close eye on its share register, both in order to see if a potential bidder is building up a stake in the company and to see if shareholders are appearing who are likely to be susceptible to an offer, if one is made (for example, certain types of hedge fund). Most of these events are likely to take place before the Takeover Code applies and so the relevant rules are to be found in the Companies Act and other legislation.

An initial apparent advantage for the board and disadvantage for the acquirer is that the names of those who are on its register of shareholders are known both to the company and the public.[176] However, the registered shareholder is often not the beneficial owner of the share,[177] and so the appearance of a new name on the register does not necessarily reveal much useful information, whilst large shareholdings can be split up across a number of registered nominee holders. Information about beneficial holders

of shares is obtainable under two sets of provisions. First, beneficial holdings at the 3 per cent level and above are required to be disclosed under the vote-holding disclosure rules discussed in Ch.26.[178] It is not intended to repeat that discussion here but its importance should be noted. In effect, a cap of 3 per cent is set on the shares an acquirer can obtain cheaply in order to offset the costs of a failed bid, so that there must be doubts about the financial adequacy of this method of combating the disincentive effect of permitting competing bids.

Company-triggered disclosures

28–51

The second set of disclosure provisions contain no threshold requirements, and so are potentially more extensive than the general vote-holder disclosure rules, but they do not operate automatically but must be triggered by the company on each particular occasion it requires information and in relation to each potential holder. These rules are in Pt 22 of the Companies Act 2006. They enable the directors of a public company to serve a notice upon persons suspected of being interested in its voting shares seeking information about that interest and permitting the company to apply to the court for restrictions on the voting and transfer of the shares if that information is not forthcoming. The statutory provisions are often supplemented by provisions in the company's articles which expand the board's powers, for example, by permitting the directors to impose the restrictions without application to the court and to impose them in a wider range of situations.[179]

Section 793 provides that a public company (whether its shares are traded on a public market or not) may serve notice on a person whom it knows to be, or has reasonable cause to believe to be, or to have been at any time during the three years immediately preceding the date of the notice, interested in voting shares of the company. The notice may require that person to confirm that fact and, if so, (a) to give particulars of his own past or present interest; (b) where the interest is a present interest and any other interest subsists or subsisted during the three-year period at a time when his own interest did, to give particulars known to him of that other interest; or (c) where his interest is a

past interest, to give particulars of the identity of the person to whom that interest was transferred.[180] In cases (a) and (b) the particulars to be given include the identity of persons interested and whether they were members of a concert party or there were any other arrangements regarding the exercise of any rights conferred by the shares.[181] The notice must require a response to be given in writing within such reasonable time as may be specified in the notice.[182]

The initial notice will normally be sent to the person named on the shareholder register and, if he is the sole beneficial owner of the shares, he will normally say so (at any rate once the likely consequences of refusing to respond are explained to him). But in other cases the notice may merely be the beginning of a long and often abortive paper-chase. If the recipient of the notice is a nominee it may well decline to say more than that, claiming that a duty of confidentiality forbids disclosure or, if the nominee is, say, a foreign bank, that the foreign law makes it unlawful to disclose the name of the person on whose behalf the nominee holds the shares. In principle, this is a breach of the duty under s.793 (since the nominee is bound to give details of the "other interests" known to it, i.e. that of the person upon whose behalf the nominee holds the shares). Alternatively, the nominee may disclose the nominator's identity, but the latter, if resident abroad, may refuse to provide any further information. Ultimately, as a result of the possibility of the freezing and disenfranchisement of the shares (see below), the true ownership may be disclosed—but not always.[183] Such information regarding interests in the shares as may be elicited as a result of the notice (or a succession of notices as the company follows the trail) must be entered on a public register, with the information being entered against the name of the present holder of the shares.[184] The rules applying to this register, including court control of public access for a non-proper purpose, are the same as those applying to the company's register of members, and most companies will use the share register for this purpose as well.[185]

28–52

The Act recognises that members of the company may have a legitimate interest in securing that the company exercises its

powers under s.793, even if the board does not want it to (perhaps because the directors or some of them may fear that it may bring to light breaches by them of their obligations to notify their dealings under the rules discussed in Ch.26). Hence, under s.803, members holding not less than one-tenth of the paid-up voting capital—a very high threshold in the case of a publicly traded company—may serve a requisition stating that the requisitionists require the company to exercise its powers under s.793, specifying the manner in which those powers are to be exercised[186] and giving reasonable grounds for requiring the powers to be exercised in the manner specified.[187] It is then the company's duty to comply.[188] If it does not, every officer of the company who is in default is liable to a fine.[189] On the conclusion of a shareholder-initiated investigation, the company, under s.805, has to prepare a report of the information received which has to be made available at the company's registered office within a reasonable time[190] after the conclusion of the investigation.[191] If it is not concluded within three months beginning on the day after the deposit of the requisition, an interim report on the information already obtained has to be prepared in respect of that and each succeeding three months.[192] Any report has to be made available for inspection by any person at a place notified to the registrar, unless the company chooses to make it available at its registered office[193] and the requisitionists must be informed within three days of the report becoming available.[194]

Sanctions

28–53

A person who fails to comply with a s.793 notice, whether initiated by board or shareholders, or, in purported compliance with the notice, knowingly or recklessly makes a false or misleading statement commits an offence, which can be sanctioned by imprisonment, unless the defendant shows the requirement was frivolous or vexatious.[195] What, however, makes the foregoing sections more effective than they would otherwise be is that, if a notice is served on a person who is or was interested in shares of the company and that person fails to give any information required by the notice, the company may

apply to the court for an order directing that the shares in question be subject to restrictions.[196] However, it should be noted that the information a company may require under the notice is, perhaps not surprisingly, limited by what the person asked knows. If the company obtains no useful information, because the person asked does not have it, there is no breach of s.793 and restrictions cannot be imposed on the shares.[197]

The restrictions are that:

(a) any transfer of the shares is void;

(b) no voting rights are exercisable in respect of them;

(c) no further shares may be issued in right of them or in pursuance of an offer made to their holder; and

(d) except in a liquidation, no payment by the company, whether as a return of capital or a dividend, may be made in respect of them.[198]

Thus, although the company may never track down the ultimate beneficial owner of the shares, it can take them out of consideration with regard to a takeover bid through the restrictions imposed by the court or under the articles. Nevertheless, the restrictions constitute a draconian penalty,[199] which may be detrimental to wholly innocent parties, for example bona fide purchasers of, or lenders on the security of, the shares. Although the court has a discretion whether to make the order imposing the restrictions, an order should normally be made if that knowledge has not been obtained, since “the clear purpose [of Pt 22 of the Act] is to give public companies, and ultimately the public at large, a prima facie unqualified right to know who are the real owners of its voting shares”. If an order is made, it has to impose all four restrictions without any qualifications designed to protect innocent parties.[200] However, an application can be made to the court by the company or any aggrieved person for the restrictions to be relaxed on the grounds that they “unfairly affect” the rights of third parties, and the court is given a broad power to do so.[201] The court also has the power to remove the restrictions altogether,[202] but this normally can be done only if the court is “satisfied that the relevant facts about the shares have been disclosed to the company and no

unfair advantage has accrued to any person as a result of the earlier failure to make that disclosure".[203] To this there are two exceptions. If the shares are to be transferred for valuable consideration and the court approves the transfer,[204] an order can be made that the shares should cease to be subject to the restrictions.[205] Further, the court, on application by the company, may order the shares to be sold,[206] subject to the court's approval as to the terms of the sale,[207] and might then also direct that the shares should cease to be subject to the restrictions.[208]

Interests in shares and acting in concert

28–54

As is usual in the disclosure area, what has to be disclosed is not just ownership of shares but "interests in shares". However, the legislation does not use the Code's definition of "interests in shares" but has its own, set out in ss.820 to 823. It is widely formulated so as to include an interest in shares "of any kind whatsoever", but it is not so wide as to include interests in shares of a purely economic character, such as CfDs.[209] Part 22 also contains a "concert party" provision, again not that of the Code, but set out in ss.824 and 825, under which the interests of one concert party can be attributed to all members. The agreement must relate to the acquisition of interests in shares and indeed the agreement is not caught by the section until an interest in securities is in fact acquired by one of the parties to it in pursuance of the agreement.[210] Thus, the section does not apply to a simple voting agreement between existing shareholders. Further, the agreement must include provisions imposing restrictions on dealings in the interests so acquired[211]: an agreement to acquire shares which the acquirer is then free immediately to dispose of is not caught by the section. The "agreement" need not be an enforceable contract, but the section does not apply to an agreement which is not legally binding "unless it involves mutuality in the undertakings, expectations or understandings of the parties to it".[212] Each member of the concert party is taken for the purposes of the disclosure notice to be interested in all shares in which any member of the concert party has an interest, whether or not those interests were acquired in pursuance of the agreement.[213] Any notification

which a party makes with respect to his interest must state that he is a party to a concert party agreement, must include the names and (so far as known to him) the addresses of the other parties and must state whether or not any of the shares to which the notification relates are shares in which he is interested by virtue of the concert party provision and, if so, how many of them.[214]

Before a formal offer is made to the target shareholders

28–55

Once a bid is imminent, the Takeover Code rules become the dominant source of obligation, though the rules discussed in the previous section continue to operate. Rule 1(a) of the Code prohibits an offeror from simply putting its offer directly to the shareholders of the target: it must "notify a firm intention to make an offer in the first instance to the board of the offeree company or its advisers". This is to enable the board of the target to form a view on the merits of the offer and to advise the shareholders accordingly. As we have seen above, the Code requires the board to give such advice to the shareholders and, indeed, to obtain independent advice on the bid and make it known to the shareholders. Rule 1 facilitates this process: without it, the board of the target might be left scrambling around trying to fulfil its duties under r.3.

Apart from this, there are two different timing problems relating to the public disclosure of the bid proposal with which the Code has to deal. The bidder may delay disclosure, perhaps in order to continue acquiring shares in the target company. Alternatively, the bidder may be eager to put the possibility of a bid into the public domain. As r.1(b) recognises, what the board of the target often first receives is not so much the details of a firm offer proposed to be made to the shareholders as "an approach with a view to an offer being made". There are a number of good reasons why this should be. First, the offeror may wish to obtain the target board's recommendation of the offer and so wishes to indicate that there is some flexibility in the terms of its offer and that it is prepared to negotiate with the board for its support. Secondly, the offeror may genuinely be in

doubt about the value of the target and may wish to secure access to the target's books in order to be able to formulate a precise offer to be put to the shareholders. Especially in the case of highly leveraged bids, it is crucial for the offeror not to find any unpleasant surprises after it has obtained control which would jeopardise its ability to pay the interest on or repay the often very large loans it has taken out to finance the bid. Offers by private equity bidders, accordingly, are rarely hostile. This puts the target board in a negotiating position, because there is nothing in the Code or the general law which requires the board to give the potential bidder such access. Thirdly, the bidder may make an informal approach, but also let it be known publicly that such an approach has been made, in order to induce the larger shareholders to put pressure on their board to co-operate with the bid, notably by granting access to the company's books. This third situation caused the Panel some concern in its 2010 review, on the grounds that it created a "virtual bid" period of uncertain duration, i.e. one in which the company is effectively "in play" but no firm offer for the company has been announced. We begin with discussion of this problem.

Put up or shut up

28–56

Where a public but non-firm approach, which puts the company "in play", has been made, senior management of the potential target will concentrate on little else until the acquirer walks away or a firm offer is made and is either accepted or rejected. However, no firm intention to make an offer having yet been announced, the time limit contained in the Code for posting the offer to the target shareholders is not triggered. On the other hand, the announcement of a possible offer triggers the Code's definition of the "offer period", at which point the ban on defensive action by the target board without shareholder approval is triggered.[215] So, the target board is stymied, but the acquirer used to be under no obligation to push on with its offer. To meet this concern, the Code for some time contained a "put up or shut up" (PUSU) provision, enabling the potential target to request the Panel to set a time limit within which the bidder had either to make an announcement of a firm intention to make an

offer or to state that it did not intend to make a bid, and in the latter case the bidder (and a person acting in concert) would not normally be able to bid until six months had passed. Such applications to the Panel by potential targets were not infrequent, but in its 2010 review the Code Committee concluded that boards were often reluctant to make such applications, presumably for fear of shareholder ire, even though the company's management was "destabilised" by the possible offer announcement. Consequently, it recommended shifting the burden of action under the PUSU rule.[216] Except with the consent of the Panel, a possible offeror, who must be named in the possible offer announcement, must make a further announcement one way or the other within four weeks of the possible bid announcement, with the consequence noted above if the further announcement is that it will not proceed with an offer.[217] However, the Panel will normally extend the deadline for the further announcement if the target board requests this. This amendment clearly promotes the policy underlying GP 6 that "an offeree company must not be hindered in the conduct of its affairs for longer than is reasonable by a bid for its securities".

Faced with the PUSU requirement, a potential bidder might move on to make an announcement of a firm intention to make an offer, but hedge that offer about with conditions, so that it can react appropriately to any negative information about the target which subsequently emerges. Where a bidder seeks to make an actual offer subject to conditions, its freedom to do so is severely constrained by the provisions of r.13, but originally that rule did not apply to announcements of a firm intention to make an offer, where, in consequence, the bidder had a freer hand. However, in 2004 the Panel decided to apply the provisions of r.13 (discussed below) to "firm intention" statements as well.[218] This Rule promotes certainty, for both the shareholders and the board of the target company. Thus, the "PUSU" rule forces the potential bidder to clarify its intentions since r.13 now constrains the bidder's freedom to avoid PUSU by employing a heavily conditional firm intention statement.

Once a "firm intention" announcement is made, whether because of the operation of the PUSU rule or not, the offeror

becomes obliged in the normal case to proceed with its bid and to post the formal offer document to the shareholders within 28 days of the announcement.[219] Moreover, at the firm announcement stage a good deal of information about the forthcoming bid must be provided.

Initial announcements

28–57

The bidder strategy discussed above depends on an announcement of a possible offer being made at an early stage. However, there are incentives for potential bidders to delay announcements in some situations. A possible bid creates tempting opportunities for insider trading on the part of those privy to the bid preparations, not only those within the bidder itself but those involved as financial or legal advisers. We have seen that the acquisition of shares in the target by or on behalf of the bidder itself does not normally amount to insider trading, but acquisitions by or on behalf of other persons would.[220] Insider dealing also constitutes market abuse under the Market Abuse Regulation, in respect of which the FCA can impose civil penalties, including, in this case, on corporate bodies involved. In spite of the frequent and unexplained rises in the share prices of target companies in the period before takeover announcements are made, the FCA has not had great success in identifying the culprits.[221]

The Code approaches this problem by, first, insisting on the "vital importance of absolute secrecy before an announcement of a bid" (r.2.1) and, secondly and probably more effectively, by requiring a public announcement if that secrecy is not or is not likely to be maintainable, for example, where the target is subject to "rumour and speculation" or where the bidder is taking its discussions about a possible bid beyond "a very restricted number of people" (r.2.2). Once an approach has been made to the board of the offeree company, the primary responsibility for making an announcement rests with that board, but what is announced will depend upon how far matters have progressed when an announcement has to be made. As we have seen, it may be no more than a statement that an offer may possibly be forthcoming (but with no guarantee that it will). Rule

13 about conditions does not apply to announcements which are not firm.[222]

The formal offer

Conditions

28–58

Once a company posts its formal offer documents to the shareholders of the target, the bid is open to acceptance by the shareholders to whom it is addressed. One aim of the Code in this situation is that the shareholders should have a clear proposition to accept or reject. As we have noted already, r.13 of the Code imposes restrictions on the conditions which the bidder can attach to its offer. An offer must not be subject to conditions which depend solely on subjective judgments by the directors of the offeror or the fulfilment of which is in their hands. Otherwise, offerors would be free to decide at any time to withdraw an offer, whereas one purpose of the Code is to ensure that only serious offers are put forward for consideration. The note to r.13.4 makes it clear that this means that normally the bidder cannot make its offer subject to satisfactory financing being available for the offer: the bidder must not make an offer, or even announce a firm intention to make an offer, if the financing is not already in place.[223] This implements GP 5. The main exception to this principle arises where the bidder intends to raise the cash for the bid through a new issue of shares and its shareholders' approval is required for the share issue, either by the Act or under the rules applicable to the market on which the shares are traded. In this case, the offer must be made conditional on the necessary consent and the condition is not waivable by the bidder.[224] Even if the inclusion of the condition does not fall foul of the above restriction, the condition must not actually be invoked by the bidder unless the circumstances which have arisen are of "material significance" to the offeror in the context of the bid.[225]

However, some conditions are common in offers, and are even required by the Code. The offeror is required by r.10 to make its offer for voting securities conditional on acceptances of a sufficient level to give it, together with securities already held,

50 per cent of the voting rights in the offeree company. Thus, the bidder must either end up with legal control of the target company or the bid must lapse and the bidder acquires none of the shares which have been assented to the offer. This is regarded by the Panel as a very important provision, as the extensive notes to r.10 make clear, dealing with the operation of the Rule in a variety of circumstances likely to arise in practice. As r.9.3 makes clear, it also applies to mandatory bids. The offeror may choose to, and often does, make a voluntary offer conditional upon a higher level of acceptances, though it will normally also reserve to itself the right to waive the higher condition during the bid. The offer may be conditional upon the offeror achieving 75 per cent of the voting rights, so as to be able to pass a special resolution; or even on achieving 90 per cent of the shares bid for (so as to be able to avail itself of the statutory squeeze-out procedure discussed below). Hence, an important stage in the progress of a bid is when it becomes or is declared "unconditional as to acceptances".

Rule 12 requires a condition to be inserted in the offer to deal with the fact that a competition authority consent may be needed for the offer to be consummated. The condition is to the effect that the bid will lapse if there is a reference to the competition authorities before the offer becomes unconditional as to acceptances. Except for a mandatory bid, where reinstatement is mandatory, the offeror has a choice whether to reinstate its bid, if the competition authorities ultimately clear it.[226]

Timetable

28–59

We have already seen that r.30.1 imposes a 28-day-limit for the posting of the offer document after a firm intention to bid has been announced. That is a maximum limit in order not to leave the target board and shareholders in a state of uncertainty. Once the offer is posted, the Code is still concerned with the overall length of the process and r.31.6 stipulates that the offer may not remain open for acceptances once the 60th day after the offer was posted has passed. There are some exceptions, in particular that the "60th day" is set by reference to the competing bidder's timetable if there is a competing offer or can be adjusted where

the board of the target company agrees to a longer period.

However, within the offer period, the Code is also concerned with setting minimum time periods, in order that the shareholders have an opportunity to properly consider the offer and are not pushed into a “snap” decision on it. An offer must initially be open for acceptance for at least 21 days, as required by r.31.1. This date is referred to as the “first closing date” of the offer. If this is later extended, as it normally may be, a new date must be specified, but there is no obligation to extend an offer (rr.31.2 and 31.3). Moreover, if it is stated that the offer will not be extended, only in exceptional cases will the Panel allow it to be so. This is laid down in r.31.5, not merely because the offeror should not break its promises but in order to prevent shareholders being pressurised into accepting before the current closing date by false statements that they will lose all chance of availing themselves of the offer unless they accept before that date.

In some cases the offer may be revised (i.e. improved), sometimes more than once. This is particularly likely to occur if there is a contested takeover. In such circumstances each rival bidder, having already incurred considerable expense, is likely to go on raising its bid and trying to get its new one recommended by the board of the target. Even if it loses the battle, the defeated bidder will at least be able to recover part of the expenses out of the profit it will make by accepting the winner’s bid in respect of its own holdings.[227] Moreover, even if there is no contest, an offeror may be forced to increase its bid if proves unattractive to the target shareholders or if the bidder or its associates or members of its concert party acquire shares outside the offer at above the price of its offer, as we have seen above. If an offer is revised, it must be kept open for at least 14 days after the revised offer document is posted (r.32.1). All shareholders who have accepted the original offer are entitled to the revised consideration (r.32.3) and new conditions must not be introduced except to the extent necessary to implement an increased or improved offer and with the prior consent of the Panel (r.32.4). “No increase” statements are treated by r.32.2 in essentially the same way, and for the same reasons, as “no extension” statements, i.e. the bidder is allowed to go back on them only in

"wholly exceptional" circumstances, unless the bidder has specifically reserved its freedom in the "no increase" statement to increase the offer in the circumstances which have arisen.

28–60

In general, as r.33.1 makes clear, the foregoing rules apply equally to alternative offers in which the target's shareholders are given the option to choose between different types of consideration (e.g. shares or cash). In other words, the shareholders retain their options so long as the offer remains open. But where the value of a cash alternative provided by a third party is more than half the maximum value of the primary share option, the offeror is not obliged to keep that offer open, or to extend it, if not less than 14 days' written notice to shareholders is given reserving the right to close it on a stated date.[228] This "shutting off" of the cash alternative provided by a third party is permitted because underwriters will be reluctant to agree to remain at risk for an indeterminate period. However, the bidder's freedom to "shut off" a cash alternative does detract from the offeree's freedom to wait and see what the other shareholders do before accepting the offer. It is significant that it is not permitted in mandatory bids, where a cash offer or a cash alternative is required, and there is no danger of bidders responding to the lack of a "shut off" opportunity by simply not arranging for a cash alternative to be available.

The combination of the maximum period for the formal offer (normally 60 days) and the minimum period for revised offers to remain open (14 days) means that an offer cannot normally be revised after the 46th day. However, where there are competing bidders still in the field at this point, the Panel has come to the conclusion that this freezing of the offers on the 46th day is an unacceptably inflexible rule. It will therefore conduct an auction, with revisions being announced into the final period, according to a procedure determined ad hoc for the particular bid (r.32.5).

Bid documentation

28–61

The offer will, of course, be a longer and more detailed document than the announcement of the firm intention to make a

bid. After a general statement in r.23 that shareholders must be given sufficient information and advice to enable them to reach a properly informed decision as to the merits or demerits of an offer and early enough to decide in good time, r.24 (divided into 16 sub-rules) states what financial and other information the offer document must contain and r.25 (divided into nine sub-rules) what information must be contained in circulars giving advice from the target company's board. The information required is extensive but need not be considered in detail here, beyond saying that it is very much what one would expect in the light of the nature of the documents. It is worth noting that the documentation issued by a bidder on a share-exchange offer need no longer comply with the FCA's rules, since it does not constitute a prospectus.[229]

Employees' interests

28–62

Following the adoption of the Directive, the interests of employees received slightly more explicit consideration in the Code than before, mainly at the level of information provision, and these provisions were further strengthened in the 2010 review. Rule 24.2 requires the bidder to state in its offer document "its intentions with regard to the future business of the offeree company and explain the commercial justification for the offer" as well as its intentions with regard to continued employment of the employees and management of the offeree company, material changes in working conditions, strategic plans for the offeree company and their likely impact on employment, and the redeployment of the fixed assets of the company. It must also state its intentions on these matters in relation to the business of the offeror company. So, much more is required to be stated about intentions vis-à-vis employees than previously. Rule 25.2 requires the board of the target, when giving its opinion on the offer, to include its views, and the reasons for those views, on the implications of the bid for the employees and its views on the offeror's strategic plans. These documents, and any revised offer and a target board opinion thereon, must be made available to the representatives of the employees or, in their absence, to the employees themselves[230];

and the offeree board must attach the opinion of the employee representatives to its response circular or publish it on its website.[231] None of this gives the employees any formal say in the bid decision, though it may give them information upon which to organise political or social pressure in relation to the offer. For a more formal input to the bid decision, the employees or their representatives must look elsewhere. Thus, where a statutory information and consultation arrangement is in place, both bidder and target may need to consult employee representatives on the employment consequences of the bid or of defensive measures.[232]

In the takeover of Cadbury by Kraft in 2009 the bidder unwisely committed itself not to close a factory in the UK which the target management had decided to shut down. Having obtained control, the bidder discovered there were very good reasons for the previous management's decision and reneged on its commitment. This caused a political storm, as a result of which r.19 was amended to deal with "post offer" statements and undertakings, i.e. statements made during an offer about how a party (typically the bidder) intends to act after the end of the offer period. The amendments apply generally to post-offer statements and undertakings, but these will often be given in relation to employment matters in order to defuse employee or public opposition to the bid. The amendments first require the party to be clear whether it is making a statement of intention (r.19.8) or giving an undertaking (r.19.7) about its post-offer conduct. The requirements on intention statements are less demanding than those on undertakings. For intention statements the statement must accurately reflect the party's intentions at the time it is made and be made on reasonable grounds. For 12 months after the offer has closed (or such other period given in the statement), a party intending to depart from its statement must consult the Panel and, having done so, it must publicly announce its change of heart and explain the reasons for it. The intention statement rules recognise that intentions may genuinely change but they impose a form of "comply or explain" rule, first in relation to the Panel and then in relation to the market and public opinion, in an attempt to control opportunistic changes of mind.

The rules on undertakings are, not surprisingly, more robust. The Panel must be consulted in advance of the undertaking being given and the undertaking must be precisely formulated. In particular, qualifications or conditions attached to the undertaking must be capable of objective assessment (ie not be dependent on the subjective judgement of those giving the undertaking). Even if these conditions are met, a person seeking to invoke a condition or qualification post-bid must obtain the Panel's consent. The giver of the undertaking must report periodically to the Panel on progress, or lack of it, towards its implementation, which reports the Panel may publish. If the Panel has doubts about the quality of these reports, it may appoint an independent supervisor to monitor compliance and to report to the Panel. The regulation of intention statements and undertakings was not an easy issue for the Panel, because it required regulation of post-offer behaviour. Once the offer period is over the Panel's role has traditionally been limited, as discussed below, essentially confined to enforcing its rules on when a failed bidder may bid again. It is notable that in extending its regulatory reach the Panel did not put in the forefront the use of its new legal powers,[233] but relied instead on the domestic remedies of Panel consultation and approval and disclosure.

Curiously, however, the strongest mechanism for the protection of employee interests may found in the pensions legislation. Where a highly leveraged bid for a target company is successful, the level of risk in the target company increases, including the risk that the company will default on its obligations under an occupational pension scheme. In that situation, the Pensions Regulator has a, still somewhat ill-defined, power to require the bidder to make extraordinary payments into the fund, which the bidder may either do, and so give the pensioners greater financial protection, or refuse to do and decide not to make an offer. The potential power of the Regulator puts the pension scheme trustees in a position to negotiate with the bidder as to the terms upon which they will regard it proper not to seek the Regulator's intervention.[234]

Profit forecasts and valuations

In the case of an agreed recommended takeover with no rival bidders, no more may need stating than the Code requires. But, in the case of a hostile bid or where there are two or more rival bids, each of the companies involved will probably want to make optimistic profit forecasts about itself[235] and to rubbish those of the others. All profit forecasts are unreliable and those made in a takeover battle more unreliable than usual. Hence, r.28 (with eight sub-rules) lays down stringent conditions about them. In particular, the forecast "must be compiled with due care and consideration by the directors whose sole responsibility it is" but "the financial advisers must satisfy themselves" that it has been so compiled.[236] The assumptions on which the forecast is based must be stated both in the document and in any press release.[237] Except for a bidder's forecast in a pure cash offer, the forecast must be reported on by the auditors or consultant accountants (and sometimes by an independent valuer[238]) and the report sent to the shareholders[239] and, if any subsequent document is sent out, the continued accuracy of the forecast must be confirmed.[240] All this is wholly admirable but the evidence does not suggest that it has made such forecasts significantly more reliable.

Somewhat similar requirements apply when a valuation of assets is given in connection with an offer.[241] These valuations tend to vary according to whether it is in the interests of the company which engages the "independent" valuer that the value should be high or low; but at least the valuer of real property is likely to have more objective evidence in the form of prices recently paid for comparable properties. Rule 19.1 lays down a general principle that all documents, advertisements and statements made during the course of an offer "must be presented with the highest standards of care and accuracy and the information given must be adequately and fairly presented". Note 9 makes it clear that statements about the expected financial benefits of a takeover to the bidder (often referred to as "synergies"), which fall short of constituting profit forecasts, are nevertheless regulated in a similar manner, with assumptions stated and reports from financial advisers.

Liability for misstatements

28–64

Although there has not been space here to discuss the details, it is clear that the Code attaches the highest importance to the provision to shareholders of complete and accurate information about the bid and any defence to it. Without such guarantees, the Code's purpose of placing the decision on the commercial acceptability of the offer in the hands of the shareholders of the target company might seem unrealistic, as might the Panel's own refusal to make any assessment of the commercial merits of the bid.[242]

Suppose, however, an inaccuracy is present in the information put out by the bidder or target companies and a person later wishes to claim compensation for the loss said to have been suffered thereby. The Panel now has the power to award compensation but this is not one of the areas in which it has sought to implement the power, nor will compensation under FSMA normally be available.[243] However, this is an area in which the Code intersects with the general law, in the sense that there may well be legal remedies available to shareholders who have suffered loss as a result of inaccurate or incomplete information provided in the course of a takeover bid.[244] Applying generally, that is, to both bidder and target documentation, is the common law liability for negligent misstatement, which, even after the decision of the House of Lords in *Caparo Industries Plc v Dickman*,[245] would seem capable of imposing liability upon the issuers of documentation in the course of takeover bids towards the shareholders of the target company, to whom it is clearly addressed, where such shareholders act in reliance upon the information to either reject or accept the offer made.[246] Indeed, in the post-*Caparo* case of *Morgan Crucible & Co v Hill Samuel & Co*[247] the Court of Appeal refused to strike out a claim by the bidding company against the directors of the target that inaccurate statements made by the target company in the course of a bid had been intended to cause the bidder to raise its bid, which it had done to its detriment.

Dealings in shares

28–65

General Principle 4 states that "false markets must not be created

in the securities" of the offeror or offeree company. The Code has always sought, however, to permit dealings in the securities of companies involved in a bid to continue during the bid period. Apart from the insider dealing laws, already discussed, the main restrictions are these. Once the "offer period" starts (triggered by the first public announcement about the bid, even if it is only about a possible offer) and has not ended (with the first closing date or, if later, the offer becoming or being declared unconditional as to acceptances),[248] the offeror and persons acting in concert with it must not sell any securities in the target company without the consent of the Panel.[249] Moreover, during that period requirements for disclosure of dealings, additional to and stricter than that required by the Act, come into operation.[250]

Solicitation

28–66

There is an obvious temptation for both bidder and target to engage in high-pressure salesmanship in the case of a hostile or, especially, a contested takeover. There are firms specialising in the art of persuading reluctant shareholders. It is increasingly common for the services of such firms to be recruited by the parties or their financial advisers. Rule 19 of the Code is designed to curb the excesses which may result (and sometimes have done). The sub-rules of particular interest include r.19.4 which prohibits the publication of an advertisement connected with an offer unless it falls within one of nine categories, and, with two exceptions,[251] it is cleared with the Panel in advance. The Panel does not attempt to verify the accuracy of statements,[252] but if it subsequently appears that any statement was inaccurate the Panel may, at least, require an immediate correction.[253] This pre-vetting, however superficial, is a powerful disincentive to window-dressing and to "argument or invective".[254] The rule applies not only to press advertisements (which must not include acceptance or other forms[255]) but also to advertisements in any of the ever-expanding media available[256] and in each case the advertisement must "clearly and prominently" identify the party on whose behalf it is being published.[257]

The Rule, however, covers only advertising material of which

there will be a record. The greater danger arises from unrecorded oral communications, which cannot be vetted in advance or scrutinised afterwards. However, an attempt is made to control these. Rule 19.5 provides that, without the consent of the Panel, campaigns in which shareholders are contacted by telephone may be conducted only by "staff of the financial advisers who are fully conversant with the requirements of, and their responsibilities under, the Code", and it adds that only previously published information which remains accurate and not misleading may be used, and that "shareholders must not be put under pressure and must be encouraged to consult their financial advisers". However, in recognition, no doubt, that the parties will have selected their financial advisers on the basis of their financial expertise and reputation rather than their ability to woo, the Panel may consent to the use of other people, subject to the Panel's approval of an appropriate script which must not be departed from, even if those rung up ask questions which cannot be answered without doing so, and to the operation being supervised by the financial adviser.[258]

28–67

The telephone campaign rules focus on solicitations in favour of or against a bid which is on the table. But campaigning may begin before this. Rule 4.3 provides that any person proposing to contact a private individual or small corporate shareholder with a view to seeking an irrevocable commitment consult the Panel in advance. An irrevocable commitment is an undertaking to accept the offer, if one is made, though they often contain qualifications which release the promisor if a rival bid emerges at a higher price. A Note to r.4.3 states that the Panel will need to be satisfied that the proposed arrangements will provide adequate information as to the nature of the commitment sought and a realistic opportunity to consider whether or not it should be given and with time to take independent advice. It adds that the financial adviser will be responsible "for ensuring compliance with all relevant legislation and other regulatory requirements".[259] Furthermore, Note 3 to r.19.5 stipulates that the Panel must be consulted before a telephone campaign is conducted with a view to gathering irrevocable commitments in connection with an offer. Short of a total ban on cold-calling this

seems to regulate it in this context as satisfactorily as is reasonably possible—assuming that financial advisers can be relied on to observe the Rules.

Rule 19.6 says that parties, if interviewed on radio or television, should seek to ensure that the interview, when broadcast, is not interspersed with comments or observations made by others. It also provides that joint interviews or public confrontations between representatives of the contesting parties should be avoided.

The more serious problem, arising from meetings with shareholders or those who are likely to advise them, is dealt with in r.20.1 which provides that "information about companies involved in an offer must be made equally available to all offeree company shareholders as nearly as possible at the same time and in the same manner".[260] Despite this, meetings with institutional shareholders, individually or through their professional bodies, are likely to be held, as, often, are meetings with financial journalists and investment analysts and advisers. Note 3 to the Rule permits this, "provided that no material new information is forthcoming and no significant new opinions are expressed". If that really is strictly observed, one wonders why anybody bothers to attend such meetings.[261] But many do, and when a representative of the financial adviser or corporate broker of the party convening the meeting is present (as must be the case unless the Panel otherwise consents), the representative generally seems able to confirm in writing to the Panel (as the Note requires) that this Rule was observed. If such confirmation is not given, a circular to shareholders (and, in the later stages, a newspaper advertisement also) must be published giving the new information or opinions supported by a directors' responsibility statement.

The post-offer period

Bidding again

28–68

If the first offer fails, the Code's policy is that the target should be given some respite before the acquirer makes a second offer. Rule 35.1 provides that, except with the consent of the Panel,

when an offer[262] has not become wholly unconditional within the bid timetable or has been withdrawn or has lapsed, neither the offeror nor any person who has acted or now is acting in concert with it, may, within the next 12 months: (a) make or announce another offer for the target company; (b) acquire any shares of the target company which would require a mandatory bid on the part of the acquirer; (c) be a member of a concert party which acquires 30 per cent or more of the voting rights in the offeree company[263]; (d) make any statement which raises the possibility that an offer might be made for the offeree company; (e) take any preliminary steps in connection with an offer (to be made after the end of the 12 months) which might become known outside the immediate circle of the company's top management and its advisers. Similar restrictions apply following a partial offer, if one is permitted. Interestingly, the restrictions apply to a partial bid for between 30 and 50 per cent of the target, even if that bid is successful. In other words, having had one bite at the cherry, the bidder cannot come back for a second within 12 months: if the bidder wants to obtain a legally controlling interest through a partial bid, it must try for this the first time around.[264] Furthermore, if a person or concert party following a takeover offer holds 50 per cent or more of the voting rights it must not, within six months of the closure of the offer, make a second offer, or acquire any shares from the shareholders on better terms than those under the previous offer.[265] This is another expression of the equality principle. Overall, these provisions prevent the offeror from continuously harassing the target and, while the maximum waiting period is only 12 months, that may be long enough to enable the target's board to strengthen its defences against further hostile bids by the offeror.

The bidder's right to squeeze out the minority

28–69

Here we deal with the post-bid consequences of a successful offer. These are regulated by the Act rather than the Code, since they involve the compulsory acquisition of shares. It is virtually unknown for even a well-supported offer to achieve 100 per cent acceptance. As we have seen above, although a bidder is normally required to offer for all the equity shares, it may

declare the offer "unconditional as to acceptances" at a less than full acceptance, provided it ends up with at least 50 per cent of the voting rights. However, where it is important to the bidder to obtain complete control of the target (for example, where it wishes to conduct its business in a way which will not necessarily be in the interests of the minority shareholders of the target), it will seek to get to a position where it can squeeze out any dissenting (or simply non-responsive) minority shareholders. This may be particularly true of private equity bidders, which will want to use the target's assets to secure the loans made to the bidder to finance the bid. Moreover, the existence of the squeeze-out removes to some degree the incentive for target shareholders not to accept an offer from a bidder who they think will run the target well, so that a target shareholder will be better off not accepting the bid (provided the majority do so).

Since 1929, the Companies Act has contained a provision enabling the bidder to squeeze out a minority after a successful bid. Article 15 of the Takeover Directive now requires Member States to provide a squeeze-out right, and the Directive's provisions led to some amendments in the 2006 Act to the previous legislation, though the report of the Company Law Review was a more significant source of reforms.[266] Despite the number of statutory provisions devoted to the squeeze-out, its practical importance is less extensive as it constitutes only one way of ejecting an unwanted minority. One attraction of the scheme of arrangement mechanism (discussed in the following chapter) for effecting a takeover is that, once the scheme has been approved by a resolution of the shareholders and approved by the court, dissenting minorities (or those who simply do not accept the offer as a result of inertia) will be bound to transfer their shares, though a scheme is not attractive in a competitive situation.[267] Moreover, the majority required for a scheme is 75 per cent of those voting on the resolution, rather than 90 per cent of those to whom the offer is addressed required (see below) for a post-bid squeeze-out. Not only is a higher percentage required for the squeeze-out, but under that mechanism apathy always counts against the bidder. A de-listing of the company from the public equity markets will also act as a strong incentive for the minority to throw in the towel. Again, this step requires only a 75 per cent vote in favour and, indeed, no vote at all if the

intention to de-list has been stated in the offer document and the offeror reaches the 75 per cent figure as a result of the offer.[268]

28–70

The current rules on squeeze-outs are set out in Ch.3 of Pt 28 of the Act. The basic principle is quite straightforward, though its implementation gives rise to some complicated provisions. Assuming a single class of shares has been bid for, the offeror is entitled to acquire compulsorily the shares of the non-acceptors if the offer has been accepted by at least 90 per cent in value of the shares "to which the offer relates" and, if the shares are voting shares, those shares represent at least 90 per cent of the voting rights carried by those shares.[269] Note that the 90 per cent figure relates to the shares bid for, not to the total number of shares of the class, some of which may be held by the offeror before the bid is launched. These shares are to be excluded from both the numerator and the denominator when working out whether the appropriate fraction of the shares has been acquired as a result of the bid.[270] Where there is more than one class of shares bid for, the 90 per cent test is applied to each class separately, so that a bidder could end up in a position to squeeze out the minority of one class but not that of another.[271]

In contrast to the Code, Ch.3 applies to takeovers of any type of company within the meaning of the Act whether it is public or private.[272] The offeror need not be a company though in practice it will usually be a body corporate[273] (or in some cases two or more such bodies).[274] The definition of "takeover offer" is one to acquire (a) all[275] the shares of the company (or all the shares of a class) which on the date of the offer the offeror does not already hold[276]; and (b) to do so on the same terms for all the shares (or all the shares of a particular class).[277]

28–71

All the apparently simple terms used above are capable of raising questions of interpretation, most, though not all, of which are expressly addressed now in the legislation. What, for example, is an "offer"? In *Re Chez Nico (Restaurants) Ltd*,[278] Browne-Wilkinson VC held that this definition had to be construed strictly, since the provisions enabled a bidder who had acquired 90 per cent of the shares to expropriate the remaining

shares, and that accordingly they operated only if the bidder had made an "offer" in the contractual sense of the word. In the instant case two directors of the company who were its major shareholders had circulated the other shareholders inviting them to offer to sell their shares to them and indicating the price that those directors would be prepared to pay if they accepted the offers. As a result, the directors succeeded in acquiring over 90 per cent and then sought to acquire the remainder. On an application by one of the remaining shareholders, the court declared that the directors were not entitled to do so, since they had not made any "offer" but instead had invited the shareholders offer to them. While this produced the right result in the instant case,[279] the importation into company law of the subtle distinctions drawn by the law of contract seems regrettable; in company law many transactions are described as "offers" or "offerings" when strictly they are invitations to make offers.[280] Moreover, the decision has adverse consequences for a minority shareholder who, instead of wanting to remain a shareholder in the taken-over company, wishes to exercise his rights to be bought out (see below); the effect of the decision is that he will not be entitled to do so if the bidder has proceeded as the directors did in this case.

The requirement that the offer be on the same terms is relaxed in two minor respects by s.976. If the difference simply reflects differences in the dividend entitlements (for example, because later allotted shares carry a lower dividend entitlement in that particular financial year as contrasted with shares allotted earlier), the offer is nevertheless on the same terms. This is deemed to be the case also where an offer is made of "substantially equivalent" consideration to those outside the UK whose law either prohibits or subjects to unduly onerous conditions the consideration offered to the main body of the shareholders.[281]

A similar problem to this second one arises with the requirement that the offer be made to all the shareholders (of the relevant class) where the target has a few shareholders resident in countries with elaborate securities laws and where the inclusion within the offer of such shareholders is likely to trigger the need to comply with those laws. An established technique for

dealing with this situation is to make the offer capable of acceptance by the foreign shareholders but to take elaborate steps to ensure that the formal offer documentation is not addressed to them. When challenged in court, this practice was upheld with some unease by the Court of Appeal on the specific facts of the case.[282] Section 978 now gives specific statutory cover to this technique, where the offer was not communicated in order to avoid contravention of local law. In order to deal with the difficulty that the foreign resident might never know of the offer until it receives the compulsory acquisition notice from the offeror, the offer is normally placed on a website and the website address given in the *Gazette*.[283] Section 978(2) also saves from failure under the squeeze-out provisions an offer which is communicated but whose acceptance is made impossible or difficult as a result of local law. Finally, s.978(3) makes it clear the courts should not deduce from the section that, in all other cases, a failure to communicate the offer to each holder or an offer which it is impossible or more difficult for some shareholders to accept fails to be a "takeover offer" within the meaning of the Act: the courts will decide on a case-by-case basis.

28–72

Further, there is the question of which are the shares "already held by the offeror" at the date of the offer.[284] In general, the larger the stake held by the offeror before the bid, the more difficult it is for it to achieve the 90 per cent, since the smaller becomes the proportion of the class as a whole which is needed to stop it reaching the threshold.[285] In consequence, it becomes important to know how one determines whether a share is acquired before or after the offer is made. Section 975(2) states that shares conditionally acquired before the offer do not count towards the 90 per cent except where the promise by the existing holder is to accept the offer when and if it is made ("irrevocable undertakings") and the undertaking is given for no significant consideration beyond, if this is the case, a promise to make the offer.[286]

Finally, the bidder's ability to reach the 90 per cent threshold will be enhanced if it can count shares acquired after the date of the offer but outside the bid. The effect of the Act is that such

shares count towards the 90 per cent but only if the price paid does not at that time exceed the value of the consideration specified in the offer or the offer is subsequently revised so that it no longer does so.[287] As we have seen, where the Code applies, inequality of consideration is unlikely to arise.

There are also potentially tricky issues about shares which are allotted after the bid is made (for example, as a result of a conversion of another security into shares of the class in question) and about treasury shares, which may be held in treasury throughout the bid or become or cease to be treasury shares during the bid period. The statute handles this point by giving the bidder a choice whether it includes in the shares to which the offer relates after-allotted shares or treasury shares of different categories.[288] If it decides to include them in the offer, a cut-off date must be specified in the offer beyond which such shares will not be regarded as being within the offer. If any of those categories of shares are included within the offer, then the 90 per cent threshold is calculated by taking into the account the shares allotted or which have ceased to be treasury shares on the date on which the bidder triggers the compulsory acquisition procedure (s.979(5)). Subsequently allotted shares or shares subsequently ceasing to be treasury shares do not affect that determination, once made, though if the offeror gives a subsequent notice (for example, because the first is defective in some way) the 90 per cent figure will have to be calculated on that second date. If the offeror chooses not to make an offer for after-allotted or treasury shares, then, naturally, the compulsory transfer provisions will not apply to them.

Challenging the squeeze-out

28–73

Given the demanding nature of the 90 per cent threshold, the above detailed provisions may well be of practical importance in particular cases in establishing whether the threshold has been exceeded. Assuming it has, the successful bidder triggers the compulsory acquisition process by giving notice to the non-accepting shareholders, with a copy to the target company, accompanied by a statutory declaration of its entitlement to serve the notice.[289] That notice must normally be given within three

months of the last day on which the offer could be accepted.[290] The effect of the notice is, under s.981(2), that the offeror becomes entitled and bound to acquire the shares on the final terms of the offer. If the offer gave shareholders alternative choices of consideration (e.g. shares or a cash alternative), the notice must offer a similar choice and state that the shareholder may, within six weeks from the date of the notice, indicate the choice by a written communication to the offeror and must also state which consideration will apply in default of a choice. This applies whether or not any time limit or other conditions relating to choice contained in the offer itself can still be complied with and even if the consideration was to have been provided by a third party who is no longer bound or able to provide it.[291] The remainder of ss.981 and 982 prescribes in detail the procedures that have to be adopted to ensure that the shares which the offeror is bound to acquire are transferred to it and that the consideration that it is bound to pay reaches the shareholders concerned.[292]

The dissenting shareholder does not have to take the notice lying down. He or she can appeal to the court under s.986(1) for an order either (a) that the offeror shall not be entitled to acquire the shares; or (b) that the terms of the acquisition shall be amended "as the court thinks fit".[293] The shareholder must act within six weeks of the date on which the acquisition notice was given by the bidder, but the application has the effect of suspending the bidder's rights until the appeal is disposed of. Section 986(4) provides that, where the petitioner seeks relief of type (b), the court may not increase the level of consideration to be provided by the bidder beyond that available in the offer, unless "the holder of the shares shows that the offer value would be unfair" (but it cannot in any event require a consideration of lower value). Thus, the burden of showing unfairness is on the challenger.

28–74

What are the petitioner's chances of success? They will be excellent if the petitioner can show that the statutory requirements for a "takeover offer" have not been met or that the 90 per cent threshold has not been reached, under the provisions discussed above, because then the court will have no jurisdiction

to make an order for the compulsory acquisition of the shares.[294] However, it should not be thought that the merits are always on the side of the non-accepting minority. They may simply be interested in exploiting to the full the position of power which the bidder's desire for complete control has given them. If the court cannot order a compulsory acquisition because the statutory requirements have not been met, the bidder may think of other devices to achieve the same result.

In *Rock Nominees Ltd v RCO (Holdings) Plc*[295] the bidder, faced with highly opportunistic conduct on the part of a shareholder which narrowly blocked achievement of the 90 per cent threshold, caused the newly acquired subsidiary to sell its business to another company in the same group (at a fair price) and then put the seller into voluntary liquidation, for which only a special resolution is required, distributing the price received on the sale to the shareholders (including the minority) and thus achieving the same result as a compulsory acquisition. The Court of Appeal refused to hold that this was unfairly prejudicial conduct on the part of the majority.[296]

Where the court has jurisdiction, the petitioner will have a more uphill struggle. Section 986(4) (above) indicates the nature of the difficulty: if 90 per cent of the shareholders have accepted the offer, that is normally strong evidence that it is a fair one. Indeed, that subsection, introduced as a result of the Directive, appears to put a very high burden on the petitioner seeking to amend the bid terms: the petitioner must show, not simply that the offer value is unreliable, but that it was too low and, by implication, what the right price should be.[297] Consequently, the petitioner may have a better chance of success if he or she simply seeks an order that there should be no compulsory acquisition, for there the requirement to show that the offer value is unfair does not apply. Even in relation to simple denial of the compulsory purchase request, however, the British courts have traditionally relied on the high level of acceptances achieved to conclude that they should exercise their discretion in favour of the compulsory acquisition.[298] However, in more recent times the courts have been prepared to refuse compulsory acquisition where, unusually, the acceptances are an unreliable indicator of fairness, without requiring the petitioner to establish what the

correct level of consideration should have been. Two such indicators of unreliability have emerged in particular in the cases. If the acceptors of the offer are not independent of the bidder or if the acceptors were not given adequate information upon which to take their decision, the court will not necessarily draw the conclusion that a 90 per cent acceptance indicates a fair offer.[299] In practice, this means the petitioner's chances of success are much greater if the bid was not governed by the Code than if it was.

The sell-out right of non-accepting shareholders

28–75

The squeeze-out provisions introduced in 1929 were not originally accompanied by a right on the part of the non-accepting minority to have their shares bought by the bidder. This right was added only in 1948. Although formally reciprocal, in fact the two rights perform very different functions. The sell-out right permits the shareholder, who does not wish to accept the bid, but who, if the majority do accept, would rather leave the company as well, to give effect to that set of preferences. He or she can refuse to accept the offer, but then change his or her mind, once the results of the other shareholders' decisions have become clear. However, as we have noted, the Code already provides a more effective mechanism for giving the shareholder that facility. Rule 31.4[300] requires the offeror to keep the offer open for a further 14 days after it has become unconditional as to acceptances. Since the Code rule is not dependent upon the 90 per cent threshold and it operates without a court order, it is a much more attractive mechanism for those who are quick enough to use it. This perhaps explains why there has been little litigation on the sell-out right provided by the statute.

The sell-out right, like the squeeze-out right, depends upon there having been a takeover offer which relates to all the shares in the company, as those terms are defined for a squeeze-out.[301] However, the 90 per cent threshold is calculated in relation to a different set of shares. The question is whether the shares acquired through the offer *together with* other shares which the offeror (or an associate of the offeror) held before the offer or

acquired during the offer but outside it constitute 90 per cent of the shares in the company (and, where relevant, 90 per cent of the votes). If there is more than one class of share, this rule is applied class by class.[302] In other words, unlike in the squeeze-out, the question is not whether there has been a 90 per cent level of acceptance of the offer, but rather whether the bid has left the offeror holding 90 per cent of the shares. This seems the correct test: the mischief which is sought to be remedied is the minority position into which the bid has put the applicant shareholder and the precise degree of enthusiasm displayed by the other shareholders for the offer is of secondary importance.[303] It is probably rather easier for the sell-out threshold to be attained than the squeeze-out threshold, because, in a sell-out, a lower level of acceptances might be compensated for by a higher level of pre-bid holdings on the part of the bidder or its associates.

28–76

The offeror must give each of the non-accepting shareholders notice of their entitlement to be bought out within one month of the end of the offer period. The shareholder wishing to take up this right must give notice to the offeror, either within three months of the end of the offer period or, if later, as it usually will be, of the notice given by the offeror.[304] Provisions apply as to the consideration to be provided which are equivalent to those for a squeeze-out.[305] It is in this case, rather than in relation to a squeeze-out, that the need to provide a choice of all the original alternatives (including a cash underwritten alternative) is so unpopular with offerors and their advisers. And it is, perhaps, rather remarkable and not altogether easy to reconcile with the provisions of the Code. As we have seen, under the Code an offer has to remain open for at least 14 days after it becomes unconditional as to acceptances. However, an offeror is not obliged to keep most types of cash underwritten alternatives open if it has given notice to shareholders that it reserves the right to close them on a stated date being not less than 14 days after the date on which the written notice is given.[306] The effect of the Act is virtually to keep the offer open for considerably longer than is required under the Code in all cases where the offer has achieved 90 per cent success. And clearly the parties cannot contract out of the statutory provisions. Nor can the Panel

or the Code waive them. The CLR endorsed this position.[307]

However, it is sometimes argued that what is now s.985 does not apply if the cash alternative is described in the offeror's offer document as a separate offer by the underwriting investment bank. In the light of the section that argument seems unsustainable. The fact is that, as the section and the Code clearly recognise, the offeror's "offer" may and probably will contain a number of separate offers and that some of those offers may be made by third parties. All fall within the phrase "the terms of the offer". The only way, it is submitted, in which offerors and their investment banks might be able to achieve their aim is by making no mention at all of a cash underwritten alternative hoping that an independent investment bank, not acting on behalf of, or paid for its services by, the offeror will come forward and make an offer on its own account to the target's shareholders to buy the shares of the offeror received on the takeover. That is a somewhat unlikely scenario.

Under s.986(3), when a shareholder exercises his sell-out rights by notice to the offeror, an application to court may be made either by the shareholder or the offeror and the court may order that the terms on which the offeror shall acquire the shares shall be such as the court thinks fit. The parties may be in disagreement about whether there is an obligation on the offeror to acquire the shares at all or they may be in disagreement about the terms. The same provisions about raising or lowering the consideration in relation to the bid value apply as in a squeeze-out, since art.16 of the Directive requires Member States to provide a sell-out right; and the shareholder will be in the same difficulty when arguing that the sell-out should be at a higher level than was provided for in the bid.

Conclusion

28–77

UK takeover regulation is committed to the principle that the decision on the offer should lie in the hands of the shareholders rather than the management of the target company (assuming no competition concerns). Especially important in this regard are the restrictions imposed by the Code on the defensive steps which are open to the management of the target company and its

insistence that the shareholders of the target should not be denied the opportunity to decide on the merits of the bid. In other countries, it is easier for the incumbent management to take steps to defend itself against unwelcome bids, though not necessarily to the point of preventing them entirely. The argument in favour of the regime adopted by the Code is that it provides a cheap and effective method of keeping management on their toes and protects shareholders from management slackness or self-dealing—or, in any event, provides a method for the shareholders to exit the company on acceptable terms if such managerial misbehaviour produces a takeover bid. Further, this rule makes it less easy for target management to resist offers driven by the potential benefits of combining the businesses of offeror and target companies, where target management are nevertheless likely to lose their jobs in the process. The potential disadvantages of this stance are that it deprives the board of the target of full-scale role in either negotiating on behalf of the shareholders or protecting them from coercive bids. The latter concern is addressed by other provisions of the Takeover Code regulating the format in which offers may be put, in particular, the requirements for equal treatment and the Panel's reluctance to sanction partial bids. The board's negotiating role is not entirely removed by the "no frustration" rule but the board cannot in the end insist that its valuation of the company is correct and the shareholders' mistaken, if the target shareholders take a different view.

The Code's orientation seems to reflect the dominance of the institutional shareholders in the UK which naturally favour a set of rules which maximise their gains from bids but which also reduce their managerial agency costs. Thus, the institutions have also set their faces against the adoption in pre-bid situations, where the Code does not apply, of defensive devices by the management of potential takeover targets. However, it is perhaps easy to overestimate the beneficial effect upon management performance of the threat of the takeover bid, which is not to say that the takeover bid has no role to play in the British system of corporate governance. The core decision to side-line target management in the decision on the takeover offer also makes it difficult to build any protection for non-shareholders, notably employees, into the Takeover Code—though in this respect the

Code simply imitates the general orientation of British company law.[308]

---

[1] Where T Co was previously controlled by one or more large shareholders, they too will have lost control to A, but that is the result of a voluntary transaction between them and A. In so far as issues arise on this aspect of the takeover they can probably be resolved by the law of contract.

[2] This is a crucial and highly controversial proposition. For a balanced assessment see J. Coffee Jr, "Regulating the Market for Corporate Control" (1984) 84 *Columbia Law Review* 1145. See also P. Davies, K.J. Hopt and G. Ringe "Control Transactions" in R. Kraakman et al. (eds), *The Anatomy of Corporate Law*, 3rd edn (Oxford: OUP, 2016).

[3] Below, para.28–41.

[4] Sometimes the approval of the *offeror* company's shareholders is required under the Listing Rules if the proposed transaction is a very large one: above, at para.14–20. However, the relationship between acquirer and its shareholders is not dealt with by takeover regulation in the UK, though it has sometimes been suggested that it should be. Rather, that relationship is left to the general rules concerning shareholder approval of transactions, notably the "significant transactions" requirements of the Listing Rules. Other than the Listing Rules, general company law, notably the rules on directors' duties, is rather weak: it would be a bold court which concluded that an offeror board's decision to launch a takeover offer constituted a breach of duty. See A. Kouloridas, *The Law and Economics of Takeovers: An Acquirer's Perspective* (Oxford: Hart, 2008).

[5] As we shall see below, where the takeover is effected by means of a scheme of arrangement (Ch.29), a corporate decision of the target, which company law can regulate, is required, but the scheme is in practice available only where acquirer and target board are in agreement on the desirability of the takeover, so that at least the first main issue in takeover regulation (see para.28–1) will not be present.

[6] A. Johnston, *The City Take-over Code* (Oxford: OUP, 1980), Chs 1–4.

[7] Which, in some cases, was horrendous, with rival bidders badgering each of the target's shareholders by night and day telephone calls offering him a special price because, so it was falsely alleged, only his holding was needed to bring that bidder's acceptances to over 50 per cent. In one case the result was that the bidder who eventually succeeded paid prices ranging from £2 to £15 per share.

[8] For an excellent early analysis of the impact of the Directive on the UK see J. Rickford, "The Emerging European Takeover Law from a British Perspective" [2004] E.B.L.R. 1379.

[9] Reflecting the fact that a very high proportion of the EU's total of takeover bids (especially "hostile" ones) takes place in the UK.

[10] The competent authority may be, of course, a public body of a more traditional kind. The Government did toy, probably not very seriously, with the idea of giving takeover regulation to the FCA, or alternatively keeping the Panel on a non-statutory basis but treating breaches of the Code as breaches of the FCA's rules, but rejected both ideas. See DTI, *Company Law Implementation of the European Directive on Takeover Bids: A Consultation Document* (January 2005, URN 05/11) paras 2.7 and 2.17—hereafter "DTI Consultation Document". That idea does demonstrate, however, that the Government was not obliged to give these functions to the Panel nor is it obliged to leave them there, should the Panel act in a way the Government finds unacceptable.

[11] See *The Takeover Code*, 11th edn, 2013, *Introduction*, A8 (hereafter the "Code"). This perhaps illustrates better than anything the self-created nature of the Panel, since it is circular for the Code, which is the responsibility of the Panel, to determine the composition of the body which creates the Code. Under earlier editions of the Code the chair and two deputies of the Panel were appointed by the Governor of the Bank of England, which reflects the historical reality of how the self-regulatory process was initiated, but he no longer has a formal role in the Panel's composition. Sections 957–959 also maintain the Panel's present funding arrangements. It is not supported out of taxation, but by fees for its services and a levy on share transactions, but of course a statutory body could be funded in a similar manner, as the FCA is.

[12] DTI Consultation Document, paras 2.35–36. The system is set out in the Code, *Introduction*, §§6–8.

[13] Delegation by the Panel of functions to officers or members of staff is specifically provided for by s.942(3)(b). In practice, the Panel's efficiency depends upon the parties or their advisers bringing issues to the Panel at an early stage and disclosing full information. The obligation to do so is laid down in the *Introduction* to the Code, paras 6(b) and 9(a). See Panel Statement 2015/15, *Asia Resource Minerals plc (Formerly Bumi plc).*

[14] With its own website: *http://www.thetakeoverappealboard.org.uk/* [Accessed 26 April 2016]. For an instructive example of its operating methods see Takeover Appeal Board, *Principle Investment Capital Trust Plc*, decision 2010/1.

[15] Currently Lord Collins of Mapesbury as chairman and Sir John Mummery as deputy chairman.

[16] The Takeover Panel, *Report on the Year Ended March 31, 2001*, pp.8–9.

[17] *R. v Panel on Take-overs and Mergers, Ex p. Datafin Ltd* [1987] Q.B. 815 CA. See Cane, "Self Regulation and Judicial Review" [1987] C.J.Q. 324. See also *R. v Takeover Panel, Ex p. Guinness Plc* [1990] 1 Q.B. 146 CA.

[18] See ss.942(2), 943, 944(1) and 945.

[19] "It is intended that the implementing legislation should neither undermine nor be inconsistent with the principles established in the Datafin case." (DTI Consultation Document, para.2.38.)

[20] 2006 Act s.956(1). The definitions of "rule-based requirement" and "disclosure requirement" are given in s.955(4), the latter referring to the Panel's disclosure powers in s.947, which are discussed below.

[21] 2006 Act s.956(2).

[22] 2006 Act s.961. The provisions of the Convention most likely to affect that Panel are those of a procedural nature, for example, art.6 relating to the fair trials in civil disputes. The liability of the Panel under the Human Rights Act 1998 is not new.

[23] 2006 Act s.943. It is not absolutely clear that art.4 of the Directive contemplates that the supervisory authority shall make the rules, but the Directive does not explicitly forbid it, which one would have expected it to do if its authors had wanted to bring about such a major change in British practice, which was very much to the forefront in the formulation of art.4.

[24] 2006 Act s.943(2),(3). Section 944(1) permits the Panel to make rules in a flexible form.

[25] DTI Consultation Document para.2.10. The Directive applies only to bids for companies whose shares are traded on a regulated market, whilst the Code applied more broadly (see below), and even in relation to regulated markets the Code covers a number of topics not touched on by the Directive.

[26] 2006 Act s.942(3)(a).

[27] 2006 Act s.945, but binding effect only "to the extent and in the circumstances specified in the rules".

[28] City Code, *Introduction*, 2(c).

[29] 2006 Act s.946 and City Code, *Introduction*, 10.

[30] 2006 Act s.947(1)–(3). This section can also be seen as implementing art.6(5) of the Directive. The Code itself requires those dealing with it to disclose any known and relevant information (Code, *Introduction*, 9(a)) and the Panel expects this to be the power it normally relies on rather than the statutory one. Those firms subject to the jurisdiction of the FCA are required under its rules to provide information and documents to the Panel and to provide such other assistance which the Panel requests in the performance of its functions and the firm is reasonably able to provide: see MAR 4.3.5 and below, fn.41. This disclosure obligation is also subject to an exemption relating to legal professional privilege: see s.413 of FSMA.

[31] 2006 Act s.947(10).

[32] 2006 Act ss.948 and 949 and Sch.2. In the parliamentary debates it was controversial that the Panel has no responsibility for the further disclosure of the information by a body which receives it through one of the gateways, though it is difficult to see how in practice the Panel could have exercised such supervision.

[33] In one notorious case, concerning St Piran Ltd, such action by the Exchange proved singularly ineffective, despite belated undertakings by the guilty party to behave in future. See the Annual Reports of the Panel for 1981 and 1984. See also *Re St Piran Ltd* [1981] 1 W.L.R. 1300 CA, where intervention by the Secretary of State was saved from futility only because a shareholder in the company was prepared to bring a petition for the winding-up of the company on the just and equitable ground.

[34] Thus, in *R. v Takeover Panel, Ex p. Guinness Plc* [1990] 1 Q.B. 146 CA, the bidder agreed to pay £85 million to the shareholders of the target company in order to comply with a ruling of the Panel.

[35] See in particular ss.138 and 143 of FSMA 2000. The current provisions are discussed further below.

[36] 2006 Act s.955(2) makes it clear that only the Panel can so apply and not, for example, the party to the bid which stands to benefit from the Panel's ruling.

[37] See fn.17, above, where the company had been in breach of a Code rule requiring the bidder to increase the price offered to the target shareholders because shares had been purchased in the market at that higher price. For the current version of that requirement, see below at para.28–39.

[38] Code, *Introduction*, 10(c).

[39] Code, *Introduction*, 11(b). The Panel may also withdraw or qualify any special status or exemption it has granted the offender, for example, as an "exempt principal trader".

[40] 2006 Act s.952(2)–(8). For a discussion of the FCA's penalty powers, see above at

para.25–41.

[41] The FCA rules discussed in this paragraph are set out in MAR 4.3. These rules were made by the FSA under what is now FSMA 2000 s.137A. The range of prohibited services in connection with a bid is widely defined (MAR 4.3.3–4), though it does not extend to the giving of legal advice. S.143, dealing with formal endorsement of the City Code by the FSA, was repealed in the light of the statutory sanctions given to the Panel.

[42] 2006 Act s.953(2),(4). In the parliamentary debates the Solicitor-General gave an assurance that the provision was not intended to reach investment banks when they make offers as agents of bidders—though it must be said that it would be a pretty poor investment bank which knew of the defect in the documentation and did not take reasonable steps to correct it. See HC Debs, Standing Committee D, Nineteenth Sitting, 18 July 2006, cols 804–806.

[43] DTI Consultation Document para.2.18. See also Panel on Takeovers and Mergers, *Implementation of the Takeover Directive, Consultation Paper*, PCP 2005/5, November 2005, (hereafter "Panel Consultation Document") para.2.4: "Overall, the Panel remains confident that while its status and the status of the Code will be different under the new statutory regime, there will be little material substantive change either to its procedures or to the Rules of the Code".

[44] Directive, arts 1(1) and 2(1)(a). On the definition of a "regulated market" see above at para.25–7.

[45] We have also noted above that the criminal sanctions for inaccuracies in the bid documentation apply only to offers within the scope of the Directive. See para.28–12.

[46] The Code's provisions, discussed in this and the following paragraph, are set out in its *Introduction*, 3(b). Although a control shift by means of a scheme of arrangement has long fallen within the Panel's jurisdiction, only in 2008 was the Code amended to indicate more fully how it applies to schemes (because of the "significant increase in recent years in the use of schemes of arrangement in order to implement transactions which are regulated by the Code"). See Panel Consultation Paper, PCP 2007/1, *Schemes of Arrangement*, and App.7 to the current Code. For a more detailed analysis see J. Payne, *Schemes of Arrangement* (2014), Ch.3.

[47] A takeover bid is defined in art.2(1)(a) as "a public offer (other than by the offeree company itself) made to the holders of the securities of a company to acquire all or some of those securities, whether mandatory or voluntary, which follows or has as its objective the acquisition of control of the offeree company in accordance with national law".

[48] *Introduction*, 3(a)(i) and (ii). The starred note makes it clear that "company" for the purposes of the Code includes UK unregistered companies, to which, in addition, the statutory provisions of Chs 2 and 3 of Pt 28 are applied by regulation. See para.1–16. The term also embraces European companies which are incorporated in the UK.

[49] References to the UK include the Channel Islands and the Isle of Man. This is necessary to meet the EU obligations of the UK, but we do not further refer to this extension.

[50] For a good example of the significance of the residence requirement see *Xstrata Plc*, Panel Statement 2002/7: company incorporated in the UK and to be listed on the Main Market of the LSE not within the jurisdiction of the Panel under the pre-Directive rules because the place of its central management was Switzerland. The Panel's insistence on the central place of management being in the UK seems to have been linked to the question of whether that management would be amenable to its authority.

[51] See para.25–44.

[52] Directive art.4(2)(b) and (c). If the simultaneous listing had occurred before the Directive came into force, the relevant competent authorities must agree within four weeks of that date which of them is to be the competent authority for that company or, in default of agreement, the company chooses on the first day of trading after that four-week period.

[53] If, on the date for transposition of the Directive (20 May 2006) there were already multiple first admissions, either the regulators have to agree who has jurisdiction or the target chooses.

[54] At para.28–1.

[55] Directive art.1(1).

[56] Panel Consultation Document para.2.1. On the Panel's derogation and waiver powers, see above at para.28–7. Of course, the Directive restricts the Panel's derogation powers only by reference to its GPs and not by reference to any additional GPs which a Member State chooses to adopt, but copying out the Directive's GPs at least removes a source of possible confusion about which of the domestic GPs simply implement the Directive's GPs and which add something beyond the Directive's requirements.

[57] City Code, 7th edn, 2002, B1.

[58] Panel Consultation Document para.2.1.

[59] City Code, *Introduction*, 2(b).

[60] City Code, *Introduction*, 4(b).

[61] See para.16–65.

[62] For an analysis of the competing views see R. Kraakman et al. (eds), *The Anatomy of Corporate Law*, 3rd edn (Oxford: OUP, 2016), Ch.8.

[63] This prohibition, however, seems to be restricted to internal corporate action of the sort specified in r.21 and it is not regarded as breached by lobbying the competition authorities seeking to persuade them to take action to prohibit the bid or subject it to conditions unacceptable to the offeror.

[64] Thus, a power conferred by shareholders pre-bid upon the board to issue shares or warrants post-bid would not escape r.21, because that rule would catch the post-bid decision by the board to make the issue.

[65] See paras 16–26 et seq., above.

[66] On which see Note 2 to r.21.1.

[67] Of course, the management of the target company may, and often do, promise as part of their defence to the bid to carry out one or more of these actions after their shareholders have rejected the offer.

[68] See Panel Statement 1989/7, *Consolidated Gold Fields* and Panel Statement 1989/20, *BAT Industries*, which explore the complications which arise when the litigation is initiated in a foreign jurisdiction by a partially owned subsidiary or when the "litigation" takes the form of enthusiastic participation in regulatory hearings.

[69] DTI Consultation Document para.3.12. The most prominent country which does not

apply the board neutrality rule in takeovers is Germany, though even there defensive measures need (a) the approval of the shareholders which can be given in general and for periods of up to eighteen months and need not be given in the face of the bid, as the Code demands; or (b) the approval of the supervisory board. See W. Underhill and A. Austmann, "Defensive Tactics" in J. Payne (ed.), *Takeovers in English and German Law* (Oxford: Hart Publishing, 2002), pp.95–98.

[70] These rules apply to post-bid defensive tactics as well, but there their impact is normally hidden beneath that of r.21 of the Code. They might be important, even post-bid, in the exceptional case where the Code did not apply to the target company, for example, where it was a private company or a public company whose securities were not publicly traded in the UK and whose central management was outside the UK. See para.28–15, above.

[71] For an example of the legal pitfalls which can be created if the drafters of the joint venture agreement are overly ambitious see *Criterion Properties Plc v Stratford UK Properties LLC* [2004] 1 W.L.R. 1846 HL.

[72] On the division of powers between shareholders and the board see para.14–1.

[73] See para.24–4.

[74] The shareholder rights plan, which comes in many varieties, in its core version gives shareholders other than the bidder the right to subscribe for shares in the target company at a very attractive price. Given the discrimination between the bidder and non-bidder shareholders a rights plan would also cause difficulties for the target board under s.172(1)(f).

[75] Pre-emption rights, which might also stand in the way of rights plans, suffer from the same weakness of disapplication in advance. See s.570 and, above, at para.24–6.

[76] *Report of the High Level Group of Company Law Experts on Issues Related to Takeover Bids*, Brussels, 10 January 2002, Ch.1, especially pp.28–36.

[77] DTI Consultation Document para.3.9. In opting out of the breakthrough rule the UK followed the "vast majority" of the Member States: see Commission of the European Communities, *Report on the implementation of the Directive on Takeover Bids*, SEC (2007) 268, February 2007, para.2.1.4 (hereafter "Commission Report").

[78] Directive art.12(2). This provision applies to opt-outs from both arts 9 and 11, though only the latter is relevant in the UK, because the UK did not opt out of art.9. Article 12(3) provides for the reciprocity exception.

[79] At paras 28–19 to 28–26.

[80] The extent to which such defensive measures on the part of the target are permitted and the extent to which opting back into art.11 by the UK company would be effective against such defensive measures depends upon some difficult issues in the interpretation of the singularly ill-drafted art.12(3) of the Directive. First, it is not clear whether reciprocity is permitted to companies to which either arts 9 or 11 applies on a mandatory basis. The strict wording of the Directive suggests not, but this seems an odd result and the Commission seems to take a different view. See Commission Report para.2.1.3. Secondly, it is not clear on what precise basis the equivalence of the positions of the bidder and target companies is to be assessed, so as to exclude retaliatory measures. See Rickford, above, fn.8 at pp.1406–1408.

[81] 2006 Act s.996(3).

[82] For the variation of class rights procedure, see para.19–13.

[83] 2006 Act ss.966–7.

[84] The Large and Medium-sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410) Sch.7 Pt 6. The information might conceivably be set out in the strategic report instead: s.414C(11).

[85] In the case of "vote-holding" such disclosure by the vote-holder to the company and then by the company is required by the Transparency Directive (see para.26–14), but this disclosure obligation goes wider to embrace not just voting shares, though it is not accompanied by any obligation of disclosure on the security-holder.

[86] Shareholder pacts are particularly important in some continental European countries in giving groups of investors holding a substantial, but nevertheless minority, stake in the company complete control of it. See *Financial Times*, 28 March 2007, UK edition, p.15 (discussing Italy).

[87] These are likely to be the subject of annual shareholder resolutions in any event: see paras 13–19 and 24–10 et seq.

[88] Which in the UK will often be required as part of the directors' remuneration report: see para.14–43.

[89] It does not necessarily follow that a private equity group will want to keep the existing management of the target in place. Conversely, a public bidder may be happy to keep the existing management, where it is buying the target for synergy reasons rather than because it thinks the target badly run.

[90] Normally from an investment bank not disqualified under r.3.3. A similar obligation applies to the board of the offeror when the offer is made in a "reverse takeover" (i.e. one in which the offeror may need to increase its issued voting equity share capital by more than 100 per cent: see fn.2 to r.3.2) or when the directors are faced with a conflict of interests: r.3.2.

[91] In its 2010 review of the Code following the politically controversial takeover of Cadbury Plc by Kraft, the Panel considered the suggestion that independent advice should be required to be given to the shareholders directly, but this was not thought to add significantly to the existing r.3 requirements. See Code Committee of the Takeover Panel, *Review of Certain Aspects of the Regulation of Takeover Bids*, 2010/22, paras 6.10–6.12.

[92] Note 1 to r.3.1.

[93] Note 2 to r.25.2.

[94] Notes 4 and 5 to r.25.2.

[95] Panel Statement 2003/25, *Canary Wharf Ltd*, para.12.

[96] Now set out in Pt 4 of Pt 10 of the Act.

[97] 2006 Act s.219(1)(2)(4). Non-bidder holders of shares of the class may vote, even if their shares are not subject to the offer—a rare situation given the Code's equality rules.

[98] The Act does not require shareholder approval before the transfer of shares to the bidder under the offer but only before the payment is made. However, failure to achieve a quorum at two successive meetings triggers the rule that the payment is deemed to have been approved: s.219(5).

[99] 2006 Act s.219(3). The director is no longer under a statutory obligation, as was the case with the 1985 Act, to take all reasonable steps to secure that details of the proposed payment are included in the offer document, though r.24.5 (above) of the Code requires the offeror to include such information.

[100] 2006 Act s.222(3).

[101] See para.16–91, above.

[102] 2006 Act s.219(6) makes it clear that approval is not required where compensation is paid in relation to the takeover of a wholly-owned subsidiary. The requirement for shareholder approval also applies only to payments by UK-registered companies.

[103] 2006 Act s.223. This might seem to mean that a company could escape the statutory controls by paying a shadow director compensation for loss of the shadow directorship. However, since the shadow directorship is not a formal position, payment for loss of it is likely to be a breach of duty on the part of the non-shadow directors and recoverable from the shadow director who has received it, knowing of the facts which make its payment improper.

[104] 2006 Act s.219(1).

[105] 2006 Act s.215(3). The definition of a connected person is given in s.252 and discussed above at para.16–71.

[106] 2006 Act s.219(7). The date of the transfer of the shares is presumably the date upon which the bid became unconditional as to acceptances.

[107] 2006 Act s.216.

[108] 2006 Act s.215(2).

[109] 2006 Act s.221. The Secretary of State has power to raise the figure: s.258.

[110] *Taupo Totara Timber Co v Rowe* [1978] A.C. 537 PC; *Lander v Premier Pict Petroleum*, 1997 S.L.T. 1361. In the former case the director’s service contract provided that, if the company were taken over, he could within 12 months resign from the company and become entitled to a lump-sum payment of five times his annual salary.

[111] 2006 Act s.220(1)(a).

[112] 2006 Act s.220(3).

[113] 2006 Act s.220(1)(b), (c). Such payments must be made “in good faith” and so the parties to the transaction run a legal risk if they use a damages claim to inflate the compensation payable to the director beyond his or her contractual or statutory entitlements.

[114] 2006 Act s.220(1)(d). Again the payment must be made “in good faith”, which may constrain egregious use of this provision. For an unsuccessful attempt to use s.320 of the 1985 Act (now s.190 of the 2006 Act, see para.16–70) to impose a requirement for shareholder approval in relation to pensions, see *Granada Group Ltd v Law Debenture Pension Trust Corp Plc* [2015] 2 B.C.L.C. 604.

[115] By the Enterprise and Regulatory Reform Act 2013.

[116] i.e. companies with equity quoted on a top-tier public market: s.385.

[117] See para.14–44.

[118] 2006 Act s.226C.

[119] 2006 Act s.226F.

[120] 2006 Act s.226E(4).

[121] Directive art.9(2).

[122] *Heron International Ltd v Lord Grade* [1983] B.C.L.C. 244 CA.

[123] *Heron International Ltd v Lord Grade* [1983] B.C.L.C. 244 at 265.

[124] *Re A Company* [1986] B.C.L.C. 382.

[125] Note 1 to r.20.2.

[126] See paras 30–28 and 30–38.

[127] Code r.5 forbids pre-bid purchases (at least once a bid is in contemplation) which would take the bidder over the 30 per cent threshold, which triggers a mandatory bid (see below), or over the 50 per cent threshold, giving de jure control of the company, except purchases from a single shareholder (and in certain other cases). The purpose of r.5 is to ensure that "the board of the company has a sufficient opportunity to make the company's shareholders aware of all relevant matters before control of the company passes". See Panel Consultation Paper 2005/5, para.6.1. (However, the rules on Substantial Acquisitions of Shares, which previously formed an addendum to the Code and prevented, or at least slowed down, market raids, were repealed in 2006.)

[128] However, the Code does not encourage competing bids, as some systems do, by automatically releasing those who have accepted the offer if a competing bidder emerges, but only if the offer has not become unconditional as to acceptances within 21 days of the first closing date of the initial offer (r.34). For this reason, experienced investors do not accept an offer until the final moment, so as to be able freely to consider competing offers, whilst those who find the terms of the offer attractive may simply sell their shares in the market. On the other hand, once a competing bidder emerges, the bid timetable is re-set for both offerors according to that appropriate for the competitor (see fn.4 to r.31.6) so that the offer period is extended to give target company shareholders adequate time to consider both offers.

[129] *Dawson International Plc v Coats Paton Plc* [1991] B.C.C. 278; *Rackham v Peek Foods Ltd* [1990] B.C.L.C. 895; *John Crowther Group Ltd v Carpets International Plc* [1990] B.C.L.C. 460. See also the decision of the Inner House in the interlocutory proceedings in the *Dawson* case: (1989) 5 B.C.C. 405. This is sometimes called the "fiduciary out" though it is to some degree unclear in these cases whether the result was arrived at as a matter of interpretation of the contract in question or of the application of a mandatory rule of the law of directors' duties.

[130] Above fn.91 at para.5.15.

[131] Code r.21.2(b) contains a list of agreements which are permitted because they do not infringe substantially the principle of shareholder choice. This new approach also renders less important, but does not remove, the difficult question of whether a break fee constitutes financial assistance under the statute (para.13–44): *Paros Plc v Wordlink Group Plc* [2012] EWHC 394 (Comm).

[132] The Code Committee review (above fn.91 at para.5.16) makes it clear that the intention was to include undertakings "to refrain from taking any action which might facilitate a competing transaction" as well as commitments to positive action in relation to the initial bid. The prohibition on agreements to take positive action might be thought

to impede the implementation of agreed takeovers by way of schemes because the scheme arrangements are in the hands of the offeree (see para.29–5) and offeror will want the target to commit to propose the scheme. However, the necessary obligation is now laid on the offeree by the Code itself: App.7.3(f).

[133] Notes 1 and 2 to r.21.2.

[134] Code, *Introduction*, 2(a).

[135] Code r.36.1. In fact, where the other shares are very dispersed, less than 30 per cent could in fact give control. However, the Code is constructed on the basis of equating a 30 per cent holding with control. See the discussion of the mandatory bid below.

[136] Code r.36.2.

[137] Code r.36.3.

[138] Code r.36.7.

[139] Code r.36.4.

[140] Code r.36.6.

[141] Code r.32.3.

[142] The pressures in favour of thoughtless acceptance are further mitigated by the procedural rules requiring the initial offer to be open for acceptance for at least 21 days (r.31.1) and revised offers to be open for at least 14 days (r.32.1).

[143] Note 1 makes it clear that this bans the not-unknown practice of buying a shareholding coupled with an undertaking to make good to the seller any difference between the sale price and the higher price of any successful subsequent bid. It also covers (Note 3) cases where a shareholder of the target company is to be remunerated for the part he has played in promoting the offer ("a finder's fee").

[144] Code r.6.1 or even earlier if the Panel thinks this is necessary to give effect to General Principle 1: r.6.1(c).

[145] Code r.6.2.

[146] Before an announcement is made of a firm intention to make an offer the Panel has a discretion to relax the rule, though it will do so only rarely, but not thereafter. Compare rr.6.1 and 6.2.

[147] Note 3 to r.6. For this reason some systems prohibit post-offer purchases outside the bid if the offer is on a share-exchange basis.

[148] The Panel has a discretion to apply the cash rule even if fewer than 10 per cent of the voting rights have been acquired (see r.11.1(c)), something Note 4 to r.11.1 suggests it might do, and at a considerably lower level than 10 per cent, if the vendors were directors of the target.

[149] See Note 5 to r.11.1.

[150] Which may not now have the same value as when offered prior to the offer: see Note 1 to r.11.2.

[151] Or under the mandatory bid rule, see below.

[152] In the case of consolidation, the holder will necessarily have been able to cross the 30 per cent threshold without triggering the mandatory bid, notably where it falls into

one of the exceptions discussed below. The Code used to allow consolidation of control at the rate of 1 per cent a year without imposing a mandatory bid requirement. However, this facility was removed, seemingly in response to the decision in *Re Astec (BSR) Plc* [1998] 2 B.C.L.C. 556, in which the court took a narrow view of the application of the unfair prejudice remedy in relation to future actions of a shareholder which had obtained "creeping control" of a company under this facility. In this case the target company was non-resident in the UK, and so not subject to the Code when it acquired 45 per cent of the target, but it then entered into an agreement with the other investors under which it made itself subject to the Code. Today, the company's initial purchase would be subject to the Code since the company was incorporated in the UK and its shares were traded on the Main Market of the LSE, and the fact that its headquarters were in Hong Kong would not put it outside the Code. See above, para.28–15.

153 Code r.9.5. Unless the Panel agrees to an adjusted price in a particular case: see Note 3 to r.9.5 for the factors the Panel will take into account in considering whether to grant a dispensation from the highest price rule. For a strong example of the application of the "highest price" rule, even in the face of a serious market decline triggered by the terrorist bombings in New York, see Panel Statement 2001/15 (WPP Group Plc).

154 Code r.9.3. But, when the mandatory offer comes within the provisions for a possible reference to the competition authorities, it must be a condition of the offer that it will lapse if that occurs. But, in contrast with voluntary offers (r.12), it *must* be revived if the merger is allowed and, if it is prohibited, the Panel may require the offeror to reduce its holdings to below 30 per cent: r.9.4, Note 1.

155 e.g. on a share for share offer that it is conditional on the passing of a resolution by members of the offeror to increase its issued capital.

156 Code rr.9.6 and 9.7.

157 For discussion of the mandatory bid see fn.62, above, Ch.8.3.5.

158 See para.25–13.

159 Note 7 to r.9.1. Notes 8 to 15 deal with a number of other cases where dispensation may be granted, for example, indirect acquisitions of controlling interests, convertible securities, further acquisitions after a reduction of the holding below 30 per cent; share lending arrangements.

160 But not if the person seeking the waiver bought shares in the target company after the point at which it had reason to believe that a redemption or repurchase would take place: Note 2 to r.37.1.

161 Dispensation Notes 4 and 5. Note 5 also waives the bid where the holders of 50 per cent of the voting rights indicate they would not accept the bid, no matter by how many people those rights are held.

162 Dispensation Notes 3, 2, 6 and 1 respectively. In the case of (d) the security must not have been taken at a time when the lender had reason to believe that enforcement was likely, and of (e) the shares must not have been purchased at a time when the purchaser had reason to believe that enfranchisement was likely. The "whitewash" procedure is set out in App.1 of the Code, which involves tight Panel control over the procedure.

163 In the case of entities of equal size, this could occur if a person held 15 per cent of the voting rights of both offeror and target companies.

164 This definition reflects art.2(1)(d) of the Directive. The presumed categories of acting in concert are: (i) a company with any others in the group and associated

companies (widely defined, so as to make a company an associated company if another company controls 20 per cent of its equity share capital); (ii) a company with any of its directors and their close relatives and related trusts; (iii) a company with any of its pension funds or the pension funds of other group or associated companies; (iv) a fund manager with any of its discretionary managed clients; (v) a connected adviser with its client; (vi) the directors of the target company.

[165] See above, paras 15–25 et seq.

[166] *Shareholder Activism and Acting in Concert*, Consultation Paper 10, issued by the Code Committee of the Panel (2002).

[167] *Shareholder Activism and Acting in Concert*, para.1.6.

[168] *Puddephat v Leith* [1916] 1 Ch. 200.

[169] Panel Consultation Papers 2005/1–3, *Dealings in Derivatives and Options*, set out the nature of the problem (see in particular PCP 2005/1, section A) and the Panel's proposals for reform of the Code. The CfD may work in the opposite way (i.e. the holder obtains the downward difference in the market prices) but then the counterparty will protect itself by selling "short", which does not create the control problems noted in the text. Why should anyone enter into such a contract? Essentially, it allows the derivative holder to speculate in relation to the price of the underlying shares without having to spend the money to acquire them. The fee paid to the investment bank for entering into the contract is a form of recompense to the bank for making the acquisition instead of the derivative holder (a sort of interest payment).

[170] Of course, 30 per cent is only a rough approximation of the point at which a change of de facto control of a company occurs. In the early versions of the Code the figure was set at 40 per cent, but it was reduced to 30 per cent in 1974. However, a precise percentage makes the Rule easier to operate than would a case-by-case examination of whether a particular shareholder had acquired sufficient shares in a particular company to enable it to control that company.

[171] Notes to r.14 make it clear that comparable is not the same as identical and that normally the difference between the offers should reflect the differences in market prices over the previous six months. "Equity share capital" seems to be as defined in CA 2006 s.548. See para.23–7.

[172] See in relation to mandatory bids, para.28–46, above.

[173] The implication from Note 3 to r.14.1 is that equity share capital is defined in the same was as in the Companies Act 2006 s.548, so that preference shares are not included.

[174] See para.23–7, above.

[175] On the disincentives of potential bidders to bid because of the wasted costs point, see para.28–33 above. As we have seen, the insider dealing rules are formulated so as to allow defeated bidders to profit in this way. See para.28–35. However, the shares the bidder "acquires" through acceptance of its offer cannot be used in this way, because, if the initial bidder does not obtain the level of acceptances it seeks, its offer will lapse and so the assenting shareholders, rather than the initial bidder, will be able to accept the competing bid.

[176] See para.27–16.

[177] As we have seen in para.15–31, above.

[178] See paras 26–16 et seq.

[179] Where the directors impose the restrictions, their freedom of action is limited by the "proper purpose" doctrine applying generally to the exercise by directors of their powers under the articles (see para.16–26). In particular, the purpose of the power to impose restrictions is to further the purpose underlying the statutory provisions (revelation of beneficial interests in shares). Failure to disclose does not give the directors a general power to impose restrictions, for example, for the purpose of defeating a resolution to remove the directors: *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71.

[180] 2006 Act s.793(2) and (6).

[181] 2006 Act s.793(5). In the light of the complications of the statutory provisions defining "interests" and "concert party agreements" (see below) a lengthy explanation accompanying the notice may be needed if the recipient (particularly if a foreigner) is to understand precisely what is being asked.

[182] If the time allowed is unreasonably short, the notice will be invalid: *Re Lonrho Plc (No.2)* [1989] B.C.L.C. 309.

[183] In some cases the information sought has never been obtained and the shares have remained frozen.

[184] 2006 Act s.808. Assuming there is a present holder and assuming the holder's identity is known. If not, the information must be entered against the name of the holder of the interest. The entry must state the fact that, and the date when, the requirement was imposed.

[185] 2006 Act ss.808–819. For discussion of the share register, see paras 27–16 et seq.

[186] In particular, of course, in respect of which persons they require notices to be served.

[187] 2006 Act s.803(2) and (3).

[188] 2006 Act s.804.

[189] 2006 Act s.804(2).

[190] Not exceeding 15 days: s.805(1).

[191] 2006 Act s.805(1). On the meaning of "concluded", see s.805(7).

[192] 2006 Act s.805(2).

[193] 2006 Act ss.805(5) and 807. Not to give notice to the registrar is an offence on the part of the company and any officer in default, as is a failure to make the report available for inspection: ss.806 and 807. There is no "proper purpose" control over public access to the report.

[194] 2006 Act s.805(6) and it must remain available for inspection at the registered office for at least six years: s.805(4).

[195] 2006 Act s.795. After consulting the Governor of the Bank of England, the Secretary of State may exempt persons from compliance with a s.793 notice where for "special reasons" an undertaking is substituted for the obligation to comply with the section: s.796.

[196] 2006 Act s.794.

[197] It appears to be open to companies—and some have taken this step—to make

provisions in their articles entitling the board to impose restrictions in a wider range of circumstances, including where information is not forthcoming following a request, even if the person asked does not have the information.

[198] 2006 Act s.797(1).

[199] Made the more so since any attempt to evade the restrictions may lead to a heavy fine: s.798.

[200] *Re Lonrho Plc (No.2)* [1990] Ch. 695.

[201] 2006 Act s.799.

[202] 2006 Act s.800: on the application by the company or any person aggrieved.

[203] 2006 Act s.800(3)(a).

[204] 2006 Act s.800(3)(b).

[205] But the court has a discretion whether to allow the transfer and whether or not also to remove the restrictions; in particular it may continue restrictions (c) and (d) either in whole or in part so far as they relate to rights acquired or offered prior to the transfer: see s.800(4).

[206] 2006 Act s.801. The only transaction that can be *ordered* is a sale. The word is used in conscious contradistinction to “transferred for valuable consideration” in s.800(3), which would include a share exchange takeover offer: cf. *Re Westminster Group Plc* [1985] 1 W.L.R. 676 CA.

[207] 2006 Act s.801(1). The court may then make further orders relating to the conduct of the sale: s.800(3). The proceeds of sale have to be paid into court for the benefit of the persons who are beneficially interested in the shares who may apply for the payment out of their proportionate entitlement: s.802.

[208] Though it appears that it does not have to remove them.

[209] 2006 Act s.820(1). For a discussion of CfDs, see para.28–45, above.

[210] 2006 Act s.824(2)(b). Though, see below, once an agreement is triggered by an acquisition, the notification requirements extend beyond interests acquired in pursuance of it.

[211] 2006 Act s.824(2)(a).

[212] 2006 Act s.824(5)(6). Of course, the presence of mutuality will normally make the agreement legally binding, but the subsection deals with the doctrine of intention to create legal relations, which the parties might use to declare an agreement not binding at law. The subsection also excludes an underwriting or sub-underwriting agreement provided that that “is confined to that purpose and any matters incidental to it”.

[213] 2006 Act s.825(1)–(3).

[214] 2006 Act s.825(4).

[215] The “Definitions” section of the Code makes it clear that the offer period is triggered by an announcement of a possible offer (not necessarily a firm one) and the possible offeror can make that announcement itself or easily put the offeree company in a position where it is required to make an announcement under rr.2.2 and 2.3.

[216] Above fn.91, paras 3.1 and 5.7.

[217] Code rr.2.6 and 2.8. The deadline is set much later if a competing offeror announces a firm bid for the company before the deadline expires. And the rule will not normally apply to participants in a formal sale process which the company is conducting, presumably because any destabilising effect has been precipitated by the company's management itself.

[218] PCP 2004/4, *Conditions and Pre-Conditions*, especially s.7. The "pre-conditions" to an offer are the conditions attached in the "firm intention" statement. See now r.2.7.

[219] Code rr.2.7 and 30.1.

[220] Above, para.28–35. Even those acting on behalf of the bidder may find themselves caught by the insider trading prohibition, if as a result of being granted access to the target's books, they obtain, as is likely, price-sensitive but non-public information. This is because the exemption in Sch.1 to the CJA 1993 is confined to "market information" which is information about the acquisition or disposal of securities. Thus, to take an extreme example, if the bidder's due diligence reveals the company has just made a potentially very lucrative discovery, the fact that the bidder is now prepared to pay more for the target's shares is market information, but the fact of the discovery would appear not to be.

[221] FSA, *Market Watch*, No.21, July 2007.

[222] Code rr.2.3 and 2.4 and n.1 to r.2.4, though the Panel must be consulted in advance if it is proposed to include conditions and there are some requirements in the note designed to make the potential bidder's intentions clear. The Panel (above, fn.218) took the view that, since a "possible bid" announcement was not binding on the bidder in any event, more information was preferable to less.

[223] In the case of pre-conditions the Code shows a little more flexibility, notably where a regulatory condition must be satisfied for the bid to proceed and that is likely to take a long time, and it would thus not be "reasonable" for the potential offeror to have to maintain, and pay for, committed financing throughout this period.

[224] In fact, this concession may enable the company to escape having to proceed with the bid. The shareholders (including the directors in their capacity as shareholders) will not be obliged to approve the share issue (especially if they think conditions have changed since the offer was first announced): *Northern Counties Securities Ltd v Jackson & Steeple Ltd* [1974] 1 W.L.R. 1133. And it is not even clear that the Code can require the directors to recommend approval to the shareholders if the directors think it would be a breach of their core fiduciary duty to do so: see above, para.28–36. (In the *Jackson & Steeple* case the contrary was held, but on the basis that the directors had already given an undertaking to the court to recommend positively.) Perhaps for this reason, the Code attempts to prevent this situation arising in the case of a mandatory bid: r.9.3(b).

[225] Code r.13.5 and see the WPP case, above, fn.153.

[226] Normally a lapsed bid cannot be revived within 12 months: see r.35 below. However, the bidder must decide whether to re-offer within 21 days of the clearance: note on r.35.1 and 35.2. The new offer need not be on the same terms as the lapsed one. For the mandatory bid, see note on r.9.4.

[227] By contrast, the successful bidder may suffer from the "winner's curse" of having overpaid for the target.

[228] Code r.33.2. But such a notice must not be given if a competing offer has been announced until the competitive situation ends. For the exclusion of mandatory offers

see fn.2 to r.33.2.

229 PR 1.2.2(2) and 1.2.3(3).

230 Code rr.23.2. The same obligation is imposed in relation to bid announcements: r.2.12.

231 Code r.25.9. Rule 32.6 makes the same provision in relation to the offeree's circular on any revised offer.

232 Information and Consultation of Employees Regulations 2004 (SI 2004/3426) reg.20. The FCA's rules indicate that it will not be market abuse for a company involved in a bid to disclose information to an employee representative in fulfilment of an obligation imposed by the Regulations, provided the information is subject to a confidentiality requirement: MAR 1.4.5(2)(e). Equally, disclosure of inside information to an employee representative will not be a criminal offence on the part of a manager under s.52 of CJA 1993 if the disclosure is "in the proper performance of the functions of his employment", though it might be for the representative to trade on the information or to further disclose it. See C-384/02 *Criminal Proceedings against Gröngaard* [2006] I.R.L.R. 214 ECJ.

233 See para.28–9, above.

234 Pensions Act 2004 ss.43–51 ("financial support directions"). The point is that the pension deficit revealed in the accounts may no longer be an accurate indication of the amount of money needed to secure the pension obligations, if the bidder's risk profile changes significantly. A better test might be the amount an insurance company would require to transfer to itself the company's pension obligations. In the case of the takeover of Boots by a private equity bidder in 2007 the trustees negotiated additional payments of £418 million over 10 years into the pension fund: *Financial Times fm*, 25 June 2007, p.6. In the earlier case of WH Smith it appears that a potential bidder decided not to make a bid because of the target's pension fund deficit.

235 The offeror will not need to do so on a pure cash offer for all the shares; but the target will.

236 Code r.28.1.

237 Code r.28.2 (and see the Notes thereto).

238 Code r.28.3.

239 Code r.28.4.

240 Code r.28.5.

241 Code r.29.

242 Code, *Introduction*, 2(a).

243 On the Panel's powers to award compensation, see above, para.28–9.

244 In addition to the liabilities discussed in the text, the bidder might also be liable in damages under s.2(1) of the Misrepresentation Act 1967 (unless it could disprove negligence) or to have its contract with the accepting shareholders rescinded in equity, though in both cases this could apply only between the bidder and the target company shareholders and where the shareholders had accepted the bidder's offer.

245 *Caparo Industries Plc v Dickman* [1990] 2 A.C. 605. See paras 22–36 et seq., above.

[246] Proving that the negligent misstatement caused the plaintiff the loss in question may be, of course, a very difficult matter. See *JEB Fasteners Ltd v Marks Bloom & Co* [1981] 3 All E.R. 289 (above, para.22–52).

[247] *Morgan Crucible & Co v Hill Samuel & Co* [1991] Ch. 295 CA. However, this decision has to be read in the light of subsequent developments on assumption of responsibility. See *Partco Group Ltd v Wragg* [2002] 2 B.C.L.C. 323 CA, where a successful bidder sued the directors of the target on the basis of statements made to the bidder in the course of due diligence carried out by the bidder prior to making a recommended offer. The CA refused to strike out the claim but were clearly sceptical as to whether it would ultimately succeed, because the directors could be said to have assumed responsibility for the accuracy of the statements only on behalf of the target (now owned by the bidder) and not personally. See also above, at para.22–44. See further the refusal to strike out in a claim by the bidder against the target's auditors on special facts in *Galoo Ltd v Bright Grahame Murray* [1994] 1 W.L.R. 1360 CA.

[248] See Code, "Definitions".

[249] Code r.4.2. Such action is likely to cause great confusion in the market. If the Panel does consent, it will require 24 hours' notice to be given to the market and will require the sale to be at above the offer price. Not abiding by the Code's provisions on sales might well be a criminal offence under Pt 7 of the Financial Services Act 2012, if the object was to rig the market by causing a fall in the quoted price of the target's shares, thus making the offer more attractive; or under the insider dealing legislation if information available to the offeror suggested that its offer would not succeed and it wanted to "make a profit or avoid a loss" by selling before the quoted market price fell back when the offer lapsed. See Ch.30, below.

[250] In brief, "Opening Disclosures" must be made by any person at the 1 per cent level (instead of 3 per cent) and full disclosure by the parties to the bid or their "associates" (as defined in "Definitions") and "Dealing Disclosures" must be made daily by those parties. Dealings in derivatives must also be disclosed. See rr.8.1–8.3 and notes. However, in the case of cash offers, dealings in the shares of the offeror do not have to be disclosed.

[251] A product advertisement, not bearing on the offer (which is not really an exception), and advertisements in relation to schemes of arrangement (when the relevant regulator is the court): see Ch.29, below.

[252] Time constraints do not permit this to be done; the Panel requires only 24 hours to consider the proof of the advertisement which must have been approved by the company's financial adviser: r.19.4, Note 1.

[253] Code r.19.4, Note 2.

[254] Specifically excluded from exceptions (iii) and (iv) to r.19.4.

[255] Code r.19.4, Note 5.

[256] Code r.19.4, Note 4.

[257] Code r.19.4, Note 3.

[258] Code r.19.5, Note 1. It is difficult to see how the financial adviser can supervise effectively unless it insists upon all calls made being recorded; but the rules and notes do not require or suggest that.

[259] This warning ought to frighten the financial adviser!

[260] This does not preclude the issue of circulars to their own investment clients by brokers or advisers provided that the circulars are approved by the Panel.

[261] The risk of new information being given out on a partial basis in such cases materialised in the Kvaerner bid for AMEC, where a financial public relations company employed by the target made statements in closed meetings about the target's future profits which had not been contained in the defence document: Panel statement 1995/9. The PR company was censured by the Panel and dismissed by the target.

[262] Or even if no offer has been made but a firm announcement of an intention to bid has been made. A bidder is not normally free simply to withdraw a bid, but may do in some limited circumstances.

[263] As we have seen above (para.28–42), the obligation to bid might not fall to the particular member of the concert party who is the former bidder.

[264] Code r.35.2.

[265] Code r.35.3.

[266] Final Report I, pp.282–300. However, that report rejected the argument that a squeeze-out right should be extended so as to operate whether the 90 per cent holding results from a takeover or not, largely on the grounds that valuation in such a case would be difficult. Nevertheless, the functional arguments for the squeeze-out from the 90 per cent holder's point of view are just as strong in such a case. The European Commission included such a proposal in its draft Directive amending the Second Directive (see COM(2004) final, 21 September 2004, proposed new art.39a) but it was later dropped.

[267] See para.29–3.

[268] See para.25–46. This is a situation where non-acceptors are likely to change their minds once the acceptance level is known. See para.28–60, above. In companies with a small number of shareholders there are sometimes contractual provisions (in the articles or a shareholder agreement) requiring the minority to accept on the same terms an offer which the majority have accepted ("drag along" provisions). See *Re Charterhouse Capital Ltd* [2015] B.C.C. 574 CA.

[269] 2006 Act s.979(2). If, as is usual, the voting rights are on a one vote per share basis, the two requirements amount to the same thing.

[270] See further below.

[271] 2006 Act s.979(4). In the case of a company with voting shares or debentures admitted to trading on a regulated market, debentures carrying voting rights are treated as shares of the company: s.990. This provision is necessary because art.15 of the Directive refers to "securities" (not just to shares), though art.2(1)(e) makes it clear that the Directive includes only securities carrying voting rights. Voting debentures are uncommon in the UK.

[272] 2006 Act s.974(1); and see *Fiske Nominees Ltd v Dwyka Diamond Ltd* [2002] 2 B.C.L.C. 123.

[273] But it could be an unincorporated body, e.g. the trustees of a pension fund.

[274] See s.987 on joint offers, which deals with the problem identified in *Blue Metal Industries v Dilley* [1970] A.C. 827 PC, that the legislation at the time of that case was not well-adapted to deal with joint offers.

[275] Hence it does not apply to "partial offers": but, where the Code applies, the Panel

would not be likely to allow a partial offer which might lead to the acquisition of 90 per cent.

[276] "Shares" here means shares allotted at the date of the offer and excludes treasury shares (s.974(4)) but see below for the handling of these shares.

[277] 2006 Act s.974(2) and (3). "Shares" here means shares allotted at the date of the offer but the offer may include shares to be allotted before a specified date: s.428(2).

[278] *Re Chez Nico (Restaurants) Ltd* [1992] B.C.L.C. 192.

[279] Since the directors had failed to make proper disclosure to the other shareholders.

[280] Browne-Wilkinson VC emphasised that his decision was only on the meaning of "takeover offer" for the purposes of the squeeze-out and sell-out provisions and that he had no doubt that what had occurred would be a takeover offer for the purposes of many statutory or non-statutory provisions. This is certainly true of the non-statutory Code. Indeed, the Panel had treated the *Chez Nico* takeover as subject to the Code (the company had been a Plc at the time of the circularisation and remained subject to the Code after its conversion to a private company since, while a public company, it had made a public offering) but the only penalty that the Panel had imposed was to criticise the two directors for their ignorance of, and failure to observe, the Code: see p.200.

[281] For example, local securities laws might make a share-exchange offer in a particular jurisdiction "unduly onerous". The requirement for "equivalent consideration" is a better solution than that adopted by the directors in *Mutual Life Insurance Co of New York v The Rank Organisation Ltd* [1985] B.C.L.C. 11, in order to avoid US securities laws, which was simply to exclude the US shareholders from any pre-emption entitlements in a public offering.

[282] *Re Joseph Holt Plc* [2001] 2 B.C.L.C. 604 CA.

[283] Final Report I, paras 13.24 and 13.43–13.45.

[284] 2006 Act s.974(2).

[285] This is not compensated for by the fact that the number of shares which the bidder has to acquire to reach 90 per cent acceptances is also reduced. Thus, if there are 200 allotted shares and the bidder holds none of them at the outset, it takes a holding of 21 shares to block the squeeze-out, but if the bidder holds 100 at the outset, 11 objectors are enough to block it, i.e. the blocking percentage falls from just over 10 per cent of the class to just over five per cent of the total shares in issue. This would not matter if the bidder could rely on having acquired shares pre-bid rateably from acceptors and non-acceptors, but, in the nature of things, the non-acceptors are likely to be underrepresented among those who have sold out voluntarily to the bidder.

[286] The reason for insisting on no significant consideration is to maintain the rule that the offer must be on the same terms to all the shareholders. In general, shares conditionally acquired ahead of the bid do count as shares already held: s.975(1).

[287] 2006 Act ss.977, 979(8)–(10). This rule is also applied to acquisitions by associates.

[288] 2006 Act s.974(4)–(7). A decision to exclude all or any such shares from the offer does not cause it to fail to meet the requirement that the offer be for all the shares or all the shares of a class: s.974(4), which excludes such shares from the universal obligation. Convertible securities, so long as they remain unconverted into shares, are treated as shares of the company but as a class of shares separate from the class into which they can be converted: s.989. Rule 15 of the Code normally requires the bidder to bid for

convertible shares. For the problems caused by convertible shares before the introduction of these statutory reforms see *Re Simo Securities Trust* [1971] 1 W.L.R. 1455. Rule 4.5 prohibits an offeree company from accepting an offer in respect of shares still held in treasury until after the offer is unconditional as to acceptances. On treasury shares, see above at para.13–27.

[289] 2006 Act ss.979(2), 980. This requirement is buttressed by criminal sanctions for failing to send a notice to the company or for intentionally or negligently making a false statement in the declaration. Section 986(9),(10) provide a limited exemption from the 90 per cent threshold: if the failure to reach it is due entirely to the non-response of untraceable shareholders, the court may permit the bidder to serve a compulsory acquisition notice, provided it is satisfied (a) the consideration is fair and reasonable and (b) it is just and equitable to do so (taking into account in particular the number of untraceable shareholders).

[290] Where the offer is not governed by the Code, so that there is no fixed closing date for the offer, the period is six months from the date of the offer.

[291] 2006 Act s.981(4),(5). Normally the alternative which was to have been provided by a third party will have been cash, in which case the bidder now has to supply it. If the consideration which cannot now be provided, whether by bidder or third party, was a non-cash one, a requirement for equivalent cash applies. This adopts and codifies the effect of the decision of Brightman J in *Re Carlton Holdings Ltd* [1971] 1 W.L.R. 918.

[292] The main problem that has had to be solved is that many of the non-acceptors of the offer will probably be untraceable. The solution adopted causes the offeror little trouble (see ss.982(4) et seq.), but the target company, now a subsidiary of the offeror, may have to maintain trust accounts for 12 years or earlier winding-up and then pay into court.

[293] It seems that the offeror cannot deprive the court of its jurisdiction to amend the terms of the squeeze-out by accepting the petitioner’s right not to be squeezed out, at least where the petitioner has not indicated he or she seeks only the right not to be compulsorily acquired: *Re Greythorn* [2002] 1 B.C.L.C. 437. In this case the petitioner had reasons for thinking that the closely-held target company had been taken over at a gross undervalue, and the bidder evidently preferred to allow the petitioner to remain in the company than to have that issue examined in court.

[294] Formally, this will not help a petitioners who want a higher price, but they may be able to negotiate one if the bidder cannot squeeze them out at the offer price.

[295] *Rock Nominees Ltd v RCO (Holdings) Plc* [2004] 1 B.C.L.C. 439 CA.

[296] This way of proceeding was undoubtedly more expensive for the bidder than a compulsory acquisition. On unfair prejudice, see Ch.20, above, and on voluntary winding up, para.33–9, below.

[297] For the courts’ traditional reluctance to fix a price (as opposed to simply ratifying or not the bid price) see *Re Grierson, Oldham & Adams Ltd* [1967] 1 W.L.R. 385.

[298] *Re Hoare & Co Ltd* (1933) 150 L.T. 374; *Re Press Caps Ltd* [1940] Ch. 434.

[299] *Re Bugle Press Ltd* [1961] Ch. 270 CA; *Re Chez Nico (Restaurants) Ltd* [1992] B.C.L.C. 192; *Re Lifecare International Plc* [1990] B.C.L.C. 222; *Fiske Nominees Ltd v Dwyka Diamond Ltd* [2002] 2 B.C.L.C. 123.

[300] Subject to the shut-off of cash alternatives: see above, para.28–60.

[301] 2006 Act s.983(1).

[302] 2006 Act s.983(2)–(4),(8). "Associate" is broadly defined in s.988. If conditionally acquired shares are not in fact ultimately acquired and that would mean the threshold would not be met if they were excluded, there is a standstill procedure which may result in the shareholder losing the right to be bought out: s.983(6),(7).

[303] As with the squeeze-out right, however, this is not a general right for a minority to be bought out: if the final step in the process whereby the majority acquires 90 per cent of the shares is not a takeover bid, the right to be bought out does not arise in the UK, unlike in some other jurisdictions.

[304] 2006 Act s.984(1)–(4). The offeror's obligation is supported by criminal sanctions on the bidder and any officer in default: s.984(5)–(7).

[305] 2006 Act s.985.

[306] Above, para.28–59.

[307] Final Report I, para.13.61.

[308] For a general review of these issues see P. Davies, "Control Shifts via Contracting with Shareholders" in G. Ringe and J. Gordon (eds), *The Oxford Handbook of Corporate Law and Governance* (Oxford: OUP, 2017 (forthcoming publication)).

Employee participation 29–20
Further uses of cross-border mergers 29–22
Reorganisation under Sections 110 and 111 of the Insolvency Act 1986 29–24
Conclusion 29–26

THE FUNCTION OF SCHEMES OF ARRANGEMENT

29–1

Part 26 of the Act applies "where a compromise or arrangement is proposed between a company and its creditors or any class of them or its members or any class of them" (s.895). Proposals made under this Part are normally referred to as "schemes of arrangement". Schemes are frequently used to effect "gamechanging" transactions as a company's business strategy develops, especially in the case of public and publicly-traded companies. They are very important in practice. Yet, someone who comes to the statute without any knowledge of how schemes can be used finds the language of the statute uninformative. This is mainly because the scheme provisions are very widely drawn and can be used to carry through a number of different types of transaction which, in other jurisdictions, are often made the subject of separate statutory procedures. It is therefore useful to begin by identifying the principal types of activity for which schemes are or could be used.

Mergers

29–2

In most countries' companies legislation there is to be found a section headed "Mergers" which will contain language somewhat along the following lines:

> "Any two or more corporations existing under the laws of this State may merge into a single corporation, which may be any one of the constituent corporations, or may consolidate into a new corporation formed by the consolidation, pursuant to an agreement of merger or consolidation, as the case may be, complying and approved in accordance with this section."[1]

The assets of the merging companies will end up in the "resulting company" (which may be a new company formed for the purpose of the merger or one of the merging companies). As to the shareholders of the merging companies, traditionally they too end up as shareholders of the resulting company, each of the previously separate bodies of shareholders holding, more or less, the proportion of shares in the resulting company which reflects the respective valuations of the companies which came together to form that company. In liberal jurisdictions, such as the UK, cash may be permitted as merger consideration. In that case, some or all of the shareholders of a merging company exit the company rather than transfer to the combined enterprise. If, in addition, one merging company is already wholly owned by the controlling shareholder of the second merging company and only cash is offered to the non-controlling shareholders of the second company, then the merger constitutes a method of squeezing out the minority shareholders in the second company.

Although it is perhaps not obvious that s.895 contemplates the use of a scheme of arrangement to effect a merger, later sections make it clear that this is the case. Section 900 deals specifically with compromises or arrangements under s.895 "proposed for the purpose of or in connection with a scheme for the amalgamation of two or more companies" and involving the transfer of the undertaking or property of one company involved in the scheme to another.[2] Section 900 gives the court the power to make ancillary orders so as to transfer the undertaking from transferor to transferee company (without the parties having make arrangement to do this themselves by contract) and to dissolve the transferor company without winding it up.[3] Equally,

the scheme can be used for a "de-merger" or division of a company, whereby part of its undertaking is transferred to another company, again either one formed for the purpose of the de-merger or an existing company.[4] In certain merger and de-merger cases, the transaction will have to comply in addition with the provisions of Pt 27 of the Act, which implements in the UK the Third and Sixth Company Law Directives of the EU.[5]

In addition to the scheme of arrangement under the Companies Act, it is possible to effect a merger under provisions of the Insolvency Act 1986. Sections 110 and 111 of that Act are precisely targeted at the transfer of a company's undertaking to another company, in exchange for shares "or other like interests" in the transferee company, which are distributed to the transferor's shareholders. However, the transferor must be in voluntary winding up to take advantage of this procedure.[6]

Takeovers

29–3

As we shall see,[7] it is in fact relatively uncommon for the scheme to be used to effect a merger. More often, what is produced is the scheme equivalent of a takeover, as discussed in the previous chapter. A simple example is the "transfer scheme" whereby the shares in the target not already held by the bidder are transferred to it in exchange for a consideration in cash or shares, provided by the bidder.[8] A scheme can be used in this way to replicate all of the outcomes of a successful takeover bid.[9] The resulting position is, formally, different from a merger. The target company ends up as a subsidiary of the bidder (i.e. the separate legal personality of the two companies is maintained), though a single legal entity may be produced ultimately through a squeeze out merger of the parent and its new subsidiary. As we have seen above, effecting an agreed takeover through a scheme is an increasingly popular move, so that the Takeover Panel, which has always applied its rules to takeovers through schemes (where its rules are not displaced by statutory rules specific to schemes), has now set out on a systematic basis how its rules apply to schemes.[10]

An advantage of the scheme is that it becomes binding on all the shareholders in question if approved by three-quarters of the

shares (and a majority in number of them),[11] whereas, as we have seen,[12] a takeover offer becomes binding on all shareholders only if accepted by 90 per cent of the shares offered for (which allows the company compulsorily to acquire the shares of the non-accepting shareholders). For this reason, it was argued that, if the scheme procedure was used where a takeover offer could be made, the court should insist on 90 per cent approval of the scheme by the shareholders. However, the argument was rejected on the grounds that in the scheme procedure the shareholders have the protection of the requirement of prior court approval of the scheme, an element not present in the contractual takeover offer.[13] A crucial step in this reasoning is that the court must form its own judgment on the merits of the scheme when it comes to consider its approval and not grant approval simply because the appropriate proportion of the members have approved it. Whether this is in fact the case we shall consider below.

In the case of a hostile offer, the disadvantages of the scheme normally outweigh its advantages as against the takeover offer. The main disadvantage is that the shareholders are not bound until they have voted in favour of the scheme or, even, until the court has sanctioned it, and the necessary delays involved in calling a shareholder meeting give rival bidders the time to organise a competing bid. By contrast, in a takeover offer the bidder can start soliciting "irrevocable commitments"[14] even before the formal offer is made, and those who accept the offer, whether before or after it is formally launched, are not released from their acceptances simply because a rival offer has appeared.[15] It is also easier to make use of the scheme procedure if the cooperation of the target board is forthcoming, though that cooperation is not a formal condition for a successful scheme, whereas one of the advantages of the contractual offer is that the legal transaction is solely between acquirer and target shareholder. Therefore, a scheme is likely to prove attractive only where the takeover is agreed with the board of the target and is not likely to precipitate a rival offer and the offeror is keen to achieve complete ownership of the target.

Other cases

29–4

Although a merger (potentially) and a take-over (actually) constitute important uses of the scheme of arrangement, the width of the statutory language means that many other uses are possible. The scheme may be particularly convenient where UK company law does not appear to offer a customised procedure for carrying out the transaction in question. Besides the merger, another example is use of the scheme to shift the jurisdiction of incorporation of the company or of the parent of a corporate group—usually termed "redomiciling" the company. As we have noted,[16] British company law does not provide a simple mechanism for transferring jurisdictions, not even between the jurisdictions which constitute the UK. Forming a new company in the preferred jurisdiction which acquires the assets of the existing company at a market price is likely to prove expensive in tax terms. However, a transfer scheme whereby the court uses its powers to transfer the assets of the existing company makes this transaction fiscally feasible.[17] It should be noted that the scheme provisions do not require that the transferee company be incorporated in the same jurisdiction as the transferor or in a UK jurisdiction at all.

Overall, whether the scheme involves just a single company or more than one company, the courts have construed "arrangement" as a word of very wide import and as not to be read down by its association with the word "compromise" in the section, so that an arrangement involving members need not, and usually does not, involve an element of compromise.[18] The term covers almost every type of legal transaction, and, as the takeover example shows, in substance the transaction may be between the shareholders and a third party, though a scheme will only be available if the company is formally a party to the transaction. Only the case of unvarnished expropriation of the shareholders has so far been excluded by the courts from the scope of the term.[19]

Creditors' schemes

29–5

The arrangement may not be with the company's members at all but with its creditors. In fact, when the scheme provisions were

introduced by the Joint Stock Companies Arrangement Act 1870, they applied only to arrangements with creditors (and indeed only to arrangements proposed by companies in the course of being wound up). The members were added in 1900 but not until the Companies (Consolidation) Act 1908 was the winding-up requirement dropped and the forerunner of the modern provisions emerged. In practice, a very common use of the provisions today is to secure compromises with creditors of a company in financial trouble—and perhaps at the same time with its shareholders.[20] In some cases the getting in and distribution of the company's assets can be effected more quickly and expeditiously through a scheme than a winding-up, in which case the scheme will operate alongside the winding-up, but in effect be determinative of most of the substantive issues; or the company may be able to reconstruct itself as a viable going concern under a scheme without entering formal insolvency.[21] We do not consider creditors' interests in schemes in any detail in this book, since they are better located in works on insolvency. It is worth noting, however, that where the company is in financial difficulty the English courts have been willing to accept jurisdiction over schemes proposed by companies which are not incorporated in the UK and even have no assets here, for example, where the creditors' rights are governed by English law. However, such reasoning would have no application to solvent companies where the scheme concerns wholly or primarily the members' rights.[22] Even in members' cases, creditors' interests may possibly be affected and, if so, their consent will be needed.

The Mechanics of the Scheme of Arrangement

29–6

Given the significance of the scheme for the company's future development, it is not surprising that the scheme procedure is designed with the aim of ensuring that the shareholders of the company or companies involved in the scheme are content with it. Special resolution approval of the scheme is required, to be given separately by each class of affected shareholders. But since even a supermajority approval requirement may not protect minority shareholders, court approval of the scheme is also

required—though the effectiveness of this piece of minority protection depends on the rigour of the court's scrutiny of the scheme. Thus, there are three main steps in a scheme of arrangement:

(a) A compromise or arrangement must be proposed between the company and its members.[23]

(b) Meetings of the members must be held to seek approval of the scheme by the appropriate majorities. These meetings are convened by the court on application to it.[24]

(c) The scheme is sanctioned by the court.[25]

Proposing a scheme

29–7

This first stage, which is often overlooked, is important because, in practice, it is difficult to use the scheme procedure unless the scheme is approved by the board, which then proposes it on behalf of the company. Formally, it would seem that the general meeting could propose a scheme on behalf of the company,[26] but the shareholders' co-ordination problems make this course of action often difficult. The point is illustrated by the decision in *Re Savoy Hotel Ltd*,[27] which is instructive in a number of ways. The company, which had survived a hostile takeover bid in the early 1950s,[28] introduced a dual-class share structure, consisting, at the time of the litigation, of some 28 million A shares and some 1.3 million B shares, with identical financial entitlements, but with the B shares having (in effect) 20 times the number of votes attached to the A shares. The board held directly or indirectly some two-thirds of the B shares. Such a degree of voting leverage may have been thought to have rendered the company impregnable to a takeover. However, this distribution of voting rights did mean that the A shareholders held just over half the votes in the company. This did not create the risk of an ordinary takeover offer succeeding, because it was reasonable to assume that enough holders of the A shares would oppose a bid to prevent the bidder obtaining 50 per cent of the total votes, as required by the Takeover Code,[29] given that the B shareholders would be solidly against an offer.

Instead, the bidder (THF) sought to put forward a scheme for

the transfer to it of the A and B shares in exchange for cash, the scheme providing that if one class of shareholders did not approve of it (the B shareholders), the scheme could proceed in favour of the other class alone (the A shareholders). It was reasonable to suppose that three-quarters in value and a majority in number of the A class shareholders[30] might approve the scheme. The dissentient A class shareholders would then be bound by it (subject to court sanction) and the bidder would end up with just over half the voting shares in the company, even if the scheme were rejected by the B class shareholders. THF, which held a few A class shares, applied to the court as a member[31] under step (b) above for an order for separate meetings of the A and B shareholders to be held to consider the scheme. Nourse J held that he had power to order such meetings but declined to do so, on the grounds that they would be futile. This was because the scheme had not been proposed by the company but by a shareholder (THF). Thus, step (a) was not satisfied and so the court would not have jurisdiction to sanction it at stage (c).[32]

Convening and conducting meetings

29–8

When the proposed scheme has been formulated, the first step is an application (normally ex parte) to the court by or on behalf of the company (or companies) to which the compromise or arrangement relates for the court to order meetings of the members or classes of members to be summoned.[33] This the court will generally do and will give directions about the length of notice, the method of giving it and the forms of proxy. In the case of shareholders—unlike with creditors where the question has generated endless difficulty—this is a relatively easy task, since the practice of splitting shares into different classes in the articles is a general feature of company law. However, the fact that the members in question have the same rights as against the company does not necessarily mean that they are part of the same class for scheme purposes, because the scheme may propose to treat different groups of those members differently Equally, the fact that shareholders are in different classes under the articles does not necessarily mean they should not be put

together for the purposes of voting on the scheme.

The general test for determining whether the members should meet as a whole or in one or more separate classes is whether the rights of those concerned "are not so dissimilar as to make it impossible for them to consult together with a view to their common interest".[34] However, it is easier to state this test than to apply it. In general, it can be said that, the greater the number of classes, the greater the chances the scheme will fail to obtain the consent of one or more of those classes.[35] Further, the tests for determining classes should be reasonably simple and applicable by the company without extensive investigation into the position of particular members. For this reason, the courts have used the rights of shareholders (as against the company and under the scheme) as the touchstone for determining the class issue, rather than their interests. Interests, it is said, can be taken into account by the court at the third stage when it decides whether to sanction the scheme. However, the courts cannot take a radically different approach at the third stage without affecting the way classes are defined at the second stage. Thus, in *Re BTR Plc*,[36] a case of a takeover being effected through a scheme, the judge sanctioned the scheme which had been approved in a single meeting of the target's shareholders and rejected the argument that those shareholders of the target company who already held shares in the bidder should have been put in a separate class. The judge distinguished the earlier case of *Re Hellenic and General Trust*,[37] where the judge had refused sanction because the ordinary shares already held by a subsidiary of the bidder in the target had been voted in favour of the scheme at a meeting of the ordinary shareholders. The explanation of *Re Hellenic* was that the subsidiary's shares had been excluded because the scheme did not concern them: in effect, they were already held by the bidder.

29–9

The issue of how classes should be composed for scheme purposes was rendered particularly acute by the former practice of the courts of leaving the decision about class meetings at stage (b) almost wholly to the company (i.e. of simply accepting what the company proposed) and taking a view whether that decision was correct only at stage (c), by which time it was too

late to do anything about it and the court could only refuse to sanction the scheme on the grounds it had no jurisdiction to do so, since the proper meetings had not been held!

This approach was roundly criticised by Chadwick LJ in *Re Hawk Insurance Co Ltd*[38] and, as far as creditors are concerned, where identifying the correct classes is often particularly difficult, a Practice Direction was subsequently issued designed to produce substantive consideration of the classes issue at stage (b). Although a creditor may still challenge the way the meetings were convened at stage (c), the court "will expect them to show good reason why they did not raise a creditor issue at an earlier stage".[39] The CLR proposed that the court should have the general discretion to determine the appropriate classes at stage (b), when asked to do so by the company, and that, if it exercised its discretion at this stage, it should be bound by it when it came to consider sanctioning the scheme after member or creditor approval (stage (c)).[40] It further proposed that the court should have a discretion to sanction the scheme even if the appropriate class meetings had not been held, provided the court was satisfied that the incorrect composition of the meetings had not had any substantive effect on the outcome, i.e. it would no longer be a matter going to the jurisdiction of the court.[41] However, these proposed reforms were not taken up in the Act and so the procedure in relation to classes of members remains somewhat obscure. It seems likely that the courts will adapt the creditor procedure so that members who think the company's class proposals are inappropriate should object at stage (b) and not wait until (c).

29–10

Section 897 requires any notice sent out summoning the meetings to be accompanied by a statement explaining the effect of the compromise or arrangement and in particular stating any material interests of the directors (whether in their capacity of directors or otherwise) and the effect on those interests of the scheme in so far as that differs from the effect on the interests of others.[42] Where the scheme affects the rights of debenture-holders, the statement must give the like statement regarding the interests of any trustees for the debenture-holders.[43] If the notice is given by advertisement,[44] the advertisement must include the

foregoing statements or a notification of where and how copies of the circular can be obtained, and on making application a member or creditor is entitled to be furnished with a copy free of charge.[45]

The level of approval required at the meeting is a majority in number,[46] representing three-fourths in value,[47] of its creditors or members present and voting in person or by proxy.[48] The question of whether the approval of both creditors and members or of a particular class of member or creditor is required in any case is to be answered by determining with whom the company proposes to effect a compromise or arrangement. If members or creditors or any class of them are not included within the scheme, their consent is not required, but the company runs the risk that the implementation of the scheme may later be held to infringe the rights of those left out of it.[49]

The sanction of the court

29–11

The application for the court's approval is made by petition of the applicants and may be opposed by members and creditors who object to the scheme. In the oft-quoted words of Maugham J,[50] the duties of the court are twofold:

> "The first is to see that the resolutions are passed by the statutory majority in value and number …at a meeting or meetings duly convened and held. The other duty is in the nature of a discretionary power…[W]hat I have to see is whether the proposal is such that an intelligent and honest man, a member of the class concerned and acting in respect of his interest, might reasonably approve."

The first of these duties involves not only ensuring that the meeting was given the information the statute requires and that the requisite majority was obtained, but also that the class was fairly represented at the meeting. Thus, the sanction of the court can be refused if the meeting was unrepresentative of the class as a whole or if those whose votes were necessary to secure the required level of approval did so in order to promote some special interest which they did not share with the ordinary members of the class.[51] This seems to involve something akin to the "bona fides" test applied to majority decisions to change the articles.[52] The second part of the test is relatively weak, since it is a rationality rather than a reasonableness test. The court

should not differ from the majority view "unless something is brought to the attention of the Court to show that there has been some material oversight or miscarriage".[53]

The scheme becomes binding on the company and all members (or all members of the class concerned) and, if the company is in liquidation, on the liquidator, once it is sanctioned by the court and a copy of the court's order is delivered to the Registrar (so that knowledge of the scheme is publicly available).[54] Indeed, the binding effect of schemes on minorities is one of its attractions over a takeover bid.[55] In addition, implementation of an approved scheme will not lead to liability for any unlawful act contained in the scheme, for example, unlawful financial assistance for the purchase of shares.[56]

Additional requirements for mergers and divisions of public companies

29–12

Under British practice, amalgamations of domestic companies are rarely carried out by means of transfers of undertakings (as opposed to shares) using a scheme of arrangement. For this, there are said to be two reasons. First, there are limitations on what s.900 can achieve. It was held in *Nokes v Doncaster Amalgamated Collieries*[57] that the section does not operate to transfer contracts of employment and that principle has been applied to any rights which as a matter of general law are not transferable. Even if the contract is in principle transferable, the counterparty may have negotiated a right to terminate the contract or to insist on different terms of business if the transferor is replaced by the transferee as the contracting party. Any court order under s.900 (transferring property) will not override these third-party rights and so transferor and transferee will have to negotiate an acceptable set of arrangements with the third party. However, it should be noted that contractual restrictions can easily be drafted so as to apply where control of the company changes without there being any transfer of assets (as in a takeover, whether effected by a scheme or not), so that in this respect a merger may put the company in no worse a position. Whether or not the third party has negotiated contractual protection, s.900(2)(e) gives the court power to

require protection for any creditor (or, indeed, member) who dissents from the transfer. This issue will not arise in the case of a takeover, since the court is not involved in approving it.

A second part of the explanation may be that a merger effected by a scheme is very likely to trigger Pt 27 of the Act, which imposes extra requirements and costs on the implementation of schemes for reconstruction[58] or amalgamation involving a public company, in order to meet the requirements of the Third Company Law Directive on mergers of public companies.[59] Part 27 does not apply where a scheme is used to effect a takeover, because bidder and target remain separate companies after the scheme has been effected. There are three major additional requirements,[60] of which the most important is the third, which deploys the protective device, not otherwise found in the domestic rules on schemes of arrangement, of an independent expert's report. However, although no formal independent expert's report may be required of the bidder in the case of a proposed takeover by means of a scheme, the Takeover Code lays down extensive rules on the provision of information to the "target" shareholders, including an independent expert's opinion on the fairness of the offer and the Code's rules will apply to takeovers by way of a scheme.[61] Thus, Pt 27 may not add much in substance to the bidder's costs. Perhaps the truth is that tax rules make amalgamations through schemes unattractive or that British practitioners have become so familiar with the takeover that alternative means of amalgamation are not seriously explored. In any event, the scheme-based domestic merger seems to be rare.

29–13

The additional requirements of Pt 27 are:

1. Normally, a draft scheme has to be drawn up by the boards of all[62] the companies concerned and publicised via the *Gazette* or, more likely, the company's website. All this must be done at least one month before the meetings are held.[63]
2. What has to be stated in the board's circulars is considerably amplified as compared with the rules for a standard scheme, but perhaps not as compared with the Takeover Code rules.[64]

3. In addition, generally[65] separate written reports on the scheme have to be provided to the members of each company by an independent expert appointed by that company or, if the court approves, a single joint report to all companies by an independent expert appointed by all of them.[66]

However, the Directive, although widely framed, does not apply to all forms of merger, and Pt 27 goes no wider. Hence, there is some considerable scope for framing a merger scheme which avoids the additional requirements. In particular, Pt 27 applies only where the consideration for the transfer is or includes shares in the transferee, so that a merger for a purely cash consideration is excluded.[67] Secondly, in the case of a merger "by absorption" (see below), where the transferee company already holds all, or in some cases 90 per cent, of the securities carrying voting rights in the transferor, the requirements mentioned above are substantially reduced.[68] This facilitates mergers within corporate groups and, in particular, a merger of parent and new subsidiary following a successful takeover bid. Thirdly, Pt 27 does not apply if the transferor company is being wound up,[69] rather than being dissolved without winding-up after the merger. Thus, the requirements of Pt 27 can be avoided by incurring the expense of putting the transferor into liquidation—probably not an attractive course of action.

29–14

Finally, the merger must fall within one of two "Cases" specified in the Directive. The two "Cases" are:

1. Where the undertaking, property and liabilities of the public company are to be transferred to another public company, other than one formed for the purpose of, or in connection with, the scheme ("merger by absorption").[70]

2. Where the undertakings, property and liabilities of each of two or more public companies, including the one in respect of which the arrangement is proposed, are to be transferred to a new company, whether or not a public company, formed for the purpose of, or in connection with, the scheme ("merger by formation of new company").[71] Thus, a transfer to a new company, public or private, by a single public company escapes from both 1 and 2, and equally a reconstruction of a

single company can be carried out purely under Pt 26.[72]

3. There is a third Case, which applies to divisions. Where, under the scheme, the undertaking, property and liabilities of the public company are to be divided among, or transferred to, two or more companies each of which is either a public company or a company formed for the purposes of, or in connection with, the scheme ("division by acquisition" or "division by formation of new company").[73]

29–15

Despite the discouraging history of the use of schemes to effect true mergers, the CLR consulted on the issue of whether there should be introduced into the Act a statutory merger procedure, as in many other jurisdictions.[74] For the CLR the crucial element of a statutory merger procedure was that the merger should not require approval by the court, though in appropriate cases those adversely affected by the proposal should have a right of appeal to the court. Its goal of providing a "court free" merger procedure was thus in line with what it recommended in the case of reductions of capital.[75] However, it also took the view that, where the Third Directive applied, it would be impractical to implement a proposal except under the supervision of the court.[76] The result of the restrictions in effect imposed by the Directives was that the statutory merger procedure seemed to the CLR to be feasible only in two cases. The first was the merger of wholly-owned subsidiaries of a parent company. The CLR thought this a useful reform, and it was supported on consultation, because "many groups of companies include subsidiaries which are kept alive for no good reason other than to avoid the expense and problems associated with getting rid of them".[77] The second and somewhat more general area for the operation of a statutory merger procedure was where a company formed a new wholly-owned subsidiary, into which the assets and liabilities of an existing company were transferred, the transferor being dissolved. On consultation a majority thought the new procedure should be made available in this situation as well.[78] However, neither of these proposals was taken up in the Act.

Cross-Border Mergers

29–16

Despite the limited utilisation of the scheme of arrangement to produce true mergers between domestic companies, the merger procedure has begun to be used by UK companies involved in cross-border mergers since the adoption by the EU of the Cross-Border Mergers Directive.[79] The objective is often to simplify the structure of a multi-national corporate group, The Directive is implemented in the UK by the Companies (Cross-Border Merger) Regulations 2007.[80] Thus, for cross-border mergers UK law does now have a customised merger procedure, i.e. one not tied to the scheme of arrangement. Given their EU origin, the Directive and Regulations reflect the approach of the Third Directive, but subject to the important extension that they cover mergers involving private as well as public companies. They provide a mechanism to effect both mergers by absorption and mergers by formation of a new company. Within the absorption category a distinction is made between standard absorptions and absorption of a wholly-owned subsidiary.[81]

Even before the adoption of the Directive, the CJEU had held that the blanket exclusion of a company incorporated in another EU state from the domestic merger procedure of a Member State was an infringement of a company's freedom of establishment under the Treaty.[82] However, an effective cross-border merger procedure requires the coordination of the laws of different Member States, which is difficult to achieve via decisions of the CJEU, but which EU legislation is uniquely well-placed to bring about. The Regulations apply only to mergers involving both a UK and a non-UK company incorporated in the EEA, so that purely domestic mergers are excluded.[83] Equally, the Regulations are not available for cross-border mergers involving a non-EEA company.[84]

29–17

Subject to the always thorny issue of employee representation on the board of the resulting company (see below), the scheme of the Directive and the Regulations is simple and relatively elegant. Each company in the cross-border merger is subject to its national merger procedure, on the basis of a common merger plan, drawn up by the directors.[85] That merger plan must be accompanied by a report from the directors, setting out, amongst other things, the rationale for the merger and its likely impact on

members, creditors and employees.[86] As under the Third Directive, a report by an independent expert is normally also required.[87] An expert is one who is eligible to be appointed as a statutory auditor and is independent if he meets the statutory tests for independence as an auditor.[88] This report is concerned principally with the exchange ratio proposed as between the shares in the transferor company (or companies) and in the transferee company involved in the merger.[89] The consideration for the merger will often be shares in the transferee company but the UK regulations take up the option to make cash available as consideration without restriction.[90] In the case of merger by absorption of a wholly owned subsidiary, the Regulations anticipate that no consideration at all will be provided[91] (since consideration has no function in this situation). In the other types of merger it has been held that, within a wholly-owned group structure, the members of the transferor company can waive their right to shares in the transferee, so that here, as well, consideration is dispensed with.[92]

29–18

Publicity is to be given to these documents in various ways, for the benefit of members, creditors and employees, but normally in practice by their publication on the company's website.[93] Publicity is a necessary part of the process whereby consent is sought from these groups for the merger proposal. As far as members are concerned, in principle consent is required from each of the UK companies involved in the merger. The approval level, as under a scheme, is 75 per cent in value and a majority in number of each class of members.[94] Again, as under a scheme, the court has power to order meetings of the members or classes of them, and the same issues are likely to arise in relation to the definition of classes as under schemes.[95] Creditor approval does not appear to be mandatory, but any creditor of a UK merging company may apply to the court to summon a meeting of creditors or classes of creditors, and the transferor company itself will normally do so, if the rights of creditors are affected (for example, because their claims will lie in future against a foreign company).[96] The level of creditor approval required at a meeting is again 75 per cent in value and a majority in number.[97] Employee consultation is considered below.

29–19

After the relevant procedure has been followed (including the employee aspects—below), the UK court performs one of two roles, depending on whether the transferee company is a UK company or not. If it is not, the UK transferor company or companies may apply to the court for a certificate (a "pre-merger certificate") that the UK procedure has been followed.[98] The UK company may use that certificate before the competent authority in the jurisdiction where the transferee company is incorporated in order to complete the merger in that jurisdiction. If the transferee company is a UK company, the UK court may order the completion of the cross-border merger on the basis of the pre-merger certificates provided by the UK court and by the competent authority of the jurisdictions in which the non-UK merging companies are incorporated.[99] The core function of the court at this stage is to ensure that the merging companies have all approved the same draft merger terms and that the employee participation arrangements have been determined, where this is necessary. However, it has been said that the court also has a more general power to review the merger substantively to see whether it will adversely affect any member, creditor or employee in a material way and whether there is any other good reason not to approve it.[100] Upon approval and notification to the registrar of companies, all the assets and liabilities of the transferor companies go across to the transferee company,[101] the members of the transferor companies receiving securities become members of the transferee company and the merging companies cease to exist.[102]

Employee participation

29–20

The Directive and domestic Regulations become complicated over the issue of whether the transferee company is required to have in place a system of worker participation in relation to its board. Participation includes not only the right to elect or appoint members of the board but also rights to recommend or oppose board members.[103] No more than a sketch of the provisions can be offered here, but in general the rules follow those for the SE (European Company).[104] However, there is one

very important difference from the scheme contained in the SE Regulations: the default system of representation which applies in the absence of agreement between company and employee representatives may be capped by the transferee company at one third of the seats for the employees, even if a more extensive system applied to one of the constituent companies.[105] There is no such cap in the SE rules and so there may be some incentive for cross-border mergers to take place via the Directive rather than under the SE Regulation.

29–21

The following additional points can be made about the employee participation rules, looking at the matter from the point of view of a UK-incorporated transferee company:

(1) The general rule (though it has significant exceptions) is that the transferee is subject to the participation rules applying in its State of registration.[106] On this basis a resulting company registered in the UK would not be subject to participation rules.

(2) However, participation is the default rule even in UK transferee companies in three situations,[107] of which the most important is probably that where any merging company in the six months prior to the publication of the draft terms of the merger had an average number of employees exceeding 500 and operated a system of employee participation. The default rule covers any merging company (not just a UK one) and any system of employee participation, whether based on board level representation or some other form of influence over the composition of the board. In this way, a UK transferee company may exceptionally become subject to mandatory employee participation rules.

(3) Where participation rules apply to the UK transferee, the merging companies (unanimously) may choose unilaterally to apply to the transferee company the “standard rules” (set out in the Regulations) on participation, i.e. without any negotiation with the employee representatives and without the loss of time such negotiation entails.[108] In that case, the employees of the transferee company obtain participation

rights in relation to that number of board members which is equal to the highest proportion to be found in any of the merging companies in which participation rights existed. Thus, the strongest system applying in any of the merging companies will apply to the transferee company, where "strength" is measured by the number of board seats subject to employee influence, not the form of that influence. The right to oppose the appointment of three members trumps the right to elect two.

(4) Alternatively, the merging companies may choose to negotiate with representatives of the employees of the merging companies with the aim of agreeing on some alternative to the standard rules. This involves the creation of a "Special Negotiating Body" ("SNB") of employee representatives to negotiate on behalf of the employees of all the merging companies.[109] The parties have six months (extendable by agreement once to 12 months) to reach a participation agreement, which agreement will then determine the participation arrangements in the company.[110] That agreement may increase or reduce the participation rights of the employees.[111] The SNB can even decide not to negotiate participation arrangements, in which case the employees of the transferee company are subject to the rules on participation of the Member State in which that company is incorporated.[112] In the case of a UK transferee this would mean no mandatory participation rights.

(5) If the parties either do not reach agreement within the specified period or agree that the standard rules shall apply, then the resulting company will be subject to those rules.[113] In this case, however, the transferee company may impose the cap mentioned above.

(6) The employee participation system applied by the Directive to the first transferee company must be applied to a subsequent domestic merger by that company for a period of three years, so that the second transferee company cannot escape the participation rules imposed on the first transferee company.[114] However, after three years it would appear to be open to the first transferee company, in a jurisdiction which does not require employee participation, to merge

with a domestic company under the domestic merger procedure and thus escape from the Directive's participation requirements.

Further uses of cross-border mergers

29–22

In addition to the simplification of the structure of cross-border groups, the Regulations could be used to effect an amalgamation between two or more separately owned companies, in place of a cross-border takeover bid. For the reasons given in relation to schemes of arrangement,[115] the cross-border merger is unlikely to replace the cross-border hostile bid, especially as the directors of the merging companies are even more strongly entrenched in the case of cross-border merger than a scheme.[116] However, the cross-border merger could perform a role in relation to agreed takeovers, where a competing offer is unlikely to emerge, especially where the bidder is from a culture less committed to the takeover form of amalgamation. On the other hand, the takeover avoids the creation of novel employee participation rights: the bidder and target remain subject to whatever, if anything, their national laws provide in this regard.[117]

29–23

A rather different potential use of the cross-border merger is to change a company's jurisdiction of incorporation. The cross-border merger Directive and Regulations appear to give the merging companies a free choice as to the Member State jurisdiction in which the transferee company is incorporated. If a jurisdiction is desired which is not one in which any of the merging companies is currently incorporated, then a new transferee company can be incorporated in the desired jurisdiction and the existing companies merged into it. However, if the desired jurisdiction is a "real seat" state, then the Directive appears to permit the authorities of that state not to register the resulting entity, if the company's "central administration" is not also in that state.[118] This is a significant obstacle to a merger based solely on choice of law considerations.

Finally, it is worth noting that it is possible to produce a cross-border merger through a "dual-listed structure". In this

arrangement the companies remain formally independent (i.e. they do not merge) nor does the one become a subsidiary of the other, as in a takeover. Instead, by contract, including provisions in their respective constitutions, the companies produce a unified management (i.e. the same people sitting on the boards of directors of the two companies or, normally, top companies of the two groups of companies which are coming together). The shareholder bodies remain separate but each body is given voting rights in the meetings of the other, so as to produce a single decision from the two votes; and the profits of the two companies are equalised. Such structures are complex to create (and to understand) but may have advantages over a merger, for example, where national susceptibilities are involved. There are not many such companies but a number of well-known multinational companies take this form (Unilever, BHP Billiton, Reed Elsevier) and others did so for a substantial period of time before moving to a more conventional single company (or group) structure (Shell, ABB).

Reorganisation under Sections 110 and 111 of the Insolvency Act 1986

29–24

Under this type of reorganisation the company concerned resolves first to go into voluntary liquidation[119] and secondly to authorise by a special resolution the liquidator to transfer the whole or any part of the company's business or property to another company[120] or a limited liability partnership ("LLP") in consideration of shares or like interests in that company (or membership in the LLP) for distribution among the members of the liquidating company. This procedure affords a relatively simple method of reconstructing a single company or of effecting a merger of its undertaking into that of another. It is often used as a tax-efficient way of effecting a demerger or division of a business.

Use of this method has the advantage, over a scheme, that confirmation by the court is not required,[121] and the advantage over a takeover that all the shareholders of the company are bound by the decision. But what it can achieve is somewhat limited. Creditors of the transferor will be entitled to prove in its

liquidation and the liquidator must ensure that their proved claims are met and cannot rely upon an indemnity given by the acquiring company.[122]A high level of member agreement on the use of the sections is also desirable. This is because s.111 provides that, in the case of a members' voluntary winding-up, any member of the company who did not vote in favour of the special resolution may, within seven days of its passing, serve a notice on the liquidator requiring the liquidator either to refrain from carrying the resolution into effect or to purchase the member's shares at a price to be determined either by agreement or by arbitration.[123] It is normally essential if advantage is to be taken of stamp duty concessions that the membership of the old company and the new should be very largely the same. If a number of the members elect to be bought out, there is a grave risk that the reorganisation will have to be abandoned as prohibitively expensive.

29–25

The CLR found the Insolvency Act procedure to be a popular method for reconstructing private or family-controlled companies or groups and also for reconstructing investment trust companies.[124] It therefore recommended its retention with, however, the modernisation of the arbitration procedure which operates when a member exercises the appraisal right and a valuation of the member's interest cannot be agreed. The procedure under the current law is antiquated, invoking as it does the arbitration provisions of the Companies Clauses Consolidation Act 1845 or its Scottish equivalent,[125] doubtfully in compliance with the Human Rights Act and unclear about the basis upon which the member's interest should be valued. The CLR proposed that the valuation should be based on the dissentient's proportionate share of the consideration offered by the transferee for the transferor's business.[126] However, these provisions being in the Insolvency Act 1986, they were not touched by the Companies Act 2006.

Conclusion

29–26

We remarked at the beginning of this chapter that the Companies Act does not contain a statutory merger procedure of the type

typically found in other jurisdictions. Whilst this statement is true, somewhat oddly a true merger procedure is now provided for cross-border mergers within the EU as a result of the Cross-Border Merger Directive and implementing Regulations. For purely domestic mergers, however, the scheme of arrangement is available for this purpose, but that procedure is available also to achieve a number of other objectives which have nothing to do with mergers of two or more companies. Indeed, since the scheme procedure, although available, is rarely used to achieve a true merger, it would be odd to use the term statutory merger procedure to refer to the scheme of arrangement. Just to confuse things further, the alternative to the merger—the takeover bid—can be, and increasingly is, affected by means of a scheme. The scheme of arrangement is thus an immensely flexible instrument. However, because it is as much an instrument of insolvency law as of corporate law and because it elides what is regarded in other jurisdictions as the fundamental difference between a takeover bid and a merger, the scheme of arrangement has a rather uncertain image. There can be almost as many types of schemes of arrangement as there are inventive corporate and insolvency lawyers, which indicates both the significance of the scheme procedure and the impossibility of identifying such a thing as a typical scheme of arrangement.

---

[1] Delaware General Corporation Law s.251.

[2] 2006 Act s.900(1). The section also applies to the "reconstruction" of a company by way of the transfer of its undertaking or property to another company.

[3] 2006 Act s.900(2)(a),(d).

[4] That a de-merger is a valid scheme is clear, but the courts' powers under s.900 apply only to de-mergers which count as "reconstructions". From this the courts have reasoned that a reconstruction requires that the shareholding structure of the transferee company must substantially reflect that of the transferor company (but liabilities may be left with the transferor): *Re South African Supply and Cold Storage Co* [1904] 2 Ch. 268, 281–282; *Re MyTravel Group Plc* [2005] 2 B.C.L.C. 123 (Mann J).

[5] See para.29–12, below.

[6] See para.29–24, below.

[7] See para.29–12, below.

[8] This way of proceeding under what is now Pt 26 was sanctioned a century ago: *Re Guardian Assurance Co Ltd* [1917] 1 Ch. 431, despite the fact that the element of "arrangement" between the target company and its shareholders is vanishingly small, consisting of no more than the company facilitating the transfer of their shares to the

bidder. See also *Re Jelf Group Plc* [2016] B.C.C. 289.

[9] Popular in the past, because it avoided the payment of stamp duty on the transfer of the shares from target shareholders to the "bidder", was the "reduction" scheme, under which the shareholders of the target agreed to the cancellation of their shares in the target company; the reserve so created in the target was used by the target to pay up new shares which were issued to the offeror; and the shareholders of the target received in exchange for their cancelled shares cash or shares in the offeror company. The company's role in a reduction scheme is thus more significant. However, the Treasury removed the stamp duty advantage in 2015 by prohibiting the first step (cancellation of the shares) when this is part of scheme to allow the bidder to obtain all the shares in the target company. However, the reduction scheme is still available for the equivalent of share exchange bid. See the Companies Act 2006 (Amendment of Part 17) Regulations 2015/472, inserting new s.641(2A) and (2B).

[10] Above, at para.28–14. On the complications which can arise when competing bids are put through the scheme mechanism see *Re Allied Domecq Plc* [2000] 1 B.C.L.C. 134; and *Re Expro International Group Plc* [2010] 2 B.C.L.C. 514. For this reason acquirers proceeding by way of a scheme often reserve the right to revert to a contractual offer if a competing bidder emerges.

[11] 2006 Act s.899(1).

[12] See above at paras 28–69 et seq.

[13] *Re National Bank* [1966] 1 W.L.R. 819; *Re BTR Plc* [2000] 1 B.C.L.C. 740 CA.

[14] See above, at para.28–67.

[15] See para.28–35 at fn.128—though those accepting may contract for this right.

[16] See para.6–18.

[17] In this case the problems mentioned in fn.4, relating to the use of courts' ancillary powers, are unlikely to arise.

[18] *Re National Bank Ltd* [1966] 1 W.L.R. 819 at 829; *Re Calgary and Edmonton Land Co* [1975] 1 W.L.R. 355 at 363; *Re Savoy Hotel Ltd* [1981] Ch. 351 at 359D–F; *Re T&N Ltd (No.3)* [2007] 1 B.C.L.C. 563 at [46]–[50].

[19] *Re NFU Development Trust Ltd* [1972] 1 W.L.R. 1548: held that the court had no jurisdiction to sanction a scheme whereby all the members were required to relinquish their financial rights without any quid pro quo. However, the decision in *Re MyTravel Group Plc* [2005] 2 B.C.L.C. 123, makes it less easy for companies to use the scheme to effect a debt-for-equity swap. The lack of congruence between the transferor and transferee companies' shareholding structures was brought about in that case by the fact that, under the scheme, the existing shareholders were to be heavily diluted and most of the shares in the transferee were to be held by the former creditors of the transferor. However, the scheme did in fact proceed in that case but without the exercise of the court's ancillary powers (see the decision of the CA in that case). It is unclear why the ancillary powers are not made available for all schemes which get through the statutory procedure.

[20] See the debt-for-equity swap discussed in the previous note.

[21] For a modern example see *Re T&N Ltd (No.3)* [2007] 1 B.C.L.C. 563.

[22] *Re Drax Holdings Ltd* [2004] 1 B.C.L.C. 10, where Lawrence Collins J (as he then was) said obiter at [29]: "It is almost impossible to envisage circumstances in which the

English court could properly exercise jurisdiction in relation to a scheme of arrangement between a foreign company and its members, which would essentially be a matter for the courts of the place of incorporation".

[23] 2006 Act s.895(1).

[24] 2006 Act ss.896–899(1).

[25] 2006 Act s.896.

[26] The possibility of shareholder proposal was recognised in *Re Savoy Hotel Ltd* [1981] Ch. 351.

[27] See previous note.

[28] See para.15–4 at fn.9.

[29] See para.28–58.

[30] The required level of approval of a scheme. See below.

[31] 2006 Act s.896(2) contemplates applications under step (b) by a creditor or member as well as by the company or its liquidator or administrator.

[32] THF would not be able to get around this problem by seeking to convene a general meeting to propose the scheme, because at a general meeting both A and B shareholders would vote together and the reasons given in the text why a bid would fail would apply also to a shareholder resolution to adopt a scheme.

[33] 2006 Act s.896(1). Sensibly, the courts will recognise that a meeting can occur even if the company has only one shareholder, for otherwise schemes would be less freely available within groups (*Re RMCA Reinsurance Ltd* [1994] B.C.C. 378), but no meeting can be said to have occurred when in a multi-member class only one member in fact attends: *Re Altitude Scaffolding Ltd* [2006] B.C.C. 904.

[34] *Sovereign Life Assurance Co v Dodd* [1892] 2 Q.B. 573 at 583, per Bowen LJ.

[35] *Re Equitable Life Assurance Society* [2002] 2 B.C.L.C. 510.

[36] *Re BTR Plc* [1999] 2 B.C.L.C. 675. The decision and reasoning were upheld on appeal: [2000] 1 B.C.L.C. 740 CA. See also *Re Industrial Equity (Pacific) Ltd* [1991] 2 H.K.L.R. 614.

[37] *Re Hellenic and General Trust* [1976] 1 W.L.R. 123. On the view of this case adopted in *BTR* it was not fatal to the scheme that the subsidiary's shares were voted at the class meeting, but they were to be discounted at the third stage when deciding whether to approve the scheme.

[38] *Re Hawk Insurance Co Ltd* [2001] 2 B.C.L.C. 480. He thought it particularly unfortunate that the court should feel obliged to raise the issue of its own motion at stage (c), even though no member or creditor sought to argue that class meetings should have been held.

[39] Practice Direction [2002] 1 W.L.R. 1345. For an account of modern practice, see *Re T&N Ltd (No.3)* [2007] 1 B.C.L.C. 563 at [18]–[20].

[40] The court does already decide at stage (b) issues relating to the jurisdiction of the court to sanction a scheme at stage (c), though not issues going to the fairness of the scheme: *Re Savoy Hotel* [1981] Ch. 351; *Re Telewest Communications Plc (No.1)* [2005] 1 B.C.L.C. 752 at [14]–[15]; *Re My Travel Group Plc* [2005] 2 B.C.L.C. 123.

[41] Final Report I, paras 13.6–13.7. This would not otherwise affect the tasks to be performed by the court at the sanctioning stage, on which see below.

[42] 2006 Act s.897(1),(2).

[43] 2006 Act s.897(3). If the interests of the directors or the trustees change before the meetings are held, the court will not sanction the scheme unless satisfied that no reasonable shareholder or debenture-holder would have altered his decision on how to vote if the changed position had been disclosed: *Re Jessel Trust Ltd* [1985] B.C.L.C. 119; *Re Minster Assets* [1985] B.C.L.C. 200.

[44] Which will be the only way of notifying holders of bearer bonds. It may also be necessary to advertise in this way to creditors.

[45] 2006 Act s.897(1)(b),(4). A default in complying with any requirement of the section renders the company and every officer, liquidator, administrator, or trustee for debenture-holders liable to a fine unless he shows that the default was due to the refusal of another director or trustee for debenture-holders to supply the necessary particulars of his interest: s.897(5)–(8). In that case the criminal offence is committed by that director or trustee: s.898.

[46] The CLR recommended the removal of the number requirement, which does indeed appear anomalous in the context of the Companies Act approach to shareholder approval: Final Report I, para.13.10. However, the “number” requirement does constitute an additional element of minority protection where 75 per cent of the shares are concentrated in one or a few persons.

[47] In relation to creditors further difficulties may arise in valuing their claims and thus determining whether the majority does represent three-fourths in value. This is a problem met whenever this formula is employed in respect of creditors—as it is throughout the Insolvency Act.

[48] 2006 Act s.899(1).

[49] *Re MyTravel Group Plc* [2005] 2 B.C.L.C. 123 CA; *Re Bluebrook Ltd* [2010] 1 B.C.L.C. 338.

[50] In *Re Dorman Long & Co* [1934] Ch. 635, 655 and 657. See also *Re National Bank Ltd* [1966] 1 W.L.R. 819, 829.

[51] *Re BTR Plc* [2000] 1 B.C.L.C. 740 at 747. For an extreme case, see *Re PCCW Ltd* [2009] 3 HKC 292 Hong Kong Court of Final Appeal.

[52] Above, at para.19–7. At this point the first and second parts of the test began to overlap.

[53] per Lindley LJ in *Re English, Scottish, and Australian Chartered Bank* [1893] 3 Ch. 385. See also *Re Alabama, New Orleans, Texas and Pacific Junction Railway Co* [1891] 1 Ch. 213, per Fry LJ; *Re Telewest Communications Plc (No.2)* [2005] 1 B.C.L.C. 772; *Re Apcoa Parking Holdings GmbH* [2014] EWHC 3849 (Ch). These were all creditors’ cases but the same principle applies to members’ schemes.

[54] 2006 Act s.899.

[55] The courts have rejected arguments that a scheme which satisfies the requirements of the Act might nevertheless amount to deprivation of possessions contrary to art.1 of the First Protocol of the European Convention on Human Rights: *Re Equitable Life Assurance Society* [2002] 2 B.C.L.C. 510; *Re Waste Recycling Group Plc* [2004] 1 B.C.L.C. 352.

[56] *British and Commonwealth Holdings Plc v Barclays Bank Plc* [1996] 1 W.L.R. 1 CA; *Re Uniq Ltd* [2012] 1 B.C.L.C. 783—though it is unlikely that the judges will give wholesale exemptions from the financial assistance rules just because the assistance is embodied in a scheme.

[57] *Nokes v Doncaster Amalgamated Collieries* [1940] A.C. 1014 HL; *Re TSB Nuclear Energy Investment UK Ltd* [2014] B.C.C. 531—though the Transfer of Undertakings (Protection of Employment) Regulations 2006/246 largely solve the employment issue.

[58] See fn.4, above.

[59] Directive 78/855/EEC (now Directive 2011/35/EU ([2011] O.J. L110/1)). The requirements of this Directive were somewhat reduced by two subsequent amending directives: Directives 2007/63/EC and 2009/109/EC, both of which have been implemented in the UK. Directive 82/891/EEC (the "Sixth" Directive) deals with the division of public limited companies.

[60] The details differ somewhat according to the "Case" (see below) within which the scheme falls, the main differences being between those within Case 1 or 2 (mergers) and Case 3 (divisions).

[61] See para.28–14.

[62] This includes the transferee company, whose consent is not required under a scheme governed purely by Pt 26, unless the rights of the shareholders or creditors of the transferee are proposed to be changed. However, it is enough that the members of the transferee are given the option to call a meeting (on the basis of a five per cent threshold: ss.918 and 932) so that the burden of action falls on the shareholders rather than the company in such a case. Of course, if the transferee is a UK listed company, the large transaction provisions of the Listing Rules might require it to obtain shareholder approval. See para.14–20.

[63] 2006 Act ss.905–6A, 920–921A.

[64] 2006 Act ss.908, 910, 923, 925.

[65] As a result of amendments to the Directives introduced by Directive 2007/63/EC the requirement for an independent report can be dispensed with if all the shareholders agree. See s.918A.

[66] 2006 Act ss.909, 924 and 935–937. The matters to be dealt with in the report are specified in some detail. In some respects it resembles the report required (also as a result of an EU Directive) when a public company makes an issue of shares paid-up otherwise than in cash: see paras 11–16 et seq., above.

[67] 2006 Act s.902(1)(c).

[68] 2006 Act ss.915 and 915A. In these cases, as well, the requirement for a meeting of members is relaxed: ss.916–917 and 931.

[69] 2006 Act s.902(3).

[70] 2006 Act ss.904(1)(a) and 902(2)(b).

[71] 2006 Act ss.904(1)(b) and 902(2)(a).

[72] See the scheme proposed in *Re MyTravel Group Plc* [2005] 2 B.C.L.C. 123.

[73] 2006 Act ss.919 and 902(2). The Sixth Directive applies to divisions. See fn.59, above.

[74] Completing, paras 11.40–11.53.

[75] See paras 13–39 et seq.

[76] Completing, para.11.46.

[77] Completing, para.11.50. A potential use for the SE (above, para.1–40) is to achieve a similar result within multinational groups.

[78] Final Report I, paras 13.14–13.15.

[79] Directive 2005/56/EC on cross-border mergers of limited liability companies ([2005] O.J. L310/10).

[80] SI 2007/2974, as amended, a self-standing set of regulations made under the European Communities Act 1972 and constituting a major piece of corporate law which is not located in the 2006 Act at all.

[81] SI 2007/2974 reg.2.

[82] TFEU art.49. See Case C-411/03 *SEVIC* [2005] E.C.R. I-10805, concerning German merger procedure.

[83] SI 2007/2974 reg.2. In the case of merger by formation of a new company the diversity requirement is applied to the transferor companies (reg.2(4)(a)).

[84] See art.1 of the Directive.

[85] SI 2007/2974 reg.7. It thus appears that the merger cannot proceed unless the directors of all the companies involved approve the idea.

[86] SI 2007/2974 reg.8.

[87] SI 2007/2974 reg.9. An expert's report is not required where the merger is between a wholly-owned subsidiary and its parent and where the transferee holds 90 per cent of the securities of the transferor carrying voting rights and an exit right on fair terms is afforded to the minority: regs 9 and 9A.

[88] Reg.9(7)–(8), invoking ss.1212 and 1214 of the Act, on which see para.22–12.

[89] The transferor company or companies will have their assets and liabilities transferred if the merger goes through and the transferee company is the company which will receive those assets and may be an existing company or one formed for the purposes of the merger.

[90] SI 2007/2974 reg.2.

[91] SI 2007/2974 reg.2(3).

[92] *Re Olympus UK Ltd* [2014] EWHC 1350 (Ch)—an interesting example of the interpretation of the English version of the Directive so as to maximize its harmonising effect, despite an ill-advised use of words in that version.

[93] SI 2007/2974 regs 10, 12–12A.

[94] SI 2007/2974 reg.13. Transferor member approval is not required in the case of merger by absorption of a wholly owned subsidiary and, where the transferee company is an existing company, approval of its members is required only if the holders of 5 per cent or more of the voting rights call a meeting to consider the merger.

[95] SI 2007/2974 reg.11, and see para.29–8, above.

[96] SI 2007/2974 reg.11. The transferor company may pay off or secure the creditors' claims in advance of the merger.

[97] SI 2007/2974 reg.13.

[98] SI 2007/2974 reg.6. The court's role here is presumably similar to that under a scheme.

[99] SI 2007/2974 reg.16. The court may order completion even where the merger agreement is conditional, provided the court has a high degree of confidence that the conditions will be met, that the conditions are aimed at facilitating the merger which the shareholders approved and that they do not amount to giving a party other than the court a discretion whether the merger goes ahead: *Re International Game Technology Plc* [2015] 2 B.C.L.C. 45; *Nielsen Holdings Plc* [2015] EWHC 2966 (Ch); *Re Livanona Plc and Sorin SpA* [2015] B.C.C. 914. This reflects practice under domestic schemes (*Lombard Medical Technologies Plc* [2015] 1 B.C.L.C. 656).

[100] *Re Diamond Resorts (Europe) Ltd* [2013] B.C.C. 275. The judge also held that the rigor of that enquiry would also depend on the extent of the investigations undertaken by the competent authority (which may not be a court) in the other EEA jurisdictions involved.

[101] Including the rights and obligations of the merging companies under contracts of employment: reg.17(1). It seems likely that reg.17 will be interpreted as transferring all contractual rights and liabilities, no matter whether they are transferable under general law. See fn.57, above.

[102] SI 2007/2974 reg.17, widely construed in *Re Lanber Properties LLP and Lanber II GmbH* [2014] EWHC 4713.

[103] SI 2007/2974 reg.3(1).

[104] See para.14–67.

[105] SI 2007/2974 reg.39. This follows art.16(4)(c) of the Directive, which permits, but does not require, Member States to adopt a cap and confines that cap to one-tier boards.

[106] Directive art.16(1) and reg.22.

[107] Directive art.16(2) and reg.22.

[108] Directive art.16(3)(h), (4)(a) and regs 36 and 38. However, the one third cap can be imposed only if there have been negotiations with the employee representatives. Completion of the employee participation arrangements is a condition for the registration of the resulting company: reg.39.

[109] Regulations Ch.2 of Pt 4.

[110] SI 2007/2974 regs 28 and 29.

[111] But if at least one-quarter of the employees of the merging companies had participation rights, any decision by the SNB on an agreement which reduces participation rights below the highest proportion previously operating requires a two-thirds majority of the members of the SNB: reg.30.

[112] SI 2007/2974 reg.31. This requires not only a two-thirds vote of the SNB, but also that those voting in favour should represent two-thirds of the employees of the merging companies.

[113] SI 2007/2974 reg.36. However, failure to agree will trigger the standard rules where

fewer than one-third of the employees of merging companies were subject to participation only where the SNB has positively opted (by a majority of its members) for them. Thus, a majority of representatives, perhaps from countries not having a participation system, could block its imposition on the resulting company, perhaps in exchange for some different type of concession from the companies.

[114] SI 2007/2974 reg.40.

[115] Above, para.29–3.

[116] Above, fn.85. *Re International Game Technology Plc* [2015] 2 B.C.L.C. 45 concerned a genuine cross-border merger, not just an intra-group restructuring.

[117] This is in fact highly unsatisfactory in one respect. Where a German company, subject to co-determination, takes over a British company, the British workers will have no right to participate in board level representation arrangements of the German parent, even though the strategy of both companies is probably determined at that level, unless, as sometimes happens, voluntary arrangements are made to accommodate the interests of the non-German workers.

[118] Directive art.4(1)(b). For discussion of this issue, and a number of other pertinent observations on the Directive, see J. Rickford, "The Proposed Tenth Company Law Directive on Cross Border Mergers and its Impact in the UK" [2005] E.B.L.R. 1393.

[119] Under former versions of these provisions it had to be a *members'* voluntary liquidation, i.e. one in which the directors have made a "declaration of solvency" declaring that all the company's debts will be paid in full within 12 months. It can now be employed also in a creditors' voluntary liquidation so long as it is sanctioned by the court or the liquidation committee (Insolvency Act s.110(3)) but that sanction is unlikely to be given unless all creditors are paid in full.

[120] Whether or not the latter is a company within the meaning of the Companies Act (Insolvency Act s.110(1)) so that it could be a company registered in another jurisdiction.

[121] Though the court's sanction may be needed if the company is to be wound up in a creditors' winding-up.

[122] *Pulsford v Devenish* [1903] 2 Ch. 625. But the sale of the undertaking will be binding on the creditors who will not be able to follow the assets transferred to the transferee company: *Re City & County Investment Co* (1879) 13 Ch. D. 475 CA.

[123] This is an example, rare under UK law (but more widely used in some other common law jurisdictions) of protecting dissenting members by granting them "appraisal rights". The courts will not permit the company to deprive members of their appraisal rights under the section by purporting to act under powers in its articles to sell its undertaking in exchange for securities of another company to be distributed *in specie*: *Bisgood v Henderson's Transvaal Estates* [1908] 1 Ch. 743 CA.

[124] Completing, para.11.13.

[125] Clauses Consolidation Act 1845 s.111(4).

[126] Final Report I, para.13.13.

INTRODUCTION

30–1

With these topics we reach the margins of company law. Market abuse can occur in all markets and the relevant rules apply equally widely. We are concerned in this book, however, only with abuse in the markets for company securities (shares and bonds) and their derivatives. Our analysis will accordingly be so confined.

Market abuse is conventionally regarded, at least within the EU, as covering two rather different activities: insider dealing and market manipulation. Insider dealing (or trading)[1] occurs when a person in possession of price-sensitive information about a company buys or sells securities in that company and so

obtains better terms in the transaction than would have been the case had the counterparty been aware of the information in question. In that way, the insider can either make a profit or avoid a loss, depending on whether the information, once public, will drive the price of the security up or down.[2] The issue is at the margins of company law because the insider dealer does not have to be an insider of the company, for example a director, though he or she very often is. A governmental official may know that the agency for which he or she works is about to issue an adverse report on a particular company which will affect the price of its shares and then trade in the company's shares before the report is published.

Market manipulation involves conduct which moves the price of the securities to a position which is different from that which the market would have set in the absence of the conduct. Penalising such behaviour thus involves drawing a distinction between legitimate and illegitimate behaviour within markets. If a company announces a bid for another company at a price above the prevailing market price for the shares, that announcement will move the price in an upward direction, but such behaviour is not only regarded as legitimate, it may also be required by takeover rules (as we saw in Ch.28). On the other hand, if I move the market price by making statements which I know to be false, that will be regarded as illegitimate behaviour. In a very early example of market manipulation, from the beginning of the nineteenth century, the fraudsters pretended to be soldiers returning from France with news of the defeat of Napoleon (before this event actually came to pass some time later). The false rumours which they spread caused the price of British government bonds to rise, thus enabling the accused to dispose of their holdings of those bonds at a profit.[3] However, as we shall see below, distinguishing legitimate from illegitimate behaviour in more marginal cases is not easy.

In the case of manipulation it is clear that market participants may suffer loss as a result of the behaviour. They will have acquired or disposed of shares on the basis of an artificial price and may suffer loss when the truth emerges.[4] Equally, the allocative efficiency of the market may suffer. Investors use market prices to determine how to target their resources and so

manipulated prices may produce a misallocation of those resources. In the case of insider dealing the harm to the market and its participants is less clear. The insider dealing may not move the share price very much, if at all, and, in so far is it does, it moves the price towards, not away from, its "true" value (i.e. towards the value it will have when the full information is eventually publicly disclosed). Since insider dealing can be avoided by not trading and in public markets many of the other market participants would have traded, whether or not the insider traded, the harm to them is difficult to identify.[5] It is easier to see the harm if there are rules, as is now the case, requiring inside information to be disclosed.[6] If the information had been in the market, the prices would have been different and this can be used as a starting point for calculating loss.[7] On this basis, the harm-causing event is not the insider dealing as such but the non-disclosure of the inside information, but non-disclosure is an inherent part of the insider dealer's strategy.[8]

30–2

In insider dealing rules a crucial task is distinguishing between information which the insider cannot use privately and information which can be used privately. This is not an easy task. It cannot be said, though it often is, that the aim of the insider dealing rules is to put all market participants in possession of the same information, because then there would be no incentive for analysts (and others) to seek out information about companies which is not known to the market in general. Analysts fulfil an important function in keeping the market informationally efficient because they provide information to the market after, or often as, they trade on the information for their profit.[9] If they had to disclose the information before trading, their incentive to acquire it in the first place would disappear. As with market manipulation, it can be argued that the key objective is to distinguish legitimate from illegitimate means of acquiring information which is not generally known to the market. Only information acquired by illegitimate means should count as "inside" information. So, for example, an analyst who carefully pieces together public but not easily accessible information to arrive at new facts about the company should not be classified as a holder of inside information. On the other hand, a director,

who routinely acquires information about the company before the market does because of his or her position in the company, has no socially valuable claim to be allowed to trade on the basis of that information.

30–3

The above arguments provide reasons why securities market authorities would wish to control market abuse. But they do not tie the regulation very closely to the objectives of corporate law. It is possible to make this connection by focusing on the interests of the company (the issuer) in having effective regulation in place. If insider dealing is rife in the market, the non-insider will know that the market prices will systematically fail to reflect all the available information about the company and will do so in a way which is unfavourable to the outsiders. In the absence of regulation, this will be an inherent risk of holding shares in companies and outsiders will build this risk into their investment decisions, by lowering the price they are prepared to pay for companies' shares. This in turn will increase companies' cost of capital because they will be able to issues shares on less favourable terms than if investors could be assured that there was no or little insider trading in the market. Thus, companies have an interest in effective insider dealing legislation or regulation.[10]

The same general argument can be made in relation to market manipulation.[11] If extensive, such behaviour may systematically produce prices which are unfavourable to outsiders, thus again causing them to re-assess the riskiness of corporate securities as a class.

30–4

The law on market abuse has developed rapidly over the past 40 years. The first sanctions against insider dealing were criminal and were introduced by the Companies Act 1980. Those sanctions are now in Pt V of the Criminal Justice Act 1993. Market manipulation was criminalised (beyond the common law) a little later in the Financial Services Act 1986. The present provisions are in Pt 7 of the Financial Services Act 2012. The Financial Services and Markets Act 2000 added administrative sanctions against market abuse (of both types) and widened the

definitions of the behaviour which was open to sanction. Enforcement of both the administrative penalties and the criminal law lies in the hands of the Financial Conduct Authority ("FCA"), previously the Financial Services Authority ("FSA").

Market manipulation is an area where EU law has played an important role. Initially, the EU operated via Directives which required transposition into domestic law by the domestic legislator. After the financial crisis, in the name of greater uniformity, the EU adopted a Market Abuse Regulation ("MAR"),[12] most of whose provisions do not require transposition.[13] However, in the case of the UK, the EU rules tended to lag behind the reforms made at domestic level, so that their impact on the rules applicable to the UK markets was also limited. Even the extensions contained in the new Regulation relate primarily to markets other than the markets in corporate securities. Consequently, for the matters considered in this chapter, the impact of the Regulation has been more on the structure of the law and less on its substantive content. Its impact on the structure or sources of the law is profound. EU rules, in the shape of the Regulation and "secondary legislation" made by the Commission under the Regulation, become the important first-line sources of law in relation to market abuse in securities markets and domestic sources, whereas rules made by Parliament or the FCA, become less important than in the past.

This is the position in relation to administrative sanctions against market abuse. In relation to criminal law, the position is different. There is a new Market Abuse Directive on criminal sanctions,[14] but this is a Directive out of which the UK may opt and it has chosen to do so. In the criminal law, therefore, the domestic rules remain in the front line.

We analyse first the rules on insider dealing and then those on market manipulation.

Approaches to Regulating Insider Dealing

Disclosure

30–5

A number of approaches to the regulation of insider dealing are

to be found in the current law. Mandatory disclosure has long been used, but disclosure may be used to control insider dealing in a number of different ways. For example, as we saw in Ch.26, directors, as potential insider dealers, may be required to disclose dealings in their company's securities on the theory that, if they know that their dealings will be public knowledge, they will be less likely to trade on the basis of inside information.[15] Indeed, this is the oldest anti-insider dealing technique, having been introduced upon the recommendation of the Cohen Committee of 1945.[16]

Alternatively, or in addition, the disclosure rules may aim at those who have the inside information and require them to disclose it, whether or not they are likely to trade on the basis of it. The point here is that putting the information into the public domain reduces the opportunities of others to engage in insider dealing. This, too, we have discussed above in the shape of the obligation laid upon issuers to disclose inside information promptly to the market.[17] Even the obligation to disclose the beneficial ownership of shares at the 3 per cent level and above[18] may constitute a disclosure obligation of this type, for it shows who is accumulating a stake in a company, perhaps preparatory to a bid.[19]

Prohibiting trading

30–6

At the other end of the spectrum, the law could ban trading by potential insiders, irrespective of whether they are in possession of inside information or not. This is a blunt instrument, since it deprives those without inside information of trading opportunities. However, this approach is used in a targeted way in relation to particular "high risk" groups. The clearest example of this strategy was the requirement of the *Model Code* that directors, subject to exceptions, should not deal in securities of the company within a period of two months preceding the preliminary announcement of the company's annual results and similar limitations were imposed in relation to the announcement of the half-yearly and quarterly[20] reports. In addition, clearance to deal at any time had to be obtained in advance from the chairman of the board, the CEO or the company secretary, as

appropriate.[21] Compliance with the Code was not required by legislation but was one of the continuing obligations imposed upon companies with a premium listing by the Listing Rules.[22] Such companies were required to ensure that those discharging managerial responsibilities complied with the Code or such stronger requirements as the company might impose. Thus, the Code was not directly binding on directors but was a model which premium listed companies were required to adopt with such refinements as were thought desirable. In practice it was normally adopted virtually verbatim. The company was required to take "all proper and reasonable" steps to secure compliance with the Code by those discharging managerial responsibilities within it.[23]

The notion of a prohibition on trading during a closed period preceding the company's required regular reports was taken up in MAR, though with a lesser closed period of 30 days.[24] The prohibition now applies to all companies traded on the Main Market, whether with a premium listing or not, and companies traded on AIM. MAR covers "persons discharging managerial responsibilities" as well as directors (but not "closely associated" persons[25]); extends to trading on the account of a third party as well as to own account trading; and brings in trading in derivatives and other financial instruments as well as directly in the company's securities. As under the Model Code, the issuer may allow trading in this period in "exceptional circumstances, such as severe financial difficulty", as further elaborated in Commission delegated acts.[26] Since the MAR provisions overlap with the Model Code, the FCA proposes to remove it from the Listing Rules.[27] However, this leaves two areas where the Model Code applied more widely than MAR. First, it applied to preliminary announcements of annual results, which are not required, and so fall outside MAR, but are market practice in the UK and are in effect the market moving event rather than the later full publication. Secondly, MAR has no equivalent to the clearance rules which applied whenever a director proposes to deal (not just during the closed period). On the second issue the FCA proposed to provide guidance for issuers in place of the present obligation to have clearance rules.[28] Its policy on the first issue is unclear: it may take the view that the provisions of MAR cannot be added to.[29]

Relying on the general law

30–7

A third approach is to not to legislate specifically for insider dealing but to rely instead on established doctrines of the common law to deal with it. Company law offers its fiduciary duties for this purpose, and more general doctrines of the common law may also have a role. For one reason or another, however, these doctrines fail to capture the problem of insider dealing comprehensively. Yet they need to be borne in mind because they offer civil remedies under the control of private parties, whereas, as we shall see, the specific insider dealing rules rely wholly on criminal or regulatory sanctions which are, in effect, under the control of the FCA.

Directors' fiduciary duties

30–8

As pointed out in Ch.16,[30] if directors make use of information acquired as director for their personal advantage they may breach their fiduciary duties to the company and be liable to account to it for any profits they have made. A great advantage of the civil suit brought by the company for breach of fiduciary duty is that it does not have to show that it has suffered loss as a result of the insider dealing, simply that the insider fiduciaries have made a profit in breach of the rules on conflicts of interest.[31] In practice, however, it is unlikely that the company will call them to account unless and until there is a change of control. If only one director has committed the breach, the others may cause the company to take action against him but most public companies are likely to avoid damaging publicity by persuading the errant director to resign "for personal reasons" and to go quietly.

It is also possible that, for example, in relation to a takeover of a small company,[32] the directors may place themselves in the position of acting as agents negotiating on behalf of the individual shareholders and thereby, despite *Percival v Wright*,[33] owe fiduciary duties to the shareholders. If so, they would breach those duties if they persuaded any shareholder to sell at a price which they knew (and the shareholders did not) was

materially lower than their likely value on the basis of full disclosure of the information the directors hold about the company. It is, however, highly unlikely that the directors of a listed company would create such a relationship. If they did engage in insider dealing, it would be by dealing impersonally on a stock exchange so that no fiduciary relationship was created.

Hence, the general equitable principle is, on its own, rarely an effective deterrent. Moreover, the law relating to directors' fiduciary duties is simply incapable of applying to the full range of insiders and, except in the rare case where the decision in *Percival v Wright* can be overcome, it has the demerit of concentrating on the relationship between the director and the company rather than on the relationship between the director and other traders in the market.

Breach of confidence

30–9

Somewhat similar criticisms can be made of the second source of equitable obligation which is relevant here, namely that imposed by the receipt of information from another person where the recipient knows or ought to have known that the information was imparted in confidence. However, the range of persons potentially covered by this obligation is much wider that those covered by the fiduciary duties applying to directors of companies. It will extend to the professional advisers of companies who, say, are involved in preparing a takeover bid which the company is contemplating, and to the employees of such advisers, since no contractual link between the confider and the confidant is necessary to support this fiduciary obligation. Indeed, the obligation extends to anyone who receives information knowing that they are receiving it in breach of a duty of confidentiality imposed upon the person communicating the information.[34]

If the duty attaches, the holder of the information may not use it (for example, by trading in securities) or disclose it (for example, to another person so that that person may trade)[35] without the permission of the confider. Breach of the duty gives rise to a liability to account for the profits made, potentially the

most useful civil sanction in the case of insider dealing on securities markets. The confidant may have to pay damages to the confider but it is far from clear that the confider actually suffers any loss if the confidant uses the information for the purposes of insider dealing and does not, in so doing, communicate the information to other persons. However, the cause of action again lies in the hands of the person to whom the fiduciary obligation is owed (i.e. the confider), not in the hands of the person with whom the confidant has dealt in the securities transaction or other participants in the market at the time. This might not matter if in fact the duty of confidence was routinely used to deprive insiders of their profits,[36] but, although much inside information must also be received in confidence and although the law in this area has achieved much greater prominence in recent years than it had previously, there are no reported cases of its use against insider dealers. This may be because the difficulties of detection and proof, which abound in this area, operate so as to deprive confiders of the incentive to use their private law rights to secure the transfer of insider dealing profits from the insiders to themselves.

Misrepresentation

30–10

When in 1989 the Government was considering its response to the EU's first Directive on insider dealing, it decided to continue its policy of not providing civil sanctions under the insider dealing legislation partly on the grounds that these worked satisfactorily only in face-to-face transactions and that the general law already provided remedies in that situation.[37] Apart from the insider's liability to the company, discussed above, the Government referred to liability for fraudulent misrepresentation. Misrepresentation-based liability, however, whether for fraudulent, negligent or innocent misrepresentation, faces a formidable obstacle in relation to insider trading. This is the need to demonstrate either that a false statement has been made or that there was a duty to disclose the inside information to the other party to the transaction. As to the former, the insider can avoid liability by not making any statements to the other party relating to the area of knowledge in which he holds the

inside information. Liability might arise if the other party to the transaction has the good luck or the right instinct to extract a false statement from the insider by probing questions, but liability on this basis is unlikely to be widespread.

As to non-disclosure, the current legislation does not adopt the technique contained in some earlier proposals for insider dealing legislation: requiring insiders in face-to-face transactions to disclose the information before dealing.[38] Consequently, the potential plaintiff has to fall back on the common law, which imposes a duty of disclosure in only limited circumstances. The most relevant situation would be where the insider was in a fiduciary or other special relationship with the other party, but, as we have seen above, even as between directors and shareholders, the current law recognises such a relationship only exceptionally, whilst many insiders and their counterparties are simply not in the relationship of director and shareholder at all.[39] There is also little evidence at present of a willingness on the part of the courts to expand the categories of fiduciary or other special relationships in this area[40] or to bring securities contracts within the category of contracts uberrimae fidei.

Prohibiting insider dealing

30–11

The above analysis leaves only the approach of prohibiting dealing by those who actually possess inside information. This can be said to constitute the core of the current law. However, the prohibition can take two forms. The first involves the criminalisation of insider dealing and certain associated acts. The original criminal legislation was contained in Pt V of the Companies Act 1980 and was later consolidated in the Company Securities (Insider Dealing) Act 1985. As a result of the adoption by the European Community of the Insider Dealing Directive in 1989,[41] some amendment of the British law became necessary, and the Department of Trade and Industry also took the opportunity to simplify the 1985 Act in some respects. However, Pt V of the Criminal Justice Act 1993, the current law, is still recognisably in the mould established by the 1980 Act, though it contains some interesting new features and has abandoned some old obfuscations.[42] Experience showed, however, that it was

difficult to secure convictions for this offence, partly because of difficulties of detection but partly also because of the standards of evidence and proof required in criminal trials. The legislature responded in the market abuse provisions of the FSMA 2000, which allow the FCA to impose administrative penalties upon those who engage in this activity, which is defined so as to include insider dealing. Thus, the second main form of the prohibition on trading is the deployment of regulatory sanctions against insider dealing, which is the area where EU law has been most influential.

The Criminal Justice Act 1993 Part V

30–12

Section 52(1) of the 1993 Act defines the central offence which it creates in the following terms: "An individual who has information as an insider is guilty of insider dealing if, in the circumstances mentioned in subs. (3), he deals in securities that are price-affected securities in relation to the information". This definition, however, conceals as much as it reveals, for it is much elaborated and qualified in the remaining sections of the Part. It is proposed in the following sections to try to elucidate the central elements of the offences created and of the defences available.

Regulating markets

30–13

Pursuing the reference to s.52(3), contained in the above definition, reveals at once that the Act does not aim to control all dealings in shares where one of the parties has price-sensitive, non-public information in his or her possession. On the contrary, it is only when the dealing takes place "on a regulated market" and in certain analogous situations does the Act bite. If, say, the transaction occurs face-to-face between private persons, then the situation is outside the control of this particular legislation. The Act leaves regulated markets to be identified by statutory instrument and that instrument includes any market established under the rules of the London Stock Exchange (thus including AIM).[43]

However, the legislation has always applied to certain “off-market” deals and these are now defined as those where the person dealing “relies on a professional intermediary or is himself acting as a professional intermediary”.[44] Section 59 makes it clear that the profession in question must be that of acquiring or disposing of securities (for example, as a market maker[45]) or acting as an intermediary between persons who wish to deal (for example, as a broker[46]), and that a person does not fall within the definition if the activities of this type are merely incidental to some other activity or are merely occasional.

30–14

Despite this extension, which was in any event required by the 1989 Directive,[47] the main thrust of the legislation is the regulation of dealings on formalised markets, and the extension was designed to prevent the evasion of such regulation, which might occur if trading were driven off formalised markets into less efficient, informal arrangements. The concentration of the prohibition on formal markets also makes it much easier to justify the restriction of the sanctions for breaches of the Act to the criminal law. In addition to the other difficulties which surround the creation of a coherent civil remedy in this area, the fact that the trading has occurred on a public exchange means that the identity of the counterparty to the transaction with the insider is a matter of chance. In any liquid stock many thousands of persons may be trading in the market at the same time as the insider. To give a civil remedy to the person who happened to end up with the insider’s shares and not to the others who dealt in the market at the same time in the security in question would be arbitrary, whilst to give a civil remedy to all relevant market participants might well be oppressive of the insider.[48] By confining the sanction to the criminal law, Parliament avoided the need to address these difficulties. Moreover, if the main argument against insider trading is that it undermines public confidence in the securities markets, the criminal law is capable of expressing the community’s view of that public interest, provided it can be effectively enforced.[49]

Finally, in this section on the definition of markets a few words should be said about the international dimension of insider dealing. It is now extremely easy, technically, for a

person in one country to deal in the shares of a company which are listed or otherwise open to trading in another country; or for a person to deal in shares of a company quoted on an exchange in his or her own country via instructions placed with a foreign intermediary. For the domestic legislator not to deal with this situation runs the risk that the domestic legislation will be circumvented wholesale. To apply the domestic sanctions irrespective of the foreign element, on the other hand, is to run the risk of creating criminal law with an unacceptable extra-territorial reach. The latter risk is enlarged by the 1989 Directive's requirement that the Member States must prohibit insider dealing in transferable securities "admitted to a market of a Member State"[50] and not just those admitted to its own markets. In line with this requirement, the 1994 Order extends the application of the Act to securities which are officially listed in or are admitted to dealing under the rules of any investment exchange established within any of the states of the European Economic Area.[51]

This clearly should not mean, however, that a French citizen dealing on the basis of inside information on the Paris *Bourse* or even on the Milan Exchange in the shares of a British company (or a company of any other nationality) is guilty of an offence under UK law. Consequently, s.62(1)[52] of the Act lays down the requirement of a territorial connection with the UK before a criminal offence can be said to have been committed in the UK. This requires the dealer or the professional intermediary to have been within the UK at the time any act was done which forms part of the offence or the dealing to have taken place on a regulated market situated in the UK.[53] Consequently, our French citizen will commit a criminal offence in the UK only if the deal is transacted on a regulated market located in the UK,[54] unless the trader or the professional intermediary through whom the deal is transacted is in the UK at the time of the dealing.[55] This approach does not eliminate all potential of the insider dealing legislation for extra-territorial effect, but it does limit it to situations where there is some substantial connection between the offence and the UK.

Regulating individuals

30–15

A striking feature of the 1993 Act is that it regulates insider dealing only by individuals. The Act does not use the more usual term "person" to express the scope of its prohibition, so that bodies corporate are not liable to prosecution under the Act. Corporate bodies were excluded, not because it was thought undesirable to make them criminally liable but because of the difficulties it was thought would be faced by investment banks when one department of the bank had unpublished price-sensitive information about the securities of a client company and the dealing department had successfully been kept in ignorance of that information by a "Chinese Wall"[56] or otherwise. If someone in the dealing department entered into a trade, it was thought to be arguable that the bank as a single corporate body would have committed an offence, had the Act applied to corporate bodies, the act of one employee and the knowledge of the other being attributed to the bank. However, it should be noted that these arguments were not regarded as decisive by those who drafted the various versions of the administrative sanction regime. Their policy was to bring insider dealing, even by corporate bodies, within the scope of the regulatory prohibitions but then to deal expressly with the problem of attributed knowledge.[57]

In any event, it should be noted that an individual can be liable under the Act even if the dealing in question is done by a company. Companies can act only through human agents, and, as we shall see below,[58] the Act's prohibition on dealing extends to procuring or encouraging dealing in securities. Thus, if the individuals who move the company to deal do so on the basis of unpublished price-sensitive information, they may well have committed the criminal offence of procuring or encouraging the company to deal, even if the company itself commits no offence in dealing. These extensions embrace encouraging and procuring "persons" to deal—though, of course, the encourager or procurer must be an individual.

Inside information

30–16

The definition of inside information is a core feature of the Act

and has always been controversial. The general principle stated in the preamble to the 1989 Directive was: investor confidence in security markets depends inter alia on “the assurance afforded to investors that they are placed on an equal footing and that they will be protected against the improper use of inside information”. However, it is much easier to state this general principle than to cast it into precise legal restrictions. As we have noted, placing investors “on an equal footing” cannot mean that all those who deal on a market should have the same information.[59] The aim of the legislation is not to eliminate all informational advantages, but to proscribe those advantages whose use would be improper, often because their acquisition is not the result of skill or effort but of the mere fact of holding a particular position. This general issue will be seen to recur in relation to all four of the limbs of the statutory definition of “inside information”.

Section 56 defines inside information as information which:

(a) relates to particular securities or to a particular issuer of securities and not to securities generally or to issues of securities generally;

(b) is specific or precise;

(c) has not been made public;

(d) if it were made public would be likely to have a significant effect on the price of any securities.

Particular securities or issuers

30–17

The first limb of the definition is the subject of a crucial clarification in s.60(4) that information shall be treated as relating to an issuer of securities “not only where it is about the company but also where it may affect the company’s business prospects”. This makes it clear that the definition of inside information includes information coming from outside the company, for example, that the Government intends to liberalise the industry in which the company previously had a monopoly, as well as information coming from within the company, for example, that the company is about to declare a substantially

increased or decreased dividend or has won or lost a significant contract. This casts the net very wide, but it is difficult to see that any narrower formulation would have been appropriate.

Whatever the source of the information, it must relate to particular securities or a particular issuer[60] or particular issuers of securities and not to securities or issuers generally. So information relating to a particular company or sector of the economy is covered, but not information which applies in an undifferentiated way to the economy in general. This is not an entirely easy distinction; nor is its policy rationale self-evident. It would seem to mean that knowledge that the Government is, unexpectedly, to increase or decrease interest rates would fall within the definition in relation to bank shares (because interest rates are central to the bank's business of borrowing and lending money) but not in relation to the shares in all companies (where the implication of the rate rise is simply a less rapid future growth of the economy).

Specific or precise

30–18

The second limb of the definition restricts the scope of inside information further: the information must also be specific or precise.[61] The 1989 Directive required simply that the information be "precise",[62] but this was thought by Parliament to be possibly too restrictive, so the alternative of "specific" was added. The example was given of knowledge that a takeover bid was going to be made for a company, which would be specific information, but might not be regarded as precise if there was no knowledge of the price to be offered or the exact date on which the announcement of the bid would be made.[63] However, the crucial effect of this restriction is that it apparently relieves directors and senior managers of the company and analysts who have made a special study of the company from falling foul of the legislation simply because they have generalised informational advantages over other investors. Having a better sense of how well or badly the company is likely to respond to a particular publicly known development does not amount to the possession of precise or specific information.

Made public

30–19

The tension between the policy of encouraging communication between companies and the investment community and of stimulating analysts and other professionals to play an appropriate role in that process, on the one hand, and that of preventing selective disclosure of significant information to the detriment of investors who are not close to the market, on the other, is further revealed in s.58 of the Act, which deals with the issue of when information can be said to have been "made public". The Government initially proposed to leave the problem to be solved by the courts on a case-by-case basis, but came under pressure in Parliament to deal with the issue expressly. The pressure probably reflected the accurate perception that, with the broadening of the definition of "insider",[64] more weight would fall on the definition of "inside information" and especially this limb of the definition. Section 58 is not, however, a comprehensive attempt to deal with the issue. It stipulates four situations where the information shall be regarded as having been made public and five situations where the court may so regard it; otherwise, the court is free to arrive at its own judgment.[65]

The most helpful statement in s.58 from the point of view of analysts is that "information is public if it is derived from information which has been made public".[66] It is clear that this provision was intended to protect analysts who derive insights into a company's prospects which are not shared by the market generally (so that the analyst is able to out-guess competitors) where those insights are derived from the intensive and intelligent study of information which has been made public. An analyst in this position can deal on the basis of the insights so derived without first disclosing to the market the process of reasoning which has led to the conclusions, even where the disclosure of the reasoning would have a significant impact on the price of the securities dealt in. This seems to be the case even where the analyst intends to and does publish the recommendations after the dealing, i.e. there is what is called "front running" of the research.[67]

The utility of this subsection to the analyst and others is enhanced by the other provisions of s.58(2). Section 58(2)(c) comes close to providing an overarching test for whether information is “made public” by stating that this is so if the information “can readily be acquired” by those likely to deal in the relevant securities. In other words, the public here is not the public in general but the dealing public in relation to the securities concerned (which is obviously sensible) and, more controversially, the issue is not whether the information is known to that public but whether it is readily available to them. This is a more relaxed test than that applied under the previous legislation, which required knowledge of the information on the part of the public.[68] The former test in effect required those close to the market to wait until the information had been assimilated by the investment community before trading. Now it appears that trading is permitted as soon as the information can be readily acquired by investors, even though it has not in fact been acquired. In other words, a person who has advance knowledge of the information can react as soon as it can be “readily acquired” and reap a benefit in the period before the information is in fact fully absorbed by the market. This consequence of s.58(2)(c) is strengthened by the express provisions that publication in accordance with the rules of a regulated market or publication in records which by statute are available for public inspection mean that the information has been made public.[69]

However, the extent of the move away from actual public knowledge in the current legislation should not be exaggerated. The test laid down in s.58(2)(c) is not that information is public if it is available to the relevant segment of investors but whether it “can readily be acquired” by them. That information could be acquired by investors, if they took certain steps, is surely not enough in every case to meet the test of ready availability. One can foresee much dispute over what in addition is required to make information readily available. Section 58(3) helps with this issue to the extent of stating that certain features of the information do not necessarily prevent it from being brought within the category of information which “can be readily acquired”. Thus, information is not to be excluded solely

because it is published outside the UK, is communicated only on payment of a fee, can be acquired only by observation or the exercise of diligence or expertise, or is communicated only to a section of the public. However, in the context of particular cases, information falling within these categories may be excluded from the scope of "public information", for instance because the information is supplied for a (high) fee or is supplied to a very restricted number of persons. To this extent, the legislation has necessarily ended up adopting the Government's initial standpoint that much would have to depend upon case-by-case evaluation by the courts in the context of particular prosecutions.

Impact on price

30–21

The final limb of the definition is the requirement that the information should be likely to have "a significant effect" on the price of the securities, if it were made public.[70] The law has chosen not to pursue those who will reap only trivial advantages from trading on inside information. At first sight, the test would seem to present the court (or jury) with an impossibly hypothetical test to apply. In fact, in most cases, by the time any prosecution is brought, the information in question will have become public,[71] and so the question will probably be answered by looking at what impact the information did in fact have on the market when it was published. However, it would seem permissible for an insider to argue in an appropriate case that the likely effect of the information being made public at the time of the trading was not significant, even if its actual disclosure had a bigger effect, because the surrounding circumstances had changed in the meantime.

Insiders

30–22

We have already noted[72] the important restriction in the legislation that insiders must be individuals. Beyond that, it might be thought that nothing more needs to be said other than that an insider is a person in possession of inside information. In other words, the definitional burden should fall on deciding what is inside information and the definition of insider should follow

as a secondary consequence of this primary definition. The Government's consultative document on the proposed legislation[73] rejected this approach as likely to cause "damaging uncertainty in the markets, as individuals attempted to identify whether or not they were covered". This is not convincing. Either the definition of inside information is adequate or it ought to be reformed. If it is adequate, so that it can be applied effectively to those who are insiders under the Act, then it is not clear why it cannot be applied to all individuals, whether they meet the separate criteria for being insiders or not. If the definition of inside information is not adequate, it is not proper to apply it even to those who clearly are insiders under the legislation and it should be changed. In fact, the proposal that insiders should be defined as those in possession of inside information would to some extent reduce uncertainty, because the only question which would have to be asked is whether the individual was in possession of inside information and the additional question of whether the individual met the separate criteria for being classed as an insider would be irrelevant.

However, the Government stuck to its guns whilst simplifying the criteria which had been used in the earlier legislation and, following the Directive, expanding the category of insiders quite considerably.[74] By virtue of s.57(2)(a) two categories of insider are defined. The first are those who obtain inside information "through being" a director, employee or shareholder of an issuer of securities.[75] Although it is not entirely clear, it seems that the "through being" test is simply a "but for" test. If a junior employee happens to see inside information in the non-public part of the employer's premises, he or she would be within the category of insider, even if the duties of the employment do not involve acquisition of that information. On the other hand, coming across such information in a social context would not make the junior employee an insider, even though the information related to the worker's employer. In other words, there must be a causal link between the employment and the acquisition of the information, but not in the sense that the information must be acquired in the course of the employee's employment (though the latter remains a possible interpretation of the subsection). It may be thought that shareholders, who were excluded from the definition of insider in the previous

legislation, are unlikely to obtain access to inside information "though being" shareholders, but this is in fact a likely situation in relation to large institutional shareholders, which may, either as a general practice or in specific circumstances, keep in close touch with at least the largest companies in their portfolios.

The second category of insider identified by s.57(2)(a) is the individual with inside information "through having access to the information by virtue of his employment, office or profession", whether or not the employment, etc. relationship is with an issuer. Thus, an insider in this second category maybe, or be employed by, a professional adviser to the company[76]; an investment analyst, who has no business link with an issuer; a civil servant or an employee of a regulatory body; or a journalist or other employee of a newspaper or printing company.[77] Again, the question arises about the exact meaning of the phrase "by virtue of": is it again a simple "but for" test or does it mean "in the course of" (perhaps a slightly stronger suggestion in this second situation)? Even if the latter interpretation is ultimately adopted, this second category would be wide enough to embrace partners and employees of an investment bank or solicitors' firm retained to advise an issuer on a particular matter, employees of regulatory bodies who are concerned with the issuer's affairs, journalists researching an issuer for a story and even employees of a printing firm involved in the production of documents for a planned but unannounced takeover bid.[78] If the broader "but for" test is adopted, then employees of these organisations, not employed on the tasks mentioned, but who serendipitously come across the information in the workplace, would be covered too.[79]

Recipients from insiders

30–23

In practice, the need to define the exact scope of the second category of insider is reduced by the third category, created by s.57(2)(b). In the US persons in this third category are distinguished from primary insiders by the use of the graphic expression "tippee",[80] but the British legislation lumps them in with primary insiders. This third category consists of those who have inside information "the direct or indirect source of" which is a person falling within either of the first two categories. Thus,

subject to the point about mens rea made in the next paragraph, the employee of an investment bank who overhears a colleague talking about a takeover bid on which the latter is engaged would be in all probability an insider in the third category if he or she does not fall within the second category. This example also makes it clear that the more striking American terminology might be somewhat misleading. It does not matter whether the primary insider has consciously communicated the information to the secondary insider (i.e. "tipped the latter off"). Provided the latter has acquired the information from an inside source, even indirectly, he or she will fall within the scope of the Act; indeed, as in the example, the "tipper" may be entirely unaware that inside information has been communicated to anyone else.[81] Furthermore, a certain type of tipping will not in fact make the tippee liable for dealing. If the insider within the first two categories encourages another person to deal without communicating to that other person any inside information, the latter can deal without being exposed to liability under the Act—though the tipper would be liable for encouraging the dealing.[82]

Mental element

30–24

Finally, the requirement of having information "as an insider" in s.57 was used by the drafters to put a crucial limitation on the scope of the offence created by the Act. This is the required mental element, a not surprising precondition for criminal liability, but nevertheless one which has made enforcement of the legislation often difficult.[83] The requirement in this regard is a two-fold one: the accused must be proved to have known that the information in question was inside information and that the information came from "an inside source", i.e. accused knew the information was obtained in one of the three ways discussed above. The requirement of knowledge is likely to be difficult to meet, especially in the case of recipients of information from insiders via a chain of communications. Proving that a "sub-tippee" or even a "sub-sub-tippee" knew that the ultimate source of the information was a primary insider could be fraught with problems.

Prohibited acts

What is an individual with inside information and who is an insider and meets the required mental element prohibited from doing? There are four prohibitions and, before describing them, it should be pointed out that it is not necessary that the accused should be an insider at the time he or she does the prohibited act. Once inside information has been acquired by an insider, the prohibitions apply even though the accused resigns the directorship or employment through which he obtained the information.[84] On the other hand, if by the time of the dealing the information enters the public domain, the prohibitions of the Act will cease to apply. It should also be noted that the prohibitions apply not only to the company's securities but also to futures contracts[85] and contracts for differences,[86] where the reference security is a security issued by the company.[87]

First, and most obviously, there must be no *dealing* in the relevant securities.[88] The relevant securities are those which are "price-affected", i.e. those upon the price of which the inside information would be likely to have a significant effect, if made public.[89] Dealing is defined as acquiring or disposing of securities.[90] Thus, a person who refrains from dealing or cancels a deal on the basis of inside information is not covered by the legislation.[91] In principle, it is difficult to defend this exclusion since the loss of public confidence in the market will be as strong as in a case of dealing, if news of the non-dealing emerges. The exclusion was presumably a pragmatic decision based on the severe evidential problems which would face the prosecution in such a case. The dealing prohibition is broken quite simply by dealing; the Act does not require the prosecution to go further and prove that the dealing was motivated by the inside information, though the accused may be able to put forward the defence that he would have done what he did even if he had not had the information.[92] The Act covers dealing as an agent (not only as a principal) even if the profit from the dealing is thereby made by someone else, for one can never be sure that the profit made by the third party will not filter back to the trader in some form or other. And it covers agreeing to acquire or dispose of securities as well as their actual acquisition or disposal, and entering into or ending a contract which creates the

security[93] as well as contracting to acquire or dispose of a pre-existing security.

Secondly, the insider is prohibited from *procuring*, directly or indirectly, the acquisition or disposal of securities by any other person. Technically, this result is achieved by bringing procuring within the definition of dealing.[94] Procurement will have taken place if the acquisition is done by the insider’s agent or nominee or a person acting at his or her direction, but this does not exhaust the range of situations in which procurement can be found.[95] Since the person procured to deal may well not be in possession of any inside information and the procurer has not in fact dealt, without this extension of the statutory meaning of “dealing” there would be a gap in the law.

Thirdly, there is a prohibition on the individual *encouraging* another person to deal in price-affected securities, knowing or having reasonable cause to believe that dealing would take place on a regulated market or through a professional intermediary.[96] Again, it does not matter, for the purposes of the liability of the person who does the encouraging, that the person encouraged commits no offence, because, say, no inside information is imparted by the accused. Indeed, it does not matter for these purposes that no dealing at all in the end takes place, though the accused must at least have reasonable cause to believe that it would. The existence of this offence is likely to discourage over-enthusiastic presentations by company representatives to meetings of large shareholders or analysts.

Finally, the individual must not *disclose* the information “otherwise than in the proper performance of the functions of his employment, office or profession to another person”.[97] Unlike in the previous two cases, the communication of inside information is a necessary ingredient of this offence, but no response on the part of the person to whom the information is communicated need occur nor be expected by the accused. However, in effect, this element is built into the liability, for the accused has a defence that “he did not at the time expect any person, because of the disclosure, to deal in securities” on a regulated market or through a professional intermediary.[98] So, even if it occurs outside the proper performance of duties, disclosure which is not expected to lead to dealing will not result in liability, but the

burden of proving the absence of the expectation falls on the accused. This prohibition helps to put the issuer in the position of being the sole source of the disclosure of internally generated inside information to the market.[99]

Defences

30–26

The Act provides a wide range of defences,[100] which fall within two broad categories. First, there are two general defences which carry further the task of defining the mischief at which the Act is aimed.[101] Secondly, there are the special defences, set out mainly but not entirely, in Sch.1 to the Act, which frankly accept that in certain circumstances the policy of prohibiting insider trading should be overborne by the values underlying the exempted practices. These special defences, which were foreshadowed in the recitals to the 1989 Directive, will be dealt with only briefly here.[102]

General defences

30–27

The more important of the general defences is that the accused "would have done what he did even if he had not had the information".[103] This defence benefits liquidators, receivers, trustees, trustees in bankruptcy and personal representatives who may find themselves in the course of their offices advised to trade when in fact themselves in possession of inside information.[104] Thus, a trustee, who is advised by an investment adviser to deal for the trust in a security in relation to which the trustee has inside information, will be able to do so, relying on this defence. But the defence applies more generally than that and would embrace, for example, an insider who dealt when he did in order to meet a pressing financial need or legal obligation. However, the accused will carry the burden of showing that his or her decision to deal at that particular time in that particular security was not influenced by the possibility of exploiting the inside information which was held.

The other general defence is that the accused did not expect the dealing to result in a profit attributable to the inside

information.[105] Although the defence is general in the sense that it is not confined to particular business or financial transactions, the range of situations falling within it is probably quite narrow. The Government's attempts in the parliamentary debates to produce examples of situations for which this defence was needed and which were at all realistic were not entirely convincing.[106]

Special defences

30–28

The Act provides six special defences, two in the body of the Act and four in Sch.1. One of those provided in the body of the Act appears to be a general defence and is to the effect that dealing is not unlawful if the individual "believed on reasonable grounds that the information had been disclosed widely enough to ensure that none of those taking part in the dealing would be prejudiced by not having the information".[107] In fact, however, this defence is aimed particularly at underwriting arrangements,[108] where those involved in the underwriting may trade amongst themselves on the basis of shared knowledge about the underwriting proposal but that information is not known to the market generally. The other defence provided in the body of the Act[109] concerns things done "on behalf of a public sector body in pursuit of monetary policies or policies with respect to exchange rates or the management of public debt or foreign exchange reserves". So reasons of state, relating to financial policy, trump market integrity.[110]

The four special defences provided in the Schedule do not extend to the disclosure of inside information. Where these defences apply, those concerned may trade or encourage others to do so but may not enlarge the pool of persons privy to the inside information. In all four cases, what are judged to be valuable market activities would be impossible without the relaxation of the insider dealing prohibition. Thus, market makers[111] may often be in possession of inside information but would not be able to discharge their undertaking to maintain a continuous two-way market in particular securities if they were always subject to the Act. So para.1 of Sch.1 exempts acts done by a market maker in good faith in the course of the market-

making business. More controversially, para.5 does the same thing in relation to price stabilisation of new issues.[112]

The final two special defences relate to trading whilst in possession of "market information", which is, in essence, information about transactions in securities being contemplated or no longer contemplated or having or not having taken place. First, an individual may act in connection with the acquisition or disposal of securities and with a view to facilitating their acquisition or disposal where the information held is market information arising directly out of the individual's involvement in the acquisition or disposal.[113] An example is where the employees of an investment bank advising a bidder on a proposed takeover procure the acquisition of the target's shares on behalf of the bidder but before the bid is publicly announced, in order to give the bidder a good platform from which to launch the bid. This defence would not permit the employees to purchase shares for their own account, because they would not then be acting to facilitate the proposed transaction out of which the inside information arose. Even so, permitting a bidder to act in this way is somewhat controversial for those who procure the purchase of the shares know that a bid at a price in excess of the current market price is about to be launched and those who sell out to the bidder just before the public announcement may feel that they have been badly treated.[114] Another situation covered by the provision is that of a fund manager who decides to take a large stake in a particular company. The manager can go into the market on behalf of the funds under management and acquire the stake at the best prices possible, without announcing in advance the intention to build up a large stake, which would immediately drive up the price of the chosen company's shares.

Under the second and more general "market information" defence the individual may act if "it was reasonable for an individual in his position to have acted as he did" despite having the market information.[115] This is so broadly phrased that it would seem wide enough to cover the situations discussed in the previous paragraph. The more specific provisions were included as well presumably in order to give comfort to those who would otherwise have had to rely on the general reasonableness provision and who might have wondered whether the courts

would interpret it in their favour.

Criminal Prohibitions on Market Manipulation

30–29

The criminal prohibitions on market manipulation are now to be found in Pt 7 of the Financial Services Act 2012. Section 89 creates an offence in relation to misleading statements made in order to induce trading in securities. It can clearly be used to catch egregious cases of market manipulation[116] and has been discussed in Ch.26.[117] The second offence is more interesting and was introduced by s.47(2) of the Financial Services Act 1986 (now repealed). As reformulated by s.90 of the 2012 Act, this criminalises an act or course of conduct[118] which creates a false or misleading impression as to the market in or price or value of any investment (as widely defined), if done for one or other (or both) of two purposes. The first is where the defendant intends by creating the impression to induce a person to acquire or dispose of investments or to refrain from doing so or to exercise or not to exercise rights attached to investments.[119] It is to be noted that the offence is complete whether or not the accused knew that, or was reckless whether, the impression created was misleading: all that has to be shown is that he acted for the purpose of creating an impression which was in fact misleading. However, a defence is provided where the accused can show that he reasonably believed that the impression was not misleading.[120] In effect, negligence as to the misleading nature of the impression is made a crime and the burden of disproving negligence is placed upon the maker of the impression.

The second purpose does depend upon the creator of the impression knowing that it is false or misleading or being reckless as to whether this is the case. If the defendant intends through the impression to make a gain for himself or another or cause loss (or the risk of loss) to another, that person commits an offence, as will also be the case where the defendant is aware that these consequences are likely to result.[121] Thus, if in the *De Berenger* case,[122] the fraudsters had acted somewhat more subtly and refrained from openly stating that Napoleon had been killed but had allowed that impression to arise (for example, through their joyous behaviour as if by soldiers released from a

successful army), they would be caught by this version of the second offence.

Some basic forms of manipulative behaviour are offences at common law,[123] but the statute extends and makes clearer the reach of the criminal law in this area. This offence is rarely prosecuted,[124] but the following examples of contraventions can be given. The promoters of a company fund the underwriters of a share issue to buy shares in the market when dealings begin in order to give the impression that there is a greater market interest in the shares than is in fact the case[125]; or the directors of a company, believing the market price of its shares not to reflect the net tangible asset value of the company, persuade its brokers to buy shares in the market at some four times the previous market price, in order to move the market price closer to what the directors believe to be the "true" value of the shares.[126]

Regulatory Control of Market Abuse

Background

30–30

So far, we have looked at the criminal prohibitions on insider dealing and market manipulation. We now turn to the practically more important form of control of market abuse, namely, that administered by regulators, which do not require resort to the criminal law and the criminal courts. In fact, with the enactment of the FSMA 2000, the main thrust of the legal rules controlling market abuse, in which term is to be included both insider dealing and market manipulation, shifted from the criminal law to administrative sanctions which have been placed in the hands of the FCA. At this point, the main source of the rules was Pt VIII of FSMA which was used later to transpose the first EU Directive on market abuse,[127] but in significant ways went beyond that Directive. From the beginning the regulatory sanctions were applied to companies as well as to individuals. Moreover, they applied to all those whose actions had an effect on the market, whether they were persons authorised to carry on financial activities or not. They thus applied as much to industrial companies and their directors, for example, as to investment banks and their directors and employees. These

statements are true also of the MAR, now the central legal instrument on administrative control.

Part of the reason for the emphasis on administrative penalties from 2000 onwards was that successful deployment of the criminal law on a wide scale against insider dealing and market manipulation proved difficult. Only after the financial crisis of 2007/8 did the FSA/FCA put substantial resources into the enforcement of the relevant criminal laws. Even so, between 2009 and mid-2015 there were only 27 successful prosecutions for insider dealing (about four a year), of which 23 resulted in custodial sentences (in no case for more than four years).[128] The move towards a regime based on administrative penalties was driven by the desire to address two of the obstacles raised by the criminal offences, namely the need to show intention, at least in relation to insider dealing,[129] and the high evidential requirements of the criminal law. Even so, in the 12 years to March 2015 the FSA/FCA issued only 85 "Final Notices" in relation to market abuse, i.e. about seven a year.[130]

However, the proposals which were eventually embodied in the FSMA 2000 proved highly controversial during the parliamentary debates on the Bill, those opposing it claiming that it would infringe rights conferred by art.6 of the European Convention on Human Rights (right to a fair trial).[131] The central claim of the opponents was that the penalty regime proposed by the Government, although clearly not part of the domestic criminal law, would be classified as criminal by the European Court of Human Rights, whose classification criteria are independent of those used domestically. Without ever conceding the correctness of this claim, the Government nevertheless did make substantial amendments to its proposals in order to promote the fairness of the new regime, the regime being subject in any event to a general fairness test under the European Convention, even if regarded as civil rather than criminal in nature. These amendments involved in particular the elaboration by the then FSA of a Code on Market Abuse in order to give guidance on the scope of the prohibitions, and the creation of rights of appeal to an independent tribunal (now the Upper Tribunal) to be granted to persons penalised by the FCA.[132]

In the aftermath of the financial crisis, the debate turned on its

head. Now, it was argued that the market abuse provisions were inadequate. This was an argument advanced at EU level as well as at domestic level. It led to the replacement of the EU Directive by a Regulation on market abuse (MAR). MAR both expanded the scope of the substantive EU laws on market abuse, but also removed the need for domestic transposition of those laws, thus bringing about a major change in the structure of the domestic law. In fact, with regard to the securities markets aspects of market abuse, which are the focus of this chapter, the structural changes were probably more important than the substantive ones. In particular, MAR led to the removal of the FCA's power to make a Code in this area.[133]

Insider dealing

30–31

The definition of insider dealing in MAR is somewhat more simply phrased than under the CJA.

> "For the purposes of this Regulation, insider dealing arises where a person possesses inside information and uses that information by acquiring or disposing of, for its own account or for the account of a third party, directly or indirectly, financial instruments to which that information relates."[134]

As to inside information, as far as trading in corporate securities is concerned, this is:

> "information of a precise nature, which has not been made public, relating, directly or indirectly, to one or more issuers or to one or more financial instruments, and which, if it were made public, would be likely to have a significant effect on the prices of those financial instruments or on the price of related derivative financial instruments"[135]

Since these definitions, not surprisingly, are substantially similar to those to be found in the CJA, it is proposed only to highlight the main features of the regulatory prohibition.

Dealing

30–32

First, the crucial difference between the MAR approach to insider dealing and that of the CJA is that there is no requirement for a mental element, i.e. no equivalent to the requirement in s.57(1) of the CJA that the person know the information is inside information and know that he or she has it through being an

insider.[136] This was the case also under FSMA. Article 14 of MAR simply says that "a person shall not engage in insider dealing" and the definition of insider dealing (above) contains no requirement as to a mental element. The lack of mental element was further emphasised by the CJEU when it held that a person who "possesses" inside information and trades is presumed to "use" it, i.e. to trade on the basis of the information—though that presumption is rebuttable.[137]

30–33

Secondly and new in the UK, art.14 prohibits attempts to engage in insider dealing, so that even if no dealing occurs, there is exposure to penalties if the person attempted to deal (for example, placed an order with a broker which, for some reason, the broker failed to implement).

30–34

Thirdly, again new in the UK, MAR catches a limited number of decisions not to trade or to trade differently, i.e. where the person cancels or amends an order for trading already given after receiving the inside information. A simple addition to a trading order would seem to be caught in any event by the prohibition on trading but an alteration of the price at which a person is prepared to trade might not be and is picked up by the provision on amending an existing order. However, a person who is contemplating an order but has not placed one before receiving the inside information is still outside the prohibition.

30–35

Fourthly, the definition of insider dealing in art.8(1), unlike the CJA,[138] appears not to contain a requirements that the possessor of the inside information be, in addition, an insider. However, art.8(4) says that the prohibition applies only to those who acquire the information "as a result of" being a director or shareholder of the company, having access to the information "through the exercise of an employment, profession or duties" or through criminal activities. So, art.8(4), like the CJA, in fact builds in a requirement of being an insider into its prohibition—though the extension of the insider concept to criminals is novel. In addition to the above categories, art.8(4) imposes liability on

any person "who possesses inside information under circumstances…where that person knows or ought to know that it is inside information". In this final case, a mental element is required to bring the person within the category of insider: either knowledge or negligence as to the inside quality of the information. Subject to that mental element, however, a person with inside information is an insider, and how that person acquired the information is relevant only to the assessment of the holder's mental state.

30–36

Fifthly, like the CJA, the prohibition extends beyond dealing. It extends to the situation where the person with inside information "recommends" or "induces" another person to trade (or cancel or amend an order), irrespective of whether the inside information was communicated to the person who trades or, in the case of a recommendation, irrespective of whether trading occurs.[139] If the third party actually responds by trading, etc. that person will also be liable provided that he knows or ought to know that the recommendation or inducement is based on inside information.[140] Mere disclosure of inside information, unaccompanied by any recommendation or inducement, is also prohibited, unless this occurs "in the normal exercise of an employment, a profession or duties".[141] The onward transmission by its recipient of a recommendation or inducement also falls within this prohibition where the recipient knows or ought to know that the recommendation or inducement was based on inside information.[142] This prohibition does not seem confined to the first recipient of the recommendation or inducement.

Inside information

30–37

Sixthly, the definition of inside information is slightly broader than its CJA equivalent in that the information does not have to relate to particular securities or particular issuers of securities, so that information which has an impact on the securities markets generally could be inside information for the purposes of MAR. As with the prior domestic law (under FSMA), the likely impact of the information on the market is tested by reference to what "a reasonable investor" would regard as relevant information.[143]

The CJEU has held that the "market impact" test can be satisfied even if the direction of the impact (upwards or downwards) cannot be predicted at the time of trading.[144] Whilst this seems odd at first sight, in situations of market volatility a particular piece of information might predictably move the market without the direction of the movement being clear in advance. A person holding the information could then profit from it by acquiring appropriate financial instruments one of which will pay off in either event, for example, both call and put options over the issuer's securities, only one of which would be exercised depending on the direction of the market impact.[145]

The headline definition of inside information requires that it be "precise" but, unlike the CJA,[146] does not say that it is enough that it is specific, even if not precise. However, art.7(2) says that information about events or circumstances "shall be deemed to be of a precise nature…where it is specific enough to enable a conclusion to be drawn as to the possible effect of that set of circumstances or event on the prices of the financial instruments". This does not in terms say that specific but not precise information may always be inside information, but comes close to it.

As with disclosure of information,[147] knowing when information about a developing situation becomes inside information raises difficult issues. The CJEU held under the prior EU law that the information might cross that threshold before the situation was fully developed and MAR reflects that view.[148] Article 7(2) states that "an intermediate step in a protracted process shall be deemed to be inside information if, by itself, it satisfies the criteria of inside information as referred to in this Article". More generally, art.7(2) treats information as inside information where it relates to circumstances or events which "which may reasonably be expected" to occur as well as circumstances which already exist or have occurred. That same CJEU decision equated a reasonable expectation with a realistic prospect, not a high probability, of occurrence.

MAR does not contain one extension beyond inside information which was part of the prior domestic regime. This covered "information which is not generally available" (RINGA) and not just to "inside information",[149] provided a "regular user

of the market" would regard the information as relevant to the transaction in question. The effect was to extend the prohibition to information which would not meet the definition of inside information, because it was not specific or precise, but which market users would regard as an illegitimate basis for trading. Domestically, this was a controversial extension, which was kept going from year-to-year until the end of 2014, when it was allowed to expire under the latest version of its "sunset" provision.[150] The Commission proposed a more rigid version of RINGA in its initial proposals for MAR, but in the end the uncertainties thought to be generated by the concept led to its exclusion from MAR.[151]

Persons covered and exemptions

30–38

Seventhly, like the prior FCA rules but unlike the CJA, MAR imposes liability on the company as well as on natural persons, but makes it clear that corporate liability does not remove the liability of the persons who traded on behalf of the company.[152] The problem of over-extensive attribution is addressed by removing liability from the company if it has effectively instituted a "Chinese wall" between those within the company who traded and those who held the inside information.[153]

Eighthly, inevitably a range of exemptions from the prohibition is provided in order to deal with situations where the otherwise prohibited activity is thought to have a higher value than reducing the incidence of insider trading. Besides the usual exemptions from liability for market makers and brokers acting in the normal course of their business, MAR pay a lot of attention to insider trading in the course of takeovers and mergers. Article 9(5) provides that a person's knowledge that it has decided to acquire or dispose of securities, where that fact is not known to the market, does not "of itself" constitute the use of inside information when that person implements its decision. This provision applies generally (for example, to fund managers who have decided to take a major position in a company) but would appear to permit a bidder to build up a stake in the potential target before announcing a bid, at least to the point where the rules on disclosure of major shareholding are

triggered.[154] Article 9(4) applies specifically to inside information obtained "in the conduct of" a merger or public takeover. A person holding such information is not "deemed" from the mere fact of its possession to have used it when proceeding with the merger or takeover, provided the inside information has ceased to be such by the time the shareholders accept the takeover offer or approve the merger. The purpose of this provision, which is expressly said not to apply to "stake-building", might be to deal with the situation where a bidder or potential merger partner obtains information in private discussions with the target company before making an offer or putting forward a merger proposal. The offer or proposal, when made, might constitute a recommendation or inducement to acquire shares (in the bidder) or dispose of shares (in the target), even though that offer or proposal, when initially announced as required by MAR itself, might not be accompanied by all relevant information.

An exemption from the obligation not to disclose inside information is provided, subject to extensive safeguards, in relation to "market soundings", i.e. discussion with selected market participants about a possible course of action in order to establish the market's likely reaction to it. The most common situation is where those acting on behalf of an issuer wish to establish whether the market would absorb a public offering of shares within a price range the issuer would find acceptable. However, market soundings also embrace talks by a potential bidder with large shareholders in the target in order to establish the likelihood of their accepting an offer, if one were made.[155] The information in question here is clearly likely to constitute inside information of the utmost salience. Indeed, unusual trading in advance of a bid announcement is a common feature of securities markets. MAR seeks to address this risk by requiring the discloser to assess whether it will be disclosing inside information during the market soundings (and to keep a written record of its assessment and of the inside information disclosed, if any). If so, the consent of potential recipients of the information to receive it must be obtained (a process sometimes called "[Chinese] wall crossing") and the implications for the recipients of being put in possession of inside information must be explained. The recipients must themselves assess whether

they are in possession of inside information.[156] Finally, the Commission is to adopt regulatory technical standards and ESMA guidelines for market soundings.[157]

Market manipulation

Transactions and orders to trade

30–39

Market manipulation is defined very broadly in art.12 of MAR, as it was under the previous regime. Many of its manifestations have little relevance to the public markets in securities, with which we are primarily concerned. We concentrate on the forms of manipulation which are relevant to such markets. The first two aspects of the definition both arise out of effecting transactions or orders to trade (for example, in securities). The first covers trades which give or are likely to give a false impression as to the market supply or demand or price of a financial instrument or secure the price of the financial instrument at an abnormal or artificial level.[158] As we have seen above, such behaviour constitutes a criminal offence if done for the purpose of inducing investment decisions,[159] but MAR applies on the basis simply of engaging in the proscribed behaviour (subject to the defences discussed below).[160] Indeed, as with insider dealing, attempting to engage in the behaviour is also prohibited. The second covers transactions or orders which employ some form of deception.[161] Annex 1 to MAR gives a non-exhaustive list of the matters national regulators should take into account when applying these two aspects of the prohibition.

The market itself has developed graphic terms to refer to some of the forms of behaviour falling within these prohibitions. Examples are "wash trades" (where a person trades with himself or two persons acting together trade between themselves, but so that there is no real transfer of beneficial ownership or market risk) and "painting the tape" (entering into a series of transactions that are publicly reported for the purpose of suggesting a level of activity or price movement which do not genuinely exist) fall within the first type of behaviour.[162]

Dissemination of information

30–40

Given the reliance of markets on information, it is not surprising that a common form of market manipulation consists of supplying misleadingly good or bad information to the market. Colourful examples are "pump and dump" (taking a long position in an investment, disseminating misleading positive information about it, and then selling out) and its opposite, "trash and cash" (taking a short position in a security and disseminating misleading negative information before closing out the short position) fall within this type of market manipulation.[163] The third aspect of prohibited manipulation thus consists of disseminating information which gives or is likely to give a false or misleading impression as to the demand for, supply of or the price of a financial instrument where the disseminator knew or ought to have known that the information was false or misleading.[164] In this case, a negligence standard is built into the definition of the prohibited conduct.[165] In effect, a person who makes a negligent misstatement to the market about a financial instrument is exposed to the FCA's penalties, but without it being a requirement for liability that the maker of the statement should have intended or expected that any particular person or class of person should rely on it, still less that any such reliance should have occurred.[166] As we have seen,[167] there is liability under s.91 of FSMA to the FCA's penalties on the part of an issuer (and its directors) which negligently make a misleading disclosure required by the Transparency Rules. However, liability under the market abuse provisions (which was invoked in the *Shell* case)[168] is a useful supplement because MAR, unlike the TD, is not confined to regulated markets.[169]

Misleading behaviour and market distortion

30–41

The final forms of market manipulation identified in MAR target various forms of behaviour which may mislead the market but which are not central to the manipulation of securities markets. An example is securing a dominant position in the market for a financial instrument ("cornering" it) so as to establish unfair trading conditions.[170] This can happen in securities markets but is difficult and expensive in a deep and liquid market. More

common perhaps is trying to influence the opening or closing prices of certain financial instruments, in order to influence the settlement terms of derivatives linked to those prices[171] or placing artificial orders which make it difficult for market participants to identify genuine orders or for the market to establish the price of the financial instrument.[172]

Accepted market practices

30–42

The principal difficulty with prohibitions on market manipulation is that any effective definition is likely also to catch some behaviour which market participants regard as legitimate. MAR recognises this by exempting from the prohibition on manipulation acts which are done "for legitimate reasons, and conform with [sic] an accepted market practice".[173] A further issue here is that accepted market practices ("AMP") are specific to particular markets and so need to be defined at that level. This created a particular problem for the drafters of MAR, whose objective is uniformity of regulation across the EU. One can see their reluctance to delegate an important regulatory power, not just to Member States, but to the regulators of particular markets. Having accepted therefore the principle that AMP are to be established by the relevant market regulators,[174] MAR constrains the decisions of those regulators to a considerable extent. Seven criteria are laid out which competent authorities have to take into account when establishing an AMP and those criteria are supplemented by regulatory technical standards adopted by the Commission.[175]

None of the criteria is surprising but setting them creates a framework of EU law within which competent authorities must operate. That framework is enforced through the requirement that a competent authority, before establishing an AMP, must notify ESMA, giving its analysis justifying the establishment of an AMP under the criteria.[176] ESMA then carries out its own analysis at the EU level to determine whether the AMP would "threaten the market confidence in the Union's financial market," publishing that opinion on its website.[177] The competent national authority is not bound to accept ESMA's view but must publish on its website within 24 hours of

establishing the AMP what is in effect a rebuttal of ESMA's analysis.[178] This very public "comply or explain" procedure is clearly designed to give ESMA a major oversight role in the establishment of an AMP: a national competent authority which wants a quiet life will clearly consult informally with ESMA before it provides its initial analysis in order to maximise the chances of that analysis being acceptable to ESMA.

However, this is not an end to ESMA's role. Other competent authorities (from other Member States) are co-opted into the scrutiny process. Another competent authority may complain that the AMP has been established in breach of the criteria laid out in MAR. In that case ESMA is to assist the competent authorities to reach an agreement, but, if this does not occur, ESMA may give a decision which is binding on the competent authorities involved in the dispute.[179] Enforcement of the decision may lead ESMA to give instructions directly to market participants. Although this procedure is dependent on complaint by the competent authority of another Member State, no doubt there are ways and means of informally encouraging such complaints.

Safe harbours

30–43

MAR provides safe harbours, for two types of activity, in relation to both the insider trading and market manipulation manifestations of the prohibition on market abuse. These activities are share buy-backs and stabilisation occurring in the period after a public offer of securities. In both cases, the exemptions are tightly drawn and must comply with regulatory technical standards drawn up by ESMA and adopted by the Commission.[180] Both exemptions were contained in the prior law and were there subject to Commission second-level rules. The UK has chosen to extend the protection to the criminal provisions[181] on misleading statements.

Share buy-backs

30–44

The creditor and shareholder protection aspects of share buy-

backs have been considered in Ch.13.[182] It is by no means impossible for a company to effect a buy-back programme for its shares without falling foul of the market abuse prohibition, especially as issuers in any event must disclose inside information to the market "as soon as possible"[183] and so should not be holding it when effecting the buy-back. However, it seems to have been thought that buy-backs were an important corporate tool, so that companies should be given a "safe harbour" for their implementation.

The conditions laid down for access to the safe are not particularly novel in the UK, where the Listing Rules have contained similar provisions for permissible buy-backs some time.[184] Putting together the provisions of MAR and the likely content of the technical standards, the following main points emerge:

(a) The purpose of the buy-back programme must be to reduce the company's capital or to meet its obligations under a debt instrument convertible into equity or an employee share scheme. This appears to mean that the shares bought back will be required to be either cancelled or re-issued for the permitted purposes (rather than held in treasury subject to the board's discretion). And the safe harbour applies only to behaviour directly related to the purpose of the buy-back programme.

(b) Apart from meeting the requirements for shareholder approval and so on,[185] details of the buy-back programme must be disclosed to the market in advance of any purchases and the issuer must report purchases actually made to the competent authority within seven working days, giving amounts acquired and prices. Thus, the acquisitions cannot occur clandestinely and the market will know what may happen and what has happened.

(c) The acquisitions must not be at a price higher than the prevailing market price (even if the authorisation from the shareholders permits a higher price) and, normally, not more than one quarter of the average daily volume of the shares may be bought in any one day. This rule reduces the impact of the acquisitions on the trading price of the share.

(d) The issuer may not sell its own shares (presumably those held in treasury) during the programme, thus removing an incentive to pay an above-market price. Nor may it effect acquisitions under its programme at a time when it is making use of the permission not to disclose otherwise disclosable inside information. Finally, it may not make purchases under the programme during a "closed period".[186] However, the issuer can avoid all three restrictions by either adopting a programme under which the amounts and times of the acquisitions are set out in the public disclosure required above (a "time-scheduled" programme) or by outsourcing the programme to an investment bank which makes the trading decisions independently of the issuer.

Price stabilisation

30–45

Share or price stabilisation is, as its name suggests, a somewhat more questionable procedure from the point of view of market abuse than share repurchases, since the very purpose of the behaviour is to set the market price of the security at a different level from that which would otherwise prevail. However, it is permitted in connection with new shares issues, for reasons which have been put as follows:

> "Because new securities are usually issued at irregular intervals, they may result in a temporary oversupply of those securities leading to an artificially low market price during and immediately after issue. Such short-term price fluctuations may be to the detriment of both issuers and investors. Price stabilising activity involves the lead managers of a new issue of securities supporting the price of those securities for a limited period, thereby reducing the risk of price falls."[187]

30–46

Putting together the provisions of MAR and the technical regulatory standards of the Commission developed under the prior EU law, the main conditions to be met for the price stabilisation safe harbour are likely to be, briefly, as follows:

(a) The stabilisation may be carried out only within a limited period of time, for example, in the case of shares, within 30 calendar days of the date on which shares offered in an initial offer commence trading.[188]

(b) The market must be informed before the shares are offered to

the public that stabilisation may be undertaken (but that there is no guarantee that it will or that it will be at any particular level) and of the period during which it may be undertaken and who will be undertaking it.[189] Stabilisation activity must be reported to the FCA within seven working days of its taking place, and within one week of the end of the stabilisation period the market must be informed of what stabilisation activity occurred, including the dates and prices.[190]

(c) The price at which the stabilisation activity took place must not be above the offer price.[191]

Enforcement and Sanctions

30–47

Although the substantive rules on market abuse are set at EU level, enforcement and sanctions are in the hands of national competent authorities. However, this does not mean that MAR ignores these topics. Rather, it proceeds by requiring Member States to confer on their national authorities at least the investigatory and sanctioning powers specified in Chs 4 and 5 of MAR and by imposing obligations to cooperate on those authorities. Although the range of powers and sanctions contained in these chapters is wide, by and large they are not new powers for the FCA. The current investigation and penalty powers of the FCA in relation to market abuse are set out in Pts VIII and XI of FSMA but will need some amendment to deal with the provisions of MAR.

Investigation into market abuse

30–48

MAR requires competent authorities to have 13 powers so that they may police and enforce the prohibition on market abuse effectively.[192] Among the more notable ones, are access to data in any form, the right to summon persons and demand answers to questions, to carry out on-site inspections (other than residences), to enter premises and seize documents (subject to judicial control if the Member State requires it), to require recordings of telephone conversations and copies of emails from

financial institutions, to require traffic data from telecom operators (if national law permits this) and, crossing the border into remedies, to impose various interlocutory remedies and to require the correction of misstatements to the market. Information obtained must be subject to confidentiality requirements and be governed by national data protection laws.[193]

In order to maximise the chances of national regulators learning of potential infringements of MAR, Member States are required to ensure that "whistle-blowing" procedures exist, both for the provision of information to the competent authority and for the provision of information to the employer concerned, where the employer is engaged in providing regulated financial services.[194] However, there is no obligation on the whistle-blower to report first to the employer before approaching the competent authority. In relation to reporting to the competent authority the Commission Implementing Directive[195] provides that there should be a dedicated function within the authority to receive the reports, that its operation should be explained on the authority's website and that, in all normal circumstances, the identity of the reporting person should not be revealed and that that person should be protected against discriminatory acts of the employer, if the identity does become known. MAR permits the provision of financial inducements to make reports, provided the informer is not under an existing legal or contractual duty to report and that the report leads to the imposition of a penalty or sanction.[196]

30–49

Since market manipulation is often a cross-border activity, MAR requires national competent authorities to cooperate both with ESMA (mainly in the communication of information)[197] and with other national authorities and ESMA for the purposes of investigation, supervision and enforcement.[198] The latter form of cooperation is likely to involve the provision of information but may go much further. For example, cooperation requests from other national competent authorities, which may be refused on only limited grounds,[199] may extend to initiating on-site investigations in the country receiving the request.[200] Investigation requests assume that the requesting state is itself

already knows or suspects some potential wrongdoing in its own jurisdiction and is seeking to investigate it, but knowledge of that wrongdoing might first emerge as a result of the activities of a competent authority in another Member State. The Member State with the knowledge must report the facts to the Member State where the activities appear to be located and to ESMA and both Member States are under an obligation to coordinate their subsequent actions.[201] What gives bite to these requirements is the role afforded to ESMA where a Member State's request for information or assistance is rejected by another Member State's competent authority or not accepted within a reasonable time. ESMA may either deal with the matter as an example of a disagreement between national authorities, as discussed above,[202] or, if it believes one of the competent authorities is acting in breach of EU law, take action against it on that basis. In either case ESMA may end up requiring the recalcitrant national authority to take specific action or to refrain from action or, if that fails, itself requiring market participants to take specific action or to refrain from action.[203]

30–50

Since financial activity is often a global matter, cooperation among EU regulators, although highly desirable, is unlikely to be enough. MAR therefore envisages cooperation agreements with the supervisory authorities of third countries. Reflecting prior practice, but somewhat out of tune with MAR's objectives, the conclusion of such agreements is a matter for national competent authorities. However, ESMA is inserted into the process. It is "where possible" to facilitate and coordinate the third-party agreements and is to draft regulatory technical standards, to be adopted by the Commission, aimed at producing a "template" for such agreements, which national competent authorities are to use, again "where possible".[204]

Under the pre-MAR rules the UK signed Memoranda of Understanding relating to co-operation with regulators from other leading countries in the financial services field, such as the US, Japan, Hong Kong, Switzerland and Australia. These international agreements and the pre-MAR EU obligations are underpinned by s.169 of FSMA, which authorises or, in the case of the EU obligation, requires the FCA to appoint investigators

at the behest of a non-British regulator to investigate “any matter”. The FCA may permit a representative of the overseas regulator to be present and ask questions, provided the information obtained is subject to the same confidentiality requirements in the hands of the overseas regulator as it would be under the FSMA.[205] Where assistance is not obligatory, the overseas regulator may be required to contribute to the costs of the investigation and the FCA considers, before granting the request, whether similar assistance would be forthcoming from the overseas regulator if it were requested by a British regulator, whether the breach of the law to be investigated has no close parallel in the UK, whether the matter is of importance to people in the UK and whether the public interest requires that the assistance be given.[206] In the case of insider dealing, it seems likely that these criteria could easily be satisfied, so that assistance should normally be given, even where there is no EU obligation to provide it, subject to the matter of cost. The Court of Appeal has interpreted the section liberally, notably by not requiring the FCA investigate the genuineness or validity of the foreign regulator’s request and by permitting the investigators to require the production of any documents which are relevant to their investigation.[207]

Sanctions for market abuse

30–51

MAR requires a wide range of administrative sanctions to be available for breach of the prohibitions on market abuse.[208] These are expressly stated to be minimum requirements to which Member States may add, both by making sanctions available other than those listed in MAR and by making the listed sanctions more powerful.[209]

In relation to companies and individuals other than investment firms and their managers and employees, the sanctions required to be made available are:

- injunctions requiring the conduct constituting the market abuse to cease;
- disgorgement of profits made or losses avoided through the market abuse “insofar as they can be determined”[210];

- a maximum administrative penalty of 'at least' three times the profit made or loss avoided under the previous item[211];
- public warnings;
- financial penalties up to a maximum of €5,000,000 in the case of individuals and €15,000,000 or 15 per cent of annual turnover in the case of companies.[212]

In the case of investment firms and those employed within them there are additional sanctions consisting of temporary or permanent (i) withdrawal of the authorisation of the firm to carry on financial business; and (ii) bans on the individual from discharging managerial responsibilities within such a firm or dealing on their own account.

These sanctions are already available in principle to the FCA.

Penalties

30–52

The penalty provisions were another of the human rights battle grounds in the parliamentary debates preceding the passing of FSMA 2000 and a number of restrictions on the FCA's powers are the result. First, although there is no statutory restriction on the size of penalty the FCA may impose, the FCA is required to produce a statement of policy on the factors which will determine its approach to penalties.[213] That policy now appears in the Decision Procedure and Penalties Manual ("DEPP") which contains a list of the factors the FCA considers relevant to the decisions whether to seek a financial penalty, whether to substitute public censure for a monetary penalty and to determining the level of penalty. The FCA's views on the appropriate level of penalties were significantly strengthened as from March 2010, under the impact of the financial crisis.

Secondly, the FCA may not impose a penalty upon a person without sending him first a "warning notice" stating the level of penalty proposed or the terms of the proposed public statement.[214] Thirdly, if the FSA does impose a penalty or make a public statement, it must issue the person concerned with a decision notice to that effect,[215] which triggers the person's right to appeal to the Upper Tribunal.[216] That right must normally be

exercised within 28 days.[217] The Tribunal, consisting of a legally qualified chair and one or more experienced lay persons, operates by way of a re-hearing of the case, and so can consider evidence not brought before the FCA, whether it was available at that time or not,[218] and must arrive at its own determination of the appropriate action to be taken in the case,[219] which, presumably, could be a tougher penalty than the one the FCA had proposed. There is a legal assistance scheme in operation for proceedings before the Tribunal, funded by the FCA, which recoups the cost from a levy on authorised persons.[220] Appeals lie on a point of law from the Tribunal to the Court of Appeal or Court of Session.[221]

Fourthly, a prohibition on the use of compelled testimony applies not only to subsequent criminal charges but also to proceedings for the imposition of a penalty, whether before the FCA or the Tribunal.[222]

Injunctions

30–53

The FCA may apply to the court under s.381 for an injunction to restrain future market abuse, whether such abuse has taken place already or not, and the court may grant an injunction where there is a "reasonable likelihood" that the abuse will occur or be repeated.[223] The court has two further and independent powers under s.381. If, on the application of the Authority, the court is satisfied that a person may be, or may have been, engaged in market abuse, it may order a freeze on all or any of that person's assets. This helps to ensure that any later restitution order has something to bite on. Secondly, if the court is satisfied that the person is or has been engaged in market abuse, it may, on the application of the Authority, order the person to take such steps to remedy the situation as the court may direct. Finally, in an injunction (or restitution) application the court may impose a penalty of such amount as it considers appropriate.[224]

Sanctions for breach of the criminal law

30–54

The Criminal Justice Act 1993 places exclusive reliance upon

criminal sanctions for its enforcement. Section 63(2) states that no contract shall be "void or unenforceable" by reason only of an offence committed under the Act, a provision which was redrafted in 1993, it would seem, in order to close the loophole, as the Government saw it, identified in *Chase Manhattan Equities v Goodman*.[225] Although the Act does not deal expressly with the question of whether a civil action for breach of statutory duty could be built on its provisions, it seems unlikely that the Act would be held to fall within either of the categories identified for this purpose in the case law.[226]

The criminal sanctions imposed by the Act are, on summary conviction, a fine not exceeding the statutory maximum and/or a term of imprisonment not exceeding six months, and on conviction on indictment an unlimited fine and/or imprisonment for not more than seven years.[227] The power of the judge on conviction on indictment to impose an unlimited fine means that, in theory at least, the court could ensure that the insider made no profit out of the dealing.[228] Prosecutions in England and Wales may be brought only by or with the consent of the Secretary of State or the Director of Public Prosecutions. In England and Wales prosecutions may be brought by the FCA as well as by the usual prosecution bodies, the Crown Prosecution Service, the Serious Fraud Office and the relevant government department.[229] Indeed, the FCA has the prime responsibility for bringing criminal prosecutions for breach of the criminal laws in the area of market abuse. As we have noted above, the number of criminal prosecutions brought by the FCA is small, but increasing.[230]

The FCA is also the lead prosecutor under Pt 7 of FSA 2012. This section is less used than the CJA provisions, but will be invoked in what the FCA regards as serious cases.[231]

Restitution orders and injunctions

30–55

On the application of the FCA or the Secretary of State, the court may impose a restitution order or an injunction where a breach has occurred or is threatened of Pt 7 of FSA 2012.[232] In practice, it is unlikely this adds anything significant to the court's and FCA's powers to seek restitution or an injunction on grounds of

market abuse, since the criminal law is narrower than the civil penalty regime.

Disqualification

30–56

In addition to the traditional criminal penalties which may be visited upon those engaging in market abuse, the disqualification sanction is available against them in some cases, the effect of which is to disable the person disqualified from being involved in the running of companies in the future.[233] In *R. v Goodman*[234] the Court of Appeal upheld the Crown Court's decision to disqualify, for a period of 10 years, a managing director convicted of insider dealing. The Crown Court had invoked s.2 of the Company Directors Disqualification Act 1986 which enables a court to disqualify a person who has been convicted of an indictable offence in connection with the management of a company. The Court of Appeal took a liberal view of what could be said to be "in connection with the management of the company", so as to bring within the phrase the managing director's disposal of his shares in the company in advance of publication of bad news about its prospects. It would seem, too, that a disqualification order could be made on grounds of unfitness under s.8 of the 1986 Act upon an application by the Secretary of State in the public interest. In that case, conviction by a court of an indictable offence would not be a pre-condition to a disqualification order, but the court would have to be satisfied that the person's conduct in relation to the company made him unfit to be concerned in the management of a company and this section, unlike s.2, is capable of applying to market abuse only by directors and shadow directors.

Conclusion

30–57

Regulation of market abuse has been an area of enormously rapid growth in recent years, to which the adoption of MAR has most recently added. Before 1980 insider dealing was tackled mainly through statutory disclosure requirements, whilst broader forms of market abuse received at best a shadowy control in the common law of crimes. Today, both insider dealing in particular

and market abuse in general are the subject of detailed criminal and regulatory rules. Why should this have happened? It may well reflect a deterioration in standards of market conduct as a result of powerful financial incentives to "do the business". Probably, it also an example of the growth of shareholder (or, in this case, investor) power as financial markets have come to play a more important role in national and international business.[235] In general, the regulation discussed in this chapter aims to protect investors, individual and collective, against opportunistic behaviour by corporate and market insiders and thus make securities markets more attractive places in which to participate.

Of course, it is another question whether the law is as effective in practice as it could be. Research published by the FSA suggests there is still a high level of abnormal price movements ahead of takeover announcements, though in recent years there has been a decline in such movements ahead of trading statements.[236] Until recently, whilst the FCA's budget was not out of line with that of its US equivalent, the Securities Exchange Commission, when adjusted for market capitalisation, it seemed to devote a lower proportion of its budget to enforcement and to impose lower penalties when it did take action.[237] The FCA has up-graded the resources it devotes to enforcement and changed its view about the appropriate level of penalties since the financial crisis, but the effects of this policy re-orientation remain to be seen.

---

[1] The Criminal Justice Act 1993 Pt V and the Market Abuse Regulation (Regulation (EU) No.596/2014) (MAR) use the word "dealing".

[2] Clearly, the insider buys in the former case and sells in the latter.

[3] *R. v De Berenger* (1814) 3 M. & S. 68. This was long before there was specific legislation on market manipulation but the defendants were convicted of the common law offence of fraud. The case was also an example of manipulation in the government bond, rather than the corporate securities, market.

[4] Of course, those who buy and sell before the truth emerges may suffer no loss but may actually benefit from the manipulation, so the loss is normally suffered by those holding the securities at the moment of truth.

[5] The analysis might be different in face-to-face transactions but in fact the market abuse rules apply only to securities which are publicly traded.

[6] See para.26–5, above.

[7] The loss is in fact crystallised only when the truth emerges. See fn.4.

[8] So, the distinction between trading and non-disclosure may seem trivial. However, without the disclosure rule, the insider could plausibly say that s/he could have complied with the insider trading provisions by simply not dealing.

[9] The very act of trading will reveal some information to the market about the analysts' position.

[10] See H. Schmidt, "Insider Dealing and Economic Theory" in K.J. Hopt and E. Wymeersch (eds), *European Insider Dealing* (Butterworths, 1991).

[11] For an example see *R. v De Berenger* (1814) 3 M. & S. 68. For the specific statutory definition of market abuse in the current legislation, see para.30–29, below.

[12] Above fn.1. MAR is in force, for the most part, as from July 2016, but at the time of writing not all the Commission's delegated legislation was in place.

[13] The area of enforcement and sanctions is the most important one where Member State transformation is required, because there the Regulation is formulated as a direction to the Member States to introduce specified powers.

[14] Directive 2014/57/EU. But the Government has committed itself to the principle that the UK criminal sanctions should be at least as tough as those in the Directive. See Treasury, Bank of England, FCA, *Fair and Effective Markets Review: Final Report*, June 2015, 6.3.1.

[15] See above, paras 26–9 et seq.

[16] *Report of the Company Law Committee*, Cmnd. 6659 (1945), paras 86–87.

[17] See above, paras 26–5 et seq.

[18] See above, paras 26–14 et seq.

[19] Though note that for the prospective bidder itself to buy shares on the basis of its knowledge that it is going to launch a bid is not regarded as insider trading (see below, para.30–28), but it would be for a person in the know to do so for his or her own account.

[20] Which are, of course, no longer mandatory. See para.26–4.

[21] Nor might the company or any other company in the group trade in its securities at a time when the director was prohibited from trading, unless this was done in the ordinary course of securities dealing or at the behest of a third party: LR 9.2.7.

[22] LR 9.2.8. The code itself was appended to Ch.9. On listing and premium listing see para.25–6.

[23] LR 9.2.8. On the meaning of those "discharging managerial responsibilities", which term includes both directors and senior executives, see para.26–11.

[24] MAR art.19(11).

[25] See para.26–11 for the meaning of these two terms.

[26] MAR art.19(12)(13). Certain limited routine trading is permitted, for example, in relation to employee share schemes. ESMA's advice is that a narrow view be taken of "exceptional circumstances", embracing only situations which are "extremely urgent, unforeseen and compelling and where their cause is external to the person discharging managerial responsibilities who has no control over them" (ESMA, *Final Report: ESMA's technical advice on possible delegated acts concerning the Market Abuse*

Regulation, 2015, 5.4).

[27] FCA, *Policy proposals and Handbook changes related to the implementation of the Market Abuse Regulation (2014/596/EU)*, November 2015, paras 4.130 et seq.

[28] FCA, *Policy proposals and Handbook changes related to the implementation of the Market Abuse Regulation (2014/596/EU)*, November 2015, paras 4.130 et seq.

[29] Of course, the insider trading prohibition itself will apply during the run-up to the preliminary announcement, but that is hardly an adequate response if one thinks the blanket ban on trading is a valuable technique during pre-result periods.

[30] See paras 16–86 et seq., above.

[31] The leading case is the decision of the New York Court of Appeals in *Diamond v Oreamuno* (1969) 248 N.E. 2d 910. The precise situation has not yet arisen in an English court.

[32] For an early example of the directors constituting themselves agents in this way, see *Allen v Hyatt* (1914) 30 T.L.R. 444 PC. Or the court may find a fiduciary relationship in a small company even in the absence of agency: see para.16–6, above.

[33] *Percival v Wright* [1902] 2 Ch. 421: see para.16–5, above.

[34] For both these propositions see *Schering Chemicals Ltd v Falkman Ltd* [1982] Q.B. 1 CA.

[35] And by virtue of the *Schering Chemicals* case (see previous note) the recipient of the information (the "tippee") would also be in breach of duty by using or disclosing the information if aware that it had been communicated in breach of the duty of confidence imposed on the tipper.

[36] That is, one might be more concerned with depriving the insiders of their profits than with working out who precisely are the best persons to receive them.

[37] DTI, *The Law on Insider Dealing: A Consultative Document* (1989), paras 2.11–2.12.

[38] Companies Bill, Session 1978/79, H.C. Bill 2, cl.59. As we saw in Ch.26 those with management responsibilities in companies traded on regulated markets are obliged to disclose inside information, but this requirement is likely to pick up a few face-to-face transactions.

[39] For example, where the director is selling shares in the company to a person who is not presently a shareholder or where the insider is not a corporate fiduciary at all.

[40] See *Chase Manhattan Equities v Goodman* [1991] B.C.L.C. 897, where the judge passed up the opportunity to use the FCA's *Model Code* as the basis of an extended duty of disclosure.

[41] Directive 89/592/EEC [1989] O.J. L334/30. This Directive was replaced by Directive 2003/6/EC (the Market Abuse Directive) in 2003, but the Government took the view that the criminal law provisions of domestic law did not require amendment as a result, though the 2006 Directive had a substantial impact on the administrative sanction regime. The 2006 Directive was repealed by MAR.

[42] For an analysis of the changes see Davies, (1991) 11 O.J.L.S. 92.

[43] Insider Dealing (Securities and Regulated Markets) Order (SI 1994/187) art.10, as amended. Confusingly, the term "regulated market" in the 1993 Act does not have the meaning attached to the term in the EU instruments: see para.25–8. In particular, trading

on AIM does fall within the CJA (AIM being a market established under the rules of the LSE), even though AIM is not a regulated market for EU law purposes but a multilateral trading facility.

[44] 1993 Act s.52(3).

[45] A firm which has undertaken to make a continuous two-way market in certain securities, so that, in relation to those securities, it will always be possible to buy from or sell to the market maker, though, of course, at a price established by the market maker.

[46] Following the "Big Bang" on the Stock Exchange in 1986 it is no longer required that market makers and brokers be entirely distinct functions, though equally it is not required that brokers make a continuous two-way market in any particular securities. Some broking firms act as market makers as well; others are only intermediaries.

[47] 1989 Directive art.2(3).

[48] In some cases it might not even be possible to identify the counterparty.

[49] See further below, para.30–30.

[50] 1989 Directive art.5.

[51] Above fn.43, arts 4 and 9 and Schedule.

[52] 1993 Act s.62(2) provides that in the case of the offences of encouraging dealing or disclosing inside information (see para.30–25, below) either the encourager or discloser must be in the UK when he did the relevant act or the recipient of the encouragement or information must be.

[53] See above, para.30–10.

[54] If French law adopts the same territorial rules as the UK, the citizen would also commit a criminal offence under French law if he gave the instructions to deal from France. His liability in the UK would not depend, of course, upon the nationality of the company in whose shares on a UK regulated market the trading occurred.

[55] If the French citizen is in the UK at the relevant time, he will commit a criminal offence in the UK even if the trading occurs on a regulated market outside the UK but within the EEA. However, if the market is outside the EEA (say, New York or Tokyo) and involves no professional intermediary who is within the UK it would seem that the offence of dealing is not committed in the UK even if the instruction to deal is given by a person in the UK. This is because the dealing will not have taken place on a regulated market within s.52(3) and the 1994 Order and will not have involved a professional intermediary who is within the scope of s.62. However, the offence of encouraging dealing may have been committed, the encourager being in the UK even if the person encouraged is not. See fn.52, above.

[56] An arrangement designed to prevent information in one part of a firm from being available to individuals working elsewhere in the firm.

[57] See para.30–38, below.

[58] See below, para.30–25. Otherwise a person could avoid the prohibition on insider dealing simply by setting up a company to do the trading.

[59] Above, para.30–2.

[60] The Act uses the term "issuer" rather than "company" because the Act applies not only to securities issued by companies but also to government securities or even, though

this is unlikely, securities issued by an individual: s.60(2).

[61] 1993 Act s.56(1)(b).

[62] 1989 Directive art.1.

[63] HC Debs, Session 1992–93, Standing Committee B, col. 174 (10 June 1993). It seems that, on this argument, precise information will always be specific.

[64] See para.30–22, below.

[65] In the permissive cases the situation is, presumably, that the facts described in the subsections do not prevent the court from holding the information to have been made public, but whether the court in a particular prosecution will so hold will depend on the circumstances of the case as a whole.

[66] 1993 Act s.58(2)(d).

[67] Query whether front-running a recommendation, not based upon any research but where its publication will have an impact on the price of the securities because of the reputation of the recommender, would be protected by s.58(2)(d). cf. *US v Carpenter* (1986) 791 F. 2d 1024. The trader might have a defence under para.2(1) of Sch.1 to the Act, but that would depend upon his having acted “reasonably”: see para.30–28, below. Such conduct might in extreme cases even be a breach of Pt 7 of the FSA 2012. See para.30–29, below.

[68] Company Securities (Insider Dealing) Act 1985 s.10(b).

[69] 1993 Act s.58(2)(a) and (b) respectively. The former would cover publication on a Regulatory News Service and the latter documents field at Companies House or the Patents Registry.

[70] 1993 Act s.56(1)(d).

[71] Insiders have little incentive to trade on the basis of inside information which will never become public or will do so only far into the future.

[72] See above, para.30–15.

[73] DTI, *The Law on Insider Dealing* (1989), para.2.24.

[74] In particular, the requirement of “being connected with the company” was removed. See the Company Securities (Insider Dealing) Act s.9.

[75] The relationship does not have to exist with the issuer of the securities which are dealt in. So a director of Company A who is privy to his or her company’s plans to launch a bid for Company B is an insider in relation to the securities of Company B (as well as those of A).

[76] In the course of their professional duties such individuals may well obtain inside information in relation to a company other than the instructing company. Thus, employees of an investment bank preparing a takeover bid would become insiders in relation to both the proposed bidder (i.e. the bank’s client) and in relation to the target company.

[77] Of course, the journalist’s employer may be a listed company, in which case he would seem to fall within the first category as well.

[78] cf. *US v Chiarella* (1980) 445 U.S. 222.

[79] An even more restrictive test would be in the course of an employment which is likely to provide access to inside information. Such a test would exclude the famous, if unlikely, example of the cleaner who finds inside information in a waste-paper basket. However, there seems to be no warrant in the Act or the Directive for such a restrictive test, which would come close to reinstating the clearly discarded test of s.9(b) of the 1985 Act.

[80] The guru of securities regulation, Professor Louis Loss of Harvard Law School, first used this expression and the Oxford English Dictionary has credited him with this fact.

[81] Moreover, since it is enough that the individual in the third category "has" the information from a source falling within the first or second categories, it does not matter either whether the "tippee" has solicited the information. Inadvertent acquisition of inside information is covered. This was a point of controversy under the previous legislation until cleared up by the House of Lords, in favour of liability. See *Attorney-General's Reference (No.1 of 1988)* [1989] A.C. 971.

[82] See para.30–25, below.

[83] See para.30–30, below.

[84] This is the significance of prohibiting acts by a person who has information "as an insider", which s.57 makes clear refers to the situation at the time of the acquisition of the information, rather than the simpler formulation of prohibiting acts *by* an insider, which might well refer to the accused's status at the time of the prohibited acts.

[85] A contract of the sale or purchase of securities at a future date.

[86] A contract not involving an agreement to transfer an interest in the underlying securities but simply to pay the difference between the price of the securities on a particular date and their price on a future date. For discussion of the problems which CfDs have created in relation to disclosure obligations, see above at para.26–20 and at para.28–45.

[87] Certain types of security are omitted, perhaps most notably the purchase or sale of units in unit trusts, though shares in companies which operate investment trusts are within the scope of the Act. Presumably, the former were excluded on the pragmatic grounds that it was unlikely that a person would have inside information which would significantly affect the price of the units, which normally reflect widely diversified underlying investments, though query whether this is always the case with more focused unit trusts. See para.26–12. In any event, the Treasury has power to amend the list of securities contained in Sch.2 (see s.54(2)).

[88] 1993 Act s.52(1).

[89] See s.56(2) and para.30–21, above.

[90] 1993 Act s.55.

[91] Ditto an individual who discovers good news and decides not to dispose of its shares.

[92] See below, para.30–27.

[93] As is the case with derivatives.

[94] 1993 Act s.55(1)(b).

[95] 1993 Act s.55(4) and (5).

[96] 1993 Act s.52(2)(a).

[97] 1993 Act s.52(2)(b).

[98] 1993 Act s.53(3)(a).

[99] See paras 26–5 et seq.

[100] We have already dealt, in the previous paragraph, with one of the defences relevant to the disclosure offence.

[101] Though s.53 makes it clear that the burden of proof falls on the accused, thus obviating a possible ambiguity which was found by some in the previous legislation. See *R. v Cross* [1991] B.C.L.C. 125.

[102] Sch.1 may be amended by the Treasury by order (s.53(5)), presumably so that it may be kept current with developments in financing techniques.

[103] 1993 Act s.53(1)(c) and (2)(c). This defence does not apply to the disclosure offence, though it is an essential ingredient of that offence that the disclosure should not have occurred in the proper performance of the accused's functions.

[104] Previously they were covered by more targeted provisions: 1985 Act ss.3(1)(b) and 7.

[105] 1993 Act s.53(1)(a). The same defence is provided, mutatis mutandis, in relation to the other offences by s.53(2)(a) and (3)(b). Making a profit is defined so as to include avoiding a loss: s.53(6). This is considerably narrower than the defence in the 1985 Act s.3(1)(a), which applied when the individual traded "otherwise than with a view to the making of a profit".

[106] HC Debs, Session 1992–93, Standing Committee B (10 June 1993). A suggestion was where the insider sold at a price which took into account the impact the (bad) information would have on the market when released.

[107] 1993 Act s.53(1)(b),(2)(b) provide a similar defence in relation to the encouraging offence.

[108] On underwriting, see para.25–12, above.

[109] 1993 Act s.63, applying to all offences under the Act. Technically, s.63 does not provide a defence but rather describes a situation where the Act "does not apply".

[110] As art.2(4) of the Directive permits.

[111] See above, fn.45.

[112] This is discussed further below at para.30–45.

[113] See para.3.

[114] Nevertheless, the Code on Takeovers and Mergers adopts the same approach as the Act. See r.4.1. However the potential bidder would have to comply with the statutory provisions on the disclosure of shareholdings. See paras 26–17 et seq.; and P. Davies, "The Takeover Bidder Exemption and the Policy of Disclosure" in K.J. Hopt and E. Wymeersch (eds), *European Insider Dealing* (London, 1991). Even so, the bid facilitation argument ought not to be employed to justify the purchase of derivatives where the aim of the purchase is simply to give the bidder a cash benefit rather than to take a step towards the acquisition of voting control.

[115] See para.2(1). Some guidance on what is reasonable is given in para.2(2).

[116] As in *R. v De Berenger* (1814) 3 M. & S. 68.

[117] See para.26–32, above.

[118] 2012 Act s.90(1). The act or course of conduct must occur in the UK or the misleading impression must be created in the UK: s.90(10).

[119] 2012 Act s.90(2).

[120] 2012 Act s.90(9)(a).

[121] 2012 Act s.90(3)(4).

[122] *R. v De Berenger* (1814) 3 M. & S. 68 (see para.30–1, above).

[123] *Scott v Brown Doering & Co* [1892] 2 Q.B. 724.

[124] Though there has been recent interest in relation to the manipulation of interest-rate or foreign exchange benchmarks, topics outside the scope of this chapter.

[125] As in *Scott v Brown Doering & Co* [1892] 2 Q.B. 724. There is a defence in s.90(9)(b) for such behaviour carried out in accordance with the price stabilisation rules. See para.30–45.

[126] *North v Marra Developments* (1981) C.L.R. 42 HCA. Both this and the case mentioned in the previous note were civil actions in which the criminal nature of the activity was used to defeat a contractual claim on grounds of the illegality of the contract.

[127] Directive 2003/6/EC on insider dealing and market manipulation (market abuse) [2003] O.J. L96/16.

[128] Treasury, Bank of England, FCE, above fn.14, Chart 11. In general those convicted were not sophisticated criminals.

[129] As we have seen, in relation to misleading impressions, mens rea is required only in an attenuated form under what is now the Financial Services Act 2012.

[130] Above, fn.128, p.85.

[131] See Joint Committee on Financial Services and Markets, First Report, *Draft Financial Services and Markets Bill*, Vol. I, Session 1998/99, HL 50-I/HC 328-I, pp.61–67 and Annexes C and D; Second Report, HL 66/HC 465, pp.5–10 and Minutes of Evidence, pp.1–27.

[132] The Financial Services and Markets Tribunal, the predecessor to the Upper Tribunal, tended to view the penalty proceedings as being criminal in nature for the purposes of the Convention. However, the standard of proof required by the Convention is not necessarily that of "beyond reasonable doubt". The standard will depend, as is the case with the civil burden in domestic law, on the seriousness of the allegation which has to be proved. See *Davidson & Tatham v FSA*, FSM Case No. 31; *Parker v FSA* [2006] UKFSM FSM037; *Mohammed v FSA* [2005] UKFSM FSM012.

[133] FCA, above fn.27, para.3.15.

[134] MAR art.8(1).

[135] MAR art.7(1).

[136] See above, para.30–24. However, knowledge or negligence might to relevant to the size of the penalty imposed: art.31.

[137] Case C-45/08 *Spector Photo Group NV v CBFA* [2010] 2 B.C.L.C. 200. Rebuttable presumably involves showing that the insider would have traded whether he had the inside information or not. A specific defence of this sort is provided in art.9(3)—trading carried out under an obligation which had come into effect before the inside information was acquired.

[138] Above, para.30–22.

[139] MAR art.8(2).

[140] MAR art.8(3). MAR inelegantly talks about the third party ‘using’ the recommendation or inducement.

[141] MAR art.10(1). The CJEU has indicated that this exception is to be construed narrowly: Case C-384/02 *Criminal Proceedings against Grongaard* [2005] E.C.R. I-9939.

[142] MAR art.10(3). Unless the transmitter knows the information underlying the recommendation or inducement, that person would not otherwise fall within the prohibition because not in possession of inside information.

[143] MAR art.7(4).

[144] Case C-628/13 *Lafonta v Autorité des marchés financiers* [2015] Lloyd’s Rep FC 113. This was in fact a disclosure case, but its rationale seems equally applicable to trading. The Upper Tribunal had taken a different view: *Hannam v Financial Conduct Authority* [2014] UKUT 0233 (TCC).

[145] In this respect it is important to note that the definition of insider trading quoted above embraces “financial instruments” and not just the securities issued by the company.

[146] Above, para.30–18.

[147] Above, para.26–6.

[148] Case C-19/11 *Geltl v Daimler AG*, decision of 28 June 2012, also a disclosure case.

[149] FSMA s.118(4).

[150] FSMA s.118(9).

[151] The FCA’s Code of Market Conduct gave the following example of RINGA: “An employee of B Plc is aware of contractual negotiations between B Plc and a customer. Transactions with that customer have generated over 10 per cent of B Plc’s turnover in each of the last five financial years. The employee knows that the customer has threatened to take its business elsewhere, and that the negotiations, while ongoing, are not proceeding well. The employee, whilst being under no obligation to do so, sells his shares in B Plc based on his assessment that it is reasonably likely that the customer will take his business elsewhere”. Query whether this situation would fall within art.7(2) of MAR (above).

[152] MAR art.8(5). “National law” is left to determine how these natural persons are identified. In the UK the rules of agency and employment will presumably be used, in a form of “reverse” vicarious liability.

[153] MAR art.9(1).

[154] See para.26–14.

[155] MAR art.9(1)(2).

[156] MAR art.9(5)(7).

[157] ESMA, *Final Report: Draft technical standards on the Market Abuse Regulation*, 2015, §4 and Annex VIII; ESMA, *Consultation Paper: Draft guidelines on the Market Abuse Regulation*, 2016.

[158] MAR art.12(1)(a).

[159] FSA 2012 s.90. Above, para.30–29.

[160] MAR art.15.

[161] MAR art.12(1)(b).

[162] See FCA, Code of Market Conduct, 1.6.2.

[163] FCA, Code of Market Conduct, 1.7.2.

[164] MAR art.12(1)(c). See also art.12(2)(d) dealing with statements (not required to be false or misleading) about a financial instrument where the maker of the statement already has a position in the instrument but has not disclosed it.

[165] Though the defences discussed below are still available.

[166] The breadth of the prohibition was thought to put financial journalists at particular risk and so art.21 provides that the liability of journalists is to be assessed on a basis which takes into account the codes of conduct governing that profession, provided the journalist derives no direct or indirect benefit from the dissemination of the information and did not intend to mislead the market.

[167] See Ch.26 at para.26–29, above.

[168] See above, Ch.26 at para.26–31.

[169] MAR art.2(1) applies the Regulation to MTFs as well as regulated markets and to derivatives referencing securities so traded.

[170] MAR art.12(2)(a).

[171] MAR art.12(2)(b).

[172] MAR art.12(2)(c). There is considerable debate about the extent to which high frequency or algorithmic trading can or bring about such distortions.

[173] MAR art.13.

[174] MAR art13(2).

[175] MAR art.13(2) and ESMA, above fn.157, §5 and Annex X.

[176] MAR art.13(3).

[177] MAR art.13(4).

[178] MAR art.13(5).

[179] MAR art.13(6). ESMA's procedure for giving a binding decision is set out more fully in art.19 of Regulation (EU) No.1095/2010, which establishes ESMA. ESMA's power to give binding decisions in inter-Member State disputes is not confined to this instance, but it must be specifically provided for in the relevant EU instrument dealing

with the subject in question.

[194] MAR art.32.

[195] Commission Implementing Directive (EU) 2015/2392.

[196] MAR art.32(4).

[197] MAR art.24.

[198] MAR art.25(1).

[199] MAR art.25(2).

[200] MAR art.25(6). That request may be given effect to in a variety of ways, ranging from the requested state carry it out itself to the requesting state doing so. ESMA may coordinate the cross-border investigation if one of the participating states so requests.

[201] MAR art.25(5).

[202] See para.30–42, above.

[203] MAR art.25(7) and arts 17 and 19 of Regulation (EU) No.1095/2010.

[204] MAR art.26.

[205] FSMA s.169(7) and (8).

[206] FSMA s.169(4).

[207] *R. (on the application of Amro International SA) v Financial Services Authority* [2010] 2 B.C.L.C. 40 CA.

[208] MAR art.30. A Member State may choose not to have administrative sanctions in an

area where criminal sanctions are available, for example, in the UK under FSA 2012 Pt 7. The UK seems unlikely to take advantage of this provision since it traditionally has made both types of sanction available to the FCA in the area of market abuse. On the FCA's policy about the choice between criminal and administrative sanctions, see FCA, *Enforcement Guide*, paras 12.7–12.10.

[209] MAR art.30(3).

[210] On the potential difficulties with this remedy see para.26–28, above.

[211] In other words Member States may set the maximum penalty at a higher level but not at a lower level than three times the profit or loss. Although the actual penalty imposed will often be below the maximum, the thought is that the higher the maximum, the higher the range of penalties actually imposed.

[212] See previous note.

[213] FSMA ss.124 and 125.

[214] FSMA s.126. Sections 392 and 393 extend the warning notice procedure to third parties, but only if the third party is identified in the FCA's decision notice: *Watts v Financial Services Authority* [2005] UKFSM FSM022.

[215] FSMA s.127. MAR art.34 requires decisions to impose sanctions normally to be published.

[216] FSMA s.126.

[217] FSMA s.133(1).

[218] FSMA s.133(4). Although the hearing function was transferred to the Upper Tribunal in 2010, the statutory provisions in FSMA, as amended, governing the appeal hearing continue to apply.

[219] FSMA s.133(4). The action must be one the FCA could have taken: s.133A.

[220] FSMA ss.134 and 135, even though in the case of market abuse appeals, the appellant may not be an authorised person. The details of the assistance scheme are set out in Financial Services and Markets Tribunal (Legal Assistance) Regulations 2001 (SI 2001/3632) and the Financial Services and Markets Tribunal (Legal Assistance—Costs) Regulations 2001 (SI 2001/3633).

[221] Now by virtue of the general provisions applying to appeals from the Upper Tribunal.

[222] FSMA s.174(2).

[223] FSMA s.381(1).

[224] FSMA s.129; *FCA v Da Vinci Invest Ltd* [2016] 1 B.C.L.C. 554, where Snowden J examines fully the scope of this power.

[225] *Chase Manhattan Equities v Goodman* [1991] B.C.L.C. 897 at 930–935, where the judge held that the previous legislative formulation did not prevent the court from holding a contract unenforceable when it had been concluded in breach of the 1985 Act's provisions.

[226] See especially *Lonrho Ltd v Shell Petroleum Co Ltd (No.2)* [1982] A.C. 173 HL.

[227] 1993 Act s.61.

[228] The Crown Court has power under the Criminal Justice Act 1988, as amended by the Proceeds of Crime Act 1995, to make an order confiscating the proceeds of crime, which could also be used to this end.

[229] FSMA s.402(1)(a). This implies that some cases which might previously have been dealt with through regulatory sanctions will now be subject to criminal prosecution, but the courts have refused to treat this change of policy as a ground for special leniency when sentencing offenders: *R. v McQuoid* [2010] 1 Cr. App. R. (S.) 43.

[230] See para.30–30.

[231] See para.26–32.

[232] FSMA ss.382(9) and 380(6).

[233] See Ch.10, above. These powers are in addition to the powers of (probably more important) the FCA to disqualify persons from operating within the financial services industry.

PART 7

DEBT FINANCE

At various points in this book we have referred to the comparative advantages of equity and debt finance for companies. Even more so than with the rights of shareholders, the rights of lenders to the company depend heavily on the terms upon which they contract with the company. Nevertheless, one can say that, in general, debt is both cheaper and more flexible, but is also more demanding as a form of finance for companies than equity shares. It is cheaper because insolvency priority[1] and contractual flexibility may reduce the risk to lenders, who can therefore be persuaded to lend on more advantageous terms; but it is more demanding because those terms create an entitlement (usually to payment of a fixed or narrowly fluctuating rate of interest, plus repayment of principal), whether the company is doing well or badly, whereas the declaration of a dividend on ordinary shares is usually a matter for the discretion of the directors. Clearly, the rate of interest a company has to pay for its debt depends to some considerable extent on the financial standing of the company and, if that is not enough, on whether it can offer a lender personal or proprietary security for its loan, and the quality of the security offered. Much of the law applicable here is the general law relating to lenders and borrowers, and does not have to be analysed in a book on company law. However, three aspects of the relevant law do deserve discussion in a company law text.

First, as part of its debt-raising activities, a company may issue debt securities and those securities may be traded on a public market, in the same way as equity securities are.[2] Indeed, the line between the two forms of investment in a company can be quite blurred, and—whether the debt securities are traded on the public market or not—debt-holders can play a significant role in the indirect governance of companies. We thus need to say something about the nature of a company's debt obligations. Secondly, although the issue of granting valid security is a

general problem in the law of secured lending, Companies Acts have long included their own rules governing the registration of charges granted by companies. These rules have been the subject of attention of various review groups, including the Law Commission, and are examined here. Thirdly, in the creation of one form of security, company lawyers took the lead in the nineteenth century. This was with the floating charge, still a controversial mechanism because of the way it can operate to crowd out the interests of unsecured creditors, in terms both of the scope of the charge and the mechanisms for enforcing it. Thus, the floating charge is the third topic we need to look at in some detail.

---

[1] On insolvency, a company's creditors are repaid before the shareholders: see Ch.33.

[2] Thus, some reference to such securities has already been made in Ch.25 (public offers).

INTRODUCTION

31–1

A company will inevitably finance itself not only through issuing shares (of various classes) but also by taking loans or, alternatively, by making use of credit. Given that around 77 per cent of UK registered companies have an issued share capital of £100 or less,[1] the need for this sort of alternative funding is clear.[2] Of these options, taking loans, i.e. debt financing,

including its more sophisticated variants, is the main source of non-equity finance for companies, and is the focus of this chapter. Nevertheless, most companies (small and large) will also make use of various forms of credit, including quite sophisticated forms of asset-based financing.[3]

One basic divide in all debt financing is between simple debts (not always so simple in their documentation, and including large syndicated loans) and marketable "debt securities"[4] (with their obvious parallels with equity securities, i.e. shares).[5] As with shares, debt securities may be issued and traded privately or on public markets, with the latter being more tightly regulated. With the terminology, context is important: the terms "debt" and "debt financing" can be used perfectly generally to embrace all the options open to a company; only as the terms become more specific, and "debt" and "debt securities" are contrasted, do they reveal anything of the nature of the underlying debt instrument.

Some elements of debt financing turn out to be especially important in the corporate context. We focus on these, especially the regulated use of marketable corporate debt contracts (i.e. debt securities), including the transfer of these interests; the protective creditor-imposed governance constraints common in all debt financing; and—at various points—the similarities and differences between debt and equity financing. But some introductory points are necessary before we can address that detail. We start with the basic differences between debt and equity, and the various structural choices in debt financing.

Difference between debt (loans), equity (shares) and hybrid instruments

31–2

Often the expected sharp differences between debt and equity are blurred or non-existent. Take the financing decision itself. The choice is for the directors, and is subject to all their general duties. At first blush the constraints on directors, and the controls given to members, seem greater with share issues than with debt: recall the decisions on "proper purposes" in share issues, and the statutory rules on pre-emption rights.[6] There are no direct general law parallels when the decision concerns debt, but in

practice many lenders will impose even greater constraints in their own loan agreements, insisting on contractual terms prohibiting further corporate borrowing, or at least further secured borrowing (i.e. negative pledge clauses), unless the consent of the lender is first obtained.

The same blurring is true of the contrast between members and creditors: in law a member of the company has rights in it, while a creditor has rights against it. In reality, however, the difference between the debt-holder and the share-holder may not be anything like as clear-cut, for the debt instrument may give the holder contractual rights akin to those of a shareholder, e.g. to appoint a director; to receive a share of profits (whether or not available for dividend)[7]; to repayment at a premium; to attend and vote at general meetings.[8] Covenants in the loan instrument may also, as we shall see, give debt holders considerable influence over the way in which the company is managed.[9] Moreover, where the debt instrument is secured by a floating charge on all the assets and undertaking of the company, the holder will have a legal or equitable interest in the company's business, albeit of a different kind from that of its shareholders.

The line between the holder of a debt instrument and a share is particularly narrow if the contrast is made with a preference shareholder, who is a member of the company, but a member whose share rights may limit the shareholder's dividend to a fixed percentage of the nominal value of the share and give that shareholder no right to participate in surplus assets in a winding-up, and perhaps only limited voting rights.[10] The main difference between the two in such a case may then be that the dividend on a preference share is not payable unless profits are available for distribution,[11] whereas the debt holder's interest entitlement is not subject to this constraint; and that the debt holder will rank before the preference holder in a winding-up. Thus, the legal rules operate with a binary divide between debt and equity, but the accounting rules and general practice leads to the creation of securities whose classification in accordance with this divide is problematic.

31–3

These difficulties of classification are magnified in relation to

securities which are "hybrid" in character, in that the terms of the issue provide for conversion, whether from a preference share convertible into debt, or a debt convertible into equity[12] at a later date and on fixed terms. A simple way of looking at such securities is to say that they are simply one form until conversion, at which point they become the other. However, where the bond is required to be converted into equity at a certain future date, for example, it may be possible to classify it as equity in the company's accounts from the beginning, whilst nevertheless treating the interest payable on the debt before conversion as deductible for tax purposes, so that the same security is equity for one purpose and debt for another.[13]

Notably, these hybrid securities do not provide a mechanism for avoiding the statutory rules regulating shares. They do not, for example, provide a way around the prohibition on issuing shares at a discount to their nominal value.[14] And in takeover situations, debts that are convertible to shares, or debts that have voting rights, are treated as if they were shares for the purposes of the squeeze-out and sell-out provisions in the Act.[15]

Should a company use debt or equity in its financing?

31–4

How does a company decide what mix of debt and equity is appropriate for its operations? Clearly its aim is to access the necessary funds at the least cost to the company. The options available will depend on the size of the company, the funding purpose, and the riskiness of the endeavour.[16] The choice can be difficult, since the similarities between corporate debts and shares are often strong, and can be made even stronger in "hybrid" securities, as we have seen. With both debts and shares, the investor has limited liability (limited to the sum invested by way of loan or share price); with both, the rate of return likely to be demanded is reduced if the security is highly liquid; and with both, the desire for some form of governance control is present, and increases with the risk of the investment. True, the return to the debt-holder is a binding and quantified commitment made in advance, and if not met according to its terms the company risks insolvency.

Despite this, financial economists have suggested that the cost of capital is unaffected by the debt to equity ratio: this is based on the Modigliani-Miller propositions that no combination of debt and equity is better than any other, and that a company's total market value is independent of its capital structure.[17] This, as with many economic theories, is based on an "ideal" market. When real market frictions are included, it seems that companies may add some debt without reducing the return to shareholders because the interest payable on debt is tax deductible for the company, whereas dividends payable to shareholders are not. But there is a tipping point: too much debt raises the risk of corporate default, and continuing default on debt obligations will, in the end, lead to corporate insolvency, whereas for shareholders it would simply lead to no payment of dividends. As well as the negative financial pressures of the debt-equity mix, there are however also advantageous pressures the mix puts on directors in their management of the company: managers can be over-inclined to prefer the interests of either themselves or their shareholders, and debt provides a disciplining effect because it requires directors to find the funds to make principal and interest repayments.

Different Structures in Debt Financing

Terminology

31–5

The literature on debt financing quickly makes it plain that a wide variety of terms are used to describe different debt financing arrangements, although none constitute terms of art. Perhaps because the debt instrument is simply a creature of contract, and the relationship between debt-holder and company creates no particular conceptual puzzles—the relationship is simply the contractual relationship of debtor and creditor, coupled, if the debt is secured on some or all of the company's assets, with that of mortgagor and mortgagee or chargor and chargee—different terms have come to be used in commercial practice as a matter of fashion, and changing fashion at that. Many of the terms now in popular current usage emerge in the discussions which follow.

Defining a "debenture"

31–6

By contrast, instead of any of the modern terms in use in the market, the rather old-fashioned term "debenture" is the only one used in the Act. And even there it is not defined: s.738 merely says that the term "includes debenture stock, bonds and any other securities of a company,[[18]] whether or not constituting a charge on the assets of the company".[19] This is helpful in indicating that a debenture need not be secured on the company's assets, but not for much else; and indeed commercial practice rather contradicts this, typically using the word "debenture" to refer precisely to the proprietary security agreement which secures the debt owed by the company to its lender.[20]

This lack of clear definition is despite the fact that the Act contains a (short) Pt 19, headed "Debentures", as well as frequent references throughout the Act to debentures and debenture holders.[21] The question this raises is whether the term "debenture", as defined in s.738, is wide enough to include all debts (i.e. all loan agreements), or whether it is implicitly limited to "issues" of debt which have parallels of some sort with issues of shares, noting of course that the latter embraces private issues as well as issues to the public.[22] The answer matters because of the particular statutory rules which then apply to "debentures".

Outside the statutory context, the term is certainly wide enough to include simple loans. In *Fons HK (In Liquidation) v Corporal Ltd, Pillar Securitisation Sàrl*,[23] the Court of Appeal had to decide whether an unsecured debt was a debenture, thus sweeping it into the assets subjected to a charge. The court reviewed and accepted earlier authorities which had held that simple loan agreements could be considered as debentures, and then held that, in the absence of other contractual terms or circumstances limiting the definition of debentures in the contract before them, the term simply meant an acknowledgement of debt recorded in a written document, whether or not secured. In doing so, the court rejected the approach of the lower court which had adopted a criterion of business common sense in contractual interpretation, and had

held that, since an ordinary businessman would be surprised to hear a simple loan agreement described as a debenture, the contractual term did not cover unsecured debts.[24]

Although this case raised uncertainties in the market about similar breadth being assumed in the statutory definition, that seems misplaced. The case itself makes it clear that the necessary interpretation of agreements (and, by analogy, statutes) is contextual, and in the statutory context the term "debenture" is most often used in contexts where the analogy is with other issued securities.[25]

31–7

This is especially true of the statutory provisions requiring registration of "an allotment of debentures" (s.741), the keeping of a register of "debenture holders" (ss.743 et seq.), and the prohibition on private companies offering "securities" to the public, with "securities" meaning shares or debentures (s.755(5)).[26] These provisions are quite inapt for general application to all loan contracts.

The issue is perhaps less clear in two further contexts, where the statute overrides equity's traditional rules. First, s.740 provides that contracts to take up and pay for debentures may be specifically enforceable, thus overriding the normal contractual rule that the lender is liable only in damages.[27] The arguments for enforcing subscriptions and underwriting obligations when an "issue" of debt securities is made may be strong, but they do not seem to apply to a single creditor who, in breach of contract, fails to make an advance. Then, damages would seem a perfectly adequate remedy. The issue does not seem to have troubled modern courts,[28] but giving s.740 a more limited remit could be achieved either by defining "debentures" more narrowly, especially since s.740 refers to a contract to "take up and pay for" debentures (terminology which seems inapt for general loan agreements); or by relying on the use of "may" in s.740, and interpreting it as merely conferring a discretion on the court.

Secondly, s.739 specifically excludes irredeemable and long term debentures from the protective equitable doctrine prohibiting such "clogs on the equity". This, too, seems more appropriately applied to "issues" of debentures, but the statutory

predecessor to s.739 was applied very generally, in 1940, in *Knightsbridge Estates Ltd v Byrne*.[29] The House of Lords held that an ordinary mortgage granted by a company was a debenture,[30] and so subject to the statutory provision disentitling the mortgagor from insisting on its equitable right to make early repayment. However, even a narrow application of the statutory provision, holding it inapplicable in this context, might not have prevented the same outcome on these facts: we might now simply say that a mortgagor has no right to early repayment unless the contract provides for it, and that a long but properly agreed maturity term is not itself sufficient to attract equitable relief.[31]

Despite these concerns, the absence of a precise statutory definition of "debenture" has given rise to surprisingly few problems, and to even fewer reported cases. In addition, modern financial markets regulation is typically directed at the product being issued rather than at the issuer or the investors, and it then defines its focus more clearly than by use of the broad term "debenture". Nevertheless, in what follows we have tried to avoid the use of the term "debenture" in favour of either more specific descriptions of the contracts in issue or, by contrast, when breadth is intended, the more generic term, "debt".

Small and large scale loans

31–8

Small and medium size companies tend to rely on loans from banks and, especially in very small companies, loans from directors and shareholders.[32] *Salomon*[33] is an old and typical illustration. Invariably the loan terms will be individually negotiated to reflect the risk, and, as we shall see, can be quite demanding in terms of the ongoing obligations imposed on the borrower, the potential consequences of any "event of default", and the various forms of security (proprietary and personal) required to support the company's primary obligation to repay the debt.

Large-scale debt financing for bigger companies is more varied. It comes in two main forms: from banks (perhaps by way of "indirect financing", so called because the banks in turn need to seek investment funds from third parties) and from the capital

markets ("direct financing", because the relationship is directly with the lender). Here, too, the terms of the debt security are individually negotiated, even if against industry models. Sizeable transactions may involve both types of debt. The initial debt finance for a major acquisition may, for example, be provided wholly by banks, often under a syndicated loan agreement[34] involving several banks and providing for a variety of types of senior and junior (or "mezzanine") debt, the terms "senior" and "junior" referring to the order in which the debt falls to be repaid (the ranking of their claims on the assets of the debtor).[35] The banks may, subsequently, offload that debt (in a wide variety of ways) to third parties so as to realise the value of the asset earlier than the debt's maturity date (i.e. capitalise the debt) or so as to shed some of the risk. On the company's side, sometimes this form of bank debt is too short-term and is provided on such financially unattractive terms that the company itself has a strong incentive to finance differently or to re-finance the bank loan as soon as possible.

Debts and "debt securities"

31–9

So far the distinction has been between small and large-scale loans, and single and multiple lenders. But lenders are likely to be persuaded to accept a lower rate of return if their loans are highly liquid. This is not to say that traditional loans cannot be transferred, as we shall see, but there is no organised secondary market for their transfer. Thus, as with shares, the company has an incentive to arrange for its debts, as "debt securities", to be traded on a secondary public market, so enabling a lender to liquidate its investment easily by selling it to a third party.[36] It follows that a company might make an offer of "debt securities" (analogous in many ways to "equity securities") on the public (retail or wholesale) markets, much like a company might offer a new issue of its equity securities (shares) so as to raise funds. It might also make similar issues privately. As with shares, public offers are strictly regulated; private offers less so. This is considered below, along with the different and rather more complicated structures used for different debt security issues, although otherwise many of the applicable rules are those which

have already been dealt with in relation to shares.[37]

Single and Multiple Lenders

Single lenders

31–10

In the simplest of cases, the company borrows from a single lender. The loan contract between the parties will define their rights and obligations. As we will see later, their contract will undoubtedly include covenants restricting the company's power to act completely autonomously,[38] and may include terms providing for the debt to be secured against the company's assets, or for "equity-like" features (such as voting rights for the lender), or for conversion from debt to equity in defined circumstances.

The company may repeat this borrowing process as it grows, entering into sequential loans agreements with different lenders, with the general law then governing any competition between the lenders seeking to have their secured or unsecured loans repaid. The general law outcome is often varied by agreement between the lenders (a "subordination agreement"), although the limitations inherent in these subordination agreements should be noted: the borrower cannot agree with lenders that the general insolvency law rules will not apply to the distribution of its own assets, but that itself some other distribution will be effected; the lenders, by contrast, can agree amongst themselves to share their different insolvency entitlements in any way they wish. Thus a lender who might otherwise have had priority may agree with other lenders to be deferred; or a secured or unsecured lender may agree to take nothing until other lenders have been paid in full.[39] It may be wondered why lenders would agree to this, but it is relatively common for insiders (whether the company's directors or other members of the same corporate group) to agree to be subordinated so as to enable the company to attract further external financing, or at least to attract it on commercially acceptable terms.

This all works well for smaller scale financing needs, but if the company has more substantial needs, then it is likely to need to access a number of different lenders simultaneously. This can

be achieved either by means of a syndicated loan or by the issue of marketable debt securities. The underlying contracts for such loans come in as many varieties as individual loans, with covenants and security interests as agreed by contract, but each must also of necessity be overlaid by some sort of organisational structure which enables the different lenders to co-ordinate their information and decision needs in relation to the borrower and, importantly, to control hold-out or independent-mover problems within the group. These problems are not unlike the various co-ordination problems which exist between shareholders.[40] As well, it will be in the interests of the lenders themselves that their chosen structure does not inhibit their rights to transfer their interests, although only debt securities are deliberately designed as marketable securities. We discuss these transfer and governance features later, but first say a little more about the structures themselves.[41]

Syndicated loans

31–11

Syndicated loans are typically embodied in a single contract, signed by all parties, although usually put together by a lead bank or underwriter of the loan, known as the "arranger", "agent", or "lead lender".[42] This lender may put up a proportionally bigger share of the loan, or perform duties like dispersing cash flows amongst the other syndicate members, and other administrative tasks. But the syndicated lenders are explicitly not partners, and their interests are deliberately several, not joint, although, as perhaps one mark of the joint endeavour, their agreement is likely to provide for "no-action clauses" and for pari passu recovery should the borrower become insolvent,[43] thus denying any one lender a first-mover advantage if the debt looks risky.[44] As with all agreements involving multiple lenders, the lenders' own internal governance arrangements are often subject to decision by majority rule (as with shareholders), and to various exclusions of liability by the arranger: these are considered below.[45]

It can be seen even from this brief outline that syndicated loans are essentially scaled up versions of single bank loans (or loans from non-bank entities), and are likely to contain similar

sorts of detailed protective covenants, although with the advantage that one lender is not required to carry the entire risk. As with single bank loans, it is also generally true that these transactions are not motivated by the lenders' desire to acquire marketable securities[46]; the lenders' interests may be transferable under general law provisions, and there is a good private market in such interests, but these lenders are quite likely to remain engaged in the deal for its full term.

Debt securities: distinguishing "bonds" and "stocks"

31–12

By contrast, where marketability of the underlying debt is a material consideration, the company usually attracts loans from multiple lenders, again typically financial institutions and specialist investors, by issuing either "bonds" (or "notes" or "commercial paper")[47] or "loan stock" (often labelled "debenture stock" if the loan is secured on a pool of assets, although neither term is a term of art, and both are often used more broadly).[48] Such issues are often tradeable on a public secondary market,[49] although this is not essential.[50] There was, historically, a fundamental structural difference between bonds and stock, although in modern practice both the structure and co-ordination problems turn out to be rather similar.

Bonds (or notes) are, in theory, individual debt obligations owed by the company to each of the bondholders, whether they are registered holders or holders of bearer bonds,[51] with the latter being far more common. Historically, each individual lender (bondholder) purchased a number of bonds from the company, denominated in appropriate amounts, much as shareholders purchase equity interests by buying different numbers of issued shares. In the same way, too, each bondholder became the legal owner of its own bonds.[52] Co-ordination problems between the bondholders were, and are still, typically resolved by appointing an appropriately authorised agent, or, more commonly, a trustee for the bondholders,[53] and also requiring, in certain circumstances, majority votes of the bondholders themselves.[54] However, as with shares, bonds are now typically held via an intermediary, whether or not they are traded on public markets.

So a “global note” is issued by the company to the intermediary (representing the debt due from the company to the intermediary), and the intermediary, as legal owner (of either a registered or a bearer bond, again with the latter being more common, except when intended for the US market) holds its interest on trust for a number—often a large number—of account holders.[55] The intermediary can then perform a number of important services for the account holders, including holding any security for the bond, and, at least from a functional perspective, the resulting organisational structure ends up being similar to that operating with loan stock.[56]

Loan or debenture stock, by contrast, consists of a single debt obligation issued by the company and typically held by a trustee on behalf of the various stockholders.[57] If the loan is secured, the trustee will also hold the security on trust. The stockholders therefore have only an equitable interest in the debt (secured or not), held as tenants in common in proportion to the amount of the debt they own (with no limit on how the fractions are denominated, in contrast to bonds). Even as beneficiaries under the trust, however, the stockholders are nevertheless entered on the company’s register of debenture holders (in contrast to equitable owners of shares, who are not recognised in the company’s register of shareholders[58]). These debenture holders receive a certificate (if the stock is certificated); if it is dematerialised, a similar register is kept in the CREST system.[59] It follows that, unlike the largely meaningless distinction between “shares” and “stock”,[60] the similar distinction between “debentures” and “debenture stock” is far from meaningless and debenture stock has considerable practical advantages. Thus, in this structure, the stockholders have all the advantages of a protective trustee structure, but with the (relatively few) disadvantages of only having equitable interests in the underlying asset.[61]

31–13

One clear difference between bonds (and notes) and stock is that the former can be transferred only in complete units, whereas stock is expressed in terms of an amount of money and may be transferred in any fraction of that amount. This is an attribute of the transferable interest being merely a fractional equitable

interest in a debt. Thus, if a public company wishes to raise £1 million, it could create £1 million of debenture stock, and then issue it[62] to subscribers in such amounts as each wants,[63] giving each a single certificate of an appropriate denomination,[64] and each subscriber can in turn sell and transfer any fraction of it. By contrast, the company could issue a series of bonds, say £1, £10, £100, or £1,000 bonds, each representing a separate debt totalling in aggregate £1 million. This would result in an enormous bundle of paper for the company to process and subscribers to handle. And, if a subscriber for a single bond wanted to sell half of it, that would not be possible at law, only in equity.

Debt securities: trustees for the bondholders or stockholders

31–14

As we have already noted, it is now almost invariable practice for an issue of marketable loans to interpose a trustee, normally a trust corporation,[65] between the company and the bondholders or stockholders. The loan contract is then between the company and the trustee, and any security over the company's assets can be made out in favour of the trustees, who hold it on trust for the benefit of the debt security holders. Such an arrangement has many advantages.

First, it greatly simplifies the security arrangements.[66] A legal mortgage can be vested in the trustees, on trust for the debt security holders, and the trustees retain custody of the title deeds; a charge can be granted in favour of the trustees, and the rights under the charge document exercised by the trustees for the benefit of the debt security holders. This is difficult, sometimes impossible, with multiple parties.

Secondly, the primary enforcement of the loan (and any security) will be between the company and the trustees, being the parties to the loan agreement.[67] A practical side-effect of this is to impose equality amongst the debt security holders, although their own governance arrangements generally reinforce that.[68]

Finally, it will provide a single trustee corporation or a small body of persons charged with the duty of monitoring the debt

security holders' interests and of intervening if they are in jeopardy. This is obviously far more satisfactory than leaving it to a widely dispersed class of investors, each of whom may lack the skill, interest and financial resources required to take action alone.[69] It will also be possible, by the trust deed, to impose on the trustee company or its directors additional obligations, regarding the submission of information and the like, which might not otherwise be practicable.[70] Similarly, the trustees can be empowered to convene meetings of the holders in order to acquaint them with the position and to obtain their instructions.

Issue of Debt Securities

Private issues

31–15

The act of issuing debt securities (assuming no public offer) is not much regulated by the Act. The one significant provision is to the effect that a contract with a company to "take up and pay for debentures" is specifically enforceable, as noted earlier.[71] Otherwise, in the absence of a public offer, the Act is notable for the absence of regulation of the issuing process, assuming instead that debenture holders will themselves make appropriate provision for their own protection.[72]

In addition, and unlike the rule applying to shares,[73] there is no rule in the Act, even for public companies, requiring the authorisation of either the shareholders or the existing debt security holders for a new issue of debt, although this matter may well be one of the matters regulated in the trust deed of the existing debt securities.[74] In some ways this is surprising, since a large increase in the company's debt could have a significant impact—positive or negative depending on whether the venture in which the new funds are embarked is successful—on the prospects of the shareholders and debt holders.[75] Nor does the Act create pre-emption rights[76] on an issue of debt, probably because the rights of the existing debt holders are not affected by a new issue, although their value might be, since a company seen to be overburdening itself with debt would cause the market value of its existing debt instruments to fall. Again, however, this matter can be dealt with in the trust deed governing the

existing debt.

Finally, since debt does not count as legal capital, the rules relating to issue at a discount and to the quality of the consideration received, which apply to shares,[77] are not extended to debt generally or debt securities in particular.[78] For the same reason, the distribution and capital maintenance rules[79] do not apply to loans, so that interest may (normally must) be paid on loans even though no profits have been earned, and debts may be freely repurchased by the company (subject to the loan terms themselves), assuming in both cases it has the cash to do so. The only specific statutory provision in this area in fact facilitates repurchases of debt by providing that redeemed debt securities may be reissued with their original priority, rather than cancelled, unless the company's articles contain provisions to the contrary or the company in some other way resolved to cancel them.[80]

31–16

Of course, the general duties of directors will still apply to their decisions relating to the issue of debt securities, even, perhaps especially, in the absence of specific statutory regulation in the area.

Although all this is left unregulated, the Act does contain a number of largely administrative provisions relating to the issue of debt securities. Section 741 requires companies to register an allotment of debentures with the Registrar of companies, as is required for shares, so that the existence of the debentures is public knowledge (unless the debentures are issued as bearer debentures). A company is not obliged itself to keep a register of debenture holders, but, if it does, it must locate it and make it available for inspection by debenture holders and members of the public in the same way as the register of shareholders.[81] This includes the power, applicable also to the share register, to apply to the court for an order not to comply with the request for inspection.[82] Probably more important in practice is the provision which entitles a debenture-holder to be provided at any time (on payment of the appropriate fee) with a copy of the trust deed on which the debentures are secured, if, as is normal, there is such a trust.[83] This provision is perhaps the functional

equivalent of the public availability of the articles in the case of shareholders.

Finally, as we shall see in Ch.32, where debentures are secured against the company's assets, it is often necessary to register those security instruments at Companies House, on pain of invalidity against the liquidator on the company's insolvency.

Public issues of debt securities

31–17

Matters change radically, however, if there is a public offer of debt securities. In that case, much of the law discussed in Ch.25 will be applicable. As with shares, this is to ensure that those buying debt securities on the primary or secondary markets have the appropriate information necessary to assess the risks. One difference, though, is that it might be thought that the risks are inherently smaller with debt securities, since the holder of a debt has the ultimate right to sue for the sum due under the debt, and is also commonly protected by powerful contractual and perhaps proprietary provisions to assist on that front, whereas the holder of the share has a mere expectation of benefit and therefore perhaps requires a wider range of information upon which assess the relevant risks. This is perhaps the explanation for the hierarchy of information requirements,[84] which puts equity securities ahead of debt securities issued to the retail market, and then debt securities issued to the wholesale market,[85] and leaves the private syndicated loan market completely unregulated by the Act.

The prohibition on private companies offering their shares to the public extends to a public offer of any securities, including debt securities.[86] If public companies do offer their debt securities to the public, the required disclosure varies depending upon whether the offer is general, or is, on the other hand, either explicitly directed only to sophisticated ("qualified") investors or is of such large denomination (i.e. at least €100,000) that it can be assumed to be addressed only to such a sophisticated ("wholesale") market.[87] And if the issued securities are then to be traded on a secondary market, as would be typical for reasons already discussed,[88] the continuing disclosure rules again depend upon the sophistication of the market participants, with securities

listed on the Professional Securities Market ("PSM") attracting a less onerous regime.[89]

It might be thought that if companies already have listed shares, then they would automatically opt for the more onerous regime, since it opens the debt issue to wider markets and the companies are already subject to onerous disclosure regimes in respect of their equity securities. However, the specific disclosure required for a new issue is substantial, and debt security issues are typically put together in quick order, so companies will make use of whatever exemptions are possible, while still ensuring they have access to the most fruitful markets.[90]

31–18

All this may change quite substantially in the near future, however, with the European Commission proposing to remove these heavy-weight debt exemptions, in the interest of opening up this exclusive market to smaller investors,[91] and achieving this by removing the incentive to create large-denomination debt securities, and at the same time putting in place an appropriate information regime for general investors.

Otherwise, many of the rules on public issues of shares also apply equally to public issues of debt securities, and for similar reasons. One notable difference however, is that there is no limitation on the payment of underwriting commissions, and an allotment may be made no matter how small a response there is to the offer.[92] This is no doubt because the rights of the debenture-holder are comprehensively specified in the debt contract, whereas with shares, the expected returns may depend very materially on these two features.

Finally, note that an issue may begin as a private issue to an underwriter or other financial institution, and those institutions may then themselves provide the necessary disclosure to enable the securities to be traded on either wholesale or retail markets.

Special rules: covered bonds

31–19

A further means of regulation is focused not broadly on all

public offers, but more narrowly on specifically defined types of transactions. We see this in evidence in the regulatory regime which has been put in place relating to financial collateral,[93] and to the credit derivatives market.[94] Similarly, specific regulation has been implemented related to covered bonds, in the form of the Regulated Covered Bonds Regulations 2008.[95] A "covered" bond (sometimes called a "structured covered bond") is a particular form of bond which is payable by the issuer (typically a bank or building society[96]), but is also backed by a specific pool of high quality assets, in the UK held by a special purpose vehicle ("SPV"), so that the assets are ring-fenced with the result that, if the issuer becomes insolvent, the repayments on the bond can continue to be made by recourse to the those assets, and in priority to the issuer's general creditors.

The regulations are designed to ensure that the asset pool is high quality[97]; that its value is maintained throughout the life of the bond at a high enough figure to ensure that the bond is 8 per cent "over-collateralised",[98] thus guaranteeing sufficient resources to cover realisation costs and bondholder repayment in full; that there is regulated oversight of the collateral by the issuer and the "Asset Pool Monitor" (analogous to an external auditor)[99]; and that there is consistent and frequent reporting to investors. These additional reporting and oversight requirements aside, a covered bond differs from a normal securitisation principally in that the issuer of a covered bond remains liable to the bondholder, whereas a securitisation is typically non-recourse; and the pool of assets associated with a covered bond is regulated so that the issue is compulsorily "over-collateralised".

What has this structure achieved? From the company's point of view, it has turned (illiquid) mortgages into cash which it can use to expand its business. And, conversely, from the investors' point of view, they have made a loan to the company but of a highly secure type. Provided the SPV has been set up in such a way that the assets purchased by the SPV cannot be clawed back by the issuer in the latter's liquidation and provided the issuer is obliged to maintain the quality and value of the mortgages held by the SPV, the note-holders can remain unconcerned about such an event because their security will remain intact. This is why

the bond is “covered”.[100] Overall, the issuer is incurring debt through the covered bond in order to further the business of itself making secured loans to others, its business model turning on its ability to borrow money through the bond at a lower rate of interest than it itself charges when lending to others.

31–20

It will be apparent that the above structure can be created by contract and so it may be wondered how the need for the Regulations arises. Such bonds were not brought into existence by the Regulations, though they are a relatively recent development in the UK. In fact, the purpose of the Regulations is to create a more ready market for covered bonds rather than to bring them into existence. The market for them is restricted, in the absence of the Regulations, by provisions in EU law and, equally, EU law indicates the way forward to the expansion of that market. In particular, the UCITS (undertakings for collective investment in transferable securities) Directive 2009/65/EC (as amended by Directive 2014/91/EU), which governs what are or used to be referred to in the UK as unit and investment trusts, contains the prudential rule that such a body may invest no more than 5 per cent of its assets in the securities issued by the same body.[101] However, this limit may be raised to 25 per cent in the case of bonds meeting certain quality standards, set out in the Directive.[102] A similar restriction on investment by insurance companies and relaxation of that restriction in the case of UCITS-compliant bonds are also to be found in EU law. Finally, UCITS-compliant bonds are less heavily weighted in banks’ risk profiles than non-compliant bonds.[103]

However, producing a UCITS-compliant covered bond requires the use of legislation. Article 52(4) of the UCITS Directive requires (a) that the issuer (which may only be a “credit institution”, i.e. a bank or similar deposit-taking body) be “subject by law to special public supervision designed to protect bond-holders”—presumably additional to the supervision to which it is already subject by virtue of being a bank—and (b) that the law control the assets in which the proceeds of the bond may be invested and ensure the priority of the investors’ claims in the event of the insolvency of the issuer. It is perfectly lawful to continue to issue covered bonds which do not comply with the

new regulations, but in this case they will not benefit from the additional market possibilities, noted above. The Regulations implement the above principles by creating registers of "recognised" issuers and issues of covered bonds, access to which is controlled by the Financial Conduct Authority.[104] An applicant must have its registered office in the UK and be a body already authorised under the Financial Services and Markets Act to carry on activities as a deposit-taker and the FCA must also be satisfied that the applicant issuer and the owner of the asset pool (i.e. the SPV), will comply with the requirements imposed on them by the Regulations.[105] To claim to issue recognised covered bonds without issuer and issue being on the registers is a breach of the Regulations and makes the issuer liable at a minimum to monetary penalties imposed by the FCA.[106]

The proceeds of the issue may be used only to acquire "eligible assets" which term goes beyond mortgages on residential or commercial real property to include public sector loans, loans to a registered social landlord which may be secured on the income arising from letting of the properties as well as loans secured on the properties themselves, and loans to project companies under certain types of public-private partnerships. The property must be situated in any EEA State or in one of a limited number of other designated States.[107] Those assets must be transferred to an asset pool which must be capable throughout the life of the bond of covering the bond-holders' claims and the costs of administering the pool.[108] Priority is given to the claims of bond-holders in insolvency of the owner.[109]

Transfer of Debts and Debt Securities

Transfer of simple debts

31–21

Although the rules on legal capital do not stand in the way of repurchase by a company of its debts, unlike its shares,[110] it may well be financially extremely inconvenient for the company to do so (or indeed it may be prohibited by the lender[111]). However, it is normally possible for the lender to find liquidity in other ways. There may be a private market in the loans, and indeed many banks lending to private equity funds aim to have only a

small, if any, proportion of the loans made on their books six months after the transaction completes.[112] These loans can be transferred by outright sales, such as invoice discounting to a financier (of distressed debt if the rating of the debt security is poor), or by securitisation transactions (real or synthetic),[113] or in other ways.

The ability to transfer debt in this way helps persuade lenders to agree to provide finance, but, on the other side, it may also tempt lenders to worry less about the repayment risks, knowing that they can shift those risks to third parties. The financial crisis in 2008 presents clear evidence of this. Where debt securities are traded on public markets, the compulsory disclosure rules are designed to minimise those risks for secondary purchasers, although their effectiveness in this regard might be questioned; otherwise, as elsewhere, the rule is, "buyer beware".

Transfer of debt securities

31–22

Turning from transfers of debt generally to transfers of debt securities, these can be absolute (whether at law or in equity) or by way of security interest (see Ch.32, below). We do not say a great deal about the legal rules here,[114] since the legislation clearly assumes that debt securities will be transferred in much the same way as shares, and so reference can simply be made to the discussion in Ch.27. Hence, initial allotments and subsequent transfers of registered debt securities must be registered (s.741, as s.554 for shares; and s.771 for transfers of both), and the register must be open for inspection with the right to obtain copies of it (ss.743, 744); as with shares, the bond documentation or certificates of debenture stock must be issued by the company to the holder within two months, unless the issue is to a clearing house or its nominee (ss.769, 776, 778, although for debt securities there is no equivalent of s.768 providing for the certificate to be evidence of title); and, as with shares, the transfer, unless by operation of law or by CREST, must be in writing using an appropriate instrument of transfer (s.770). Equally, the Uncertificated Securities Regulations 2001 (as amended) uses the word "securities", and so permits the transfer of title to debt securities held in uncertificated form.[115]

And in relation to these debt securities held in uncertificated form, the Operator is now required to maintain in the UK a register of the names and addresses of those holding debt securities in this way, together with a statement of the size of the individual holdings.[116]

Transferees could also be faced with problems, similar to those in relation to shares, regarding equitable and legal ownership of debt securities and the priority of competing transferees. On general principles relating to assignments of choses in action, a transfer of legal title to a debt security should be an equitable assignment only, until it becomes a legal assignment when the company receives notice of it. But, as with shares, and given that registration is compulsory under the 2006 Act, it seems the legal title should pass from transferor to transferee only at the later date of actual registration. But it is now usually only the trustee for the debt security holders who has legal title to the debt. The question is different, of course, and can involve nice matters of law, where the transferor's interest is only ever equitable, as it invariably is with debenture stock (notwithstanding that the holders must be registered) and also with other intermediated securities, as is now common practice with most marketable debt securities.[117]

Other differences flow from the fact that, whereas the rights of shareholders depend mainly on the provision of the company's articles, which will have been drafted in the interests of the company, those of debt holders depend upon the terms of a contract between lender and borrower and its terms will have to be acceptable to the lender as well as the borrower. Some debt securities will, like shares, include non-assignability clauses, or clauses restricting assignment subject to conditions.[118] This might seem an odd clause to include in a debt, but it will protect the corporate debtor from losing potentially valuable post-assignment rights of set-off against the creditor, or protect against possible transfer of the debt to a third party who may not be quite so generous in deciding when and how to enforce the agreed debt covenants. The question then arises, precisely as with shares, whether a purported assignment in breach of the anti-assignment clause is effective to give the assignee any rights at all. The answer, as with shares, depends upon the precise

terms of the clause, but the analysis can be difficult.[119]

31–23

With marketable debt securities, by contrast, there will be no problems arising from restrictions on transferability or from a company's lien; debt securities will invariably provide that the money expressed to be secured will be paid, and that the debt securities are transferable, free from any equities or claims between the company and the original or any intermediate holder.[120] It is possible that the terms of issue of the debt securities will be inconsistent with their being held in uncertificated form, in which case they will need to be altered if the company wishes to make this form of holding debt securities available.[121] The Regulations do not provide a simple shortcut to the necessary amendments, as they do in the case of shares, but they do something to encourage trustees to agree to such amendments without holding a meeting of the debt security holders. A trustee for debt security holders is not to be chargeable with breach of trust by reason only of his assenting to changes in the trust deed necessary to enable the debt security holders to hold the debt securities in uncertificated form or to transfer them or exercise any rights attached to them electronically.[122]

The great contrast, however, between debt and equity securities is that debt securities secured by charges on the company's property throw up problems regarding the priority between conflicting charges. These problems are dealt with in the next chapter.

Protective Governance Regimes in Debts

General

31–24

The terms on which debt financing is agreed will depend upon the risk-reward calculations between the lender and borrower. Higher interest rates and greater restrictions on the debtor's autonomy, as well as proprietary security, are typical if the risk is high. As well, where there are multiple lenders, the lending parties need to put in place co-ordination rules. These aspects are

considered briefly; they are not peculiar to companies.

Defining repayment terms

31–25

A debt security issued by a company (or indeed any debt) is primarily a matter of contract between lender and company. The legislature does not specify one, or even a number, of forms that the debt security must take, any more than it does with shares. Nor, however, does it even provide any equivalent of the model articles. It is thus difficult to describe a "typical" debt security. However, the security will normally have, unlike a share, an end-date, i.e. a point at which the amount still outstanding has to be repaid (its "maturity date")—though it is possible to make the loan totally irredeemable (s.739). That maturity date can be set as the parties wish, but may be quite long, for example, 40 years. The instrument also typically requires the amount lent to be repaid in regular instalments over the life of the loan (in which case it is called "amortising" debt), although it is also possible for the parties to provide that nothing needs to be repaid either until maturity (which is unlikely in the case of long maturities, unless the loan is backed by very high quality assets) or only after a considerable period of time has passed (say, eight to ten years), at which point the amount becomes repayable which would have been paid over this period through a normal amortisation arrangement. Such debt is sometimes called "bullet" debt, perhaps because of its likely impact on the borrower.[123]

The instrument will normally provide for the periodic payment of a fixed rate of interest at fixed points in time, but there is no reason why the interest rate so specified should not vary (provided there is a clear mechanism for working out what it is at any one time) nor, as we have seen, why interest should not be "rolled up" and be payable at a later date (sometimes on the maturity of the loan). In such a case the lender earns a return by buying the security at a discount to its face (or nominal or principal) value (i.e. the amount the company promises to repay) and takes the return as a capital gain rather than income, but only at maturity or, if the price of security in the market rises, upon sale to a third party.

The lender may have the right to recall or the borrower to repay the loan ahead of the repayment schedule,[124] or they may be specifically prohibited from so doing. Section 739 recognises that the security may be made irredeemable by the borrower, or redeemable only in certain circumstances, "any rule of equity to the contrary notwithstanding". This removes any doubt about the validity of such a restriction.[125]

Protecting the debt holder against the borrower's possible default

31–26

None of the above clauses provide the lender with ongoing reassurance that the borrower remains able to repay the debt. Accordingly, it is common to insert a variety of covenants in the loan documentation with this objective in mind. Through such covenants, lenders become part of the corporate governance structure of the company, and may have a far more significant impact on management than the shareholders if the company is near to breaching its loan covenants.

Of course, the extent to which lenders are able to insert such covenants in their loans depends upon the level of competition in the market for such loans. For a period in the early 2000s up until the middle of 2007, competition among banks for the opportunity to fund private equity buy-outs was so great that "covenant-light" loans became common, i.e. bank loans with little by way of restrictive covenants inserted. In more normal circumstances, however, substantial loans are typically issued subject to important constraints on management.[126]

The best protection is proprietary security. That is discussed in the next chapter. If the lender does not have the bargaining power to insist on security, or if the company has no further assets over which security might be granted, then alternative contractual protections become increasingly important. They are, however, typically included even when security is taken.

31–27

Loan covenants typically require the borrowing company to provide the lender with periodic accounting information, perhaps

including credit ratings, to conduct its operations so as to maintain pre-determined financial ratios between assets and liabilities, and to refrain from certain defined acts or activities, or at least refrain from them without the prior consent of the lender. The list of prohibitions typically includes disposing of substantial assets, changing the primary business activities of the company, taking on additional loans, granting further security, distributing dividends above a nominated level of return, or changing the management or ownership structure.[127] The list of possibilities does not end there, but their objective is clear. In addition, the debenture may provide for the lender to be part of the management of the company by giving it the right to appoint a director.[128]

If any of these covenants is breached, the debenture usually defines this as "an event of default" upon which the lender is given various rights, usually including the right to accelerate repayment, to take new security, to enforce existing security, to impose repayment penalties (drafted, of course, to avoid invalidity as a "penalty clause"[129]), and such like. From this list, the lender can elect the most appropriate course of action. It is not usual to make the consequences of default automatic, as undoing their automatic effect can be very difficult if the breach is, for example, merely technical and one which the lender is inclined to ignore.

It might be asked what consequences would follow if the company decided unilaterally to exercise its powers, either at board level or in general meeting, to subvert these covenants—for example by the general meeting dismissing the debenture holder's nominee director,[130] or effecting other significant changes to the articles. But this is hardly a live issue: the breach would invariably constitute an event of default, normally entitling the debenture-holder to require the debt to be repaid immediately and, if it was secured by a charge on the company's property, to enforce the security. This is a far more effective remedy—and disincentive—than a claim for damages for the breach. Thus, while the value of the lender's rights may depend on the continued prosperity of the company, particularly if the loan is unsecured, lenders (including debt security holders) are not normally subject, as is a shareholder, to any serious

possibility that the agreed rights will be varied by the company by corporate action without the lender's consent.

Protecting multiple lenders from their lead intermediary

31–28

With both syndicated loans and debt securities, there is a "leader" in the collaboration between the multiple lenders, with the leader typically being the person to whom the corporate debtor is to make the necessary loan repayments, and who can enforce the debt, or implement acceleration provisions, or agree to modifications of the terms of the debenture. Thus, by contract, the parties provide for collective enforcement of their debt.[131]

But when things go wrong and the debt is not repaid according to its terms, or negotiations seem to go awry, these leaders are especially likely to come in for criticism. Different obligations are owed depending on the selected debt structure and the terms of the contractual engagement, but a brief outline gives the general features.

In syndicated loan agreements, the arranger, in putting the deal together, will clearly owe a duty of care to the other participants, although this duty can be expressly excluded in large measure,[132] especially in relation to misrepresentations as to the features of the loan and the standing of the debtor.[133] Whether, during the term of the loan, the arranger also owes the other lenders general fiduciary duties seems unlikely, unless the particular facts are such as to call into play such a relationship,[134] but otherwise the general rules of contract and tort apply, with no special statutory overlay.

31–29

By contrast, there is less flexibility with debt securities using trustees as intermediaries,[135] as is now the practice. The debt security holders are dependent on the trustees for the proper protection of their interests, and their remedies are primarily against the trustees, rather than the company. This is made all the more attractive since these trustees are likely to have deep pockets, although note that in modern structures with account

holders and a string of sub-trusts, the beneficiary's only claim is against the immediate trustee—there is a "no look through" rule preventing access to trustees higher up the chain. The trustees are subject to all the general common law, equitable and statutory duties imposed on trustees, and the extent to which these can be relaxed by the trust deed is limited, not only by the common law,[136] but more importantly by what is now s.750, which invalidates provisions in trust deeds (or elsewhere) which purport to exempt a trustee from, or to indemnify him against, "liability for breach of trust where he fails to show the degree of care and diligence required of him as a trustee having regard to the provisions of the trust deed conferring on him any powers, authorities or discretions".[137] As a result, the powers and obligations of trustees are likely to be set out fairly fully in the trust deed, and to be supplemented, typically, by arrangements for debt holder voting on difficult issues, so as to protect the trustee against internal complaints and potential litigation concerning the exercise of its powers.[138]

Even so, trustees can be excessively cautious in fulfilling their obligations. In *Concord Trust v Law Debenture Trust Corp Plc*,[139] the House of Lords found that the debtor company had "terrified the trustee" into declining to implement a valid instruction given to it by the requisite majority of the bondholders unless the trustee was given an indemnity by the bondholders against what the court thought was a fanciful liability to the company on the part of the trustee should the trustee's action of declaring a default and accelerating the bond (i.e. requiring it to be repaid) turn out to be ill-founded.

Protecting multiple lenders from each other

31–30

As well as settling the boundaries for the relationship between the multiple lenders and their leader, the lenders need some protection from each other. Typical trust deeds therefore include "no action" and "pari passu" provisions, expressly prohibiting individual debt holders from seeking to enforce any rights against the debtor company, or to recover any more individually than would be recovered under collective action. In addition, in syndicated loans, there can be complicated subordination

agreements between the different parties. All these, added to the formal collective action structure, are designed to prevent any one party gaining “first mover advantage”.[140]

But these days the more difficult governance issue concerns the possible judicial review of voting at meetings of debt security holders. There has to be a decision-making process, but it must be such that it does not oppress minorities. The trust deed typically provides for the security holders to give directions, often by majority vote (perhaps a simple majority or some special majority, in number or in value or both, depending on the issue under review, or perhaps some other agreed regime that seems, at the time of the agreement, to afford the participants the necessary protection of their personal interests). This decision is commonly required to be reached at a meeting of the security holders, called in an agreed way, with specified notice, and typically allowing representation by proxies. The parallels between this contractually agreed regime for debt securities and the combined statutory and contractual regime for equity securities is obvious, and so too the legal issues in its resolution.[141]

In these circumstances the debt holders do not have the protection of the unfair prejudice provisions which apply only to “members”.[142] The issues are left to the common law. The first requirement is that any decision must be fully informed. It is usually left to the trustee to ensure that proposals are fully and fairly explained in the circulars seeking the needed consents.[143] Further, the courts have applied to decisions of a majority of the debenture holders binding on the minority the same common law doctrine applied to decisions by shareholders to alter the articles,[144] i.e. the decision must be made bona fide[145] in the interests of the debenture holders,[146] and for the purposes for which the power is granted.[147] Taking each of these requirements in turn (although in older cases they are often regarded as comprehending a single test), the limits of the controls become readily apparent. It is usually impossible to prove absence of bona fides. Further, as we saw with shareholders, it is often equally difficult to prove that a decision is not “in the interests of the debenture holders”, especially if—as with shareholders—this is taken to mean that the decision is one which the debenture

holders themselves subjectively view as in their interests, subject only to a rationality test. Indeed, proof that a decision is not in their interests is generally even more difficult than with shareholders, since the voting requirement is often designed precisely to resolve issues where the different debtholders' interests may be in conflict. Faced with these facts, it is necessarily the final strand in the test—the proper purposes aspect—which is to the fore in determining whether the majority decision should stand.

31–31

However, even a "proper purposes" test does not give the courts much leverage to intervene, especially where the various interests of the debenture holders are in conflict, and the vote is designed (i.e. its purpose is) to resolve the outcome in favour of one or other side, and there is nothing in the facts which suggests more than a predictable difference of opinion.[148]

On the other hand, there are a small number of cases which show that the rule has some teeth.[149] Thus, in *British America Nickel Corp Ltd v O'Brien*[150] a decision of the majority of the bondholders, modifying their rights, was invalidated on the grounds that one of the bondholders, whose support was necessary for the passing of the resolution, was to receive under the scheme a block of ordinary shares, with that opportunity not available to the other bond-holders.[151] In the *O'Brien* case, Viscount Haldane said that the power of alteration "must be exercised for the purpose of benefiting the class as a whole", and the courts have often been quick to conclude that the purpose is self-interest, not class interest, where there are particular and exclusively personal benefits hanging on the voting outcome (beyond those, of course, which are inherently and necessarily delivered by the vote itself).

This same approach was adopted by Briggs J in *Assénagon Asset Management SA v Irish Bank Resolution Corp Ltd*,[152] with more modern, and more explicit, reference to the equitable requirement of proper purposes in the exercise of power, and the need to ensure powers were not used to oppress minorities. This case involved a more complicated inducement from the debtor company to the debt holder to vote in a particular way,[153]

adopting an apparently common technique of requesting "exit consents", which offered the debt holder a lower denomination bond in exchange for a commitment to vote in a way which would, effectively, destroy or extinguish the existing bond. Of course, the bondholders who did not accept this inducement before the pre-meeting deadline (thinking it priced their bonds too conservatively) ran the risk—the prisoner's dilemma—of the vote going against them, and being left with an old bond rendered almost worthless. Gamesmanship was clearly an essential part of the debtor company's strategy,[154] and its effectiveness was ensured because the timing went against effective co-ordination by the bondholders. But in legal terms, the real question is what distinguishes *Assénagon* from *Azevedo*.[155] In both cases there was an inducement offered to all bondholders, but accepted only by some; in both the vote reduced the value of the old bonds. The legal difference cannot, it seems, lie merely in the size of the inducement or the magnitude of the devaluation. But quite where it lies is not clear. These cases reinforce the conclusion that although this protection is important to debt security holders, and although the principles in play may be readily stated, they are anything but easy to apply with confidence.

Where there is some doubt as to the legitimacy of a decision taken in this way, the parties may feel more secure seeking the sanction of the court via a scheme of arrangement if the company is solvent,[156] or a company voluntary arrangement if the company is insolvent.[157]

Conclusion

31–32

From the above analysis it will be clear that the terms and structure of debt which companies take on are left very much to be bargained out between lenders and borrowers. Consequently, most of the law in this area consists of the principles of the law of contract and the law of property, with relatively little in the way of special company law regulation, except where the company wishes to issue its debt securities to the public, or enable those securities to be traded on a secondary market (where the rules are similar to those applying to equity

securities), or where the company agrees to give a charge over its property to secure the loan, which is the topic for the following chapter.

[1] BIS/Companies House, *Statistical Tables on Companies Registration Activities 2012/13*, Table A6.

[2] Apple is perhaps one of the few companies that may not need loans to fund its operations (although it chose to do so to maximise returns); it can rely on operating profits, especially as it has also had, until 2012, a policy of not paying dividends on shares.

[3] These forms of financing are not discussed here, but include, e.g. the familiar mechanisms of hire-purchase, retention of title, conditional sales, sale and leaseback, finance leases, supply-chain financing, debt/receivables factoring and "repos" (sale on terms providing for repurchase). These are all well-covered in specialist texts such as L. Gullifer and J. Payne, *Corporate Finance Law: Principles and Policy*, 2nd edn (Oxford: Hart Publishing, 2015). With all of these, proper characterisation can be problematic, raising the risk that the courts will instead characterise the arrangement as a charge, which may be void for want of registration: see below, paras 32–24 et seq.

[4] With these further subdivided into "bonds" and "stock", although with the use of global notes and intermediation, the modern differences between these have become rather slender.

[5] Or—looking at the transaction from the other end of the telescope—we might speak not of debts and debt securities, but "loans" and "marketable loans". The latter perhaps gives a clearer sense of the similarities and distinctions in issue.

[6] See paras 16–26 et seq. and 24–6 et seq. respectively.

[7] *Lemon v Austin Friars Investment Trust Ltd* [1926] Ch. 1 (instrument not prevented from being a debenture because interest payable only out of profit, which might or might not be earned in any particular year).

[8] But the debt-holder's vote should not be counted if the Act requires the resolution to be passed by "members".

[9] See below, para.31–26.

[10] On whether they should be treated as debt or equity, see W. Bratton and M. Wachter, "A Theory of Preferred Stock" (2013) 161 University of Pennsylvania L.R. 1815. The classification may be different for different purposes, e.g. accounting purposes, or tax purposes.

[11] See para.12–1. Whether the preference shareholder is entitled by contract to the dividend, even if the company cannot lawfully pay it, is a separate question. And a potentially important one, because non-payment of the contractually due dividend may trigger voting rights for the preference shareholders or affect the amount due to the preference shareholders when the company returns to profit or is wound up: *Re Bradford Investments Plc (No.1)* [1991] B.C.L.C. 224.

[12] An alternative to conversion is to issue debt securities with attached warrants which give the lender the option to subscribe for shares. The debt is then not swapped—it continues—but the lender has the added benefit of an equity interest in the company.

[13] See generally P. Pope and A. Puxty, "What is Equity? New Financial Instruments in

the Interstices between Law, Accounting and Economics” (1991) 54 M.L.R. 889.

[14] To issue at a discount debt instruments which can be immediately converted into shares of the full par value would be a colourable device to evade the prohibition on issuing shares at a discount (*Moseley v Koffyfontein Mines* [1904] 2 Ch. 108 CA) but appears to be unobjectionable if the instrument is convertible only when the debentures are due for repayment at par since the shares will then be paid up in cash “through the release of a liability of the company for a liquidated sum”: s.583(3)(c). See also, above at para.11–15 on debt/equity swaps.

[15] See ss.989, 990 (but see ss.983(2)(b) and (3)(b) ignoring such debentures in calculating the 90 per cent threshold for the exercise of the sell-out right).

[16] See the summary in BIS, *Financing a Private Sector Recovery* (Cm 7923, July 2010), Ch.3.

[17] F. Modigliani and M.H. Miller, “The Cost of Capital, Corporation Finance and the Theory of Investment” (1958) 48 American Economic Review 433; and also see Miller, “The Modigliani-Miller Propositions After Thirty Years” (1988) 2 Journal of Economic Perspectives 99.

[18] And, with unhelpful circularity, “securities” are then defined to “mean shares or debentures” (s.755(5)).

[19] See below, para.31–13, for more detail on debenture stock and bonds, neither of which are defined in the Act.

[20] See below, Ch.32. And unsecured loans are sometimes referred to as “loan stock”, in contradistinction to “debenture stock”.

[21] The courts have not done much better: *Levy v Abercorris Slate & Slab Co* (1887) 37 Ch. 260 at 264; *British India Steam Navigation Co v IRC* (1881) 7 Q.B.D. 165 at 172; *Lemon v Austin Friars Trust* [1926] Ch. 1 at 17 CA; *Knightsbridge Estates Co v Byrne* [1940] A.C. 613 HL.

[22] See above, Chs 24 and 25.

[23] *Fons HK (In Liquidation) v Corporal Ltd, Pillar Securitisation Sàrl* [2014] EWCA Civ 304 CA.

[24] *Fons HF (In Liquidation) v Corporal Ltd* [2013] EWHC 1801 (Ch).

[25] See Tijo, (2014) 73 C.L.J. 503; Roberts, [2014] J.I.B.F.L. 431.

[26] Where the difficult issue, if there is one, is usually whether there has been an offer to the public, rather than whether what is offered falls within the exceptionally wide and inclusive definition of a debenture.

[27] Thus overcoming the decision in *South African Territories Ltd v Wallington* [1898] A.C. 309 HL.

[28] Perhaps because the claim would in any event be regarded as one in debt, not damages; or perhaps that damages, assessed in context, would in any event give the company full recovery.

[29] *Knightsbridge Estates Ltd v Byrne* [1940] A.C. 613 HL.

[30] Whilst also accepting that the mortgage would not be a “debenture” for the purposes of some of the other sections of the Act: Viscount Maugham at 624. Clearly such a mortgage does not have to be registered in the company’s register of debenture holders

under s.743 in addition to registration of the mortgage under Pt 25.

[31] See *Hooper v Western Counties and South Wales Telephone Co Ltd* (1892) 68 L.T. 78; *Hyde Management Services (Pty) Ltd v FAI Insurances* (1979–80) 144 C.L.R. 541 Aust HC. And in the *Knightsbridge Estates* case, Viscount Maugham suggested as much, at least between competent and well-advised contracting parties: at 626.

[32] Care must be taken with these transactions. Often, it is true; the insiders provide loans on very favourable terms. But sometimes the terms are exploitative, and the risk is that they may then be held to amount to an unlawful return of capital: *Ridge Securities Ltd v IRC* [1964] 1 W.L.R. 479; *Progress Property Co Ltd v Moore* [2010] UKSC 55; [2011] 1 W.L.R. 1 SC.

[33] *Salomon v Salomon & Co Ltd* [1897] A.C. 22 HL. See above, para.2–1.

[34] With the various banks using either agency or trust structures to manage their relationship with each other: see below, paras 31–10 et seq.

[35] For a description of typical funding arrangements see FSA, *Private Equity: a discussion of risk and regulatory engagement*, DP 06/6, November 2006, paras 3.52 et seq.

[36] So, as with shares, the Stock Exchange can provide a primary market for the issuance of debt securities and a secondary market for trading in them.

[37] See above, Chs 24 and 25 and below, paras 31–17 et seq.

[38] See below, paras 31–24 et seq.

[39] See below, para.32–12.

[40] See above, Ch.19.

[41] See L. Gullifer and J. Payne, *Corporate Finance Law: Principles and Policy*, 2nd edn (Oxford: Hart Publishing, 2015), Ch.8.

[42] On the related duties, see below, para.31–28.

[43] Assuming there is no pragmatic reason for some alternative explicit subordination agreement.

[44] See P. Rawlings, “The Management of Loan Syndicates and the Rights of Individual Lenders” (2009) 24 J.I.B.L.R. 179.

[45] See below, paras 31–28 and 31–30.

[46] And thus typically are not rated by credit rating agencies.

[47] The difference between the two used to be that bonds had longer maturities than notes or commercial paper, although it was never clear precisely where the line was drawn. Both terms are now used far more indiscriminately.

[48] As already noted, the definition of “debenture” in s.738 includes both “bonds” and “debenture stock”.

[49] In the future, all traded securities will be obliged to be either dematerialised, or immobilised and held through intermediaries, in order to improve the efficiency and integrity of the market: Regulation (EU) No.909/2014, recital 11 and arts 3 and 79 (form 1 January 2023 for new issues after that date, and from 1 January 2025 for all transferable securities).

[50] Some would have the necessary characteristics, but nevertheless be traded “over the counter” (“OTC”).

[51] See above, Ch.24, for the equivalent terminology in relation to shares.

[52] This was essential if the bond was a bearer bond, and thus intended to be a negotiable instrument.

[53] Although then there is the nice question of what, precisely, is the subject-matter of the trust: see L. Gullifer and J. Payne, *Corporate Finance Law: Principles and Policy*, 2nd edn (Oxford: Hart Publishing, 2015), pp.383–390.

[54] See below, para.31–30.

[55] For details of the transfer of intermediated securities, see Ch.27.

[56] See below, para.31–14.

[57] Alternatively, the company can create loan stock by deed poll, i.e. by unilaterally executing a deed which promises to pay those registered as stockholders, which is enforceable by anyone who is a stockholder. This structure is less common, usually confined to larger issues with few holders and no active market.

[58] 2006 Act s.126.

[59] See above, para.27–12.

[60] See above, para.23–11 where it is noted that conversion of shares into stock is no longer permitted.

[61] Made especially few because the competing interests are also typically equitable, e.g. sale of stock by a stockholder is sale of an equitable interest, so does not raise the spectre of competition with a bona fide purchaser for value. But also see *Re Dunderland Iron Ore Co* [1909] 1 Ch. 446, 452, and noted below, fn.67.

[62] Debenture stock can be created de novo; there is no need to create debentures and then to convert them to debenture stock as there is in relation to shares and stock.

[63] In practice there is likely to be a prescribed minimum amount which can be subscribed for or transferred. If this minimum amount is equal to the nominal value of any bonds which the company might otherwise issue, then, of course, this particular advantage of debenture stock disappears.

[64] A simple document of one sheet, similar to a share certificate, in contrast with a bond which will, unless there is a trust deed (see below, and now almost invariably the case), have to set out all the terms.

[65] Formerly it was common for banks to undertake this work but they have tended to fight shy of it since *Re Dorman Long & Co* [1934] Ch. 635 drew attention to the conflict of interest and duty which might arise when the bank was both a creditor in its own right and a trustee. Today, therefore, the duties are generally undertaken by other professional trust corporations.

[66] Such securities are, nevertheless, subject to all the rules considered in Ch.32. Note that it is uncommon for major publicly traded companies today to give security over their assets in public issues of debentures.

[67] *Re Uruguay Central and Hygueritas Railway Co of Monte Video* (1879) 11 Ch. D. 372; *Re Dunderland Iron Ore Co Ltd* [1909] 1 Ch. 446. Theoretically, although there are trustees, an individual security-holder could take steps to enforce the security (using the

Vandepitte procedure: *Vandepitte v Preferred Accident Insurance Corp of New York* [1933] A.C. 70 PC), but trust deeds typically contain a "no action" clause. And, in other respects, the security-holder will not be regarded as a creditor of the borrowing company, so, for example, cannot petition for its winding up if there is default: *Re Dunderland Iron Ore Co* [1909] 1 Ch. 446, 452.

[68] See below, para.31–30.

[69] Although the governance arrangements typically prohibit this in any event: see below, para.31–30.

[70] See the facts which gave rise to the litigation in *New Zealand Guardian Trust Co Ltd v Brooks* [1995] 1 W.L.R. 96 PC.

[71] 2006 Act s.740. See above, para.31–7.

[72] See below, paras 31–24 et seq.

[73] See para.24–4.

[74] See below, at para.31–26.

[75] Even the "Class 1 transaction" rule of the Listing Rules, requiring shareholder consent, does not apply to an issue of securities, unless the transaction involves the acquisition or disposal of a fixed asset of the company or a subsidiary: LR 10.1.3.

[76] On pre-emption rights for shareholders see para.24–6.

[77] See Ch.11.

[78] *Re Anglo-Danubian Steam Navigation and Colliery Co* (1875) L.R. 20 Eq. 339.

[79] See Chs 12 and 13.

[80] 2006 Act s.752. On treasury shares, see para.13–24. Note also s.753 which is designed to remove the technical difficulties revealed in *Re Russian Petroleum Co* [1907] 2 Ch. 540 CA when a company secures its overdraft on current account by depositing with the bank a debenture for a fixed amount.

[81] 2006 Act ss.743–748. Less detail is required in the register of debentures, if there is one, than in the share register. On the share register, see para.24–21.

[82] 2006 Act s.745.

[83] 2006 Act s.749. Non-compliance is a criminal offence on the part of any officer of the company in default.

[84] See Commission Regulation (EC) No.809/2004 art.21(2).

[85] Compare Commission Regulation (EC) No.809/2004 Annexes I, IV and V.

[86] 2006 Act s.755. See para.24–2.

[87] See Prospectus Directive art.3(2)(d) (no prospectus on a public offer of heavy-weight debt) and art.7(2)(b) (less detail in a prospectus if one is nevertheless needed on an introduction to trading). FSMA 2000 ss.102B, 86(1), (1A), (1B).

[88] Often bonds are traded over the counter ("OTC"), even though the bonds are listed. Many institutional investors are not permitted to invest in unlisted securities, so listing sometimes simply provides a necessary quality kitemark (as backed by the requirements of the LSE for listing).

[89] This is the exchange-regulated market, requiring only listing particulars (unless the securities are initially offered to the public generally). The LSE's regulated market for debt securities is the Gilt-Edged and Fixed Interest Market (sometimes also referred to as the Main Market, as is the analogous market for equity securities, although all debt security listings are "Standard", not "Premium"; for this market, a full Prospectus Directive prospectus is required: see above, para.25–17).

[90] This is unless the passporting of the prospectus to other EEA Member States is important: see Prospectus Directive 2003/71/EC art.17 and above, para.25–44.

[91] In November 2015, the European Commission proposed replacing the Prospectus Directive (an odd Directive in any event) with a Prospectus Regulation as part of its move to create a "capital markets union" within the EU: see above, para.25–10. The proposal is to remove the heavy-weight debt exemptions in PD arts 3(2)(d) and 7(2)(b), so that a prospectus is required for a public offer and more burdensome disclosure is required for an introduction to trading.

[92] i.e. for marketable loans, there is no equivalent of CA 2006 ss.552 and 578.

[93] For an informative description, see L. Gullifer, "What Should We Do About Financial Collateral?" (2012) C.L.P. 1.

[94] See S. Firth, *Derivatives Law and Practice* (London, Sweet & Maxwell, 2012); A. Hudson, *The Law on Financial Derivatives*, 5th edn (London, Sweet & Maxwell, 2012).

[95] SI 2008/346, as amended by SI 2008/1714, SI 2011/2859 and SI 2012/2977. Also see *Review of the UK's Regulatory Framework for Covered Bonds*—FSA and HM Treasury Consultation Paper, April 2011 (Consultation Paper).

[96] There are, in 2015, only 12 UK issuers registered to issue covered bonds.

[97] Public sector or residential or commercial mortgages, with the register indicating the class or the mixture, which cannot then be changed over the life of the bond. In order to maintain investor confidence, securitisations do not constitute eligible collateral.

[98] With the FCA having the right to impose over-collateralisation requirements on a case-by-case basis.

[99] 2008 Regulations reg.17A.

[100] The structure would be even simpler if the notes were issued by the SPV and the investors' money paid directly to it. However, investors may have good reasons for preferring the loans to be made to the issuer, so that the investors have the benefit of both the issuer's promise to repay and the claim on the asset pool held by the SPV. Where the note or bond is issued by the SPV itself, the arrangement is referred to as an "asset-backed" or "mortgage-backed" security, but is non-recourse and does not count as a covered bond. Equally, in the UK, if the issuer merely secures the bond against a ring-fenced pool of its own assets, without transferring them to a SPV, the arrangement is certainly a secured bond (assuming the security is properly registered), but it cannot be a covered bond in the UK (although other European jurisdictions have more relaxed rules in this regard, adopting what is called an "integrated model" covered bond), but the UK rules are designed to be as protective as possible to attract the greatest number of market participants.

[101] Directive 2009/65/EC, as amended, art.52(1)(a).

[102] 2009 Directive art.52(4).

[103] HM Treasury and FSA, *Proposals for a UK Recognised Covered Bonds regulatory*

framework, July 2007, para.1.7. The third advantage, as with the other two, accrues, of course, to a bank which purchases the bonds, not to the issuer bank.

[104] The Regulated Covered Bonds Regulations 2008/346 (as amended) Pts 2 and 3.

[105] 2008 Regulations reg.9. The owner is not an applicant for registration, though various obligations are laid on it by the Regulations. The proposals (above, fn.103) did not envisage a requirement for UK registration, but in this and in a number of other respects, the "credit crunch" of 2007 caused the Regulations to be more tightly drawn.

[106] The enforcement powers of the FCA are set out in Pt 7 of the Regulations and follow those normally available to it. See para.25–41.

[107] 2008 Regulations reg.2. Partly, this definition is achieved by cross-reference to art.129 Regulation (EU) 575/2013 (the requirements regulation), which determines which assets may be used to collateralise a covered bond, if a bank investing in such bonds is to benefit from a lower risk rating. However, a recognised covered bond is not limited to such collateral, though an issuer which uses the wider type of collateral will not be able to confer the benefit of the lower risk rating on banks which purchase the bonds.

[108] 2008 Regulations reg.17(2), imposing the obligation on the issuer; reg.23(1) imposing it on the owner of the asset pool.

[109] 2008 Regulations reg.27. The proposals (above, fn.103) envisaged an alternative model (the "integrated" model) in which the assets remained with the issuer but were ring-fenced. Insisting on a SPV made the priority issue somewhat simpler to deal with.

[110] See paras 13–2 et seq. The capital maintenance rules do not apply to debt because debt is not legal capital: above, para.11–1.

[111] *Knightsbridge Estates Ltd v Byrne* [1940] A.C. 613 HL.

[112] FSA, above, fn.35, paras 3.67 et seq.

[113] The detail is not examined in this book, but the basic structure is that the bank sells the securities to a SPV, so that the bank obtains immediate cash (inevitably discounted) in return for the debts which were due for repayment in the future, and the sale also ensures that those debts are no longer on the bank's balance sheet. The SPV then in turn issues debt securities to third parties on the basis that their repayment is to come exclusively from the original assets (the debts) now held by the SPV (with the securities repayable on the basis of this non-recourse liability being, more positively, described as "asset-backed securities" ("ABS")). This basic structure has been developed in various ways. One of these is "synthetic securitisation", where the debts are not sold to the SPV, but the SPV instead makes a loan to the bank, secured on the pool of debts, and then the SPV, as before, issues securities to fund that loan. It is crucial to the success of this synthetic structure that the SPV can easily enforce its security against the pooled assets, and to that end the IA 1986 ss.72B–72D enables such floating charge security holders to continue to be able to appoint an administrative receiver provided the debt is over £50 million, and despite the abolition of administrative receivers generally in the Enterprise Act 2002 (see below, para.32–34). The credit rating of these bonds then depends upon the quality of the secured assets, not the overall credit rating of the company.

[114] Although there are some difficult conceptual problems, especially with transfer of intermediated securities: see L. Gullifer and J. Payne, *Corporate Finance Law: Principles and Policy*, 2nd edn (Oxford: Hart Publishing, 2015), Ch.9. As a result, the trust deeds of debenture stock issues or the documentation associated with bond issues typically provide explicitly that the holder takes free of all equities affecting the current

and previous holders (including the account holder for bond issues). The effectiveness of these provisions is not guaranteed, and clear wording is essential: see *Re Kaupthing Singer and Friedlander Ltd; Newcastle Building Society v Mill* [2009] EWHC 740 (Ch).

115 Reg.19 and the definition of "security" in reg.3(1). See generally Ch.27, above.

116 Uncertificated Securities Regulations 2001 reg.22(3). If the terms of issue of the debentures require the company to maintain a register of holders in the UK, then this rule still applies but the company's register reflects that of the Operator: reg.22(1) and (2).

117 The details are not discussed here, but the difficult issues of analysis are well described in L. Gullifer and J. Payne, *Corporate Finance Law: Principles and Policy*, 2nd edn (Oxford: Hart Publishing, 2015), Ch.9.

118 In *Barbados Trust Co Ltd v Bank of Zambia* [2007] EWCA Civ 148, where consent of the debtor was required, such consent not to be unreasonably withheld.

119 See *Barbados Trust Co Ltd v Bank of Zambia* [2007] EWCA Civ 148; *Linden Gardens Trust Ltd v Lenesta Sludge Disposal Ltd* [1994] 1 A.C. 85; *Morris v Royal Bank of Scotland Plc* unreported 3 July 2015 No. HC-2014-001910 Norris J; R. Goode, "Inalienable Rights?" (1979) 42 M.L.R. 553; M. Bridge, "The Nature of Assignment and Non-Assignment Clauses" (2016) 132 L.Q.R. 47; L. Gullifer and J. Payne, *Corporate Finance Law: Principles and Policy*, 2nd edn (Oxford: Hart Publishing, 2015), pp.434–443.

120 Without this, debenture holders and their transferees would be in grave danger, for a debenture, unless in bearer form and thus a negotiable instrument (*Bechuanaland Exploration Co v London Trading Bank Ltd* [1898] 2 Q.B. 658), would, as a chose in action, be transferable only subject to the state of the account between the company and the transferor. As stressed in Ch.27, neither shares (unless in the form of share warrants to bearer) nor debentures (unless bearer bonds) are negotiable instruments like bills of exchange. Although CARD (above, para.25–15) requires listed shares and debt securities to be "freely negotiable" (arts 46 and 60) this is interpreted as "freely transferable" and not as prescribing that they must be "negotiable instruments" in full sense.

121 See Ch.27, above.

122 2008 Regulations reg.40(2), provided notice is given to the holders at least 30 days before the changes become effective.

123 Where such debt is part of a private equity transaction, it is a strong candidate for early re-financing.

124 And, for example, bank overdrafts are typically repayable on demand and regardless of breach (unless the facility agreement provides otherwise), with the bank not required to refrain from making a demand simply because it will tip the company into insolvency: *Williams and Glyn's Bank Ltd v Barnes* [1981] Com. L.R. 205.

125 See above, para.31–7.

126 Bratton, "Bond Covenants and Creditor Protection" (2006) 7 E.B.O.R. 39.

127 However, since these are contractual restrictions, they will not bind third parties (in whose favour, for example, assets have been pledged in breach of covenant), unless equity will intervene (see above, para.16–134), or the ingredients of the tort of inducing breach of contract have been established, notably knowledge on the part of the third

party of the contractual restrictions: *Swiss Bank Corp v Lloyds Bank Ltd* [1979] Ch. 548.

[128] Of course, such nominee directors owe their duties to the company, not the nominee: see the discussion above, para.16–63.

[129] *Lordsvale Finance Plc v Bank of Zambia* [1996] Q.B. 752; although now see *Cavendish Square Holding BV v Talal El Makdessi; ParkingEye Ltd v Beavis* [2015] UKSC 67.

[130] See above, para.19–25. It seems clear that an injunction could not be granted to restrain the general meeting from removing a nominated director under s.168.

[131] *Elektrim SA v Vivendi Holdings 1 Corp* [2008] EWCA Civ 1178.

[132] *IFE Fund SA v Goldman Sachs International* [2007] EWCA Civ 811 at [28]; *Raiffeisen Zentralbank Osterreich AG v Royal Bank of Scotland Plc* [2010] EWHC 1392 at [65].

[133] *Peekay Intermark v ANZ Banking Group* [2006] EWCA Civ 386.

[134] Although see the dicta in *UBAF Ltd v European American Banking Corp* [1984] Q.B. 713, 728.

[135] It is possible, although now less common, for the company to issue bonds directly to the bondholders, and for the bondholders then to appoint an agent to act as their point of contact. Such an appointed agent will have whatever powers are expressly agreed by the parties, and these may well be fewer than those typically enjoyed by a trustee for the bondholders in a structure where the trustee holds the global note and any associated security on trust for the bondholders. But such an agent is nevertheless subject to common law and equitable duties, providing the bondholders with fairly extensive protection.

[136] *Armitage v Nurse* [1998] 1 Ch. 241. Although see the pro-trustee approach to restrictive clauses in *Citibank NA v MBIA Assurance SA* [2006] EWHC 3215. Also see M. Bryan, “Contractual Modification of the Duties of a Trustee” in S. Worthington, (ed.), *Commercial Law and Commercial Practice* (Oxford, Hart Publishing, 2003), p.513.

[137] But note the exceptions and qualifications in subss.(2)–(4) permitting 75 per cent in value of the debenture holders present and voting to give a release from liability to the trustee in respect of prior specific acts or omissions of the trustee (or on the latter’s death or ceasing to act). In addition, reg.40(2) of the Uncertificated Securities Regulations 2001 (above, Ch.27) exempts the trustees from liability simply for assenting to amendments of the trust deed to enable title to debentures to be held and transferred under the electronic system and for rights attached to debentures to be exercised in that way.

[138] Especially if the trustee’s opinion differs: see *Citibank NA v MBIA Assurance SA* [2006] EWHC 3215 (Ch); [2007] EWCA Civ 11 (see “Issue 2” in the Court of Appeal); and *Law Debenture Trust Corp Plc v Concord Trust* [2007] EWHC 1380.

[139] *Concord Trust v Law Debenture Trust Corp Plc* [2006] 1 B.C.L.C. 616 HL. The event of default was a failure to maintain on the board of the borrowing company a nominee of the lenders, who had been placed there to protect the bond-holders’ interests. Having accelerated the bond, as a consequence of the HL judgment, and secured substantial payments from the company, the trustee then took an overly cautious line about how much of the monies recovered it could distribute to the bond-holders: *Law Debenture Trust Corp Plc v Concord Trust* [2007] EWHC 1380 (Ch).

[140] The aim is to achieve, by contract between the multiple lenders alone, at least the level of protection that the IA 1986 attempts to deliver between all unsecured creditors, despite the fact that they are often strangers to each other. See below, Ch.33. See above, paras 31–24 et seq.

[141] See above, paras 19–4 et seq.

[142] See para.20–1. Nor, of course, will the class rights provisions afford protection as they too apply only to members. See para.19–13.

[143] The Listing Rules require that any circular must include an explanation of the effect of proposed amendments: LR 17.3.10.

[144] See the detailed discussion at paras 19–4 et seq., much of which is equally relevant here.

INTRODUCTION

32–1

Borrowers are often obliged to provide security for the repayment of their debts. In this respect a company is no different from any other borrower. However, there are sufficiently unique features associated with the granting of security by a company to justify it being treated here as a separate topic. In particular, one type of security (the floating charge) is practicable only if created by a body corporate,[1] there is a separate system for the registration of company charges,[2] there are distinct statutory procedures for the enforcement of the floating charge,[3] and certain provisions of the Insolvency Act 1986 affecting company charges apply on corporate insolvency. Coupled with these, the granting of security by a company is subject to the law relating to corporate capacity and directors' duties,[4] although compliance in that regard is assumed in what

follows.

Security Interests

The legal nature of security interests

32–2

Some knowledge of this general topic is essential in order to understand the particular nature of the rights conferred on a secured charge holder, the priorities of charges, and the system for the registration of company charges.[5] Some understanding is also needed of nomenclature. Various forms of security are possible, as described below, but the most common form granted by a company is a charge. "Charge" has a restricted technical meaning in equity, although this technical distinction is not always maintained in the literature or in the Act,[6] and, unless the context indicates otherwise, the terms "charge", "security" or "security interest" are often used interchangeably.

Browne-Wilkinson VC, without claiming that it was comprehensive, accepted the following as a description of a security interest[7]:

> "Security is created where a person ('the creditor') to whom an obligation is owed by another ('the debtor') by statute or contract, in addition to the personal promise of the debtor to discharge the obligation, obtains rights exercisable against some property in which the debtor has an interest in order to enforce the discharge of the debtor's obligation to the creditor."

More recently in *Smith (Administrator of Cosslett (Contractors) Ltd) v Bridgend CBC*, Lord Scott remarked that[8]:

> "a contractual right enabling a creditor to sell his debtor's goods and apply the proceeds in or towards satisfaction of the debt is a right of a security character. [It is important to note that] the conclusion does not depend on the parties' intention to create a security. Their intention, objectively ascertained, is relevant to the construction of their contract. But once contractual rights have, by the process of construction, been ascertained, the question whether they constitute security rights is a question of law that is not dependent on their intentions."

These two statements highlight the essential features of a security interest. First, the classification of security interests is a matter of law, and depends upon the rights agreed between the parties, not on their intention to create one form of security rather than another, nor on the economic effect of their agreement. Secondly, every security interest ultimately gives the holder of the security a proprietary claim over assets, normally

the debtor's, to secure payment of the debt. The position of a secured creditor is to be contrasted with that of an unsecured creditor who merely has a personal claim to sue for the payment of his debt and to invoke the available legal processes for the enforcement of any judgment that he may obtain.

Security interests can be divided broadly into consensual and non-consensual securities. We are interested in the former—i.e. securities agreed by companies to be granted in favour of their creditors. English law recognises only four types of security interest (mortgages, charges, pledges and common law liens[9]),[10] although these can be used in a wide variety of ways to give sophisticated protection to lenders.

32–3

It is not possible in a text of this nature to describe security interests in any great detail, but a number of questions typically arise with respect to the creation of such interests by a company:

(i) First, is the interest created by the security equitable or legal? This has a bearing on the priorities of different charges and of course an equitable charge holder can be defeated by a bona fide purchaser for value.[11]

(ii) Secondly, is the security interest possessory in the sense that possession, either actual or constructive, of the property subject to the security is necessary in order to confer a security interest on the security holder? Obviously, if all security interests had to be possessory it would make secured borrowing virtually impossible since the debtor would be unable to use the secured assets in the course of business. The classic example of a possessory security is the pledge, which involves the pledgee (the security holder) taking possession of the goods of the debtor (the pledgor) until the debt is paid or the pledgee takes steps to enforce the pledge. The common law lien is also possessory. In the interests of commercial vitality, English law has thankfully long recognised non-possessory security interests, by way of mortgages and charges.

But it can be important to decide just what sort of arrangement the parties have entered into. "Stock lending",

from its label, suggest a mere pledge of the underlying collateral: it is "on loan" from the borrower to the lender for the purposes of security, and recoverable on repayment of the loan; more importantly, should the lender become insolvent, the securities belong to the borrower, not the lender. But typically these arrangements also give the lender the enormously valuable commercial advantage of being able to deal freely with the underlying securities, and an obligation to return to the borrower, when the time comes, not the precise securities lent, but simply equivalent securities.[12] The courts have held, perhaps unsurprisingly, that in these cases it is the lender who has title to the securities, not the borrower, with all the insolvency consequences that attracts.[13]

(iii) Thirdly, what type of "proprietary" interest is vested in the chargee by the charge? This has a direct bearing on remedies. The remedies of charge holders will be dealt with later. But some brief comment is needed as to the remedies available to the holders of other types of security interests. First to be contrasted is the mortgage and the charge. Although the words are often used interchangeably, there is technically an essential difference between them: "a mortgage involves a conveyance of property subject to a right of redemption, whereas a charge conveys nothing and merely gives the chargee certain rights over the property as security for the loan".[14] This essential difference has an impact on remedies: unless the charge document expressly provides otherwise (which it now invariably does[15]), the remedy of a chargee is to apply to the court for an order for sale or for the appointment of a receiver; this is because a charge, unlike the mortgage, does not involve conveyance of title to the asset, so a chargee cannot automatically foreclose or take possession. The principal remedy of a pledgee is sale of the pledged goods; they can also be sub-pledged, with restrictions,[16] even before the right to sell arises. By contrast, a common law lien holder merely has the right to detain the goods subject to the lien until the debt has been paid.[17]

(iv) Fourthly, is the security interest one that is created by the act of the parties or is it one created by operation of law? This is

of critical importance with respect to the registration of company charges, since charges created by a company over its assets are registrable, whereas charges (or, more correctly, equitable liens) arising by operation of law are, of course, not.

(v) Fifthly, if the charge has been created by the company, has it been registered as required by the Act? Registration is dealt with later.

(vi) Finally, is the charge created by the company fixed or floating? This will have a significant impact on the rights and remedies available to the chargee, and to other third parties associated with the failing company. It too is dealt with later.

To complicate the picture further, there are a number of other devices which do not constitute legal security (because they do not involve the debtor granting an interest in *its* property to the secured creditor), but which nevertheless function in a similarly protective fashion, and so are referred to as quasi-security devices. Negative pledge clauses in unsecured lending, and retention of title by sellers of goods, are two common illustrations. The first involves an agreement by the debtor company and its unsecured creditor that the company will not create any securities which have priority to the creditor's claim. Although this does not vest a security interest in the creditor, it "behaves" like a security interest in that it precludes the debtor from using its assets freely and thus, as with a security interest, it provides the creditor with a measure of protection. In retention of title arrangements, the seller of goods simply retains title to the goods until the buyer has paid for them (or until some later time defined by the contract).[18] Some of the problems raised by this type of security are considered later in the discussion on registration.[19]

The benefits of taking security

32–4

There are a number of compelling reasons for a creditor to take security rather than rely solely on its personal claims against the debtor company. First, in the event of the debtor company's

insolvency, a secured creditor will have priority over unsecured creditors (at least to the extent that the secured assets are of sufficient value to fund repayment of the secured debt), and may also, depending on the seniority of its claim, have priority over less senior security holders. This is a direct consequence of the fact that a security interest confers some type of proprietary interest on its holder. Priority on insolvency is one of the principal reasons for taking security.

Secondly, the secured creditor has the right to trace. If the debtor company wrongfully disposes of the charged property, the creditor is entitled to enforce its security against any identifiable proceeds of the disposition.[20]

Thirdly, a security interest gives its holder particular rights of enforcement depending on the nature of the security interest. Charge become enforceable in circumstances determined by the agreement itself, and the chargee may then take steps to enforce the charge. English law has traditionally placed few impediments in the way of enforcement of a charge: liberal rights are given by statute[21] and can be enhanced by contract. These rights allow the chargee to remain largely outside any concurrent insolvency proceedings and to enforce the charge independently of such proceedings,[22] although, as discussed later, this principle is substantially modified in the case of floating charges. Then various statutory rules give priority to preferential debts and to liquidation expenses,[23] and provide for a defined proportion of the floating charge realisations to be ring-fenced for the unsecured creditors.[24] Further rules operate in relation to the administration procedure (and its accompanying moratorium).[25]

Lastly, a charge affords a chargee a measure of control over the business of the debtor company. The terms of the security agreement may require the debtor company to report regularly to the chargee and, if the company gets into financial difficulties, the chargee may be made privy to management decisions.[26] In addition, the charge may be so all-embracing that there is no scope for the debtor company to obtain further secured credit.[27] In any event, a charge will obviously deter a second financier from providing funds where its charge would rank after a charge that the company has already created over its assets. Finally,

unsecured creditors may see little advantage in seeking a winding-up where it appears that the secured creditors are entitled to all the company's assets.[28]

The practical differences between fixed and floating charges

32–5

Subject to the issue of registration, discussed in the next section, the creation of a charge by a company is no different from the creation of a charge by any other debtor. And the creation of a floating charge, although devised for companies and still confined to them and to analogous vehicles, is no more difficult than the creation of a fixed charge.

A charge is an equitable proprietary security interest. It is created whenever parties agree that certain property belonging to the debtor (or some third-party guarantor) will be appropriated to the discharge of the debt or other obligation (e.g. the machinery in a factory may be charged in favour of repayment of the loan that funded its purchase, or, alternatively, a loan granted for an entirely separate purpose). The agreement is by contract, without any transfer of title. The proprietary interest created in this way is less than an ownership interest (either legal or equitable), but it allows the secured property to be appropriated and sold, with the proceeds of sale dedicated to the repayment of the outstanding secured obligation.[29] On the debtor's insolvency, this arrangement removes the secured property from any insolvency proceedings,[30] and so the secured creditor is more likely to be repaid in full when compared with the unsecured creditors who have to share pari passu in the proceeds derived from sale of the remaining unsecured assets.

All charges created in this way are either fixed or floating. A fixed (or "specific") charge expressly or impliedly restricts the debtor's power to dispose of, or otherwise deal with, the property without the creditor's consent. By contrast, a floating charge leaves the chargor free to deal with the charged property in the ordinary course of business without reference to the chargee. A floating charge thus has the very practical advantage

that it allows a company to give security over assets which are continually turned over or used up and replaced as a matter of routine trading; a business can thus raise money on secured loans without removing any of its property from routine business activities.[31] The charge remains floating and the company is free to use the assets subject to the charge until the charge is converted into a fixed charge. This is referred to as "crystallisation" of the charge. The normal crystallising event is the taking of steps to enforce the charge, but there are others and these are dealt with later.[32]

32–6

No particular form of words is necessary to create a floating charge. From the earliest cases, it was recognised as sufficient if (a) the intention is shown to impose a charge on assets both present and future; (b) the assets are of such a nature that they would be changing in the ordinary course of the company's business; and (c) the company is free to continue to deal with the assets for its own benefit in the ordinary course of its business.[33] Recent authorities make it clear that only the last of these three attributes is crucial.[34]

Interestingly, at the same time that courts in the UK were confirming the legitimacy of floating charges, courts in the US were moving in the opposite direction. According to US courts, allowing such freedom to the debtor/chargor was incompatible with the creation of a genuine security interest and was a fraud on the creditors; if the creditor did not exercise reasonable dominion over the secured asset, then the security was illusory and void,[35] and any rights created could only be contractual, not proprietary.[36]

Despite this early judicial acceptance in the UK, the floating charge has always been treated by the legislature with something approaching suspicion, and successive Companies Acts and Insolvency Acts have adopted a variety of rules designed to restrict its full impact, which is potentially to sweep up *all* the company's resources (by securing "the undertaking" or "all the assets and undertaking" of the company) and dedicate them to securing the debt of *one* of the company's creditors,[37] leaving all the other creditors unprotected, able only to share pari passu in

whatever remains of the proceeds from the secured assets (if anything) after the secured creditor has been paid in full.

32–7

Because of these various statutory incursions, floating charges (i.e. all charges *created* as floating charges[38]) are now subjected to more, and more onerous, invalidating provisions (including specific invalidity rules), and are also subjected to prior payment of administrator's and liquidator's costs and expenses, and then prior payment of claims from preferential creditors, and then compulsory distribution of a prescribed part to unsecured creditors. This differential treatment of floating charges, discussed in more detail below,[39] gives creditors an incentive to ensure their charges are classified as fixed, not floating.[40]

Given the vulnerability of floating charges, the question arises as to why a creditor should bother to obtain one. While obviously the fixed charge accords superior protection, there are sound reasons for taking a floating charge. First, where a subsequent holder of a registrable charge is deemed to have notice of the negative pledge clause which typically accompanies a floating charge,[41] then this accords priority to the floating charge holder. Secondly, the charge provides security against unsecured creditors. Thirdly, the floating charge holder will be able to take steps to enforce the charge and, as will be seen, this accords him considerable control over the company's affairs. Fourthly, the holder of a floating charge will have some measure of control over the company, even without taking any steps to enforce its security.[42] Lastly, the holder of a floating charge may be able to block the appointment of an administrator, although now only in a limited range of cases.[43]

Crystallisation

32–8

As indicated above, a floating charge (unlike a fixed charge) leaves the debtor company free to use the secured assets in the ordinary course of its business until some point at which the charge is converted into a fixed charge. "Crystallisation" is the term used to describe this transition point.[44] Crystallisation is an important event, since it enables definition of the pool of assets

available to the chargee as security for the obligation: a crystallised charge bites on all the assets that are presently in, or in the future come into, the hands of the chargor and are properly within the description of the charged assets.[45]

The effect of crystallisation is to deprive the company of the autonomy to deal with the assets subject to the charge in the normal course of business.[46] The events of crystallisation, on which there is general agreement, are: (i) the making of a winding-up order[47]; (ii) the appointment of an administrative receiver[48]; (iii) the company's ceasing to carry on business[49]; (iv) the taking of possession by the debenture-holder[50]; and (v) the happening of an event expressly provided for in the debenture, often referred to as "automatic crystallisation". Events (i)–(iii) are implied as crystallising events in every floating charge agreement unless explicitly excluded.

Automatic crystallisation

32–9

Automatic crystallisation is not a term of art. It covers at least two situations which at first blush appear dissimilar. One is where the charge is made to crystallise on the happening of an event provided for in the charge agreement without there being any need for a further act by the chargee,[51] and the other is where the charge is made to crystallise on the serving of a notice of crystallisation on the company. However, these events have one important common feature, in that they will normally not be known to a person dealing with the company and therefore it seems appropriate to treat them together.

Initially there was some doubt about both the validity and the desirability of automatic crystallisation provisions. On validity, the matter is now settled beyond dispute, following acceptance of the judgment of Hoffmann J in *Re Brightlife Ltd*[52] upholding the validity of a provision enabling the floating charge holder to serve a notice of crystallisation on the company. Hoffmann J saw crystallisation as being a matter of agreement between the parties. On this reasoning there can be no objection to a charge being made to crystallise on the happening of a specified event. On the desirability of automatic crystallisation clauses, their acceptance as a matter of law indicates at least tacit approval that

the benefits outweigh the detriments. The earlier arguments against such clauses focused on the disadvantages suffered by third parties. For example, insofar as insolvency law is committed to the principle that property within the apparent ownership of the company should be treated as the company's in the event of its insolvent liquidation, permitting party autonomy to effect automatic crystallisation clearly undermines this policy, but then English insolvency law is littered with similar exceptions.[53] Similarly, it has been argued that automatic crystallisation may prejudice subsequent purchasers and chargees who do not know, and indeed who may have no way of knowing, that the charge has crystallised.[54] Whether this is indeed the case is not clear cut. The matter is usually resolved as one of priorities,[55] and subsequent purchasers or chargees will not necessarily be defeated by the earlier equitable charge.[56] In addition, Professor Goode has pointed out that the fact that the charge has crystallised will affect the relationship between the chargee and the company, but it does not necessarily affect a third party since, if the company is left free to deal with the assets in the normal course of its business, then the chargee (under the prior, now crystallised, floating charge) should be estopped from denying the company's authority to do so.[57]

The events implied as crystallising events in every floating charge agreement have already been mentioned. For the avoidance of doubt, there are no further implied terms defining events that cause crystallisation. In particular, default in the payment of interest or capital are not implied crystallising events,[58] nor (more controversially[59]) is the crystallisation of another floating charge, whether created earlier or later than the charge in question.[60] Of course, given the validity of automatic crystallisation clauses, these events could be nominated as crystallising events.

Note that even where default does not result in crystallisation, the company will be in breach of contract and the chargee will have appropriate contractual remedies. For example, the holder of an uncrystallised charge may apply for an injunction to prevent the company dealing with its assets otherwise than in the ordinary course of its business.[61]

Priority accorded to floating charges

32–10

Since a floating charge gives the debtor company management autonomy over the secured assets, the most serious risk facing the charge holder is that the assets will be dissipated, without replacement, leaving no security to support the outstanding obligation. Subject to any specific restrictions in the charge agreement, the debtor company is free to deal with the charged assets in the ordinary course of business. Of course this means that the chargor may sell the assets in the ordinary course of business, and purchasers take free of the security.

In addition, the company may grant subsequent security interests, and the earlier floating charge will be deferred to any subsequent fixed legal or equitable charge created by the company over its assets,[62] or any subsequent floating charges provided they are not over precisely the same assets,[63] but are over only part of the pool of assets[64] where the first charge contemplates the creation of the later charge.[65] In Scotland, however, it has been proposed that where the same property (or any part of the same property) is subject to two floating charges they rank according to the time of registration unless the instruments creating the charges otherwise provide.[66]

Similarly, if debts due to the company are subject to a floating charge, the interest of the floating charge holder will be subject to any lien or set off that the company creates with respect to the charged assets prior to crystallisation,[67] since a floating charge is not to be regarded as an immediate assignment of the chose in action,[68] but is subject to dealings in the ordinary course of business up until crystallisation.[69] In the same vein, if a creditor has levied and completed execution,[70] the debenture-holders cannot compel him to restore the money, nor, unless the charge has crystallised, can he be restrained from levying execution.[71] Put another way, the floating charge holder will take the company's property subject to the rights of anyone claiming by paramount title, and if the incursions into the secured asset arise in the ordinary course of business, then it matters not that they occur after the charge was created but before the charge crystallises.

However, once the floating charge crystallises,[72] this ability to deal with the charged assets in the ordinary course of business ceases, and the usual priority rules apply to determine whether the (now fixed) equitable charge has priority over any subsequently created legal or equitable interests.[73]

Negative pledge clauses

32–11

In an effort to enhance the security offered by a still floating charge as against subsequent security interests that would otherwise have priority, floating charge agreements almost invariably contain a provision that restricts the right of the company to create charges that have priority to or rank equally with the floating charge (called a negative pledge clause). Such restrictions are strictly construed,[74] but because they limit the company's actual authority to deal with its assets in the ordinary course of business, they remove the basis described above on which floating charges are automatically postponed to later charges. Instead, orthodox priority rules must be applied (e.g. an earlier equitable (floating charge) interest is deferred to a subsequent legal interest obtained bona fide and without notice of the earlier interest).

Notice (actual or constructive) of the terms of the floating charge and any negative pledge, is thus crucial in determining priority disputes.[75] Actual notice is easy enough. But constructive notice raises two problems: which matters are deemed noted, and who has such notice? The Act does not answer either question. On the first, the cases indicate that registration provides constructive notice only of those particulars which are required to be included on the register.[76] Since those particulars now include whether or not there is a negative pledge, it would seem that parties will be taken to have constructive notice of such clauses, thus doing away with a great deal of earlier uncertainty when the registration requirements were more limited.[77] But uncertainty remains over whether there will also be constructive notice of matters beyond the particulars, since the whole charge document must also be registered; and what will happen if the particulars do not accurately reflect the terms of the registered charge.[78]

On the second question, as to who will have such constructive notice, there is even less clarity. Registration might be taken to be notice to all the world, but the better view, consistent with the role of constructive notice elsewhere in the law, seems to be that registration is notice only to those who could reasonably be expected to search the register.[79] The boundaries of that rule are not certain, but it should include most lenders, especially secured lenders.

Finally, and despite the foregoing, subsequent interests that can be classed as purchase money security interests may have priority over an earlier floating charge which appears to cover the same assets, although that priority will only extend to the newly purchased assets. This follows, since the company's later purchase, secured by a mortgage, means that all that the company acquires from the purchase is an equity of redemption subject to the mortgage, so the later mortgagee will take priority, even if it has actual notice of the negative pledge.[80]

Subordination agreements

32–12

Finally, in *Cheah v Equiticorp Finance Group Ltd*,[81] Lord Browne-Wilkinson made it clear that where there were two charges over the same property, the chargees could agree between themselves to alter the priority of their security interests without the consent of the debtor. These types of subordination agreements do not affect the interests, even on insolvency, of either the debtor company or its other creditors; they merely redistribute what would otherwise be allocated to the chargees.[82]

Statutory limitations on the floating charge

32–13

Certain statutory provisions add further to the vulnerability of the floating charge. These provisions relate to (i) defective floating charges—which affects the validity of the charge; (ii) preferential creditors—which affects the priority of the charge; (iii) compulsory sharing of the security proceeds with other creditors—which diminishes the assets available for the floating charge holders; (iv) costs of the liquidation—which again

diminishes the assets available for the floating charge holders; (v) the right of an administrator to override a floating charge—which affects the enforcement rights of the charge. These matters are dealt with in turn.

(i) Defective floating charges

32–14

An unsecured creditor with advance notice that insolvent liquidation is imminent may well be tempted to seek security to cover the outstanding obligation, thereby obtaining priority over the other unsecured creditors. Directors, perhaps more than most, are likely to have early warning of such danger in repayment of their own unsecured loans.[83] And the only security likely to be available when the company is distressed is a floating charge security—the company's fixed assets will usually have been secured much earlier.

To prevent this, s.245 of the Insolvency Act 1986[84] provides that a floating charge created in favour of an unconnected person within 12 months[85] of the commencement of the winding-up or the making of an administration order[86] shall be invalid, except to a prescribed extent, unless it is proved that the company was solvent immediately after the creation of the charge.[87] If these conditions are not satisfied, the charge is valid only to the extent of any new value in the form of cash, goods or services supplied to the company,[88] or the discharge of any liability of the company, where these take place "at the same time as, or after, the creation of the charge".[89] It has been held that the phrase in quotations requires the new value to be provided contemporaneously with the creation of the charge.[90] Any delay, no matter how short, in the execution of the debenture after the advance has been made will result in the new value falling outside s.245.[91] Hence those who take a floating charge from a company which cannot be proved to be solvent,[92] and which does not survive for a further year, cannot thereby obtain protection in respect to their existing debts, but only to the extent that they provided the company with new value[93] and thus potentially increased the assets available for other creditors.

Where the floating charge is in favour of a "connected person", the rules are even more restrictive: the charge is

vulnerable for two years after its creation,[94] and there is no need to show that at the time the charge was created the company was insolvent. The definition of connected person is complex, but includes a director, the director's relatives, and companies within a group.[95]

These provisions cannot be avoided by sleight of hand, for example by advancing further money on a floating charge on the understanding that this is to be used to repay existing loans specifically to the connected or unconnected person: a creditor cannot by use of the floating charge transmute an unsecured debt into a secured debt by manipulating the saving provisions of s.245.[96] In addition, it is important to note that not all value is "new value" for the purpose of s.245, as the latter is confined to money, goods or services and excluded are, for example, intellectual property rights and rights under a contract.[97]

These rules apply to floating charges and not to fixed charges. The policy justification for this has been questioned. The Cork Committee considered that these rules should not be extended to fixed charges since such charges would relate to the company's existing assets, whereas the floating charge could cover future assets.[98] This distinction is not in fact true,[99] but why it should make a critical difference in any event is far from clear. The exclusion of fixed charges from IA 1986 s.245 arguably reflects the favouritism shown to secured creditors in English company law. A fixed charge may of course be attacked as a preference where it is given to secure past value,[100] although not as a transaction at an undervalue since the assets of the company are not diminished by the creation of the charge.[101]

(ii) Preferential creditors

32–15

The general rule on insolvency is that pre-insolvency rights are respected, and the company's unsecured creditors share the losses pari passu. However, this general rule has been varied by statute, giving certain classes of creditors added protection[102] by according them a statutory preference over some or all of the company's creditors. Perhaps surprisingly, the enforcement of a floating charge is to some extent treated as an insolvency proceeding whether or not the company is in the course of being

wound up,[103] and these preferential creditors are given a similar priority out of the pool of floating charge assets (although only to the extent that the general assets of the company are insufficient to meet their claims).[104] To this extent, floating charge holders are treated a little like unsecured creditors (whose repayments are deferred in this way on the company's insolvency) rather than like other secured creditors with mortgages or fixed charges (who are entitled to realise the secured assets outside this insolvency regime).

There are various reasons supporting the adoption of this policy. It had been a strong criticism by the Cork Committee that banks, through a combination of fixed and floating charges, could scoop the asset pool and, in many cases, leave unsecured creditors with nothing in an insolvency. In addition, as already pointed out, some large-scale debt-financing arrangements are structured so that the ranks of debenture-holders (with floating charge security) closely resemble shareholders, forming a class that is interested in the company rather than merely one with claims against it. Consequently, it has been thought unjust that they should obtain priority over employees (one of the categories of preferential creditor) who have priority over the shareholders in the event of the company's liquidation.[105]

The preferential debts of the employees are set out in Sch.6 to IA 1986 and include four months' wages per employee up to a maximum prescribed by the Secretary of State and accrued holiday remuneration.[106] In the case of a floating charge, the relevant date for quantifying the preferential debts is the date of the appointment of the receiver by the debenture-holders.[107] Anyone who has advanced money for the payment of the employee debts which would have been preferential is subrogated to the rights of the employee.[108] It is important to note that the preferential creditors are given priority where a receiver is appointed with respect to a charge "which, as created, was a floating charge"[109]; thus the fact that the charge has crystallised at the time a receiver is appointed does not result in preferential debts being denied their statutory priority.[110]

32–16

Employees have other protections. Where the company becomes

insolvent, an alternative and speedier route for the employee to recover monies due is by way of application to the Secretary of State. Under Pt XII of the Employment Rights Act 1996, the Secretary of State is obliged to pay certain amounts due and then is subrogated to the employee's position in the employer's insolvency, including the employee's preferential rights, insofar as the debts discharged would have preferential status against the company.[111] This provision and its associated priority have remained, despite the more recent abolition of Crown priorities in the Enterprise Act 2002 (see below). In practice, the National Insurance Fund is probably the main beneficiary from this preference.

Prior to 2002, there were other preferential creditors on the statutory list, but these have now been all but eliminated by the Enterprise Act 2002 s.251, which abolished Crown preferences entirely, leaving only employee remuneration and contributions to pension schemes with a preference in insolvency, together with levies on coal and steel production, derived from EU law, which the UK is not free to repeal.

(iii) Sharing with unsecured creditors—the "prescribed part"

32–17

Employees are not the only preferential creditors to eat into the assets available to the floating chargee, however. There is also now limited preferential treatment of general unsecured creditors. IA 1986 s.176A requires that when the assets of a company subject to a floating charge are realised, a certain proportion (the "prescribed part") must be set aside for the unsecured creditors.[112] The percentage is defined as follows[113]: (i) 50 per cent of the first £10,000; plus (ii) 20 per cent of the remainder; up to a maximum of £600,000.[114] The rule does not apply where (i) the company's net property is less than £10,000[115]; or (ii) the costs of distribution to unsecured creditors would be disproportionate and the court makes an order accordingly.[116]

This segregation of the prescribed part is made at the outset, and if what remains for the floating charge holder is insufficient

to meet the debt due, the chargee is nevertheless not entitled to share in the prescribed part, notwithstanding that the outstanding debt is now unsecured: s.176A(2)(b).[117] This provision is interpreted as confining the prescribed part to the unsecured creditors until they are paid in full, and only returning any excess for the benefit of the floating chargeholder once that has happened, even though the debt secured by the floating charge may remain only partly paid.

These rules may affect companies other than those registered under the Act if, but only if, they are being wound up under it.[118]

(iv) Costs of liquidation

32–18

None of these statutory incursions alters the fact that the first payments to come out of the floating charge realisations are the costs and expenses of liquidation (if the company goes into liquidation),[119] in priority even to the receivership expenses.[120] This can be a substantial drain on the funds eventually available to the floating chargee. Then come the costs and expenses of receivership,[121] and only then the preferential creditors, finally leaving a pool (if the parties are lucky) that is split between the floating chargee and the unsecured creditors according to the formula outlined above.

The position of fixed charge holders is quite different. Their asset pool is not subjected to claims from liquidators to fund liquidation expenses, nor from preferential or unsecured creditors. Any change to these rules would obviously affect both the terms of credit and the amount of credit available to chargors, but it is not clear that this adequately or rationally justifies the present position.

Chargees no doubt expect the expenses of their own receivership proceedings to be paid in priority to their secured debt, but the rather odd decision that liquidation expenses constitute a prior claim on floating charge receipts (but not on fixed charge receipts) was first reached by the Court of Appeal in *Re Barleycorn Enterprises Ltd*[122] on the basis that such receipts were assets *of the company*, and it is a principle of insolvency law that the expenses of a company's liquidation are

payable out of the assets of the company[123] in priority to all other claims.[124] This decision was only overruled 35 years later by the House of Lords in *Buchler v Talbot* (also known as *Re Leyland Daf*),[125] which held that liquidation expenses are not payable out of floating charge assets, those being the property of the chargee and not the chargor. But the Government then almost immediately reversed this decision by inserting s.176ZA into IA 1986.[126]

32–19

So the current position, determined by statute, is that assets subject to a floating charge (i.e. assets subject to a charge that was created as a floating charge, even though it will have crystallised on liquidation) are available for payment of liquidation expenses. Where several charges have been granted over the same asset, this rule can lead to nice questions about the priority as between the various charges: if the charge with first priority is a floating charge, then the proceeds are subject to claims for liquidation expenses, but if the first charge (or equal ranking charge) is a fixed charge, the fixed chargee can realise the charged assets without making any such provision (either for the liquidation expenses or for the preferential creditors). This outcome advantages those many creditors who typically take a "fixed and floating charge" over all the company's assets: to the extent that a fixed charge is possible, it ranks equally with the floating charge and is protected from these expenses.[127] On the other hand, if the charge with priority is a floating charge, even if priority was gained by crystallisation, then the assets are subject to these rules relating to liquidation expenses and preferential debts.[128] These costs, combined with the claims of the preferential creditors, entail a substantial erosion of the entitlement of the floating charge holder.[129]

(v) Powers of the administrator

32–20

The final statutory limitation on the right of a floating charge holder is para.70 of Sch.B1 to the Insolvency Act 1986 which empowers an administrator to sell property subject to a charge which as created was a floating charge without the need to obtain a court order.[130] As protection, the floating charge holder

is given the same priority with respect to any property representing directly or indirectly the property disposed of as he would have had with respect to the property subject to the floating charge.[131]

Distinguishing between fixed and floating charges

32–21

The previous sections (on priority, preference and invalidity rules) demonstrate why chargees prefer to have fixed rather than floating security over the assets of a corporate debtor. Prior to 1986, it was possible to achieve this status simply by showing that the charge had crystallised (and thereby become a *fixed* charge) before the commencement of the liquidation or other relevant statutory date.[132] This loophole was eliminated by IA 1986 s.251, which provides that "floating charge" means "a charge which, *as created*, was a floating charge". This means that lenders must now ensure that their security, as created, is categorised as a fixed charge, not a floating charge, if they are to avoid the disadvantages outlined earlier.

Given the consequences that follow the categorisation of a charge as fixed or floating, the courts do not simply accept the labels attached by the parties. The fact that a charge is called a "fixed" charge by the parties does not necessarily make it so. As Lord Millet indicated in the Privy Council decision, *Agnew v Commissioner for Inland Revenue* (also known as *Re Brumark*)[133]:

> "in deciding whether a charge is a fixed charge or a floating charge, the court is engaged in a two-stage process. At the first stage it must construe the instrument of charge and seek to gather the intentions of the parties from the language they have used….The object of this stage of the process…is to ascertain the nature of the rights and obligations which the parties intended to grant to each other in respect of the charged assets. Once these have been ascertained, the court can then embark on the second stage of the process, which is one of categorization, [which] is a matter of law."

In *Re Spectrum Plus Ltd*,[134] the House of Lords approved this approach and held that in characterising a charge as fixed or floating, the crucial element is the freedom of the company to use the assets in the ordinary course of its business, not the nature of the assets charged.[135] The House of Lords had to consider a charge over book debts expressed in the same terms

as that in *Siebe Gorman*[136] (which had been accepted as a fixed charge: see below). In a decision that overruled *Siebe Gorman* and reversed the Court of Appeal below, the House of Lords held that the charge was floating. This was so, despite the fact that the debenture prohibited the chargor from charging or assigning the debts, and required it to pay the proceeds of collection of the debts into an account with the lending bank (i.e. despite following the recipe prescribed in *Siebe Gorman*), because the debenture did not go on to specify any restrictions on the chargor's operation of the account. This very restrictive definition of a fixed charge removes the element of judgement permitted by earlier cases: a charge is fixed if and only if the chargor is legally obliged to preserve the charged assets, or their permitted substitutes, for the benefit of the chargee. In all other cases, the charge is floating and therefore subject to the disadvantageous statutory regime already described.[137]

32–22

The change effected by this approach can be seen most clearly by comparing earlier decisions.[138] The easy cases remain easy. Suppose the charge holder is a bank with a charge over a company's book debts: if use of the proceeds of the book debts is not controlled at all, then the charge is floating[139]; and if use of the proceeds is completely restricted, then the charge is fixed.[140] But if neither the freedom nor the control is absolute, then a judgement used to be required. In *Siebe Gorman & Co Ltd v Barclays Bank Ltd*,[141] Slade J (as he then was) held that a debenture over the borrower's book debts and its proceeds was correctly classified by the parties as a fixed charge. The charge agreement provided that the company could not assign or charge the secured book debts, and that the proceeds of the debts had to be paid into a designated bank account with the lending bank, although the chargor was then free to use the funds in the account.[142] On the basis of Slade J's decision, this form of debenture became a precedent and was widely used by most banks. The mere fact that the assets sought to be charged were a fluctuating class of present and future assets was not by itself a fatal objection to the creation of a fixed charge.[143] This decision has now been overruled by *Spectrum.*

In *Re New Bullas Trading Ltd*,[144] the agreement provided for a

fixed charge over the book debts while they remained uncollected, but, when collected and paid into a designated account (unless written instructions to the contrary were given by the chargee), the monies so received were released from the fixed charge and became subject to a floating charge. No directions were ever given. The Court of Appeal, reversing Knox J, held that the parties were contractually able to reach such an agreement, and the arrangement constituted a fixed charge over the (uncollected) book debts, and a floating charge over their (collected) proceeds in the bank account. This case, too, was overruled by the House of Lords in *Spectrum* on the basis that, since the chargor was free to deal with the charged assets (the book debts), for its own benefit and without the consent or interference of the chargee, by collecting the debts and using their proceeds at will, the charge over the book debts was therefore floating.

32–23

The restriction on the chargor's ability to deal with the assets must be legally binding. In *Royal Trust Bank v National Westminster Bank Plc*,[145] for example, an instrument creating a charge over book debts gave the chargee bank the right to demand that the company should open a dedicated account and pay all monies received on the collection of the debts into that account, but the bank never exercised this right, and in practice monies collected went into the company's ordinary trading account. The charge was held by Millett LJ to be floating.[146] Similarly, in *Re Double S Printers Ltd*,[147] the chargee, as a director of the company, had de facto control over the proceeds of the charged book debts since he had actual control of the bank account, but this was not backed by any contractual restraint on their disposal in the instrument itself. As in the *Royal Trust Bank* case, it was held that the company's freedom to deal (at least in law) led to the conclusion that the charge was floating. And a legally binding arrangement to create a fixed charge that is in fact ignored by the parties, who operate as if the charge is floating, will be treated by the courts as a sham.[148]

The *Spectrum* decision has substantially affected the rights of companies to grant fixed charge securities over what must remain, for good commercial reasons, their circulating assets,

whether these are physical assets used or manufactured by the company or the company's book debts.[149] It remains to be seen what techniques enterprising commercial parties will find to set up effective substitute security that attracts fewer of the disadvantages associated with floating charges.

Registration of Charges

The purpose of a registration system

32–24

Part 25 of the Companies Act 2006 contains provisions relating to the registration of particular details in relation to certain charges with the Registrar of Companies. Following a major reform in 2013, the registration system has now changed from a mandatory one (and backed by criminal sanctions) to one which is optional and registration lies at the discretion of the Company.[150] The 2013 changes came about following multiple rounds of failed attempt to reform the system. To understand how we have come to where we are today, it may be helpful to understand the registration requirement, which has been a feature of the Companies Acts since 1900. What are the possible purposes of such a registration requirement?

First, and most obvious, the aim might be to give potential lenders to the company more accurate information about the company's apparent wealth by revealing the true extent of any earlier secured lending[151] that may rank ahead of their own contemplated advances. Such information may also be of interest to credit analysts, insolvency practitioners appointed upon the company's insolvency, shareholders and investors. Secondly (and for reasons aligned with the first objective), registration might be treated as an essential part of the process whereby a person obtains a security interest against the company. Without registration, the security interest would be void, and could not be relied upon as against the unsecured creditors of the company in the latter's insolvency.[152] The usual terminology is that registration is necessary for the "perfection" of the security. Thirdly, registration might determine priority among secured creditors. For example, priorities among secured creditors could be determined simply by the date of the registration of the

security (and not, for example, by reference to the date of creation of the security, or by whether the later taker of a security knew of the earlier one): such a system is generally referred to as a system of “notice filing”.

32–25

As the law stood before the 2013 changes, not one of these objectives was delivered. The first failed, since not all security interests needed to be registered, only those listed in the now-repealed s.860(7). The second failed for the same reason of limited application, although within that limited range any charges that ought to have been registered, but were not, were void as against the liquidator, administrator and any creditor.[153] And the third failed, as it was simply not part of the rules of the system: instead, if the security was valid (including properly registered, if it needed to be), then priority was judged according to the usual common law rules, generally based on the time of creation, the type of interest created, and the notice to subsequent security holders.

What is remarkable about this area of law is that proposals for radical change have been made by highly respected official bodies for over 40 years, but no change of either a radical or a tinkering kind was put in place until 2013 (and even that might be described as merely tinkering).[154] Radical change was proposed by the Crowther Committee in 1971,[155] endorsed by the Cork Committee in 1983,[156] and re-proposed by Professor Diamond in 1989.[157] The CLR began in tinkering mood,[158] partly because consultation on the previous radical proposals had not produced an enthusiastic response, but concluded by advocating radical reform.[159] In this positive spirit, the issue was handed over to the Law Commission,[160] which produced a consultation paper and a “consultative report”, both favouring radical change, proposing a comprehensive scheme of notice-filing and associated priority rules that would extend to all securities and quasi-securities, whether granted by companies, unincorporated businesses or individuals.[161] Despite the early support, further consultation on this detailed proposal produced a more cautious response, and the Law Commission’s final Report on Company Security Interests in 2005 recommended a less radical scheme, preserving its recommended notice-filing and priority rules for

charges and outright sales of receivables, but not including quasi-securities nor, at least to start with, unincorporated debtors.[162]

In July 2005, the Department of Trade and Industry (the predecessor to the Department of Business, Innovation and Skills) considered these various recommendations and published a consultation document.[163] The results of all this effort can only be seen as disappointing. CA 2006 has now been amended, repealing the original Chs 1 and 2 of Pt 25 and replacing them with Ch.A1, but all to rather minimal effect.

The reformed registration system

What has to be registered

32–26

As already mentioned, there is no longer any requirement to register security interests. But any charge created by the company[164] *may* be registered, save for four exceptions,[165] and s.859A(2) compels the registrar to register the charge if a statement pursuant to s.859D is submitted within the stipulated time period. In keeping with this general change of direction, the criminal sanction for non-registration is removed, although it remains the case that failure to register a registrable charge will render it void against the administrator, liquidator or any creditor of the company.[166] There is thus a very powerful practical sanction for non-registration.

It might be thought that the move away from a prescribed list of charges which were required to be registered (under the now repealed s.860(7)) would eliminate much of the argument about whether or not the charge was one that required registration. But given the invalidity consequences just noted, and in any event as was very largely the case under the previous rules, all the debate will simply be about whether the creditor’s interest is a charge at all,[167] not whether it falls within or outside some prescribed list of charges.

The mechanics of registration

32–27

Registration may be effected by the company itself or by any person interested in the charge. The chargee is the person most motivated to register, so as to protect its security.

The period allowed for registration is 21 days beginning with the day after the date of creation of the charge (s.859A(4)), unless an order granting an extension can be obtained from the court, having regard to the restrictive requirements laid down in s.859F.[168] Section 859E defines the "date of creation of the charge", with ss.(1) stipulating the date of creation, in respect of three different types of charge, depending on whether it is a "standard security" and whether or not it is "created or evidenced by an instrument".

Where the debt is satisfied or the charged property or undertaking has been fully or partially released, a statement to that effect,[169] together with the relevant particulars,[170] should be submitted to the registrar. Upon receipt of such statement and particulars, the registrar must include in the register a statement of satisfaction or a statement recording the release of the charge.[171]

The register is accessible to the public. Reflecting concerns for confidentiality and privacy, certain personal information is not required to be included in the certified copy of the instrument delivered to the registrar.[172]

In addition to this registration at Companies House, the company is no longer required to keep a register of charges on its undertaking and property.[173] However, companies are still required to keep copies of instruments creating and amending charges available for inspection.[174]

Geographical reach of the registration provisions

32–28

The reformed system provides a single scheme for registration irrespective of the place of incorporation of the company within the UK (the previous scheme had one system for England, Wales and Northern Ireland, and a separate one for Scotland). The wide scope of s.859A means that a charge is registrable whether or not it is created in the UK, and whether or not the property being charged is located in the UK, with no special provisions or

exceptions for these types of security.

Despite this, if the secured property is located outside the UK, then the effectiveness of any security is likely to depend upon the property law rules applying within that jurisdiction, and not simply on whether the charge should have been registered in the UK.[175]

If the debtor company is not one that is registered in England, Wales or Scotland, then special rules used to apply. The requirements under the Overseas Companies (Execution of Documents and Registration of Charges) Regulations 2009,[176] which effectively imposed the same registration requirements on registered overseas companies, are now repealed.

The effect of failure to register

32–29

As already noted, failure to register is no longer a criminal offence, although any registrable but unregistered charge created by the company will be void against the administrator, liquidator or any creditor of the company.[177] The person disadvantaged is the chargee, not the company; hence the rule allowing any person with an interest in the charge to register it. If the charge is not registered,[178] the chargee effectively loses its security. To reduce this hardship, the Act provides that if the charge is void to any extent for non-registration, then the whole of the sum thereby secured becomes immediately repayable on demand.[179] This, of course, also provides the company with an incentive to register. In addition, the unregistered charge is not void against the company (if still solvent), and there is nothing to prevent the chargee enforcing it (although often to little advantage if the company is solvent).[180] An unsecured creditor has no standing to prevent the holder of an unregistered but registrable charge from enforcing it.[181]

Late registration

32–30

Section 859F enables the company or a person interested in a charge that has not been registered within 21 days of its creation to apply to the court for an order extending the time for

registration. This can be done if the court is satisfied that the failure to register was accidental or inadvertent and not likely to prejudice creditors or shareholders, or it is satisfied on other grounds that such relief is just and equitable.[182] This repeats earlier provisions, so older cases remain useful. The jurisdiction of the court is very wide,[183] but the court will not normally make an order once a winding-up has commenced.[184] This is because winding up is a procedure for the benefit of unsecured creditors, and registering a charge after the commencement of winding up would defeat their interests. The court may also refuse to exercise its discretion if the company is insolvent,[185] or if the company is in administration and it is inevitable that this will proceed to insolvent liquidation.[186]

If the court does exercise its discretion, the charge is normally registered on terms that do not prejudice the secured rights acquired by third parties prior to the actual date of registration.[187] Since a charge does not become ineffective until the normal time limit has expired, this standard proviso only protects third parties acting between the date when the charge ought to have been registered and its actual registration.[188] Unsecured creditors are not protected by such a proviso, and are not part of the court's considerations.[189]

Defective registration

32–31

Section 859M allows applications for rectification of omissions or misstatements in the registered particulars. The jurisdiction is defined in the same way as s.859F (see above). The particulars may, for example, fail to state accurately the property subject to the charge or the amount secured by the charge.[190] Note that the court's power is limited to correcting omissions or misstatements within an entry. The court cannot order the removal of an entry,[191] nor can it order the removal of information that the company would prefer not to be there,[192] and nor does the court's jurisdiction extend to particulars which are not required to be registered.[193]

Effect of registration

32–32

Where a charge is registered, the Registrar has to issue a certificate of registration and this is made conclusive evidence that the requirements of CA 2006 Pt 25 Ch.1A have been complied with.[194] This provides assurance to any transferees of the security that the validity of its registration cannot be challenged. The conclusiveness of the certificate means that the charge will be treated as validly registered even if it was not, but was registered by mistake[195]; and even if the registered particulars are inaccurate.[196] Note, however, that where there is such inaccuracy, registration validates the charge, but the operative terms are those agreed between the parties notwithstanding that third parties may have been misled[197] by incorrect particulars.[198] Because the certificate is conclusive evidence of registration, there can be no judicial review of the Registrar's decision to register.[199]

On the other hand, registration does not cure any flaw in the charge itself as between the parties, so the validity of the charge remains challengeable by the company.[200] In addition, registration does not determine priority as between competing security interests (although failure to register renders the charge void, and therefore registration is a necessary, although not sufficient, condition to obtaining priority). Priority is determined by the usual common law and equitable rules of property. Indeed, the register does not necessarily provide accurate information to chargees about earlier charges that may rank ahead of any charge currently being negotiated. This is because of the "21 day invisibility problem", whereby if A registers a charge on 21 January, for example, there is no guarantee that the company has not created a charge shortly prior to this which may be registered within 21 days[201] and thus have priority. In applying the normal priority rules as between competing interests, any person taking a registrable charge over the company's property (and perhaps other persons[202]) will have constructive notice of any matter that requires registration and has been disclosed. To take an example, a person taking a contractual lien is probably not affected by constructive notice of the register, but a person taking a floating charge would be.

Reform proposals and registration systems elsewhere

32–33

The fate of recent and not so recent proposals for reform of the UK registration system has already been described.[203] Although some commentators doubt the need for a registration system at all,[204] most developed countries have one. Indeed, the major reform proposals most recently rejected in England and Wales had strong parallels with the systems already operating in the US (Uniform Commercial Code art.9), Canada, New Zealand and Australia, and under consideration elsewhere. The most disappointing feature of the current position in England and Wales is not simply that the UK has been left with an outdated regime, but that it missed an opportunity to provide the first draft for a model European scheme. The work being done by the EBRD, UNCITRAL and UNIDROIT indicates the demand for sophisticated input on this front.[205] Older editions of this book provided some detail on the Law Commission's various 2002–2005 proposals, assuming that they had not quite been laid to rest,[206] but that detail is not repeated here.[207]

Enforcement of Floating Charges

Receivers and administrators

32–34

The methods of enforcing a security interest depend upon the nature of the rights which it confers, and are often in no way peculiar to company law. However, company law has traditionally provided a distinct proceeding for the enforcement of a floating charge by the appointment of a receiver—termed, since the insolvency reforms of the 1980s, an "administrative receiver".[208] In this section, therefore, we return to our preoccupation with the floating charge. A major reform brought about by the Enterprise Act 2002 was substantially to restrict use of receivership in the future and to channel the enforcement of floating charges into the administration procedure, which is a general procedure for the handling of insolvent companies and thus not specific to the enforcement of the floating charge.

The main driver behind this reform was the desire to produce an enforcement mechanism for the floating charge in which the relevant insolvency practitioner owed duties to all the creditors

of the company and not primarily to the floating charge holder.[209] Consistently with the case law origins of the floating charge in the nineteenth century, the receiver is a person appointed out of court by the charge holder under the provisions of the instrument creating the charge, and who takes management control of the company in order to realise sufficient assets to repay the appointor (the charge holder) and then hands the company back to its directors or to a liquidator,[210] depending on the financial state of the company at the end of the receivership.

Compared with receivership, administration is a much more recent mechanism, introduced as a result of the recommendations of the Cork Committee.[211] Ironically, the statutory administration procedure was based on the common law receivership. Although the Cork Committee had criticisms to make of receivership, it took the view that it had one inestimable advantage over the then principal alternative way of dealing with an insolvent company, namely winding up. This was because the receivership was structured on the basis that the receiver would normally continue to run the company and in the process save the viable parts of its business (though often by selling them off to others). Such a "rescue culture" was thought to be more protective of the interests of all stakeholders in the business than a winding-up, and so the Committee recommended that the benefits of receivership be made available where there was no floating charge, so that the rescue culture could be extended to such cases.

32–35

Of course, the receivership rules could not simply be applied in total to a situation where there was no floating charge. In the absence of a charge holder to appoint the insolvency practitioner, that task was given to the court, on application by the company or its creditors. Further, the opportunity was taken of giving the statutory administrator the benefit of an institution which the receiver, as a product essentially of private law, had not had, namely, a moratorium during the administration on the enforcement of creditors' rights against the company. Finally, and in line with the notion of the administration as an extension of the receivership, the floating charge holder, if such had been

created, was initially given, in effect, a veto over the appointment of an administrator.[212] This last feature was subsequently removed by the Enterprise Act 2002 and, going in the opposite direction, is supplanted by a prohibition in the normal case on the appointment by the floating charge holder of an administrative receiver.[213] Thus under the Enterprise Act 2002, it is not possible to appoint an administrative receiver under a floating charge created on or after 15 September 2003, except as in the cases specified in IA 1986 ss.72B–72H. Instead, the chargee is given the right to appoint an administrator: see IA 1986 Sch.B1 para.14(1). Chargees of charges created prior to this date may appoint an administrator, but retain the right to appoint an administrative receiver. The aim, stated in the White Paper preceding the Enterprise Act 2002, was that "administrative receivership should cease to be a major insolvency procedure".[214] The administrative receiver would instead be replaced by an administrator, who is an officer of the court, and must "perform his functions in the interests of the company's creditors as a whole".[215]

Note that a chargee whose charge does not cover the whole or substantially the whole of the assets of the company can still appoint a receiver (who will not be an administrative receiver), and cannot appoint an administrator.

32–36

This policy of statutory patricide was subject, however, to two qualifications which concern us. First, the White Paper recognised that the procedure for appointing a receiver had the advantages for the floating charge holder of being quick, cheap and entirely under the charge holder's control. It was further recognised that the earlier administration procedure would need to be reformed so as to reproduce those advantages, as far as possible, within the new structure. "Secured creditors," said the White Paper, "should not feel at any risk from our proposals".[216] Accordingly, the current administration procedure is not simply one that applies more generally, but is itself reformed, a new Pt II being inserted into the IA 1986 by the Enterprise Act 2002.[217]

Secondly, the common law administrative receivership system is retained in certain exceptional cases as mentioned above.[218]

Most of these do not need to be discussed in a work of this nature, but one is of crucial importance to us. Under the new IA 1986 s.72B, as interpreted in the new Sch.2A,[219] a receiver may still be appointed where a company issues secured debentures[220] and where (a) the security is held by trustees on behalf of the debenture-holders[221]; (b) the amount to be raised is at least £50 million[222]; and (c) the debentures are to be listed or traded on a regulated market.[223] In terms of enforcement, therefore, an important distinction is drawn between two common forms of corporate finance. Where the debt is raised from the public by way of a large-scale offering of securities, the administrative receivership procedure will continue to be available. Where the debt is raised from a bank (or syndicate of banks), administration will be the enforcement procedure, unless one of the other exceptions contained in IA 1986 ss.72C–72G applies.[224] For this reason it is necessary to discuss briefly both the receivership and administration methods of enforcing the floating charge.[225] We begin with the older procedure.

Receivership

Appointment of an administrative receiver

32–37

Where an appointment of an administrative receiver remains possible, because the case falls within one of the exceptions noted above and the necessary power is contained in an existing debenture, almost invariably the first step in the enforcement of a charge is for the debenture-holders or their trustee to obtain the appointment of a receiver.[226] This appointment will normally be made by the debenture-holder under an express or implied[227] power in the debenture, or by the court. Where the appointment is pursuant to a provision in the debenture then it must be clear that the conditions justifying the appointment have arisen, otherwise the receiver will be a trespasser and also liable for conversion.[228]

Once the conditions for the enforcement of a charge have arisen, English law places few constraints on the rights of the security holder to enforce the charge, and in this respect the regime is pro-security holder. For example, if the chargee is

entitled to payment on demand, it is only necessary to give the company reasonable time to put into effect the mechanics of payment, not reasonable time in which to raise the funds to make payment.[229] Indeed, if the debtor makes it clear that funds are not available, this constitutes a sufficient act of default and there is no need to allow the debtor any time before treating it as being in default.[230] In addition, the chargee is not under any duty to the debtor company to refrain from exercising its rights merely because by doing so it could avoid loss to the company,[231] nor to exercise its rights promptly because the security is declining in value.[232]

If the security is not yet enforceable, but the debenture-holder's position is in jeopardy, the court may exercise its inherent discretion to appoint a receiver.[233] This is now very rare, but can be done by a debenture-holder's action, taken by one of the debenture-holders, on behalf of himself and all other holders. "Jeopardy" is established when, for example, execution is about to be levied against the company,[234] or when the company proposes to distribute to its members its one remaining asset.[235] "Jeopardy" is not assumed whenever the circumstances make it unreasonable, in the interests of the debenture-holder, that the company should retain power to dispose of the property subject to the charge. This is the statutory definition under Scottish law,[236] but the English decisions hardly go so far, and the fact that the assets on realisation would not repay the debentures in full has been held insufficient.[237]

Despite this option, appointment out of court is certainly preferable. The procedure in a debenture-holders' action is lamentably expensive and dilatory, since the receiver, as an officer of the court, will have to work under its closest supervision and constant applications will have to be made in chambers throughout the duration of the receivership, which may last years if a complicated realisation is involved. Since the 1986 Act allows a receiver, even though appointed out of court, to obtain the court's directions,[238] it is difficult to envisage circumstances in which an application to the court can be justified if the cheaper alternative is available, and the professional adviser who recommended it would be laying himself open to grave risk of criticism. In the discussion which

follows, it will be assumed that what is being referred to is a receiver appointed out of court.

Function and status of the receiver and administrative receiver

32–38

The 1986 Insolvency Act views the appointment of an administrative receiver as being in some respects similar to insolvency proceedings and regulates it accordingly.[239] Thus administrative receivers must be qualified to act as insolvency practitioners[240] and can only be removed from office by the court.[241] Also, like the liquidator, the administrative receiver can compel those involved in the affairs of the company to provide him or her with information relating to the company's affairs,[242] and is also obliged to report to the Secretary of State if he or she forms the opinion that the conduct of the directors makes any of them unfit to act as director of a company.[243] The effect of the appointment of a receiver upon the company directors is that they no longer have any authority to deal with the company property. They do however officially remain in office and continue to be liable for the submission of documents to Companies House, and may still institute proceedings in the company's name. In other ways, too, the appointment of a receiver must not be equated with that of a liquidator: (i) where a receiver is appointed, the company need not go into liquidation,[244] and if it does, the same person who acted as receiver will normally not be appointed liquidator; (ii) liquidation is a class action designed to protect the interests of the unsecured creditors, whereas, as we shall see, receivership is designed to protect the interests of the security holders who appointed the receiver and it is for this reason that a receiver can be appointed even where the company is in liquidation[245]; (iii) liquidation terminates the trading power of the company,[246] whereas this is not the case with receivership; (iv) a liquidator has power to disclaim onerous property,[247] something not possible in the case of receivership; (v) a liquidator in a compulsory winding-up is an officer of the court,[248] whereas this is not the case with a receiver unless appointed by the court[249]; (vi) lastly, it is easier to obtain recognition of liquidation as

opposed to receivership in proceedings in foreign courts.[250] These are the most important differences but there are others, particularly with respect to liability on contracts.[251]

An administrative receiver might be assumed to be the agent of those who appointed him but this is not the case; IA 1986 s.44 makes him the agent of the company.[252] The reason for this is to avoid those who appointed the administrative receiver being treated as mortgagees in possession[253] or being held liable for the receiver's acts, which would be the case were the receiver to be treated as their agent.[254] As many have pointed out, the receiver's agency is a peculiar form of agency. This is because the primary responsibility of the receiver is to protect the interests of the security holders and to realise the charged assets for their benefit.[255] Nevertheless, the way the receiver carries out these responsibilities will profoundly affect parties other than the chargee. If the secured assets are not realised for their full value and there is a shortfall in paying the secured debt, the shortfall may become payable by a guarantor who might feel aggrieved to be called upon if the shortfall seemed unnecessary. Equally, the company—and, if it is insolvent, its creditors—will feel aggrieved if the value of secured asset has been in some way wasted on meeting only the secured creditor's claims when a more careful exercise might have generated a surplus for the benefit of the company. For these reasons, there are a number of parties interested in the various duties the receiver owes in the exercise of his or her role.

This has been a fraught question. The powers of administrative receivers are extensive and they will have complete control over the assets subject to the charge under which the appointment was made.[256] In addition they may apply to the court for an order empowering them to dispose of property subject to a prior charge.[257] In the exercise of these extensive powers, the courts have struggled with the standards that ought to be imposed. The low water mark was probably the decision of the Privy Council in *Downsview Nominees Ltd v First City Corp*,[258] of course much welcomed by insolvency practitioners. Lord Templeman in that case held that the receiver owed no general common law duty of care to interested parties; his duties lay exclusively in equity, which required him merely to act in

good faith, although if he did decide to sell the property (as he invariably would), then he was required to take reasonable care to obtain a proper price. Nevertheless, and predictably, the receiver's role could not withstand the onslaught in the development of common law principles of the duty of care. The position now is that receivers are under a duty to the debtor company to take reasonable care to obtain the best price reasonably possible at the time of sale[259]; this duty is also owed to a guarantor of the company's debts.[260] However, as the receiver in exercising a power of sale is in a position analogous to that of a mortgagee, receivers are not obliged to postpone sale in order to obtain a better price or to adopt a piecemeal method of sale.[261] If they delay the sale, they are also under a duty, while they manage the property, to manage it with reasonable care and due diligence.[262]

32–39

The basis of the receiver's duty set out above was initially considered to involve a controversial extension of the common law of negligence to supplement equity,[263] but the courts now tend to treat it as something which flows directly from the special nature of the relationship between the chargee and chargor.[264] The result is that the receiver must act in good faith, and not for improper purposes, and must have regard to the chargor's interests while at the same time allowing that the chargee's interests are paramount. The most recent significant English authority, *Medforth v Blake*,[265] treats the standard of care required in equity as the same as that required at common law, and in that case held the receivers, who negligently conducted the business of which they had taken control, to be liable to the mortgagor, who suffered loss when (after the secured debt had been discharged) the business was handed back to him in a less good state than if it had been properly run by the receivers. Although this decision goes some way towards protecting debtor companies, and, by extension, their unsecured creditors, from the incompetence of receivers, the Court of Appeal made it clear that it was not purporting to overturn the principle that the primary duty of the receiver is to bring about the repayment of the debt owed to the secured creditor. In this particular case, there was no conflict of interest between the mortgagor and

mortgagee, since both potentially suffered harm as a result of the receivers' incompetence.[266] The case, thus, is not authority for the proposition that it is negligent for the receivers to give primacy to the appointor's interests as against those of the mortgagor (or the company and its unsecured creditors).

A person dealing with an administrative receiver in good faith and for value is not bound to enquire if the receiver is acting within his or her powers.[267] Unlike a winding-up, the board of directors is not discharged on the appointment of a receiver, but the directors' powers are substantially superseded since they cannot act so as to interfere with the discharge by the receiver of his or her responsibilities and accordingly their powers are suspended "so far as is requisite to enable a receiver to discharge his functions".[268] Given the extent of the powers of the administrative receiver, the directors will have a miniscule aperture within which they are free to exercise their powers. However, they do possess certain residual powers and, for example, it has been held that they can bring proceedings in the company's name.[269] This authority has been doubted because of the conflict that would arise were the receiver and the directors to have different views on whether an action should be brought, and also on the handling of any counterclaim.[270] Whatever the status of the *Newhart* decision,[271] it is clear that it will be confined to very narrow limits, since to allow every such action would interfere with the primary duties of the receiver to protect the interests of the security holder.[272] On the other hand, the directors can certainly take proceedings to challenge the validity of the receiver's appointment,[273] or sue the receiver for breach of duty,[274] or oppose a petition to wind up the company.[275]

Finally, as the directors remain in office, the receiver is under an obligation to provide the directors with the information that they request to enable them to comply with their reporting obligations under the Companies Act.[276] The receiver is also obliged at the end of his receivership to hand over to the company any documents belonging to the company other than those brought into existence for the discharge of his own professional duties or his duties to the chargee.[277]

The receiver's liability with respect to contracts

32–40

An administrative receiver taking over the management of a company will need to manage the company's existing (partly performed) contracts, and will need to enter into new contracts on behalf of the company. These raise separate issues.

Consider first the contracts already in existence when the receiver is appointed. As an administrative receiver is the agent of the company, the appointment does not of itself affect existing contracts. If, in the interests of the chargee, the receiver causes the company to repudiate these contracts, the injured parties will be left to their normal contractual remedies in damages, but with the company unlikely to be left with the funds to pay such claims.[278] Since, in doing this, the receiver acts as an agent of the company, he cannot be liable for the tort of inducing a breach of contract.[279] The only exceptions to this general rule are the normal exceptions applying with contracts that are specifically enforceable[280] or subject to injunctions: the appointment of an administrative receiver makes no difference to the court's response in these cases. On the other hand, if the receiver does not repudiate the contract, he is said to "adopt" it.[281] This is rather misleading terminology: the contract is not a new contract at all; it remains the contract entered into by the company on the terms agreed by the company. Indeed, this itself can cause problems for receivers where adoption brings into play contractual liens[282] or set-offs.[283]

As a matter of policy, it seems desirable to impose a limited duty on the receiver to continue to trade or otherwise act positively where this would not jeopardise the chargee's interests and a failure to do so would impose gratuitous damage on the company.[284] Not to extend his duty in this way would stretch the pro-creditor bias of receivership to ridiculous lengths. But, as described below, this obligation is limited: the primary purpose of receivership is to realise the assets for the benefit of the secured creditor.

32–41

Special mention should be made of contracts of employment. These contracts are not automatically terminated by the receiver's appointment unless the receiver does something which

is inconsistent with the continuation of the contract,[285] for example by selling the company's business.[286] If the receiver sees no hope of selling the business as a going concern, then he is likely to dismiss the employees forthwith. Such dismissal will likely be because of redundancy, and will almost certainly not be unfair dismissal (provided there is no unfair selection of the persons to be dismissed). The receiver may take some time to decide what to do. Nothing that is done or omitted to be done in the first 14 days of the receiver's appointment is taken as showing that the receiver has adopted a contract of employment.[287] After that, if nothing is done, the receiver will be taken to have impliedly adopted these contracts.[288] Once adopted, the administrative receiver is, by statute, personally liable for the company's liability for wages or salary, contributions to an occupational pension scheme, holiday and sick pay, and deductions for income tax and national insurance,[289] from the date of adoption of the contract.[290] The administrative receiver cannot contract out of this liability for adopted employment contracts,[291] but is entitled to an indemnity out of the assets of the company.[292]

Where the receiver enters into new contracts, this is done as agent for the company, and the contracts will therefore be binding on the company. More importantly, however, the receiver is also personally liable by statute on any contract entered into on behalf of the company unless the contract provides otherwise.[293] Exclusion of liability may be express or implied. Administrative receivers will invariably try to contract out of liability. They will in any event have a statutory indemnity out of the company's assets[294] and will usually also have an indemnity from the chargee.

Publicity of appointment and reports

32–42

Where a receiver or manager is appointed then this must be stated in various business documents relating to the company.[295] All receivers also have to make prescribed returns to the Registrar,[296] and the administrative receiver has to report to creditors, including unsecured creditors, but will not have to report to those who have opted out of receiving notices.[297] A

receiver who fails to comply with his reporting obligations can be ordered to do so[298] and, more importantly, can be disqualified from acting as a receiver or manager.[299] There is no similar obligation to report where a debenture-holder enters into possession and it has been recommended that this omission be corrected.[300]

Administration[301]

Function

32–43

The "rescue" goals of the revised administration procedure are clearly displayed in the current definition of the objectives of administration, set out in Sch.B1 to the IA 1986. Three objectives are listed but are put into a clear hierarchy. Priority is given to "rescuing the company as a going concern",[302] which is the objective which the administrator must pursue unless he or she thinks it is not practicable to achieve it or that the second objective would better serve the creditors' needs.[303] That second objective is "achieving a better result for the company's creditors as a whole than would be likely if the company were wound up".[304] Thus, preservation of the company as a going concern, to the benefit, for example, of employees, is not essential if the creditors would be worse off as a result. The third objective is "realising property in order to make a distribution to one or more secured or preferential creditors".[305] The administrator may pursue this objective only if it is not reasonably practicable to achieve the other two objectives, and it must be pursued in such a way that it will "not unnecessarily harm the interests of the other creditors of the company as a whole".[306] Subject to the qualification implied where the administrator legitimately pursues the third objective, the administrator must act "in the interests of the company's creditors as a whole".[307]

Although on an application to the court, the purpose of the proposed administration has to be stated, that purpose does not have to be confined to a single goal. It is more likely, therefore, that the statutory purposes will simply control the way in which the administrator, after appointment, exercises his or her powers.

The floating charge holder may read these provisions with some gloom, for the priority given to the second objective over the third appears to mean that if the creditors as a whole would be better off than in a winding-up, the administrator should pursue that course of action, even if the charge holder will be worse off.[308]

Appointment

32–44

As is now generally required in the insolvency area, only a qualified insolvency practitioner may be appointed as an administrator.[309] An administrator may be appointed by the court, on application by the company, its directors or one or more creditors,[310] where the company is or is likely to become unable to pay its debts[311] and the appointment is "reasonably likely" to achieve one of the specified purposes.[312] This seems to put into statutory form the position at which the courts had arrived under the old law, which used a different form of wording, namely, that there must be a "real prospect" that the purpose or purposes will be achieved.[313] The change is important, for a higher hurdle materially increases the costs (as well as decreasing the chances) of securing an administration order, especially by encouraging applicants to commission an extensive report by an independent person in support of the application.[314]

An administrator may also be appointed out of court, and this now is the preferred route in the interest of saving costs. The ability to do this[315] was one of the important changes introduced by the Enterprise Act 2002, to reduce opposition to the proposals from banks.[316] The holder of a "qualifying floating charge",[317] being a charge or charges which relate to the whole or substantially the whole of the company's property, may appoint an administrator out of court where the instrument creating the charge gives the holder the power to do so.[318] Such an administrator will still be an officer of the court,[319] and what has been said above about the objectives of the administration still applies. Notice and other documents have to be filed with the court after the appointment.[320] If it turns out that the appointment was invalid (for example, because the appointor did not hold a

valid floating charge),[321] the court may order the appointor to indemnify the person appointed against liability arising (for example, to the company in trespass or conversion).[322]

The company or the directors may also appoint an administrator out of court,[323] but not if a receiver is in office,[324] and five days' notice of the intention to appoint has to be given to any floating charge holder, whose consent to the appointment is required.[325] This has two consequences. First, it gives the floating charge holder the opportunity to act first and appoint an administrator of its own choosing.[326] Secondly, in those cases where the charge holder still has the right to appoint an administrative receiver,[327] such an appointment may be made instead. Alternatively, the floating charge holder could simply block the appointment proposed by the company or its directors by not giving consent. In such a case the company or its directors would presumably apply to the court for an appointment. Indeed, it appears that the court can appoint an administrator even though a receiver has already been appointed,[328] but the situations in which the court may exercise this power are limited.[329] Thus, where the appointment of an administrative receiver is still allowed under the new regime, it is logically given priority over the appointment of an administrator.

Powers and duties

32–45

The first task of the administrator is to produce a set of proposals for the future of the company's business, which are put before its creditors for their approval. This must be done within eight weeks of appointment, and sooner if possible.[330] The time limit may be extended by the court on application by the administrator.[331] Notice of the proposals has to be given to members as well as creditors who have not opted out of receiving notice,[332] since in some cases the members may have a financial interest in the success of the rescue. A wide range of outcomes is possible in the case of an administration. They do not need to be examined in detail here. They may be successful, as in acceptance by the creditors of proposals for a restructuring of their rights under a scheme of arrangement[333] that enables the

company to come out of administration and be returned to its previous management, although perhaps with the former creditors now owning a majority of the shares. They may be unsuccessful, as in rejection of the administrator's plans by the creditors and the company being put into liquidation. And there are many variations in between. Whatever the decision reached, the administrator must report the outcome to the court and to the Registrar. Failure to do so attracts a fine.[334] It is worth noting that amendments brought about by the Small Business, Enterprise and Employment Act 2015 has simplified the insolvency procedure by removing the need for creditors' meetings as the default means of decision making.

Between appointment and approval of the proposals, the administrator may exercise all the powers conferred by IA 1986 Sch.B1 para.59 and Sch.1, and this includes the power to dispose of the company's property if an attractive offer is made.[335]

During the administration process, the company benefits from a moratorium on both winding up[336] and legal proceedings for the enforcement of claims against it, except, in the latter case, with the consent of the administrator or the court.[337] A somewhat more limited moratorium also applies from the moment any formal step is taken to seek an administration order.[338] The administrator has general authority to manage the company's business, acting as its agent,[339] as well as the powers specified in Sch.1 to the Act[340]; may appoint and remove directors[341]; and, as we have noted,[342] may dispose of property subject to the floating charge[343] and, with the consent of the court, even property subject to a fixed charge.[344] However, the court may so order only if the court thinks the disposal would be likely to promote the purposes of the administration and there is applied to discharging the security the net proceeds of the disposal and any additional amount needed to bring that amount up to the market value of the asset. Since the moratorium will prevent the charge holders (fixed or floating) from enforcing their security, the position may be that charge holders not only cannot repossess their property but that the administrator has disposed of it. However, the floating charge holder will have his or her security transferred to the proceeds of the sale,[345] whilst the conditions attached to the court's power to sanction a sale over property in

relation to which a fixed charge obtains mean the only detriment to the fixed charge holder is that he cannot control the timing of the realisation of his security, which will be undertaken by the administrator, probably as part of a larger disposal, instead of by the security holder as a single transaction.

32–46

Overall, the administrator has all the powers normally vested in the board of directors,[346] now supplemented by some of those given to liquidators, specifically the power to bring actions against directors claiming compensation on behalf of the company for fraudulent or wrongful trading.[347] In contrast with an administrative receiver,[348] he or she is not personally liable on contracts entered into on the company's behalf. However, the Act contains an alternative mechanism for ensuring that the administrator secures the discharge of the obligations he or she causes the company to incur. When the administrator relinquishes office, undischarged liabilities are charged on the company's assets and rank ahead of any floating charge or the administrator's own remuneration.[349]

The moratorium, which, as we have noted, was not available to the administrative receiver, may prove an important means of reconciling the banks to the use of the administration. Although it prevents them from enforcing their security, it also keeps unsecured creditors at bay and may promote the sale of the company's business at a higher price, from which those with security will be the first to benefit financially. However, the impact of the moratorium depends in part on how willing the courts are to grant leave. Some guidance on this was given by the Court of Appeal in *Re Atlantic Computer Systems (No.1)*[350] of which the following is a summary. Since the prohibitions in s.11 are intended to assist the administrator to achieve the purpose of the administration, it is for the person who seeks leave (or consent) to make out a case for being granted it. If leave is unlikely to impede the achievement of that purpose, leave should normally be given. In other cases it is necessary to carry out a balancing exercise, weighing the legitimate interests of the applicant and those of the other creditors of the company. In carrying out that exercise the underlying principle is that an administration should not be conducted at the expense of those

who have proprietary rights which they are seeking to exercise, except to the extent that this may be inevitable if the purpose of the administration is to succeed and even then only to a limited extent. Thus, it will normally be a sufficient ground for granting leave if significant loss would otherwise be suffered by the applicant, unless the loss to others would be significantly greater. In assessing the respective losses all the circumstances relating to the administration should be taken into account and regard paid to how probable they are likely to be. The conduct of the respective parties may sometimes also be relevant. Similar considerations apply to decisions regarding imposing terms.

Of course, an unpaid creditor of a company in administration does not have an obligation to continue with supplies or to make further advances unless contractually or statutorily required to do so.[351] Thus, the moratorium may protect the company in administration from pressure from its existing creditors, but it falls far short of guaranteeing that the administrator will be able to carry on the business effectively during the administration. That is likely to require fresh funding and the availability (or not) of such funding is one of the matters the court needs to consider when deciding whether to appoint an administrator.

Protections for creditors and members as against the administrator

32–47

It is clear that an administration may give rise to many of the same agency problems which we have examined in previous chapters in relation to companies that are going concerns. There may be conflicts between majority and minority creditors, and administrators may exercise their wide powers unfairly or incompetently. The Schedule provides some remedies aimed at such conduct. First, administrator proposals to the creditors may not involve downgrading the rights of secured or preferential creditors, without their consent or use of a scheme of arrangement or a company voluntary arrangement (which contain mechanisms for the protection of minorities).[352] Thus, although the secured creditor is put into a collective insolvency procedure, it is given specific protection that the administrator may not propose action which “affects the right of a secured

creditor to enforce his security".[353] Secondly, and more generally, protection against unfair prejudice[354] is extended to actions of the administrator, so that any member or creditor of the company can apply to the court for relief[355] on the grounds that the administrator is acting, has acted or proposes to act in a way which is "unfairly harms" the interests of the applicant.[356] It is not clear whether the substitution of the phrase "unfairly harms" for the phrase "unfairly prejudicial", which is used in the equivalent CA provision[357] and was used in the original version of the IA 1986[358] is intended to produce a substantive change. Thirdly, an application can also be made on the grounds that the administrator "is not performing his functions as quickly or efficiently as is reasonably practicable",[359] thus giving members and creditors an uncomplicated route to complain about negligence on the part of the administrator.[360] Fourthly, the misfeasance provisions from IA 1986 s.212[361] are elaborated in their application to administrators.[362] Together, these last three provisions lay down standards by which the creditors and members can challenge conduct of the administrator which either falls below the standard of competence they are entitled to expect or which does not give appropriate weight to their interests.[363]

Publication of appointment

32–48

A newly appointed administrator must notify the company, the Registrar, and the company's creditors of the appointment.[364] While the company is in administration, every business document must state that fact and name the administrator.[365]

Administration expenses

32–49

Debts or liabilities arising out of contracts entered into by the administrator have priority (often called "super-priority") over the administrator's own remuneration and expenses.[366] This can amount to a hefty liability. The expenses of administration, including the administrator's remuneration, then have priority over a debt secured by a floating charge.[367] After this, the normal priority rules apply.[368]

End of administration

32–50

Under IA 1986 s.76, the appointment of an administrator ceases to have effect at the end of the period of one year beginning with the date on which the appointment took effect, unless the term of office is extended by the court or with the consent of the creditors. The term may be extended by consent only once[369] and by no more than one year.[370]

Alternatively, on the application of the administrator, the court may provide for the appointment of the administrator to cease to have effect, if the purpose of the administration has been sufficiently achieved in relation to the company.[371] Administrators are often keen for these provisions to be interpreted pragmatically in order to enable them to escape accruing business liabilities; the courts have generally complied.[372] The administrator may now also be obliged to make such an application if the company's creditors decide that he must do so.[373]

Conclusion

32–51

A company must be able to raise debt finance, and so it must be able to grant effective security to lenders. It is possible to conceive of a legal regime in which the position of companies giving security is in essence no different from that of any other borrower. There would inevitably be some company law aspects to security transactions—for example, are the directors authorised to enter into the particular transaction contemplated?—but those company law aspects would not be unique to security transactions. As we saw in Ch.7, the issue of directors' authority can easily arise in relation to transactions that do not involve a grant of security.

In fact, however, as this chapter has shown, the current law on the granting of security does have two features that are specific to the corporate nature of the debtor. These are the availability of the floating charge and the system of registration of charges granted by companies. We have also seen, however, that the

modern tendency is to whittle away these uniquely corporate features. Thus, the unique enforcement mechanism for the floating charge by means of the appointment of an administrative receiver has been substantially replaced by the general insolvency mechanism of the appointment of an administrator, as introduced by the Enterprise Act 2002. Going further, the Law Commission has queried the justification for retaining the provisions in the Bills of Sales Acts which prevent non-corporate businesses granting floating charges (as have other bodies before them).[374] Equally, in its proposals for radical reform of the companies charges system, the Law Commission clearly regards the optimal solution as being a registration system applying to charges (and quasi-securities) granted by all debtors,[375] although its proposals were not adopted. Could it be that, like corporate insolvency and public offers of corporate securities before them, security interests granted by companies is a topic which is on its way out of core company law, in order to join up with the rules that apply where a company is not involved?

McKendrick, *Goode on Commercial Law*, 4th edn (London: LexisNexis, 2010), Pt 4, especially Ch.25; P. Ali, *The Law of Secured Finance* (Oxford: OUP, 2002); F. Oditah, *Legal Aspects of Receivables Financing* (London: Sweet & Maxwell, 1991), Ch.1; and M. Bridge, L. Gullifer, G. McMeel and S. Worthington, *The Law of Personal Property* (London, Sweet & Maxwell, 2013), Ch.7.

[6] See s.859A(7), defining "charge" to include mortgage, and any other form of security.

[7] *Bristol Airport Plc v Powdrill* [1990] Ch. 744 at 760. Note that the property of a third party can also be made available by way of security, without any associated personal promise by the third party to meet the secured obligation: *Re Bank of Credit and Commerce International SA (No.8), Re* [1998] A.C. 214. See also *Re Curtain Dream Plc* [1990] B.C.L.C. 925 at 935–937; *Welsh Development Agency v Export Finance Co Ltd* [1992] B.C.L.C. 148; IA 1986 s.248. A charge can be created not only to secure the payment of a monetary obligation but also to secure other types of obligations: *Re Cosslett (Contractors) Ltd* [1998] Ch. 495.

[8] *Smith (Administrator of Cosslett (Contractors) Ltd) v Bridgend CBC* [2002] 1 A.C.

336, [53].

[9] A *common law lien* arises when possession of goods is given to a creditor otherwise than for security—for example, so that the goods can be stored, repaired or transported—and the creditor is given, by custom, statute or contract, a right to retain the goods (and only that right, unless the parties expand upon it by contract) if the debt is not satisfied.

[10] *Re Cosslett (Contractors) Ltd* [1998] Ch. 495 at 508 (Millett LJ).

[11] Most securities created by companies are charges (using that term in its technical sense). A *legal mortgage* is created if the borrower transfers legal title to the property to the lender on the condition that it will be given back when the obligation is met. An *equitable mortgage* is created in the same way, but where the transfer is of equitable title rather than legal title; an equitable mortgage is also created by a specifically enforceable contract to create a legal mortgage. Note that a legal mortgage of land is no longer possible: these arrangements are now deemed by statute to create a *legal charge* (LPA 1925 ss.85(1) and 86(1)). All other charges, using "charge" in its technical sense, are *equitable charges.* These arise where, by contract, a specific item of property is appropriated to, or made answerable for, meeting the debtor's obligation.

[12] "Repos", or sale and repurchase agreements, may equally be subjected to this analysis: on the surface they appear to be much like mortgages, but if the lender has the right to deal with the underlying securities and return only their equivalent, then the agreement is a true sale (plus an agreement the other way to sell equivalent securities), not a mortgage: *Lehman Bros International (Europe) (In Administration)* [2011] EWCA Civ 1544 CA.

[13] *Beconwood Securities Pty Ltd v ANZ Banking Group Ltd* [2008] FCA 594 Aust. Fed.Ct.; *Lehman Bros International (Europe) (In Administration)* [2011] EWCA Civ 1544 CA.

[14] *Re Bond Worth Ltd* [1980] Ch. 228 at 250. These rights are, however, proprietary, and protected as such. For some of the difficulties in distinguishing an equitable charge from a mortgage in terms of the quality of the security granted, see Oditah, above, fn.5, pp.94–96. Also see *Re Leyland Daf Ltd; Buchler v Talbot* [2004] 2 A.C. 298, where Lords Hoffmann (at [29]) and Millett (at [51]) used the language of mortgages, not charges, in describing the chargor of a crystallised charge as having only an equity of redemption.

[15] The usual provision is that, in the event of specified types of default by the chargor, the chargee is entitled to appoint a receiver to act as the agent of the chargor to sell the charged assets and use the proceeds to repay the outstanding debt to the chargee, after first paying those with statutory priorities, as discussed later.

[16] To ensure that the pledgee does not breach obligations to the pledgor.

[17] Although the right to sell is often expressly granted by contract. Subsequent security holders of course take subject to the lien: *George Barker (Transport) Ltd v Eynon* [1974] 1 W.L.R. 462.

[18] Functionally, but not legally, these arrangements operate much like a chattel mortgage (*Welsh Development Agency v Export Finance Co Ltd* [1991] B.C.L.C. 936 at 950; [1992] B.C.L.C. 148), and as a result, there have been several attempts to align their treatment at law with the treatment of other security interests, but so far unsuccessfully. See below, paras 32–33 et seq.

[19] See below, paras 32–26 et seq.

[20] The secured creditor is, alternatively, also be able to follow the original secured property into the hands of third parties, and assert its property rights against them, unless the property is acquired by a bona fide purchaser for value without notice of the earlier equitable interest.

[21] IA 1986 s.42(1) and Sch.1, for example.

[22] *Sowman v Samuel (David) Trust Ltd* [1978] 1 W.L.R. 22; *Re Potters Oils Ltd* [1986] 1 W.L.R. 201.

[23] See paras 32–15 and 32–18, below.

[24] See para.32–17, below.

[25] See para.32–20, below.

[26] Although the chargee has to be careful not to become a shadow director and thus, e.g., potentially liable under the IA 1986 s.214. The chances of this are, on the whole, minimal: see *Re Hydrodam (Corby) Ltd* [1994] 2 B.C.L.C. 180.

[27] For an unsuccessful attempt to challenge a charge precluding the creation of charges in favour of third parties as being in violation of arts 85 and 86 of the EC Treaty, see *Oakdale Richmond Ltd v National Westminster Bank Plc* [1996] B.C.C. 919.

[28] Although see below, paras 32–15 to 32–17, for the rules on preferred creditors and on the prescribed fund to be dedicated to unsecured creditors from floating charge realisations.

[29] And if the proceeds are more than sufficient to repay all the secured debts (and other claims on the secured assets—see below, paras 32–13 to 32–19 (preferred creditors, etc.)), then the excess is returned to the debtor/chargor.

[30] Although see para.32–14, below, for particular rules relating to floating charges.

[31] See paras 2–16 and 2–31, above. For valuable analyses of the floating charge see J. Getzler and J. Payne, *Company Charges: Spectrum and Beyond* (Oxford: OUP, 2006); E. McKendrick, *Goode on Commercial Law*, 4th edn (London: Penguin, 2010), Ch.25; W.J. Gough, *Company Charges*, 2nd edn (London: LexisNexis, 1996), Ch.5. Floating charges and receivers in Scotland are dealt with by CA 2006 Pt 25 Ch.2, and IA 1986 Pt III Ch.II.

[32] See paras 32–8 et seq.

[33] *Re Yorkshire Woolcombers' Association Ltd* [1903] 2 Ch. 284 at 295 (Romer LJ); *Illingworth v Houldsworth* [1904] A.C. 355 HL. In practice, it is usual to state specifically that the charge is "by way of floating charge" but it suffices if it is expressed to be on the "undertaking" or the like: *Re Royal Mail Co* (1870) L.R. 5 Ch. App. 318; *Re Florence Land and Public Works Co* (1879) 10 Ch.D. 530 CA; *Re Colonial Trusts Corp* (1880) 15 Ch.D. 465.

[34] *Re Spectrum Plus Ltd* [2005] 2 A.C. 680 HL.

[35] *Geilfuss v Corrigan*, 95 Wis. 651, 70 N.W. 306 (1897); *Benedict v Ratner*, 268 U.S. 354, 45 S.Ct. 566, 69 L.Ed. 991 (1925).

[36] The commercial inconvenience of this judicial approach probably contributed to the early adoption of an alternative mechanism to achieve similar ends by way of the Uniform Commercial Code art.9.

[37] *Re Panama, New Zealand and Australian Royal Mail Co* (1870) 5 Ch. App. 318 CA,

provided early confirmation that this is possible.

[38] IA 1986 s.251 provides that "floating charge" means "a charge which, *as created*, was a floating charge". See below, para.32–14.

[39] See paras 32–13 et seq.

[40] See paras 32–21 et seq. for the way the courts classify charges as fixed or floating.

[41] And this can be a fraught question given the current registration requirements. See below, para.32–11.

[42] See para.32–4, above.

[43] See below, para.32–34.

[44] The language is often muddled: crystallisation is described as operating as an equitable assignment (by way of charge): *George Barker (Transport) Ltd v Enyon* [1974] 1 W.L.R. 462 at 467, 471, 475; or as conversion to a specific (fixed) charge: *Re Griffin Hotel Co Ltd* [1941] Ch. 129. And see the assertion that the company has an equity of redemption: *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 (Ch) at [1401].

[45] A floating charge agreement does not usually provide for crystallisation over part only of the assets to which it relates. There is no doctrinal reason for this. Partial crystallisation could, theoretically, be provided for by agreement, so long as the class of assets to be affected could be specified with certainty so as to define those which the chargor can and cannot deal with. This practicality creates the problem. It is submitted that *Robson v Smith* [1895] 2 Ch. 118 is not authority against partial crystallisation since the floating charge in that case did not confer any such right. In any event, such a provision is unlikely to be attractive in practice: it confers no significant benefit on the chargor, since the essence of security is that it only secures the outstanding debt, and any surplus (in cash or kind) is returned to the chargor; and it reduces the rights of the chargee in ways that may turn out to be unnecessarily detrimental when the event occurs.

[46] At the time the event of crystallisation occurs, there must be: (a) an outstanding obligation which the charge secures; (b) a valid and subsisting charge agreement; (c) identifiable charged assets in which the chargor has an interest or rights.

[47] *Wallace v Universal Automatic Machines* [1894] 2 Ch. 547 CA; *Re Victoria Steamboats Ltd* [1897] 1 Ch. 158. Even if the winding-up is for purposes of reconstruction: *Re Crompton & Co* [1914] 1 Ch. 954. It is the making of the order and not, for example, the presentation of the petition since there is always the chance that the court will decline to make the winding-up order. In Scotland the charge crystallises on the commencement of the winding-up of the company: Bankruptcy and Diligence etc. (Scotland) Act 2007 s.45 (not yet in force).

[48] *Evans v Rival Granite Quarries Ltd* [1910] 2 K.B. 979. The same applies to the appointment of a receiver by the court. See para.32–38 on administrative receivership.

[49] This occurs because the cessation removes the raison d'être of the floating charge, which is to permit the company to carry on business in the ordinary way insofar as the class of assets charged is concerned. *Re Woodroffes (Musical Instruments) Ltd* [1986] Ch. 366 (it is the cessation of business and not ceasing to be a going concern assuming the latter is different). Express provisions for crystallisation will only exclude this implied provision for crystallisation if they expressly do so: *Re The Real Meat Co Ltd* [1996] B.C.C. 254.

[50] *Evans v Rival Granite Quarries Ltd* [1910] K.B. 979 at 997.

[51] The crystallising event could, for example, be the failure by the debtor to pay any monies due or to insure the charged property.

[52] *Re Brightlife Ltd* [1987] Ch. 200.

[53] English insolvency law achieves this policy to some extent by requiring registration of non-possessory securities. It does not, however, require registration of title retention clauses or trusts, and any assets in the possession (and apparent ownership) of the company but which are subject to these arrangements do not form part of the company's assets in a winding-up.

[54] It is common when taking a fixed charge or purchasing a substantial asset of the company to serve on it inquiries as to whether any floating charge has crystallised. This provides limited protection since the company can lie or, more likely, it may not appreciate that the charge has crystallised. In an early effort to overcome this problem, provisions were inserted into CA 1989 s.102, that empowered the Secretary of State to pass regulations whereby events of crystallisation would have no effect until notified to the Registrar; however, these provisions were never brought into effect and have not been included in CA 2006.

[55] Where the subsequent interest-holder (purchaser or chargee) may have no actual or constructive notice that the earlier floating charge has crystallised. See E. McKendrick, *Goode on Commercial Law*, 4th edn (London: Penguin, 2010), pp.733–736.

[56] The interests that lose out to the crystallised floating charge are the subsequent equitable charge (provided the equities are equal), the common law lien over chattels and the interests of execution creditors: see W.J. Gough, "The Floating Charge: Traditional Themes and New Directions" in Finn (ed.), *Equity and Commercial Relationships* (Sydney, 1977), p.262.

[57] E. McKendrick, *Goode on Commercial Law*, 4th edn (London: Penguin, 2010), pp.734–735; a similar point is made by W.J. Gough, *Company Charges*, 2nd edn (London: LexisNexis, 1996), pp.255–256.

[58] *Government Stock and Other Securities Investment Co Ltd v Manila Railway Co Ltd* [1897] A.C. 81.

[59] See H.G. Beale, M. Bridge, L. Gullifer and E. Lomnicka, *The Law of Security and Title-Based Financing*, 2nd edn (Oxford: OUP, 2012).

[60] *Re Woodroffes (Musical Instruments) Ltd* [1986] Ch. 366.

[61] *Re Woodroffes (Musical Instruments) Ltd* [1986] Ch. 366 at 378: "it is a mistake to think that the chargee has no remedy while the charge is still floating. He can always intervene and obtain an injunction to prevent the company from dealing with its assets otherwise than in the ordinary course of its business. That no doubt is one reason why it is preferable to describe the charge as 'hovering', a word which can bear an undertone of menace, rather than as 'dormant'".

[62] *Wheatley v Silkstone and Haigh Moor Coal Co* (1885) 29 Ch. D. 715; *Robson v Smith* [1895] 2 Ch. 118 at 124 (any dealing with the property subject to a floating charge "will be binding on the debenture holders, provided that the dealing be completed before the debentures cease to be merely a floating security"); *Re Castell and Brown Ltd* [1898] 1 Ch. 315. Although note that if B has *actual* notice that A's charge prohibits the creation of a later charge having priority, then A's charge will prevail: *Siebe Gorman & Co Ltd v Barclays Bank Ltd* [1979] 2 Lloyd's Rep. 142 (overruled by *Re Spectrum Plus Ltd*

[2005] 2 A.C. 680, but not on this point): see below, para.32–11, on negative pledges.

[63] If the subsequent floating charge is over the same assets, then, the equities being equal, the first in time prevails: *Re Benjamin Cope & Sons Ltd* [1914] 1 Ch. 800.

[64] *Re Automatic Bottle Makers Ltd* [1926] Ch. 412 CA.

[65] *Re Automatic Bottle Makers Ltd* [1926] Ch. 412 CA, implies that this depends on the wording of the charge and of the express provision, if any, relating to the creation of further charges.

[66] Bankruptcy and Diligence etc. (Scotland) Act 2007 ss.40, 41 (not yet in force). But when the first chargee receives written notice of the registration of the later charge his priority is restricted to present advances and future advances which he is legally required to make plus interest and expenses: s.40(5) and (6).

[67] Even though, if *George Barker (Transport) Ltd v Eynon* [1974] 1 W.L.R. 462 CA is rightly decided, the lien or set off has not actually accrued.

[68] *Biggerstaff v Rowatt's Wharf* [1896] 2 Ch. 93 CA; *Rother Iron Works Ltd v Canterbury Precision Engineers Ltd* [1974] Q.B. 1 CA; *George Barker (Transport) Ltd v Eynon* [1974] 1 W.L.R. 462 CA.

[69] See *Cretanor Maritime Co Ltd v Irish Marine Management Ltd* [1978] 1 W.L.R. 966 CA, where the company's assets were subject to an injunction against their removal from the jurisdiction, obtained by an unsecured creditor. On the application of the holder of the debenture whose charge had crystallised, the court discharged the injunction. See also *Capital Cameras Ltd v Harold Lines Ltd* [1991] 1 W.L.R. 54 (successful application of a receiver to dismiss a *Mareva* injunction).

[70] Seizure alone does not suffice: *Norton v Yates* [1906] 1 K.B. 112 CA.

[71] *Evans v Rival Granite Quarries* [1910] 2 K.B. 979 CA.

[72] On crystallisation, see paras 32–8 et seq.

[79] See the discussion in L. Gullifer, *Goode on Legal Problems of Credit and Security*, 5th edn (London: Sweet & Maxwell, 2015), paras 2–25 to 2–31.

[80] *Re Connolly Bros Ltd (No.2)* [1912] 2 Ch. 25 CA; *Abbey National Building Society v Cann* [1991] 1 A.C. 56 HL. This of course presumes that the second security is properly

registered, and thus enforceable on insolvency: see *Tatung (UK) Ltd v Galex Telesure Ltd* (1989) 5 B.C.C. 325 at 327; *Stroud Architectural Systems Ltd v John Laing Constructions Ltd* [1994] 2 B.C.L.C. 276.

[81] *Cheah v Equiticorp Finance Group Ltd* [1992] 1 A.C. 472.

[82] See above, para.31–10.

[83] In some cases the company has been deliberately floated with the intention of defrauding creditors by granting floating charges to the promoters and then winding the company up, with the charge attaching to goods which the company has purchased on credit: see Cohen Report, Cmnd. 6659, para.148.

[84] This applies to Scotland: IA 1986 s.245(1).

[85] The period was three months in the 1908 Act and six months in the 1929 Act: each was found to be inadequate in view of the ingenuity displayed in staving off liquidation.

[86] IA 1986 s.245(3)(b) and (5).

[87] The test of solvency is that laid down in s.123 of the 1986 Act: IA 1986 s.245(4).

[88] The value of the goods or services is their market value: IA 1986 s.245(6).

[89] IA 1986 s.245(2)(a) and (b).

[90] *Power v Sharpe Investments Ltd* [1994] 1 B.C.L.C. 111.

[91] *Power v Sharpe Investments Ltd* [1994] 1 B.C.L.C. 111 at 123a–b. If the delay is de minimis, for example, a coffee-break, it can be ignored: ibid. The inconvenience of this can be avoided by the parties creating a present equitable right to security rather than a promise to create security in the future: see *Re Jackson & Bassford* [1906] 2 Ch. 467.

[92] There is nothing in the section to displace the normal rule that he who asserts must prove, and thus the burden of proof would be on the liquidator or administrator. This should cause no great hardship as they will normally have sufficient information to found their action.

[93] For interesting illustrations of the way in which the rule in *Clayton*'s case ((1816) 1 Mer. 572) may protect a bank when the charge secures a current account, see *Re Thomas Mortimer Ltd* (1925) now reported at [1965] Ch. 186n; *Re Yeovil Glove Co Ltd* [1965] Ch. 148 CA. The Cork Committee recommended that *Re Yeovil Glove Co Ltd* be reversed by statute (paras 1561–1562) but why this should be so is far from clear since the bank by permitting the company to continue to draw on its overdrawn account is providing it with new value: see Goode, (1983) 4 Co.L. 81.

[94] IA 1986 s.245(3)(a).

[95] See ss.249 and 435 of the 1986 Act.

[96] *Re Destone Fabrics Ltd* [1941] Ch. 319 (this would now be a transaction with a connected person, on which see below); *Re GT Whyte & Co Ltd* [1983] B.C.L.C. 311. It is submitted that the transactions in these cases would not fall within s.245(2)(b) as there would be no discharge as a matter of substance of the debts at the time of the creation of the charge. Contrast *Re Matthew Ellis Ltd* [1933] Ch. 458 CA. The test seems to be whether the company receives what is genuinely new value.

[97] See E. McKendrick, *Goode on Commercial Law*, 4th edn (London: LexisNexis, 2010), p.919.

[98] Cmnd. 8558 at paras 1494 and 1553. The other reason given was that the extension of IA 1986 s.245 to fixed charges would compel creditors to seek repayment if fixed security could not be granted. This argument could also be applied to obtaining a floating charge.

[99] A company can create a fixed charge of accounts receivables, or a mortgage of future property, for example. The critical distinction between a fixed and a floating charge is that assets can be removed from the latter, and not from the former, without the specific consent of the chargee. Whether assets can be added (or not) is immaterial to the characterisation of the charge, and possible with both forms of charge: see below, paras 32–21 et seq.

[100] One important difference between the rules relating to preferences and to defective floating charges is that the time within which a preference in favour of an unconnected person can be challenged is six months (not 12 months). Also note that a preference will involve a diminution in the company's assets (giving one creditor a preference in repayment), whereas a floating charge constitutes a preferential claim on them.

[101] *Re MC Bacon Ltd* [1990] B.C.L.C. 324.

[102] The same policy decisions have to be made with respect to bankruptcy: see, e.g. Insolvency Act 1986 s.336 dealing with the matrimonial home.

[103] e.g. the enforcement of the floating charge is dealt with in Pt III of IA 1986; administrative receivers have to be qualified insolvency practitioners (s.230(2)); and s.247(1) defines insolvency as including the appointment of an administrative receiver. IA 1986 ss.40, 175, 386–387 and Sch.6, and CA 2006 s.754 are the most relevant for the subordination of the floating charge. For the ability of these provisions to reach through earlier contractual engagements, see *Re Oval 1742 Ltd (in CVA) v Royal Bank of Scotland Plc* [2007] EWCA Civ 1262. Of course, if realisation of the security and application of the priority rules leaves the chargee carrying a loss, the floating chargee then ranks with the other unsecured creditors to the extent of any outstanding debts.

[104] IA 1986 s.175(2)(b).

[105] Another argument made in favour of employees is that they have no way of obtaining security for the payment of their salary which is normally made after the provision of the services. This is not strictly correct since money to pay employees could be placed in a trust account to be paid on the appropriate date. But this would be cumbersome and as a matter of practice does not happen.

[106] See IA 1986 Sch.6 paras 9 and 10. Para.8 brings in contributions to occupational pension schemes.

[107] IA 1986 s.387(4)(a). For the date of the appointment see IA 1986 s.33.

[108] IA 1986 Sch.6 para.11. This enables the company to be kept going where it is in financial difficulties but there is some chance that it can trade out of its difficulties. For case law on the previous statutory provisions see *Re Primrose (Builders) Ltd* [1950] Ch. 561; *Re Rutherford (James R) & Sons Ltd* [1964] 1 W.L.R. 1211; *Re Rampgill Mill Ltd* [1967] Ch. 1138.

[109] IA 1986 s.40(1).

[110] Under the old law the crystallisation of the charge prior to the appointment of a receiver resulted in the preferential creditors being denied their priority: see *Re Brightlife Ltd* [1987] Ch.200. This alteration of the old law has made automatic crystallisation clauses less attractive.

[111] Employment Rights Act 1996 s.189. The Pt XII rights of the employee as against the Secretary of State are in some respects wider and some respects narrower than the preferences accorded by the Insolvency Act against the company. Theoretically, the employee might want to pursue the preferential claim against the company in so far as it does not fall within Pt XII.

[112] Which category does not include the charge holder in relation to that part of the debt which has not been satisfied by the security, unless the unsecured debts have been fully met: IA 1986 s.176A(2).

[113] Insolvency (Prescribed Part) Order 2003 (SI 2003/2097).

[114] It is possible to vary this rule by means of a voluntary arrangement: IA 1986 s.176A(4).

[115] IA 1986 s.176A(3)(a); SI 2003/2097 art.2.

[116] IA 1986 s.176A(3)(b) and (5).

[117] *Re Permacell Finesse Ltd* [2007] EWHC 3233 (Ch); *Re Airbase (UK) Ltd* [2008] EWHC 124 (Ch); [2008] 1 W.L.R. 1516.

[118] i.e. a floating chargee who appoints a receiver of a statutory or chartered company will not be subject to the claims of preferential creditors unless the company goes into compulsory liquidation under Pt V of the 1986 Act.

[119] Also see below, paras 33–24 et seq.

[120] And to the extent that the floating chargee is unable to recoup the outstanding debt from the floating charge proceeds, that shortfall becomes an unsecured debt, repayable pari passu with all the other unsecured debts owed by the company.

[121] Justifying the super-priority of receivership costs (but subject to what follows on the statutory priority, even over these, of liquidation costs), see *Batten v Wedgwood Coal and Iron Co* (1884) 28 Ch. D. 317. But a receiver has a duty not to incur expenses if to do so would lessen the amount otherwise available to pay the preferential creditors: *Woods v Winskill* [1913] 2 Ch. 303; *Westminster Corp v Haste* [1950] Ch. 442, both cases concerning the expenses in carrying on the company’s business.

[122] *Re Barleycorn Enterprises Ltd* [1970] Ch. 465.

[123] The assets must, however, be the assets of the company and not, for example, assets held on trust. In certain limited circumstances, however, the court may order liquidation expenses to be paid out of assets the beneficial interest in which is not vested in the company: e.g. *Re Berkeley Applegate (Investment Consultants) Ltd (No.3)* [1989] 5 B.C.C. 803, where the activities and efforts of the liquidator were essential in establishing and preserving the rights of the trust beneficiaries, and to that extent (only) his fees were payable out of the trust assets.

[124] For voluntary winding up see IA 1986 s.115; this section has been held to be a priority section and does not deal with the question of what constitute properly incurred expenses in a liquidation: see *Re MC Bacon Ltd* [1991] Ch.127. The position as regards court-ordered winding up is not so explicit but a combination of s.156 and Insolvency Rules 1986 rr.4.218 and 4.220 produces this effect.

[125] *Buchler v Talbot* [2004] 2 A.C. 298.

[126] See L.C. Ho, “Reversing *Buchler v Talbot*—The Doctrinal Dimension of Liquidation Expenses Priority” (2006) 3 J.I.B.F.L. 104. Note that IA 1986 s.176ZA(3) may allow

these expenses to be restricted to expenses either approved by the chargee and preferential creditors, or by the court. See too *Re Premier Motor Auctions Leeds Ltd* [2015] EWHC 3568 (Ch) in which the effects of s.176Z were briefly discussed.

[127] *Re Lewis Merthyr Consolidated Collieries Ltd* [1929] 1 Ch. 498; *Re GL Saunders Ltd* [1986] 1 W.L.R. 215.

[128] *Re Portbase Clothing Ltd* [1993] Ch. 388 at 407–409. A more difficult problem arises where the two successive charges are floating charges, the second one crystallises first and so has priority over the first, but the receiver is not appointed under the second charge but under the first one. *Griffiths v Yorkshire Bank Plc* [1994] 1 W.L.R. 1427 may be technically correct in deciding that since no receiver is appointed under the second charge, the assets are not subject to the claims of preferential creditors. But this leaves the way open for floating chargees to avoid the operation of these provisions, and so the more strained analysis in *Re H and K (Medway) Ltd* [1997] 2 All E.R. 321, which concluded that the preferential debts had priority over both charges, may be preferable.

[129] Attempts to extend the *Portbase* principle decision have not been successful. In *Re MC Bacon Ltd* [1991] Ch. 127 the court held that the costs of the liquidator in bringing an action under s.214 of the 1986 Act and to challenge a transaction as a preference were not costs of realising the company's assets and thus did not enjoy the priority accorded to such expenses in a winding-up.

[130] IA 1986 s.15(1) and (3).

[131] Where the charge has crystallised, the priority will be that of a fixed equitable charge.

[132] This was the case in *Re Brightlife Ltd* [1987] Ch. 200, where the debenture-holder had given the company a notice converting the floating charge into a fixed charge a week before a resolution for voluntary winding up was passed. The court held that the preferential creditors no longer had any right to be paid in priority to the charge.

[133] *Agnew v Commissioner for Inland Revenue* [2001] 2 A.C. 710 PC at [32].

[134] *Re Spectrum Plus Ltd* [2005] 2 A.C. 680. Also see *Re Armagh Shoes Ltd* [1984] B.C.L.C. 405 Ch. D. (NI).

[135] Thus clarifying the relevance of the description of a floating charge advanced by Romer LJ in *Re Yorkshire Woolcombers Association Ltd* [1903] 2 Ch. 284 at 295 (see above, para.32–6).

[136] *Siebe Gorman & Co Ltd v Barclays Bank Ltd* [1979] 2 Lloyd's Rep.142.

[137] S. Worthington, "An 'Unsatisfactory Area of the Law'—Fixed and Floating Charges Yet Again" (2004) 1 *International Corporate Rescue* 175–184 (adopted by the House of Lords in *Spectrum*); and "Floating Charges: Use and Abuse of Doctrinal Analysis", in J. Getzler and J. Payne, above, fn.31, p.28.

[138] Although also see *Gray v G-T-P Group Ltd* [2010] EWHC 1772, where the charge was held void as an unregistered floating charge, since the agreement between the parties entitled the chargor to draw on the relevant bank account proceeds effectively at will.

[139] *Re Brightlife Ltd* [1987] Ch. 200, although in this case the chargee was not itself a bank.

[140] *Re Keenan Bros Ltd* [1986] B.C.L.C. 242, where the chargee bank stipulated that the account could not be drawn against without the counter-signature of one of its officers.

[141] *Siebe Gorman & Co Ltd v Barclays Bank Ltd* [1979] 2 Lloyd's Rep.142.

[142] On this last point, Slade J may have interpreted the arrangement otherwise, assuming the bank was required to give permission for each release of funds; on that basis the decision was accepted in *Agnew*, but, on the contrary interpretation, was overruled in *Spectrum.*

[143] Of course, in many cases, the fluctuating nature of the assets, especially of physical assets, means that managerial control of them can be given to the company only in a way which is inconsistent with a fixed charge: *Smith v Bridgend CBC* [2002] 1 A.C. 336.

[144] *Re New Bullas Trading Ltd* [1994] 1 B.C.L.C. 485 CA.

[145] *Royal Trust Bank v National Westminster Bank Plc* [1996] 2 B.C.L.C. 699 CA.

[146] All three members of the court concurred in the result; Nourse LJ on other grounds, and Swinford Thomas LJ without giving reasons.

[147] *Re Double S Printers Ltd* [1999] 1 B.C.L.C. 220.

[148] *Agnew v CIR* [2001] 2 A.C. 710.

[149] Although see *Russell Cooke Trust Co Ltd v Elliott* [2007] EWHC 1443 (Ch); [2007] 2 B.C.L.C. 637, where a charge described as floating was held to be fixed.

[150] CA 2006 s.859A.

[151] Registration for this purpose is confined to registration of non-possessory securities. An obligation secured by a possessory security necessarily entails transfer of the secured asset into the possession of the security-holder, so that it does not remain on site as part of the "apparent wealth" of the borrowing company.

[152] This rule does not avoid the underlying obligation, and if the loan fell for repayment whilst the company was a going concern, for example, then it could simply be repaid by the company without any question of enforcement of a security arising. The problem arises on insolvency, when the protection of a security interest is most needed.

[153] Companies Act 2006 s.874, and see the discussion below at paras 32–29.

[154] Some tinkering reform was included in the Companies Act 1989, but never brought into force.

[162] Law Commission, *Company Security Interests* (Law Com No.296, Cm 6654, August

2005), especially paras 1.31, 1.46–1.57, and 1.60–1.66.

[163] DTI, *The Registration of Companies' Security Interests (Company Charges): The Economic Impact of the Law Commissions' Proposals* Consultative Document (July 2005).

[164] Defined in s.859A(7).

[165] 2006 Act ss.859A(1) and (6).

[166] 2006 Act s.859H. It is the security which is void, not the underlying obligation (s.859(3) and (4)), and so for this purpose, creditor means secured creditor: *Re Teleomatic Ltd* [1994] 1 B.C.L.C. 90 at 95. Of course, if the company goes into liquidation or administration and the charge is unenforceable, this pro tanto protects the interests of the unsecured creditors: see *R. v Registrar of Companies, Ex p. Central Bank of India* [1986] Q.B. 1114 at 1161–1162. The previous provision, in similar terms, but applying only to the listed charges which required registration, was 2006 Act s.874 (now repealed).

[167] Or is, instead, e.g. a retention of title agreement or some other quasi-security. See, e.g. *Re Cosslett (Contractors) Ltd* [1997] Ch. 23; and [1998] Ch. 495 CA; and the failed retention of title cases, *Re Bond Worth* [1980] 1 Ch. 228; and *Borden (UK) Ltd v Scottish Timber Products Ltd* [1981] Ch. 25. The one exception to this is that, previously, not all fixed charges required registration, although all floating charges did, and so that particular characterisation could be especially important for validity (see paras 31–21 et seq. on the distinction), as well as for all the reasons discussed above at paras 31–29 et seq.

[168] See below para.32–30.

[169] 2006 Act s.859L(1)–(3).

[170] 2006 Act s.859L(4).

[206] Also see above, paras 32–24 et seq.

[207] See the 9th edn, paras 32–53 to 32–56.

[208] The distinction is typically made between a person who has control of all, or substantially all, the assets of a company (an administrative receiver: IA 1986 s.29(2)) and a person who simply has control of a single asset or limited class of secured assets (a receiver). The former is in a position to manage the company as a going concern; the latter is not. Both hold their positions in order to realise the rights of the secured creditor (and other creditors, if the charge is floating—see above, paras 32–13 et seq.).

[209] Insolvency Service, White Paper, *Productivity and Enterprise: Insolvency—A Second Chance*, Cm. 5234 (July 2001), para.2.2.

[210] On winding up and liquidation, see Ch.33.

[211] See above, fn.98, Ch.9. The Committee's proposals were not implemented precisely in the way the Committee had envisaged. See V. Finch, *Corporate Insolvency Law*, 2nd edn (Cambridge: CUP, 2009), pp.16–18.

[212] IA 1986 s.9(2) and (3), repealed by the Enterprise Act 2002.

[213] IA 1986 s.72A, introduced by the 2002 Act s.250. The prohibition does not apply to appointments under floating charges in existence before the date on which the new rules are brought into operation: s.72A(4).

[214] See above, fn.209, para.2.5.

[215] IA 1986 Sch.B1 para.3(2).

[221] IA 1986 s.72B(1) and Sch.2A para.1(1)(a).

[222] IA 1986 s.72B(1)(a).

[223] IA 1986 Sch.2A para.2.

[224] Note *Feetum v Levy* [2006] Ch. 585: a right to appoint an administrative receiver does not amount to step-in rights.

[225] The use of administration generally is not discussed in this book.

[226] If the state of the company is so parlous that it is doubtful whether there will be enough to cover the receiver's remuneration it may be necessary for the trustees to take possession. If the "debenture" is just an ordinary mortgage of particular property, the debenture-holder may, of course, exercise its power of sale without the preliminary step of appointing a receiver.

[227] i.e. under LPA 1925 s.101 when applicable.

[228] Where the appointment is defective, the court can order the person making the appointment to indemnify the receiver: IA 1986 s.34. See also IA 1986 s.232, which deals with the validity of acts of a defectively appointed administrative receiver, and IA 1986 s.234 dealing with the seizure or disposal by an administrative receiver of property that does not belong to the company, and generally see *Re London Iron and Steel Co Ltd* [1990] B.C.L.C. 372; *Welsh Development Agency v Export Finance Co Ltd* [1992] B.C.L.C. 148.

[229] *Bank of Baroda v Panessar* [1987] Ch. 335; *Quah Su-Ling v Goldman Sachs International* [2015] EWHC 759 (Comm); this is normally a matter of hours during normal banking hours. In addition, the company may be estopped by its conduct from challenging the validity of the appointment of a receiver, and the appointment of a receiver on invalid grounds may be subsequently cured if grounds justifying the appointment are subsequently discovered: *Bank of Baroda* at 352–353 and *Byblos Bank SAL v Al-Khudairy* [1987] B.C.L.C. 232 respectively. There is no need for the debenture-holder to specify the exact sum due in any demand: see *NRG Vision Ltd v Churchfield Leasing Ltd* [1988] B.C.L.C. 624.

[230] *Sheppard & Cooper Ltd v TSB Bank Plc* [1996] 2 All E.R. 654; *Quah Su-Ling v Goldman Sachs International* [2015] EWHC 759 (Comm).

[231] *Re Potters Oils Ltd* [1986] 1 W.L.R. 201; *Standard Chartered Bank Ltd v Walker* [1982] 1 W.L.R. 1410. Also see *Alpstream AG v PK Airfinance Sarl* [2015] EWCA Civ 1318 CA.

[232] *China and South Sea Bank Ltd v Tan* [1990] 1 A.C. 536 PC; of course it will always be in the commercial interests of the chargee to exercise his rights if the security is declining in value. On other aspects of the receiver's duties to the company and others, see para.32–38, below.

[233] But the court will not normally have any power to appoint a receiver unless the debentures are secured by a charge: *Harris v Beauchamp Bros* [1894] 1 Q.B. 801 CA; *Re Swallow Footwear Ltd*, The Times, 23 October 1956. Also the court will not imply a term into a debenture empowering a chargee to appoint a receiver where his security is in jeopardy: see *Cryne v Barclays Bank Plc* [1987] B.C.L.C. 548 CA.

[234] *McMahon v North Kent Co* [1891] 2 Ch. 148; *Edwards v Standard Rolling Stock* [1893] 1 Ch. 574; and see *Re Victoria Steamboats Co* [1897] 1 Ch. 158.

[235] *Re Tilt Cove Copper Co* [1913] 2 Ch. 588.

[236] IA 1986 s.52(2) (for the purpose of appointing a receiver), s.122(2) (for the purpose of making a winding-up order).

[237] *Re New York Taxicab Co* [1913] 1 Ch. 1.

[238] IA 1986 s.35.

[239] See IA 1986 s.247(1) for the definition of "insolvency".

[240] IA 1986 s.388(1). A body corporate, an undischarged bankrupt, or a person disqualified to act as a director may not act as an insolvency practitioner: see IA 1986 s.390(1) and (4).

[241] IA 1986 s.45(1); they can resign, ibid.

[242] IA 1986 ss.47 and 236; *Re Aveling Barford Ltd* [1989] 1 W.L.R. 360; *Cloverbay Ltd (Joint Administrators) v BCCI SA* [1991] Ch. 90.

[243] Company Directors Disqualification Act 1986 s.7(3)(d).

[244] See IA 1986 s.247(2). Although generally a receiver should not be seen as a doctor but rather as an undertaker.

[245] *Re Potters Oils Ltd* [1986] 1 W.L.R. 201.

[246] Also without the leave of the court legal proceedings cannot be brought against the company: see IA 1986 s.130.

[247] See IA 1986 s.178.

[248] *Parsons v Sovereign Bank of Canada* [1913] A.C. 160.

[249] It is contempt of court to interfere with the exercise of power by a court-appointed receiver without the leave of the court.

[250] IA 1986 s.72 permits an English or Scottish receiver to act throughout Great Britain provided local law permits this. The White Paper (above, fn.209 at para.23) suggested that an advantage of greater use of administration was that it would receive easier international recognition.

[251] See paras 32–40 et seq.

[252] Also the debenture will invariably provide that irrespective of the type of receiver appointed by the charge holder he is to be the agent of the company. A receiver appointed by the court is not an agent of anyone but an officer of the court: see *Moss SS Co v Whinney* [1912] A.C. 254 HL.

[253] The duties of a mortgagee in possession are onerous: see H.G. Beale, M. Bridge, L. Gullifer and E. Lomnicka, *The Law of Security and Title-Based Financing*, 2nd edn (Oxford: OUP, 2012), para.18.39.

[254] If the chargee interferes with the receiver's discharge of his duties this could, provided the interference is sufficiently pervasive, result in the receiver being treated as the agent of the chargee: see *American Express International Banking Corp v Hurley* [1985] 3 All E.R. 564.

[255] The receiver would not, for example, be considered to be participating in the management of the company since he is not managing the company but the assets of the company: *Re B Johnson & Co (Builders) Ltd* [1955] Ch. 634; *Re North Development Pty Ltd* (1990) 8 A.C.L.C. 1004. Although contrast the analysis in *Buchler v Talbot* [2004] 2

A.C. 298, above, para.32–18.

[256] IA 1986 s.42 confers on an administrative receiver the powers set out in Sch.1 to the Act in so far as they are not inconsistent with the terms of the debenture. There are 23 powers enumerated and they are very wide; for example, number 14 confers on an administrative receiver “Power to carry on the business of the company”.

[257] IA 1986 s.43. The rights of the security holder are protected in the same way as they are in the case of administration: see para.32–20, above.

[260] *Standard Chartered Bank Ltd v Walker* [1982] 1 W.L.R. 1410; *American Express International Banking Corp v Hurley* [1985] 3 All E.R. 564; *AIB Group (UK) Plc v Personal Representative of James Aiken (Deceased)* [2012] N.I.Q.B. 51.

[261] *Cuckmere Brick Co Ltd v Mutual Finance Ltd* [1971] Ch. 949 CA; *Alpstream AG v PK Airfinance Sarl* [2015] EWCA Civ 1318 CA. And if the receiver does wait, he is not liable if the market declines: *Tse Kwong Lam v Wong Chit Sen* [1983] 1 W.L.R. 1349.

[262] *Medforth v Blake* [2000] Ch. 86.

[263] See G. Lightman and G. Moss, *The Law of Administrators and Receivers of Companies*, 5th edn (London: Sweet & Maxwell, 2011), Ch.7.

[264] *Parker-Tweedale v Dunbar Bank Plc* [1991] Ch. 12 CA (mortgagee owes no duty to beneficiary of mortgaged property); *Downsview Nominees Ltd v First City Corp* [1993] A.C. 295 PC; *Cukurova Finance International Ltd v Alfa Telecom Turkey Ltd* [2013] UKPC 2; [2015] 2 W.L.R. 875.

[265] *Medforth v Blake* [2000] Ch. 86 CA; thus somewhat back-tracking on the decision of the Privy Council in *Downsview Nominees Ltd v First City Corp* [1993] A.C. 295. See also *Knight v Lawrence* [1993] B.C.L.C. 215; and, recently, *Purewal v Countrywide Residential Lettings Ltd* [2015] EWCA Civ 1122 CA.

[266] On the facts, the appointor suffered no loss because the business, even in its damaged state, generated enough profit to satisfy the appointor’s claims.

[267] IA 1986 s.42(3). If an administrative receiver is seen as being an organ of the company, then this provision is arguably not in compliance with art.9(2) of the First Directive. See Ch.7, above.

[268] *Re Emmadart Ltd* [1979] Ch. 540 at 544; see also *Gomba Holdings UK Ltd v Homan* [1986] 1 W.L.R. 1301.

[269] *Newhart Developments Ltd v Co-operative Commercial Bank Ltd* [1978] Q.B. 814 CA (it is important to note that in that case the company was indemnified for any costs that it might incur and the receiver had decided not to bring any action against his appointor).

[270] *Tudor Grange Holdings Ltd v Citibank NA* [1992] Ch. 53. As Browne-Wilkinson VC pointed out in that case, it would be more appropriate for receivers or their appointor to use IA 1986 s.35. *Tudor Grange* has itself come in for criticism: see *Re Geneva Finance Ltd* (1992) 7 A.C.S.L.R. 415 at 426–432.

[271] It could be argued that the right to bring an action against the debenture-holder could not be an asset covered by the charge. This, however, proves too much since it would mean that the directors would always be in a position to bring an action against the debenture-holder even when the special factors in *Newhart* were not present. And while this argument rightly emphasises the scope of the receiver's authority it fails to give effect to his functions. Also the agency of the receiver may have sufficient content to impose on him a duty to seek redress against a debenture-holder in appropriate cases.

[272] See also *Gomba Holdings UK Ltd v Homan* [1986] 1 W.L.R. 1301; *Watts v Midland Bank Plc* [1986] B.C.L.C. 15 (a case which illustrates that since the power to use the corporate name in litigation is normally vested in the directors, a shareholder will normally be precluded from bringing a derivative action against a receiver, none of the usual reasons for the exceptions applying on these facts).

[293] IA 1986 s.44(1)(b) as amended by the Insolvency Act 1994 s.2. He is entitled to indemnification out of the assets of the company (s.44(1)(c)), and can also contract for indemnification by those who appointed him (s.44(3)).

[294] IA 1986 s.44(1)(c).

[295] IA 1986 s.39.

[296] IA 1986 s.38 (receivers) and s.48 (administrative receivers).

[297] IA 1986 s.48.

[298] IA 1986 s.41. Also of relevance are the Insolvency Rules 1986 Pt 3.

[299] Company Directors Disqualification Act 1986 ss.1(1)(a), 3 and 22(7); see *Re Artic Engineering Ltd (No.2)* [1986] 1 W.L.R. 686.

[300] Jenkins Committee, para.306(k).

[301] This discussion will concentrate on the appointment of an administrator where the company has granted a floating charge, though, as we have seen (above, para.32–34) administration is not confined to such situations.

[302] IA 1986 Sch.B1 para.3(1)(a).

[303] IA 1986 Sch.B1 para.3(3).

[304] IA 1986 Sch.B1 para.3(1)(b).

[305] IA 1986 Sch.B1 para.3(1)(c).

[306] IA 1986 Sch.B1 para.3(4).

[307] IA 1986 Sch.B1 para.3(2).

[308] This is subject to the "unfair harm" protection discussed below.

[309] IA 1986 Sch.B1 para.5.

[310] IA 1986 Sch.B1 para.12 (or by the chief executive of a magistrates court in the case of fines imposed on companies).

[311] In one context (see IA 1986 Sch.B1 para.35) this is not a requirement: this is where the application is made to the court by a floating charge holder who has the power to make an appointment out of court (see below). As we have seen above (para.31–26), the terms of debentures may give charge holders the power to appoint even though the company is able to pay its debts.

[312] IA 1986 Sch.B1 para.11.

[313] *Re Harris Simmons Ltd* [1989] 1 W.L.R. 368; *Re Primlaks (UK) Ltd* [1989] B.C.L.C. 734; cf. *Re Consumer & Industrial Press Ltd* [1988] B.C.L.C. 177.

[314] Provision is made for such reports by r.2.2 but they are not mandatory and the

Chancery Division judges have sought to encourage concise reports not based on protracted and expensive investigation: Practice Note [1994] 1 W.L.R. 160.

[315] Though, as we have seen (above, para.32–34), the floating charge holder is not excluded from applying to the court for an appointment.

[316] Banks feared not only the cost of court applications, but, more so, the delay involved, during which desperate directors might spirit assets out of the company, once they knew of the petition.

[317] A floating charge over a company's property is a qualifying floating charge if it alone, or in conjunction with other floating or fixed charges, covers the whole, or substantially the whole of the company's property and the contract creating the floating charge states that the chargee may so appoint an administrator (IA 1986 s.72A and Sch.B1 para.14).

[318] IA 1986 Sch.B1 para.14. He or she must give two days' notice of the intention to appoint to the holder of any prior floating charge (so that that person may take action, if desired), but the intention does not have to be advertised generally, which would defeat one of the objectives of this power.

[319] IA 1986 Sch.B1 para.5.

[320] IA 1986 Sch.B1 para.46.

[321] This means that the charge must be enforceable when the notice of appointment is filed under para.18, as that is when the appointment is made: *Fliptex Ltd v Hogg* [2004] EWHC 1280 (Ch); [2004] B.C.C. 870.

[322] IA 1986 Sch.B1 para.21.

[323] IA 1986 Sch.B1 para.22.

[324] IA 1986 Sch.B1 para.25(c).

[325] IA 1986 Sch.B1 para.28.

[326] In addition, on an application to the court by a non-floating charge holder, the charge holder has a presumptive right to have its nominee for administrator appointed in place of the applicant's: para.36.

[327] See above, para.32–37.

[328] IA 1986 Sch.B1 para.12(1)(a) clearly contemplates that a receiver may be in place when the application to the court for an administrator is made, as does para.41, which provides for an administrative receiver to vacate office when an administrator is appointed.

[329] IA 1986 Sch.B1 para.39—essentially where the charge holder consents or the charge is thought to be subject to challenge, for example under s.245 (above, para.32–14).

[330] IA 1986 Sch.B1 para.49(5).

[331] IA 1986 Sch.B1 paras 49(8) and 107.

[332] IA 1986 Sch.B1 para.49(4).

[333] See above, Ch.29.

[334] IA 1986 Sch.B1 para.53(2) and (3).

[335] *Re Transbus International Ltd* [2004] 1 W.L.R. 2654 at [12]–[14].

[336] But not winding up under IA 1986 s.124A on public interest grounds: see para.18–13. See para.42(4)(a).

[337] IA 1986 Sch.B1 paras 42 and 43. Paragraph 43(4) includes the landlord's right of forfeiture by peaceable re-entry, which had been an issue disputed in the pre-2002 case-law. This extension was made initially by the Insolvency Act 2000 s.9. However, intervention by regulators appears to remain outside the moratorium. See *Air Ecosse Ltd v Civil Aviation Authority* (1987) 3 B.C.C. 492; *Re Railtrack Plc* [2002] 2 B.C.L.C. 755.

[338] IA 1986 Sch.B1 para.44.

[339] IA 1986 Sch.B1 para.69, so that the company, not the appointor, is liable for unlawful acts of the administrator.

[340] IA 1986 Sch.B1 para.59.

[341] IA 1986 Sch.B1 para.61.

[342] See above, para.32–20.

[343] IA 1986 Sch.B1 para.70.

[344] IA 1986 Sch.B1 para.71.

[345] IA 1986 Sch.B1 para.70(2), thus in effect putting the charge holder in the position which obtained before the charge crystallised.

[346] The directors, although still in place, may not exercise management power without the consent of the administrator: para.64.

[347] IA 1986 ss.246ZA–246ZC, added by SBEEA 2015. See discussion of the parallel provisions for liquidators, in IA 1986 ss.213–215, at paras 9–4 et seq.

[348] Who, despite the fact that he too acts as an agent is personally liable on contracts he enters into unless they provide to the contrary. See above, para.32–40.

[349] IA 1986 Sch.B1 para.99(4). For the application of this rule in relation to adopted employment contracts, see *Powdrill v Watson* [1995] 2 A.C. 394 HL; partially reversed by the Insolvency Act 1994; and Pollard, (1995) 24 I.L.J. 141.

[350] *Re Atlantic Computer Systems (No.1)* [1992] Ch. 505. See also *Bristol Airport Plc v Powdrill* [1990] Ch. 744 CA.

[351] *Leyland DAF Ltd v Automotive Products Plc* [1994] 1 B.C.L.C. 245 CA.

[352] IA 1986 Sch.B1 para.73. Thus, in creditor meetings to approve a scheme secured and unsecured creditors would be put in separate classes: above, paras 29–8 et seq.

[353] It is important not to overestimate the extent of this specific protection. It applies only to the right to enforce the security; it would not apply to action which fails to maximise the value of the assets to which the security attaches.

[354] See above, Ch.20.

[355] The court has broad relief powers (para.74(3) and (4)), but there is no specific mention of a power to order litigation in the name of the company (though presumably the court could do so under its general authority to "grant relief") or the compulsory purchase of shares (hardly likely to be an appropriate order in an administration).

[356] IA 1986 Sch.B1 para.74. This applies whilst the company is "in administration". If it is not, the creditor may no longer petition; if it is, this paragraph effectively replaces CA 2006 s.994 as far as members are concerned, for the administrator's or court's consent would be needed under the moratorium provisions for a s.994 petition to be launched.

[357] Now CA 2006 s.994.

[358] IA 1986 s.27, now repealed.

[359] IA 1986 Sch.B1 para.74(2).

[360] cf. the uncertainties surrounding the use of CA 2006 s.994 (previously CA 1985 s.459) against negligence, above, paras 20–14 et seq.

[361] See above, Ch.17.

[362] IA 1986 Sch.B1 para.75.

[363] The risk that these provisions will be used by particular creditors or members opportunistically to block a resolution of the company's problems is somewhat reduced by para.74(6) which says that no order by way of relief may be made by the court if it would "impede or prevent the implementation of a scheme agreed under the CA or a company voluntary arrangement agreed under Pt I of the IA or administrator proposals approved by creditors, unless, in the last case, the application is made within 28 days. However, a fixed charge holder can use this procedure even when the court has authorised the administrator to dispose of the property (see para.74(5)(b)), presumably lest the administrator carry out the disposal in an unfair or negligent way".

[364] IA 1986 Sch.B1 para.46.

[365] IA 1986 Sch.B1 para.45.

[366] IA 1986 Sch.B1 para.99. But the provisions are strictly construed, and damages for wrongful dismissal or other payments in lieu are not entitled to super-priority: *Re Leeds United Association Football Club Ltd (In Administration)* [2007] I.C.R. 1688 at 1761 (Ch).

[367] IA 1986 Sch.B1 para.99.

[368] See above, paras 32–15 et seq.

[369] IA 1986 Sch.B1 para.78(4).

[370] IA 1986 Sch.B1 para.76(2)(b), as amended by s.127 of the Small Business, Enterprise and Employment Act 2015.

[371] IA 1986 Sch.B1 para.79(3)(b).

[372] *Re TM Kingdom Ltd* [2007] B.C.C. 480; *Re GHE Realisations Ltd* [2006] B.C.C. 139.

[373] IA 1986 Sch.B1 para.79(2)(c).

[374] See above, Law Commission CP 164 (2002), fn.161, Pt IX. In one limited area, that of farmers, the problem was addressed as long ago as 1928 in the Agricultural Credits Act of that year.

[375] See each of the Law Commission documents noted above in fnn.160 and 161.

PART 8

INSOLVENCY AND ITS CONSEQUENCES

CHAPTER 33

WINDING UP, DISSOLUTION AND RESTORATION

Introduction 33–1
Types of Winding Up 33–2
  Winding up by the court 33–3
  Voluntary winding up—general 33–9
  Members' voluntary winding up 33–11
  Creditors' voluntary winding up 33–13
Powers and Duties of the Liquidator 33–16
Collection, Realisation and Distribution of the Company's Assets 33–17
  Maximising the assets available for distribution 33–17
  Proof of debts and mandatory insolvency set off 33–22
  Distribution of the company's assets 33–24
Dissolution 33–27
  After winding up 33–27
  Striking off of defunct companies 33–29
  Voluntary striking off 33–30
Resurrection of Dissolved Companies 33–31
  Administrative restoration 33–32
  Restoration by the court 33–33
Conclusion 33–34

INTRODUCTION

33–1

Where a company no longer has the funds to function, or its members no longer wish it to function, then there needs to be a process for bringing the existence of the legal entity to an end. This is achieved by winding up, or liquidation (the two terms can be used interchangeably).[1] The process of winding up, or liquidation, is designed to ensure that, before the company ceases to exist, all its outstanding obligations are met (so far as they can be) and any surplus assets (if there are any) are distributed to the members according to their agreed entitlement.[2] For reasons which might be obvious, especially given the competing interests which may need to be balanced, this process is not undertaken by the company's own directors, but by independent appointees who are qualified insolvency practitioners and who act professionally as company liquidators (alternatively, in some circumstances, the process is carried out

by the Official Receiver). When this process is completed, the company is removed from the register: it is "dissolved". Clearly this is a dramatic step, and, as we have seen already, there are less terminal alternatives which may provide avenues for the successful rescue of failing companies: recall the use of administration, administrative receivership and company voluntary arrangements and reconstructions, often also making use of professional outsiders.[3]

The provisions relating to winding up and dissolution are now to be found almost exclusively[4] in the Insolvency Act 1986 and Pt IV of the Insolvency Rules,[5] and not in the Companies Act: and rightly so where the company is insolvent. But, although insolvency is the most common reason for winding up, it is far from being the only one and, when the company is fully solvent, it seems, on the face of it, somewhat illogical to treat the process as part of insolvency law rather than company law. The reason why the legislation relating to liquidation of solvent companies is in the Insolvency Act is probably to avoid duplicating those many provisions that apply whether or not the company is insolvent—to repeat them in the Companies Act would have added substantially to the length of the combined legislation. But it can also be justified as realistic. Once a company goes into liquidation, the distinction between shareholders and creditors becomes more than usually difficult to draw: the members' interests will, in effect, have become purely financial interests deferred to those of the creditors.

Types of Winding Up

33–2

The basic distinction is between voluntary winding up and compulsory winding up by the court.[6] But voluntary winding up is subdivided into two types—members' voluntary winding up and creditors' voluntary winding up. In relation to companies registered under the Companies Acts which are dealt with in Pt IV of the Insolvency Act, Chs I and VII–X of that Part relate to all three types, except where it is otherwise stated; Chs II and V relate to both types of voluntary winding up; Ch.III relates only to members' voluntary winding up; Ch.IV only to creditors' voluntary winding up; and Ch.VI only to winding up by the

court. This arrangement of the sections is not exactly “user friendly” for it means that, to grasp which sections apply to the type of winding up with which one is concerned, it is necessary to refer to various chapters of Pt IV. Nor is life made easier because other Parts of the Act may also be relevant: for example Pt VI on “miscellaneous provisions” and Pt VII on “interpretation for first group of Parts”.

As their names imply, an essential difference between compulsory winding up by the court and voluntary winding up is that the former does not necessarily involve action taken by any organ of the company itself, whereas voluntary winding up does. The essential difference between members’ and creditors’ winding up is that the former is possible only if the company is solvent, in which event the company’s members appoint the liquidator, whereas, if it is not, its creditors have the whip hand in deciding who the liquidator shall be. In all three cases, the winding up process is not exclusively directed towards realising the assets and distributing the net proceeds to the creditors and, if anything is left, to the members, according to their respective priorities; it also enables an examination of the conduct of the company’s management to be undertaken. This may result in civil and criminal proceedings being taken against those who have engaged in any malpractices thus revealed[7] and in the adjustment or avoidance of various transactions.[8]

Winding up by the court

Grounds for winding up

33–3

Under s.122 of the Insolvency Act, a company may be wound up by the court[9] on one or more of eight specified grounds. Of these grounds, by far the most important is ground (f), that the company is unable to pay its debts, and the next most important is ground (g), that the court is of the opinion that it is just and equitable that the company should be wound up. The latter has been dealt with in Ch.20 (where we saw that it may be used as a remedy in cases where members are being unfairly prejudiced or there is a deadlocked management) and in Ch.18 (where we saw that it may be invoked by the Secretary of State following the

exercise of his or her investigatory powers). The presence of a minority protection remedy in the Insolvency Act is, in fact, something of an anomaly.

Who may petition for a court ordered winding up?

33–4

It should be noted that the company itself can opt for winding up by the court, since ground (a) is that the company has by special resolution resolved that the company be so wound up. But normally that is the last thing that those controlling the company will want: winding up by the court is the most expensive type of winding up and the one in which their conduct is likely to be investigated most thoroughly.[10] Alternatively, s.124 makes it clear that a wide range of people may, in different and sometimes specifically limited circumstances, petition for the winding up of a company by the court; the list includes the company's directors, its members,[11] its creditors (including prospective and contingent creditors), and various parties with official public status.[12]

Proof that a company is unable to pay its debts

33–5

Creditors are among those who may petition for a winding up[13] and this they are likely to do once it becomes widely known that the company is in financial difficulties[14]; like a petition for the bankruptcy of an individual, a petition for winding up is the creditors' ultimate remedy. Indeed, about 95 per cent of petitions for court ordered winding ups are by creditors. And although the company itself or its directors[15] or members[16] may petition, the court will be reluctant to grant it on ground (f) if it is opposed by a majority of the creditors.

The Insolvency Act s.123 affords creditors owed more than £750 a simple means of establishing ground (f), that the company is unable to pay its debts, by serving a "statutory demand".[17] Because of the presumption of insolvency inherent in this, the courts are astute to prevent creditors relying on the sub-section if the debt itself is disputed,[18] or if the sum is disputed so that £750 may not be owed,[19] or if the statutory demand has not

been properly put together or properly served.[20] Otherwise, it is usually necessary for the creditor to prove "to the satisfaction of the court that the company is unable to pay its debts as they fall due".[21]

The court's discretion

33–6

The court has a statutory discretion to refuse to order a winding up on a contributor's petition if some other remedy is available and it seems that the petitioners are acting unreasonably in seeking this rather drastic option.[22] In addition, the court has an inherent jurisdiction to refuse to make the order if it considers the petition to have been brought for improper or extraneous purposes,[23] and may simply strike out as an abuse of process any petition which is bound to fail.[24]

Liquidators, provisional liquidators and official receivers

33–7

If a winding up order is made, the first step needing to be taken will be to appoint a liquidator to whom, as in all types of winding up, the administration of the company's affairs and property will pass. In contrast with an individual's trustee in bankruptcy, the company's property does not vest in the liquidator[25]; but the control and management of it and of the company's affairs do, and the board of directors, in effect, becomes functus officio.[26] A liquidator may, indeed, be appointed before a final order for winding up is made, for at any time after the presentation of a winding up petition the court may appoint a provisional liquidator, normally the official receiver attached to the court.[27]

The important role played by official receivers in compulsory liquidations in England and Wales[28] is perhaps the major difference between compulsory and voluntary liquidations.[29] Official receivers are officers of the Insolvency Service, an Executive Agency of BIS, attached to courts having bankruptcy jurisdiction.[30] Not only will an OR normally be the provisional liquidator (if one is appointed) but he or she will generally be the

initial liquidator and often will remain the liquidator throughout in a court ordered winding up. On the making of a winding up order[31] the OR automatically becomes liquidator by virtue of his or her office and will remain so unless and until another liquidator is appointed.[32] The OR may succeed in getting rid of the office by summoning separate meetings of the creditors and of the members for the purpose of appointing another liquidator.[33] And if that does not succeed,[34] the OR may decide to refer the need to appoint another liquidator to the Secretary of State who may appoint.[35] But, whenever any vacancy occurs, the OR again becomes the liquidator until another is appointed.[36]

The liquidator, provisional liquidator and official receiver are all officers of the court, required to behave as such, if they have been appointed by the court to execute a court ordered compulsory liquidation.

Whether or not the official receiver becomes the liquidator, the OR has important investigatory powers and duties. When the court has made a winding up order, the OR may require officers, employees and those who have taken part in the formation of the company to submit a statement as to the affairs of the company verified by affidavit.[37] It is the duty of the OR to investigate the causes of the failure, and to make such report, if any, to the court as he or she thinks fit.[38] The OR may apply to the court for the public examination of anyone who is or has been an officer, liquidator, administrator, receiver or manager of the company, or anyone else who has taken part in its promotion, formation or management, and must do so, unless the court otherwise orders, if requested by one-half in value of the creditors or three-quarters in value of the members.[39] And if the OR is not the liquidator, the person who is must give the OR all the information and assistance reasonably required for the exercise of these functions.[40]

Once a liquidator is appointed, the process of the winding up proceeds very much as it would in the case of a voluntary liquidation since the objective is identical and the liquidator's functions are the same as those in voluntary windings up, namely "to secure that the assets of the company are got in, realised, and distributed to the company's creditors[41] and, if there is a surplus, to the persons entitled to it".[42] The main

difference is that, in a winding up by the court, the liquidator in the exercise of powers given under Sch.4 to the Insolvency Act will more often be required to obtain the sanction of the court before entering into transactions, and that throughout the liquidation process the liquidator will be subject to the surveillance of the OR, acting, in effect, as an officer of the court.

In a court-ordered winding up where the liquidator is not the OR, the creditors may appoint a "liquidation committee", so that they have some formal voice in the liquidation proceedings.[43]

Timing of commencement of winding up

33–8

On the making of a winding up order the winding up is deemed to have commenced as from the date of the presentation of the petition (or, indeed, if the order is made in respect of a company already in voluntary winding up, as from the date of the resolution to wind up voluntarily).[44] This dating back is important since it can have the effect of invalidating property dispositions[45] and executions of judgments[46] lawfully undertaken during the period between the presentation of the petition and the order,[47] and of affecting the duration of the periods prior to "the onset of insolvency" in which, if certain transactions are undertaken, they are liable to adjustment or avoidance in the event of winding up or administration.[48]

Voluntary winding up—general

Instigation of winding up

33–9

In contrast with winding up by the court, voluntary winding up always starts with a resolution of the company. In the unlikely event of the articles fixing a period for the duration of the company[49] or specifying an event on the occurrence of which it is to be dissolved,[50] all that is required is an ordinary resolution in general meeting.[51] Otherwise, what is required is a special resolution that the company be wound up voluntarily.[52] In either case the resolution is subject to the requirement that a copy of it has to be sent to the Registrar within 15 days[53] and the company

must give notice of the resolution by advertisement in the *Gazette* within 14 days of its passing.[54]

Timing of commencement of winding up

33–10

A voluntary winding up is deemed to commence on the passing of the resolution[55]; there is no "relating back" as there is in the case of winding up by the court. As from the commencement of the winding up, the company must cease to carry on its business, except so far as may be required for its beneficial winding up,[56] and any transfer of shares, unless made with the sanction of the liquidator, is void, as is any alteration in the status of the members.[57]

Members' voluntary winding up

Declaration of solvency

33–11

The most important question which the directors of the company will have had to consider prior to the passing of the resolution is whether they can, in good conscience and without dire consequences to themselves, allow the voluntary winding up to proceed as a members', as opposed to a creditors', winding up. In order for that to occur they, or if there are more than two of them, the majority of them, must, in accordance with IA 1986 s.89, make at a directors' meeting[58] a statutory declaration (the "declaration of solvency") to the effect that they have made a full inquiry into the company's affairs and that, having done so, they have formed the opinion that the company will be able to pay its debts in full, together with interest at the "official rate",[59] within such period, not exceeding 12 months from the commencement of the winding up, as may be specified in the declaration.[60] This was the origin of the declaration of solvency now used in the out-of-court procedure for a reduction of capital[61] and in respect of an acquisition of shares out of capital.[62]

The declaration is ineffective unless:

(a) it is made within five weeks preceding the date of the passing

of the resolution; and

(b) it embodies a statement of the company's assets and liabilities as at the latest practicable date before the making of the declaration.[63]

If a director makes the declaration without having reasonable grounds for believing that the company will be able to pay its debts with interest within the period specified in the declaration, he or she is liable to a fine and imprisonment,[64] and if the debts are not so paid it is presumed, unless the contrary is shown, that the director did not have reasonable grounds for that opinion.[65] It therefore behoves the directors to take the utmost care and to seek professional advice before they make the declaration. Especially is this so because, even if the winding up is a members' one, a licensed insolvency practitioner will have to be appointed as liquidator and the liquidator is likely to detect whether the declaration was over-optimistic long before the expiration of the 12 months. Formerly, small private companies could, and often did, appoint as liquidator one of the directors and, in effect, continued to proceed much as they would have when a partnership was being dissolved. This is no longer possible[66]: despite the efforts begun by the 1989 Act to reduce the burdens on private companies, the Insolvency Act has increased their burdens as regards winding up even if they are quasi-partnerships.

If the professional liquidator, appointed as described below, forms the opinion that the company will not be able to pay its debts within the stated period, he or she must summon a meeting of the creditors and supply them with full information in accordance with IA 1986 s.95 and, as from the date when the meeting is held, the winding up is converted under s.96 from a (solvent) members' to a (insolvent) creditors' voluntary winding up.[67] So long, however, as the liquidator shares the view of the directors (and if they are wise they will have consulted him, as their proposed nominee, before they made the declaration) all should proceed smoothly as a members' winding up.

Appointment and obligations of liquidator

33–12

The company in general meeting will appoint one or more liquidators for the purpose of winding up the company's affairs and distributing its assets[68] whereupon "all the powers of the directors cease except so far as a general meeting or the liquidator sanctions their continuance".[69] If a vacancy in the office of liquidator "occurs by death, resignation or otherwise" the company in general meeting may fill the vacancy,[70] subject to any arrangement with the creditors.[71] If the winding up continues for more than a year,[72] the liquidator must summon a general meeting at the end of the first and any subsequent year, or at the first convenient date within three months from the end of the year or such longer period as the Secretary of State may allow.[73] The liquidator must lay before the meeting an account of his or her acts and dealings, and of the conduct of the winding up during the year.[74]

When the company's affairs are fully wound up the liquidator must draw up an account of the winding up, showing how it has been conducted and the company's property disposed of, and must call a final meeting of the company for the purpose of laying before it the account and giving an explanation of it.[75] The fact that this meeting is being called is something which is of wider interest than to members alone for, as we shall see,[76] it will lead to the final dissolution of the company. The Insolvency Act provides that it shall be called by advertisement in the *Gazette*, specifying its time, place and object and published at least one month before the meeting.[77] Within one week after the meeting the liquidator must also send the Registrar a copy of the account and make a return of the holding of the meeting.[78]

Creditors' voluntary winding up

Instigation of winding up

33–13

Here, in contrast with members' winding up, the company is assumed to be insolvent and it is the creditors in whose interests the winding up is undertaken and they who have the whip hand. If no declaration of solvency has been made, the company must cause a meeting of its creditors to be summoned for a day not later than the 14th day after the resolution for voluntary winding

up is to be proposed. It must cause notices to be sent by post to the creditors not less than seven days before the date of the meeting and must advertise it once in the *Gazette* and once at least in two newspapers circulating in the locality in which the company's principal place of business in Great Britain was situated during the previous six months.[79] This must state either (a) the name of a qualified insolvency practitioner[80] who, before the meeting, will furnish creditors with such information as they may reasonably require; or (b) a place where, on the two business days before the meeting, a list of the company's creditors will be available for inspection free of charge.[81] Further, the directors must prepare a statement of the company's affairs verified by affidavit and cause it to be laid before the creditors' meeting. The directors must also nominate one of their number to preside at the creditors' meeting—an unenviable task which it is the nominee's duty to perform.[82]

Appointment of liquidator

33–14

At their respective meetings, the creditors and the members may nominate a liquidator, and if the creditors do so their nominee becomes the liquidator, unless, on application to the court by a director, creditor or member, the court directs that the company's nominee shall be liquidator instead of, or jointly with, the creditors' nominee, or it appoints some other person instead of the creditors' nominee.[83] Provisions, similar in effect, apply when a members' winding up is converted to a creditors' winding up because the liquidator concludes that the company's debts will not be paid in full within the 12 months, except that the obligations of the directors have to be undertaken by the incumbent liquidator.[84]

"Liquidation committee"

33–15

In a creditors' voluntary winding up,[85] or in a winding up by the court,[86] the creditors may decide at their initial or a subsequent meeting to establish what used to be called a "committee of inspection" but which the Insolvency Act now calls a "liquidation committee", and, in the case of a creditors' winding

up, may appoint not more than five members of it.[87] If they do so, the company in general meeting may also appoint members not exceeding five in number.[88] However, if the creditors resolve that all or any of those appointed by the general meeting ought not to be members of the committee, the persons concerned will not be qualified to act unless the court otherwise directs.[89]

The functions of a liquidation committee are to be found in the Insolvency Rules rather than the Insolvency Act, and for present purposes can be summarised by saying that they give the liquidator the opportunity of consulting the creditors and the members without having to convene formal creditors' and company meetings, and indeed the committee has substantial powers to agree to matters on behalf of the creditors or the company.[90] They also provide additional means whereby the creditors and members can keep an eye on the liquidator. In the latter respect, liquidation committees are, perhaps, likely to be more valuable in creditors' voluntary windings-up (rather than in windings-up by the court) owing to the lesser role played by official receivers.

It may be thought somewhat anomalous that, when the company is insolvent, the members should have equal (or any) representation on the liquidation committee. But the Cork Committee rejected the argument that they should not, because "it is rarely possible to assess the interest of shareholders at the outset of proceedings".[91] This is certainly true. What at the commencement of the winding up would seem to be a clear case of the company's liabilities greatly exceeding its assets (so that the shareholders have no prospective stake in the outcome of the winding up) may turn out otherwise if the winding up is prolonged.[92]

In other respects a creditors' winding up proceeds up to and including the final meeting in much the same way as in a members' winding up, although notably SBEEA 2015 and the proposed new Insolvency Rules 2016 now much reduce the requirements for, and formalities of, any creditors' meeting, including the largely pointless final meeting.[93]

If the required procedures are not followed, the court can give directions under IA 1986 s.166. This was done in *Re*

WeSellCNC.Com Ltd,[94] where it was discovered by the appointed liquidator that no declaration of solvency had been made; this was therefore necessarily a "creditors' voluntary winding up" pursuant to IA 1986 s.89, but no creditors' meeting had been summoned (and no statement of affairs prepared). Accepting that the company was in fact well and truly solvent with a considerable surplus, and with all creditors having been paid and distributions made to shareholders, the judge declared that the liquidation was a creditors' voluntary winding up, but dispensed with the requirement of a creditors' meeting (and the laying before it of a statement of affairs).

Powers and Duties of the Liquidator

33–16

In order to make possible the orderly winding up the company, the Insolvency Act confers a wide range of powers on the liquidator (ss.165 et seq.), and Sch.4 sets out an extensive list of specific powers, including the power to carry on the company's business, to borrow and grant security over the company's property, and to bring and defend proceedings. Importantly, ss.178 et seq. empowers the liquidator to "disclaim any onerous property", meaning that the liquidator can terminate the company's obligations under any unprofitable contracts, and the contracting counterparty is then left to claim damages as a creditor in the company's insolvency. This power is typically used to terminate the company's leases of premises and other property, on the basis that otherwise the company's available assets would be disproportionately appropriated to the creditor holding the onerous right.[95]

In exercising these powers, the liquidator typically acts in the company's name[96] (the company retains its separate legal personality until the winding up is completed and the company is dissolved).[97]

The liquidator's duties are owed to the company,[98] not to individual creditors or members, and the liquidator may therefore be sued in misfeasance proceedings under IA 1986 s.212 and held personally liable for misapplication of the company's assets,[99] negligence[100] or breach of fiduciary duties (conflicts and profits rules) owed to the company.

Maximising the assets available for distribution

33–17

The task of the liquidator in winding up the company is to finalise the company's affairs, and to get in the company's assets so as to maximise the return to those entitled to the assets on a winding up.[101] In getting in the assets, the liquidator will take control of all the assets owned beneficially[102] by the company and, crucially, will seek to "claw back" assets which the company should not have disposed of (or should not have disposed of on the terms actually agreed) and will also pursue claims against any officers or third parties who may be liable to the company for breach of their duties or for other wrongs.[103] In this way, the asset pool available for distribution will be maximised, to the benefit of those entitled to share in it.

In all of this, a word ought to be said about the position of secured creditors in order to draw attention to the difference between their position and that of general creditors on a winding up, and also the different between their position on a winding up compared with that during an administration. As we saw, so far as the latter is concerned, unless the secured creditors have taken steps to enforce their security prior to the administration, they may be in difficulties in doing so while it lasts.[104] In contrast, on a winding up, a secured creditor is in the enviable position of having the choice of realising its security and, if this does not raise sufficient to pay what is due in full, to prove for the balance, or to surrender its security for the benefit of the general body of creditors and prove for the whole debt.[105] Normally, of course, the former option will be adopted.[106]

Statutory "claw back" and avoidance provisions

33–18

From the date of commencement of the winding up,[107] transfers of shares are avoided,[108] and, for compulsory liquidations, dispositions of the property by the company (unless the court otherwise orders)[109] and attachments, distress and execution

which have not been completed[110] are void. This can prove awkward, unless the court is minded to approve what has happened. For example, in *Re Gray's Inn Construction Co Ltd*,[111] the company continued to trade unprofitably after the date the winding up petition had been presented; counsel conceded that both sums credited and debited to the company's bank account were "dispositions" which, in the exercise of its discretion, the court mostly declined to validate in the interests of preserving rateable distributions to all creditors rather than enabling some to be paid in full. The banking community has, however, since been reassured that its potential exposure to restitutionary liability of this sort is rather less, with the important Court of Appeal decision in *Hollicourt (Contracts) Ltd v Bank of Ireland*,[112] to the effect that where a bank meets a cheque drawn by the company as its customer (whether the account is in credit or overdrawn), it does so merely as the company's agent; as a result, while there is clearly a disposition in favour of the payee, there is no disposition to the bank itself. Where, on the other hand, the company merely pays sums into its bank account, if the account is overdrawn, then the payment is a disposition to the bank,[113] whereas if the account is in credit then it has been held that the payment is not a disposition,[114] which is perhaps a pragmatic conclusion since the transaction simply converts the company's cash receipts into an equivalent claim against the bank.

Far more significantly, however, the liquidator is also given the right to look backwards, and unwind transactions entered into within prescribed periods before the commencement of an insolvent winding up. We have seen this already in relation to avoiding floating charges created within 12 months (or, in the case of connected persons, two years) of that date.[115] Similar rules enable the liquidator to unwind transactions entered into at an undervalue (s.238) within two years of the onset of insolvency, at a time where the company was already insolvent[116] or became so as a result of the transaction.[117] The court has wide powers in framing its orders to effect restitution of the company's estate.[118] Another provision with the same timing restrictions avoids transactions motivated by the desire to prefer one creditor over other (s.239).

A leading case on both these provisions remains *Re MC Bacon*,[119] the first decided case on s.239. The company, a bacon importer and wholesaler, went into liquidation some time after losing its principal customer. The liquidator challenged a debenture granted to the company's bank during the period where the company was attempting to stay afloat, and when it was probably insolvent or almost so, and could not have continued without the support of its bank. Millett J declined to strike down the debenture, holding that it was not a voidable preference, since the company had not been motivated by a desire to prefer the bank but merely by a desire to avoid their overdraft being recalled; and it was not a transaction at an undervalue,[120] since the granting of security had neither depleted the company's assets nor diminished their value (although the unsecured creditors may well have taken a rather different view of this).

This outcome, although clearly defended in the judgment, raises starkly the substantial practical shortcomings of these claw back provisions. The fact that a preference is only voidable if motivated by the insolvent debtor's desire to prefer creates the rather odd result that if the creditor aggressively demands early repayment under threat of refusing further supplies or services, the payment is unlikely to be caught, to the distinct advantage of the creditor who has now been paid in full and the corresponding disadvantage of the remaining unsecured creditors. By contrast, in both the US and Australia, a disposition is voidable if it has the *effect* of preferring one creditor, whatever the debtor's motivation. And the practical consequences for unsecured creditors where valid late security is granted (presumably security not otherwise caught by the floating charge provisions in s.245) is obvious on the face of it. Interestingly, this odd outcome has been the subject of some attention, obiter only, with Arden LJ suggesting that the grant of a legal mortgage could in the right circumstances be classified a transaction at an undervalue[121]; this then raises the nice question of whether the property disposition required to effect a legal mortgage merits a different treatment from the granting of a security interest by way of charge.

Whatever their shortcomings, however, these claw-back

provisions can provide vital additional reserves for creditors, and occasionally for members, but, in conclusion, it might also be noted that their backdated effect sits uneasily with the aims of the protective notice rules which require notice of the winding up to be published in the *Gazette.*[122]

Statutory provisions requiring wrongdoers to make contributions

33–19

We have in earlier chapters already considered the provisions in the Insolvency Act which enable the liquidator to pursue the directors, and sometimes others, making them liable to account or pay compensation or contribute to the assets of the company by way of remedy for their breach of duty (s.212, a purely procedural provision, but one which does give the court a discretion to require compensation to be paid in full or in part "as the court thinks just", although the wrong being pursued is necessarily a general law wrong, either statutory or common law), fraudulent trading (s.213), or wrongful trading (s.214, also allowing the court a discretion to order "such contribution (if any) as the court thinks proper").[123]

The common law "anti-deprivation principle"

33–20

When a company is insolvent, the widely accepted objective of regulated insolvency distribution, and the clear goal of the statutory rules just considered, is to ensure that the company's assets are preserved for distribution, and that the distribution, when effected, is for the collective benefit of the company's creditors. Put another way, although it is accepted that some businesses will inevitably fail, even when run without fault,[124] and that innocent parties will then have to bear the resulting losses, the general consensus is that the losses should then be borne rateably.[125]

This then raises the question of whether there is common law support for this endeavour, or whether the task falls entirely to statute. A number of old cases and one House of Lords authority suggest the common law has a role. In *British Eagle*

International Airlines Ltd v Cie Nationale Air France,[126] the House of Lords, by a 3:2 majority, overruled both the Court of Appeal and the trial judge to hold that a contractual netting-out agreement between international airline companies could not operate on Air France's insolvency so as to prevent Air France from collecting in full the sums owed to it by certain airlines, even though sums which it owed to different airlines would obviously not be met in full.[127]

Perhaps predictably, the 2008 financial crisis generated litigation which tested the breadth of this common law restriction. The difficult case of *Belmont Park Investments Pty Ltd v BNY Corporate Trustee Services Ltd and Lehman Brothers Special Financing Inc*[128] is the only case to reach the Supreme Court to date. The clause under review was not a *British Eagle* "contracting out" provision (operating against the pari passu rule),[129] but a clause which effected an insolvency-triggered deprivation to the pool of assets available for distribution (as outlawed in *Ex p. Mackay*[130]).[131] The Supreme Court did not follow the analysis in *Mackay*, but gave powerful backing to freedom of contract, and unanimously upheld these "flawed asset" depletion provisions, denying that they offended the common law anti-deprivation principle. The derivatives markets, and perhaps financial markets more generally, applauded the outcome and the freedom it provides to parties to organise their affairs at will, although the result stands in stark contrast to the strict approach still favoured in *British Eagle* type arrangements, and also to the broader approach to protecting creditors against flawed asset provisions that is favoured in US bankruptcy legislation.

Benefit of the statutory claw backs and wrongdoer contributions

33–21

Money that is ordered to be paid under most of the sections just discussed (ss.238, 239, 213 and 214, but not s.212) typically goes into the general assets of the company in the hands of the liquidator, not to individual victims of the wrongs, and not, importantly, into the clutches of floating charge holders. This is because the right to sue belongs exclusively to the liquidator, not

the company. Receipts from s.212 actions, by contrast, are regarded as the products of a chose in action which belonged to the company before liquidation, and so will be caught by an appropriately worded floating charge.[132]

Proof of debts and mandatory insolvency set off

33–22

The liquidator will only pay those debts which are provable in the insolvency, and proved. The rules specifying which debts these are and how they are proved are contained in the Insolvency Rules 1986.[133] All claims by creditors are provable, whether the debts are present or future, certain or contingent, ascertained or sounding only in damages,[134] provided the company was, on that basis, subject to the claim at the time the winding up commenced.[135] The liquidator has the power to estimate the value of contingent or uncertain debts,[136] and may if necessary apply to the court for assistance.[137]

In a compulsory winding up, the creditors must submit written "proof" or their debts, and in a voluntary winding up the liquidator usually elects to impose the same requirement. The liquidator then examines the proofs and decides whether to admit all or part of the debt or reject it; aggrieved creditors may apply to the court for review.[138] This all sounds eminently simple and sensible, and generally it is, although more complicated facts can throw up conceptually difficult problems. One rule which helps solve some of these problems is the "rule against double proof", which prevents more than one creditor suing the insolvent company for the same debt. This is not as unlikely as it might at first seem. For example, consider the situation where A guarantees a debt which B owes to C. Although this looks like a problem where there are two debtors, not two creditors, looked at the other way it is also true that the primary creditor (C) has a right to sue B on the debt, and the guarantor (A) has a contingent right to sue B to enforce its indemnity rights under the guarantee. If B is insolvent, can A and C both prove in the insolvency? The answer is no, and the rule against double proof prevents this, denying creditors whose rights relate to the same underlying debt the possibility to prove together. Were it otherwise, it would follow that if a debt were guaranteed by several parties, they

could all prove in the liquidation; this makes it clear that the logic delivering this conclusion is flawed. So held the Supreme Court in *Kaupthing Singer & Friedlander Ltd (In Administration); sub nom Mills v HSBC Trustee (CI) Ltd.*[139]

As already noted, secured creditors often elect to stand outside this process.[140]

33–23

A further limitation on the amount for which creditors may prove is imposed by the mandatory insolvency set off rules,[141] which require the sums due from the creditor to be set off against the sums due from the company where those sums arise from mutual credits, mutual debts or other mutual dealings between the company and the creditor proving in the liquidation. In practice, this arrangement invariably benefits the creditor, because at least some part of the debt due to the creditor from the company is effectively paid off in full by virtue of the set off, and the creditor only has to prove for the remaining balance (which balance will constitute a claim against the insolvency pool, with the inevitable risk of being paid very little, as we shall see).

It is quite hard to find a compelling justification for this rather generous exception to the strict pari passu rule of insolvency distribution, which generally insists that losses are shared rateably, and that all unsecured creditors are only paid pro rata. True, the rule is longstanding,[142] and perhaps it simplifies the work required to be done by the liquidator in accepting proof of debts,[143] and perhaps it reduces exposure and therefore total risk in the financial markets,[144] but it is quite hard to find reasons of fairness[145] which explain why creditors with mutual dealings with the insolvency debtor should effectively be preferred in the sharing of losses by all the debtor's unsecured creditors.[146]

Whatever the justifications for the rule, because it is so advantageous to creditors, they will be keen to classify their dealings as mutual. Often this can be relatively easy to prove. The 1990s litigation surrounding the collapse of the Bank of Credit and Commerce International[147] illustrated that customers who both saved with and borrowed from the bank came within the rules, and so were protected from having to repay their loans

in full while only recovering a fraction of their savings as unsecured creditors in the insolvency. The same was true of companies who had borrowed on the security of their own deposits with the Bank. But where these types of corporate loans were secured not on the borrowing company's own Bank deposits, but on deposits belonging to third parties, typically those of the borrowing company's director, the outcome was different. The directors, so it was held, had not undertaken any personal liability to the Bank; they had merely allowed their assets to be used as security; there was therefore no debt owed by the director to the Bank which could be set off against the debt owed by the Bank to the director in relation to the director's deposit.[148] The net result was that the borrowing companies would have to repay their loans in full (the Bank could not be forced to rely on the director's secured guarantee), and the directors by contrast would recover only minimal sums in the Bank's insolvency. The seeming injustice of the outcome did not escape Lord Hoffmann.

And of course, no set off is possible if the creditor's claims against the company arose after the commencement of winding up,[149] or if the creditor's obligations to the company arose by way of liability for misfeasance (that not being a mutual "dealing" with the company).[150]

Distribution of the company's assets

33–24

Once the liquidator has gathered in the company's assets, they must be distributed in an orderly fashion to those entitled to them. The basic rules are clear. The funds are devoted first, to paying the expenses of liquidation; then to the preferred creditors; then the general unsecured creditors; then the deferred creditors; then, if there is anything left, the members, according to the entitlements associated with their class rights. If the funds are not sufficient to pay all of a particular class in this hierarchy in full, then they share pro rata. It then follows, necessarily, that the classes below that class will receive nothing. It is common knowledge that the unsecured creditors often secure almost nothing in an insolvent liquidation; the banks take the lion's share, as secured creditors, and the preferential creditors take

most of the little that remains.

In examining in more detail the order of distribution of the company's assets, recall, first, that the pool of assets includes only assets owned beneficially by the company.[151] Moreover, the claims of secured creditors to the assets specifically secured rank ahead of any claim in the winding up to those secured assets, including even the costs of liquidation,[152] but with the significant exception noted in Ch.32 in relation to floating charge holders, who must cede priority to quite an astonishing number of preferred claims.[153]

The first call for payment from the company's assets are the proper expenses of liquidation, as defined authoritatively by the classes of debts set out in the IR 1986 r.4.218, which also defines the priorities as between these classes of expenses.[154] There is no additional implicit requirement that to be classed as an expense, the expenditure must also have been, or have been intended to be, for the benefit of the company.[155] These liquidation expenses include the liquidator's remuneration (without which guarantee no liquidator would be persuaded to act), post-liquidation debts and certain pre-liquidation debts.[156] The total size of these claims can be enormous, but perhaps the greatest recent surprise was delivered by *Re Nortel GmbH and Lehman Bros International (Europe) Ltd*,[157] which held that a Financial Support Direction (an order to pay) issued by the Pensions Regulator to a holding company after the commencement of that company's liquidation, was a liquidation expense, and therefore, with the other liquidation expenses, had to be paid in priority to all the company's other unsecured claims. This would clearly have had a dramatic impact on the likely payout to claimants further down the chain, and so it came as some relief when the Supreme Court overturned this decision, in *Bloom v Pensions Regulator*,[158] to hold that the debt was simply one of the company's general unsecured debts, provable and payable in the ordinary course.

33–25

Costs of litigation can also be recovered as an expense. After several contrary judicial determinations, the statutory rules have now been changed to make it clear that a liquidator who is

sanctioned to bring proceedings directed at clawing back assets or pursuing wrongdoers to compel them to make contributions to the company's assets will be able to recover the costs of such litigation as a proper expense of the liquidation.[159]

Finally, in the context of expenses, the 1986 Insolvency Act introduced protective provisions to prevent public utilities from putting pressure on liquidators to pay their outstanding pre-commencement debts as a condition of further supply,[160] which effectively enabled such companies to extract preferential repayment of their pre-winding up debts. Any supply which comes after the commencement of winding up will normally rank as a liquidation expense, and so is likely to be paid in full, but suppliers are nevertheless permitted to require the liquidator personally to guarantee payment.[161]

The second call on the pool is to pay the preferential creditors, as defined in IA 1986 s.386 and Sch.6.[162]

33–26

The third call on the funds is to pay the general unsecured creditors, unless their debts are deferred, as described next below. Recall that the unsecured creditors may also receive a boost to the pool dedicated to them as a result of compulsory contributions of a "prescribed part" from floating charge realisations.[163]

The fourth call on the funds is to pay deferred debts to creditors. There are three classes of such deferred debts. First, interest on all debts payable in the winding up, calculated from the date of commencement of the winding up until the date of payment of the interest, with all relevant debts treated as ranking equally for this purpose.[164] Secondly, money due to a member on a contract to redeem or repurchase shares which was not completed before the winding up.[165] And, thirdly, debts due to members in their character as members, whether by way of dividends, profits or otherwise.[166] The House of Lords had cause to consider the scope of this last category in *Soden v British and Commonwealth Holdings Plc*,[167] and held that it embraced only claims by members based on the statutory contract between the company and its members, and that debts due to members in other capacities, such as lenders to or trade creditors of the

company, are not deferred in the same way, but are typically general unsecured debts. In the case in question, the member was claiming damages for misrepresentations which allegedly induced the member to acquire shares in the company. The House of Lords held this was a claim arising outside the context of what is now the Companies Act 2006 s.33 contract, so would not be a deferred debt.

And, finally, whatever remains then goes to the members. Typically the class rights as between shareholders will ensure that the preferential shareholders get preferential rights to the return of their capital, then capital is returned to the ordinary shareholders, and then any surplus after that is usually only for the ordinary members (the preferential shareholders often not being entitled to share in any surplus on a winding up).

It is tolerably clear that the objective behind these distribution rules, so far as they apply on insolvency, is for the company's creditors and members to share the inevitable losses roughly according to pari passu rules, whilst marginally adjusting those rules to specially favour those who have contractually pre-agreed security rights[168] or who are non-adjusting creditors with little wherewithal to negotiate for their own priority (e.g. employees), and, by contrast, to disfavour those with debts that are truly of second order importance (e.g. interest only on all provable debts) or with debts that reflect the claims of members to the company's capital (at least as the position appears on insolvency), which claims should, in the natural order of things, be deferred to the claims of the company's creditors.

Dissolution

After winding up

The normal process

33–27

In contrast with the formalities attendant on the birth of a company,[169] its death takes place with a singular absence of ceremony. In the case of voluntary liquidations, once the liquidator has sent to the Registrar the liquidator's final account and return,[170] and on the expiration of three months from their

registration, the company is deemed to be dissolved,[171] unless the court, on the application of the liquidator or any other person who appears to the court to be interested, makes an order deferring the date of dissolution.[172]

Normally, the position is much the same where the winding up is by the court. Once it appears that the winding up is for all practical purposes complete, the liquidator must currently summon a final meeting of creditors[173] (although this is expected to be abolished in late 2016[174]) which receives the liquidator's report on the winding up and determines whether the liquidator shall be released.[175] The liquidator then gives notice to the court and to the Registrar that the meeting has been held and of the decisions (if any) of the meeting. When the Registrar receives the notice, it is registered and, unless the Secretary of State, on the application of the official receiver or anyone else who appears to be interested, directs a deferment,[176] the company is dissolved at the end of three months from that registration.[177]

If the official receiver is the liquidator, the procedure is the same except that registration is of a notice from the official receiver that the winding up is complete.[178]

Early dissolution

33–28

However, there is a sensible procedure whereby the OR may bring about an early dissolution if it appears that the realisable assets are insufficient to cover the costs of the winding up[179] and that the affairs of the company do not require any further investigation.[180] Before doing so, the OR must give at least 28 days' notice of the proposal to the company's creditors and members and to an administrative receiver if there is one,[181] and, with the giving of that notice, the OR ceases to be required to undertake any duties other than to apply to the Registrar for the early dissolution of the company.[182] On the registration of that application, the company becomes dissolved at the end of three months[183] unless the Secretary of State, on the application of the official receiver or any creditor, member or administrative receiver,[184] gives directions to the contrary before the end of that period.

The grounds upon which the application to the Secretary of State may be made are (a) that the realisable assets are in fact sufficient to cover the expenses of the winding up; or (b) that the affairs of the company do require further investigation[185]; or (c) that for any other reason the early dissolution of the company is inappropriate.[186] And the directions that may be given may make provision for enabling the winding up to proceed as if the official receiver had not invoked the procedure or may include a deferment of the date of dissolution.[187]

There are no similar provisions for early dissolution on a voluntary winding up; once the company has resolved on voluntary winding up it is expected to go through with it. But if there is a vacancy in the liquidatorship and no one can be found who is willing to accept the office because there is clearly not enough left to pay the expenses of continuing it (no insolvency practitioner will accept office in such circumstances unless someone is prepared to pay the costs), it is difficult to see how the Registrar could do other than to strike the company off the register as a defunct company (see below)—as, indeed, that section specifically recognises.

Striking off of defunct companies

33–29

The striking off of defunct companies affords a method whereby a small company can, in practice, often be inexpensively dissolved without the expense of any formal winding up. Although the rules are contained in Pt 31 of the Companies Act, rather than in the Insolvency Act, they are an integral part of the machinery by which companies cease to exist.

Under s.1000 of the Companies Act 2006, if the Registrar has reasonable cause to believe that a company is not carrying on business or is not in operation, the Registrar may send to the company a letter inquiring whether that is so. If within a month of sending the letter a reply is not received, the Registrar shall, within 14 days thereafter, send a registered letter referring to the first letter and stating that no answer to it has been received and that, if an answer to the second letter is not received within one month from its date, a notice will be published in the *Gazette* with a view to striking the company's name off the register.[188] If

the Registrar receives a reply to the effect that the company is not carrying on business or is not in operation, or if, within one month of sending the second letter, no reply is received, the Registrar may publish in the *Gazette* and send to the company by post a notice that at the expiration of three months from the date of the notice the name of the company will, unless cause to the contrary is shown, be struck off the register and the company will be dissolved.[189] At the expiration of the time mentioned in the notice, the Registrar may, unless cause to the contrary is shown, strike the company off the register and publish notice of this in the *Gazette*, whereupon the company is dissolved.[190]

This section is most commonly used when what has afforded the Registrar reasonable cause to believe that the company is not carrying on business or in operation is the fact that it is in arrears with the lodging of its annual returns and accounts.[191] When so used by the Registrar, it is both a method of inducing those companies that are operating in breach of their filing obligations to mend their ways, as well as a method of clearing the register of companies which are indeed defunct.

A problem discovered by the CLR arises out of the fact that the section requires the Registrar to communicate with the company at its registered address[192] which, for a variety of good and not-so-good reasons, might be an ineffective form of communication. The CLR encouraged the Registrar to experiment with writing also to the directors of the company at their last known residential address, where correspondence to the company's address was returned, before striking the company off, and it appears that this measure has had some success and is now part of the Registrar's administrative practice.[193] The advantage is that it may avoid striking off companies which are in fact still operational, and thus avoid the expense of seeking to restore them to the register when they discover they have been struck off (see below). From 11 July 2014 onwards, the Registrar may now send communications electronically, as opposed to communicating via letters by post.[194]

However, the above procedure can also be used to deal with the situation referred to above when winding up proceedings have been started but insufficient resources are available to complete them.[195] If the Registrar has reasonable cause to

believe either that no liquidator is acting or that the affairs of the company are fully wound up and, in either case, that the returns required to be made by the liquidator have not been made for a period of six consecutive months, the Registrar shall publish in the *Gazette* and send to the company or the liquidator (if any) a like notice which causes the company to be dissolved.[196]

Voluntary striking off

33–30

Further, the predecessor to the above sections used to provide companies with a method of dissolving without the expense of a formal winding up and especially without the appointment of an insolvency practitioner to oversee the process: the directors of a company which had ceased trading would simply write to the Registrar inviting the Registrar to exercise the statutory power to strike it off. Under the Deregulation and Contracting Out Act 1994,[197] perhaps somewhat ironically, this practice was formalised in the statute and it is understood that the Registrar discontinued the old practice and will now only entertain formal applications for striking off under the new procedure. The new sections in large part replicated the old practice, so the change helped to make this course of action more transparent.

The statutory procedure enables a company,[198] which has not traded or carried on business[199] during the previous three months, to apply by its directors (or a majority of them)[200] to the Registrar for the company to be struck off. The directors must ensure that notice of the application is given to a list of persons, who include, notably, its creditors (contingent and prospective creditors being embraced within the term),[201] its employees, the managers and trustees of any pension fund and its members.[202] On receipt of the application the Registrar publishes a notice in the *Gazette* stating that the company may be struck off and inviting any person to show cause why it should not be.[203] Not less than three months later the Registrar may strike the company off and, on publication of a notice to this effect in the *Gazette*, the company is dissolved.[204]

The purpose of requiring notice to be given by the directors is obviously to see if the people most likely to object to the striking-off in fact oppose this course of action, but the

legislation lays down no particular procedure which the Registrar must follow in dealing with objections. The fact that the company has creditors clearly does not debar it from using this procedure (otherwise the Act would not require notice to be given to creditors) but it is not intended to be used in place of liquidation where the company has substantial assets or liabilities outstanding at the time of application.[205] Nor may an application be made for striking off where the company is currently the subject of an application to the court for consent to a compromise or arrangement under the Companies Act[206] or other procedures for handling insolvent companies contained in the Insolvency Act 1986.[207]

The range of matters which the Registrar must keep in mind upon an application under s.1003 is much reduced by the provision that dissolution under the procedure does not inhibit the enforcement of any liability of the erstwhile company's directors, managing officers or members, so that these people cannot escape their common law or statutory duties by causing their company to be dissolved.[208] Moreover, a company dissolved under the new procedure, like companies dissolved in other ways, may be restored to the register in certain circumstances, a topic to which we now turn.

Resurrection of Dissolved Companies

33–31

A contrast between the death of an individual and that of a company is that, without divine intervention, a dissolved company can be resurrected. Following the CLR,[209] the Act made two innovations in this area. First, it introduced a limited form of administrative restoration to the register, a result which had previously required a court order. Secondly, a single method of court restoration replaced the formerly existing two methods, which the courts had found some difficulty in making sense of and which overlapped to a considerable extent.

Administrative restoration

33–32

The new form of administrative restoration applies only where

the company was dissolved by the Registrar under the provisions relating to defunct companies.[210] Thus, it does not apply to either dissolution after winding up or to voluntary striking off. The conditions for administrative restoration to the register confine it to situations where the company was carrying on business or in operation at the time it was struck off.[211] Thus, the main purpose of administrative restoration is to deal more cheaply with reversing a striking off which, ideally, should not have occurred in the first place. For probably the same reason, the application for restoration may be made only by a former director or former member of the company,[212] but no application for restoration may be made more than six years after its dissolution.[213] If any of the company's property is vested in the Crown as bona vacantia,[214] the Crown's representative must consent and the applicant must offer to pay any costs of the Crown in relation to the application and, more importantly, dealing with the property during the period of dissolution.[215] Finally, the applicant must deliver to the Registrar such documents as are necessary to bring the company's public records up-to-date and to pay any penalties outstanding at the time the company was dissolved.[216]

If these conditions are met, the Registrar is under a duty to restore the company to the register.[217] Notice of the decision must be given to the applicant and the restoration takes effect when that notice is sent.[218] Public notice must be given of the restoration.[219] The effect of restoration is that the company is deemed to have continued in existence as if it had not been struck off.[220] However, any consequential directions, if necessary, for placing the company and all other persons in the position (as nearly as possible) as they would have been in, had the company not been struck off, are to be given, not by the Registrar, but by a court, to which application may be made within three years of the restoration.[221]

Restoration by the court

33–33

The two court-based restoration methods previously provided were contained in ss.651 and 653 of the 1985 Act. The current provisions are based on those of s.653, the somewhat simpler procedure. The court-based procedure applies to all forms of

dissolution[222] and a much wider range of persons may apply for restoration. These include not just former directors or members, but any creditor of the company at the time of its dissolution, anyone who but for the dissolution would have been in a contractual relationship with it, any person with a potential legal claim against the company, any manager or trustee of an employee pension fund, any person interested in land in which the company had an interest, and the Secretary of State.[223] This caters for a much wider range of reasons for wanting to have the company restored to the register, a common one being in order to sue or assert a right against it. Normally, such persons must act within six years of the date of dissolution,[224] but a claim for restoration in order to bring a claim for damages for personal injury against the company may be made at any time.[225]

The court has power to order restoration if (a) in the case of striking off of a defunct company, it was carrying on business or in operation at the time; (b) in the case of voluntary striking off, the conditions for such a striking off were not complied with; and (c) in any other case the court thinks it just to do so.[226] Restoration, if ordered, takes effect from the time the court's order is delivered to the Registrar and the Registrar must give publicity to the order in the usual way.[227] The effect of restoration by the court is the same as with administrative restoration,[228] and the court may give the necessary directions to effect the principle that the company should be treated as if never dissolved.[229]

Conclusion

33–34

This final chapter has considered the means by which the lives of companies are deliberately brought to an end, against their natural characteristic of perpetual succession. The overview has been brief, especially given the great complexities and doctrinal and policy difficulties in the current structure. The source of those difficulties is, at root, the result of a simple problem: mostly when companies are wound up, they are insolvent; their liabilities exceed their assets. In such circumstances, innocent parties will inevitably face losses, whatever efforts are made to protect them (and we have seen the lengths to which the winding

up regime goes in that regard). Perhaps then the best the law can do is try to minimise obvious unfairness and ensure the rules, even if not perfect, are at least certain. Given the entrepreneurial imagination of commercial parties and our flexible and sophisticated mix of statute, contract and property law rules, this is a challenge, but one against which the current winding up regime might be judged to be doing tolerably well.

---

[1] And, more rarely, simply by striking the company off the register: see below, paras 33–29 and 33–30 et seq.

[2] See Ch.23, above.

[3] See above, Chs 29, 32.

[4] But see Pt 31 of CA 2006, noted below, paras 33–29 and 33–30.

[5] Insolvency Rules 1986 (SI 1986/1925), amended on numerous occasions, and with the Insolvency Service planning a revised and consolidated version for 2016, to take effect from 1 October 2016. The details of these new Rules can be found at *https://www.gov.uk/government/news/draft-insolvencyrules-sent-to-the-insolvency-rules-committee-for-statutory-consultation* [Accessed 27 February 2016]. The Explanatory Notes indicate that the new Rules (i) consolidate existing rules; (ii) modernise and simplify the language; and (iii) incorporate various changes in the law intended to reduce the burden of red tape (especially in relation to creditors' meetings, which will become the exception, rather than the default rule). To the extent that the rules are consolidated and recast, this is not intended to change the law. Both IA 1986 and the Rules eschew the use of the word "members" and substitute "contributories", thus perhaps giving the misleading impression that it means only members who are called upon to contribute because their shares are partly paid (or in the case of guarantee companies because of the minimal amounts that they have agreed to contribute on a winding up). To avoid this impression, here "members" has been substituted; but this too is not wholly accurate, for "contributories" also includes past members unless they ceased to be members more than 12 months before the commencement of the winding up: see IA 1986 ss.74 and 76; and *Re Anglesea Collieries* (1866) L.R. 1 Ch. 555 CA; and *Re Consolidated Goldfields of New Zealand* [1953] Ch. 689. On the other hand, the benefits of participating as a contributory are denied to those whose obligation to contribute arises from a misfeasance to the company: see IA 1986 s.79(2) in respect of liability under IA 1986 ss.213, 214 (fraudulent and wrongful trading respectively); and *Re AMF International Ltd* [1996] 1 W.L.R. 77 in respect of liability under IA 1986 s.212.

[6] In relation to the winding up of "unregistered companies" (on which see paras 1–31 et seq., above) winding up by the court is the only method allowed: see IA 1986 Pt V. A company incorporated outside Great Britain which has been carrying on business in Britain may be wound up as an unregistered company notwithstanding that it has ceased to exist under the law of the country of incorporation: IA 1986 s.225.

[7] See IA 1986 Pt IV Ch.X.

[8] See IA 1986 Pt VI ss.238–246.

[9] Normally the High Court, but the county court of the district in which the company has its registered office has concurrent jurisdiction if the company's paid-up capital is small

and if that county court has jurisdiction in relation to bankruptcy of individuals: IA 1986 s.117.

[10] But it might be used if the court is already involved because the liquidation of the company is part of a scheme requiring its sanction in accordance with the provisions discussed in Ch.29, above.

[11] Notwithstanding anything to the contrary in the articles: *Re Pervil Gold Mines Ltd* [1898] 1 Ch. 122 CA.

[12] And, as we have noted earlier, the Secretary of State (also see ss.124A, 124B), the FCA (also see s.124C), the Regulator of Community Interest Companies, the Official Receiver of the court, and designated officers of the magistrates court, each in specified circumstances.

[13] IA 1986 s.124.

[14] Until then each may try to obtain judgment and levy execution thus getting ahead of the pack.

[15] Prior to the 1985/86 statutory reforms, it was held, somewhat surprisingly, that directors could not apply: *Re Emmerdart Ltd* [1979] Ch. 540. Now they can. For the interpretation of "the directors" see *Re Equiticorp International Plc* [1989] 1 W.L.R. 1010.

[16] But unless the membership has been reduced below two, a member cannot apply unless his (or her) shares were originally allotted to him or have been held and registered in his name for at least 6 months during the 18 months prior to the commencement of the winding up (on which see below) or have devolved on him through the death of a former holder: IA 1986 s.124(2). This is designed to prevent a disgruntled person (e.g. an ex-employee) from buying a share and then bringing a winding up petition (or threatening to do so).

[17] In accordance with IA 1986 s.123(1)(a).

[18] Indeed, a creditor whose debt is bona fide disputed cannot petition at all: *Stonegate Securities Ltd v Gregory* [1980] Ch. 576 CA; *Re Selectmove Ltd* [1995] 1 W.L.R. 474.

[19] *Re A company (No.003729 of 1982)* [1984] 1 W.L.R. 1090.

[20] *Re A company (No.008790 of 1990)* [1991] B.C.L.C. 561; *Stylo Shoes Ltd v Prices Tailors Ltd* [1960] Ch. 396.

[21] IA 1986 s.123(1)(e). See *BNY Corporate Trustee Services Ltd v Eurosail-UK 2007-3BL Plc* [2013] UKSC 28; [2013] 1 W.L.R. 1408 SC. While discrediting the "point of no return" test, the Supreme Court affirmed the decision of the Court of Appeal that the ability of a company to meet its liabilities, both prospective and contingent, was to be determined on the balance of probabilities with the burden of proof on the party asserting "balance-sheet insolvency".

[22] IA 1986 s.125(2). This is typically relied on to resist orders made on the "just and equitable" ground, where the unfair prejudice alternative may seem preferable.

[23] *Re Surrey Garden Village Trust Ltd* [1995] 1 W.L.R. 974 Ch; *Re JE Cade & Sons Ltd* [1992] B.C.L.C. 213. On the other hand, if the purpose of the petition is legitimate, it does not matter if the petitioner's motive is malicious: *Bryanston Finance Ltd v De Vries (No.2)* [1976] Ch. 63 CA.

[24] *Charles Forte Investments Ltd v Amanda* [1964] Ch. 240 CA.

[25] Unless the court so orders, as it may: IA 1986 s.145(1).

[26] By common law, even though not made explicit in the IA 1986 for compulsory winding ups: *Re Farrow's Bank Ltd* [1921] 2 Ch. 164 CA (contrast the statutory provision in voluntary winding up (s.90(2)).

[27] IA 1986 s.135.

[28] Scotland manages without them but when the Government, in a desire to reduce civil service manpower and public expenditure, proposed to remove their role in individual bankruptcy there was bitter opposition (not least from the Cork Committee: see Cmnd. 8558, Ch.14) and the proposal was dropped.

[29] In the latter, their role is principally in relation to disqualification of directors under the Directors Disqualification Act (on which see Ch.10, above).

[30] Official receivers have the unique distinction of being entitled to act as liquidators notwithstanding that they are not licensed insolvency practitioners under Pt XIII of the IA 1986: ss.388(5) and 389(2).

[31] Except when it is made immediately upon the discharge of an administration order or when there is a supervisor of a voluntary arrangement under Pt I of the Act, when the former administrator or the supervisor of the arrangement may be appointed by the court as liquidator: IA 1986 s.140.

[32] IA s.136(1) and (2).

[33] See IA 1986 s.136(4) and (5). The nominee of the creditors prevails unless, on application to the court, it otherwise orders (s.139) which it is unlikely to do if the company is insolvent.

[34] Which it may not since both creditors and members may be happy to leave the liquidation to the official receiver since that may prove less expensive.

[35] IA 1986 s.137.

[36] IA 1986 s.136(3).

[37] IA 1986 s.131. See also ss.235 and 236. See *Re Chesterfield United Inc* [2012] EWHC 244 (Ch); [2013] 1 B.C.L.C. 709; *Re Comet Group Ltd* [2014] EWHC 3477 (Ch); *Re Corporate Jet Realisations Ltd* [2015] EWHC 221 (Ch).

[38] IA 1986 s.132.

[39] IA 1986 ss.133 and 134. It is this public examination that is the most dreaded ordeal, particularly if the company is sufficiently well known to attract the attention of the general public and the Press.

[40] IA 1986 s.143.

[41] Giving priority, of course, to preferred creditors as set out in Sch.6 to IA 1986.

[42] IA 1986 s.143(1). Normally the members (except in the case of non-profit-making or charitable companies) in accordance with their class rights on a winding up.

[43] See below, para.33–15.

[44] IA 1986 s.129.

[45] IA 1986 s.127.

[46] IA 1986 s.128.

[47] Which may be considerable if hearings are adjourned, as is not infrequent.

[48] See IA 1986 ss.238–245.

[49] This is rare but charters of incorporation of limited duration are not uncommon.

[50] It is possible to conceive of circumstances in which this might be done: e.g. when a partnership converts to an incorporated company because its solicitors and accountants advise that this would be advantageous tax-wise, the partners might wish to ensure that it could be dissolved by a simple majority if they were later advised that it would be better to revert to a partnership.

[51] IA 1986 s.84(1)(a).

[52] IA 1986 s.84(1)(b).

[53] IA 1986 s.84(3).

[54] IA 1986 s.85(1).

[55] IA 1986 s.86. And CA 2006 s.332, which provides that a resolution passed at an adjourned meeting is treated as passed on the day it was in fact passed, prevents companies backdating the commencement of winding up.

[56] IA 1986 s.87(1).

[57] IA 1986 s.88. Contrast the wording of the comparable IA 1986 s.127, above, in relation to winding up by the court: that avoids also any disposition of the company's property (unless the court otherwise orders) which IA 1986 s.88 does not.

[58] This, on the face of it rather curious, use of a board meeting as a venue for the making of statutory declarations ensures that all the directors know what is going on.

[59] i.e. whichever is the greater of the interest payable on judgment debts or that applicable to the particular debt apart from the winding up: IA 1986 ss.189(4) and 251.

[60] IA 1986 s.89(1). In practice the declaration will play safe and not specify a shorter period than 12 months even if the directors expect that it will be shorter.

[61] See above, para.13–39 et seq.

[62] See above, para.13–4.

[63] IA 1986 s.89(2). The declaration must be delivered to the Registrar within 15 days immediately following the passing of the resolution: IA 1986 s.89(3) and (4).

[64] IA 1986 s.89(4).

[65] IA 1986 s.89(5).

[66] But see below at paras 33–30 et seq. for the possible resort to s.1003 of the Companies Act.

[67] Indeed, it may become a winding up by the court, for a winding up order may be made notwithstanding that the company is already in voluntary winding up and an official receiver, as well as the other persons entitled under IA 1986 s.124, may present a petition: IA 1986 s.124(5). But unless the court, on proof of fraud or mistake, directs otherwise, all proceedings already taken in the voluntary winding up are deemed to have been validly taken: IA 1986 s.129(1).

[68] IA 1986 s.91(1).

[69] IA 1986 s.91(2).

[70] IA 1986 s.92(1). The meeting to do so may be convened by any continuing liquidators if there was more than one or by a member: IA 1986 s.92(2).

[71] This reference to "creditors" is presumably to cover the case where the members' voluntary winding up forms part of a reorganisation of one of the types dealt with in Ch.29, above, in which creditors are involved.

[72] Which it may, because although the creditors should be paid within 12 months the subsequent distribution of the remaining assets or their proceeds does not have to be completed within any prescribed time.

[73] IA 1986 s.93(1).

[74] IA 1986 s.93(2).

[75] IA 1986 s.94(1).

[76] See below, paras 33–27 et seq.

[77] What is surprising is that neither the IA 1986 nor the Insolvency Rules seem to require the liquidator to give written notice to the members. If this is not done, it is not surprising that the final meeting is frequently inquorate.

[78] IA 1986 s.94(3) and (4). If a quorum is not present the liquidator must send instead a return that the meeting was duly summoned and that no quorum was present.

[79] IA 1986 s.98(1).

[80] In practice he or she will probably be the person that the directors intend to propose to the company meeting for appointment as liquidator.

[81] IA 1986 s.98(2).

[82] IA 1986 s.99.

[83] IA 1986 s.100.

[84] IA 1986 ss.95 and 96.

[85] IA 1986 s.101, and, when a members' is converted to a creditors' winding up, IA 1986 s.102.

[86] IA 1986 s.141.

[87] IA 1986 s.101(1). In the case of windings-up by the court the position under IA 1986 s.141 and Ch.12 of Pt IV of the Rules is somewhat different and is designed to ensure that, when the official receiver is the liquidator, the committee's functions are performed instead by the Insolvency Service and that, if the liquidator is some other person, it is left to that person to decide whether to convene a meeting of creditors to establish a liquidation committee (unless one-tenth in value of the creditors require him to do so).

[88] IA 1986 s.101(2).

[89] IA 1986 s.101(3).

[90] See, e.g. IA 1986 ss.103, 110, 165(2)(b) and (6), and the Insolvency Regulations 1986 (SI 1986/1994), reg.27(2), and Insolvency Rules 1986 (as amended), r.4.151ff.

[91] Cmnd. 8558, para.939.

[92] But, unless it is, the reverse is at present likely to be the case, resulting in members' windings-up having to be converted into creditors' (or to winding up by the court).

[93] See IA 1986 ss.246ZE and 246ZF, and Insolvency Rules 2016 Explanatory Notes (*https://www.gov.uk/government/news/draft-insolvency-rules-sent-to-the-insolvency-rules-committee-for-statutory-consultation* [Accessed 27 February 2016]).

[94] *Re WeSellCNC.Com Ltd* [2013] EWHC 4577 (Ch).

[95] *Re Celtic Extraction Ltd* [1999] 2 B.C.L.C. 555 at 568 CA.

[96] With the exception of the exercise of certain statutory powers given specifically to the liquidator: e.g. IA 1986 ss.212, 213 and 214.

[97] But the liquidator may nevertheless sometimes incur personal liability if costs exceed the company's assets: *Re Wilson Lovatt & Sons Ltd* [1977] 1 All E.R. 274.

[98] *Knowles v Scott* [1891] 1 Ch. 717.

[99] *Re Home and Colonial Insurance Co Ltd* [1930] 1 Ch. 12; *Pulsford v Devenish* [1903] 2 Ch. 625.

[100] *Re Windsor Steam Coal Co (1901) Ltd* [1928] Ch. 609.

[101] This will be the creditors only, and perhaps not even all of them, if the company is insolvent; and both creditors and members if the company is solvent. Special rules govern the order of distribution, as described below.

[102] Thus excluding assets in the company's possession but, e.g. held on hire purchase, or subject to retention of title agreements; or assets which the company does own, but which are held on trust for the benefit of third parties or are subject to valid security interests in favour of third party creditors.

[103] This latter option for enhancing the asset pool has largely been examined already in earlier chapters: see Ch.9 on fraudulent and wrongful trading.

[104] See paras 32–44 et seq., above.

[105] Insolvency Rules 1986 (as amended) r.4.88. If the winding up follows an administration in which the administrator has exercised his or her powers under Sch.B1, paras 70 and 71 (para.32–45, above) it would seem that the effect of paras 70(2) and 71(3) will be to preserve the security holder's rights by treating the sums mentioned in those subsections as the security in the winding up.

[106] Unless the secured creditor is unusually altruistic or wants to maximise his or her votes at a creditors' meeting.

[107] i.e. presentation of the petition (compulsory winding up, s.129) or passing of the resolution (voluntary winding up, s.86).

[108] IA 1986 ss.88, 127.

[109] IA 1986 s.127.

[110] IA 1986 s.128, and see ss.183–184 for all winding ups.

[111] *Re Gray's Inn Construction Co Ltd* [1980] 1 W.L.R. 711 CA.

[112] *Hollicourt (Contracts) Ltd v Bank of Ireland* [2001] Ch. 555 CA.

[113] On this point it seems *Re Gray's Inn Construction Co Ltd* [1980] 1 W.L.R. 711 CA, is still good authority.

[114] *Re Barn Crown Ltd* [1995] 1 W.L.R. 147.

[115] IA 1986 s.245, and see above, para.32–14.

[116] On the s.123 test.

[117] IA 1986 s.240(2). There is a rebuttable presumption that this is the case if the transaction is with a connected person.

[118] IA 1986 s.241.

[119] *Re MC Bacon* [1990] B.C.L.C. 324 Ch.

[120] Also see *Phillips v Brewin Dolphin Bell Lawrie Ltd* [2001] 1 W.L.R. 143 HL.

[121] *Hill v Spread Trustee Co Ltd* [2006] EWCA Civ 542 (a case on IA 1986 s.423).

[122] Companies Act 2006 s.1079.

[123] See above, Ch.9.

[124] But where there is fault, the defaulters should contribute to the insolvent company's assets, as we have already seen.

[125] With some minor exceptions for identified vulnerable creditors (see below, at para.33–24), and of course the major exception accorded to secured creditors who often escape the burden of shared loses entirely, and in doing so disproportionately reduce the assets available for those who are unsecured (see above, Ch.32).

[126] *British Eagle International Airlines Ltd v Cie Nationale Air France* [1975] 1 W.L.R. 758 HL.

[127] By contrast, had the issue been mutual debits and credits been between Air France and a single third party airline, insolvency set off would have allowed offsetting.

[128] *Belmont Park Investments Pty Ltd v BNY Corporate Trustee Services Ltd and Lehman Brothers Special Financing Inc* [2011] UKSC 38. Commented on in Worthington, "Good faith, flawed assets and the emasculation of the UK anti-deprivation rule" (2012) 75 M.L.R. 112.

[129] The existing approach to which the Supreme Court supported.

[130] *Ex p. Mackay* (1873) L.R. 8 Ch. App. 643.

[131] It achieved this by clauses which altered net liability and flipped non-recourse security arrangements so that third parties were preferred, not the insolvent company (and therefore its general creditors).

[132] *Re Anglo-Austrian Printing & Publishing Union* [1895] 2 Ch. 891. Also see *Re Oasis Merchandising Services Ltd* [1998] Ch. 170.

[140] See above, fn.125.

[141] Insolvency Rules 1986 r.4.90.

[142] *Stein v Blake* [1996] 1 A.C. 243 at 251 (Lord Hoffmann).

[143] *National Westminster Bank Ltd v Halesowen Presswork and Assemblies Ltd* [1972] A.C. 785 at 809 (Lord Scarman), although the extent is surely not great.

[144] P. Wood, *Set-off and Netting, Derivatives and Clearing Systems*, (London: Sweet & Maxwell, 2007), para.1–012.

[145] Although, to the contrary, see the claims for fairness in *National Westminster Bank Ltd v Halesowen Presswork and Assemblies Ltd* [1972] A.C. 785 at 813 (Lord Cross); *Stein v Blake* [1996] 1 A.C. 243 at 251 (Lord Hoffmann); *Forster v Wilson* (1843) 12 M. & W. 191 at 204 (Parke B).

[146] Contrast this outcome with that where the debts are not mutual, as in *British Eagle*: see above, para.33–20.

[147] *Re Bank of Credit and Commerce International SA (No.8)* [1998] A.C. 214 HL.

[148] Contrast the outcome in *MS Fashions Ltd v BCCI SA (No.2)* [1993] Ch. 425, where the guaranteeing director had expressly agreed to accept liability as principal debtor for the borrowing company's loan.

[149] Insolvency Rules 1986 r.4.90(3).

[150] *Manson v Smith* [1997] 2 B.C.L.C. 161 CA.

[151] See above, para.33–17.

[152] But if the security is more than adequate to enable full repayment of the outstanding secured debt, then the extra is added to the insolvency pool to be distributed in the same way as the rest.

[153] See above, paras 32–15 et seq.

[154] *Re Toshuku Finance UK Plc, Kahn v IRC* [2002] UKHL 6 (on the relevant corporations tax being such an expense). Also see IA 1986 s.156 and IR 1986 r.4.220(1) which gives the court a discretion in a compulsory winding up to change this order of priority between expenses. But once something is determined to *be* a liquidation expense, the court has no discretion to deny it priority over other creditors' claims which are *not* liquidation expenses.

[155] *Re Toshuku Finance UK Plc, Kahn v IRC* [2002] UKHL 6.

[156] IA 1986 s.156 (compulsory liquidation) and s.115 (voluntary liquidation).

[157] *Re Nortel GmbH and Lehman Bros International (Europe) Ltd* [2011] EWCA Civ 1124 CA.

[158] *Bloom v Pensions Regulator* [2013] UKSC 52; [2014] A.C. 209.

[159] IA 1986 1986 Sch.4 and IR 1986 r.4.218(a) as amended, effectively reversing the outcome in *Re MC Bacon Ltd (No.2)* [1990] B.C.L.C. 607 (Millett J); *Re RS&M Engineering Ltd, Mond v Studdards* [1999] 2 B.C.L.C. 485 CA; and *Re Floor Fourteen Ltd, Lewis v IRC* [2001] 2 B.C.L.C. 392 CA.

[160] IA 1986 s.233(2)(b).

[161] IA 1986 s.233(2)(a).

[162] See the earlier discussion in relation to floating charges, above, para.32–15.

[163] See above, para.32–17.

[164] IA 1986 s.189.

[165] Companies Act 2006 s.735.

[166] IA 1986 s.74(2)(f).

[167] *Soden v British and Commonwealth Holdings Plc* [1997] 2 B.C.L.C. 501 HL.

[168] The justifications for this are various, not all equally compelling, but the gist is that assets that are owned and worked produce more wealth, which is good for all, and the availability of credit provides liquidity, enabling capital to be used profitably.

[169] See Ch.4.

[170] In accordance with IA 1986 s.94 (members' voluntary) or IA 1986 s.106 (creditors' voluntary).

[171] IA 1986 s.201(1) and (2).

[172] IA 1986 s.201(3). It is then the duty of the applicant to deliver a copy of the order to the Registrar for registration: IA 1986 s.201(4).

[173] The relevant statutory provisions appear to apply to windings-up by the court on any ground and whether or not the company is insolvent and not to require any final meeting of the company (as in a voluntary liquidation). If this is correct, it is very curious. In a winding up on the petition of a member on the ground that it is just and equitable, if the company's creditors have been fully paid it is only the members who will have any interest in the result of the winding up.

[174] See the draft Insolvency Regulations 2016: *https://www.gov.uk/government/news/draftinsolvency-rules-sent-to-the-insolvency-rules-committee-for-statutory-consultation* [Accessed 27 February 2016].

[175] IA 1986 ss.146 and 172(8).

[176] IA 1986 s.205(3). An appeal to the court lies from any such decision of the Secretary of State: IA 1986 s.205(4).

[177] IA 1986 s.205(1) and (2).

[178] IA 1986 s.205(1)(b).

[179] In Scotland (lacking official receivers) there is a procedure for early dissolution on this ground alone but it involves an application to the court: IA 1986 s.204.

[180] IA 1986 s.202(1) and (2).

[181] IA 1986 s.202(3).

[182] IA 1986 s.202(4).

[183] IA 1986 s.202(5).

[184] There is an apparent inconsistency between IA 1986 s.202(5) which says that the application can be made by the official receiver "or any other person who appears to the Secretary of State to be interested" and IA 1986 s.203(1) which says that it must be by one of the persons mentioned in the text above. Presumably the Secretary of State will not regard any other person as "interested".

[185] Neither of which is likely to be accepted by the Secretary of State if the official receiver has concluded the contrary.

[186] IA 1986 s.203(2).

[187] IA 1986 s.203(3). There can be an appeal to the court against the Secretary of State's decision: IA 1986 s.203(4).

[188] CA 2006 s.1000(2). From hereon references to "the Act" are to the Companies Act 2006 unless the context otherwise requires.

[189] CA 2006 s.1000(3).

[190] CA 2006 s.1000(4)–(6).

[191] See para.21–34.

[192] See CA 2006 s.1002 for the methods of communication with the company.

[193] Final Report I, para.11.20.

[194] Companies (Striking Off) (Electronic Communications) Order 2014; ss.1000 and 1002 as amended.

[195] CA 2006 s.1001.

[196] CA 2006 s.1001(1)–(4).

[197] CA 2006 s.13 and Sch.5.

[198] Under s.652A of the 1985 Act the provision applied only to private companies, but s.1003 of the 2006 Act applies to public companies as well.

[199] What this involves (or rather does not involve) is set out in some detail in s.1004. A change of name during the period will bar an application even if there has been no trading: s.1004(1)(a).

[200] CA 2006 s.1003(2).

[201] CA 2006 s.1011.

[202] CA 2006 s.1006(1).

[203] CA 2006 s.1003(3).

[204] CA 2006 s.1003(4),(5).

[205] If the company has assets and the application is successful, these will become bona vacantia upon the dissolution of the company and so pass to the Crown or one of its emanations: s.1012. Chapter 2 of Pt 31 contains provisions dealing with the methods and consequences of disclaimer by the Crown of bona vacantia, which are not dealt with

here.

[206] See Ch.29, above.

[207] CA 2006 s.1005—or the Insolvency (Northern Ireland) Order 1989. If an application for striking off has been made and any of these events occurs or the company does any of the acts mentioned in s.1004 (see fn.199, above), the then directors of the company are under a duty to withdraw the application: s.1009.

[208] CA 2006 s.1003(6)(a). The same provision applies to a striking off under the Registrar's own motion: s.1000(7)(a).

[209] Final Report I, paras 11.17–11.19.

[210] CA 2006 s.1024(1).

[211] CA 2006 s.1025(2). See *Re Priceland Ltd* [1997] 1 B.C.L.C. 467.

[212] CA 2006 s.1024(3)—who must provide a certificate that he or she has the necessary standing: s.1026.

[213] CA 2006 s.1024(4). By that time, it may be thought, those involved with running the former company will have accepted its striking off.

[214] See fn.205, above.

[215] CA 2006 s.1025(3),(4).

[216] CA 2006 s.1025(5).

[217] CA 2006 s.1025(1). There is no formal right of appeal if the Registrar refuses to restore, but (a) presumably judicial review is available; and (b) the disappointed applicant could re-apply under the court-based procedure (see below) and is given 28 days to do so, even if the six-year time limit for that procedure has expired: s.1030(5).

[218] CA 2006 s.1027(2).

[219] CA 2006 s.1027(3),(4).

[220] CA 2006 s.1028(1)—but not so as to make the company liable for failing to file reports and accounts during the period of dissolution (s.1028(2))! Section 1033 deals with the situation where the company cannot be restored under its former name without a breach of s.66 because another company now has that name. See Ch.4.

[221] CA 2006 s.1028(3), (4). The statute appears not to undermine the distinction drawn by the courts between dissolution after winding up and administrative striking off (of either type) in terms of the impact of restoration on action purportedly taken by the company in litigation during the period of dissolution. In the latter case subsequent restoration automatically validates action during the period of dissolution: *Top Creative Ltd v St Albans DC* [2000] 2 B.C.L.C. 379 CA.

[222] CA 2006 s.1029(1).

[223] CA 2006 s.1029(2).

[224] CA 2006 s.1030(4). Under the 1985 Act the limitation period for s.651 claims was two years and for s.653 claims 20 years. Six years is the period in England and Wales after which many claims against the company will be time-barred.

[225] CA 2006 s.1030(1)—though if the claim against the company appears to the court to be time-barred, it may not order the restoration of the company: s.1030(2), (3). However,

the court may order under s.1032(3) that the period of dissolution should not count for limitation purposes in respect of the personal injury claim. See *Smith v White Knight Laundry Ltd* [2002] 1 W.L.R. 616 CA.

[226] CA 2006 s.1031(1). The wording of the section suggests that the third ground applies as well to a defunct company and voluntary striking off where the particular ground set out in (a) or (b) is not available. On the exercise of the court's discretion see *Re Priceland Ltd* [1997] 1 B.C.L.C. 467; *Re Blenheim Leisure (Restaurants) Ltd (No.2)* [2000] B.C.C. 821; *Re Blue Note Enterprises Ltd* [2001] 2 B.C.L.C. 427.

[227] CA 2006 s.1031(2),(3).

[228] CA 2006 s.1032(1),(2).

[229] CA 2006 s.1032(3). See *Joddrell v Peaktone Ltd* [2012] EWCA Civ 1035; [2013] 1 W.L.R. 784 CA at [40]–[49] (Munby LJ) for a description of the retrospective effect of s.1032. Note, too, *County Leasing Asset Management Ltd v Hawkes* [2015] EWCA Civ 1251, where a limitation direction preventing time running granted in favour of a restored company.

INDEX

This index has been prepared using Sweet and Maxwell's Legal Taxonomy. Main index entries conform to keywords provided by the Legal Taxonomy except where references to specific documents or non-standard terms (denoted by quotation marks) have been included. These keywords provide a means of identifying similar concepts in other Sweet and Maxwell publications and online services to which keywords from the Legal Taxonomy have been applied. Readers may find some minor differences between terms used in the text and those which appear in the index. Suggestions to *sweetandmaxwell.taxonomy@thomson.com*.
