Preface

In addition to the general updating which a book of this scope requires for a new edition, there have been three drivers of change in the corporate law area since the ninth edition of 2012. First, the Supreme Court has continued to be active in the area of core corporate law, unusually so by historical standards. Even the old chestnut, piercing the veil, has given the Justices something to chew on in *VTB Capital Plc v Nutritek International Corp* [2013] UKSC 5 and *Petrodel Resources Ltd v Prest* [2013] UKSC 34. These decisions confirm the limited scope of that doctrine in English law, whilst demonstrating the availability of alternative techniques for handling the underlying problem. Re-assertion of orthodoxy was also the main thrust of *Eclairs Group Ltd v JKX Oil and Gas Plc* [2015] UKSC 71 on directors' use of powers for an improper purpose, though dicta in the case generate some uncertainties for the future. The Supreme Court's latest and perhaps conclusive statement on the availability of proprietary remedies for breach of fiduciary duty is to be found in *FHR European Ventures LLP v Mankarious (No.2)* [2014] UKSC 45. Finally, in *Bilta (UK) Ltd v Nazir* [2015] UKSC 23 the Court began the process of bringing order out of the chaos left by its previous decision in *Stone & Rolls Ltd v Moore Stephens* [2009] UKSC 39 concerning the availability of the illegality defence where the company has been used as a vehicle for fraud by its only directors and shareholders.

On the domestic legislative front, life has been quiet since the passing of the Companies Act 2006, but the Small Business, Enterprise and Employment Act 2015 has had a significant impact in some particular areas of company law, despite the lack of any explicit reference to companies in the title. The requirement for the revelation of controlling positions in all companies aims to make it less easy for companies to be used to hide criminal or otherwise objectionable activities. One might say that this is using the law in an attempt to limit the 'negative externalities' of the corporate form. It is thus quite different from the beneficial ownership disclosures long required (and at a much lower level) in relation publicly traded companies, which are motivated by more traditional company and market concerns. Consequently, we deal with the new disclosure rules in Ch.2, whilst leaving the established 'major shareholdings' rules in Ch.26. In addition, the 2015 Act underlines government's view that the promotion of small businesses and enterprise

requires enhanced creditor protection in relation to limited companies, in this case through reforms both to the procedures for disqualifying directors (Ch.10) and to those for recovering compensation from directors who engage in wrongful trading (Ch.9). Legislative reversal of the courts' (at least initial) unwillingness to apply directors' duties to shadow directors goes in the same direction.

Finally, the shape of the substantive reforms resulting from the financial crisis of 2007–9, which were inchoate at the time of the previous edition, have now become clearer. Not surprisingly, given the nature of the crisis, the reforms have focussed on banks and other financial institutions rather than on companies across the board. Nevertheless, the reform of financial markets has had an impact on the rules governing access by companies to the capital markets and their obligations once admitted, as discussed in Part 6 of the book. This is an area where EU law frequently takes the lead and a significant change here has been the Community's increasing use of Regulations, rather than Directives, to effect the reforms, with a consequent change in the balance between EU and domestic rules in implementing the changes. At the time of writing the future shape of this body of rules is subject to considerable political uncertainty.

We would like to thank very warmly Professor Eva Micheler of the London School of Economics and Political Science for updating Ch.27 on Transfer of Shares, for which she has taken responsibility over a number of editions.

Sarah Worthington would like to thank Michael Lok for his significant research assistance in the updating of particular parts of this edition; that he managed to provide this help while also conducting an increasingly busy and successful practice in Hong Kong is testament to his energy and organisation.

We have sought to state the law as at the end of February 2016, although some references to later material have been possible.

PARA

PART 1
Introductory

1. TYPES AND FUNCTIONS OF COMPANIES

USES TO WHICH THE COMPANY MAY BE PUT 1–1
Business vehicles: companies and partnerships (limited and unlimited)
Partnership Act 1890 and Companies Act 2006 1–2
Limited Liability Partnerships Act 2000 1–4
Limited Partnership Act 1907 1–5
Non-business vehicles: charitable, community interest and limited by guarantee companies
Not-for-profit companies 1–6
Company limited by guarantee 1–8
Company limited by shares 1–11
Community Interest Company ("CIC") 1–12
The advantages of the modern corporate form 1–13

DIFFERENT TYPES OF REGISTERED COMPANIES — 1–17

- Public and private companies — 1–18
- Officially listed and other publicly traded companies — 1–22
- Limited and unlimited companies — 1–27
- Classification according to size: large, medium and micro companies — 1–28
- Classification according to activity: for-profit and not-for-profit companies — 1–29

UNREGISTERED COMPANIES AND OTHER FORMS OF INCORPORATION

- Statutory and chartered companies — 1–31
- Building societies, friendly societies and co-operatives — 1–34
- Open-ended investment companies — 1–36

EUROPEAN UNION FORMS OF INCORPORATION

- European Economic Interest Grouping — 1–37
- The European Company (societas europaea or “SE”) — 1–40

CONCLUSION — 1–47

2. ADVANTAGES AND DISADVANTAGES OF INCORPORATION

LEGAL ENTITY DISTINCT FROM ITS MEMBERS — 2–1

LIMITED LIABILITY — 2–9

PROPERTY — 2–16

SUING AND BEING SUED — 2–18

PERPETUAL SUCCESSION — 2–19

Transferable Shares 2–24

Management under a Board Structure 2–27

Borrowing 2–31

Taxation 2–34

Formalities and Expense 2–35

Publicity
The company's affairs 2–39
The company's members and directors 2–40
"People with significant control"—the PSC Register 2–42

Conclusion 2–48

3. SOURCES OF COMPANY LAW AND THE COMPANY'S CONSTITUTION

Sources 3–1
Primary legislation 3–3
Secondary legislation 3–5
Delegated rule-making
The Financial Conduct Authority 3–7
Financial Reporting Council 3–9
Common law 3–10
Review and reform 3–11

The Company's Constitution
The significance of the constitution 3–13
Model articles of association 3–14
What constitutes the constitution? 3–16
The legal status of the constitution 3–18
(i) The parties to the contract 3–19
(ii) The contract as a public document 3–20
(iii) Limits to the provisions which can be enforced: only rights 3–23

"as a member"
(iv) Further limits to the provisions which can be enforced: not mere procedural irregularities 3–27
(v) Altering the contract 3–31

SHAREHOLDER AGREEMENTS 3–33

THE EUROPEAN COMPANY 3–36

4. FORMATION PROCEDURES

FORMATION OF DIFFERENT TYPES OF COMPANY 4–1
Statutory companies 4–2
Chartered companies 4–3
Registered companies 4–4

FORMING A COMPANY BY REGISTRATION
Registration documents 4–5
Certificate of incorporation 4–7
Purchase of a shelf-company 4–9

CHOICE OF TYPE OF REGISTERED COMPANY 4–10

CHOICE OF COMPANY NAME 4–13
Warning the public about limited liability or other status 4–14
Prohibition on illegal or offensive names 4–16
Names requiring special approval 4–17
Prohibition on using a name already allocated 4–18
Restrictions on use of a defunct company's name—phoenix companies 4–19
Use of a business name other than the corporate name 4–20

MANDATORY AND ELECTIVE NAME CHANGES 4–22
Requirements to change a name 4–23

Passing off actions 4–25
Company names adjudicators 4–27
Company's election to change its name 4–30
Effect of a name change 4–31

CHOICE OF APPROPRIATE ARTICLES 4–32

CHALLENGING THE CERTIFICATE OF INCORPORATION 4–34

COMMENCEMENT OF BUSINESS 4–38

RE-REGISTRATION OF AN EXISTING COMPANY 4–39
(i) Private company becoming public 4–40
(ii) Public company becoming private limited company 4–41
(iii) Private or public limited company becoming unlimited 4–43
Ban on vacillation between limited and unlimited 4–44
(iv) Unlimited company becoming a private limited company 4–45
(v) Becoming or ceasing to be a community interest company 4–46

CONCLUSION 4–47

5. PRE-INCORPORATION AND INITIAL CORPORATE CONTRACTING

INTRODUCTION 5–1

"PROMOTERS" AND THEIR DEALINGS WITH THE COMPANY
Meaning of "promoter" 5–2
Duties of promoters 5–6
(a) Statutory rules 5–7
(b) Common law and equitable rules 5–10

(c) Full disclosure and consent 5–11
Remedies for breach of promoters' duties 5–15
Remuneration of promoters 5–21

PRELIMINARY CONTRACTS ENTERED INTO BY PROMOTERS 5–23

COMPANIES' PRE-INCORPORATION CONTRACTS 5–24

CONCLUSION 5–29

6. OVERSEAS COMPANIES, EU LAW AND CORPORATE MOBILITY

OVERSEAS COMPANIES 6–2
Establishment: branch and place of business 6–4
Disclosure obligations 6–5
Execution of documents and names 6–7
Other mandatory provisions 6–8

COMPANY LAW AT EU LEVEL
Harmonisation 6–9
A new approach and subsidiarity 6–12
EU forms of incorporation 6–13
The single financial market and company law 6–14
Corporate governance 6–15
Reform of the existing directives 6–16

CORPORATE MOBILITY 6–17
Domestic rules 6–18
EU law: initial incorporation 6–20
EU law: subsequent re-incorporation 6–24
EU law: alternative transfer mechanisms 6–27
Conclusion 6–28

CONCLUSION 6–30

PART 2

Separate Legal Personality and Limited Liability

7. CORPORATE ACTIONS

INTRODUCTION 7–1

CONTRACTUAL RIGHTS AND LIABILITIES 7–4

Contracting through the board or the shareholders collectively 7–5

Constructive notice and the rule in Turquand's case 7–6

Statutory protection for third parties dealing with the board 7–9

(a) "In favour of a person dealing with a company in good faith" 7–10

(b) "Dealing with a company" 7–11

(c) Persons 7–12

(d) The directors 7–13

(e) Any limitation under the company's constitution 7–14

(f) The internal effects of lack of authority 7–15

Contracting through agents 7–16

Agency principles 7–18

Establishing the ostensible authority of corporate agents 7–20

Knowledge 7–24

Knowledge of the constitution as an aid to third parties? 7–26

Ratification 7–27

Overall 7–28

The ultra vires doctrine and the objects clause 7–29

TORT AND CRIME 7–30

Tortious liability

Vicarious liability 7–31

Assumption of responsibility 7–32

Fraud 7–33

Recovery by the company from the 7–34

agent
Liability of non-involved directors 7–35
Accessory liability 7–36
Direct liability 7–37
Criminal liability 7–38
Regulatory offences 7–39
Identification 7–40
Beyond "directing mind and will" 7–41
Criminal liability of directors 7–42
Corporate manslaughter 7–43
Sanctions 7–44
Personal liability under the 2007 Act 7–45
Failure to prevent criminal acts 7–46
Litigation by the company 7–47

CONCLUSION 7–48

8. LIMITED LIABILITY AND LIFTING THE VEIL

THE RATIONALE FOR LIMITED LIABILITY 8–1

LEGAL RESPONSES TO LIMITED LIABILITY 8–5
Disclosure of information 8–6

LIFTING THE VEIL 8–7
Under statute or contract 8–8
At common law 8–10
The "single economic unit" argument 8–11
Façade or sham 8–12
The agency and trust arguments 8–13
The interests of justice 8–14
Impropriety 8–15

CONCLUSION 8–17

9. PERSONAL LIABILITY FOR ABUSES OF LIMITED LIABILITY

PREMATURE TRADING 9–3

Fraudulent and Wrongful Trading 9–4
Civil liability for fraudulent trading 9–5
Wrongful trading 9–6
Shadow directors 9–7
The declaration 9–8
Impact of the wrongful trading provisions 9–9

Common Law Duties in Relation to Creditors 9–11

Phoenix Companies and the Abuse of Company Names 9–16
The prohibition 9–17
Exceptions 9–19

Misdescription of the Company and Trading Disclosures 9–20

Company Groups
Limited liability 9–21
Ignoring separate legal personality 9–24

Conclusion 9–25

10. DISQUALIFICATION OF DIRECTORS

Disqualification Orders and Undertakings 10–2
Scope of disqualification orders and undertakings 10–3
Compensation 10–4

Disqualification on Grounds of Unfitness 10–5
The role of the Insolvency Service 10–7
The role of the court 10–8
Breach of commercial morality 10–9
Recklessness and incompetence 10–10

Disqualification on Grounds other than Unfitness

Serious offences 10–12
Disqualification in connection with civil liability for fraudulent or wrongful trading 10–13
Failure to comply with reporting requirements 10–14

REGISTER OF DISQUALIFICATION ORDERS 10–15

BANKRUPTS 10–16

OTHER CASES 10–17

CONCLUSION 10–18

11. LEGAL CAPITAL, MINIMUM CAPITAL AND VERIFICATION

MEANING OF CAPITAL 11–1

NOMINAL VALUE AND SHARE PREMIUMS
Nominal value 11–3
No issue of shares at a discount 11–4
The share premium 11–6

MINIMUM CAPITAL 11–8
Objections to the minimum capital requirement 11–9

DISCLOSURE AND VERIFICATION 11–10
Initial statement and return of allotments 11–11
Abolition of authorised capital 11–12
Consideration received upon issue 11–13
Rules applying to all companies 11–14
Public companies 11–15
Valuation of non-cash consideration 11–16
Further provisions as to sanctions 11–18
Share capital and choice of currency 11–19

CAPITALISATION ISSUES 11–20

CONCLUSION 11–21

12. DIVIDENDS AND DISTRIBUTIONS

THE BASIC RULES 12–1
Public and private companies 12–2

IDENTIFYING THE AMOUNT AVAILABLE FOR DISTRIBUTION 12–5
Interim and initial accounts 12–6
Interim dividends 12–7
Adverse developments subsequent to the accounts 12–8

DISGUISED DISTRIBUTIONS 12–9
Intra-group transfers 12–11

CONSEQUENCES OF UNLAWFUL DISTRIBUTIONS
Recovery from members 12–12
Recovery from directors 12–13

REFORM 12–15
The central issues 12–16

13. CAPITAL MAINTENANCE

ACQUISITIONS OF OWN SHARES
The general prohibition 13–2
Acquisition through a nominee 13–3
Company may not be a member of its holding company 13–4
Specific exceptions to the general prohibition 13–5

REDEMPTION AND RE-PURCHASE
Introduction 13–7
Some history 13–8
General restrictions on redeemable shares and on repurchases 13–9
Creditor protection: all companies 13–11
Private companies: redemption or purchase out of capital 13–12
Directors' statement 13–14

Shareholder resolution 13–15
Appeal to the court 13–16
Legal capital consequences 13–17
Protection for shareholders 13–19
Off-market purchases 13–20
Market purchases 13–21
Companies with a premium listing 13–22
Payments otherwise than by way of the price 13–23
Treasury shares 13–24
Sale of treasury shares 13–26
Whilst the shares are in treasury 13–27
Failure by the company to perform 13–28
Conclusion 13–29

REDUCTION OF CAPITAL
Why are reductions of capital allowed? 13–30
The statutory procedures 13–33
Procedure applying to all companies 13–34
Creditor objection 13–35
Confirmation by the court 13–36
Procedure available to private companies only 13–39
Solvency statement 13–40
Reduction, distributions and re-purchase 13–43

FINANCIAL ASSISTANCE
Rationale and history of the rule 13–44
The prohibition 13–47
The exceptions
Specific exceptions 13–50
General exceptions 13–52
Exemption for private companies 13–55
Civil remedies for breach of the prohibition 13–56

CONCLUSION 13–59

PART 3

Corporate Governance: The Board and Shareholders

14. THE BOARD

THE ROLE OF THE BOARD	14–1
The default provision in the model articles	14–3
The power of the board—the legal effect of the articles	
The board and shareholders	14–5
The board and senior management	14–9
Default and confirmation powers of the general meeting	14–11
Unanimous consent of the shareholders	14–15
The mandatory involvement of shareholders in corporate decisions	14–18
The mandatory functions of the directors	14–21
APPOINTMENT OF DIRECTORS	14–23
REMUNERATION OF DIRECTORS	14–30
Composition of the remuneration committee	14–33
Mandatory shareholder approval of certain aspects of the remuneration package	
General	14–34
Long-term incentive pay schemes	14–35
Mandatory and advisory shareholder votes on remuneration policy and implementation	14–38
General disclosure: the directors' remuneration report	14–44
REMOVAL OF DIRECTORS	14–48
Shareholders' statutory termination rights	14–49
Weighted voting rights	14–51

Director's procedural rights on termination 14–52
Director's contractual rights on termination 14–53
Control of termination payments 14–56
Disclosure 14–57
Shareholder approval 14–59

STRUCTURE AND COMPOSITION OF THE BOARD 14–63
Legal rules on board structure 14–64
Legal rules on board composition
Employee representatives 14–67
Gender diversity—women on boards 14–68
Corporate governance codes, The Cadbury Report and non-executive directors 14–69
The requirements of the UK Corporate Governance Code 14–75
Enforcement of the UK Corporate Governance Code 14–77

CONCLUSION 14–81

15. SHAREHOLDER DECISION-MAKING

THE ROLE OF THE SHAREHOLDERS 15–1

SHAREHOLDER DECISION-MAKING WITHOUT SHAREHOLDER MEETINGS
The nature of the problem 15–6
Written resolutions 15–8
Where written resolutions not available 15–10
The procedure for passing written resolutions 15–11
Written resolutions proposed by members 15–13
Wider written resolution provisions 15–14

under the articles
Unanimous consent at common law 15–15

IMPROVING SHAREHOLDER PARTICIPATION
Analyses of shareholder participation 15–22
The role of institutional investors 15–25
Conflicts of interest and inactivity 15–27
"Fiduciary investors" 15–29
The UK Stewardship Code 15–30
The role of indirect investors 15–31
Governance rights—voluntary transfer arrangements for all companies 15–34
Information rights—mandatory transfer options in traded companies 15–40

THE MECHANICS OF MEETINGS 15–42

What happens at meetings? 15–43
Types of resolution 15–44
Wording and notice of proposed resolutions 15–47
Convening a meeting of the shareholders 15–48
Annual general meetings 15–49
Other general meetings 15–51
Meetings convened by the court 15–53
What is a meeting? 15–55
Getting items onto the agenda and expressing views on agenda items 15–56
Placing an item on the agenda 15–57
Circulation of members' statements 15–59
Notice of meetings and information about the agenda 15–60
Length of notice 15–61
Special notice 15–63
The contents of the notice of the meeting and circulars 15–65
Communicating notice of the meeting to the members 15–66

Attending the meeting
Proxies 15–67
Corporations' representatives 15–72
Voting and verification of votes
Voting as a governance issue 15–73
Votes on a show of hands and polls 15–75
Verifying votes 15–76
Establishing who is entitled to vote 15–77
Publicity for votes and resolutions 15–78
"Empty" voting 15–81

Miscellaneous matters
Chairman 15–82
Adjournments 15–83
Class meetings 15–84
Forms of communication by the company 15–85
Forms of communication to the company 15–86

CONCLUSION 15–87

16. DIRECTORS' DUTIES

INTRODUCTION 16–1

TO WHOM AND BY WHOM ARE THE DUTIES OWED?
To whom are the general duties owed and who can sue for their breach?
The company 16–4
Individual shareholders 16–5
Other stakeholders 16–7
By whom are the general duties owed?
De facto and shadow directors 16–8
Senior managers 16–11
Former directors 16–13
Directors of insolvent companies 16–14

DIRECTORS' DUTIES OF SKILL, CARE AND DILIGENCE

Historical development 16–15
The statutory standard 16–16
Remedies 16–20

INTRODUCTION TO DIRECTORS' VARIOUS DUTIES OF GOOD FAITH AND LOYALTY
Historical background 16–21
Categories of duties 16–22

DUTY TO ACT WITHIN POWERS 16–23
Acting in accordance with the constitution
Constitutional limitations 16–24
Other situations? 16–25
Improper purposes
The rule 16–26
Which purposes are improper? 16–27
When is a power exercised for improper purposes? 16–29
Remedies 16–30

DUTY TO EXERCISE INDEPENDENT JUDGMENT 16–33
Taking advice and delegating authority 16–34
Exercise of future discretion 16–35
Nominee directors 16–36

DUTY TO PROMOTE THE SUCCESS OF THE COMPANY
Settling the statutory formula 16–37
Interpreting the statutory formula
Defining the company's success 16–40
Failure to have regard, or due regard, to relevant matters 16–41
A duty to disclose wrongdoing 16–45
The problem of "short-termism" 16–46
Corporate groups 16–47
Employees 16–48
Creditors 16–49
Donations 16–50

Overview of the No-Conflict Rules 16–52

Transactions with the Company (Self-Dealing)

The scope of the relevant provisions 16–54

Approval mechanisms 16–55

Duty to declare interests in relation to proposed transactions or arrangements 16–57

Purpose of the disclosure requirement 16–58

Who is subject to this duty? 16–59

The interests to be disclosed 16–60

Methods of disclosure 16–61

Remedies 16–62

A continuing role for the articles in setting tighter constraints 16–63

Duty to declare interests in relation to existing transactions or arrangements 16–64

Methods of disclosure 16–65

Remedies 16–66

Transactions between the Company and Directors Requiring Special Approval of Members 16–67

Relationship with the general duties 16–68

Substantial property transactions

The scope of the requirement for shareholder approval 16–70

Exceptions 16–72

Remedies 16–73

Additional rules for listed companies 16–77

Loans, quasi-loans and credit transactions

Arrangements covered 16–78

Method of approval and related disclosures 16–81

Exceptions 16–82

Remedies 16–83

Directors' service contracts and gratuitous payments to directors 16–84
Political donations and expenditure 16–85

CONFLICTS OF INTEREST AND THE USE OF CORPORATE PROPERTY, INFORMATION AND OPPORTUNITY
The scope and functioning of section 175 16–86
A strict approach to conflicts of interest 16–87
Identification of "corporate" opportunities 16–89
Issues of scope 16–90
Effect of director's resignation 16–94
Effect of board determinations of scope 16–95
Competing and multiple directorships 16–99
Competing with the company 16–100
Multiple directorships 16–102
Approval by the board 16–103
A conceptual issue 16–105
Remedies 16–106

DUTY NOT TO ACCEPT BENEFITS FROM THIRD PARTIES
The scope of section 176 16–107
Remedies 16–108

REMEDIES FOR BREACH OF DUTY 16–109
(a) Injunction or declaration 16–110
(b) Damages or compensation 16–111
(c) "Restoration" of property 16–112
(d) Avoidance of contracts 16–113

(e) Accounting for profits: disgorgement of disloyal gains 16–114
(f) Summary dismissal 16–116

SHAREHOLDER APPROVAL OR "WHITEWASH" OF SPECIFIC BREACHES OF 16–117

Duty
What is being decided? 16–118
Who can take the decision for the company? 16–119
Disenfranchising particular voters 16–121
Voting majorities 16–123
Non-ratifiable breaches 16–124

General Provisions Exempting Directors from Liability
Statutory constraints 16–125
Conflicts of interest 16–126
Provisions providing directors with an indemnity 16–128
Insurance 16–129
Third party indemnities 16–130
Pension scheme indemnity 16–132

Relief Granted by the Court 16–133

Liability of Third Parties 16–134

Limitation of Actions 16–138

Conclusion 16–140

17. THE DERIVATIVE CLAIM AND PERSONAL ACTIONS AGAINST DIRECTORS

The Nature of the Problem and the Potential Solutions 17–1
The board and litigation 17–2
The shareholders collectively and litigation 17–3
Derivative claims 17–4
Other possible solutions 17–7

The General Statutory Derivative Claim
The scope of the statutory derivative claim
The court's gatekeeper role 17–11

The types of claims covered by the statutory regime 17–13
Shareholder claimants 17–16
Deciding whether to give permission for the derivative claim 17–17
The prima facie case and judicial management of proceedings 17–18
Mandatory refusal of permission 17–19
Discretionary grant of permission 17–20
Varieties of derivative claim
Taking over existing claims 17–22
Multiple derivative claims 17–24
The subsequent conduct of the derivative claim
General issues 17–25
Information rights 17–26
Costs 17–27
Restrictions on settlement 17–28

THE STATUTORY DERIVATIVE CLAIM FOR UNAUTHORISED POLITICAL EXPENDITURE 17–29

SHAREHOLDERS' PERSONAL CLAIMS AGAINST DIRECTORS 17–32
Reflective loss 17–34

CONCLUSION 17–39

18. BREACH OF CORPORATE DUTIES: ADMINISTRATIVE REMEDIES

INTRODUCTION 18–1

INFORMAL INVESTIGATIONS: DISCLOSURE OF DOCUMENTS AND INFORMATION 18–2

FORMAL INVESTIGATIONS BY INSPECTORS
When inspectors can be appointed 18–5
Conduct of inspections
Extent of the inspectors' powers 18–7
Control of the inspectors' powers 18–8

Reports 18–10

Power of Investigation of Company Ownership 18–11

Liability for Costs of Investigations 18–12

Follow-Up to Investigations 18–13

Conclusion 18–15

PART 4
Corporate Governance—Majority and Minority Shareholders

19. CONTROLLING MEMBERS' VOTING

Introduction 19–1

Review of Shareholders' Decisions
- The starting point 19–4
- Resolutions where the company's interests are centre stage 19–6
- Resolutions more generally 19–7
- Resolutions to expropriate members' shares 19–8
- Other resolutions 19–10
- The future 19–11
- Voting at class meetings 19–12

Class Rights 19–13
- The procedure for varying class rights 19–14
- What constitutes a "variation" 19–16
- The definition of class rights 19–18
- Other cases 19–21

Self-help 19–22
- Provisions in the constitution 19–23
- Shareholder agreements 19–25
  - *Prior contracts* 19–26
  - *Binding only the shareholders* 19–28

CONCLUSION 19–29

20. UNFAIR PREJUDICE

INTRODUCTION 20–1

SCOPE OF THE PROVISIONS 20–4

INDEPENDENT ILLEGALITY AND LEGITIMATE EXPECTATIONS OR EQUITABLE CONSIDERATIONS 20–6
Informal arrangements among the members 20–7
The balance between dividends and directors' remuneration 20–10
Other categories of unfair prejudice 20–12

PREJUDICE AND UNFAIRNESS 20–13

UNFAIR PREJUDICE AND THE DERIVATIVE ACTION 20–14

REDUCING LITIGATION COSTS 20–18

REMEDIES 20–19

WINDING UP ON THE JUST AND EQUITABLE GROUND 20–21

CONCLUSION 20–23

PART 5
Accounts and Audit

21. ANNUAL ACCOUNTS AND REPORTS

INTRODUCTION
Scope and rationale of the annual reporting requirement 21–1
The classification of companies for the purposes of annual reporting 21–2
Micro companies 21–3

Small companies 21–4
Medium-sized companies 21–5
Large companies and public interest entities 21–6

THE ANNUAL ACCOUNTS
Accounting records 21–7
The financial year 21–8
Individual accounts and group accounts 21–9
Parent and subsidiary undertakings 21–10
Parent companies which are part of a larger group 21–11
Companies excluded from consolidation 21–12
Form and content of annual accounts
Possible approaches 21–13

True and fair view 21–14
Going concern evaluation 21–15
Companies Act accounts 21–16
Accounting standards 21–17
IAS accounts 21–18
Applying the requirements to different sizes of company 21–20
Notes to the accounts 21–21

NARRATIVE REPORTING 21–22
Directors' report 21–23
The strategic report
Rationale and history 21–24
Contents of the Strategic Review 21–25
Verification of narrative reports 21–26
Liability for misstatements in narrative reports 21–27

APPROVAL OF THE ACCOUNTS AND REPORTS BY THE DIRECTORS 21–29

THE AUDITOR'S REPORT 21–30

REVISION OF DEFECTIVE ACCOUNTS AND 21–31

Reports

Filing Accounts and Reports with the Registrar 21–33
Speed of filing 21–34
Modifications of the full filing requirements 21–35
Other information available from the Registrar 21–37
Confirmation statement 21–38
Other forms of publicity for the accounts and reports 21–39

Consideration of the Accounts and Reports by the Members
Circulation to the members 21–40
Circulation of the Strategic Report only 21–41

Laying the accounts and reports before the members 21–42

Conclusion 21–43

22. AUDITS AND AUDITORS

Introduction 22–1
Sources of audit law 22–2
The duties of the auditor 22–3
Overarching issues 22–4

Audit Exemption
Small companies 22–5
Subsidiaries 22–7
Dormant companies 22–8
Non-profit public sector companies 22–9

Auditor Independence and Competence 22–10
Regulatory structure 22–11

Direct Regulation of Auditor Independence

Non-independent persons 22–12
Non-audit remuneration of auditors 22–13
Auditors becoming non-independent 22–14
Auditors becoming prospectively non-independent 22–15

The Role of Shareholders and the Audit Authorities 22–16
Appointment and remuneration of auditors 22–17
Removal and resignation of auditors
Requirement for shareholder resolution 22–18
Notifications 22–19
Failure to re-appoint an auditor 22–20
Whistle blowing 22–21
Shareholders and the audit report 22–22

The Role of the Audit Committee of the Board
Introduction 22–23
Composition of the audit committee 22–24
Functions of the audit committee 22–25

Auditor Competence 22–26
Qualifications 22–27
Auditing standards 22–28
Quality assurance, investigation and discipline 22–29
Empowering auditors 22–30

Liability for Negligent Audit
The nature of the issue 22–31
Providing audit services through bodies with limited liability 22–34

Claims by the Audit Client
Establishing liability 22–36
Limiting liability 22–38
General defences 22–39
Limitation by contract 22–42

Criminal liability 22–43

CLAIMS BY THIRD PARTIES
The duty of care in principle 22–44
Assumption of responsibility 22–47
Other issues 22–52

CONCLUSION 22–53

PART 6
Equity Finance

23. THE NATURE AND CLASSIFICATION OF SHARES

LEGAL NATURE OF SHARES 23–1

THE PRESUMPTION OF EQUALITY BETWEEN SHAREHOLDERS 23–4

CLASSES OF SHARES 23–6
Preference shares 23–7
Canons of construction 23–8
Ordinary shares 23–9
Special classes 23–10
Conversion of shares into stock 23–11

24. SHARE ISSUES: GENERAL RULES

PUBLIC AND NON-PUBLIC OFFERS 24–2

DIRECTORS' AUTHORITY TO ALLOT SHARES 24–4

PRE-EMPTIVE RIGHTS
Policy issues 24–6
The scope of the statutory right 24–7
Waiver 24–10
Sanctions 24–12
Listed companies 24–13
Pre-emption guidelines 24–14
Criticism and further market developments 24–15

THE TERMS OF ISSUE 24–17

ALLOTMENT 24–18
Renounceable allotments 24–19
Failure of the offer 24–20

REGISTRATION 24–21
Bearer shares 24–22

CONCLUSION 24–23

25. PUBLIC OFFERS OF SHARES

INTRODUCTION 25–1
Public offers and introductions to public markets 25–2
Regulatory goals 25–3
Listing 25–5
Premium and standard listing 25–6
Types of public market 25–7
Regulated markets and multilateral trading facilities 25–8
Listing and regulated markets 25–9
The regulatory structure 25–10
Types of public offer 25–11
Offers for sale or subscription 25–12
Placings 25–13
Rights offers 25–14

ADMISSION TO LISTING AND TO TRADING ON A PUBLIC MARKET
Eligibility criteria for the official list 25–15
Exchange admission standards 25–16

THE PROSPECTUS 25–17
The public offer trigger 25–18
Exemptions from the prospectus requirement on a public offer 25–19
The admission to trading trigger 25–20
The form and content of prospectuses 25–22
Summary 25–23

Supplementary prospectus 25–24
Registration statement and securities note 25–25
Verifying the prospectuses 25–26
Reputational intermediaries 25–27
Vetting by the FCA 25–28
Authorisation to omit material 25–29
Publication of prospectuses and other material 25–30

SANCTIONS 25–31
Compensation under the Act 25–32
(a) Liability to compensate 25–33
(b) Defences 25–34
(c) Persons responsible 25–35
Civil remedies available elsewhere 25–36
(a) Damages 25–37
(b) Rescission 25–39
(c) Breach of contract 25–40
Criminal and regulatory sanctions 25–41
Ex ante controls 25–42
Ex post sanctions 25–43

CROSS-BORDER OFFERS AND ADMISSIONS 25–44

DE-LISTING 25–45

26. CONTINUING OBLIGATIONS AND DISCLOSURE OF INFORMATION TO THE MARKET

INTRODUCTION 26–1

PERIODIC REPORTING OBLIGATIONS 26–3

EPISODIC OR AD HOC REPORTING REQUIREMENTS 26–5

DISCLOSURE OF DIRECTORS' INTERESTS 26–9
Who has to disclose? 26–11
What has to be disclosed, to whom and when? 26–12

DISCLOSURE OF MAJOR VOTING SHAREHOLDINGS
Rationale and history 26–14
The scope of the disclosure obligation
Which companies are subject to the regime? 26–16
When does the disclosure obligation arise? 26–17
Indirect holdings of voting rights 26–19
Financial Instruments 26–20
Exemptions 26–22
The disclosure process 26–23

SANCTIONS 26–24
Compensation for misleading statements to the market 26–25
Compensation via FCA action 26–28
Administrative penalties for breaches 26–29
Criminal sanctions 26–32

CONCLUSION 26–33

27. TRANSFERS OF SHARES

CERTIFICATED AND UNCERTIFICATED SHARES 27–3

TRANSFERS OF CERTIFICATED SHARES
Legal ownership 27–5
Estoppel 27–6
Restrictions on transferability 27–7
The positions of transferor and transferee prior to registration 27–8
Priorities between competing transferees 27–10
The company's lien 27–11

TRANSFERS OF UNCERTIFICATED SHARES 27–12

Title to uncertificated shares and the protection of transferees 27–14

The Register 27–16
Rectification 27–19

Transmission of Shares by Operation of Law 27–21

28. TAKEOVERS

Introduction 28–1

The Takeover Code and Panel 28–3
The Panel and its methods of operation
The status and composition of the Panel 28–4
Internal appeals 28–5
Judicial review 28–6
Powers of the Panel 28–7
Sanctions 28–9
The "cold shoulder" and criminal sanctions 28–11

The Scope of the City Code 28–13
Transactions in scope 28–14
Companies in scope
Full jurisdiction to the Panel 28–15
Divided jurisdiction 28–16

The Structure of the Code 28–18

The Allocation of the Acceptance Decision 28–19
Post-bid defensive measures 28–20
Defensive measures in advance of the bid 28–21
The break-through rule 28–22
Disclosure of control structures 28–25

Target Management Promotion of an Offer 28–26

Disclosure and independent advice 28–27
Compensation for loss of office 28–28

Gratuitous payments 28–29
Contractual compensation 28–32
Competing bids 28–33
A duty to auction or a duty to be even-handed? 28–34
Binding the target board by contract 28–36

EQUALITY OF TREATMENT OF TARGET SHAREHOLDERS 28–37
Partial bids 28–38
Level and type of consideration 28–39
Mandatory offers 28–41
Exemptions and relaxations 28–43
Acting in concert 28–44
Interests in shares 28–45
Conclusion 28–46
To whom must an offer be made? 28–47
Wait and see 28–48

THE PROCEDURE FOR MAKING A BID 28–49
Before the approach to the target board 28–50
Company-triggered disclosures 28–51
Sanctions 28–53
Interests in shares and acting in concert 28–54
Before a formal offer is made to the target shareholders 28–55
Put up or shut up 28–56
Initial announcements 28–57
The formal offer
Conditions 28–58
Timetable 28–59
Bid documentation 28–61

Employees' interests 28–62
Profit forecasts and valuations 28–63
Liability for misstatements 28–64
Dealings in shares 28–65
Solicitation 28–66

The post-offer period
Bidding again 28–68
The bidder's right to squeeze out the minority 28–69
Challenging the squeeze-out 28–73
The sell-out right of non-accepting shareholders 28–75

CONCLUSION 28–77

29. ARRANGEMENTS, RECONSTRUCTIONS AND MERGERS

THE FUNCTION OF SCHEMES OF ARRANGEMENT 29–1
Mergers 29–2
Takeovers 29–3
Other cases 29–4
Creditors' schemes 29–5

THE MECHANICS OF THE SCHEME OF ARRANGEMENT 29–6
Proposing a scheme 29–7
Convening and conducting meetings 29–8
The sanction of the court 29–11
Additional requirements for mergers and divisions of public companies 29–12

CROSS-BORDER MERGERS 29–16
Employee participation 29–20
Further uses of cross-border mergers 29–22

REORGANISATION UNDER SECTIONS 110 AND 111 OF THE INSOLVENCY ACT 1986 29–24

CONCLUSION 29–26

30. MARKET ABUSE

INTRODUCTION 30–1

APPROACHES TO REGULATING INSIDER

DEALING
- Disclosure 30–5
- Prohibiting trading 30–6
- Relying on the general law 30–7
  - *Directors' fiduciary duties* 30–8
  - *Breach of confidence* 30–9
  - *Misrepresentation* 30–10
- Prohibiting insider dealing 30–11

THE CRIMINAL JUSTICE ACT 1993 PART V 30–12
- Regulating markets 30–13
- Regulating individuals 30–15
- Inside information 30–16
  - *Particular securities or issuers* 30–17
  - *Specific or precise* 30–18
  - *Made public* 30–19
  - *Impact on price* 30–21
- Insiders 30–22
  - *Recipients from insiders* 30–23
- Mental element 30–24
- Prohibited acts 30–25
- Defences 30–26
  - *General defences* 30–27
  - *Special defences* 30–28

CRIMINAL PROHIBITIONS ON MARKET MANIPULATION 30–29

REGULATORY CONTROL OF MARKET ABUSE
- Background 30–30
- Insider dealing 30–31
  - *Dealing* 30–32
  - *Inside information* 30–37
  - *Persons covered and exemptions* 30–38
- Market manipulation
  - *Transactions and orders to trade* 30–39
  - *Dissemination of information* 30–40
  - *Misleading behaviour and market distortion* 30–41
  - *Accepted market practices* 30–42

Safe harbours 30–43
Share buy-backs 30–44
Price stabilisation 30–45

ENFORCEMENT AND SANCTIONS 30–47
Investigation into market abuse 30–48
Sanctions for market abuse 30–51
Penalties 30–52
Injunctions 30–53
Sanctions for breach of the criminal law 30–54
Restitution orders and injunctions 30–55
Disqualification 30–56

CONCLUSION 30–57

PART 7
Debt Finance

31. DEBTS AND DEBT SECURITIES

INTRODUCTION 31–1
Difference between debt (loans), equity (shares) and hybrid instruments 31–2
Should a company use debt or equity in its financing? 31–4

DIFFERENT STRUCTURES IN DEBT FINANCING
Terminology 31–5
Defining a "debenture" 31–6
Small and large scale loans 31–8
Debts and "debt securities" 31–9

SINGLE AND MULTIPLE LENDERS
Single lenders 31–10
Syndicated loans 31–11
Debt securities: distinguishing "bonds" and "stocks" 31–12
Debt securities: trustees for the 31–14

bondholders or stockholders

Issue of Debt Securities
Private issues 31–15
Public issues of debt securities 31–17
Special rules: covered bonds 31–19

Transfer of Debts and Debt Securities
Transfer of simple debts 31–21
Transfer of debt securities 31–22

Protective Governance Regimes in Debts
General 31–24
Defining repayment terms 31–25
Protecting the debt holder against the borrower's possible default 31–26
Protecting multiple lenders from their lead intermediary 31–28
Protecting multiple lenders from each other 31–30

Conclusion 31–32

32. COMPANY CHARGES

Introduction 32–1

Security Interests
The legal nature of security interests 32–2
The benefits of taking security 32–4

The Floating Charge
The practical differences between fixed and floating charges 32–5
Crystallisation 32–8
Automatic crystallisation 32–9
Priority accorded to floating charges 32–10
Negative pledge clauses 32–11
Subordination agreements 32–12
Statutory limitations on the floating 32–13

charge
(i) Defective floating charges 32–14
(ii) Preferential creditors 32–15
(iii) Sharing with unsecured creditors—the "prescribed part" 32–17
(iv) Costs of liquidation 32–18
(v) Powers of the administrator 32–20
Distinguishing between fixed and floating charges 32–21

REGISTRATION OF CHARGES
The purpose of a registration system 32–24
The reformed registration system
What has to be registered 32–26
The mechanics of registration 32–27
Geographical reach of the registration provisions 32–28
The effect of failure to register 32–29

Late registration 32–30
Defective registration 32–31
Effect of registration 32–32
Reform proposals and registration systems elsewhere 32–33

ENFORCEMENT OF FLOATING CHARGES
Receivers and administrators 32–34
Receivership
Appointment of an administrative receiver 32–37
Function and status of the receiver and administrative receiver 32–38
The receiver's liability with respect to contracts 32–40
Publicity of appointment and reports 32–42
Administration
Function 32–43
Appointment 32–44
Powers and duties 32–45

Protections for creditors and members as against the administrator 32–47
Publication of appointment 32–48
Administration expenses 32–49
End of administration 32–50

CONCLUSION 32–51

PART 8
Insolvency and its Consequences

33. WINDING UP, DISSOLUTION AND RESTORATION

INTRODUCTION 33–1

TYPES OF WINDING UP 33–2

Winding up by the court
Grounds for winding up 33–3
Who may petition for a court ordered winding up? 33–4
Proof that a company is unable to pay its debts 33–5
The court's discretion 33–6
Liquidators, provisional liquidators and official receivers 33–7
Timing of commencement of winding up 33–8
Voluntary winding up—general
Instigation of winding up 33–9
Timing of commencement of winding up 33–10
Members' voluntary winding up
Declaration of solvency 33–11
Appointment and obligations of liquidator 33–12
Creditors' voluntary winding up
Instigation of winding up 33–13
Appointment of liquidator 33–14

"Liquidation committee" 33–15

POWERS AND DUTIES OF THE LIQUIDATOR 33–16

COLLECTION, REALISATION AND DISTRIBUTION OF THE COMPANY'S ASSETS
- Maximising the assets available for distribution 33–17
  - *Statutory "claw back" and avoidance provisions* 33–18
  - *Statutory provisions requiring wrongdoers to make contributions* 33–19
  - *The common law "anti-deprivation principle"* 33–20
  - *Benefit of the statutory claw backs and wrongdoer contributions* 33–21
- Proof of debts and mandatory insolvency set off 33–22
- Distribution of the company's assets 33–24

DISSOLUTION
- After winding up
  - *The normal process* 33–27
  - *Early dissolution* 33–28
- Striking off of defunct companies 33–29
- Voluntary striking off 33–30

RESURRECTION OF DISSOLVED COMPANIES 33–31
- Administrative restoration 33–32
- Restoration by the court 33–33

CONCLUSION 33–34

PAGE

Index 1181

PART 1

INTRODUCTORY

The company, incorporated under the successive Companies Acts, is a dominant institution in our society, and all the more so with increasing government or public sector retreat from a number of areas in which previously it had been a monopoly or near-monopoly provider of services or, less often, of goods. Yet, the role of the Companies Act company is not easy to describe with accuracy. Even in the area of profit-making business activity, where it is a major force, it has no exclusive position and faces competition, at least in relation to smaller businesses, from other legal forms, such as the partnership or the sole trader (if the latter is a legal form at all). Moreover, the company is not just a vehicle for making profits: it can be, and is increasingly, used in the not-for-profit sector, i.e. where the aim of the undertaking is either not to make profits or, if it is, not to distribute them to the members of the company. And finally, the Companies Act company is not the only type of company; companies may also be created by Act of Parliament or royal charter, although this happens rather rarely.

The dominance of Companies Act companies arises largely because this is a highly flexible vehicle for carrying on business, whether for profit or not-for-profit. Of course, the question inevitably arises whether the proposed activity should be carried on through a company or another legal form, but none of these other legal forms is used across so many types and scales of activity as is the corporate form. In other words, the company has many competitors in the shape of other legal vehicles for carrying on business, but it is perhaps not much of an exaggeration to say that for all these other vehicles their primary competitor is the company. Companies are used as business vehicles from the smallest, one-person business to the largest, multi-national undertaking. The characteristics of the corporate form which give it such flexibility obviously deserve to be studied.

Of course, business today is often a multi-national activity. British companies may carry on activities in other states, and companies from other jurisdictions may carry on business in the UK. The right of British companies to carry on business in other Member States of the EU, whether directly or through a subsidiary company, and the right of companies from other Member States to do so in the UK (their “freedom of establishment”), are obviously matters of legitimate concern for the EU. However, globalisation means that the international dimension of British company law is not restricted to the EU, nor, indeed, has it ever been.

In this part we shall try to analyse the function of the modern company and its structure, discuss its advantages and disadvantages, see how it is created and introduce the international element of British company law.

CHAPTER 1

TYPES AND FUNCTIONS OF COMPANIES

Uses to Which the Company May Be Put	1–1
Business vehicles: companies and partnerships (limited and unlimited)	1–2
Non-business vehicles: charitable, community interest and limited by guarantee companies	1–6
The advantages of the modern corporate form	1–13
Different Types of Registered Companies	1–17
Public and private companies	1–18
Officially listed and other publicly traded companies	1–22
Limited and unlimited companies	1–27
Classification according to size: large, medium and micro companies	1–28
Classification according to activity: for-profit and not-for-profit companies	1–29
Unregistered Companies and Other Forms of Incorporation	1–31
Statutory and chartered companies	1–31
Building societies, friendly societies and co-operatives	1–34
Open-ended investment companies	1–36
European Union Forms of Incorporation	1–37
European Economic Interest Grouping	1–37
The European Company (societas europaea or “SE”)	1–40
Conclusion	1–47

USES TO WHICH THE COMPANY MAY BE PUT

1–1

Although company law is a well-recognised subject in the legal curriculum and forms the subject of a voluminous literature, its exact scope is not obvious since “the word company has no strictly legal meaning”.[1] Explicitly or implicitly, many courses on “company law” solve the problem of defining the scope of the subject by concentrating on those companies created by registration under the Companies Acts. That will be true of this book. Since there are more than three million such companies in the UK today, in practical and pragmatic terms this is a sensible solution, for clearly the law applying to such companies is a matter of major concern to many people. However, to state that a book is going to deal, principally, with companies formed under particular Acts of Parliament does not convey much by way of

understanding what role such companies perform in society.

The term “company” implies an association of a number of people for some common object or objects. The purposes for which men and women may wish to associate are multifarious, ranging from those as basic as marriage and mutual protection against the elements to those as sophisticated as the objects of the Confederation of British Industry or a political party. However, in common parlance the word “company” is normally reserved for those associated for economic purposes, i.e. to carry on a business for gain.[2] But it would be wrong to say that company law is concerned only with those associations which people use to carry on business for gain—and for two reasons. First, companies are not the only legal vehicles which people may use in order to associate for gainful business. Secondly, companies incorporated under the Companies Acts may be used for carrying on not-for-profit businesses, or for purposes which can be only doubtfully characterised as businesses at all. We will look at each of these matters in turn.

Business vehicles: companies and partnerships (limited and unlimited)

Partnership Act 1890 and Companies Act 2006

1–2

English law provides two main types of organisation for those who wish to associate in order to carry on business for gain: partnerships and companies. Historically, the word “company” was colloquially applied to both,[3] but the modern lawyer regards companies and company law as distinct from partnerships and partnership law. Partnership law, which is now largely codified in the Partnership Act 1890, is based on the law of agency, each partner becoming an agent of the others,[4] and it therefore affords a suitable framework for an association of a small body of persons having trust and confidence in each other. A more complicated form of association, with a large and fluctuating membership, requires a more elaborate organisation which ideally should confer corporate personality on the association: that is, it should recognise that it constitutes a distinct legal person, subject to legal duties and entitled to legal rights separate

from those of its members. This the modern company can provide easily and cheaply by permitting incorporation under a general Act of Parliament, the current such Act being the Companies Act of 2006.

1–3

This might seem to imply that the difference between partnerships and companies is that the former is used to carry on small businesses and the latter large ones (or, better, that the former is used by a small number of people to carry on a business and the latter by a large number). The mid-Victorian legislature was, it seems, animated by some such idea.[5] Partnership numbers were capped by statute, and incorporation was compulsory for larger numbers of people associating themselves for business purposes. Thus, s.716(1) of the Companies Act 1985, re-enacting a provision first introduced by the Joint Stock Companies Act 1844 (which in fact set the limit slightly higher at 25), provided that, in principle, an association of 20 or more persons formed for the purpose of carrying on a business for gain must be formed as a company[6] (and so not as a partnership); whilst the Limited Liability Act 1855 required companies with limited liability to have at least 25 members.[7] However, the Joint Stock Companies Act 1856 quickly reduced the minimum number to seven for companies,[8] and the decision of the House of Lords at the end of the nineteenth century in *Salomon v Salomon*[9] in effect allowed the incorporation of a company with a single member, the other six being bare nominees for the seventh. This judicial decision preceded by nearly a century the adoption of EC Directive 89/667,[10] which required private companies formally to be capable of being formed with a single member. The 2006 Act extended this facility to public companies.[11] As for the maximum limit for partnerships, this too has been eliminated over the past two decades, thus, the 2006 Companies Act contains no equivalent to s.716 of the 1985 Act.

But this eventual collapse of the Victorian segregation of the two business forms does not mean that they are equally well adapted to different sizes of business. In fact, it is clear that where a large and fluctuating number of members is involved, the company has distinct advantages as an organisational form.

This is because the company has built into it a distinction between the members of the company (usually shareholders) and the management of the company (vested in a board of directors). Although this division can be replicated within a partnership, it has to be distinctly chosen by the partners, since the default rule is the less practical universal participation in management.[12]

Limited Liability Partnerships Act 2000

1–4

On the other hand, where a small number of persons intend to set up a business and all to be involved in running it, the distinction made by company law between shareholders and directors often becomes a nuisance, for they are the same (or nearly the same) people. The internal machinery imposed by company law often appears impossibly cumbersome in such cases. Despite the amendments made in recent years to meet the needs of small companies,[13] the practical problems have proved troubling. As a result, the Limited Liability Partnerships Act 2000 now provides a useful hybrid legal vehicle. Although a hybrid, the limited liability partnership ("LLP") is much nearer to a company than to a partnership, and to that extent the title of the Act is misleading. The LLP is governed by company law principles, often adapted to its particular needs, rather than by partnership law principles, except in two crucial respects. Like companies, the LLP has separate legal personality and the partners have limited liability. Unlike companies, however, are taxation rules (the members are taxed as if they were partners) and the internal decision-making machinery, where the division between members and directors is abandoned, and the members have the same freedom as in a partnership to decide on their internal decision-making structures.[14] The LLP has proved a reasonably attractive legal form, especially for professional businesses.[15]

Limited Partnership Act 1907

1–5

The Limited Liability Partnerships Act 2000 is to be sharply distinguished from the confusingly similarly named, but much earlier, Limited Partnership Act 1907. The limited partnership is a true partnership, which is governed by the 1890 Partnership

Act and the common law of partnership, except insofar as is necessary to give effect to its particular features.[16] These special features are that some (but not all) the partners of a limited partnership have limited liability,[17] and that, in return, they are prohibited from taking part in the management of the partnership business and do not have power to bind the partnership as against outsiders, and certain information about the limited partnership has to be publicly filed (in fact, with the registrar of companies).[18] From 1 October 2009, limited partnerships have had to indicate this feature in their names by the addition of the words "limited partnership" or "LP".[19] The 1907 Act in effect provides for the existence of a "sleeping partner", often someone who contributes assets to the partnership and therefore wishes to become a member of the partnership in order to safeguard his or her investment and obtain an appropriate return on it, but who does not want to be involved in its business. There were more than 33,000 limited partnerships in existence in 2015.[20] Although a small number compared with the private company, the number has been growing in recent years, because of the attraction of the limited partnership in certain specialised fields of commercial activity.[21] For the purposes of this book, however, there is a gulf between, on the one hand, the registered company and the limited liability partnership, which are both in essence creatures of company law, and, on the other, the partnership and the limited partnership, which are creatures of partnership law.

Non-business vehicles: charitable, community interest and limited by guarantee companies

Not-for-profit companies

1–6

As noted earlier, the statement that company law is the law relating to associations formed with a view to carrying on business for gain is inaccurate; there is no requirement in the Companies Act or elsewhere that use of a registered company should be limited to such purposes.[22] In practice, a company may be not-for-profit in a strong sense, in that a provision in its constitution prohibits the distribution of profits to the members of the company, either by way of dividend or in a winding up. Or it may be so in the weak sense of not being run in order to

make a profit, though it may from time to time do so and it may then distribute these profits to its members. "Not-for-profit" is not a term of art in British company law, in the way it is in the laws of many states of the US.

1–7

Not-for-profit companies may pursue purposes which are charitable in a legal sense (in which case the company will be subject to the charities legislation as well as the companies legislation)[23] or which are public interest purposes which do not fall within the rather narrow legal definition of charitable purposes.[24] Alternatively, the purpose of the company may be to promote a private interest, but that private interest may not be making a profit. A typical example is the use by the tenants of a block of flats of a company to hold the freehold title to the block or to see to the care and maintenance of the common parts of the block. These are clearly purely private purposes, but the tenants will fund the company, usually through service charges, simply to the level needed so that it can discharge its obligations and would be surprised, even indignant, if the company made a significant profit on its activities.

Company limited by guarantee

1–8

The Companies Acts have long provided a particular form of the company which may be regarded as particularly suitable for companies which carry on a not-for-profit activity. This is the company "limited by guarantee", as opposed to the company "limited by shares",[25] the latter being the form normally used for profit-making activities and by far the more common one. The Companies Act does not permit a company to be created in which the members are free from any liability whatsoever, but, as an alternative to limiting their contribution to the amount payable on their shares,[26] it enables them to agree that in the event of liquidation they will, if required, subscribe an agreed amount.[27] The guarantee company is widely used by charitable and quasi-charitable organisations (such as schools, colleges and the "Friends" of museums and picture galleries) since incorporation with limited liability is often more convenient and less risky than a trust.[28] However, a division of such an

undertaking into shares is unnecessary, since no sharing of profits is contemplated, and the creators of the company may regard membership of the company divorced from shareholding as a more appropriate expression of the objectives of the company.

1–9

It might be thought that a company limited by guarantee imposes a more limited financial obligation upon the members than one limited by shares, since the members of a guarantee company do not have to put any money into the concern when it is set up, as they normally would have to if they subscribed for shares. The members of a guarantee company are under no liability so long as the company remains a going concern; they are liable, to the extent of their guarantees, only if the company is wound up and a contribution is needed to enable its debts to be paid. But since the par value of shares can be set at a very low level (perhaps one penny)[29] and a member of a company limited by shares is obliged to buy only one share, it is doubtful whether this financial argument carries much weight in the choice between companies limited by shares and by guarantee. In fact, the level of the guarantee is usually also set at a nominal level, so the financing aspects of not-for-profit companies probably play little part in a person's decision whether to apply for membership. For this reason, companies limited by shares can be and are in fact used for non-profit purposes. For example, in the case of the service company mentioned above, often each tenant will have one share in the company.[30]

1–10

A more important advantage of the guarantee company would seem to be the fact that admission to, and resignation from, membership are easier than in a share company. Upon resignation from a share company, the member's share has to be allocated elsewhere, either back to the company or to a new member, and on admission of a new member a new share may have to be created, unless another member is resigning at exactly the same time. The issuance, transfer and repurchase of shares are all matters which are regulated by the Companies Act in the interests of creditors,[31] and these provisions may make the

transfer of membership in not-for-profit companies cumbersome. Where, however, membership is not attached to shares, joining and leaving can be as easy as in any club or association, i.e. normally, joining is simply a matter of agreement between company and prospective member and leaving is a matter of unilateral decision by the member, perhaps subject to certain conditions relating to notice or discharge of obligations owed to the company.[32]

Company limited by shares

1–11

A guarantee company is, however, unsuitable where the primary object is to carry on a business for profit and to divide that profit among the members. Just as a partnership agreement will need to prescribe the shares of the partners, so will a company's constitution need to define the shares of its members, and if these shares are to be transferable it will be convenient for them to be expressed in comparatively small denominations. The members who subscribe for the shares will be under a duty to pay the company for them in money or money's worth, and the company is accordingly said to be "limited by shares", that is to say, the members' liability to contribute towards the company's debts is limited to the nominal value of the shares for which they have subscribed, and once the shares have been "paid up" (i.e. paid for) the members are under no further liability.[33] A fundamental distinction between this type of company and the guarantee company is that the law assumes that in a company limited by shares its working capital will be, to some extent at any rate, contributed by the members; their contributions float the company on its launching and are not a mere life-belt to which creditors may cling when the company sinks, which is how the guarantee company might be viewed. However, as we shall see,[34] since the Companies Act lays down no minimum capital requirement for private companies, the contribution of the shareholders to the initial financing of the company limited by shares may be exiguous.

Community Interest Company ("CIC")

1–12

Despite the long availability of the guarantee company for non-profit purposes, it does have a limitation in terms of its financing. Since there are no shares to be sold, the guarantee company must either operate on the basis that it needs no long-term working capital (many clubs can exist simply on their subscription income) or it must raise that capital by way of debt (i.e. loans to it). Partly for this reason, in Pt 2 of the Companies (Audit, Investigations and Community Enterprise) Act 2004 the Government created a new type of company,[35] known as the Community Interest Company, to which the 2006 Act provisions apply subject to the modifications made in the 2004 Act.[36] Such a company can be either a company limited by shares or by guarantee, its purposes are limited to pursuit of community interests,[37] distributions to the members of the company and the payment of interest on debentures are subject to a cap and its assets otherwise "locked in",[38] and, investors having less incentive to exercise control over the company because their potential rewards are limited, a Regulator of Community Interest Companies is given potentially extensive powers of intervention in the CIC's affairs.[39] Registration as a CIC is not compatible with charitable status[40] and does not attract the tax relief afforded to charities, and so it is not clear how attractive the CIC would be where the community purposes were also charitable (which, however, they might well not be).[41]

The advantages of the modern corporate form

1–13

So far, we have established two negative, and therefore not wholly helpful, propositions. First, the company form is not limited to the association of large numbers of people in the carrying on of a business, but can be used by small numbers, even by the individual entrepreneur. Secondly, the company form is not confined to the carrying on of a profit-making activity. However, a positive proposition has also emerged. This is that the comparative advantage of the company (as against, for example, the partnership or the trust) does indeed lie in the association of large numbers of people for the carrying on of large-scale business. This is for two reasons.

The first is more obvious. Company law, by insisting upon the

central role of directors in the running of the company, permits a large and fluctuating body of members (the shareholders) to delegate oversight of the company's business to a small and committed group of persons (the directors). As important, however, is that over the years successive Companies Acts and the common law have developed a set of rules for regulating the relationship between shareholders and directors when authority is delegated to the directors in this way.[42]

Secondly, and less obviously, by providing for the creation of separate legal personality, limited liability and transferable shares, company law makes it possible to isolate business risks within the business vehicle (thus insulating the shareholders), and facilitates the raising of risk capital from the public for the financing of corporate ventures. Raising funds by the sale of shares often gives companies greater flexibility than in the case of debt finance, and is therefore a crucial element in financing all businesses except those where the risk of failure is very low.[43] Although there are other ways of isolating risk and financing enterprises, none is both as simple and as flexible as the company.

1–14

This analysis is borne out by the statistics classifying businesses by their legal type. These show that of businesses in the private sector of the economy in 2015 employing more than 250 employees, 6,860 were organised as companies and only 55 as partnerships (and five as sole traders). On the other hand, of those with fewer than five employees, 1,232,210 were companies (75 per cent of all companies), 160,905 were partnerships (69 per cent), and 425,175 were sole traders (87 per cent).[44] This shows not only, as one would expect, that there are many more small businesses than large businesses, but also, and more relevant from our point of view, that among large businesses the company form predominates, whilst in small businesses it faces a distinct challenge from the partnership and from those who make no formal distinction between their personal and business lives (the sole trader).

1–15

From a functional viewpoint it could be said that today there are

three distinct types of company:

1. Companies formed for purposes other than the profit of their members, i.e. those formed for social, charitable or quasi-charitable purposes. In this case incorporation is merely a more modern and convenient substitute for the trust.
2. Companies formed to enable a single trader or a small body of partners to carry on a business. In these companies, incorporation is a device for personifying the business and, normally, divorcing its liability from that of its members despite the fact that the members retain control and share the profits. In this case, the company is often a substitute for a partnership.
3. Companies formed in order to enable the investing public to share in the profits of an enterprise without taking any part in its management. In this last type, which is economically (but not numerically) by far the most important, the company is again a device analogous to the trust, but this time it is designed to facilitate the raising and putting to use of capital by enabling a large number of owners to participate in endeavours too large for any of them individually, and to entrust management of the endeavour to a small number of expert managers.

1–16

However, this threefold categorisation needs to be treated with caution. First, there may be hybrid companies or companies which in a particular moment of their growth straddle the second and third categories. For example, a company which was formerly controlled wholly by the members of a particular family may have begun to bring in one or two outside financiers (sometimes called “business angels”) in order to expand the business and these outsiders will naturally have wanted a share in the control of the company. At a later date, the family members may have retired from active management of the company and may have brought in professional managers to run the company (to whom shares have been allocated), but the family members may still be the predominant shareholders.

Secondly, even if a company is squarely within the third

category and has a large number of shareholders, from whom the directors constitute a distinct body, there may be great variations in extent to which the shareholdings are dispersed and the ease with which those shares can be traded. At one end of the scale is a company listed on the London Stock Exchange[45] with many thousands of shareholders who are able to trade their shares with other investors with great ease; whilst at the other end is a company which does in fact have several hundred shareholders, many of whom are perhaps its employees, but which has never made a formal offer of its shares to the public and whose shares may not be traded on a public exchange.

Different Types of Registered Companies

1–17

It follows from what has just been said that the range of functions that may be performed by a company formed by registration under the Companies Acts is extremely wide. Yet, they are all subject to a single Act, today that of 2006. Is this sensible? Would it be better to have different legislation for different types of company, or can sufficient differentiation among different sorts of companies be achieved within a single Act? Let us look at this matter with reference to five possible divisions among companies, the first three of which have long been recognised in British law, the fourth of which is not formally so recognised but is in practice catered for to some extent, and the fifth of which can be said to have become recognised in recent years.

Public and private companies

1–18

A division commonly found in the company laws of many states is that between public and private companies, the former being those which are permitted to offer their securities (whether shares or marketable debt securities[46]) to the public[47] (though they may not in fact have done so) and the latter being those which are not so permitted. The distinction is embedded in the Companies Act, and suffixes, which are a mandatory part of a company's name, distinguish private ("limited" or "Ltd") from public ("public limited company" or "Plc") companies.[48] The

distinction is important not just for the obvious one that companies which do not offer their shares to the public need not be concerned with the rules governing this process, which today are set out largely in the Financial Services and Markets Act 2000 ("FSMA") and not in the Companies Act.[49] Rather, whether a company is public or private is taken more generally as an indication of the social and economic importance of the company, so that the public company is more tightly regulated than the private company in a number of ways which do not directly concern the offering of shares to the public.

1–19

However, unlike many continental European countries, there is no separate legislation for public and private companies. The approach of the single Act seems to be feasible because, although British public companies are more highly regulated than private companies, the British legislation has always had less ambitious regulatory goals for public companies than our continental counterparts. Thus, for example, the German *Aktiengesetz*, applying to public companies, divides the board of directors into two bodies, the supervisory board and the management board, and deals in some detail with the allocation of functions between them and the method of appointment of their members.[50] By contrast, the British Act says very little about what the board is to do or how its members are to be appointed,[51] and certainly does not require the creation of separate supervisory and management boards.[52] These matters are left to be decided by each company itself in its constitution. Consequently, different sizes and types of company can adjust these matters to suit their own particular situation, whereas in Germany to relieve private companies of the demands of the *Aktiengesetz* has been seen to require the enactment of a separate and more flexible statute for private companies (the *GmbHGesetz*).

1–20

Moreover, where a distinction is needed between the level of regulation to be applied to public and private companies, that can readily be embedded in a single Act. The risk with a singleAct, however, is that too little thought will be given to

explicitly applying or disapplying the relevant rules, and as a consequence public companies may be under-regulated or private ones over-regulated. To address this issue, the Company Law Review[53] considered the then current rules applying to private companies to see which were excessive and could therefore be eliminated entirely or applied only in a modified form. It also advocated re-ordering the Companies Act provisions so as to make it more transparent which applied to private companies.[54] The Companies Act 2006 embodies this approach.

1–21

The choice between a public and a private company is one for the incorporators themselves or, after incorporation, for the shareholders.[55] The default rule is that the company is private unless the parties state otherwise,[56] and an overwhelming proportion of companies on the companies register are private ones. As of 2015, only about 7,500 companies on the register in Great Britain were public (down from 9,200 in 2009), whilst the total number of registered companies was over three million.[57]

This is a big change from the position which obtained when the notion of the private company was introduced by the Companies (Consolidation) Act 1908. The view then was that, because a private company was exempted from some of the publicity provisions of the Act, access to that status should be restricted. A company could qualify as private only if it (a) limited its membership to 50; (b) restricted the right to transfer shares; and (c) prohibited any invitation to the public of its shares. Only (c) has survived into the modern law as a requirement for private status.[58]

Officially listed and other publicly traded companies

1–22

Although public companies may offer their shares to the public, some choose not to. And even if they do, those shares may or may not be subsequently traded on a public share exchange, such as the London Stock Exchange. Offering shares to the public and arranging for those shares to be traded on a public market are

two separate things, although the public's willingness to buy the shares offered is likely to be increased if the shares can later be traded on a public market. This is because a public market makes it much easier for a shareholder to sell shares to another investor, or to purchase more shares in the company, should that be desired. Consequently, public offerings of shares and the introduction of those shares to trading on a public market often go together.[59]

1–23

By and large, the companies legislation makes very few differentiations according to whether a public company's shares have actually been offered to the public or are in fact publicly traded, and the 2006 Act makes fewer than its predecessor. However, a company taking either of these steps will find itself subject to the Financial Services and Markets Act 2000 and to rules made under it by the Financial Conduct Authority ("FCA"),[60] as well as to an increasing number of Community laws. This regulation, naturally, is mainly concerned with the issues thrown up by public offers and public trading—these are discussed later in the book—but it is important to note at this stage a curiosity of the British approach. This is that admission to a public market may bring with it obligations for the company of a recognisably "company law" type, obligations which could have been included in the Act but are not. This is particularly true of certain parts of the "Listing Rules" made by the FCA. A company seeking to have its shares traded on the Main Market (whether Premium or Standard Listing)[61] of the London Stock Exchange must first have them admitted to the "Official List" of securities, a list maintained by the FCA, acting in its capacity as the UK Listing Authority ("UKLA").[62] Although a main purpose of this regulation is to secure proper disclosure of information about the company at the time its shares are offered to the public,[63] the UKLA is also empowered to impose on listed companies rules governing their conduct thereafter.[64] Such listing rules relate mainly to the orderly conduct of the public share market, but they also contain rules regulating the internal affairs of companies, which thus supplement the provisions of the Companies Act and the common law relating to companies.[65] In particular, the Listing Rules contain provisions on related

party transactions[66] and significant transactions[67] which supplement the statutory rules on directors' and controlling shareholders' conflicts of interest, set a limit on the constitutional division of powers within companies,[68] and provide the legal anchor for the UK Corporate Governance Code.

1–24

This last is probably the best-known example of such a "supplementary" Listing Rule. Companies subject to the Listing Rules must indicate to their shareholders each year how far they have complied with the UK Corporate Governance Code (a Code drafted by the Financial Reporting Council[69] and attached to the Listing Rules) and to explain areas of non-compliance.[70] This Code deals with the composition and functions of the board of directors. In short, the fact of listing is being used to identify a small group of very important British and overseas companies to which additional company law obligations are attached.[71]

1–25

The identification of publicly traded companies as a separate group for company law purposes has become increasingly important in recent years and it is unlikely that the importance of this category will diminish in the future. However, it is not obvious that the additional regulation of such companies should be confined to listed companies on the Main Market and not extend to those whose shares are traded on "secondary" markets, such as the Alternative Investment Market ("AIM").[72] Nor is it obvious that such additional regulation should be embodied in the Listing Rules rather than the Companies Act.

1–26

Because of the importance, even in core company law matters, of a company having its securities traded on a public market, an ambiguity has arisen about the term "public company". For the company lawyer it normally still means a company which for the purposes of the Companies Act is public, not private, as discussed in the previous section. For the capital markets lawyer, that is not enough to make a company public: it must also have offered its shares to the public and/or have made a public market

available for the trading of the shares. The ambiguity can be avoided by using the term "publicly traded" to refer to the latter type of company.

Limited and unlimited companies

1–27

We have already considered how the liability of members may be either limited by shares or limited by guarantee.[73] Since limited liability is the advantage which is often said to drive entrepreneurs' decisions to incorporate, it is notable that the Act also provides a category of private company where members' liability is unlimited. Such an unlimited company may have a share capital (in order to provide working capital and to measure each member's rights in the company), but that capital no longer acts as a limit on liability.[74] It is not surprising that few unlimited companies are formed,[75] and it has never been suggested that there should be separate legislation for such companies. Nevertheless, the current law does take the view that some regulation otherwise applicable to companies registered under the Act need not be applied to unlimited companies. This is true in particular of the obligation to publish the company's accounts[76] (since creditors of such companies can rely on the credit of the shareholders), and the prohibition on a company acquiring its own shares[77] (again a potential threat only to creditors who are confined to the company's assets for the satisfaction of their claims). Consequently, the unlimited company may be attractive for those shareholders who are willing to stand behind their company and for whom the advantages of privacy or flexibility of capital structure are important.

Classification according to size: large, medium and micro companies

1–28

Classification based on size does not differentiate technical legal categories, although the Companies Act recognises the different needs of different sizes of company. At one end of the scale is the listed company, at the other is the very small company where the directors and the shareholders are the same people and where

the size of the business carried on is also small. The Company Law Review reported research which indicated that 65 per cent of active companies have a turnover of less than £250,000, 70 per cent have only two shareholders and 90 per cent fewer than five shareholders.[78] However, the Review came out against separate legislation for companies whose directors and shareholders were identical and whose businesses were small in size (sometimes called "micro" companies) on the grounds that it would be undesirable to create a regulatory barrier to expansion, which might occur if a company became subject to different rules when its directors and shareholders ceased to be identical.[79] For the same reason, it was opposed to a distinct regime for micro companies even within a single Act.[80] Instead, it applied most of its reforms to private companies as a whole, but some of them were crafted as default rules drafted with micro companies particularly in mind, and it was expected that private companies of a larger size would opt out of them. The advantage of such an approach is that the legal regime does not formally cease to be applicable to a particular small company as it expands, though it is likely to find the regime less convenient and thus to opt out of it. The Companies Act 2006 adopts this approach. Those who want a corporate form which gives still more flexibility than the private company provides, especially in relation to internal decision-making structure, must go to the Limited Liability Partnership.[81]

Classification according to activity: for-profit and not-for-profit companies

1–29

The term "not-for-profit company" is not formally used in the legislation. As we have already seen, these activities are typically run though companies limited by guarantee, which may prove suitable for carrying on a not-for-profit business but are not regulated in fundamentally different ways from a company limited by shares.[82] The same is true of the community interest company ("CIC"), created in 2004.[83] A CIC is either a company limited by shares or limited by guarantee and formed under the Companies Act 2006, but the Companies (Audit, Investigations and Community Enterprise) Act 2004 provides a set of rules

which those forming a CIC can adopt and which are designed to meet the needs of an entity whose aims are to promote the interests of the community or a section of it rather than to make a private profit for its members.[84]

1–30

Those not-for-profit companies which are also charities[85] are presently subject to the burden of double regulation, under the Companies Act and the charities legislation.[86] Consequently, there is an argument that a special form of charitable company should be created and made subject to a single regulatory regime, namely, that for charities. This has been done, but on an optional basis.[87] The Charities Act 2006 has introduced the Charitable Incorporated Organisation ("CIO") for England and Wales. A CIO is a corporate form available to companies whose purposes are charitable, and is designed for their particular needs. However, unlike a CIC, a CIO is not registered by the Registrar of Companies under the Companies Act 2006 but by the Charity Commissioners under the Charities Act 2011. Nevertheless, much of the law applicable to CIOs will be familiar to a general company lawyer and some of the decisions on the companies legislation will be capable of being read across to the rules governing the CIO.[88]

Unregistered Companies and Other Forms of Incorporation

Statutory and chartered companies

1–31

Beyond the different types of companies registered under the Companies Act, there are alternative forms of incorporation which are available for the carrying on of business, including large-scale businesses, namely by special Act of Parliament or by means of a charter granted by the Crown, either under the Royal Prerogative or under powers conferred upon the Crown by statute to grant charters of incorporation.[89] In 2015, there were 43 companies in existence formed under special Acts and 850 incorporated by Royal Charter.[90]

In the past, statutory incorporation by private Acts of public

utilities, such as railway, gas, water and electricity undertakings, was comparatively common since the undertakings would require powers and monopolistic rights which needed a special legislative grant. During the nineteenth century, therefore, public general Acts[91] were passed providing standard clauses which could be deemed to be incorporated into the private Acts unless expressly excluded. As a result of post-war nationalisation measures, most of these statutory companies were taken over by public boards or corporations set up by public Acts (but many, if not most, of them have now been "privatised" and become registered companies). These boards and corporations fall outside the scope of this book. But some statutory companies remain and others may be formed. The statute under which they are formed need not incorporate them but today this is invariably done.

As for companies chartered by the Crown, such a charter normally confers corporate personality, but, as it was regarded as dubious policy for the Crown to confer a full charter of incorporation on an ordinary trading concern, it was empowered by the Trading Companies Act 1834 and the Chartered Companies Act 1837 to confer by letters patent all or any of the privileges of incorporation without actually granting a charter. Today an ordinary trading concern would not contemplate trying to obtain a Royal Charter, for incorporation under the Companies Acts would be far quicker and cheaper. In practice, therefore, this method of incorporation is used only by organisations formed for charitable, or quasi-charitable, objects, such as learned and artistic societies, schools and colleges, which want the greater prestige that a charter is thought to confer.

1–32

However, there is an important regulatory policy issue arising out of the fact that statutory and "letters patent" companies are not created by registration under the Companies Act. Unless express provision is made to the contrary, the provisions of the Companies Act will not apply to such companies. This may give such "unregistered" companies an unfair competitive advantage as against companies formed by registration under the Act, and may mean that those dealing with such companies are

inadequately protected. This problem was addressed, but only partially solved, by s.1043 of the 2006 Act, which applies some, but not all, of the provisions of the Act to unregistered companies, being "bodies incorporated in and having a principal place of business in the United Kingdom",[92] unless they are incorporated by or under a general public Act of Parliament.[93] In addition, unregistered companies falling within the section must have been formed for the purpose of carrying on a business for gain.[94] In other words, the problems of unfair competition and inadequate protection were not perceived as arising in relation to not-for-profit companies, which, as we have seen, constitute the main type of company created by the Crown.

The section provides that those parts of the Act which apply to unregistered companies are to be set out in regulations,[95] and any charter, enactment or other instrument (e.g. letters patent) constituting the company is subordinated to those parts of the Act which are thereby made applicable.[96] The main areas of regulation so applied are those relating to accounts and audit, corporate capacity and directors' authority, company investigations and fraudulent trading. This leaves out some large and important parts of the Act, such as those dealing with the removal of directors, fair dealing by directors, distribution of profits and assets, registration of charges, arrangement and reconstructions and takeover offers, and unfair prejudice.

1–33

An alternative policy embodied in the Act towards unregistered companies is to encourage them to register under the Act and thus become subject to its provisions in full. This encouragement is provided by enabling them to register under the Companies Act without having to form a new company and wind up the old one, although sometimes registration under the Act is a step in a plan designed to produce the winding-up of the company once it has registered. The method of doing this is dealt with in Pt 33 Ch.1 of the Act. As far as statutory and letters patent companies are concerned, a basic distinction is drawn between those which are "joint stock companies" (essentially those with a share capital)[97] and those which are not. Only the former may make use of this special registration process and must register as a company limited by shares and not as an unlimited or guarantee

company.[98] The details of the effect of registration, provisions for the automatic vesting of property, savings for existing liabilities and rights and similar matters are dealt with in regulations.[99]

Building societies, friendly societies and co-operatives

1–34

Although the Victorian legislature devoted considerable efforts to the elaboration of what we today call companies legislation in order to facilitate the carrying on of large-scale business, it did not confine its efforts to this legislation. Even in the area of commercial activities, the legislature was aware that the company form, despite its flexibility, would not suit all types of business, especially where the members of the organisation were intended to have a different relationship with it than shareholders with a company.

Some of these other forms of incorporation were confined to specific activities, such as the building societies,[100] whose principal purpose is to make loans secured on residential property. The building society is an incorporated body, very similar to a company—which is why it has been easy for many of them in recent years to "demutualise" by converting themselves into registered companies—but its members are those who deposit money with it or borrow from it rather than those who invest risk capital in it.

A less striking example is the friendly societies legislation,[101] which until recently contemplated only the formation of unincorporated bodies, but now permits incorporation of bodies whose purposes must include the provision on a mutual basis of insurance against loss of income arising out of sickness, unemployment or retirement. The friendly society constituted, if you like, a self-help response to the perils of ordinary life before the rise of the welfare state from the beginning of the twentieth century, and still such societies have a role to play in the areas neglected by the state system.

1–35

However, probably the most important of the "non-company" incorporated bodies were those created under the old Industrial and Provident Societies Acts, and now the Co-operative and Community Benefit Societies Act 2014,[102] which provide, inter alia, for the incorporation of co-operative societies, which can be deployed in a wide range of commercial settings. Membership and financial rights are accorded to people in co-operatives usually on the basis of the extent to which they have participated in the business of the society, whether as customers (as in retail co-operatives), producers (for example, agricultural co-operatives) or as employees (worker co-operatives). There were over 10,100 industrial and provident societies in existence in 2015,[103] and they are of importance in some limited areas of commercial activity.[104] All these entities are outside the scope of this book.[105]

Open-ended investment companies

1–36

The Victorian penchant for devising corporate vehicles for specialised purposes was revived in 1996 with the creation of the Open-Ended Investment Company. It is perhaps an indication of the changes in the nature of the UK economy over the previous 150 years that, this time, the specialised purpose was that of "collective investment". Broadly, collective investment means the coming together of a number of investors, often a large number of relatively small investors, who pool their resources for the purposes of achieving better returns on their investments. Those investments will typically be the purchase of corporate securities, though the range of investments is not confined to these. This better return, it is hoped, will result partly from the greater size of the fund to be invested and partly from the employment of specialised management to discharge the investment task.[106]

Both the trust (in the shape of "unit trusts", which can trace their origin back to the 1860s) and the registered company (in the shape of the "investment company") have long been used for this purpose. In the case of an investment company the investor buys shares in a company whose resources are allocated to the purchase of investments. However, as we have noted already in

relation to guarantee companies,[107] a company limited by shares suffers from the disadvantage that the repurchase of shares by the company is not freely available. An investor who wishes to dispose of his or her investment in the company will normally have to sell the shares to another investor, but the market price of the shares, depending on supply and demand, may well be less than the value of the underlying investments held by the company which the share represents. These difficulties can be avoided by the use of the unit trust, which is free to make a standing offer to buy back units from investors at a price which fully reflects the value of assets held in the trust. However, in the 1990s the trust came to be regarded as an English peculiarity which might not fare well in international competition with continental European and US investment funds, organised on a corporate basis.

The Government's response was the creation of a corporate vehicle which had the same freedom as the trust to repay to investors the value of the shares held, the value being calculated on a similar basis. Thus, s.262 of the Financial Services and Markets Act 2000 (the current governing legislation) permits the Treasury to make regulations for the creation of corporate bodies to be known as open-ended investment companies ("OEIC"), and an essential ingredient of the definition of an OEIC is that it provides to investors in it an expectation that they shall be able to realise their investment within a reasonable period and on the basis of a value calculated mainly by reference to the value of the property held within the scheme by the company.[108] This power has been exercised in regulations,[109] which require the OEIC to provide that its shareholders be entitled either to have their shares redeemed or repurchased by the OEIC upon request at a price related to the value of the scheme property or to sell their shares on a public exchange at the same price.[110] In general, the Regulations are a combination of provisions drawn from the Companies Act 1985[111] (but without the crucial general principle to be found in the companies legislation that a company limited by shares cannot acquire its own shares)[112] and from the Financial Services and Markets Act concerning the authorisation of those wishing to engage in investment business.[113]

European Union Forms of Incorporation

European Economic Interest Grouping

1–37

Legislation creating corporate bodies remains mainly a matter for the Member States of the EU, but there are now two forms of incorporation provided by EU law. Both are concerned to promote cross-border co-operation among companies formed in different Member States; both are in consequence rather specialised forms of incorporation; both are implemented by Regulations, which are therefore directly applicable in the Member States (though in both cases supplementary national legislation is required); but the two differ in most other respects. The European Economic Interest Grouping ("EEIG") is based on the model of the French *groupement d'intérêt économique* ("GIE"), and is designed to enable existing business undertakings in different Member States to form an autonomous body to provide common services ancillary to the primary activities of its members. Any profits it makes belong to its members and they are jointly and severally responsible for its liabilities. In addition, the members of the EEIG, acting as a body, may take "any decision for the purpose of achieving the objects of the grouping".[114] Although the managers of the EEIG also constitute an organ of the Grouping and may bind it as against third parties, it is clear that the Regulation does not insist upon the delegation of management authority from the members to the managers. For this reason and because of the lack of limited liability for the members, the EEIG is as much like a partnership as like a company.

1–38

The basic requirements for the formation of an EEIG are simply the conclusion of a written contract between the members and registration at a registry in the Member State where it is to have its principal establishment. The members must be at least two in number and may be companies incorporated under national laws, partnerships or natural persons, but at least two of the members must carry on their principal activities in different Member States.[115] The Regulation[116] confers upon the EEIG full legal capacity, though whether it is afforded corporate personality is left to national law,[117] which is also left with considerable scope

to supplement the mandatory provisions of the Regulation. The UK supplemented the EC Regulations by the European Economic Interest Grouping Regulations 1989[118] which nominate the Companies Registrar as the registering authority. A number of the sections of the Companies Act 2006[119] and the Insolvency Act[120] are applied to an EEIG as if it were a company registered under the Companies Act and it may be wound up as an unregistered company under Pt V of the Insolvency Act.[121]

1–39

The ancillary nature of the EEIG is illustrated by the restrictions placed upon it by art.3 of the EU Regulation. The general principle is that the EEIG's activities "shall be related to the economic activities of its members and must not be more than ancillary to those activities". The latter part of the restriction, in particular, is then supplemented by prohibitions on the EEIG (a) exercising management over its members' activities or those of another undertaking; (b) holding shares in a member company; (c) employing more than 500 workers[122]; or (d) being a member of another EEIG. Given the above, it was always likely that the take-up of the EEIG in Britain would not be high. That has turned out to be the case, though the number of EEIGs with principal establishment in Great Britain has grown steadily from 23 in 1991 to 279 in 2015.[123] The EEIG will receive little further discussion in this book.

The European Company (societas europaea or "SE")

1–40

The European Company,[124] by contrast, is not intended for ancillary activities but rather to facilitate the cross-border mergers of companies and their mainstream activities, something which the creation of a single market within the EU has promoted. Of course, a cross-border merger does not necessarily need a European Company. An English company could merge with a French company, so as to produce a resulting company which was either English or French (or indeed registered in some third state), though in fact such an exercise has been difficult to carry out in the past, but should be facilitated by the Cross-

Border Mergers Directive.[125] Alternatively, the English or French company can offer to buy the shares of the other company (a process known as a takeover offer).[126] If the offer is accepted by the shareholders of the offeree company, that company becomes a subsidiary of the offeror company, but the important point for present purposes is that, in a takeover, there is no need for structural changes to the pre-existing companies: the two companies continue as before after the takeover, albeit with different shareholders in the target company (and perhaps also in the bidder). In this way, the English or French company could build up a string of subsidiary companies operating in as many Member States of the EU as was desired.

1–41

What can the European Company add to this situation? Its advantages from a company law perspective are mainly psychological. In the situation described at the end of the previous paragraph, the English (or French) company had built up a group structure which operated effectively throughout the EU, but the lead or head company in the group was clearly identified as English (or French, as the case might be). It is argued that a cross-border group might be more acceptable to those who work in or with it if it could be formed under a EU type of incorporation, which was not identified with any particular Member State,[127] and there might even be some saving of transaction costs if all the existing national subsidiaries could be folded into a single SE. Thus, the English and French companies, when they originally merge, might choose to do so by forming an SE, to replace the existing French and English companies. In addition or instead, the controllers of the group might choose to roll their various national subsidiaries into an SE, whether the top company in the group continued to be an English company or a French company or was a newly formed SE.

1–42

This was the vision of the original proponents of the SE, put forward as long ago as 1959.[128] By the time the SE was adopted by the EU (in 2001[129]) and came into force (in October 2004), however, this vision had been crucially compromised. Essential

to the concept of an EU form of incorporation, divorced from the law of the Member States, is the notion that the SE law should provide a comprehensive code of company law rules for the SE. However, the adopted version of the SE not only fails to regulate adjacent legal areas such as taxation, competition law, intellectual property and insolvency,[130] even within core company law the SE law relies heavily on the national laws of the Member States.[131] The provisions specified at EU level for the SE come near to detailed regulation in only four areas: formation, transfer of the registered office of the SE,[132] board structure and employee involvement.[133] In the latter two areas the rules applying to any particular SE will vary according to the choice made by the SE itself, any agreement made between the SE and the employee representatives or to the national origins of the companies forming the SE. Outside these four areas, the SE is to be governed by the law relating to public companies in the jurisdiction in which it is registered.[134] Thus, it seems that there will be at least as many different SEs as there are Member States of the EU. This fact is emphasised by the absence of an EU registry for the SE. The SE has to be registered in one of the Member States of the EU. Since the SE is to be embedded in the domestic law of the state of registration, this is obviously the correct technical rule, but it does make clear the fact that, for example, a German-registered SE will look rather different from a British-registered one.[135]

1–43

What the SE law achieves is only partial harmonisation of the company law applying to that body.[136] In fact, since those forming an SE apparently have a free choice of the state in which they register their SE—it does not have to be one of the states in which existing businesses operate—the SE rules may promote a certain competition among the Member States to make their rules transposing the SE, and by extension their national company laws, attractive to businesses. However, it should be noted that the requirement to have registered and head offices in the same state will constitute a brake on such competition.[137]

1–44

Unlike a domestic company, the SE can be formed only by existing companies[138] and not by natural persons. In line with its cross-border objectives, those existing companies must already have a cross-border presence. The four methods of formation are: merger, formation of a holding SE, formation of a subsidiary SE and transformation.[139] The merger route is confined to public companies[140] (which in this context includes an SE) and to certain types of merger.[141] The companies must have registered and head offices in the EU and at least two of them must be incorporated in different Member States. A holding SE can be formed by public or private companies if at least two of them are incorporated in different Member States or for two years have had a subsidiary or branch in another Member State. The SE in this case results from a form of share-for-share takeover offer, made by the new SE to the shareholders of the founding companies. A subsidiary SE may be formed by a similar set of companies, in this case by the forming companies subscribing for the shares of the SE. The most tightly regulated form of incorporation of the SE is that of transformation: a public company which for at least two years has had a subsidiary company governed by the law of another Member State may convert itself into an SE. The Regulation also provides for the conversion back of an SE into a public company governed wholly by domestic law.[142] It will be clear from this that the SE is a form of incorporation not available to companies incorporated outside the EU.

1–45

Since the SE is so much part of domestic law, the rules applying to SEs registered in Great Britain will be referred to from time to time in this book. However, the take-up of this legal form has been rather limited. Throughout the EU as a whole only some 60 SEs had been formed as of early 2007 and only 12 of these had operations and employees (as opposed to being shelf companies).[143] There were three SEs registered in the UK, but all without operations and employees.

1–46

Despite these discouraging figures the Commission has committed itself to producing an equivalent form of EU

incorporation specifically designed for small- and medium-sized private enterprises, the "Societas Privata Europaea" or SPE,[144] and, more recently, on a single-member private company, the "Societas Unius Personae" or SUP.[145]

Conclusion

1–47

After a period of stability in the variety of legal forms on offer to those who wish to incorporate their businesses—before 2000 the last significant innovation had been the introduction of the private company at the beginning of the twentieth century—at least four significant new forms of incorporation have been made available in less than a decade: the limited liability partnership, the community interest company, the charitable incorporated organisation and the European Company (or societas europaea). These innovations reflect different driving forces at the policy level. The LLP was a response to the desire of large partnerships to find a form of incorporation with limited liability in an increasingly litigious world, but which nevertheless provided the tax advantages and internal management flexibility traditionally associated with the ordinary partnership. The CIC reflected the Government's desire to encourage the deployment of entrepreneurial skills towards the solution of social problems; and the CIO a desire to involve private bodies in the delivery of welfare state objectives. The SE reflected the goal of the European Commission and Community more generally to deepen the single European market by promoting cross-border mergers. Of the three, only the last produced an innovation in the core areas of company law, but, so far, its up-take, as we have noted, has been limited.

---

[1] Per Buckley J in *Re Stanley* [1906] 1 Ch. 131 at 134.

[2] But not universally; we still talk about an infantry company, a livery company and the "glorious company of the Apostles".

[3] So that it was common for partners to carry on business in the name of "—& Company".

[4] Partnership Act 1890 s.5.

[5] Though the legislature seems to have been influenced in this view more by problems of civil procedure in relation to large partnerships than by the idea that the partnership itself was inappropriate for large numbers of joint venturers. See Law Commission and

Scottish Law Commission, *Joint Consultation Paper on Partnership Law* (London, 2000), paras 5.51–5.61.

[6] It could be formed as a registered company or as a statutory or chartered one (see below, para.1–26) or indeed as an Open-Ended Investment Company under the Financial Services and Markets Act 2000 (see below, para.1–31). If it was formed as a partnership it would be automatically dissolved for illegality: Partnership Act 1890 s.34.

[7] And contained other provisions designed to restrict limited liability to relatively substantial companies, such as that each of the 25 members had to have subscribed for shares with a nominal value of at least £10, of which 20 per cent had to be paid up.

[8] And removed the capital requirements of the 1855 Act.

[9] *Salomon v Salomon* [1897] A.C. 22. See below, paras 2–1 et seq.

[10] EC Directive 89/667 [1989] O.J. L395/40.

[11] 2006 Act s.7(1)—which is not confined to private companies.

[12] Partnership Act 1890 s.24(5).

[13] Discussed throughout this book, but especially in Ch.15.

[14] For more detail see G. Morse et al (eds), *Palmer's Limited Liability Partnership Law*, 2nd edn (London: Sweet & Maxwell, 2011). The Limited Liability Partnerships (Application of Companies Act 2006) Regulations 2009/1804 repeals and replaces much of SI 2001/1090. It, plus SI 2009/1833, SI 2008/1911, SI 2008/1912, and SI 2008/1913, applies parts of the CA 2006 to LLPs.

[15] Almost 60,000 were on the register at the end of 2014/15 (though there were over 3.3 million private companies registered at the same date): BIS/Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, p.6.

[16] 1907 Act s.7.

[17] 1907 Act s.4(2) requires that there must be at least one general partner who is liable for the debts and obligations of the firm.

[18] 1907 Act ss.6 and 8.

[19] Legislative Reform (Limited Partnership) Order 2009/1940 inserting ss.8A and 8B into the Limited Partnership Act 1907.

[20] BIS/Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, p.6. However, it is not clear how many of them are active: the 1907 Act requires limited partnerships to register but provides no mechanism for de-registration.

[21] Notably, venture capital or private equity investment funds, where the investors can be limited partners distinct from the managers of the fund who are general partners; and in property investment, where tax-exempt investors may wish to be excluded from any management role. See the Law Commissions, *Limited Partnerships Act 1907: A Joint Consultation Paper* (2001), Pt I.

[22] Unlike both the partnership and the LLP where the intention (if not the actuality) of carrying on the business for profit is part of the definition of these legal vehicles, and indeed an unincorporated association meeting this test is a partnership, without the need for any formalities to make it so: Partnership Act 1890 s.1(1); Limited Liability Partnerships Act 2000 s.2(1).

[23] There is no obligation for bodies which pursue charitable objects to incorporate, though they increasingly do so today in order to obtain the benefits of limited liability, since such organisations are increasingly carrying more financial risk.

[24] An adaptation of the corporate form especially designed for those pursuing public interest goals which are not charitable is the Community Interest Company (CIC): see below, para.1–12.

[25] 2006 Act s.3(1).

[26] It is not possible to create a hybrid form (i.e. a company limited by guarantee but also with a share capital), although prior to 1980 it was: s.5.

[27] 2006 Act s.3(3).

[28] There were some 40,000 guarantee companies in existence in 1998: CLR, Developing, para.9.12.

[29] See para.11–3.

[30] This may be convenient if the members are not to have exactly identical obligations, for example, where the obligation to contribute to the costs of the company is related to the size of the flats. In that case different contribution obligations can be attached to each share.

[31] See below, Chs 11 and 12.

[32] Where membership changes are expected to be relatively rare and where a new member will always be available to replace the leaving one, as with the service company formed by the leaseholders of a block of flats, this potential disadvantage of the share company will not show itself.

[33] 2006 Act s.3(2) and more clearly in s.74(2)(d) of the Insolvency Act 1986, discussed further in paras 8–1 to 8–4.

[34] See below, Ch.11.

[35] 2004 Act s.26(1). A company may be formed as a CIC or later convert into one.

[36] 2006 Act s.6(2). Also see SI 2009/1942 amending SI 2005/1788.

[37] 2004 Act s.35.

[38] 2004 Act ss.30–31.

[39] 2004 Act ss.41–51—subject to an appeal to an Appeal Officer (s.28).

[40] 2004 Act s.26(3).

[41] As at the end of 2015 some 10,639 CICs had been registered. See Regulator of Community Interest Companies Annual Report 2014/2015, p.38.

[42] See below, Pt 3.

[43] See below, Pts 6 and 7.

[44] Office for National Statistics, *UK Business: Activity, Size and Location 2015*.

[45] See below, Ch.25.

[46] See below, Ch.31.

[47] 2006 Act s.755. Further, s.74 of the FSMA 2000 and its associated regulations prevent a private company from having its securities listed on an exchange. See below, para.25–15. The largest IPO (Initial Public Offering) on the London Stock Exchange was completed in May 2011 by Glencore International Plc. The company raised $10 billion at admission, but the 2014 NYSE listing of Alibaba Holdings Group more than doubled that.

[48] 2006 Act ss.58 and 59. Companies registered in Wales may use the Welsh equivalents. See below, Ch.4.

[49] See below, Ch.25.

[50] Other legislation requires the mandatory presence of employee representatives on the boards of large public companies, but this applies also to the boards of large private companies.

[51] Though it does contain an important provision, s.303, enabling an ordinary majority of the shareholders to remove any director at any time. See Ch.14.

[52] Typically, there is only a single board in British companies, but there is nothing in the legislation to stop them establishing a separate “management board” below the main board, and this is sometimes done. On the division within a single board between executive and non-executive directors, see paras 14–75 to 14–76.

[53] See para.3–3.

[54] Final Report I, Ch.2. Particular CLR proposals are noted at appropriate points in the book, but an illustration of the recommendations noted here was the removal of the prohibition on a company giving financial assistance for the acquisition of its shares from private companies. See paras 13–44 et seq.

[55] A company originally incorporated as private may, subject to certain safeguards, transform itself into a public one, or vice versa. See paras 4–39 et seq.

[56] 2006 Act s.4(2)(a).

[57] BIS/Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, p.8. The total number of companies on the register has been increasing quite rapidly, whilst the number of public companies gently declined over the same period. Now fewer that one in 400 companies is a public one.

[58] Private companies are in fact very likely to restrict the transfer of shares (see Ch.27) and to have fewer than 50 members, but these are no longer necessary incidents of being private.

[59] These processes are discussed in Ch.25.

[60] On 1 April 2013, the former Financial Services Authority was replaced by the Financial Conduct Authority (responsible for policing the City and the banking system), and a new Prudential Regulatory Authority (responsible for carrying out the prudential regulation of financial firms, including banks, investment banks, building societies and insurance companies), with all other responsibilities being assumed by the Bank of England and its Financial Policy Committee.

[61] The Listing Regime is divided into two segments, giving UK and overseas issuers the same choice of Listing Regimes. These are either Premium or Standard, with Premium Listing requiring adherence to more stringent standards (including for overseas companies), including “comply or explain” against the UK Corporate Governance Code, and the requirement to offer pre-emption rights. Standard Listing requires adherence to

the lower EU minimum standards, including compliance with the EU Company Reporting Directive which requires companies, amongst other things, to provide a corporate governance statement and to describe their internal control and risk management systems' main features.

[62] FSMA 2000 Pt VI.

[63] See below, Ch.25.

[64] FSMA 2000 s.96.

[65] Companies whose shares are traded on secondary markets, such as the Alternative Investment Market, may also be subject to exchange rules which perform a similar function, but the rules of secondary markets are less demanding than the Listing Rules which apply to the Main Market/Official List.

[66] LR 11.

[67] LR 10.

[68] See paras 14–18, 16–77 and 19–2 on these matters.

[69] See below, para.3–9.

[70] LR 9.8.6 and 9.8.7. See further below, para.14–69.

[71] There are some 1,500 British companies listed on the Exchange. However, most of the Listing Rules apply to all companies with primary listings, no matter where incorporated.

[72] The CLR thought the Combined Code (the predecessor to the UK Corporate Governance Code), for example, should apply to all quoted companies: Completing, para.4.44.

[73] See above, paras 1–8 and 1–9.

[74] 2006 Act s.3(4). However, only a private company can be unlimited; a public company must be limited by shares or guarantee: s.4(2).

[75] BIS/Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, p.8 indicates that in 2015 there were fewer than 5,000 on the register.

[76] 2006 Act s.448. See para.21–35. Unlimited companies must still produce accounts for their members.

[77] 2006 Act s.658. See para.13–2.

[88] Charities Act 2011 Pt 11.

[89] Under many ad hoc statutes the Crown has been given power to grant charters in cases falling outside its prerogative powers. Moreover, by the Chartered Companies Acts 1837 and 1884, the prerogative was extended by empowering the Crown to grant charters for a limited period and to extend them. Thus the BBC Charter was for 10 years and has been prolonged from time to time.

[90] BIS/Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, p.8.

[91] The Companies Clauses Acts 1845–1889. These Acts, containing the general corporate powers and duties, were supplemented in the case of particular utilities by various other "Clauses Acts", e.g. the Lands Clauses Consolidation and Railways Clauses Consolidation Acts 1845, the Electric Lighting (Clauses) Act 1899, and numerous Waterworks Clauses Acts, and Gasworks Clauses Acts.

[92] This is an interesting nod on the part of British law towards the "real seat" theory of incorporation (see below, paras 6–2 et seq.), for this section does not apply to a British unregistered company which does not have a place of business in the UK. By contrast, a company registered under the Companies Act will be governed by that Act even if it conducts the whole of its business outside the UK.

[93] 2006 Act s.1043(1)(a). This would include the Companies Act itself but also, for example, the Co-operative and Community Benefit Societies Act 2014. See below, paras 1–35 and 1–36.

[94] 2006 Act s.1043(1)(b). Open-ended investment companies are also excluded (s.1043(1)(d)) as are other unregistered companies specifically excluded by direction of the Secretary of State (s.1043(1)(c)).

[95] 2006 Act s.1043(2), (3). These are the Unregistered Companies Regulations 2009 (SI 2009/2436).

[96] 2006 Act s.1043(4).

[97] See 2006 Act s.1041.

[98] See 2006 Act s.1040(4), qualifying the broader provisions of s.1040(3).

[99] 2006 Act s.1042. See the Companies (Companies Authorised to Register) Regulations 2009 (SI 2009/2437), which not only applies the relevant parts of the Companies Act 2006, but also the Companies (Cross-Border Mergers) Regulations 2007 (SI 2007/2974). This Part of the Act also allows for the registration of the few remaining "deed of settlement" companies, a private law form of quasi-incorporation which was invented to avoid the costs of statutory or royal incorporation and which was overtaken by the introduction of formation by registration under a general Act in the middle of the nineteenth century. For details, see the sixth edition of this book at pp.29–31.

[100] The current legislation is the Building Societies Acts 1986–1997, but it can trace its origins to an Act of 1874.

[101] Currently, the Friendly Societies Act 1992, but that legislation can be traced as far back as the Friendly Societies Act 1793.

[102] The legislation is traceable back to the middle of the nineteenth century.

[103] BIS/Companies House, *Statistical Tables on Companies Registration Activities 2014/15*, p.8. The registration function had been delegated, somewhat bizarrely, to the Financial Services Authority. Since the Co-operative and Community Benefit Societies Act 2014 came into force, the registration function has now been transferred to the Financial Conduct Authority.

[104] For a fascinating comparative attempt to explain the successes and failures of the co-operatives, see H. Hansmann, *The Ownership of Enterprise* (USA: Harvard University Press, 1996).

[105] As is the trade union, that other expression of the Victorian genius for collective self-help, but with whose legal status the legislature encountered much more difficulty.

[106] The legal definition of a "collective investment scheme" is to be found in s.235 of the FSMA 2000.

[107] See above, para.1–8.

[120] SI 1989/638 reg.19.

[121] In which case the provisions of the Company Directors Disqualification Act 1986 (see below, Ch.10) apply: reg.20.

[122] This restriction seems to have been motivated in part to avoid the EEIG being used by German companies to avoid domestic worker participation legislation, which bites at the 500 employee level.

[123] BIS/Companies House, *Statistical Tables on Companies Registration Activities*

2014/15, p.8.

[124] There is also a statute for a European Co-operative Society (SCE) (Council Regulation 1435/2003 [2003] O.J. L207/1) and an accompanying directive on the involvement of employees (Directive 2003/72/EC [2003] O.J. L207/25). They have been transposed domestically by the European Cooperative Society Regulations 2006/2078. These are not discussed further in this book.

[125] Directive 2005/56/EC. See Ch.29, below.

[126] See below, Ch.28.

[127] It is easy to overstate the force of this psychological argument: there is no guarantee that the shareholdings or management of a SE will be spread equally across the Member States in which it operates.

[128] By Professor P. Sanders of the University of Rotterdam, though the French claim co-paternity.

[129] Council Regulation 2157/2001/EC [2001] O.J. L294/1, and the accompanying Directive on worker involvement (Council Directive 2001/86/EC [2001] O.J. L294/22). The European Company must use the abbreviation SE as either a prefix or suffix to its name and in the future other types of entity will not be able to avail themselves of this acronym: Regulation art.11.

[130] Reg.2157/2001 art.63 and Preamble 20.

[131] See SI 2009/2400 making the necessary changes to apply Companies Act 2006, and SIs 2009/2401 and 2009/2402 on employee involvement in Northern Ireland and Great Britain.

[132] See para.6–27.

[133] This is the matter dealt with in the accompanying Directive. See below, Ch.14.

[134] Articles 9(1)(c)(ii) and 10 of reg.2157/2001. It seems that this happens automatically, by force of the Regulation, without the Member State having to provide for it or to identify the applicable parts of the domestic law. For this reason the European Company statute, as adopted, is relatively short (70 articles in the Regulation and 17 in the Directive), whereas the 1975 proposal contained 284 articles.

[135] It has been unkindly remarked that the SE proposal started as a “sausage” and ended up as a “sausage skin”.

Conclusion	2–48

LEGAL ENTITY DISTINCT FROM ITS MEMBERS

2–1

As already emphasised, the fundamental attribute of corporate personality—from which indeed all the other consequences flow—is that the corporation is a legal entity distinct from its members. Hence it is capable of enjoying rights and of being subject to duties which are not the same as those enjoyed or borne by its members. In other words, it has "legal personality" and is often described as an *artificial person* in contrast with a human being, a *natural person.*[1]

As we have seen, corporate personality became an attribute of the normal joint stock company only at a comparatively late stage in its development, and it was not until *Salomon v Salomon*[2] at the end of the nineteenth century that its implications were fully grasped even by the courts. The details of this justly celebrated case merit attention.

2–2

Salomon had carried on a prosperous business as a leather

merchant for many years. In 1892, he decided to convert his business into a limited company, and for this purpose Salomon & Co Ltd was formed with Salomon, his wife and five of his children as members, and Salomon as managing director. The company purchased Salomon's business as a going concern for £39,000—"a sum which represented the sanguine expectations of a fond owner rather than anything that can be called a businesslike or reasonable estimate of value".[3] The price was satisfied by £10,000 in debentures, conferring a charge over all the company's assets; £20,000 in fully paid £1 shares; and the balance in cash. The result was that Salomon held 20,001 of the 20,007 shares issued, and each of the remaining six shares was held by a member of his family, apparently as a nominee for him. The company almost immediately ran into difficulties and only a year later the then holder of the debentures appointed a receiver and the company went into liquidation. Its assets were sufficient to discharge the debentures but nothing was left for the unsecured creditors.

2–3

In these circumstances Vaughan Williams J and a strong Court of Appeal held that the whole incorporation transaction was contrary to the true intent of the Companies Act and that the company was a mere sham, and an alias, agent, trustee or nominee for Salomon, who remained the real proprietor of the business. As such he was liable to indemnify the company against its trading debts. But the House of Lords unanimously reversed this decision. They held that the company had been validly formed, since the Act merely required seven members holding at least one share each. It said nothing about their being independent, or that they should take a substantial interest in the undertaking, or that they should have a mind and will of their own, or that there should be anything like a balance of power in the constitution of the company. Hence the business belonged to the company and not to Salomon, and Salomon was *its* agent. In the blunt words of Lord Halsbury LC[4]:

> "Either the limited company was a legal entity or it was not. If it was, the business belonged to it and not to Mr Salomon. If it was not, there was no person and no thing to be an agent at all; and it is impossible to say at the same time that there is a company and there is not."

Or, as Lord Macnaghten put it[5]:

> "The company is at law a different person altogether from the subscribers…; and, though it may be that after incorporation the business is precisely the same as it was before, and the same persons are managers, and the same hands receive the profits, the company is not in law the agent of the subscribers or trustee for them. Nor are the subscribers, as members, liable in any shape or form, except to the extent and in the manner provided by the Act."[6]

2–4

The *Salomon* case established that (a) provided the formalities of the Act are complied with, a company will be validly incorporated, even if it is only a "one person" company; and (b) the courts will be reluctant to treat a shareholder as personally liable for the debts of the company by "piercing the corporate veil".[7] Whereas acceptance of the former argument would have involved denying the separate legal personality of the company, the second could have been upheld without that consequence, though it would have involved undermining the concomitant of separate legal personality, i.e. limited liability (see below).

2–5

The objection of the unsecured creditors in this case was based on the overvaluation of the business which was sold to the company in exchange for shares and debentures in it. In the case of a public company today, the business would be the subject of an independent valuation so far as it was used to pay up shares,[8] but in the case of a private company, or even of debentures issued by a public company, the main protection of unsecured creditors lies in disclosure of the company's financial position.[9] Unlike some countries, English law has developed no significant doctrine whereby loans to a company by its major shareholders are treated as equity. Even today, the best the unsecured creditors could hope for is that a floating charge securing a debenture might be at least partially invalidated if there was either a successful petition for a winding-up or an administration order within two years of the creation of the charge.[10] In this case, Salomon was able to give himself protection against the downside risks of his business by taking a position as secured creditor through the debentures, whilst taking the full benefit of any upside gains through his (in effect) 100 per cent shareholding.[11]

2–6

Of course, this decision does not mean that a promoter can with impunity defraud the company which he forms, or swindle his existing creditors. In the *Salomon* case it was argued that the company was entitled to rescind the sale of the business in view of its wilful overvaluation by Salomon. But the House held that there was no basis for rescission on the facts, since all the shareholders were fully conversant with what was being done and had effectively affirmed the deal. Had Salomon concealed the profit from his fellow shareholders, the position would have been different.[12] Nor was there any fraud on Salomon's pre-incorporation creditors, all of whom were paid off in full out of the purchase price. Otherwise, they or Salomon's trustee in bankruptcy might have been entitled to upset the sale.[13]

2–7

In any event, since the *Salomon* case, the complete separation of the company and its members has never been doubted. The decision opened up new vistas to company lawyers and the world of commerce. Not only did it finally establish the legality of the "one-person" company (long before EC law required this) and showed that incorporation was as readily available to the small private partnership and sole trader as to the large public company, but it also revealed that it was possible for a trader not merely to limit his liability to the money which he put into the enterprise but even to avoid any serious risk to the major part of that by subscribing for secured debentures rather than shares. This result at the time seemed shocking, and the decision was much criticised.[14] A partial justification for it is that the public deal with a limited company at their peril and know, or should know, what to expect.[15] In particular a search of the company's file at Companies House should reveal its latest annual accounts and whether there are any charges on the company's assets.[16]

2–8

Nonetheless, the doctrine of separate corporate personality is what underpins much of the success of companies as effective business structures, and its inviolability was further reinforced in *Prest v Petrodel*,[17] where the Supreme Court affirmed the importance of the doctrine and indicated that the courts may only

"pierce the corporate veil" in exceptionally limited circumstances.[18]

Limited Liability

2–9

It follows from the fact that a corporation is a separate person that its members are not as such liable for its debts.[19] Hence, in the absence of express provision to the contrary, the members will be completely free from any personal liability for the company's debts. The rule of non-liability also applies to obligations other than debts: the company is liable and not the member.

2–10

However, the principle applies only so long as we concentrate on the position of members as such, and remains true, once the company ceases to be a going concern, only subject to the particular terms of the shareholding—then, members may be required to make contributions to the company's assets if their shares were issued on that basis. Something more should be said about each of these qualifications on limited liability.

2–11

First, members who become involved in the management of the company's business, for example as directors, will find that separate legal personality does not necessarily protect them from personal liability. Although acting on behalf of the company, they may have done things which have made them personally liable to the company or to outsiders. The most obvious example is that of a tort committed in the course of directorial duties. The extent to which those acting on behalf of companies are personally liable for their acts to third parties depends on the operation of the doctrines of agency and rules such as assumption of responsibility in tort law and identification in criminal law. These are matters discussed in Ch.7.

2–12

Secondly, although the doctrine of separate legal personality normally shields members (as such) from personal liability so long as the company is a going concern, it does not necessarily

extend further. If a company enters insolvent liquidation, the question becomes whether the liquidator acting on behalf of the company can seek contributions from its members so as to bring the company's assets up to the level needed to meet the claims of the company's creditors. In the case of an unlimited company,[20] s.74 of the Insolvency Act does indeed impose on the members such an obligation to contribute to the assets of the company. In the case of companies limited by shares or by guarantee,[21] however, that obligation is limited (hence, by transfer, the term "limited company") and is not, as it is with unlimited companies, open-ended.

In the case of a company limited by shares, each member is liable to contribute when called upon to do so the full nominal value of the shares held insofar as this has not already been paid by the shareholder or any prior holder of those shares (which it normally will have been). In the case of a guarantee company, each member is liable to contribute a specified amount (normally small) to the assets of the company in the event of its being wound up while a member, or within one year after ceasing to be a member. In effect the member, without being directly liable to the company's creditors, is in both cases a limited guarantor of the company. When, therefore, obligations are incurred on behalf of a limited company, the company is liable and not the members, though in the case of a guarantee company or of partly paid shares the company may ultimately be able to recover a contribution from the members towards the discharge of its obligations. However, in the typical case of a company limited by shares with fully paid shares in issue, no further liability will arise for the member in the absence of specific statutory provision to the contrary, which provisions are rare.[22]

2–13

By contrast, an unincorporated association, not being a legal person, cannot itself be liable, and obligations entered into on its behalf can bind only the actual officials who purport to act on its behalf, or the individual members if the officials have actual or apparent authority to bind them. In either event the persons bound will be liable to the full extent of their property unless they expressly or impliedly restrict their responsibility to the extent of the funds of the association, as the officials may well

do. Hence the extent to which the member will be liable depends on the terms of the contract of association. In the case of a club, and presumably most learned and scientific societies, there will generally be implied a term that the members are not personally liable for obligations incurred on behalf of the club.

2–14

And the position is different again for members of a partnership, being an association carrying on business for gain. Each partner is an agent of all the others, and acts done by any one partner in "carrying on in the normal way business of the kind carried on by the firm" bind all the partners.[23] Only if the creditor knows of the limitation placed on the partner's authority will the other members escape liability.[24] Moreover, an attempt to restrict the partners' liability to partnership funds by a provision to that effect in the partnership agreement will be ineffective even if known to the creditors[25]; the partners can restrict their financial liability, in respect of acts otherwise authorised, only by an express agreement to that effect with the creditor concerned.[26] This explains the pressure, which bore fruit in 2000, for the creation of an incorporated legal entity with the internal flexibility of a partnership but the advantage of limited liability, i.e. the limited liability partnership.[27]

2–15

The overall result of the broad recognition by the courts of the separate legal entity of the company and of the limited liability of its members is to produce at first sight a legal regime which is very unfavourable to potential creditors of companies, a situation which they have naturally sought to readjust by contract in their favour, so far as is in their power. For large lenders, especially banks, there are a number of possibilities, to be used separately or cumulatively. Apart from the obvious commercial response of charging higher interest rates on loans to bodies whose members have limited liability, such lenders may seek to leap over the barrier created by the law of limited liability by exacting as the price of the loan to the company personal guarantees of its repayment from the managers or shareholders of the company, guarantees which may be secured on the personal assets of the individuals concerned. Instead of or in addition to obtaining

personal security by contracting around limited liability, large lenders may seek to improve the priority of their claims by taking security against the *company's* assets. As we shall see later on in this chapter, chancery practitioners in the nineteenth century were quick to respond to this need by creating the flexible and all-embracing instrument of the floating charge to supplement the traditional fixed charge mechanisms which were already available.

However, these self-help remedies may not be practicable for trade creditors or employees[28] and, even in the case of large lenders, there is a strong danger that, when things begin to go wrong, the controllers of the company will take risks with the company's capital which were not within the contemplation of the parties when the loan was arranged. For these reasons, although the legislature has not overturned *Salomon v Salomon* and, indeed, under the influence of EU law,[29] the one-person company is now expressly recognised by domestic law, the Companies and Insolvency Acts are full of provisions whose purpose cannot be completely understood except against the background of limited liability. In particular, the extensive publicity and disclosure obligations placed upon limited liability companies,[30] the provisions relating to wrongful trading,[31] and the expanded provisions on the disqualification of directors, especially on grounds of unfitness,[32] must all be seen in this light.

Property

2–16

One obvious advantage of corporate personality is that it enables the property of the association to be more clearly distinguished from that of its members. In an unincorporated society, the property of the association is the joint property of the members. The rights of the members to that property differ from their rights to their separate property, since the joint property must be dealt with according to the rules of the society and no individual member can claim any particular asset. By virtue of the trust the obvious complications can be minimised but not completely eradicated. And the complications cause particular difficulty in the case of a trading partnership both as regards the true nature

of the interests of the partners[33] and as regards claims of creditors.[34] By contrast, on incorporation, the corporate property belongs to the company, and members have no direct proprietary rights to it but merely to their "shares" in the undertaking.[35] A change in the membership, which causes inevitable dislocation to a partnership firm, leaves the company unconcerned; the shares may be transferred, but the company's property will be untouched and no realisation or splitting up of its property will be necessary, as it will on a change in the constitution of a partnership firm.

2–17

Identification of the company's property is not the only advantage; corporate personality also enables that property to be segregated from the members' personal assets. Thus, the claims of the business creditors will be against the property of the company and the claims of the members' personal creditors against the property of the member. Neither set of creditors is in competition with the other; and each has to monitor the disposition only of the assets against which its claims lie.[36]

Suing and being Sued

2–18

Closely allied to questions of property are those relating to legal actions. The difficulties in the way of suing, or being sued by, an unincorporated association have long bedevilled English law.[37] The problem is obviously of the greatest practical importance in connection with trading bodies, and in fact has now been solved in the case of partnerships by allowing a partnership to sue or be sued in the firm's name. Hence, there is now no difficulty so far as the pure mechanics of suit are concerned—although there may still be complications in enforcing the judgment.

In the case of other unincorporated bodies (such as clubs and learned societies) not subject to special statutory provisions, the problems of suit are still serious. Sometimes its committee or other agents may be personally liable or authorised to sue. Otherwise, the only course is a "representative action" whereby, under certain conditions, one or more persons may sue or be sued on behalf of all the interested parties.[38] But resort to this

procedure is available only subject to compliance with a number of somewhat ill-defined conditions, and the law, which has been inadequately explored, is obscure and difficult. The result is apt to be embarrassing to the society when it wishes to enforce its rights (or, more properly, those of its members) though it has compensating advantages when it wishes to evade its duties.[39]

Needless to say, none of these difficulties arises when an incorporated company is suing or being sued: the company as a legal person can take action to enforce its legal rights and can be sued for breach of its legal duties.

Perpetual Succession

2–19

One of the obvious advantages of an artificial person is that it is not susceptible to "the thousand natural shocks that flesh is heir to". It cannot become incapacitated by illness, mental or physical, and it has not (or need not have) an allotted span of life.[40] This is not to say that the death or incapacity of its human members may not cause the company considerable embarrassment; obviously it will if all the directors die or are imprisoned, or if there are too few surviving members to hold a valid meeting, or if the bulk of the members or directors become enemy aliens.[41] But these vicissitudes of the flesh have no direct effect on the disembodied company.[42] The death of a member leaves the company unmoved; members may come and go but the company can go on forever.[43] The insanity of the managing director will not be calamitous to the company provided that he is removed promptly; he may be the company's brains, but lobectomy is a simpler operation than on a natural person.

2–20

Once again, the disadvantages in the case of an unincorporated society can be minimised by the use of a trust. If the property of the association is vested in a small body of trustees, the death, disability or retirement of an individual member, other than one of the trustees, need not cause much trouble. But, of course, the trustees, if natural persons, will themselves need replacing at fairly frequent intervals and the need for constant appointment of new trustees is a nuisance if nothing worse. Indeed, it may be

said that the trust never functioned at its simplest until it was able to enlist the aid of its own child, the incorporated company, to act as a trust corporation with perpetual succession.

Moreover, the trust can obviate difficulties easily only when a member, or his estate, has, under the constitution of the association, no right to be paid a share of the assets on death or retirement, which, of course, is the position with the normal club or learned society. But on the retirement or death of a partner, the default rule is that the partnership is automatically dissolved, so far at any rate as the departing partner is concerned,[44] and he or his estate will be entitled to be paid his share. The resulting dislocation of the firm's business can be reduced by special clauses in the articles of partnership, providing for a formula for valuation of his share and for deferred payment, but cannot be eradicated altogether.[45]

2–21

With an incorporated company these problems do not arise. Although the member or his estate is not generally entitled to be paid out by the company, if the member (or a personal representative, trustee in bankruptcy, or receiver) wishes to realise the value of the shares, these can be sold, whereupon the purchaser will, on entry in the share register, become a member in place of the former holder. This is not always as easy as it sounds, however. The seller might not be able to find a purchaser at all, especially one who meets any restrictions which might be imposed on transfer,[46] and the other members might not have sufficient free capital to purchase the shares. Now, therefore, but subject to stringent conditions, purchase by the company is allowed,[47] as it has long been under the laws of many other countries.

2–22

The continuing existence of a company, irrespective of changes in its membership or its management, is helpful in other directions also. When an individual sells a business to another, difficult questions may arise regarding the performance of existing contracts by the new proprietor,[48] the assignment of rights of a personal nature,[49] and the validity of agreements made with customers ignorant of the change of proprietorship.[50]

Similar problems may arise on a change in the constitution of a partnership.[51] Where the business is incorporated and the sale is merely of the shares, none of these difficulties arises. The company remains the proprietor of the business, performs the existing contracts and retains the benefits of them, and enters into future agreements. The difficulties attending vicarious performance, assignments and mistaken identity do not arise.

2–23

Although a company may shift control of its business by means of a transfer of its shares to new investors, it does not follow that it will always choose this method of effecting the change of control. The directors or shareholders of the company could decide instead to sell the underlying business of the company to the new investors, who, perhaps, may form their own company in order to take the new business. In this case, the transferring company (rather than its shareholders) will be left holding the consideration received on the sale of its business. This method is particularly likely to be attractive to the transferring company if it is divesting itself of control of only part of its business (though even then a transfer of control by sale of shares may be possible if the relevant part of the business is held in a separate group subsidiary company). When a company disposes of the whole or part of its business (as opposed to the shareholders deciding to transfer their shares), the difficulties mentioned in the previous paragraph in relation to the sale of a business by an unincorporated entity arise in relation to companies as well. To sum up, a company,[52] unlike an unincorporated body, has the option to shift control by means of a transfer of shares, but it may choose instead to dispose of the underlying business (or even just of the assets used in the business).

Transferable Shares

2–24

Incorporation, with the resulting separation of the business (owned by the company) from the shares (owned by its members), greatly facilitates the transfer of the members' interests. Without this formal incorporation of the business enterprise, approximately the same ends can be achieved through the device of the trust coupled with an agreement for

transferability in the deed of settlement. But in this case, even after transfer, the member will remain liable for the firm's debts incurred during the time when he or she was a member.[53] This ongoing liability (i.e. the absence of limited liability associated with companies) means that opportunities to transfer are, in practice, much restricted.

A partner has a proprietary interest which can be assigned (subject to the terms of the partnership deed), but the assignment does not operate to divest the partner of status or liability as a partner; it merely affords the assignee the right to receive whatever the firm distributes in respect of the assigning partner's share.[54] The assignee can be admitted into partnership in the place of the assignor only if the other partners agree[55] and the assignor will not be relieved of any existing liabilities as a partner unless the creditors agree, expressly or impliedly, to the release.[56]

2–25

With an incorporated company, freedom to transfer members' interests, both legally and practically, can be readily attained. The company can be incorporated with its liability limited by shares, and these shares constitute items of property which are freely transferable in the absence of express provision to the contrary, and in such a way that the transferor drops out[57] and the transferee steps into his shoes.

2–26

Even in an incorporated company, the power to transfer may, of course, be subject to restrictions. In a private company some form of restriction was formerly essential in order to comply with the then current statutory definition; although this is no longer a statutory requirement, it is still a desirable provision if such a company is to retain its character as an incorporated private partnership. In practice, these restrictions are usually so stringent as to make transferability largely illusory. Nor is there any legal objection arising out of the Companies Act to restrictions in the case of a public company, although such restrictions, except as regards partly paid shares, are unusual, and are prohibited by the Listing Rules if the shares are to be marketed on the Stock Exchange.[58] But there is this fundamental

difference: in a partnership, transferability depends on express agreement and is subject to legal and practical limitations, whereas in a company it exists to the fullest extent in the absence of express restriction. The partnership relationship is essentially personal, and where a private company is, functionally, an incorporated partnership, the same approach is maintained.[59] On the other hand, the relationship between members of a public company is essentially impersonal and financial and hence there is usually no reason to restrict changes in membership.

Management under a Board Structure

2–27

A further important feature of company law is that it provides a structure for the pursuit of larger and riskier endeavours by allowing many people to participate, via the purchase of shares, and separating that participation from the management of the company, which is delegated to a smaller and expert group of people who partly constitute and who are partly supervised by a board of directors. This separation of what is conventionally, but controversially, termed "ownership" of the company (i.e. shareholding) from its "control" (i.e. management) is a feature of large companies and it is therefore important that the organisational law governing companies should deal with its consequences. By contrast, as with transferable shares, this is not a feature of small companies, where "owners" and "managers" are often identical people, or substantially so. Then, as noted in Ch.1,[60] the corporate machinery for separating these roles may be more of a hindrance than a help, but it is crucial in the efficient functioning of large companies.

2–28

The legal implications of this development were first explored in the US by A.A. Berle and G.C. Means in *The Modern Corporation and Private Property*,[61] which drew attention to the revolutionary change thus brought about in our traditional conceptions of the nature of property. Today, the great bulk of large enterprise, at least in the US and the UK, is in the hands not of individual entrepreneurs but of large public companies in which many individuals have property rights as shareholders in the enterprise to which they have directly or indirectly

contributed capital. After home ownership, direct or indirect[62] investment in companies probably constitutes the most important single item of property for most people, and yet whether this property brings profit to its "owners" no longer depends on their energy and initiative but on that of the management from which they are divorced. The modern shareholder in a public company has ceased to be a quasi-partner and has become instead simply a supplier of capital. If a person invests in the older forms of private property, such as a farm or a shop, he or she becomes tied to that property and the business endeavour. The modern public company provides a new type of property in which the relationship between the "owner" and the business plays little part; and indeed the owner can realise the wealth represented by the property whenever needed, by selling shares, and therefore without removing the business property from the enterprise which requires it indefinitely. "The separation of ownership from management and control in the corporate system has performed this essential step in securing liquidity."[63]

Even when, as is increasingly the case, shareholding in large companies is concentrated in the hands of institutional shareholders, such as pension funds and insurance companies, which do have a more significant potential for intervention in management than individual shareholders, such participation is discontinuous or episodic and usually precipitated by some crisis in the company's affairs rather than a day-to-day way of managing the company.[64]

2–29

Despite the fact that the board, and especially the "managing director" or the "chief executive officer", is the driving force behind the operation of the large company, the British Companies Act, unlike its continental counterparts, says very little about the board of directors. The Act insists there be directors, but only two are required in the case of a public company and, in the case of a private company, one will do.[65] Many sections of the Act impose administrative burdens on the directors or assume in some other way the existence of a board of directors, but the composition, structure and functions of the board are left to a very high degree to companies to decide themselves, through their articles of association[66] or through

mere corporate practice. In the case of listed companies, however, this private ordering by companies themselves has become significantly qualified by the development in the last 18 years of the UK Corporate Governance Code and its predecessors.[67]

2–30

In the face of this "hands off" approach on the part of the Act, can the claim be made good that British company law provides machinery, except in the most rudimentary way, whereby the separation of ownership and control can flourish? The most obvious answer to this question consists in pointing to the duties created originally by the common law, but now restated in the Act, which aim to require the directors to exercise the powers conferred upon them competently and loyally in the interests of the company, which is normally to be seen as the interests of the shareholders.[68] Thus, one may say that the approach of company law to the regulation of the separation of ownership from control is to allow companies maximum freedom to decide on the division of powers between shareholders and board and on the functions of the board, but then to concentrate on the regulation of the way the board discharges the powers conferred upon it, whatever they may be. How successfully this is done is the topic of later chapters. All we need note here is the importance of the fact that in large companies there are two decision-making bodies, shareholders in general meeting and the board of directors, and that in terms of management functions the board is invariably the more important organ.

Borrowing

2–31

So far we have considered only the advantages or disadvantages which flow inevitably or naturally from the fact of incorporation. But incorporation also has important consequences in respect of borrowing and taxation.

2–32

At first sight one might suppose that a sole trader, or partners, being personally liable, would find it easier than a company to raise money by borrowing. In practice, however, this is not so,

since a company is often able to grant a more effective charge to secure the proposed indebtedness. The ingenuity of equity practitioners led to the evolution of an unusual but highly beneficial type of security known as the floating charge; i.e. a charge which "floats" over all the assets of the company falling within a generic description, but without preventing the chargor from disposing of those assets in the usual course of business, at least until something occurs to cause the charge to become crystallised or fixed. This type of charge is particularly suitable when a business has no fixed assets, such as land, which can be included in a normal security, but carries a large and valuable stock-in-trade. Since this stock needs to be turned over in the course of business, a fixed charge is impracticable because the consent of the chargee would be needed every time anything was sold, and a new charge would have to be entered into whenever anything was bought. A floating charge obviates these difficulties; it enables the stock to be turned over, but (if defined widely enough) attaches to whatever it is converted into and to whatever new stock is acquired.

In theory, there is no reason why such charges should not be granted by sole traders and ordinary partnerships as well as by incorporated companies (and now, LLPs). But two pieces of legislation have effectively precluded that. The first was the "reputed ownership" provision in the bankruptcy legislation relating to individuals.[69] This provision never applied to the winding-up of companies, and has now been repealed for individuals by the Insolvency Act 1986.[70] The second, which still remains, is that the charge, insofar as it relates to chattels, would be a bill of sale within the meaning of the Bills of Sale Acts 1878 and 1882, which apply only to individuals and not to companies.[71] Hence it would need to be registered in the Bills of Sale Registry,[72] and, what is more important, as a mortgage bill it would need to be in the statutory form,[73] which involves specifying the chattels in detail in a schedule. Compliance with the latter requirement is obviously impossible, since in a floating charge the chattels are, by definition, indeterminate and fluctuating.

2–33

When, belatedly, we eventually get round to reforming, as many

common law countries have done, our antiquated law relating to security interests in movables, we shall be able to repeal the Bills of Sale Acts and thus make it practicable for unincorporated firms to borrow on the security of floating charges,[74] or some comparable form of security on the lines of that provided by art.9 of the American Uniform Commercial code. In the meantime, use of this advantageous form of security is in practice restricted to bodies corporate. By virtue of it the lender can obtain an effective security on "all the undertaking and assets of the company both present and future" either alone or in conjunction with a fixed charge on its land.[75] By so doing the lender can place himself in a far stronger position than if merely the personal security of the individual trader supported the loan. It therefore happens not infrequently that a business is converted into a company solely in order to enable further capital to be raised by borrowing. And sometimes, as the *Salomon* case[76] shows, a trader by "selling" his business to a company which he has formed can give himself priority over his future creditors by taking a debenture, secured by a floating charge, for the purchase price.[77]

Taxation

2–34

Once a company reaches a certain size, the attraction of limited liability is likely to outweigh all other considerations when business people are considering in what form to carry on their activities. Investors are unlikely to be willing to put money into a company where their liability is not limited, especially if they are to have no or little control over the running of the company. However, with small businesses, where it is feasible to give all the investors a say in management, it is likely that tax considerations will play a major part in determining whether the business will be set up in corporate form or as a partnership, especially as in such cases where, as we have seen, limited liability may not be available in practice vis-à-vis large lenders.[78] This is not the place to examine the tax considerations which may cut one way or another at different times on this issue. What should be noted, however, is that in the case of small companies, the investors' return on their capital may take the form of the

payment of directors' fees rather than dividends, so that participation in the management of the company may be the means for the investor both to safeguard the investment and to earn a return on it.[79]

Formalities and Expense

2–35

Turning from advantages to costs, incorporation is necessarily attended with formalities, loss of privacy (see below) and expense greater than that which would normally apply to a sole trader or partnership. A sole trader already exists. A partnership arises out of the facts of a relationship, and does not need a formal agreement provided the parties are carrying on a business in common with a view of profit.[80] An unincorporated firm can conduct its affairs without any formality and publicity beyond that which may be prescribed by the regulations (if any) applying to the particular type of business. If the business is carried on under a name different from the true name of the sole trader or those of all the partners, it will have to comply with the provisions on business names (as would a company trading under a pseudonym)[81] but these are not onerous. The business, unless it is insolvent, can eventually be wound up equally cheaply, privately and informally. An incorporated company, on the other hand, necessarily involves formalities, publicity and expenses at its birth, throughout its active life, and on its final dissolution.

2–36

The costs of formation, at least of a private company (and most companies are formed as private even if they become public later in life), are very low, however. A competent incorporation agent should be able to set up a basic company for less than £200. British law does not require a private company, unlike a public one, to have a minimum share capital.[82] Consequently, the incorporators can borrow what money they need to set the company up and do not need to sink their own money into it, which, indeed, they may not have. However, the combination of no minimum capital and limited liability could be an invitation to trading at the expense of the creditors, and so British law, even if it has no ex ante minimum capital requirement, has

developed significant ex post controls on those who behave in this way after the company has been formed.[83]

2–37

Once the company is set up, there are also ongoing formalities and reporting requirements to meet. These ensure a degree of transparency that is not demanded of sole traders or partnerships. At the least, the documents on the public record remain accurate (so, for example, changes to the company's directors, and to its constitution must be filed[84]), and the state of the company business must be made visible, at least to some extent, to those who might deal with the company in the future—so security granted over the company's assets should be registered,[85] and annual accounts may need to be filed.[86]

2–38

Finally, we have noted at a number of points in this chapter that the requirement of two separate decision-making organs, shareholders' meeting and board of directors, may seem over-elaborate for small companies, though something has now been done to alleviate this problem without, however, going to the extent of permitting small companies to adopt a single decision-making body.[87]

Publicity

The company's affairs

2–39

As already noted, the costs of incorporation also come with the much greater publicity required of a company as against a partnership, since the former is required, but the latter is not, to make their annual accounts available publicly through filing at Companies House.[88] Until recently, small companies were required, in addition, to produce accounts in what was an over-elaborate format and to have those accounts audited, but these requirements have now been relaxed.[89]

The company's members and directors

2–40

Further, since a company can only act through the individuals behind the company—principally its board of directors, but also its members in general meeting—it is probably not surprising that there should be public registers of both the directors and the members, with more details required of the former (although now increasingly limited by concerns of privacy and personal safety).[90]

2–41

Disclosure of a company's members was never especially reliable, however, for the simple reason that s.126 prohibits trusts of any sort from being entered on the register of members. This means that the "real" owners of shares are not necessarily discoverable, even when the (disclosed) legal owner must comply absolutely with their directions on voting and distribution of the economic benefits of the shareholding. This is now the subject of significant change, as outlined below.

"People with significant control"—the PSC Register

2–42

From 2016, almost all companies will be required to keep, open to the public, a register of "people with significant control", called the company's PSC Register (ss.790C(10), 790M).[91] This does not require the company to disclose every beneficial interest in its shareholdings, but it does require disclosure of every person (human or corporate) who is able to exert "significant influence or control" over the company's business, with that phrase defined in the Act, amplified by Regulations,[92] and then supplemented by formal statutory Guidance[93]—all seen as necessary, given the potential breadth of the definition.

2–43

The government's objectives in implementing these reforms on transparency in corporate control is to ensure that the "UK is, and is seen to be, an open and trusted place to invest and do business. Knowing who ultimately owns and controls our companies will contribute to that objective"; and, in addition, to "deter and disrupt the misuse of companies,[94] and identify and sanction those responsible when illegal activity does take place".[95]

To these ends, the company must keep a register of people "with significant control over the company" (s.790M(1)). Interestingly, the information is not to be removed from the Register until 10 years after the person ceases to have such control (s.790U(1)). A person is deemed to have such control (i.e. to be a PSC) if they meet at least one of the following five conditions:

(i) directly or indirectly hold more than 25 per cent of the nominal share capital; or

(ii) directly or indirectly control more than 25 per cent of the votes at general meetings; or

(iii) directly or indirectly are able to control the appointment or removal of a majority of the board; or

(iv) actually exercise, or have the right to exercise, significant influence or control over the company; or

(v) actually exercise or have the right to exercise significant influence or control over any trust or firm (which is not a legal entity) which has significant control (under one of the four conditions above) over the company.

Both the Act, the Regulations and the formal statutory Guidance contain detailed provisions relating to the interpretation of these five conditions.[96]

The real breadth in the disclosure rules is embraced by the expression "significant influence or control". The statutory Guidance indicates that influence and control are alternatives, and that neither needs to be in fact exercised by the PSC, nor exercised by the PSC with a view to its own economic benefit. "Control" indicates that the PSC is able to direct the company's activities, while "influence" indicates that the PSC can ensure (in fact, rather than as a matter of legal right) that the company generally adopts the activities which the PSC desires.[97] As illustrations of the latter, the Guidance suggests that such influence could arise because the PSC owns intellectual property, or was the company's founder, or is indeed a shadow director.[98] If interests are held jointly, then the above tests are to be applied to each person as if each joint holder held the entire interest (Sch.1A regs 11, 12). The intended breadth is clear—the

goal is to identify exactly who is pulling the strings behind the corporate veil.[99]

Of course, this definition is so wide that it embraces those whose control or influence is far from sinister, and whose identity ought not to be necessarily revealed as a PSC. Thus the Guidance excludes parties who merely have the ability to exercise the usual veto rights given to all members to protect their personal interests (e.g. in amending the constitution, preventing share dilution, limiting corporate borrowing, or winding up the company). Similarly exempted are parties such as the company's professional advisers, third party suppliers etc., liquidators, the company's own managing director, and any non-executive directors with a casting vote.[100]

These inclusions and exclusions amply demonstrate the tightrope being walked in articulating a satisfactory and workable definition of PSCs.

2–45

Even with a watertight definition of a PSC, the next difficulty is how the company is to collect the information it is required to register. The company has a duty to gather the necessary information and keep it up to date (ss.790D, 790E), and the requested parties a corresponding duty to supply the information and keep it up to date (ss.790G, 790H), with the company and every officer or other party in default otherwise held to have committed an offence (s.790F, 790I and Sch.1B). The company's arm is strengthened, in that failure by an individual or legal entity to respond to the company's enquiries will give the company the ability (without a court order) to disenfranchise, and impose other restrictions on, any shares held by the individual.[101] The risk of misinformation is not insignificant, and the company is required to confirm all the details before they are registered (s.790M), although quite how this is to be done is not clear. In addition, given the possible risks associated with disclosing these details of significant corporate "control or influence", there are extensive provisions on protecting both information and individuals from relevant disclosures (s.790ZF, Sch.1A Ch.5).

2–46

Once the details have been gathered, the company must make its own PSC Register open to inspection by the public without charge (ss.790N, 790O),[102] or alternatively it may elect to have the register kept by Companies House for this purpose (s.790W). Access to the Register is not unrestricted, however. Those seeking inspection must provide their name, address and the purpose for which they seek access (ss.790O(4), with it being an offence to knowingly or recklessly mislead in this regard, or to pass on the information so gleaned to other parties—s.790R). It is easy to see that without this restriction, access might be abused, but at this distance it is difficult to predict quite which purposes the courts might regard as proper, other than searches by government agencies seeking evidence of identity when pursuing suspected illicit activities. We will see these "proper purpose" restrictions in operation in other contexts where access to registers is sought,[103] however, and here too the company is given a time-limited right to apply to court to seek an order that it need not make the requested disclosure (s.790P).

2–47

These provisions may seem unremarkable to those who are unfamiliar with the history of companies in the UK, but they represent one of the more radical departures from the status quo seen for some time.[104] No doubt they reflect the reality that companies can be used for evil as well as good, and the corporate form has to date provided an effective shield of anonymity behind which those in real control can hide. Perhaps these days there is in any event greater recognition that, even when the corporate activities are all for the good, companies wield such power and influence (over 95 per cent of businesses are run through companies) that it is perhaps as well to have some means of knowing who really lies behind the corporate structure.

Conclusion

2–48

The balance of advantage and disadvantage in relation to incorporation no doubt varies from one business context to another, at least as far as small firms are concerned; for large trading organisations, the arguments in favour of incorporation

are normally conclusive. This may reflect the firms' respective needs for expert centralised management and capital to finance their operations. For large firms the division between board and shareholders, transferable shares and the conferment of limited liability on the shareholders are helpful for the raising of capital. As for the large firm which does not have a large capital requirement, such as large professional firms, these have happily traded as partnerships in the past and were, indeed, often required to do so by the rules of the relevant profession, most of which have now been relaxed. Unlimited liability was seen as a badge of professional respectability. However, the threat of crippling damages awards for professional negligence led the accountancy profession in particular to press for an appropriate form of limited liability vehicle for the conduct of their businesses. As we saw in Ch.1,[105] this led to the creation of the limited liability partnership, which combines the limited liability of the company with the flat internal hierarchy of the partnership. However, where the large firm means also a need for a large amount of risk capital, the corporate form predominates.

The main policy issue, therefore, has been how far small firms should have easy access to the corporate form. Ever since the decision in *Salomon v Salomon*,[106] English law has leant in favour of not restricting access, and the Company Law Review endorsed that approach.[107] As we shall see in Pt 2, the issue is essentially about the access of small business to limited liability, since that feature of incorporation has a major potential impact on third parties who deal with the company, whilst separate legal personality, management under a board structure and transferable shares seem either benign, as far as third parties are concerned, or of concern only to those within the company.

---

[1] A company, even if it has only one member, is a "corporation aggregate" as opposed to the somewhat anomalous "corporation sole" in which an office, e.g. that of a bishop, is personified.

[2] *Salomon v Salomon* [1897] A.C. 22 HL.

[3] *Salomon v Salomon* [1897] A.C. 22 HL at 49, per Lord Macnaghten.

[4] *Salomon v Salomon* [1897] A.C. 22 HL at 31.

[5] *Salomon v Salomon* [1897] A.C. 22 HL at 51.

[6] For an early statutory recognition of the same principle, see the House of Commons (Disqualification) Act 1782, which disqualified those holding Government contracts from election to Parliament but expressly provided (s.3) that the prohibition did not extend to members of incorporated companies holding such contracts.

[7] See further Ch.8.

[8] See para.11–13. However, since Salomon was the only beneficial shareholder, it really mattered little to him whether he was issued with 20,000 or 10 shares in exchange for the business, for the value of the shares in aggregate (no matter how many or how few), would be the same, i.e. they represent the economic value (if any) of the business. However, independent valuation might protect creditors from being misled about the value of the assets contributed to the company, and also enable any new shareholders to ensure their relative financial inputs were reflected in the relative size of their shareholding.

[9] See below, Ch.21.

[10] Insolvency Act 1986 s.245. See para.32–14.

[11] But, in this particular case, Salomon seems to have been one of the victims rather than the villain of the piece for he had mortgaged his debentures and used the money to try to support the tottering company. However, the result would have been the same if he had not, and even if he had been the only creditor to receive anything from the business, which was "his" in fact though not in law.

[12] See para.5–2 and paras 5–23 et seq.

[13] Under what are now ss.423–425 of the Insolvency Act 1986.

[14] See, e.g. O. Kahn-Freund, "Some Reflections on Company Law Reform" in (1944) 7 M.L.R. 54 (a thought-provoking article still well worth study) in which it is described as a "calamitous decision". For a more positive assessment see D. Goddard, "Corporate Personality—Limited Recourse and its Limits" in R. Grantham and C. Rickett (eds) *Corporate Personality in the Twentieth Century* (Oxford: Hart Publishing, 1998). On the rationales for limited liability, see para.8–1.

[15] Although there are undoubtedly many who think that "Ltd" is an indication of size and stability (which "Plc" may be but "Ltd" certainly is not) rather than a warning of limited access to assets (i.e. access confined to the company's assets, however few, with no access to the shareholders').

[16] And in the House of Lords no sympathy was wasted on those who do not search the registers: "A creditor who will not take the trouble to use the means which the statute provides for enabling him to protect himself must bear the consequences of his own negligence": [1897] A.C. 22 at 40, per Lord Watson.

[35] "Shareholders are not, in the eye of the law, part owners of the undertaking. The undertaking is something different from the totality of the shareholdings": per Evershed LJ in *Short v Treasury Commissioners* [1948] 1 K.B. 116, 122 CA; affirmed [1948] A.C. 534 HL.

[36] R. Kraakman and H. Hansmann, "The Essential Role of Organizational Law" (2000) 110 Yale L.J. 387.

[37] As we saw above (para.1–3) this problem seems to have lain behind the former restriction of the number of partners to a maximum of 20.

[38] CPR 19.6, permitting representative actions. The provision is strictly interpreted: *Emerald Supplies Ltd v British Airways Plc* [2010] EWCA Civ 1284.

[39] "An unincorporated association has certain advantages when litigation is desired against them": per Scrutton LJ in *Bloom v National Federation of Discharged Soldiers* (1918) 35 T.L.R. 50, 51 CA.

[40] Insolvency Act 1986 s.84(1)(a) envisages that the period of the company's duration may be fixed in the articles, but this is rarely done in practice and, even if it were, the company would not automatically expire on the expiration of the term; the section provides that expiration of the term is a ground on which the members by ordinary resolution may wind the company up voluntarily. It is otherwise with chartered companies: see para.1–31, fn.89.

[41] cf. *Daimler Co v Continental Tyre and Rubber Co* [1916] 2 A.C. 307 HL.

[42] As Greer LJ said in *Stepney Corporation v Osofsky* [1937] 3 All E.R. 289 at 291 CA: a corporate body has "no soul to be saved or body to be kicked". This epigram is believed to be of considerable antiquity. G. Williams, *Criminal Law: The General Part*, 2nd edn (London: Steven & Sons), p.856, has traced it back to Lord Thurlow and an earlier variation to Coke, cf. the decree of Pope Innocent IV forbidding the excommunication of corporations because, having neither minds nor souls, they could not sin: see C.T. Carr, *The General Principles of the Law of Corporations* (Cambridge: CUP, 1905), p.73. In *Rolloswin Investments Ltd v Chromolit Portugal SARL* [1970] 1 W.L.R. 912 it was held that since a company was incapable of public worship it was not a "person" within the meaning of the Sunday Observance Act 1677 so that a contract made by it on a Sunday was not void (the court was unaware that before the case was heard the Act had been repealed by the Statute Law (Repeals) Act 1969).

[43] During the Second World War all the members of one private company, while in general meeting, were killed by a bomb. But the company survived; not even a nuclear bomb could have destroyed it. And see the Australian case of *Re Noel Tedman Holding Pty Ltd* (1967) Qd.R. 561 Qd Sup Ct where the only two members were killed in a road accident.

[44] And, in the absence of contrary agreement, as regards all the partners: Partnership Act 1890 s.33.

[45] Also see below, para.2–23.

[46] For an unsuccessful attempt to use the unfair prejudice provisions to secure the return to the shareholder's estates of the capital represented by his shares see *Re A Company* [1983] Ch. 178; and see also the explanation of this case in *Re A Company* [1986] B.C.L.C. 382 (para.20–8).

[47] See para.13–17.

[48] *Robson v Drummond* (1831) 2 B. & Ad. 303; cf. *British Waggon Co v Lea* (1880) 5 Q.B.D. 149.

[49] *Griffith v Tower Publishing Co* [1897] 1 Ch. 21 (publishing agreement held not assignable); *Kemp v Baerselman* [1906] 2 K.B. 604 CA (agreement not assignable if question of one party's obligation depends on the other's "personal requirements"), cf. *Tolhurst v Associated Portland Cement* [1902] 2 K.B. 660 CA.

[50] *Boulton v Jones* (1857) 2 H. & N. 564.

[51] See *Brace v Calder* [1895] 2 Q.B. 253 CA where the retirement of two partners was held to operate as the wrongful dismissal of a manager. And see also Partnership Act 1890 s.18. In practice such difficulties are often avoided by an implied novation.

[52] Of course, even in relation to companies this proposition applies only to companies limited by shares and not to guarantee companies.

[53] This assumes the member was, as a member, personally liable; this is not always the case. See above, para.2–7.

[54] Partnership Act 1890 s.31.

[55] Partnership Act 1890 s.24(7).

[56] Partnership Act 1890 s.17(2) and (3).

[57] Companies Act 2006 s.544. Subject only to a possible liability under ss.74 and 76 of the Insolvency Act 1986 if liquidation follows within a year and the shares were not fully paid up or were redeemed or purchased out of capital. On the latter see para.13–18.

[58] See para.25–15.

[59] In recent years the courts have shown a welcome tendency to recognise this functional reality in applying the legal rules to such incorporated partnerships: see especially *Ebrahimi v Westbourne Galleries Ltd* [1973] A.C. 360 HL. See below, Ch.20.

[60] See above, para.1–28 and below, Ch.15.

[62] For most people the investment is indirect, perhaps even not conscious, as in the case of contributions to occupational pension schemes.

[63] See above, fn.61 at p.284.

[65] Companies Act 2006 s.154.

[66] See below, Ch.14.

[67] See para.14–69.

[68] See below, Ch.16.

[69] Bankruptcy Act 1914 s.38(1)(c).

[70] This reform was a result of the Cork Committee (1982) Cmnd. 8558, Ch.23. Its repeal had been recommended in the Report of the Blagden Committee 25 years earlier: (1957) Cmnd.221.

[71] This was always accepted in relation to mortgages in the light of s.17 of the 1882 Act. It was later held, after an exhaustive review of the conflicting authorities, that both Acts apply only to individuals: *Slavenburg's Bank v International Natural Resources Ltd* [1980] 1 W.L.R. 1076.

[72] For some reason registration of a bill of sale against a tradesman destroys his credit, whereas registration of a debenture against a company does not. This can only be explained on the basis that the former is exceptional, whereas the latter is usual and familiarity has bred contempt.

[73] 1882 Act s.9. Nor could it cover future goods: see ss.5 and 6(2), ibid allows a limited power of replacement but not anything as fluid as a floating charge.

[74] Farmers can already do so under the Agricultural Credits Act 1928 which permits individuals to grant to banks floating charges over farming stock and agricultural assets and excludes the application of the former reputed ownership provision and the Bills of Sale Acts: see ss.5 and 8(1), (2) and (4). Farming stock and agricultural assets are more readily distinguishable from a farmer's other assets (than, say, the stock of an antique dealer who lives over his shop) thus meeting the difficulty referred to in the text.

[75] The implications of floating charges are discussed more fully below, in Ch.32.

[76] *Salomon v Salomon* [1897] A.C. 22 HL.

[77] The ability of the fixed and floating chargeholder to "scoop the pool" of the company's assets has now been restricted, after long debate, by the Enterprise Act 2002, which requires "a prescribed part" of the company's assets to be kept available for the unsecured creditors. See below, Ch.32.

[78] As noted, in the case of professional businesses the rules of the governing professional body may require the partnership form, though in fact many professional bodies have become more flexible on this issue in recent years.

[79] See Ch.20.

[80] Partnership Act 1890 s.1(1). Typically there is an agreement, but this can be written on a half-sheet of notepaper or be an informal oral agreement.

[81] See para.4–20.

[82] See para.11–8.

[83] See Chs 9 and 10.

[84] See paras 3–20 et seq.

[85] See para.32–26.

[86] See Chs 21 and 22.

[87] See Ch.15.

[88] Public filing is seen to be a quid pro quo of limited liability. Thus, unlimited companies are not required to file their accounts publicly (s.441) whereas the limited liability partnership (above, para.1–4) is subject to the publicity regime applied to companies: Limited Liability Partnerships Regulations 2001 (SI 2001/1090) Pt II.

[89] See Chs 21 and 22.

[90] Companies Act 2006 Pt 10 Ch.1 (directors) and Pt 8 Ch.2 (members); and below, Chs 14 and 24 respectively.

[91] The mechanics for achieving this objective are rather intricate. SBEEA 2015 inserts a substantial new Pt 21A (ss.790A–790ZG) and SCh.1A into the Companies Act 2006, and that is supplemented by Regulations and formal statutory Guidance. The new rules will apply to all UK companies, except those subject to the disclosure requirements of DTR 5 (e.g. LSE main market and AIM companies) (s.790C(7)), and legal entities with voting shares admitted to trading on a regulated market in an EEA state other than the UK, or in Japan, the USA, Switzerland and Israel (s.790C(7) and (draft) Regulations). This is because these companies are already required to make details of major shareholdings public. The provisions will also apply to LLPs and UK registered Societas Europaea (on the latter, see also art.9 of Regulation 2157/2001 EC of 8 October 2001). Generally, see *https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/486520/BIS-15-622-register-of-people-with-significant-control-consultation-response.pdf* [Accessed 29 January 2016]. The EU has also introduced similar measures in the Fourth Money Laundering Directive (EU 2015/849) which came into force on 25 June 2015 and must be implemented by all Members States by 26 June 2017.

The European Company 3–36

SOURCES

3–1

As far as domestic companies are concerned, the immediate sources of the rules applicable to them, and the hierarchy of those sources, are the ones familiar to students of other bodies of law. They are: primary legislation, secondary legislation, rule-making by legislatively recognised bodies, the common law of companies, and the company's own constitution (in particular, its articles of association). Of these, the last may perhaps appear unfamiliar, but students of contract law are used to idea that the rules applicable in any particular situation are as likely to be found in the terms of the parties' agreement as in legislative or common law rules, and students of trade union law or of the law of other types of association know that the particular association's rule-book is an important source of law, at least for its members. As to the third category, legislation may delegate to bodies outside the legislature the power to make rules relevant to companies. These bodies may themselves be agencies created by statute or they may be pre-existing bodies which the legislature recognises for the purposes of rule-making.

Finally, and standing outside the above hierarchy but with

links to it, there may be examples of "self-regulation" where the relevant rules have no legislative or common law foundation, but are nevertheless observed in practice, as a result of non-legal pressures, including the threat that government might intervene with legislation if the self-regulatory rules were not obeyed. Historically, the leading example of this phenomenon in our area was the City Panel on Takeovers and Mergers, and the Code it administers, but these were put on a statutory basis by the Companies Act 2006, implementing the Community Directive on takeovers, though its non-statutory methods of working have survived to a considerable extent.[1] Thus, self-regulation is a less obvious feature of company law than it used to be.

3–2

Whatever the source of the rule, one should also note that its content may be located on a spectrum running from "hard" to "soft". At the "hard" end, the obligation may be imposed by the rule without giving those to whom it applies any choice as to whether they comply with it (a "mandatory" rule). Moving along the spectrum, the rule may permit those to whom it prima facie applies to modify or remove the obligation. Such rules, conventionally called "default rules", are in fact quite common in company law. What is the function of such a rule, given that the parties themselves are apparently free to deprive it of regulatory force? Where the obligees can easily remove the obligation, the rule may nevertheless have the important function of relieving parties of the task of working out the best rule for themselves. In formulating the default rule, the legislature will have tried to identify the rule which most parties in the relevant situation would devise for themselves. Only if the particular parties want something different from that normally adopted will they have to go through the process of altering the rule. Thus, a number of provisions in the Act on shareholder meetings apply only "subject to any provision in the company's articles".[2] Since it is relatively easy for companies to make different provisions in their articles upon formation of the company or later, these provisions may be regarded as a pure type of default rule.

In other cases the procedure for amending the position produced by the default rule may be more demanding and the regulatory objectives of such a rule may also be more

sophisticated. For example, many rules relating to the duties of directors may be disapplied by the shareholders, by majority vote, either before or after the breach of duty.[3] The purpose of such a rule may be to induce the directors to bargain with the shareholders over the handling of conduct which would otherwise be in breach of duty. This rule contains a more demanding procedure because those upon whom the obligation is imposed (the directors) need to obtain the consent of another group of people within the company (the shareholders) for the modification of the rule, and are thus forced to disclose to the shareholders their actual or potential wrongdoing. Such a rule may be useful where the rule-maker cannot predict what the result should be in a particular class of case (otherwise it could use a mandatory rule) nor does it think it wise to leave it to the directors themselves to modify the rule (because of their conflict of interest).

Finally, the procedure for amending the rule may be so demanding that in practice little use is made of it. In such a case, it is doubtful whether the rule should be regarded as in substance a default rule. This may be true of the example given in the previous paragraph. Thus, if the only way in which directors can secure shareholder modification of the default rule is to call a meeting of the shareholders to discuss each case of breach of duty as it arises, then in a large company they may regard such a procedure as so cumbersome and unpredictable that they treat the default rule as in fact mandatory.[4] Whether they then choose to comply with it or to break the rule and hide the breach is a different question.

At the "soft" end of the spectrum are "rules" which are in fact only recommendations or exhortations. No sanction is attached to the breach of the rule. Each obligee decides for itself whether and how far to comply with the recommendation. A possible way of injecting some bite into recommendations is to put them on a "comply or explain basis". In this situation, the only formal obligation imposed by the rule is to explain publicly how far the recommendations have been complied with and the reasons for any areas of non-compliance. Such disclosure meets all the formal obligations of the rule, even if it shows that the recommendations have not been complied with at all, but

publicity may generate extra-legal pressures on the company to comply (or to comply more fully) with the recommendations. The primary example of such a mechanism in British company law is the UK Corporate Governance Code,[5] in relation to which a "comply or explain" obligation is imposed.

Primary legislation

3–3

The principal legislative source of rules is the Companies Act 2006, the latest in a line of Acts produced as the original legislation of the mid-nineteenth century has been reformed periodically. This latest effort involved the most comprehensive review of the area since company law's inception, and the resulting legislation is said to be the longest ever to be passed by Parliament.

The process began in 1998 with the then Secretary of State commissioning an independent review of company law.[6] This Company Law Review ("CLR") was carried out with the support of DTI civil servants, a Project Director, a permanent Steering Group[7] and Consultative Committee, and a series of ad hoc Working Groups.[8] The Steering Group produced a number of consultative documents, some very large, and a two-volume final report. In its Final Report it declared its aims to have been to produce a company law that was "primarily enabling or facilitative" and to "strip out regulation that is no longer necessary". This would not mean an absence of statutory law, for the framework of company law "should provide the necessary safeguards to allow people to deal with and invest in companies with confidence".[9]

The immediate response of the Government was enthusiastic, but developments were rather slow.[10] A Bill was finally introduced into Parliament in November 2005, received Royal Assent a year later, and was then phased in over a period of time, ending on 1 October 2009. The result is an Act of some 1,300 sections and 16 Schedules. This may seem an odd result for a legislative process aimed to be facilitative. Two points can be made in mitigation of its length. First, enabling legislation is not to be confused with the absence of statutory law: often confining law narrowly takes more statutory words than a sweeping

prohibition. Secondly, the Act is drafted in a lengthy way, paradoxically to make it more user-friendly. Few people read an Act from beginning to end. What they need to be able to do is to find quickly the provisions relevant to their problem. Setting out the provisions in a disaggregated form (for example, separate provisions for public and private companies on a particular topic, even if the provisions are similar) is helpful in that regard.

3–4

Other legislation is also important. Provisions relating to the insolvency of companies were hived off into an Insolvency Act of 1986, which also contains provisions dealing with the period before the company enters insolvency and intended to protect creditors in that period.[11] In the same year, a Financial Services Act (now replaced by the Financial Services and Markets Act 2000) took over the provisions relating to the public offering and listing of shares, and the 2000 Act has been modified subsequently to take account of the burgeoning EU law in this area.[12] These two examples illustrate perennial problems of classification. Should rules on the insolvency of companies go in a company law consolidation or an insolvency law consolidation; equally, should rules on share issues by companies go in a company law consolidation or a capital markets or securities law consolidation? There are arguments both ways, but it is the case that, functionally, important parts of the law relating to companies are not to be found in Acts which contain the word "company" in their title.[13]

Secondary legislation

3–5

One major difficulty attending legislation as long as the Companies Act is that a major commitment of parliamentary time by the- Government is required to get such legislation onto the statute books. Once there, ministers are likely to take the view that company law has had its turn for some while and will be reluctant to devote additional parliamentary time to proposals for its further reform. This can be a distinct disadvantage for those parts of the Act which relate to matters where the technical or economic context is changing rapidly and fairly frequent updating of the legislation would be desirable. One solution to

this problem is greater use of subordinate legislation, amending primary legislation but for which the process of parliamentary scrutiny is much reduced and which therefore is much less time-consuming.[14] The 2006 Act contains important examples of this technique in particular areas, for example, companies' accounts[15] or share capital,[16] both areas likely to be affected by changes occurring outside the UK (whether at EU or broader international levels) to which it was desirable for the Government to be able to respond quickly. The CLR proposed a general power to use secondary legislation to amend the Act, but this was dropped after opposition from Parliament.[17]

It is also the case that the EU obligations of the UK in relation to company law may be implemented by secondary legislation under general powers conferred by the European Communities Act 1972, which powers are not confined to the company law area. However, it is not absolutely clear how far this power extends beyond the minimum necessary to transpose, for example, a Directive into domestic law.

3–6

Although quicker to implement than primary legislation, secondary legislation suffers from two defects. The first is that the rules are subject to less democratic scrutiny than an Act of Parliament. For this reason, the Company Law Review, whilst proposing greater use of secondary legislation, also recommended that "the basic principles and architecture of the new framework would be set out in primary legislation".[18] The second is that secondary legislation may not be as expert as rules produced by rule-makers closer to the regulated, despite the conscientious consultation process in which the relevant Department engages before making secondary rules. This second defect can be overcome by delegation of law-making powers to a more expert body than the Department.

Delegated rule-making

The Financial Conduct Authority

3–7

A primary example of delegation beyond central government in

the current law is the rule-making power conferred upon the Financial Conduct Authority ("FCA"). The FCA makes three types of rules which are of particular interest to us. First, it took over from the Stock Exchange the long-standing and originally self-regulatory task of laying down Listing Rules ("LR") for companies whose securities have been entered onto the "official list".[19] In exercising this function, it is referred to as the UK Listing Authority ("UKLA"). Some of the EU obligations of the UK are implemented through the LR, but, as we have noted in Ch.1, they have also been used to promote purely domestic policies and thus to introduce for listed companies an additional set of core rules that are not applied to non-listed companies. It has also introduced further sets of rules—Prospectus Rules ("PR") and Disclosure and Transparency Rules ("DTR"). These are heavily driven by the need to transpose EU law in the UK, however, the transposition has had the further impact of shifting some topics from the companies legislation to the FCA's rules.[20] Here it is interesting that Parliament has proceeded with transposition not primarily by way of direct amendment of the FSMA, but by giving the FCA extended rule-making powers. Finally, it was required in the FSMA to produce a Code of Market Conduct ("MAR") to flesh out the meaning of the statutory prohibition on market abuse, which we consider in Ch.30.

3–8

In short, the FCA has power to issue elaborate sets of rules, without the need for formal approval by either Parliament or a Governmental Department.[21] The public interest is protected, however, by the statutory requirement to publish a statement of policy on the imposition of sanctions for breaches of the Rules.[22] Thus, although the FCA is a private company formed under the Companies Act, in fact a company limited by guarantee,[23] and is financed by a levy on those who engage in financial services business, it has extensive public functions and is itself subject to controls thought to be appropriate to a public body.

Financial Reporting Council

3–9

The second area where delegated rule-making is to be found on a

substantial scale in the present law is in relation to corporate governance, accounting standards, the accuracy of accounts, auditing standards and the regulation of auditors and accountants. This is an area where the Financial Reporting Council ("FRC") and its various subsidiaries are immensely important. Their functions were much enhanced as a result of reforms implemented in the UK in the wake of the Enron and related scandals in the US,[24] and the impact of their rule-making has grown further as a result of the 2008 financial crisis. These functions are analysed in Chs 21 and 22, and that analysis need not be anticipated here. What needs to be noted, however, is that, like the FCA, the FRC acquires its powers by way of delegation from the Secretary of State (who can therefore re-allocate them).[25] Like the FCA, the FRC and its subsidiaries are companies limited by guarantee, but its directors are appointed by the Secretary of State, so that the FRC, although more expert than a Government Department (and partly financed by those it regulates), is tied into the governmental machinery.

Common law

3–10

In spite of the bulk of the Companies Act and its satellite legislation, it does not contain a code of company law. The British Companies Acts have never aspired to lay down all the rules which sustain the core features of company law, as identified in the previous chapter. However, the 2006 Act goes further in that regard than previous Acts. The Law Commissions recommended that there should be a statutory statement of the common law duties of directors (though not of the remedies for breach)[26] and the English Law Commission that the law relating to the enforcement of those duties should be both reformed and stated in legislative form.[27] Both these sets of recommendations were broadly endorsed by the Company Law Review, and were included in the 2006 Act, thus effecting a major extension of statutory company law.[28]

Although these reforms significantly altered the balance between statute law and common law in company law, they may have a much less pronounced effect upon the role of the judges in developing company law. So far as directors' duties are

concerned, although the statutory statement largely replaces the existing common law and equitable rules, it is drafted as a relatively "high level" statement. Consequently, the pre-existing case law will remain relevant where the statement simply repeats, rather than reforms, the common law; and recourse throughout the statement to broad standards, rather than precise rules, means the judges will have an important role in developing and applying the standards, just as they have had in respect of those standards which were embodied in statute from the beginning.[29] Indeed, in performing this task, s.170(4) of the 2006 Act specifically, and uniquely for a UK statute, requires that "[t]he general duties shall be interpreted and applied in the same way as common law rules or equitable principles, and regard shall be had to the corresponding common law rules and equitable principles in interpreting and applying the general duties". As to the enforcement of these statutory directors' duties, the reform creates a greater judicial discretion to allow or refuse derivative actions, so that the judges are, if anything, more important under the Act than the prior common law.

Review and reform

3–11

It is clear that company law consists of a complex and diverse body of rules. Keeping this law under review is now, in the main, the task of the Department of Business, Innovation and Skills ("BIS"),[30] which is the Government Department currently responsible for company and insolvency law, among many other matters. As for financial services law, including public offerings of securities and their listing, the Treasury is the leading source of policy. As noted above, in recent years the Law Commissions (English and Scottish) have also played an important part in company law reform.

The Company Law Review, carried out by the DTI and referred to above, may be seen as the latest in a series of reviews of company law carried out by the various predecessors of BIS since the introduction of incorporation by registration in the middle of the nineteenth century. Its method of operation was rather different from that of its predecessors, however. They had consisted of small committees of enquiry which took formal

evidence but did not engage in widespread consultation; they also tended to concentrate on particular aspects of the subject thought to need reform, rather than upon a comprehensive review. The two most recent Committee reports of this older type which are still important for an understanding of the current law are the Jenkins[31] and Cohen[32] Committee reports (so referred to after the names of their chairmen).

3–12

In the long term, however, the CLR was unconvinced that ad hoc, periodic, comprehensive reviews of the type it had undertaken were the best way forward, because they depend so heavily upon governmental commitment to devote the necessary resources to the exercise. It recommended instead that a standing Company Law and Reporting Commission should have the remit of keeping company law under review and reporting annually to the Secretary of State its views on where, if anywhere, reform was needed. In addition, the Secretary of State would be obliged to consult the Commission on proposed secondary legislation.[33] In this way, it was hoped, company law reform would become a continuing and expert process, so that less weight would need to be placed on ad hoc, across-the-board reviews. This proposal was, however, rejected by the Government,[34] so the ad hoc approach remains the order of the day.

The Company's Constitution

The significance of the constitution

3–13

A remarkable feature of British company law is the extent to which it leaves regulation of the internal affairs of a company to the company itself through rules laid down in its constitution, in particular in its articles of association (which prescribe the regulations for the company[35]). In fact, the principle is that the articles may deal with any matter which is not, or to the extent that it is not, regulated through any of the sources mentioned above. This is not stated explicitly in the Act, but is rather an assumption upon which the Act is drafted, too obvious to be worth stating. However, the crucial point is not just the formal relationship between the articles and the other sources of

company law, especially the Act, but the extent to which substantive matters, central to the company's operation, are left to be regulated by the articles. Examples of important matters which are regulated mainly by the articles are the division of powers between the shareholders and the board of directors, and the composition, structure and operation of the board of directors.[36] Many jurisdictions regulate these matters through their companies legislation, rather than the company's constitution, and this is true of systems as otherwise different as those of Germany and the US.[37]

In the American case, it is true, the legislation often uses default rules, which can be changed by appropriate provisions in the company's constitution, so that, where this is the case, the shareholders can ultimately adopt the set of rules they want, as is the case in Britain. For example, para.8.01 of the Model Business Corporation Act gives a broad management power to the board of a US company, but allows the shareholders, in the constitution or by shareholder agreement, to cut down that provision if they wish and allocate decisions to themselves; whereas the directors of a British company have management powers only to the extent that they are given to the board by the articles (as, normally, they are, and the default model articles for all companies are in this form[38]). The ultimate practical division of powers between board and shareholders, in similar types of company, may thus be equivalent in the two countries despite their different starting points.

The German and, even, the American approach can be said to be based on the principle that the allocation of powers to the organs of the company is the result of a legislative act, even if, within limits, the shareholders may alter the initial legislative allocation. By contrast, since the shareholders control the constitution (see below), the British approach can be said to represent the view that the shareholders constitute the ultimate source of managerial authority within the company and that the directors obtain their powers by a process of delegation from the shareholders, albeit a delegation of a formal type which, so long as it lasts, may make the directors the central decision-making body on behalf of the company.[39] In each of these jurisdictions, however, the practical allocation of power ultimately depends on

the ease with which the default rules may be overridden.[40] If the shareholders agree to override the default rules at the time the company is formed, the barriers are often relatively low. On the other hand, if they only decide later that the legislative default rules (in the US) or the model articles (in the UK) should be amended, then the process is inevitably more complicated: issues of who is entitled to propose the necessary resolutions and call the necessary meetings (the directors or a shareholder), and what level of voting support is necessary to adopt the change (a simple majority or some sort of super majority) will, in practice, determine the ease with which changes can be effected.

Model articles of association

3–14

In the British scheme it is essential that a company have articles, and this is reflected in the provisions in the Act authorising the Secretary of State to promulgate model articles of association for companies of different types[41] and giving those statutory models default status.[42] This power is long standing, and from time to time lettered "tables" of model articles were issued under it, with those for companies limited by shares being invariably "Table A". Many companies still exist whose articles are based on the Table A of 1985 or the earlier one of 1948 or, conceivably, even earlier versions. The current statutory models are contained in the Companies (Model Articles) Regulations 2008/3229, and are applicable to companies incorporated on or after 1 October 2009. These new models are no longer denoted by lettered tables, and in addition, following the CLR,[43] there are now separate model articles for private and public companies limited by shares (previously Table A articles applied to both), and also for companies limited by guarantee.[44] Given the range of companies falling under the companies legislation, it is surprising that a single model set of articles for companies limited by shares was thought for so long to be adequate.[45]

3–15

When a limited company is formed, it will be treated as having adopted the relevant model articles, except to the extent that it chooses to have different articles, either in whole or in part.[46] This means that those registering the company could say

nothing, in which case the model will apply in full.[47] At the other extreme, they could expressly exclude the model entirely and adopt a set of articles which contains very different provisions. Typically, however, companies adopt an intermediate position, registering articles which adopt the default model subject to a list of specific amendments. Section 20(1)(b) suggests that choice may be expressed implicitly, by adopting articles which in one or more respects are inconsistent with the model, and then the model will apply to govern matters not dealt with by the company, i.e. the model performs a gap-filling role in such a case. This does mean that the full articles of the company can be established only through the laborious process of taking the model articles and applying the specified changes to it, which hardly amounts to a transparent exposition of the company's regulations. Any different approach—despite the requirement that the articles "must be contained in a single document"[48]—would, however, lose the crucial gap-filling role of the model articles mandated by s.20(1)(b).

The version of the model which is implied into the company's articles (unless excluded) is that which existed when the company was formed. The subsequent promulgation of a revised version of the model will not affect companies already registered, but only those registered in the future.[49] Hence the fact, noted above, that there are many companies in existence for whom the relevant model is Table A of 1948. For the practitioner, therefore, the replacement of one model by another is not a reason to forget the learning about former models.

Under the British structure the company cannot work effectively without fairly elaborate articles, and the models aim to supply that need for those who do not wish, or cannot afford, to work out their own internal regulations.

What constitutes the constitution?

3–16

Unlike its predecessors, the 2006 Act defines the company's constitution. The term includes the articles of association but is not limited to them. Also included are "any resolutions or agreements to which Chapter 3 [of Pt 3] applies".[50] Chapter 3 applies to special resolutions of the shareholders (whether passed

as such or by virtue of unanimous agreement among the members)[51]; any resolution or agreement of a class of members binding all the members of the class (for example, a resolution varying class rights)[52]; any unanimous resolution or agreement adopted by the members of a class provided that it would not otherwise be binding on them unless passed by a particular majority or in a particular manner; and any other resolution or agreement to which the chapter applies by virtue of any enactment.[53] In practice, the most important category is special resolutions of the shareholders. Given its much reduced legal status, it is not surprising that the memorandum of association no longer features as part of the company's constitution.[54]

3–17

As might be expected, shareholder agreements, considered below, are not generally regarded as part of the company's constitution; but that rule has one important exception, noted in passing here.[55]

The legal status of the constitution

3–18

The common law tends to classify the rule-books of associations, whether they are clubs, trade unions, friendly societies or other, as contractual in nature. The articles of association are no exception to this principle, though in this case the classification is done by the Act. Section 33 of the Act provides that "the provisions of the company's constitution bind the company and its members to the same extent as if there were covenants on the part of the company and of each member to observe it". The wording of this important section can be traced back, with variations, to the original Act of 1844.[56] What is clear, however, is that the articles constitute a rather particular form of contract, and the peculiarities of that contract need to be noted here.

(i) The parties to the contract

3–19

It is clear from the express statutory wording of s.33 that the articles constitute a contract between the company and each member. It is thus a multi-party contract, like many other

contracts found in the commercial world, and is enforceable by any one party against any other. This feature is commonly used when there is breach or threatened breach of articles which confer on members a right of pre-emption (or first refusal) when another member wishes to sell his shares,[57] or impose a duty on the remaining members or the directors to buy the shares of a retiring member (a less common provision).[58] What makes this contract different, as we shall see, is that not all of its provisions will be enforced in the courts.[59]

(ii) The contract as a public document

3–20

Although the articles of association have a contractual status, they are clearly more than a private bargain among the company and its members. The company's articles become a public document at the moment of formation, either because the relevant model articles, themselves a public document, will apply or because the company supplies to the registrar for public registration its own articles which amend or even fully replace the statutory model.[60] Publicity of the company's constitution has always been a requirement of British company law, and since 1968 is in any event a requirement of EU company law.[61] Thus, those who deal with the company have a legitimate expectation that the registered articles represent an accurate statement of the company's internal regulations.

3–21

Because of this special feature, the courts have concluded that standard contract law should apply to the articles only with certain qualifications. In particular, the courts are reluctant to apply to the statutory contract any contract law doctrines which might result in the articles being held to have a content substantially different from that which someone reading the registered documents would have understood them to have.

Thus, the Court of Appeal has held that articles cannot later be rectified to give effect to what the incorporators actually intended but failed to embody in the registered document, since the reader of the registered documents could have no way of guessing that any error had been made in transposing the

incorporators' agreement into the document.[62]

Equally, that Court has refused to imply terms into the statutory contract from extrinsic evidence of surrounding circumstances where that evidence would probably not be known to third parties who would thus have no basis for anticipating that any such implication was appropriate.[63]

Further, in this case Steyn LJ was of the view that for the same reasons the statutory contract "was not defeasible on the grounds of misrepresentation, common law mistake, mistake in equity, undue influence or duress".[64]

These decisions by the courts on the meaning of the company's constitutional documents support the policy underlying the statutory provision on the conclusiveness of the certificate of incorporation.[65] Both conduce to protection of third parties by enabling the third party to rely on what he or she finds upon a search of the public registry.[66]

3–22

However, the policy behind these cases is somewhat undermined by those decisions which have allowed the doctrine of informal, unanimous shareholder consent to be applied to changes to the company's constitution. Under this doctrine, which is discussed further in Ch.15, decisions taken informally by shareholders will nevertheless be effective, if taken unanimously. Although the Act requires informal resolutions altering the articles to be communicated to the Registrar,[67] the informality alone means this is unlikely to happen, and then the registered constitution will no longer reflect the actual set of articles.[68] Failure to inform the registrar is a criminal offence and may attract civil penalties, but the validity of the alteration appears not to be affected by non-compliance.[69]

(iii) Limits to the provisions which can be enforced: only rights "as a member"

3–23

The standard answer to the question, at common law, of who can enforce a contract is: the parties to the contract.[70] Since it is members who are party to the contract with the company, it

follows that non-members cannot enforce the contract, even if they are intimately involved with the company, for example, as directors. Suppose, however, a person is both a member of the company and one of its directors. Can he or she enforce rights conferred by the articles, even if that right is conferred upon the claimant in his or her capacity as director of the company? The answer appears to be in the negative. The decisions have constantly affirmed that the section confers contractual effect on a provision in the articles only in so far as it affords rights on a member "qua member", or as a member.[71] As Astbury J said in the *Hickman* case[72]:

> "An outsider to whom rights purport to be given by the articles in his capacity as such outsider, whether he is or subsequently becomes a member, cannot sue on those articles, treating them as contracts between himself and the company, to enforce those rights."

The same applies to the contract between the members inter se.[73]

On the wording of the section it would be difficult to interpret it as creating a contract with anyone other than the company and the members. Furthermore, there is perhaps sense in restricting the ambit of the section to matters concerning the affairs of the company, although the Act itself is not explicitly worded restrictively. The question is whether it is justified to restrict the statutory wording still further, so that it applies only to matters concerning a member in his capacity of member.[74] As a consequence of this interpretation, a promoter, who becomes a member, cannot enforce a provision that the company shall reimburse the expenses he or she incurred[75] nor a solicitor, who becomes a member, a provision that he or she shall be the company's solicitor.[76] More important, this approach to the section apparently prevents a member who is also a director or other officer of the company from enforcing any rights purporting to be conferred by the articles on directors or officers. Only if he or she has a separate contract, extraneous to the articles, will the director have contractual rights and obligations vis-à-vis the company or fellow members. For this reason, executive directors will be careful to enter into service contracts with their company (into which it is entirely permissible to incorporate provisions from the articles of association)[77] in order to safeguard their remuneration, and non-executive directors would be well advised to do so also.[78]

3–24

It is somewhat anomalous to treat directors as "outsiders" since for most purposes the law treats them as the paradigm "insiders" (which members, as such, are not) and they will breach their fiduciary duties and duties of care if they do not act in accordance with the company's constitution.[79] It also produces some strange results. *Hickman*'s case concerned a provision in the articles stating that any dispute between the company and a member should be referred to arbitration and this was enforced as a contract. But in the later case of *Beattie v Beattie Ltd*,[80] where there was a similar provision, the Court of Appeal, relying on the dictum in *Hickman*, held that a dispute between a company and a director (who was a member) was not subject to the provision because the dispute was admittedly in relation to the director qua director. In the still later case of *Rayfield v Hands*,[81] the articles of a private company provided that a member intending to transfer his shares should give notice to the directors "who will take the said shares equally between them at a fair value". A member gave notice but the directors refused to buy. Vaisey J felt able to hold that the provision was concerned with the relationship between the member and the directors as members and ordered them to buy.[82]

3–25

However, academic argument has been made to the effect that the *Hickman* principle can be side-stepped, in most or all cases, by the identification of an appropriate membership right. In 1957, Lord Wedderburn, in his seminal article on *Foss v Harbottle*,[83] pointed out that, in *Quinn & Axtens Ltd v Salmon*,[84] the Court of Appeal and the House of Lords allowed a managing director, suing as a member, to obtain an injunction restraining the company from completing transactions entered into in breach of the company's articles which provided that the consent of the two managing directors was required in relation to such transactions. This, in effect, showed that a member had a membership right to require the company to act in accordance with its articles, which right could be enforced by the member even though the result was indirectly to protect a right which was afforded to him as director. If this is correct, the supposed principle, that there is a statutory contract between the company

and its members only in respect of matters affecting members qua members, is effectively outflanked—and, if so, whether it can then still apply to the statutory contact between members inter se seems debatable.[85]

3–26

Despite the criticisms which can be levelled against the *Hickman* principle, when the Company Law Review consulted on the question of whether this aspect of the Act required reform,[86] a positive response was not forthcoming and the recommendation from the CLR was accordingly to leave the law as it is.[87] Perhaps this indicates that, although the *Hickman* principle may not be wholly desirable, the costs of contracting around it are not high. Consequently, practice has accommodated itself to the rule. On the other hand, when the common law of privity of contract was reformed, it is perhaps easier to understand why there was no pressure to change the current rule to one which would permit *non*-members to enforce rights in their favour contained in the articles.[88]

(iv) Further limits to the provisions which can be enforced: not mere procedural irregularities

3–27

Although the Company Law Review was content to let the "member qua member" aspect of the statutory contract remain undisturbed, the same cannot be said of a related aspect of the contract with which we must deal. Even though a member sues as a member and even though he or she sues to enforce a provision in the articles which appears to confer a right on the member, he or she may nevertheless be defeated by the argument that the provision does not confer a personal right on the member but creates only an obligation on the company, breach of which constitutes "a mere internal irregularity" on the company's part. The consequence of the categorisation of the breach of the articles as an internal irregularity is that the decision whether to sue to enforce the provision is a matter for the shareholders collectively, whereas personal rights, not surprisingly, can be enforced by individual shareholders.

The issue has tended to arise particularly in relation to those

provisions dealing with the convening and conduct of meetings of shareholders or the selection of members of the board. These are areas where there are statutory provisions, but they are of a limited nature and much is left to be regulated in the company's articles.[89] If, for example, the chairman of a shareholders' meeting acts in breach of the provisions of the articles governing meetings, is that an infringement of the shareholders' personal rights or a mere internal irregularity? There are a number of decisions of the courts over the past 150 years putting such breaches in one category or the other, but it is difficult to discern the principled basis on which the classification was carried out. The importance, if not the nature, of the distinction is shown by two ultimately irreconcilable cases from the 1870s, *MacDougall v Gardiner*[90] and *Pender v Lushington.*[91] In the former the decision of the chairman of the shareholders' meeting wrongfully (i.e. in breach of the articles) to refuse a request for a poll was held to be an internal irregularity, whilst in the latter the refusal of a chairman to recognise the votes attached to shares held by nominee shareholders was held to infringe their personal rights. Each decision has spawned a line of equally irreconcilable authorities. In truth, there is a conflict here between proper recognition of the contractual nature of the company's constitution and the traditional policy of non-interference by the courts in the internal affairs of companies.

3–28

As Smith has suggested,[92] ultimately the only satisfactory solution is to choose which policy is to have priority. Moreover, it is surely clear today that it ought to be the former. It can hardly be argued in modern law that it is an example of excessive interference by the courts to hold a company (or any other association) to the procedures which it itself has adopted in its constitution for its internal decision-making (until such time as it decides to change those internal rules according to the procedures set down for that to occur).[93] Indeed, it might even be suggested that effective protection of this procedural entitlement of members is basic to any satisfactory system of company law.[94]

3–29

Part of the confusion may have arisen because of a failure to appreciate that the same situation may give rise to wrongs both by and against the company, and the individual shareholder's position will vary according to which wrong he seeks to redress. Thus, the chairman of a shareholders' meeting who breaches the relevant provisions of the articles may both put the company in breach of its contract with the members and him- or herself be in breach of duty to the company for not observing the provisions. An analogy is provided by the decision in *Taylor v NUM (Derbyshire Area)*.[95] The plaintiff successfully sued his trade union[96] in a personal capacity to obtain an injunction restraining the officials of the union from continuing a strike which it was a breach of the union's rule-book (in fact, beyond its capacity) to conduct, but failed in his claim for an order requiring the same officials to restore to the union the funds already expended on the strike, because he did not have standing to bring a derivative action on behalf of the union.[97] The same analysis may often be applicable to breaches of the articles.[98] In other words, the company may be regarded as breaching its contract with the member if it seeks to act upon a resolution improperly passed and should be restrainable by the member, but for the loss (say the wasted costs of organising the meeting) caused to the company by the chair of the meeting in not conducting it in accordance with the company's regulations, the company is the proper plaintiff.[99]

3–30

An alternative line of attack on the above decisions might be provided by the general membership right, postulated by Professor Wedderburn and noted above, to have the affairs of the company conducted in accordance with the articles, for that right was also put forward by him as a personal right. Consequently, this general right, if recognised by the courts or the legislature, would defeat both the "outsider right" argument and the "mere internal irregularity" argument against shareholder enforcement of the articles of association. After some hesitation, the Company Law Review decided to take a bold approach which amounted, in effect, to the acceptance of Professor Wedderburn's argument, at least on the matter of the range of provisions enforceable by the member as member. All duties

imposed in favour of members under the constitution should be enforceable by individual shareholders.[100] In principle, if the company acted in breach of such duties, then the member would be able to bring an action to enforce the company's rule-book. Or the member would be able to sue another member if the obligation was laid by the articles on that member. This would not mean that every breach of the articles by a corporate officer would entitle each shareholder to sue the company for damages. Damages would be an available remedy only if the shareholder personally[101] had suffered loss as a result of the breach. In the case of a breach of procedure in the conduct of a meeting, a remedy other than damages might well be more appropriate, for example, an injunction preventing the company from acting on an improperly passed resolution. In other cases no remedy at all might be ordered. If the breach of procedure had been purely technical and it was clear that the resolution would have been passed even if the correct procedure had been followed, the court should not grant any remedy at all and might even award costs against the complainant shareholder. This proposal was subject to one qualification: it would be possible for the shareholders to opt, by an appropriate provision included therein, for some or all of the articles not to be enforceable. In such a case, the relevant articles would not be enforceable as a contract,[102] even if they would be under the current law. Thus, general contractual enforcement of the articles would be the default rule, and in any case it should be clear which articles were enforceable and which not.

However, the 2006 Act does not take up this proposal and so the uncertainties of the case law, discussed above, remain.

(v) Altering the contract

3–31

It is crucial that the articles, as part of the constitution of an ongoing organisation, be capable of amendment from time to time. Section 21 expressly provides that "a company may amend its articles by special resolution".[103] Thus, a member enters into a contract on terms which are alterable by the other party (the company, acting through the shareholders collectively),[104] rather in the same way as a member of a club agrees to be bound by the

club rules as validly altered from time to time by the members as a whole, or a worker agrees to be employed on the terms of a collective agreement as varied from time to time by the employer and trade union. That a majority of the members should normally be able to alter the articles by following a prescribed procedure and thus alter for the future the contractual rights and obligations of individual shareholders is hardly surprising. It reflects the fact that the company is an association and that some process of collective decision-making is needed, in relation to its constitution, if it is to be able to adapt to changing circumstances in the business environment. The alternative would be constitutional change only with the consent of each individual shareholder, which would be very difficult to obtain in many cases and which would give unscrupulous individuals golden opportunities for disruptive behaviour.

3–32

On the other hand, the ability of the majority to bind the minority through decisions which alter the articles of the company creates the potential for opportunistic behaviour on the part of the majority towards the minority. As we shall see in Chs 19 and 20, company law has developed some general standards which address this problem, which arises in all situations where the majority may bind the minority, whether the matter at issue is an amendment to the articles or not.

Here we need note only two particular restrictions on the majority's power to alter the articles. One is highly precise. The consent of the individual member is required if he or she is to be bound by an alteration which requires members to subscribe for further shares in the company or which increases liability to contribute to the company's share capital or pay money to the company.[105]

The other restriction is of a procedural nature and enables the shareholders to contract around the principle of majority rule for alteration of the articles. The normal rule is that the company cannot contract out of its power to alter the articles.[106] However, s.22 enables the shareholders to "entrench" provisions of the company's constitution, i.e. to make them capable of amendment or repeal "only if conditions are met, or procedures complied

with, that are more restrictive than those applicable in the case of a special resolution."[107] Those additional restrictions may not make the articles completely unalterable[108]—probably a wise provision, because even a member who insists on such a provision may subsequently change his or her mind. However, amendment or repeal could be made conditional on the consent of a particular member or a higher percentage of the members than a special resolution requires. Entrenched status can be conferred upon provisions in the articles either upon the formation of the company or subsequently, but in the latter case only with the unanimous consent of the members.[109] The registrar must be given notice of the adoption of entrenchment provisions and of their removal[110]; and the company must certify compliance with the entrenchment provisions whenever it alters its articles.[111] Thus, the principle that the constitution of the company can be altered by a three-quarters majority of the members can in fact be set aside by using the entrenchment provisions, though for most companies it would be unwise to do so on a significant scale.[112]

Shareholder Agreements

3–33

The freedom of the shareholders to fashion the company's constitution facilitates the input of a significant element of "private ordering" into the rules governing the company, but the articles of association are not the only method whereby the shareholders can generate their own rules for the governance of their affairs. An alternative method is an agreement, concluded among some or all the shareholders, but existing outside and separate from the articles and to which the company itself may or may not be a party. Such an agreement is not normally treated as part of the constitution of the company, though it may have an effect which is rather similar to a provision in the articles, and so there are exceptions to this general rule.[113]

3–34

The main advantages of the shareholder agreement over the articles are that the agreement is a private document which does not have to be registered at Companies House and that it derives its contractual force from the normal principles of contract law

and not from the Act, so that the limitations discussed above on the statutory contract do not to apply to shareholder agreements.

3–35

The main disadvantages are that the shareholder agreement does not automatically bind new members of the company, as the articles do.[114] A new member of the company will not be bound by the agreement unless that person assents to it and so the shareholder agreement may not continue to bind all the members. Securing the assent of new members may or may not be easy to bring about. Nor does the Act provide an overriding mechanism for majority alteration to the shareholder agreement. The parties to that agreement may provide such a mechanism, but if they do not do so, then, under normal contractual rules, the consent of each party to the agreement would be necessary to effect a change. In addition, the protection provided by such an agreement may be more limited than supposed, since remedies for breach may be restricted to damages rather than an order for specific performance, and indeed the company cannot agree to be bound in matters which are contrary to the Companies Act. In short, a shareholder agreement displays both the advantages and disadvantages of private contracting.

We discuss shareholder agreements and other methods of protecting minority shareholders, such as the issue of shares with special rights attached to them, in Ch.19.

The European Company

3–36

As far as the European Company is concerned, a hierarchy of sources of rules is set out in the European Company Statute.[115] The primary source of rules for the SE is EU law, as one would expect, in the shape of the European Company Statute, which applies directly in the Member States without the need for transposition, which a Directive requires.[116] The second source of law for the SE is its own statutes (or constitution or articles of association, as we might term them), but only to the extent that the Regulation expressly permits the SE through its statutes to regulate a particular matter. In fact, some highly significant choices are expressly given by the Regulation to the SE, to be

made through its statutes, for example, the choice between a one-tier and a two-tier board.[117] However, as we noted in Ch.1,[118] the European Regulation does not aim to provide a comprehensive code of company law for the SE. Much is referred to the law of the state in which the SE is registered, and so domestic law becomes an important source of rules for the SE. The Regulation contemplates two types of domestic law as being relevant. The third source is thus domestic law passed specifically in order to embed the Regulation in the domestic company law or to exercise choices conferred by the SE Statute on the Member States in relation to the SE.[119] For example, Member States may, but need not, lay down rules about the maximum and minimum number of members of a one-tier board (if the SE chooses this system of governance)[120] or a Member State may reduce below 10 per cent the figure for the proportion of shareholders who are entitled to insist that an item be added to the agenda of a meeting of the SE's shareholders.[121]

However, the more important domestic (and fourth) source of rules for the SE is likely to be the rules applying to public companies in the jurisdiction of registration. These rules will apply to the SE automatically and without the need for special national implementing legislation. Often, the SE Statute says in relation to a particular subject-matter that these domestic rules shall apply (for example, in relation to the legal capital of the SE),[122] but this is declared generally to be the principle in relation to matters not governed, or to the extent not governed, by the regulation itself.[123] Thus, much of the law governing domestic public companies limited by shares will apply to the SE. Indeed, the main interest of the SE as a legal form can be said to lie in those relatively limited areas where the domestic rules are trumped by rules emanating from EU law and the EU rules are significantly different from those which domestic law applies to its public companies,[124] and it is on those aspects that the later chapters in this book will concentrate. An obvious example is the requirement for the domestic legislature to make a two-tier board model of governance available for the SE to take up, if it so wishes.

The final source of rules for the SE under the regulation brings the statutes of the SE back into the picture once again.

They are a source of law "in the same way as for a public limited-liability formed in accordance with the law of the Member State in which the SE has its registered office".[125] As we have seen, the domestic law makes the articles a major source for the rules governing the internal affairs of the public company, and this will be the case also for the SE, except to the extent that the regulation itself has occupied ground which the domestic company law leaves to the articles of association. This will probably mean that the statutes of a British-registered SE will be an important source of rules, but a less important source than for a domestic public company, because Title III of the regulation governs the structure of the European Company (board of directors and shareholders' meeting) more extensively than does the Companies Act or the common law in relation to a domestic company.

However, the EU rules relating to the SE are not to be found wholly in the regulation. The crucial issue of employee involvement in the SE[126] is dealt with at EU level by a Directive.[127] Directives do require transposition into domestic law. Moreover, if the Directive is properly transposed, the domestic law becomes the source of obligation in the national legal system, not the Directive. Consequently, the employee involvement Directive, despite the importance of its subject-matter, has no greater impact on the sources of domestic company law than do any of the many other EC Directives which have played a part in shaping modern British company law,[128] and so it need not be considered further here.

[44] The model for private companies limited by shares is in Sch.1, and that for public companies in Sch.3. The model for private companies limited by guarantee is in Sch.2.

[45] Probably the facility of company formation agents in developing their own standard model articles for different classes of company met much of the need in practice.

[46] 2006 Act s.20(1). This presumption applies whatever the type of limited company. By contrast, s.8(2) of CA 1985 created a default only in the case of companies limited by shares.

[47] 2006 Act s.20(1)(a)—unless there is no model prescribed, in which case it must register articles of association: s.18(2).

[48] 2006 Act s.18(3)(a).

[49] 2006 Act s.20(2).

[50] 2006 Act s.17.

[51] See paras 15–15 and 15–44.

[52] See Ch.19. This could be an ordinary resolution of the class, if it binds all the members of the class.

[53] 2006 Act s.29.

[54] For the residual function of the memorandum, see para.4–5.

[55] They are included as part of the constitution for the purposes of s.40: see s.40(3)(b) and para.7–14.

[56] The current provision makes explicit the fact that the company too is bound by the rules (important in giving members rights against the company). Practitioners had long treated earlier versions of the articles as binding between member and company despite the statutory wording making no reference to the company, although on the basis of only a first instance authority: *Hickman v Kent or Romney Marsh Sheepbreeders Association* [1915] 1 Ch. 881. The treatment of the articles as a deed has also been removed from the current section, thus removing the consequence that a debt owed by the member to the company was a "specialty" debt, with its special limitation period, rather than an ordinary one. Contrast s.14(2) of CA 1985 and s.33(2) of CA 2006; and cf. *Re Compania de Electridad de Buenos Aires* [1980] Ch. 146 at 187.

[57] *Borland's Trustee v Steel* [1901] 1 Ch. 279 (member seeking declaration that rights of pre-emption in articles were valid); cf. *Lyle & Scott v Scott's Trustees* [1959] A.C. 763 HL; and see para.27–7.

[58] *Rayfield v Hands* [1960] Ch. 1, where Vaisey J was prepared to make an order in effect for specific performance.

[59] See below, paras 3–23 to 3–30.

[60] 2006 Act ss.9(5)(b) and 14.

[61] Directive 68/151/EEC [1968] O.J. 41 art.2(1)(b).

[62] *Scott v Frank F. Scott (London) Ltd* [1940] Ch. 794 CA.

[63] *Bratton Seymour Service Co Ltd v Oxborough* [1992] B.C.L.C. 693 CA. In this case the majority were in effect seeking to avoid the prohibition on alterations to the constitution without individual shareholder consent which have the effect of increasing the shareholder's financial liability to the company (see s.25 and below, para.19–1). See also *Towcester Racecourse Co Ltd v Racecourse Association Ltd* [2003] 1 B.C.L.C. 260, where, in any event, the judge regarded the suggested implied terms as inconsistent with the express terms of the articles. But contrast *AG v Belize Telecom* [2009] B.C.C. 433, where the extrinsic evidence was known to the third parties. See also *Re Coroin Ltd* [2011] EWHC 3466 (Ch) (affirmed [2012] B.C.C. 575), where the court was prepared to admit the shareholder agreement pursuant to which the articles were adopted as extrinsic evidence.

[64] *Bratton Seymour Service Co Ltd v Oxborough* [1992] B.C.L.C. 693 at 698 CA. On the other hand, investor protection was not inconsistent with the implication of terms based on the construction of the language used in the articles, for here the basis of the implication was available to those who read the company's constitution.

[65] See below, para.4–7.

[66] A further and important restriction on the remedies available in respect of breaches of the corporate constitution, namely the supposed rule that damages were not available to a shareholder in an action against his company so long as he remained a member, seems to have been removed by what is now s.655, originally inserted by the 1989 Act.

[67] 2006 Act ss.29 and 30. And see below, para.15–15.

[68] *Cane v Jones* [1980] 1 W.L.R. 1451; *Re Home Treat Ltd* [1991] B.C.L.C. 705.

[69] 2006 Act ss.26 and 27.

[70] The Contracts (Rights of Third Parties) Act 1999 does not apply to the company's constitution: s.6(2) of that Act.

[71] While this restriction on the types of *rights* which can be enforced is well-supported by precedent (even if difficult to explain), it is less clear whether the restriction also limits enforcement to those provisions which impose *obligations on a member* "as a member". It seems not: see *Rayfield v Hands* [1960] Ch. 1, where the provision concerned the liabilities of members qua directors; and *Lion Mutual Marine Insurance v Tucker* (1883) 12 Q.B.D. 176 CA, where the provision concerned the liabilities of members qua insurers.

[72] *Hickman v Kent or Romney Marsh Sheepbreeders' Association* [1915] 1 Ch. 881 at 897.

[73] *London Sack & Bag Co v Dixon & Lugton* [1943] 2 All E.R. 763 CA.

[74] The *Hickman* case may reflect the high regard in which the courts then held the doctrine of privity of contract.

[75] *Re English & Colonial Produce Co* [1906] 2 Ch. 435.

[76] *Eley v Positive Life Association* (1876) 1 Ex. D. 88 CA.

[77] Relatively little is needed for the court to conclude that the articles have been incorporated into the service contract, but there must be something: see *Globalink Telecommunications Ltd v Wilmbury Ltd* [2003] 1 B.C.L.C. 145.

[78] On directors' contracts see Ch.14.

[79] 2006 Act s.171. See paras 16–24 et seq.

[80] *Beattie v Beattie Ltd* [1938] Ch. 708 CA.

[81] *Rayfield v Hands* [1960] Ch. 1.

[82] What he would have held had one of the directors not been a member is unclear.

[84] *Quinn & Axtens Ltd v Salmon* [1909] 1 Ch. 311 CA; affirmed [1909] A.C. 442 HL. For subsequent dicta in support of this view see, e.g. *Re Harmer Ltd* [1959] 1 W.L.R. 62 at 85 and 89 CA; *Re Richmond Gate Property Co* [1965] 1 W.L.R. 335 (see (1965) 28 M.L.R. 347 and (1966) 29 M.L.R. 608 at 612); *Hogg v Cramphorn* [1967] Ch. 254; *Bamford v Bamford* [1970] Ch. 212; *Re Sherbourn Park Residents Co Ltd* (1986) 2 B.C.C. 99 at 528; *Breckland Group Holdings v London & Suffolk Properties* [1989] B.C.L.C. 100 (see (1989) 52 M.L.R. 401 at 407–408); *Guinness Plc v Saunders* [1990] 2 A.C. 663 HL; *Wise v USDAW* [1996] I.C.R. 691 at 702.

[85] For subsequent academic discussion of the principle, see Goldberg in (1972) 33 M.L.R. 362; Prentice in (1980) 1 Co. Law 179; Gregory in (1981) 44 M.L.R. 526; Goldberg (replying) in (1985) 48 M.L.R. 121; Drury in [1989] C.L.J. 219; and Worthington, (2000) 116 L.Q.R. 638.

[86] Formation, paras 2.6–2.8.

[87] Completing, paras 5.66–5.67.

[88] See above, fn.70.

[89] See Chs 14 and 15, below.

[90] *MacDougall v Gardiner* (1875) 1 Ch.D. 13.

[91] *Pender v Lushington* (1877) 6 Ch.D. 70.

[92] R.J. Smith, "Minority Shareholders and Corporate Irregularities" (1978) M.L.R. 147.

[93] This argument would lack force only if, as is *not* usually the case for companies or, indeed, most associations, the procedure for amending the rules on how decisions are to be taken was the same as the one for taking substantive decisions.

[94] Such a statement would surely be regarded as uncontroversial if made in relation to trade union law. cf. O. Kahn-Freund, *Kahn-Freund's Labour and the Law*, 3rd edn (Stevens, 1983), pp.286 et seq. The courts do not lack techniques for dealing with members whose complaints are purely "technical", i.e. where it is clear that the same result would have been arrived at even if the proper procedure had been followed: *Harben v Phillips* [1974] 1 W.L.R. 638.

[95] *Taylor v NUM (Derbyshire Area)* [1985] B.C.L.C. 237. For the application of the distinction between personal and derivative actions to companies in an ultra vires context, see *Moseley v Koffyfontein Mines* [1911] 1 Ch. 73 CA.

[96] To which this distinction between personal rights and mere internal irregularities also applies.

[97] See Ch.17 for a discussion of derivative actions in relation to companies.

[98] But note *Devlin v Slough Estates Ltd* [1983] B.C.L.C. 497, refusing to recognise that the particular article in question, relating to the preparation of the company's accounts, conferred a right upon individual shareholders (as contrasted with "the company").

[99] There is some suggestion in the language used in *MacDougall v Gardiner* and *Pender v Lushington* (see above, fnn.90 and 91), respectively, that the decisions are to be explained on the basis that the two courts simply fastened on two different legal aspects of a single situation.

[100] Completing, para.5.73; Final Report I, paras 7.34–7.40.

[101] On the crucial distinction between corporate and individual loss, see para.17–34.

[102] Though they could still be used as the basis for an unfair prejudice remedy: see Ch.20, below. That remedy today is probably the mechanism by which complaints of breaches of the articles are most often litigated.

[103] Changes in the articles must be notified to the registrar: s.26. In the case of charitable companies the power to amend the articles is subject to the requirement of the charities legislation operating in the three UK jurisdictions: s.21(2), (3).

[104] *Shuttleworth v Cox Bros & Co (Maidenhead) Ltd* [1927] 2 K.B. 9 at 26 CA, per Atkin LJ; *Malleson v National Insurance and Guarantee Corp* [1894] 1 Ch. 200 at 205, per North J.

[105] 2006 Act s.25(1).

[106] On the impact of this principle on contracts outside the articles, see paras 19–25 et seq.

[107] Under the prior law, entrenchment could be achieved by placing the provision in the memorandum of association and subjecting it to restrictive alteration conditions—and

the prior law did seem to permit making a provision unalterable in any circumstances (other than a court order). See CA 1985 s.17(2)(b). The new scheme follows that proposed by the CLR: Formation, para.2.27.

[108] 2006 Act s.22(3)(a) expressly provides that entrenchment cannot prevent alteration by agreement of all the members.

[109] 2006 Act s.22(2). On formation all the subscribers in effect agree to the contents of the articles and subsequent members join on the basis of what those articles provide.

[110] 2006 Act s.23.

[111] 2006 Act s.24.

[112] The entrenchment provisions can be overridden by a court order: s.22(3)(b), (4). See, for example, ss.899–901 and Ch.29.

[113] Shareholder agreements are included within the meaning of the constitution of the company for the purposes of s.40: see s.40(3)(b) and para.7–14.

[114] 2006 Act s.33(1) says that the articles bind the company and the members, meaning those who at any one time are the members of the company.

[115] Council Regulation 2157/2001/EC art.9.

[116] However, since the provisions on worker involvement in the SE are contained in a Directive, which needs transposition, the Regulation applies in the Member States only together with the national provisions transposing the Directive. For the UK see European Public Limited-Liability Company Regulations (SI 2004/2326) Pt 3 (hereafter European Company Regulations).

[117] Regulation 2157/2001/EC art.38. See further below, para.14–64.

[118] See above, para.1–40.

[119] See the European Company Regulations Pt 4 (exercising options) and Pts 2 and 5–7 doing various types of “embedding”.

[120] SE Statute art.43(2).

[121] SE Statute art.56.

[122] SE Statute art.5.

[123] SE Statute arts 9(1)(c) and 10.

[124] Of course, some of the mandatory rules to be found in the Regulation may in fact track the domestic rules with perhaps minor changes.

[125] Reg.2157/2001/EC art.9(1)(c)(iii).

[126] See further below, Ch.14.

[127] Directive 2002/14/EC [2002] O.J. L80/29.

[128] Discussed generally in Ch.6.

CHAPTER 4

FORMATION PROCEDURES

Formation of Different Types of Company	4–1
Statutory companies	4–2
Chartered companies	4–3
Registered companies	4–4
Forming a Company by Registration	4–5
Registration documents	4–5
Certificate of incorporation	4–7
Purchase of a shelf-company	4–9
Choice of Type of Registered Company	4–10
Choice of Company Name	4–13
Warning the public about limited liability or other status	4–14
Prohibition on illegal or offensive names	4–16
Names requiring special approval	4–17
Prohibition on using a name already allocated	4–18
Restrictions on use of a defunct company's name—phoenix companies	4–19
Use of a business name other than the corporate name	4–20
Mandatory and Elective Name Changes	4–22
Requirements to change a name	4–23
Passing off actions	4–25
Company names adjudicators	4–27
Company's election to change its name	4–30
Effect of a name change	4–31
Choice of Appropriate Articles	4–32
Challenging the Certificate of Incorporation	4–34
Commencement of Business	4–38
Re-Registration of an Existing Company	4–39
(i) Private company becoming public	4–40
(ii) Public company becoming private limited company	4–41
(iii) Private or public limited company becoming unlimited	4–43
(iv) Unlimited company becoming a private limited company	4–45
(v) Becoming or ceasing to be a community interest company	4–46
Conclusion	4–47

FORMATION OF DIFFERENT TYPES OF COMPANY

4–1

As noted earlier,[1] there are three basic types of domestic incorporated company—statutory, chartered and registered—and

the formation rules vary fundamentally as between each type. The last class, the class of registered companies, includes both companies registered by the Registrar of Companies under the Companies Act 2006 and Charitable Incorporated Organisations ("CIOs") registered by the Charity Commissioners under the Charities Act 2011.[2] In this chapter the focus is on companies registered under the Companies Act, for these are overwhelmingly the most common and important types of companies. Recall that this category includes public companies (limited by shares) and private companies (whether limited by shares, by guarantee, or unlimited), and also the special corporate forms (community interest companies ("CICs", limited by shares or by guarantee),[3] and European Companies ("SEs")[4]). Formation of these registered companies is briefly compared with the less common alternatives.

Statutory companies

4–2

These are formed by the passing of a Private Act of Parliament, especially where an enterprise is required for public purposes or requires special powers (e.g. to compulsorily purchase land for public utilities). The procedure is that generally applicable to Private Bill legislation. In practice the work is monopolised by a few firms of solicitors who specialise as parliamentary agents and by a handful of counsel at the parliamentary bar. The numbers of such Acts and supporting specialist practitioners are dwindling, given the move first to nationalisation and now to privatisation, both of which are achieved under Public Acts.

Chartered companies

4–3

The creation of new chartered trading companies is now unlikely, but the grant of charters to charitable or public bodies is not uncommon. The procedure in such cases is for the promoters of the body to petition the Crown (through the office of the Lord President of the Council) praying for the grant of a charter, a draft of which is normally annexed to the petition. If the petition is granted the promoters and their successors then become:

> "one body corporate and politic by the name of—and by that name shall and may sue or be sued plead and be impleaded in all courts whether of law or equity…and shall have perpetual succession and a common seal."

Sometimes a charter will be granted to the members of an existing guarantee company registered under the Companies Acts in which event the assets of the company will be transferred to the new chartered body and the company wound up unless the Registrar can be persuaded to exercise his power to strike it off the register, thus avoiding the expense of a formal liquidation.[5]

Registered companies

4–4

Today, the vast majority of companies, whatever their objects, are formed by registration under the Companies Act 2006 Pt 2. The rest of this chapter is concerned with that registration process, the decisions which have to be made to implement it, and its immediate consequences.

The Act allocates specific functions to the Registrar of Companies and to the Secretary of State, with such powers typically exercised by their authorised delegates.[6] For example, most of the powers described in this chapter are exercised by Companies House, which is an executive agency of the Department of Business, Innovation and Skills ("BIS").

For ease of explanation, those forming a company (the "promoters") are referred to as if they were natural persons, though this need not be the case: an existing company is equally capably of forming a new company. Indeed, this is common practice, since all but the smallest businesses are carried on by corporate groups rather than single companies.[7]

Forming a Company by Registration

Registration documents

4–5

In order to form a registered company,[8] the promoters must deliver certain documents to the Registrar of Companies and pay a registration fee.[9] Listing these documents helps identify the various decisions which promoters must take even earlier, before registration is possible. In addition, and perhaps surprisingly, the

Companies Act is explicit that a company cannot be formed for unlawful purposes.[10] The documents which must be registered are:

(i) A memorandum of association in prescribed form indicating that those whose names are subscribed to the memorandum wish to form a company and become its initial members.[11]

(ii) An application for registration, stating[12]:

(a) The company's proposed name.[13]

(b) Whether the company's registered office is to be in England and Wales, Wales, Scotland or Northern Ireland,[14] and its address.[15]

(c) Whether the liability of the members is to be limited and, if so, whether by shares or guarantee.[16] In the latter case a statement of guarantee must be part of the application[17] and that must state the amount which each member of the company agrees to contribute to the company on its winding up[18] and it must contain the names and addresses of each of the subscribers to the memorandum (who, of course, become its first members).[19]

In the case of a company having a share capital[20] a statement of capital and initial shareholdings must be part of the application.[21] This must give particulars of the nominal value of and amount paid up on the shares taken by the subscribers on formation (both in aggregate and individually).[22]

(d) Whether the company is to be public or private.[23]

(e) A statement of the proposed officers of the company,[24] meaning its first directors and secretary (if any[25]), and containing a statement by the subscribers that each person named has consented to act.[26]

(f) A statement of initial significant control,[27] meaning particulars of persons or legal entities who are considered to exercise significant control over the company on incorporation.[28] This includes persons or legal entities holding 25 per cent of the shares or voting rights in the company, those who have the right to appoint or remove a

majority of the board of directors, and those who have the right to exercise, or actually exercise, significant influence or control over the company.[29]

(iii) A copy of the proposed articles of association, to the extent that these are not supplied by the default model articles.[30]

(iv) A statement of compliance, which the Registrar may accept as sufficient evidence that the requirements of the Act have been complied with.[31]

4–6

Only if the company is to be a community interest company will something more be required. First, in order to meet the restrictions which the 2004 Act places on such companies, especially in relation to the distribution of assets, the company's articles must include the provisions set out in the appropriate Schedule to the Community Interest Company Regulations 2005.[32] Further, the company may only be registered as a CIC if the Regulator accepts that its objectives constitute the furtherance of a community interest. The promoters must provide the Registrar with a "community interest statement", being a document signed by each person who is to be a first director of the company declaring that the company will carry on its activities in order to benefit the community and indicating how the company's activities will benefit the community.[33] Only if the Regulator concludes that the community interest test is met will the Registrar register the company as a CIC.[34] This test is rather open-ended—"a company satisfies the community interest test if a reasonable person might consider that its activities are being carried on for the benefit of the community"[35]—and so there may be some scope for debate about its application and for appeals from the Regulator to the Appeal Officer.[36]

Certificate of incorporation

4–7

In itself none of this is very demanding, although it disguises a number of crucial decisions that the promoters must take, as described below. If Companies House is satisfied that the registration requirements have been met, then it must register the company,[37] allocate the company a "registered number",[38] and

provide the company with a certificate of incorporation[39] which is conclusive evidence that the requirements of the Act have been met and that the company is duly registered under the Act.[40] This is so even if the registration had been procured by fraud.[41]

4–8

The effect of incorporation is that "the subscribers to the memorandum, together with such other persons as may from time to time become members of the company, are a body corporate by the name stated in the certificate of incorporation".[42] Further, the subscribers to the memorandum become the holders of the shares specified in the statement of capital and the directors and secretary (if any) named in the statement of proposed officers are appointed to their offices.[43]

Challenging the issue of a certificate of incorporation is difficult, as discussed below.[44]

Purchase of a shelf-company

4–9

The majority of new companies are formed by specialist company formation experts.[45] Historically, these agents ran their businesses by registering large numbers of companies and holding them ready to sell "off the shelf" to promoters who wanted to incorporate rapidly. The agents themselves (and persons associated with them) were the original subscribers, first members and officers of the company, and the promoters then simply purchased the shares, voted in new officers, changed the company name and registered office, and reported all these amendments to Companies House. Now, however, with electronic registration, company formation agents can meet promoters' specific requests very quickly and directly without the use of shelf companies.

Choice of Type of Registered Company

4–10

One of the earliest decisions taken by the promoters is resolving which of the several types of registered company they wish to form, since this will certainly affect the contents of the

documents required to be registered.

First, they must choose between a limited and an unlimited company.[46] Both are fully liable to their creditors; the distinction refers to the extent of the members' liability (to their company, not directly to their company's creditors[47]) to meet the company's liability for its debts. In an unlimited company, the members will ultimately be personally liable (jointly, severally and to an unlimited extent) for the company's debts in the event of the company's formal liquidation. For this reason promoters are likely to steer away from this form, especially if the company intends to trade. If the company is merely to hold land or investments, however, then the absence of limited liability may not matter and may confer certain advantages, for example, as regards returning capital[48] to the members and avoiding the need for public disclosure of the company's financial position[49]; the absence of limited liability may also render the company more acceptable in certain circles (for example, the turf).

If the promoters decide upon a limited company, they must then make up their minds whether it is to be limited by shares or by guarantee. As already explained,[50] this is largely determined by the purpose for which the company has been formed, and only if it is to be a non-profit-making concern are they likely to form a guarantee company, which is especially suited to a body of that type.

4–11

Overlapping these distinctions, but closely bound up with them, is the further point of whether or not the company should have a share capital. If, as is most probable, the company is to be limited by shares this question does not arise. Likewise, if it is to be limited by guarantee.[51] But if the company is unlimited it may or may not have its capital divided into shares. Once more, the decision is dependent on the company's purpose: if the company is intended to make and distribute profits, share capital will be appropriate.

The promoters will further have to make up their minds whether the company is to be public or private. As noted earlier,[52] public and private companies essentially fulfil different economic purposes: the former to raise capital from the public to

run the corporate enterprise, the latter to confer a separate legal personality on the business of a single trader or a partnership. Once again, therefore, the choice will in practice be clear-cut, and normally it will be to form a private company. The incorporators may have the ultimate ambition of "going public", but rarely will they be in a position to do so immediately. If, however, they are, then the company will have to be a company limited by shares, the certificate of incorporation will have to state that it is to be a public company, special requirements as to its registration will have to be complied with,[53] and it must comply with prescribed minimum capital requirements.[54] Any other type of company will, perforce, be a private company.

4–12

Finally, and again cutting across the above distinctions, is the question of whether the company's objectives are to be restricted to charitable purposes so as to make it a charitable company.[55] Moreover, since 2004 it has been possible for a limited company to be formed as a "community interest company" under the provisions of Pt 2 of the Companies (Audit, Investigations and Community Enterprise) Act 2004. Such companies must have the pursuit of a community interest as their objective (but need not be legal charities) and their articles must contain restrictions on the payment of dividends and, generally, on the transfer of corporate assets other than for full consideration.[56]

In practice, the vast majority of companies formed are private companies limited by shares which are neither charitable nor community interest companies.[57]

Choice of Company Name

4–13

The incorporators must decide on a suitable name.[58] This identifies the artificial person,[59] describes its status as a limited public or private company,[60] and over time becomes the name associated with the reputation and goodwill of the company. Given the importance of a company's name, there are rules governing the choice of names (including their length[61]), their mandatory publicity,[62] their protection from abuse, and their alteration.[63]

Warning the public about limited liability or other status

4–14

If the company is a limited company, its name must end with the prescribed warning suffix—"limited" (or "Ltd") if it is a private company, or "public limited company" (or "Plc") if it is a public one.[64] The purpose of this requirement is to warn a person dealing with the company that it is a body with limited liability, though whether it is very effective in this regard is another matter.

In addition, the name must not include, except at the end, any use of "public limited company", "community interest company" or "community interest public limited company" or their abbreviations or Welsh equivalents; and the company may not use "limited" or "unlimited" (or their abbreviations or Welsh equivalents) anywhere in the name, unless the company is in fact a limited or unlimited company.[65] This is done primarily to prevent any blurring of the warnings implied by "Ltd" or "Plc".[66]

4–15

The Act provides some narrow exemptions to the above rules requiring a private limited company to have "limited" at the end of its name.[67] Charitable companies are exempted from the requirement.[68] The Names Regulations are slightly wider, exempting a company limited by guarantee and engaged in "the promotion of commerce, art, science, education, religion, charity or any profession", the articles of which require its income to be devoted to the promotion of these objects, forbid the payment of dividends or any return of capital to members and require its assets on a winding-up to be transferred to a body with like objects or to a charity.[69] In effect, the exemption is available to charitable companies or those with public interest objectives which cannot be used as vehicles for making a profit for their members. Finally, certain companies are exempted under the "grandfather" provision applying to companies which were exempted from the requirement under earlier rules.[70]

Prohibition on illegal or offensive names

4–16

More important than what the name must contain is what it must not. Certain expressions are banned. If, in the opinion of the Secretary of State, the name is such that its use would constitute a criminal offence or be "offensive", it cannot be adopted.[71]

Names requiring special approval

4–17

Certain names may be adopted only with the express approval of the Secretary of State. These are names which would be likely to give the impression that the company is connected in any way with the Government, a local authority or other specified public authority.[72] Further regulations specify other sensitive words or expressions for which approval is required; the current regulations list approximately 130 such words.[73] In both cases, the Secretary of State is empowered to require the person asking for permission to seek comments from the government department or other body which is thought to have an interest in the matter and, in particular, to ask that body whether it objects and, if so, why.[74] The relevant regulations generally specify the body which has to be invited to object.[75] When a request is made, the application for registration must contain a statement that the body has been asked and a copy of any response.[76]

Prohibition on using a name already allocated

4–18

The name must not be the same as any name already on the Registrar's index of names.[77] This is likely to present the severest obstacle because there are over two million names on that index. It is an index not just of names of companies incorporated under the 2006 or earlier Companies Acts but also of unregistered companies, overseas companies which have registered particulars in the UK, limited liability partnerships, limited partnerships, European Economic Interest Groupings registered in the UK, open-ended investment companies and registered societies under the Co-operative and Community Benefit Societies Act 2014.[78] Certain differences are to be disregarded when judging whether a name is the same and

certain expressions are to be treated as the same,[79] thus expanding the scope of the prohibition. Hence a Smith, Jones, Brown or Davies who has carried on an unincorporated business under his or her name may have difficulty in finding an available way of continuing to use that name on incorporating the business.[80]

There is, however, power to permit registration of a name that would otherwise be prohibited where the company seeking registration is part of the same group as the body already registered with the same name and the body already registered agrees to the registration of the new company.[81] Because of the requirement that the two bodies with the same name be part of the same group, the risk of confusion of the public is reduced[82] and the consent required of the body already registered serves to protect its interests.

Restrictions on use of a defunct company's name—phoenix companies

4–19

The restrictions just noted do not prevent a company adopting the name of a defunct company. However, a person who was a director or shadow director of a company that went into insolvent liquidation must not be a director of or take part in the management of a company with the same or a similar name for the next five years.[83] Breach of this prohibition attracts both civil and criminal liability.

Use of a business name other than the corporate name

4–20

Both companies and individuals may conduct their businesses under their corporate or individual names.[84] They may also adopt "business names" (or "trading names"), but the choice of such names, whether by companies or individuals, is now subject to broadly all the same restrictions and permissions as corporate names.[85] In relation to the business name, however, the convenient administrative sanction of refusing to register a company with a non-compliant name is not available, since

unincorporated businesses do not need to be registered in order to carry on business. Consequently, contravention of the rules on business names is made a criminal offence.[86] In addition, the unincorporated business will have to observe the provisions of Ch.2 of Pt 41, regarding disclosure of the identity of the proprietors, which are the equivalent of the trading disclosure rules applied to companies.[87] However, there is nothing in Pt 41 which empowers the Secretary of State or an adjudicator to direct the change of a business name because it is the same as, or too like, the name of an existing business, corporate or incorporate.

4–21

It will, therefore, be apparent that it may be difficult to find a name acceptable to both the incorporators and the Registrar and Secretary of State. But until it is achieved, it will be impossible to complete the documents required to obtain registration and unsafe to order the stationery which the company will need once it is registered. We have never introduced a system, comparable to that in some other common law countries, whereby a name can be reserved for a prescribed period. Prior to 1981, however, it was possible and usual to write to the Registrar submitting a name (or two or three alternative names) and asking if it was available. If the reply was affirmative it was usually safe to proceed so long as one did so promptly. Now, however, the incorporators or their professional advisers have to search the index[88] and make up their own minds.

Mandatory and Elective Name Changes

4–22

Even if the promoters do secure registration of their company under a particular name they cannot be certain that they will not be forced to change it. The Secretary of State has power to direct the company to change its name in certain circumstances. Alternatively, a name change may be required following a successful application to the company names adjudicator or to the courts (in a passing off action), arguing that the chosen name either exploits or damages the goodwill or reputation of another business. Finally, the company may, of course, choose to change its own name.

Requirements to change a name

4–23

The Secretary of State may require a company to change its name if the company is no longer exempted from the requirement to include “limited” in its name[89];or if the name harmfully misleads the public as to the company’s activities[90]; or if the company provided misleading information or gave unfulfilled undertakings in order to be registered with the chosen name[91]; or if the name is “the same as, or in the opinion of the Secretary of State, too like[92]…a name appearing at the time of registration in the registrar’s index of company names…or which should have appeared in that index at the time”.[93]

This last option enables the correction of errors made in complying with the non-discretionary prohibition on using a name that is the same as an existing company name[94] (either because the name had not then been entered on the index or because the fact that it was the same as that of the new company had escaped detection). More interestingly, and unlike the other provisions, it also gives the Secretary of State a slightly broader discretion to direct a name change where the company has not simply breached the non-discretionary rules on names, but has a name that, while not the “same as” an existing company name, is “too like”, and therefore might cause confusion in the minds of the public.[95] The existing company does not have to prove likely damage to its business goodwill, as is required in a passing off action (see below), but this statutory route is only open for 12 months. After that, it might be thought that the new company, too, is likely to have acquired goodwill in its name and will suffer loss if it is later required to change it, so the complainant should then be put to the more stringent tests of a passing off action.

4–24

Note, however, that the power given to the Secretary of State is to direct the company to act to change its name, not to direct the Registrar to amend the register.[96] The company may change its name by special resolution or by other procedures specified in its articles[97] (or by resolution of the directors if the direction relates to the exemption from using the word “limited”[98]). In every case,

the company and each of its officers commits an offence if the Secretary of State's direction is not complied with.

Passing off actions

4–25

The directed name changes just noted deal with a company's failure to comply with the statutory requirements in relation to company names (with the added discretion in relation to names which are "too like" existing names). But the complaint is more typically that the chosen name meets all these statutory requirements, but is deceptively similar to an existing company's name, with both companies carrying on the same of type of business (broadly defined[99]), so that the newer company is, in effect, cashing in on the reputation of the first and appropriating its goodwill and connection. The claim in such circumstances is for the tort of passing off. The newer company will be liable in damages and may be restrained by injunction. The practical effect of such an injunction is that the offending company must either change its name[100] or dissolve itself.[101] Intention to pass off is irrelevant.[102] A similar claim can be advanced for use of another's registered trade mark.[103]

4–26

More recently, the courts have also been alert to pre-emptive strikes, whereby entrepreneurs register companies with names which existing traders or famous people may want to use in the future, and then demand inflated sums for the sale of these registered companies to the named individuals. The wrong is seen as an abuse of the registration process,[104] or the creation of potential instruments of fraud[105] (being names which can be used for passing off, although this is rarely the objective of the initial registrant).

Company names adjudicators

4–27

A passing-off action requires the claimant company to demonstrate that the new company's choice of name presents a serious threat to the claimant's business. The Company Law Review, which thought the law on names broadly satisfactory,

was attracted by the idea that there should be a new statutory basis for ordering a name change, namely, that the registration constituted an abuse of the registration process (along the lines of the expanded tort claim, noted above).[106]

The Act sets up a new procedure whereby a person (including another company) may apply to a company names adjudicator,[107] apparently at any time, for an order that a company's name must be changed because it is either the same as a name associated with the applicant and in which the applicant has goodwill or it is sufficiently similar to such a name that its use in the UK would be likely to mislead by suggesting a connection between the respondent company and the applicant.[108] The mechanism thus aids the applicant in protecting its goodwill in a name. If either condition is made out, then the applicant will succeed unless the respondent company can bring itself within one of five categories.[109]

The first is that its name was registered before the commencement of the activities upon which the applicant relies to show goodwill. This does not necessarily mean the respondent has to have been registered first. For example, the applicant may have been registered first but may have remained dormant until after the respondent was registered, and in such a case the respondent would be able to bring itself within this category.

The second is that the respondent company is operating under the name, or has formerly operated under it and is now dormant, or is proposing to operate under it and has incurred substantial start-up costs. This is an important defence for the respondent because it means that operating under the name (or even incurring substantial costs in preparation for so doing) protects the respondent (subject to the qualification set out below) against the requirement to change its name.

Thirdly, the respondent shows that the name was registered in the ordinary course of a company formation business and is available for sale to the applicant on the standard terms of that business. In this case the applicant can solve its problem by simply buying the respondent company for a modest sum.

The fourth category is that the respondent acted in good faith and the fifth that the interests of the applicant have not been

affected to any significant extent. In the first three cases, however, the applicant will succeed in any event if it shows that the respondent's main purpose was to obtain money or other benefits from the applicant or to prevent the applicant from registering the name.[110] Thus, beginning to operate will not protect the respondent from the applicant's challenge if the main purpose of the respondent's activity was to extort a large sum of money from the applicant in exchange for giving up its rights to the name.

4–28

If the adjudicator upholds the complaint, an order must be made requiring the respondent to change its name to an acceptable one and to take all steps within its power to achieve that end, including not forming another company with a similar offending name.[111] The adjudicator's order may be enforced in the same way as an order of the High Court (or decree of the Court of Session)[112] and, if the name is not changed by the respondent within the specified time, the adjudicator can effect the change.[113] There is an appeal to a court from the adjudicator's decision.[114]

4–29

Even if the applicant fails under this statutory procedure, a common law claim in passing off remains open. Indeed, the statutory defences effectively demarcate the circumstances in which the additional hurdles imposed in advancing a successful common law claim are seen as warranted (see especially the second and fourth defences, which exempt from the statutory procedure occasions which do not of themselves suggest the respondent is abusing the registration process, but which may nevertheless fall foul of the tort of passing off).

Company's election to change its name

4–30

As noted earlier, a company may, in general, change its name by special resolution or by other procedures specified in its articles.[115] If the change also reflects a change in the company's status (from private to public, for example), then additional rules apply, as described below.[116]

Effect of a name change

4–31

On a change of name, whether voluntarily or because of a direction,[117] the Registrar must be notified and will enter the new name on the register in place of the old and issue an amended certificate of incorporation.[118] The change is effective from the date on which that certificate is issued.[119] But the company remains the same corporate body and the change does not affect any of its rights or obligations or render defective any legal proceedings by or against it.[120]

Choice of Appropriate Articles

4–32

The next decisions relate to the company's constitution, especially the company's articles of association. As noted in the previous chapter, the company's articles are especially important because they, not the general law, provide many of the rules governing the internal operation of the company. The legislature has provided model versions,[121] and the promoters must determine the extent to which the appropriate model is ousted or adopted (whether explicitly or by default).[122] Company formation agents normally have their own standard forms, which formally exclude the model altogether, though these standard forms are themselves typically developed from the statutory model and its predecessors. The other extreme, the option of not registering any articles and relying entirely on the model,[123] is rarely chosen because most companies will wish to define their own rules. For example, the model articles for private companies limited by shares give the directors a discretion to refuse to register share transfers,[124] but the incorporators are likely to want more elaborate provisions, such as ones requiring the shares to be offered to existing shareholders if a member wishes to sell.

4–33

A significant change under the 2006 Act was the downgrading to a vestigial role of the memorandum of association, which, under the procedures introduced in the early days of modern company law, had contained the most important information about the

company and had, originally, been largely unalterable after the registration of the company.[125] Under the 2006 Act the memorandum, which must still be delivered to the Registrar as a necessary step in the formation process,[126] simply has to state that the subscribers to it (of whom there need only be one)[127] wish to form a company under the Act and agree to become members of the company upon its formation and, in the case of a company having a share capital, agree to take at least one share each.[128] The memorandum has to be authenticated by each subscriber,[129] the Registrar being empowered to specify the method of authentication, but not in such a way as to impede electronic delivery of the memorandum (and the other registration documents) to the Registrar.[130]

Challenging the Certificate of Incorporation

4–34

The functions of the Registrar in deciding whether or not to register the company are administrative, rather than judicial, but a refusal to register can be challenged by judicial review, albeit with scant hope of success.[131] Normally, the registration of a company cannot be challenged because of the conclusive effect of the certificate. This, happily, has rendered English company law virtually immune from the problems arising from defectively incorporated companies which have plagued the US and many continental countries.[132] But the decided cases on s.15(4) (or its predecessors under earlier Acts), and the review of them by the Court of Appeal[133] in a case concerning the then comparable provision relating to a certificate of registration of a charge on a company's property, show that this immunity is not complete.

4–35

Since s.15 and its predecessors in earlier Companies Acts are not expressed to bind the Crown, the Attorney-General can apply to the court and may obtain certiorari to quash the registration.[134] This was successfully done in *R. v Registrar of Companies, Ex p. HM's Attorney-General*,[135] where a prostitute had succeeded in incorporating her business under the name of "Lindi St Claire (Personal Services) Ltd" (the Registrar having rejected her first preference of "Prostitutes Ltd" or "Hookers Ltd" and shown no enthusiasm for "Lindi St Claire (French Lessons) Ltd") and, with

scrupulous frankness, she specified its primary object in the constitution as being "to carry on the business of prostitution".[136] The court, on judicial review at the instance of the Attorney-General, quashed the registration on the ground that the stated business was unlawful as contrary to public policy.[137] It is unlikely, however, that the Attorney-General (or any other Crown servant) will take action unless public policy is thought to be involved and will not do so if all that has occurred is a technical breach of the formalities of incorporation.

4–36

Nevertheless, there is one other situation in which the certificate does not seem to be conclusive of valid incorporation. This results from what is now s.10(3) of the Trade Union and Labour Relations (Consolidation) Act 1992 (repeating similar provisions in earlier Acts) which declares that the registration of a trade union under the Companies Acts shall be void. In the past, parties other than the Crown have been held entitled to rely on this; for example, as a defence to a claim by a registered company whose objects make it a trade union. The reported cases[138] related to earlier versions of what is now s.15(4), which were less comprehensive and which were not thought to cover substantive matters but only ministerial acts leading to registration.[139] Hence, it seems doubtful that they would be followed today. However, the researches of Mr Drury[140] have unearthed a more recent example of a company's removal from the register because its objects made it a trade union. The company in question was one formed by junior hospital doctors to represent their interests. It was later realised that its objects made it a trade union within the statutory definition. The Department of Trade took the view that the labour law provision overrode what is now s.15(4) of the Companies Act and accordingly the Registrar removed the company from the register for "void registration".[141] This, apparently, was done without any court order[142] and without challenge by the doctors. Presumably this action by the Registrar could be regarded as having been taken on behalf of the Crown and as the correction of a mistake which he, or one of his predecessors, had made and therefore as rectifiable.[143]

4–37

Hence, it now seems probable, but not certain, that in no circumstances can anyone other than the Crown plead the nullity of a registered company unless and until it has been removed from the register as a result of action by or on behalf of the Crown. Removal as a result of that action is tantamount to a declaration that it never existed as a corporate body. This is not likely to be a satisfactory outcome if it has in fact been carrying on business under the guise of what both its members and its creditors believed to be a registered company; it should be wound up[144] rather than declared never to have existed.[145]

Commencement of Business

4–38

From the date of registration mentioned in the certificate of incorporation, the company, if it is a private company, becomes "capable of exercising all the functions of an incorporated company".[146] However, it may choose not to do so. Indeed, in the case of a shelf company it is inherent in the arrangement that the company will remain dormant and begin trading only some time after registration. In the case of a public company, there is in any event a further legal obstacle to its beginning trading. It needs to obtain a further certificate from the Registrar (a "trading certificate") certifying that the amount of its allotted share capital is not less than the required minimum.[147] Without it, the public company must not do business or exercise any borrowing powers unless it has re-registered as a private company. The certificate of trading is "conclusive evidence that the company is entitled to do business and exercise any borrowing powers".[148] However, by analogy with the decisions referred to above in relation to the certificate of incorporation, it appears that, as this section is not expressed to bind the Crown, the Registrar's decision could be quashed on judicial review at the instance of the Attorney-General. This, in contrast with quashing registration, would not have the undesirable effect of nullifying the incorporation. A more likely course, however, would be for the Secretary of State, if he had grounds for suspecting that the share capital had not been properly allotted, to institute an investigation[149] and, if his suspicions proved well-founded, petition the court to wind up the company under ss.124 or 124A

of the Insolvency Act.

Re-Registration of an Existing Company

4–39

A company may, at some stage, wish to convert itself into a company of a different type. In most cases it may do this without the expense of effecting a complete re-organisation of the types referred to in Ch.29, below, and without having to form a brand new company. The circumstances and methods whereby conversions may be achieved are now collected together in Pt 7 of the Act (although, as not every possible option is covered, some conversions may have to be done in two steps).

(i) Private company becoming public

4–40

Under ss.90–96 a private company limited by shares can become re-registered as a public company, by passing a special resolution that it should be so re-registered, satisfying three conditions and then making an application to the Registrar.[150] The three conditions all relate to the legal capital rules which apply in a much more onerous way to public than to private companies. In brief they are, first, that the nominal value of the company's allotted share capital must be not less than the authorised minimum (currently £50,000) and the associated rules as to the payment for those shares must have been met.[151] Secondly, the company must produce unqualified recent accounts which show, as certified by the auditor, that its net assets (assets less liabilities) are not less than the aggregate of its called-up share capital and undistributable reserves.[152] Although there is no precisely equivalent rule applying to public companies on formation, this will be the factual situation before a company formed as public begins to trade.[153] Thirdly, if the company allots shares in the period after the accounts just mentioned were drawn up and before the special resolution is passed and those shares were issued wholly or partly other than for cash, then the rules applicable to non-cash consideration received by a public company have been complied with.[154]

If the Registrar is satisfied on the above matters on the basis

of the documents the company is required to include in its application to re-register,[155] then the company shall be re-registered as a public company, with an amended certificate of incorporation,[156] the alterations in the articles take effect, and the company becomes a public company.[157] In effect, the certificate is a combined certificate of incorporation and trading certificate which would have been needed had the company been initially registered as a public company.

Since it is more common for a public company to be formed by conversion from private status than by direct formation as a public company, the above rules are of some importance.

If the private company which wishes to convert to a public one is an unlimited company it will have to become limited, that being one of the essential elements of the definition of a public company. This it is enabled to do in the conversion operation—and rather more simply than if it first re-registered as limited under (iv) below, and subsequently re-registered as a public company. It merely has to add to the special resolution the necessary changes to its articles.[158]

(ii) Public company becoming private limited company

4–41

To convert from public to private (an operation which must not be confused with ceasing to have securities traded on a public market, which does not necessarily involve any change in the company's status under the Act, or with "privatisation" in the sense of de-nationalisation) is comparatively simple unless there is disagreement among the members. The company can convert to a private company limited by shares or by guarantee[159] by passing a special resolution making the necessary alterations in its name and its articles and applying, in the prescribed form, to the Registrar.[160] But special safeguards are prescribed since loss of public status may have adverse consequences for the members, especially as regards their ability to dispose of their shares. Hence, members who have not consented to, or voted in favour of, the resolution can, within 28 days of the resolution, apply to the court for the cancellation of the resolution if they

can muster the support of:

(a) holders of not less than 5 per cent in nominal value of the company's share capital or any class of it; or

(b) if the company is not limited by shares,[161] not less than 5 per cent of the members; or

(c) not less than 50 members.[162]

The Registrar must not issue a new certificate of incorporation until the 28 days have expired without an application having been made or, if it has been made, until it has been withdrawn or dismissed and a copy of the court order delivered to the Registrar.[163] The court has broad powers to cancel or confirm the resolution, on such terms and conditions as it thinks fit, including ordering the company to purchase the shares of any members.[164] Thus, the court may grant dissenting shareholders an exit right rather than require them to accept the company's change of status. Unless the court cancels the resolution, the Registrar issues a new certificate of incorporation with the usual conclusive consequences.[165]

4–42

A public company will have to re-register as a private company if, under s.648,[166] the court makes an order confirming the reduction of its capital which has the effect of reducing the nominal amount of its allotted share capital below "the authorised minimum". In such circumstances that order will not be registered and come into effect (unless the court otherwise directs) until the company is re-registered as a private company.[167] The court may (and, in practice will) authorise this to be done through an expedited procedure without the need to resort to the provisions just discussed. Instead of the company having to pass a special resolution, the court will specify in the order the alterations to be made in the articles and, on application in the prescribed form the Registrar will issue the new certificate of incorporation. In this case there can be no application to the court by dissenting members since the company has no option but to become private.

(iii) Private or public limited company becoming unlimited

4–43

The conversion which presents the greatest dangers to the members is, obviously, that from a limited company to an unlimited one. Nevertheless, it is not completely banned since the members may legitimately conclude that forfeiting the advantages of limited liability is worthwhile, as enabling them to operate with much the same flexibility (particularly as regards withdrawal of their capital) and privacy of their financial affairs as a partnership, while yet retaining all the advantages of corporate personality other than limited liability. Hence, the Act provides that a limited company may re-register as an unlimited company if *all* the members agree.[168] The one condition which must be met is that the private company has not previously been re-registered as limited,[169] or the public company has not previously been re-registered as either limited or unlimited.[170] As with other conversions, an application, in the prescribed form, has to be lodged with the Registrar, together with supporting documents.[171] Those documents must contain a statement by the directors of the company that the persons by or on whose behalf the application form is authenticated constitute the whole of the membership of the company and that, in the case of authentication through an agent, the directors have taken all reasonable steps to satisfy themselves that the agent was authorised to act on behalf of the member.[172] The Registrar then issues a new certificate of incorporation with the usual conclusive effect.[173]

Ban on vacillation between limited and unlimited

4–44

What a company is not permitted to do is to chop and change more than once between limited and unlimited. Once a limited company has been re-registered as unlimited it cannot again re-register as a public company[174] or as a private limited company.[175] Once an unlimited company has been re-registered as a limited company, it cannot be re-registered as an unlimited company, whether it was immediately before the second attempted re-registration a private[176] or a public[177] limited company. There is, however, no ban on switching back and forth between private limited company and public limited company

status.

(iv) Unlimited company becoming a private limited company

4–45

In this, the converse of case (iii), it is not the members who need special safeguards but the creditors. Surprisingly, however, under the provisions under which this conversion is effected the only protection afforded them is that the new suffix, "Ltd", to the company's name should alert them to the fact that it has become a limited company. Their real protection is afforded by what is now s.77 of the Insolvency Act 1986. The effect of this is that those who were members of the company at the time of its re-registration remain potentially liable in respect of its debts and liabilities contracted prior thereto if winding up commences within three years of the re-registration. The Act permits re-registration as a private limited company, whether limited by shares or by guarantee, so long as the company has not previously been re-registered as limited. As far as the members are concerned the crucial requirement is the passing of a special resolution stating which of these the company is to be and making the necessary alterations to its name and articles.[178]

(v) Becoming or ceasing to be a community interest company

4–46

A limited company, whether limited by shares or guarantee and whether public or private, may convert to a community interest company.[179] This step requires a special resolution of the members, making the probably quite extensive changes to its constitution which are necessary for this purpose,[180] and the approval of the Regulator of Community Interest Companies, who needs to be satisfied that the company satisfies the community interest test.[181] However, a CIC cannot simply revert to not being a CIC. Unless it opts to be dissolved, the CIC's choices are limited to becoming a charity or a registered society.[182] Otherwise, the constraints on distributions to members by a CIC could be easily avoided by shedding that status.

4–47

Despite the potential problems caused by the company names rules, the process of registration of a company in the UK is both speedy and cheap. The rules on changing company status are not complex either, despite their detail, although they are probably used on a large scale only for transfer from private limited to public limited status and vice versa.

---

[1] See above, paras 1–17 and 1–31.

[2] See above, para.1–29, and recall that the CIO status is optional; companies which are charitable may, alternatively, be registered under the Companies Act (with all that entails) and be obliged, in addition, to comply with the Charities Act. In addition, specific types of association must be registered under specific Acts: see Building Societies Act 1986, Friendly Societies Act 1992 and Co-operative and Community Benefit Societies Act 2014.

[3] See above, para.1–12.

[4] See above, para.1–40. The European Company ("SE"), introduced in 2004, is formed under the relevant EU Regulation, as supplemented by domestic law, but with Companies House acting as the registration body for SEs registered in Great Britain. Note, however, that the European Company cannot be formed by natural persons but only by existing companies (or analogous bodies) in the ways specified in the Regulation: merger, joint subsidiary, joint holding company, transformation. Recall also the separate avenues for alternative forms of incorporation under the European Economic Interest Grouping Regulations 1989 (SI 1989/638) and the European Public Limited Liability Company Regulations 2004 (SI 2004/2326).

[5] See below, Ch.33.

[6] Contracting Out (Functions in Relation to the Registration of Companies) Order 1995 (SI 1995/1013) made under the Deregulation and Contracting Out Act 1994.

[7] The establishment of a corporate group does not necessarily require the creation of a new company, however. A group may also be formed if the original company acquires the shares of an existing company, as it would likely do if the company is expanding by acquiring an established business rather than by setting up its own new business from scratch.

[8] This describes the requirements under the Companies Act 2006. A "company" includes companies registered under earlier Acts going back to 1856, even though the registration requirements have changed over time: s.1(1).

[9] Registrar of Companies (Fees) (Companies, Overseas Companies and Limited Liability Partnerships) Regulations (SI 2012/1907) Sch.1 para.8 (ranging from £13–£30 for electronic registration, and £40–£100 for non-electronic registration). Registrations are now overwhelmingly electronic.

[10] 2006 Act s.7(2): "A company may not be formed for an unlawful purpose". This is interpreted as banning both purposes which are criminal and those which are regarded as

contrary to public policy: *R. v Registrar of Joint Stock Companies* [1931] 2 K.B. 197 CA; *R. v Registrar of Companies, Ex p. HM's Attorney-General* [1991] B.C.L.C. 476. In the light of the decision in *Yuen Kun Yeu v Attorney-General of Hong Kong* [1988] A.C. 175 PC, it seems clear that a member of the public subsequently defrauded by the company could not successfully sue the Registrar on the ground that he was negligent in registering the company (or, in the case of a public company, issuing the trading certificate).

[11] 2006 Act ss.7(1), 8 and 16(2). By contrast to this basic document, the memorandum of a company registered before 1 October 2009 (an "old style memorandum") was a radically different important constitutional document, the provisions of which are now treated as provisions of the company's articles (s.28).

[12] 2006 Act s.9.

[13] 2006 Act s.9(2)(a), and see below, paras 4–13 to 4–21.

[14] 2006 Act s.9(2)(b). This place of registration will define the company's domicile, and a company cannot unilaterally abandon this domicile and adopt a new one (as a natural person can): *Carl Zeiss Siftung v Rayner and Keeler Ltd (No.3)* [1970] Ch. 506, 544.

[15] 2006 Act s.9(5)(a).

[16] 2006 Act s.9(2)(c), and see below, paras 4–10 to 4–11.

[17] 2006 Act s.9(4)(b).

[18] 2006 Act s.11.

[19] Companies (Registration) Regulations 2008/3014 (hereafter "Registration Regulations") reg.3.

[20] If the company has a share capital, it will normally be limited by shares but not necessarily so. This would not be the case with an unlimited company having a share capital.

[21] 2006 Act s.9(4)(a).

[22] 2006 Act s.10 and the Registration Regulations reg.3. The company's power to issue shares of various classes will be set out, of course, in the articles of association. See Ch.24 for the rules governing the exercise of this power.

[23] 2006 Act s.9(2)(d).

[24] 2006 Act s.9(4)(c).

[25] A private company need not have a secretary (s.270), but a public company must (s.271).

[26] 2006 Act s.12. The Act has abolished the requirement for a private company to have a secretary and so all that will probably be provided is the name of the first directors of the company. This is the first expression of an obligation which will continue throughout the company's life periodically to inform the Registrar about these matters: see para.14–23.

[27] 2006 Act s.9(4)(d). This provision was introduced as part of the reforms under SBEEA 2015 to improve transparency around who owns and controls UK businesses. See above, paras 2–42 et seq.

[28] As defined in Pt 1 of Sch.1A. See s.12A, s.790M, s.790C, s.890K, Pt 1 of Sch.1A.

[29] This condition is potentially broad. See above, para.2–44.

[30] 2006 Act ss.9(5)(b) and 20, and see below at para.4–32.

[31] 2006 Act s.13.

[32] Community Interest Company Regulations 2005 (SI 2005/1788). And for CIOs, see above, para.1–30.

[33] Community Interest Company Regulations 2005 (SI 2005/1788) regs 2 and 11. Note the decision not to require an "objects clause" in the company's constitution for this purpose. See further para.7–29.

[34] Companies (Audit, Investigations and Community Enterprise) Act 2004 s.36(3)–(6).

[35] 2004 Act s.35(2).

[36] The Regulations give some further guidance (see regs 1–3), notably by excluding political activities.

[37] 2006 Act s.14.

[38] 2006 Act s.1066.

[39] 2006 Act s.15—signed by the registrar and authenticated by the registrar's official seal (s.15(3)).

[40] 2006 Act s.15(4).

[41] *Bank of Beirut SAL v Prince El-Hashemite* [2015] 3 W.L.R. 875.

[42] 2006 Act s.16(2)—thus making clear the company's nature as an incorporated association.

[43] 2006 Act s.16(5),(6).

[44] See below, para.4–34.

[45] Developing, para.11.32, estimating they are responsible for approximately 60 per cent of registrations.

[46] An alternative, which in practice was very rarely adopted, was a limited company with unlimited liability on the part of the directors (s.306 of CA 1985) but the 2006 Act no longer provides for this.

[47] *Oakes v Turquand and Harding* (1867) L.R. 2 H.L. 325; Insolvency Act 1986 s.74.

[48] The prohibition against a company acquiring its own shares applies only to limited companies (s.658(1) and Ch.13).

[49] An unlimited company is not required to file its annual accounts and reports (and so make them publicly available): s.448 and Ch.21.

[50] See Ch.1, above.

[51] Since the coming into force of the Companies Act 1980 no further companies limited by guarantee and having a share capital can be formed: s.5.

[52] See Ch.1, above.

[53] 2006 Act s.4(2).

[54] A public company must have a nominal value of allotted share capital not less than the statutory "authorised minimum" (s.761), currently £50,000 or its prescribed euro equivalent (s.763), denominated in sterling or euros but not both (s.765), at least one-quarter of which must be paid up before the company starts trading (s.586).

[55] See para.1–30.

[56] 2004 Act ss.30 and 32 and the Community Interest Company Regulations 2005 (SI 2005/1788) regs 7–11.

[57] According to Companies House, *Statistical Release: Companies Register Activities 2014/15* p.8, as of 31 March 2015, private limited companies account for over 96 per cent of all the corporate bodies on the register.

[58] The application for registration must state the company's proposed name: s.9(2)(a).

[59] Though less so now that the Registrar has to allot each company a registered number (s.1066) which it has to state on its business letters and order forms: s.82(1)(a) and regulations made thereunder.

[60] See below, para.4–14.

[61] Under the 2006 Act, largely for reasons of convenience of the Companies House computer system, a limit has been set on the number of characters of which a company's name may consist (no more than 160) and permitted characters have been prescribed as well as matters relating to the format of the name: s.57 and the Company, Limited Liability Partnership and Business (Names and Trading Disclosures) Regulations (SI 2015/17) reg.2. The DTI consultation document (DTI, *Implementation of the Companies Act 2006: Consultation Document*, February 2007), para.2.38, revealed that the longest registered name at that time had 159 characters. Like the famously long Welsh place name, Llanfairpwllgwyngyllgogerychwyrndrobwllllantysiliogogogoch, it is more a description than a name.

[62] The Secretary of State has power to require companies to give appropriate publicity to their names at their places of business and on business correspondence and related documentation: s.82(2)(a). The name must also be on the company's seal: s.45.

[63] Each described below in paras 4–14 et seq.

[64] 2006 Act ss.58–59. In the case of a Welsh company (i.e. one which is registered on the basis that its registered office is to be in Wales—see s.88(1) and below, para.4–14) the Welsh equivalents ("cyfyngedig" (or "cyf") or "cwmni cyfyngedig cyhoeddus" (or "ccc")) may (not must) be used instead. Similarly, in the case of a community interest company that term (or its abbreviation "cic") must be used as the suffix, if it is a private company, and "community interest public limited company" (abbreviated to "community interest plc") in the case of a public company: 2004 Act s.33. The Welsh equivalents are "cwmni buddiant cymunedol" (cbc) and "cwmni buddiant cymunedol cyhoeddus cyfyngedig" ("cwmni buddiant cymunedol ccc"). And the name of an SE must begin or end with "SE", and no company or firm formed on or after 8 October 2004 may use that abbreviation otherwise in its name: Regulation 2157/2001 art.11.

[65] 2006 Act s.65(1) and the Company, Limited Liability Partnership and Business (Names and Trading Disclosures) Regulations (SI 2015/17) regs 4–6. Nor may the company use the terms "open ended investment company", "investment company with variable capital" or "limited liability partnership" (or their abbreviations or Welsh equivalents).

[66] However, the inclusion of "unlimited" (for which, incidentally, there is no authorised

abbreviation) would presumably prevent a moneylender from incorporating as "Unlimited Loans Ltd".

[67] 2006 Act s.60.

[68] 2006 Act s.60(1)(a).

[69] 2006 Act s.60(1)(b) and the Company, Limited Liability Partnership and Business (Names and Trading Disclosures) Regulations (SI 2015/17) reg.3. The Department had originally proposed to confine the exemption to statutory regulators established as companies (for example, the Financial Services Authority) on the grounds that the community interest company form catered for other companies for which exemption was appropriate, but it changed its mind after consultation. See DTI, *Implementation of the Companies Act 2006: Consultation Document*, February 2007, para.2.47; BERR, *Government Response to consultation on Companies Act 2006: Company and Business Names*, para.2.8 (URN 07/1244/GR).

[70] 2006 Act ss.60(1)(c) and 61, 62.

[71] 2006 Act s.53. An example of the use of a particular name being a criminal offence would be where the name holds out the company as carrying on a business which requires a licence or authorisation (for example, as a bank) which the company does not have.

[72] 2006 Act s.54 and the Company, Limited Liability Partnership and Business (Names and Trading Disclosures) Regulations 2015/17.

[73] 2006 Act s.55 and the Company, Limited Liability Partnership and Business Names (Sensitive Words and Expressions) Regulations 2014/3140.

[74] 2006 Act s.56.

[75] e.g. if the name includes "Charitable" or "Charity", the Charity Commission or Office of the Scottish Charity Regulator must be asked; if "Dental" or "Dentistry", the General Dental Council; and if "Windsor" (because of its royal associations), the Ministry of Justice, the Welsh Assembly Government or the Scottish Executive.

[76] 2006 Act s.56(3).

[77] 2006 Act s.66.

[78] 2006 Act s.1099.

[79] 2006 Act s.66(3) and the Company, Limited Liability Partnership and Business (Names and Trading Disclosures) Regulations (SI 2015/17) reg.7 and Schs 2 and 3. For example, the words "company" and "cwmni" appearing at the end of the name are to be disregarded in judging whether the name is the same (so that if the only difference between the names is this one, they will be held to be the same) and "@" and "at" are to be treated as the same.

[80] Those with less common surnames can often surmount this difficulty by, for example, inserting an appropriate place-name: e.g. Gower (Hampstead) Ltd.

[81] 2006 Act s.66(4) and Company, Limited Liability Partnership and Business (Names and Trading Disclosures) Regulations (SI 2015/17) reg.8. If the body already registered subsequently withdraws its consent, that will not affect the registration of the company.

[82] Though surely not eliminated, for example, where one of the two companies with the same name is a well capitalised parent company and the other an undercapitalised

subsidiary.

[83] Insolvency Act 1986 s.216; and see below, paras 9–16 et seq.

[84] Corporate names are subject to all the restrictions noted here. An individual (or a partnership) can trade under the individual's (or individuals') own names: s.1192(2) and (3).

[85] 2006 Act Pt 41 (ss.1192–1199) (previously governed by the Business Names Act 1985).

[86] See ss.1193(4), 1194(3), 1197(5), 1198(2) and 1207.

[87] 2006 Act Ch.2 of Pt 41. The same civil sanction is applied as in the case of companies: s.1206 and para.9–3. The disclosure provisions of Ch.2 of Pt 41 apply only to individuals and partnerships (s.1200), because s.82 (trading disclosure) performs the same function for companies.

[88] And, ideally, also the Register of Trade Marks to ensure that the name proposed is not someone's registered trade mark.

[89] 2006 Act s.64. There is no time limit for giving such a direction.

[90] 2006 Act s.76. There is no time limit for giving such a direction. The company may appeal to court within three weeks of the direction, but otherwise must comply with the direction (or the court order) within six weeks: s.76(3)–(5). For example, in *Association of Certified Public Accountants of Britain v Secretary of State for Trade and Industry* [1998] 1 W.L.R. 164 the court confirmed the direction for a name change, identifying the harm as persuading the public to pay more for the services of members by giving a misleading impression of their qualifications because of the word "Certified". In general, however, little use is made of this power; undoubtedly the names of many companies give totally misleading indications of the nature of their activities but this, on its own, has apparently not been thought "likely to cause harm to the public".

[91] 2006 Act s.75. A direction may given up to five years after registration: s.75(2)(a).

[92] For a case where the names were not thought "too like" although they were sufficiently alike to have caused a petitioning creditor to obtain a winding up order against the wrong company with damaging consequences to it, see *Re Calmex Ltd* [1989] 1 All E.R. 485.

[93] 2006 Act s.67. Any direction must be given within 12 months of registration: s.68(2)(a).

[94] 2006 Act s.66.

[95] Although an interlocutory application in a passing off action may provide speedier relief: *Glaxo Plc v Glaxowellcome Ltd* [1996] F.S.R. 388.

[96] See *Halifax Plc v Halifax Repossessions Ltd* [2004] 2 B.C.L.C. 455 CA, a case dealing with an action for trade mark infringement, but the wording of all these statutory provisions indicates the same constraints will apply.

[97] 2006 Act s.77(1) and see below, para.4–30.

[98] 2006 Act s.64(3).

[99] See *Burge v Haycock* [2001] EWCA Civ 900; [2002] R.P.C. 28 on the breadth of the interests protected.

[100] The company must change its name itself; the court cannot order the Registrar to change the company's name. Similarly, see (above) para.4–24, and (below) para.4–28.

[101] See, e.g. *Tussaud v Tussaud* (1890) 44 Ch.D. 678 (an injunction was ordered preventing a member of the Tussaud family from registering Louis Tussaud Ltd to carry on a waxworks show, although the court would not restrain an individual from trading under his or her own surname); *Panhard et Levassor v Panhard Levassor Motor Co* [1901] 2 Ch. 513; *Exxon Corp v Exxon Insurance Consultants International Ltd* [1982] Ch. 119.

[102] *British Diabetic Association v Diabetic Society Ltd* [1995] 4 All E.R. 812.

[103] *Baume and Co Ltd v AH Moore Ltd* [1958] R.P.C. 226; *Parker-Knoll Ltd v Knoll International Ltd* [1962] R.P.C. 243.

[104] *Glaxo Plc v Glaxowellcome Ltd* [1996] F.S.R. 388; *Direct Line Group Ltd v Direct Line Estate Agency Ltd* [1997] F.S.R. 374.

[105] *British Telecommunications Plc v One In A Million Ltd* [1999] 1 W.L.R. 903 (which concerned registration of an internet domain name, not a company name, but the principle is the same).

[106] Completing, para.8.30.

[107] Appointed by the Secretary of State: s.70.

[108] 2006 Act s.69(1).

[109] 2006 Act s.69(4).

[110] 2006 Act s.69(5).

[111] 2006 Act s.73(1). Although the company is the primary respondent, the applicant may make its directors or members respondents as well (s.69(3)), which will be important for the range of persons caught by the adjudicator's order.

[112] 2006 Act s.73(3)—including therefore by way of an order for contempt of court.

[113] 2006 Act s.73(4). Thus avoiding the problem which arose in *Halifax Plc v Halifax Repossessions Ltd* [2004] 2 B.C.L.C. 455 CA, where, after a successful trade mark infringement and passing-off action, the court was held to have no power of its own motion to alter the defendant company's name but only to order the shareholders to secure such a change.

[114] 2006 Act s.74.

[115] 2006 Act s.77(1) and see below, para.4–31.

[116] See paras 4–39 et seq.

[117] 2006 Act s.77.

[118] 2006 Act s.80.

[119] 2006 Act s.81(1).

[120] 2006 Act s.81(2),(3). Hence contracts entered into prematurely under the new name will not be pre-incorporation contracts on which the individual who acted will be personally liable (see paras 5–24 et seq.).

[121] See above, para.3–14.

[122] See above, para.3–15.

[123] 2006 Act s.9(5)(b).

[124] Companies (Model Articles) Regulations 2008 Sch.1 art.26.

[125] The CLR had recommended that the memorandum be abolished entirely (Final Report I, para.9.4) but this was thought in some quarters, oddly, to raise the question of whether it was intended to alter the nature of the company as an incorporated association. Hence, apparently, the vestigial role for the memorandum.

[126] 2006 Act s.9(1).

[127] 2006 Act s.7(1).

[128] 2006 Act s.8(1). 2006 Act s.112(1) deems the subscribers to have agreed to become members of the company and provides that, upon registration of the company, they do become members of it.

[129] 2006 Act s.8. Bizarrely, for such a simple document, the memorandum is required to be in the prescribed form, and very straightforward forms are prescribed for companies with and without share capital respectively, in Schs 1 and 2 to the Registration Regulations.

[130] 2006 Act s.1068(3),(5).

[131] *R. v Registrar of Joint Stock Companies* [1931] 2 K.B. 197 CA where an application for mandamus to order the Registrar to register a company formed for the sale in England of tickets in the Irish Hospital Lottery was rejected on the ground that the Registrar had rightly concluded that such sales were illegal in England.

[132] See R. Drury, "Nullity of Companies in English Law" (1985) 48 M.L.R. 644. The First Company Law Directive contains three Articles dealing with nullity.

[133] *R. v Registrar of Companies, Ex p. Central Bank of India* [1986] Q.B. 1114 CA. Reversing the decision at first instance, the Court of Appeal held that, even on judicial review, the effect of s.98(2) of the Companies Act 1948, under which the certificate of registration of a charge was "conclusive evidence that the requirements as to registration have been satisfied", was to make evidence of non-compliance inadmissible, thus precluding the court from quashing the registration.

[134] *Bowman v Secular Society* [1917] A.C. 406 HL where, however certiorari was denied as the Society's purposes were held not to be unlawful.

[135] *R. v Registrar of Companies, Ex p. HM's Attorney-General* [1991] B.C.L.C. 476.

[136] Had she been less frank, for example by stating the primary object as "to carry on the business of masseuses and to provide related services", she would probably have got away with it.

[137] Notwithstanding that, as she indignantly protested, she paid income tax on her earnings. Since prostitution can be carried on without necessarily committing any criminal offence and since she continued, without incorporation, to practise her profession (for which she has become a well-known spokeswoman), some may think that this was an example of the "unruly horse" of public policy unseating its judicial riders.

[138] *Edinburgh & District Water Manufacturers Association v Jenkinson* (1903) 5 Sessions Cases 1159; *British Association of Glass Bottle Manufacturers v Nettlefold*

(1911) 27 T.L.R. 527 (where, however, the company was held not to be a trade union).

[139] *British Association of Glass Bottle Manufacturers*, fn.138 above, at 529.

[140] Drury, “Nullity of Companies in English Law” (1985) 48 M.L.R. 644 at 649–650.

[141] See *Companies in 1976*, Table 10.

[142] Notwithstanding that the First Company Law Directive provides by art.11.1(a) that “Nullity must be ordered by a decision of a court of law”.

[143] But, presumably, unless the company agreed, he could not take this action unless the incorporation was void (as in the case of a trade union or where the purposes were unlawful), rather than voidable (which would seem to be the case where, for example, registration had been secured by fraudulent misrepresentations).

[144] But as what? As a registered company, which it ostensibly is? Or as an unregistered company under Pt V of the Insolvency Act 1986?

[145] As the First Directive appears to envisage: see art.12.2.

[146] 2006 Act s.16(3).

[147] 2006 Act s.761. This is discussed further at para.11–8. In the more usual case where original registration was as a private company but it later converts to a public one, similar requirements will first have to be met, but there is no suspension of business during the process of conversion.

[148] 2006 Act s.763(4).

[149] See Ch.18.

[150] 2006 Act s.90(1).

[151] 2006 Act s.91. See Ch.11, below.

[152] 2006 Act s.92. Note that this is not a rule about minimum capital but about the relationship between the company’s net assets and the legal capital it has chosen to raise.

[153] All that s.831 provides is that a public company which is not in this position cannot make a distribution to its members.

[154] 2006 Act s.93. In addition, the rules requiring independent valuation of transfers of non-cash assets to a public company in the “initial period” (see para.11–16) apply to a company re-registered as public, but with the members of the company being substituted for the subscribers to the memorandum as the persons in respect of whom the rule applies (see s.603(a) and para.5–3). These rules apply after re-registration and so are not a condition of it.

[155] 2006 Act s.94 (including a statement of proposed secretary, if the company does not already have one, which, as a private company, it was not required to: ss.94(1)(b) and 95).

[156] Which is conclusive evidence that the requirements have been met: s.96(5). On “conclusiveness”, see paras 4–34 et seq., above.

[157] 2006 Act s.96.

[158] 2006 Act s.90(4).

[159] For obvious reasons it cannot, by this simple process, convert to an unlimited

company: s.97(1).

[160] 2006 Act s.97.

[161] The category (b) of objectors is somewhat puzzling since, until the Registrar issues a new certificate, the company remains a public company which it could not be unless it had a share capital. Presumably (b) is to cater for an "old public company" which has still not re-registered under the transitional provisions, now in the Companies Consolidation (Consequential Provisions) Act 1985 ss.1–9. As there can now be few, if any, such companies that have not re-registered under the transitional provisions either as Plcs or as private companies, this book ignores them.

[162] 2006 Act s.98.

[163] 2006 Act s.97(2).

[164] 2006 Act s.98(3)–(6).

[165] 2006 Act s.101.

[166] See para.13–34, below.

[167] 2006 Act ss.650–651.

[168] 2006 Act s.102(1)(a) for private companies and s.109(1)(a) for public companies.

[169] 2006 Act s.102(2).

[170] 2006 Act s.109(2).

[171] 2006 Act s.102(1)(c) and s.109(1)(c) for private and public companies respectively.

[172] 2006 Act s.103(4) and s.110(4).

[173] 2006 Act s.104 and s.111.

[174] 2006 Act s.90(2)(e).

[175] 2006 Act s.105(2).

[176] 2006 Act s.102(2).

[177] 2006 Act s.109(2).

[178] 2006 Act s.105.

[179] 2006 Act s.37 of the Companies (Audit, Investigations and Community Enterprise) Act 2004. Being limited is a necessary part of the definition of a CIC: s.26. However, if the company wishing to convert to CIC status is unlimited, it can first become limited under (iv) above. More important in this respect is the prohibition on a CIC re-registering as an unlimited company: s.52(1).

[180] See paras 1–7 and 1–10.

[181] 2006 Act s.38(2).

[182] 2006 Act s.53.

CHAPTER 5

PRE-INCORPORATION AND INITIAL CORPORATE CONTRACTING

Introduction	**5–1**
"Promoters" and their Dealings with the Company	**5–2**
Meaning of "promoter"	**5–2**
Duties of promoters	**5–6**
Remedies for breach of promoters' duties	**5–15**
Remuneration of promoters	**5–21**
Preliminary Contracts Entered Into by Promoters	**5–23**
Companies' Pre-Incorporation Contracts	**5–24**
Conclusion	**5–29**

INTRODUCTION

5–1

In the earlier chapters we examined the advantages of incorporation, the processes for achieving that status, and the various sources of rules regulating the corporate form once created.[1] And in later chapters we look in detail at the law as it applies to companies, paying particular attention to the sources of a company's capital and the various constraints on its use,[2] as well as the legal constraints on the powers exercised by the company's management, especially by its directors.[3] All these various legal rules are designed to ensure that the company is run as a success, thus enabling the company's shareholders, creditors and other stakeholders to prosper.

Extensive though these rules are, they leave a window of time which is potentially unregulated. This is the period during which individuals with good ideas for a new business set to work on creating a company and bringing it into existence ready to do business. This may seem a relatively unimportant time in the scheme of things, especially now that buying a company off the shelf makes the process so quick.[4] But two particular problems are common. The first is the intuitive concern with the probity of transactions between the newly formed company buying assets, for example, from the very people who set the company up and determine its first steps. The risk is that these deals overly

advantage the originators, or “promoters”, at the expense of the company and those persuaded to become its members. Secondly, there is the practical problem of how a company not yet in existence can enter into contracts which bind the company once it is formed. In agency terms, this is a case where the principal is not “undisclosed” (indeed, its expected genesis is usually made clear), but is “non-existent” at the time of the deal. This too may seem an unlikely problem, but it is sometimes (although increasingly rarely) simply the case that a time-sensitive opportunity presents itself before the company can be formed, and yet those involved do not want to be personally liable; they want—for all the reasons we have already considered—to have the deal pursued under a corporate umbrella.

We take each problem in turn. They raise quite different issues, the first dealt with primarily by the common law, the second by a combination of the common law and statute.

“Promoters” and their Dealings with the Company

Meaning of “promoter”

5–2

Much of the current law on promoters emerged in the nineteenth century, when there were no restrictions on inviting the public to subscribe for shares in newly formed companies, and the caricature “company promoter” was an individual of dubious repute who made it his profession to form bogus companies and foist them off on a gullible public, to the latter’s detriment and his own profit. But even in those days a much more typical example was the village grocer who converted his business into a limited company.[5] The motivations of each might be different, and the grocer less likely than the professional to abuse his position since he can be expected to remain the majority shareholder in his company, whereas the promoter, if a shareholder at all, usually intends to off-load his holdings onto others as soon as possible. But both create, or help to create, the company, and seek to sell it something, whether it be their services or a business. Both are well-placed to take advantage of their position by obtaining a recompense grossly in excess of the true value of what they are selling.[6] For that reason it has long

been held that both should be subjected to rather onerous common law and equitable duties, given the power that they wield over the company. The parallels with the rules applying to directors of companies already in existence will be clear when we come to consider those rules.[7]

5–3

But who should be subject to such tough rules? Both the professional promoter and the village grocer are promoters to the fullest extent, in that each "undertakes to form a company with reference to a given project, and to set it going and takes the necessary steps to accomplish that purpose".[8] But a person who has taken a much less active and dominating role may also be a promoter. Indeed, the potential activities of promoters are so varied that no comprehensive definition has ever been formulated, beyond confining it to activities related to bringing a company into existence.[9] The expression may, for example, cover any individual or company that arranges for someone to become a director, places shares, or negotiates preliminary agreements.[10] Nor need he or she necessarily be associated with the initial formation of the company; one who subsequently helps to arrange the "floating off" of its capital (in the manner explained in Ch.25) will equally be regarded as a promoter.[11] On the other hand, those who act in a purely ministerial capacity, such as solicitors and accountants, will not be classified as promoters merely because they undertake their normal professional duties[12]; although they may if, for example, they have agreed to become directors or to find others who will.[13]

5–4

Who constitutes a promoter in any particular case is therefore a question of fact,[14] and the promoter's role continues until the particular functions of promotion come to an end.[15] The expression has never been clearly defined either judicially[16] or legislatively, despite the fact that it is frequently used both in decisions and statutes; this vagueness is apt to be embarrassing when legislation requires promoters to be named or transactions with them to be disclosed.[17]

5–5

In many ways the risks of promotion are now lower. In private companies the rules very easily merge with those applying to corporate directors, since in this context the promoter usually becomes, and was always intended to become, a director of the newly formed company. And, as far as public companies are concerned, these days, promoters cannot simply invite the public to subscribe for shares in any proposed new venture: only a public company can invite the public to subscribe for shares, and before a public company is listed on the Main Market of the Stock Exchange or quoted on the Alternative Investment Market, it must be able to show some track record. Consequently, here too the duties of the promoters are often swallowed up in such cases in those of the directors.[18] But corporate promotion continues, even if on a smaller scale, and indeed more recently there has been an increase in public offers of unlisted shares, including shares in new start-up ventures, so the law on promoters may become increasingly important again.

Duties of promoters

5–6

The problems which must be dealt with are clear. Promoters are in a particularly advantaged position to sell their own assets or services to the company at an inflated price; to mislead likely investors into buying shares in the new company; and, once that is done, perhaps to induce the company to confirm that all is proper, and any breach might be waived.

(a) Statutory rules

5–7

The early Companies Acts contained no provisions regarding the liabilities of promoters, and current legislation remains largely silent on the subject, merely imposing liability for untrue statements in listing particulars or prospectuses to which they are parties.[19] Since these rules apply only to public offers and not to company formations unaccompanied by a public offer or the introduction of the securities to a public market, discussion of them is postponed to Ch.25.

5–8

There are also statutory rules relating to sales of assets to public companies. Article 11 of the Second Company Law Directive was intended to ensure that, when a public company acquired a substantial non-cash asset[20] from its promoters within two years of its entitlement to commence business, an independent valuation of that asset and approval by the company in general meeting should be required. But, as we shall see,[21] as implemented by the UK this applies only to acquisitions from the subscribers to the memorandum, who need not be the true promoters and generally are not. However, when a private company re-registers as a public one (a more common occurrence than initial formation as a public company) a similar requirement applies to such acquisitions from anyone who was a member on the date of re-registration,[22] and that may well catch a promoter. This, therefore, affords an additional statutory protection against the risk that promoters will seek to off-load their property to the company at an inflated price, but one which can be avoided by the promoters ceasing to be members prior to the re-registration.

5–9

Finally, if the promoter exchanges his or her own assets for shares, then there are also statutory rules designed to prevent issues of shares at a discount. But these too are focused on public companies rather than private ones, where it is largely left to the common law and equitable rules to regulate the problem.[23]

(b) Common law and equitable rules

5–10

Thus, in the main, promoters' duties have been developed by the courts. Promoters are of course subject to the general law on fraud, misrepresentation, negligence, unjust enrichment, and so on, and in the right context these duties can be important. But their most significant duties are equitable. In a series of cases in the last quarter of the nineteenth century, the courts were alert to the possibilities of abuse inherent in the promoter's position, and thus determined that promoters stand in a fiduciary position towards the company,[24] with all the duties of disclosure and accounting which that implies. These fiduciary restrictions profoundly affect three particular contexts: unless promoters

obtain the fully informed consent of the company, they cannot enter into any sale or purchase transactions with the company (the conflict between their personal interest in the transaction and their duty to obtain the best price for the company is obvious), or be remunerated, or take commissions from third parties (absent consent, these both constitute secret profits). These fiduciary duties have not been restated in the 2006 Act, as directors' fiduciary duties have been,[25] and so they remain regulated by the common law. However, the two sets of rules are likely to continue to influence each other, and the detail of promoters' duties and their application can be gleaned from the analogous cases concerning directors.[26]

(c) Full disclosure and consent

5–11

The main difficulty with promoters' fiduciary duties has been deciding how to effect proper disclosure to, and obtain approval from, the company—the company being an artificial entity. As we will see later, the powers of the company are generally exercised by the board of directors or (where that is not possible or where otherwise agreed) by the shareholders in general meeting.[27] But adopting either option typically raises a very real practical problem: voting may in either case be dominated by the promoter, thus allowing the promoter to be judge in his or her own cause. That does not seem right, and here, as elsewhere, the courts have struggled towards an effective solution to the problem.[28]

5–12

The first leading case on the subject, *Erlanger v New Sombrero Phosphate Co*,[29] suggested that it was the promoter's duty to ensure that the company had an independent board of directors and to make full disclosure to it. In that case Lord Cairns said[30] that the promoters of a company:

> "stand undoubtedly in a fiduciary position. They have in their hands the creation and moulding of the company; they have the power of defining how, and when, and in what shape, and under what supervision, it shall start into existence and begin to act as a trading corporation…I do not say that the owner of property may not promote and form a joint stock company and then sell his property to it, but I do say that if he does he is bound to take care that he sells it to the company through the medium of a board of directors who can and do exercise an independent and

intelligent judgment on the transaction."

5–13

Such a decision would undoubtedly be effective, but will anything less suffice? An entirely independent board would be impossible in the case of most private and many public companies, and since *Salomon v Salomon*[31] it has never been doubted that the fully informed consent of the members would be equally effective. In that famous case it was held that the liquidator of the company could not complain of the sale to it at an obvious over-valuation of Mr Salomon's business, all the members having acquiesced therein. Note, however, that in this case the shareholders' consent was unanimous, and so it might be thought irrelevant that Salomon himself held the overwhelming majority of the shares: all who could agree on the company's behalf had done so; there was no dissent. But could Salomon have carried such a vote against a unanimously opposed independent minority? Logic suggests not, yet the cases pull both ways.[32] Even the older cases saw the problem. This was evident in the speeches of the House of Lords in the second great landmark case in the development of this branch of the law, *Gluckstein v Barnes*.[33] That case made it clear that a promoter could not escape liability by disclosing to a few cronies who constituted the company's initial members, when it was the intention immediately to float off the company to the public or to induce some other dupes to purchase the shares. "It is too absurd", said Lord Halsbury with his usual bluntness:

> "to suggest that a disclosure to the parties to this transaction is a disclosure to the company. They were there by the terms of the agreement to do the work of the syndicate, that is to say, to cheat the shareholders; and this, forsooth, is to be treated as a disclosure to the company, when they were really there to hoodwink the shareholders."

The modern trend is in the same direction, and would seem to favour denying Salomon—or any other director or promoter—the right to be the person whose own votes determine the outcome of the company's decision when the question in issue is forgiveness or waiver of his own wrongs to the company.[34]

5–14

Finally, still on disclosure and consent, a number of older cases have suggested that a promoter cannot effectively contract out of

his or her fiduciary duties simply by inserting a clause in the articles whereby the company and the subscribers agree to waive their rights.[35] This is clearly right if the articles purport to exclude fiduciary duties entirely, or even to consent in advance to their general waiver during the period of promotion.[36] On the other hand, if the articles provide full disclosure of the terms of a material transaction with one of the promoters, and new subscribers join the company on the basis that they confirm their consent to that arrangement, then there seems no reason at all, on general principles, why this should not meet the demands of full disclosure and informed, and indeed unanimous, consent.

Remedies for breach of promoters' duties

5–15

There are various remedies available against promoters, but the most common is for breach of their fiduciary duties: the company (to whom these duties are owed) brings proceedings for recovery of any secret profits which the promoter has made, or for rescission of contracts it has with the promoter.[37]

5–16

A promoter, being a fiduciary, is not entitled to make a secret profit. Although the promoter's profit is most likely to derive from an over-priced sale of the promoter's property to the newly formed company (as to which, see below), if a profit has been made on some ancillary transaction there is no doubt that this too may be recovered. The classic illustrations are typically bribes or secret commissions paid by third parties to the promoters for the benefit of particular privileges in future engagements with the company. But there are more complex cases too, as in *Gluckstein v Barnes*[38] itself.[39] In that case a syndicate had been formed for the purpose of buying and reselling Olympia, then owned by a company in liquidation. The syndicate first bought up at low prices certain charges on the property and then bought the freehold itself for £140,000. They then promoted a company of which they were the directors, and to it they sold the freehold for £180,000, which was raised by a public issue of shares and debentures. In the prospectus the profit of £40,000 was disclosed. But in the meantime the promoters had had the charges on the property repaid by the liquidator out of the

£140,000 original sale price, and had thereby made a further profit of £20,000. This was not disclosed in the prospectus, though reference was made there to a contract, close scrutiny of which might have revealed that some profit had been made. Four years later the new company went into liquidation and it was held that the promoters must account to the company for this secret profit of £20,000. Alternatively, the same facts may permit the company to sue the promoter for damages for fraud (deceit),[40] or perhaps for misrepresentation.[41]

5–17

Far more common, however, is the scenario where the promoter sells his or her property to the company without proper disclosure, and the company may then rescind the contract. Rescission must be exercised on normal contractual principles[42]; that is to say, the company must have done nothing to show an intention to ratify the agreement after finding out about the non-disclosure[43] and restitutio in integrum must still be possible.[44] The restitutio requirement means the company must be in a position to return the property,[45] prima facie in its original state (although it is immaterial if it is no longer of the same value[46]) although the courts' wide discretion to order financial adjustments when directing rescission means the rule now operates as much less of an impediment.[47]

5–18

If rescission of the contract between company and promoter is no longer possible (because of delay, affirmation or inability to effect restitutio), the alternative remedy of an account of profits, designed to strip the defaulting fiduciary of the profits of the breach, is not generally allowed.[48] In principle, the court could of course assess the market value of the asset at the date of sale and on that basis force the promoter to account, but this, it has been argued, would be to make a new contract for the parties.[49] The only exception, it seems, and a rare one at that,[50] arises where the very specific duties owed by the promoter at the time of the initial purchase make it possible to say that this original purchase by the promoter was, at least in equity, a purchase for the company[51]; then the re-sale by the promoter to the company is nugatory, and the company can accordingly recover the

difference between the two prices as a simple secret profit made by the promoter.[52]

5–19

This restricted view of when an account of profits is available can clearly work an injustice if restitutio in integrum has become impossible, and the company then seems to have no remedy against its defaulting promoter. In practice, the courts have avoided this injustice by upholding other remedies against the promoter, either finding that the promoter was fraudulent, and accordingly liable for damages in a common law action for deceit,[53] or negligent in allowing the company to purchase at an excessive price,[54] the damages being the difference between the market value and the contract price. It is not possible to reach these same ends using the Misrepresentation Act 1967,[55] since the court's discretionary jurisdiction to award damages in lieu of rescission for innocent or negligent misrepresentations inducing a contract[56] does not, it seems, exist unless rescission is available at the time the court exercises the discretion.[57]

5–20

The company is not, however, the only party able to bring claims against the promoters. As already noted, promoter may be liable to those who have acquired securities of the company in reliance on misstatements in listing particulars or prospectuses to which the promoter was a party. The remedies available against him are the same as those against the officers of the company or others responsible for the listing particulars or prospectuses and are dealt with in Ch.25. In addition, other participants may have claims at common law.[58]

Remuneration of promoters

5–21

A promoter is not entitled to recover any remuneration for his services from the company unless there is a valid contract to that end between promoter and company. Indeed, older cases have suggested that without such a contract the promoter is not even entitled to recover preliminary expenses or the registration fees,[59] but whether these decisions would survive modern unjust enrichment analysis is perhaps moot. In this respect the promoter

is at the mercy of the directors of the company. Until the company is formed it cannot enter into a valid contract[60] and the promoter therefore has to expend the money without any guarantee of repayment. In practice, however, recovery of preliminary expenses and registration fees does not normally present any difficulty. The directors will normally be empowered to pay them and will do so. It may well be, however, that the promoter will not be content merely to recover his expenses; certainly a professional promoter will expect to be handsomely remunerated. Nor is this unreasonable. As Lord Hatherley said,[61] "The services of a promoter are very peculiar; great skill, energy and ingenuity may be employed in constructing a plan and in bringing it out to the best advantages". Hence it is perfectly proper for the promoter to be rewarded, provided, as we have seen, that there is full disclosure to the company of the rewards to be obtained.

5–22

The reward may take many forms. The promoter may purchase an undertaking and promote a company to repurchase it at a profit, or the undertaking may be sold directly by the former owner to the new company, the promoter receiving a commission from the vendor. A once-popular device was for the company's capital structure to provide for a special class of deferred or founders' shares which would be issued credited as fully paid in consideration of the promoter's services.[62] Such shares would normally provide for the lion's share of the profits available for dividend after the preference and ordinary shares had been paid a dividend of a fixed amount. This had the advantage that the promoter advertised his or her apparent confidence in the business by retaining a stake in it; but all too often the stake (which probably cost the promoter nothing anyway) was merely window-dressing. And if, in fact, the company proved an outstanding success the promoter might do better than all the other shareholders put together. Today, when the trend is towards simplicity of capital structures, founders' shares are out of favour and, in general, those old companies which originally had them have got rid of them on a reconstruction.[63] A more likely alternative is for the promoter to be given warrants or options entitling him or her to subscribe for

shares at a particular price (e.g. that at which they were issued to the public) within a specified time. If the shares have meanwhile gone to a premium this will obviously be a valuable right.

Preliminary Contracts Entered Into by Promoters

5–23

Until the company has been incorporated it cannot contract or do any other act. Nor, once incorporated, can it become liable on or entitled under contracts purporting to be made on its behalf prior to incorporation,[64] for ratification is not possible when the ostensible principal did not exist at the time when the contract was originally entered into.[65] Hence, preliminary arrangements will either have to be left to mere "gentlemen's agreements" or the promoters will have to undertake personal liability. Which of these courses will be adopted depends largely on the demands of the other party. If our village grocer is converting his business into a private company of which he is to be managing director and majority shareholder he will obviously not be concerned to have a binding agreement with anyone. In such a case a draft sale agreement will be drawn up and the main object of the company will be to acquire the business as a going concern "and for this purpose to enter into an agreement in the terms of a draft already prepared and for the purpose of identification signed by…". When the incorporation is complete the seller will ensure that the agreement is executed and completed.

If, however, promoters are arranging for the company to take over someone else's business, the seller certainly, and the promoters probably, will wish to have a binding agreement immediately. In this event the sale agreement will be made between the vendor and the promoters, and it will be provided that the personal liability of the promoters is to cease when the company in process of formation is incorporated and enters into an agreement in similar terms.

Companies' Pre-Incorporation Contracts

5–24

If the law described in the previous section is not appreciated, then difficulties can easily arise: promoters may purport to cause

the as yet unformed company to enter into transactions with third parties. As already noted, these contracts cannot bind the non-existent entity, and the company, once formed, cannot ratify or adopt the contract.[66] Prior to statutory amendments driven by the UK's entry into the EU, the legal position as between the promoter and the third party seemed to depend on the terminology employed. If the contract was entered into by the promoter and signed "for and on behalf of XY Co Ltd" then, according to the early case of *Kelner v Baxter*,[67] the promoter would be personally liable. But if, as is much more likely, the promoter signed the proposed name of the company, adding his own to authenticate it (e.g. XY Co Ltd, AB Director) then, according to *Newborne v Sensolid (Great Britain) Ltd*,[68] there was no contract at all. This was hardly satisfactory.

5–25

The statutory rule took a clear if rather dramatic stand. The relevant provision is now CA 2006 s.51, which reads:

> "(1) A contract which purports to be made by or on behalf of a company at a time when the company has not been formed, has effect, subject to any agreement to the contrary, as one made with the person purporting to act for the company or as agent for it, and he is personally liable on the contract accordingly."

The obvious aim of the provision is to increase security of transactions for third parties by avoiding the consequences of the contract with the company being a nullity. The provision imposes contractual liability on the promoter, and applies even if the new company is never formed.[69] To avoid the promoter's personal liability under the statute, the third party must explicitly agree to forego the protection—consent cannot be deduced simply from details of the contract which, interpreted widely, would be inconsistent with the promoter accepting personal liability, such as the promoter signing as agent for the company.[70]

5–26

The presence of the statutory provision has had an effect on the courts' perception of the common law in this area. In *Phonogram Ltd v Lane*, Oliver LJ said that the "narrow distinction" drawn in *Kelner v Baxter* and the *Newborne* case did not represent the true common law position, which was simply:

“does the contract purport to be one which is directly between the supposed principal and the other party, or does it purport to be one between the agent himself—albeit acting for a supposed principal—and the other party?”[71] This question is to be answered by looking at the whole of the contract and not just at the formula used beneath the signature. If after such an examination the latter is found to be the case, the promoter would be personally liable at common law, no matter how he signed the document.

5–27

On this analysis the difference between s.51 and the common law is narrowed, but not eliminated. At common law, if the parties intend to contract with the non-existent company, the result will be a nullity and the third party protected only to the extent that the law of restitution provides protection. Under the statute, a contract which purports to be made with the company will trigger the liability of the promoter, unless the third party agrees to give up the protection. In other words, the common law approaches the question of the third party’s contractual rights against the promoter as a matter of the parties’ intentions, with no presumption either way, whereas the statute creates a presumption in favour of the promoter being contractually liable. The common law is still important in those cases which fall outside the scope of the statute.[72]

5–28

Despite the improvements which the statute has effected, there are still some problems with its operation. First, perhaps as a consequence of the legislature’s concern with the promotion of third-party protection, the section did not make it clear whether the promoter acquires a right under the statute to enforce the contract, as well as the risk of being subjected to contractual obligations. It was submitted in earlier editions of this book that normal principles of contractual mutuality should lead to this latter result and this conclusion has been confirmed by the Court of Appeal.[73]

Secondly, the section bites only when the contract “purports” to be made on behalf of a company which has not been formed. Thus, where the parties thought the company existed, though it

had in fact been struck off the register, the Court of Appeal held that their contract was not at the time one which purported to be made on behalf of the company of the same name which was hurriedly incorporated when the parties later discovered their mistake.[74] The contract in truth purported to be made on behalf of the company which had been struck off, clearly not a company of which it could be said it "has not been formed". Ensnared in this conundrum, the claimant failed. Thus, the section has not been construed as protecting third parties in all situations where they in fact attempt to contract with non-existent companies, but only in those situations where the contract identifies a specific company as the purported contracting party and where that company is one which has not been formed.[75]

Thirdly, and undoubtedly the most serious,[76] the reforms have done nothing to make it simpler for companies to "assume" or adopt the rights and obligations of a pre-incorporation transaction. While one can understand that the Directive preferred to leave that to each Member State, the UK has not got round to doing anything about it. Many common law countries have recognised, either by judge-made law or by statute, that a company when formed can effectively elect to adopt pre-incorporation transactions purporting to be made on its behalf without the need for a formal novation, and that the liability of the promoter ceases when the company adopts it. In 1962, the Jenkins Committee recommended this reform but it still has not happened.[77] At present the only way in which the company can adopt the contract is by entering into a post-incorporation agreement in the same terms. Even if the company does so, that will not relieve the promoters of personal liability (at any rate while the new agreement remains executory)[78] unless they are parties to the new agreement, which expressly relieves them of liability under the pre-incorporation agreement. The need for all this is frequently overlooked. This may not matter much if all those concerned remain able and willing to perform their obligations under the pre-incorporation agreement. But it can be calamitous if one or more of them becomes insolvent or wants to withdraw because changes in market conditions have made the transactions disadvantageous to him or them.

As pre-incorporation transactions are inevitable features of every new incorporation, it ought to be made as easy as possible to achieve what the parties intend (or would have intended if they had realised that the company was not yet incorporated and had understood the legal consequences). In this case, if not generally, the legal technicality that ratification dates back to the date of the transaction so that it is not effective unless, at that time, the ratifying person existed and had capacity to enter into the transaction, should not apply.

Conclusion

5–29

If this chapter reveals any surprises, it is that, despite all the ambitions to simplify the law relating to companies and streamline its operation, especially for small businesses, there remains this relatively untouched territory—but nevertheless territory which must inevitably be navigated by every single company in its transition from pre-incorporation to post-incorporation. Across this territory it is largely, although not entirely, left to the common law to regulate the activities of the company's promoters, and their engagements with the company and with third parties.

[51] cf. *Cook v Deeks* [1916] 1 A.C. 554 PC. There seems to be no objection in principle to the establishment of a trust in favour of an unformed company—for there can certainly be a trust in favour of an unborn child. By contrast, there cannot be an agency relationship with an unformed principal, so this approach cannot alleviate the problem of pre-incorporation contracts dealt with below at paras 5–4 et seq.

[52] See Lord Parker's clear explanation in *Jacobus Marler Estates Ltd v Marler* (1913) 85 L.J.P.C. 167n. Also see above, para.5–10.

[53] *Re Olympia Ltd* [1898] 2 Ch. 153; affirmed sub nom. *Gluckstein v Barnes* [1900] A.C. 240 at 247 HL; *Re Leeds and Hanley Theatre of Varieties* [1902] 2 Ch. 809 CA (and perhaps Vaughan Williams LJ takes an even wider view of when damages are available, at 825).

[54] Note the restrictions described by Lord Parker in *Jacobus Marler Estates v Marler* (1913) 85 L.J.P.C. 167n at 168.

[55] Misrepresentation Act 1967 s.2(1) and s.2(2), allowing damages to be awarded in lieu of rescission.

[56] And the mere non-disclosure of the amount of the promoter's profit is not misrepresentation; *Lady Forrest (Murchison) Gold Mine* [1901] 1 Ch. 582; *Jacobus Marler Estates Ltd v Marler* (1913) 85 L.J.P.C. 167n.

[57] *Salt v Stratstone Specialist Ltd* [2015] EWCA Civ 745.

[58] See above, para.5–10.

[59] *Re English and Colonial Produce Co* [1906] 2 Ch. 435 CA; *Re National Motor Mail Coach Co* [1908] 2 Ch. 515 CA.

[60] See below.

[61] In *Touche v Metropolitan Ry Warehousing Co* (1871) L.R. 6 Ch. App. 671 at 676.

[62] The promoter should obtain a contract with the company prior to rendering the services, for past services are not valuable consideration: *Re Eddystone Marine Insurance, Re* [1893] 3 Ch. 9 CA. Hence if the services are rendered before the company was formed the promoter will have to pay for the shares. Moreover, in the case of a public company, an undertaking to perform work or supply services will no longer be valid payment: s.585(1) and see para.11–15. But provided the shares are given a very low nominal value this may not be a serious snag.

[63] There have been many interesting battles between holders of founders' shares and the other members. If the holdings of founders' shares are widely dispersed there is obviously a risk of block being acquired on behalf of the other classes in the hope of outvoting the remaining founders' shareholders at a class meeting to approve a reconstruction. To safeguard their position, in a number of cases the founders' shareholders formed a special company and vested all the founders' shares in it, thus ensuring that they were voted solidly at any meeting.

[64] See below.

[65] Contrast the position when a public company enters into transactions after its registration but before the issue of a trading certificate (see para.11–8) or when a company changes its name (above, para.4–23).

[66] Unless it enters into a new contract. This, of course, does not mean that, in the absence of a new contract, the company or the other party can accept the delivery of the goods or payment without being under any obligation.

[67] *Kelner v Baxter* (1866) L.R. 2 C.P. 174. See also *Natal Land Co v Pauline Syndicate* [1904] A.C. 120 PC.

[68] *Newborne v Sensolid (Great Britain) Ltd* [1954] 1 Q.B. 45 CA. In that case it was the promoter who attempted to enforce the agreement but it appears that the decision would have been the same if the other party had attempted to enforce it, as was so held in *Black v Smallwood* [1966] A.L.R. 744 Aust. HC: see also *Hawkes Bay Milk Corp Ltd v Watson* [1974] 1 N.Z.L.R. 218; cf. *Marblestone Industries Ltd v Fairchild* [1975] 1 N.Z.L.R. 529. The promoter should, it seems, be liable for breach of implied warranty of authority: *Royal Bank of Canada v Starr* (1985) 31 B.L.R. 124.

[69] *Phonogram Ltd v Lane* [1982] 1 Q.B. 938 CA.

[70] *Phonogram Ltd v Lane* [1982] 1 Q.B. 938 CA; *Royal Mail Estates Ltd v Maples Teesdale* [2015] EWHC 1890 (Ch). See, however, the decision of the First-tier Tribunal (Tax Chamber), obiter, in *Hepburn v Revenue and Customs Commissioners* [2013] UKFTT 455, where an agreement to the contrary was inferred from conduct of the parties, including the tendering of invoices to the company instead of the promoter. This approach goes against the trend of earlier cases, and appears doubtful.

[71] *Phonogram Ltd v Lane* [1982] 1 Q.B. 938 at 945 CA. This approach was applied by the Court of Appeal in *Cotronic (UK) Ltd v Dezonie* [1991] B.C.L.C. 721; and in *Badgerhill Properties Ltd v Cottrell* [1991] B.C.L.C. 805.

[72] See below, para.5–28, for identification of such cases.

[73] *Braymist Ltd v Wise Finance Co Ltd* [2002] Ch. 273 CA. However, since this means a contract purportedly made by the company may be enforced by its agent (the promoter), the third party may be able to resist enforcement where the identity of the counterparty is important. See also *Royal Mail Estates Ltd v Maple Teesdale* [2015] EWHC 1890 (Ch) (appeal pending), where the court held that an express agreement that the benefit of the contract was personal to the company did not exclude the effect of the equivalent of s.51 of the Companies Act 2006, such that the agent may still be liable on the pre-incorporation contract.

[74] In *Cotronic (UK) Ltd v Dezonie* [1991] B.C.L.C. 721.

[75] See also *Badgerhill Properties Ltd v Cottrell* [1991] B.C.L.C. 805. On the other hand, it is submitted that the decision in *Oshkosh B'Gosh Inc v Dan Marbel Inc Ltd* [1989] B.C.L.C. 507 CA, that s.51 does not apply to a company which trades under its new

name before completing the statutory formalities for change of name, is correct, since a change of name does not involve re-incorporation. See para.4–23.

[76] Also serious from the point of view of the harmonising objectives of the First Directive was the decision of Harman J in *Rover International Ltd v Cannon Film Sales Ltd* [1987] B.C.L.C. 540, that s.36C (now s.51) does not apply to companies incorporated outside Great Britain, a view from which the Court of Appeal did not dissent ([1988] B.C.L.C. 710). But this is now altered by reg.6 of the Overseas Companies (Execution of Documents and Registration of Charges) Regulations 2009 (SI 2009/1917).

[77] The CLR, curiously, left this issue untouched.

[78] If the new contract has been fully performed by the company, after incorporation, and by the other party, that clearly will end any liability under the pre-incorporation contract.

CHAPTER 6

OVERSEAS COMPANIES, EU LAW AND CORPORATE MOBILITY

Overseas Companies **6–2**
- Establishment: branch and place of business **6–4**
- Disclosure obligations **6–5**
- Execution of documents and names **6–7**
- Other mandatory provisions **6–8**

Company Law at EU Level **6–9**
- Harmonisation **6–9**
- A new approach and subsidiarity **6–12**
- EU forms of incorporation **6–13**
- The single financial market and company law **6–14**
- Corporate governance **6–15**
- Reform of the existing directives **6–16**

Corporate Mobility **6–17**
- Domestic rules **6–18**
- EU law: initial incorporation **6–20**
- EU law: subsequent re-incorporation **6–24**
- EU law: alternative transfer mechanisms **6–27**
- Conclusion **6–28**

Conclusion **6–30**

6–1

This chapter discusses three main issues. First, how far are companies incorporated outside the UK subject to British company law if they carry on business within the UK? Secondly, to what extent does the freedom of companies within the EU to carry on business across borders suggest that the EU should take action to harmonise the company laws of the Member States? Thirdly, what is the extent of the freedom companies have to choose the country in which their registered office is located or subsequently to move it to another jurisdiction? The third issue is closely related to the second. The effect of a change of the jurisdiction in which the registered office is located is a change in the company law to which the company is subject from the transferor jurisdiction's law to that of the transferee jurisdiction. Free movement of a company's registered office is a necessary but not a sufficient condition for competition among the Member States in the provision of company laws which companies find

attractive. If such competition develops, that may lead to convergence among the company laws of the Member States, even if there is no harmonisation of company law at EU level. In other words convergence of Member States' company laws may result from "top-down" harmonisation by the EU or from "bottom up" competition among the Member States (or, of course, from a mixture of the two processes). The first issue is also linked to the second, since it raises the question of whether the UK is happy to allow the internal relations of companies operating in the UK to be determined by foreign law.

Overseas Companies

6–2

British law might have refused to recognise companies not incorporated in one of the UK jurisdictions,[1] thus putting in jeopardy the validity in those jurisdictions of transactions entered into by non-UK incorporated companies and in effect requiring companies which wished to carry on business in the UK to do so through a British subsidiary. In fact, British law has never adopted such an approach. As Lord Wright said in 1933: "English courts have long since recognised as juristic persons corporations established by foreign law in virtue of the fact of their creation and continuance under and by that law".[2] Indeed, as we shall see below, to adopt a different rule today would be a breach of the Treaty on the Functioning of the European Union ("TFEU"). Thus, as a general rule,[3] a company incorporated outside the UK, whether within the EU or not, need not form a British subsidiary company in order to do business in the UK. It may trade through an agency or branch in this country or, indeed, simply contract with someone in the UK without establishing any form of presence in this country.[4] Of course, when a company incorporated elsewhere intends to carry on a substantial business in the UK, it is likely to form a British subsidiary in order to do so. This might be regarded as a sign of commitment to the British economy, and it also allows the foreign parent company to ring-fence its British operations by putting them in a separate subsidiary with limited liability.[5] The point, however, is that the foreign company is not obliged to take this route; it can do business here in its own right, if it so wishes.

This long-standing stance of British law towards foreign companies conducting business in the UK means that it is broadly content to leave the regulation of the internal affairs of such companies to the law of the jurisdiction in which they have their registered office, even though those dealing with it may not be aware of its jurisdictional location and the implications of this fact for its governing company law. To combat this risk a requirement is imposed on overseas companies with a significant presence in the UK, to make public disclosures which match those of required of domestic companies.

6–3

The rules on disclosure by foreign companies are to be found in Pt 34 of the Act and regulations made under it. This Part is entitled "overseas companies",[6] a term that might be thought to conjure up a picture of companies formed in some distant and exotic location, as they sometimes are, though in fact it may be only the Straits of Dover or the Irish Sea which separate the country of incorporation from the UK. An overseas company is simply "a company incorporated outside the United Kingdom".[7] The regulatory objectives of this Part are relatively modest. They are principally to ensure that there is available in the UK some basic information about a company incorporated elsewhere which has established a presence in this country from which it does business. That information is, essentially, the information a British company would have to provide on incorporation[8] or as part of its annual financial returns,[9] plus some information relating to those who represent the overseas company in the UK. However, some provisions go beyond disclosure.

Immediately prior to the 2006 Act this was an area of law which, despite its modest objectives, was overly complicated, because there were two sets of provisions, each containing slightly different disclosure requirements, for overseas companies. This arose in part because the Act does not attempt to regulate all overseas companies which do business in the UK (for example, over the internet) but only those which have some sort of base in the UK. However, two different connecting factors emerged as ways of defining that base. One was the result of the UK's implementation of the Eleventh Company Law Directive[10] which used the concept of a "branch" to define

the connection which an overseas company needed to have with the UK to fall within the overseas companies rules. The other connecting factor was the traditional domestic one, based on the company having a "place of business" in the UK. Even this might not have been problematic if both connecting factors had been linked to the same set of disclosure requirements. However, the two connecting factors were linked to slightly different disclosure requirements, so that companies could not simply proceed on the basis that they did not need to decide whether they operated a branch or a place of business. Rather, they had to decide between the two, in order to determine which disclosure regime applied.[11] Although it was clear that a company subject to both regimes must comply with the EU rules if they were more demanding than the domestic ones (which was generally the case), companies might be far from clear whether the EU regime applied to them or only the domestic one.[12]

The CLR recommended,[13] and the Government accepted and eventually implemented,[14] the re-establishment of a single regime. This is based on a single set of disclosure requirements, derived from the Eleventh Directive, but using a multi-pronged connecting factor. The Overseas Companies Regulations 2009[15] are expressed to apply whenever an overseas company opens an "establishment" in the UK; but "establishment" is defined to mean a branch within the meaning of the Eleventh Directive or a place of business which is not a branch.[16] Thus, either a branch or a place of business will trigger the operation of the provisions relating to overseas companies, but the crucial point is that the disclosure rules will not now vary according to whether the "establishment" test is met on the basis of a branch or a place of business.[17]

Establishment: branch and place of business

6–4

The terms "branch" and "place of business" obviously overlap to a large extent, but it seems that both at the top and at the bottom of the spectrum a place of business may exist even though a branch does not. To take the bottom end, this situation may arise because, it seems, activities ancillary to a company's business may constitute a place of business but not a branch. It is difficult

to be absolutely certain about this, because the Eleventh Directive does not define a “branch” whilst the Regulations do not define a “place of business”, but it seems to be the case. It has been said in case law that establishing a place of business, as opposed to merely doing business, in this country requires “a degree of permanence or recognisability as being a location of the company’s business”.[18] However, it is not fatal to the establishment of a place of business that the activities carried on there are only subsidiary to the company’s main business, which is carried on outside the UK, or are not a substantial part of the company’s overall business.[19] As to the meaning of a branch some clues may be derivable from the EU legislation referring to bank branches.[20] This does contain a definition of a bank branch, from which some guidance may be obtainable. That definition refers to a place of business through which the bank “conducts directly some or all of the operations inherent in the business”.[21] So it may be that purely ancillary activities, such as warehousing or data processing, do not constitute the establishment of a branch though they could amount to a place of business. To like effect is the definition of a branch adopted by the Court of Justice for the purposes of the Brussels Convention: a branch has the appearance of permanency and is physically equipped to negotiate business with third parties directly.[22] At the other end of the spectrum, a company incorporated outside the UK but which has its head office here,[23] clearly has a place of business in the UK, but it might be argued that this is not a branch, since a branch supposes that the head office is elsewhere.[24]

Disclosure obligations

6–5

The Act and the Overseas Companies Regulations impose disclosure requirements on an overseas company having an establishment in the UK in all phases of its life. An overseas company which opens an establishment must file with the Registrar within one month information relating to both itself and the establishment.[25] Subsequent alterations in the registered particulars must also be notified.[26] Failure to do so constitutes a criminal offence on the part of both company and any officer or agent of the company who knowingly and wilfully authorises or

permits the default,[27] but, apparently, does not affect the validity of transactions the company may enter into through its unregistered operation. There is no need in a book of this nature to go into the detail of what is required, but it should be noted that the requirements are more limited where the company is incorporated in an EEA Member State than where this is not so.[28] This reflects the approach of the Eleventh Directive.[29] Overall, the policy can be said to be to put the person dealing with the overseas company through its establishment in a similar informational position as would obtain if the company were one incorporated under the Act.

A crucial concern of those who deal with overseas companies is how to serve legal documents on the company. The particulars relating to the establishment must give the name and service address of every person resident in the UK authorised to accept service on behalf of the company or a statement that there is no such person.[30] In addition, the information must state the extent of the powers of the directors of the overseas company to represent the company in dealings and in legal proceedings[31] and give a list of those authorised to represent the company as a permanent representative of the company in respect of the branch.[32]

6–6

On-going disclosure requirements fall into two categories. First, the "trading disclosure" rules which apply to domestic companies[33] are adapted so as to apply to overseas companies "carrying on business in the United Kingdom".[34] These rules are, rightly, not confined to those overseas companies which have an establishment in the UK, though doing business "in" the UK is not defined. The aim of the rules is to provide third parties with certain information at the point at which they deal—or are likely to deal—with overseas companies. Thus, the company must display its name and country of incorporation at every location at which it carries on business[35]; its name on its business letters and a wide range of analogous documents[36]; and, where it has an establishment in the UK, a range of further information on these documents.[37] There are penalties for non-compliance,[38] but non-compliance also carries civil consequences on the same basis as that applied to domestic companies.[39]

Secondly, annual reporting requirements are applied to overseas companies, but, in this case, only if they have an establishment in the UK.[40] These requirements vary according to whether the overseas company is required by the law of the country in which it is incorporated (its “parent” law) to prepare, have audited and to disclose annual accounts. If it is,[41] the overseas company discharges its disclosure obligations by delivering to the Registrar a copy of the accounting documents prepared in accordance with the parent law.[42] The “accounting documents” include not only the accounts themselves (including the consolidated accounts, if relevant) and auditors’ report but also the directors’ report.[43] The company has the relatively generous period of three months from the date the documents were first disclosed under the parent law to file them with the Registrar.[44] If it is not so required, the overseas company is subject to a version of the accounting and filing requirements applied to domestic companies.[45] In addition to the option, available to domestic companies, to file accounts in accordance with International Accounting Standards, the overseas company may choose to prepare its accounts in accordance with its parent law.[46] However, the accounts of companies in this second category are not subject to an audit requirement. Despite the absence of an audit requirement, the obligation to produce annual accounts is clearly a burdensome one for overseas companies which are not required by their parent law to do so—though there must now be few countries in the world which do not require their companies to produce annual financial statements.

Finally, if an overseas company closes an establishment in the UK, it must give notice to the Registrar.[47] As to the overseas company itself, it must give information to the Registrar if it is wound up or becomes subject to insolvency proceedings.[48]

The Act lays down a general rule that documents delivered to the Registrar must be in English.[49] However, the company’s memorandum or articles of association may be delivered in another language, provided they are accompanied by a certified translation into English.[50]

Execution of documents and names

6–7

Although the overseas companies provisions are primarily concerned with disclosure, there are two sets of further provisions going beyond this. One set is largely facultative. It applies, with appropriate modifications, the domestic rules about execution of documents and seals to overseas companies, whether or not that company has an establishment in the UK or even whether or not it can be said to do business "in" the UK.[51] The second set applies to company names and is regulatory in intent.[52] An overseas company is required to register, on creation, the name of its establishment in the UK. That name may be its corporate name or the name under which it proposes to carry on business in the UK (its alternative name).[53] In principle, the domestic rules on company names[54] are applied to the overseas company's registered name.[55] Despite apparent contravention of the domestic policy, however, an overseas company which is registered in an EEA Member State is exempt from the domestic name controls over its corporate name, except those relating to permitted characters in a corporate name.[56] The Eleventh Directive does not provide for controls on the choice of name by overseas companies and the virtual non-application of such controls to the corporate names of EEA companies seems to have been the result of a fear that to impose them would infringe the freedom of establishment rules of the EU.[57]

Other mandatory provisions

6–8

In the final analysis, Pt 34 applies the equivalent of only a small part of the British Act to overseas companies and, as we have seen, where the home state requires the production of public, audited accounts, even Pt 34 relies on the rules of the state of incorporation rather than on the rules of the British Act. Some further protection for third parties, based on British law, may apply as a result of provisions in the Insolvency Act 1986. Thus, the rules restricting the re-use by successor companies of the name of a company which has gone into insolvent liquidation[58] apply to overseas companies. This is achieved by use of the formula that the relevant sections of the 1986 Act apply also to companies "which may be wound up under Part V of this Act".[59]

Part V of the 1986 Act permits the court in certain circumstances compulsorily to wind up an unregistered company, the definition of which is broad enough to include overseas companies.[60] To fall within Pt V the overseas company need not have an established place of business in Great Britain nor, indeed, any assets here at the time the application for winding up is made.[61] The courts have also accepted that the jurisdiction to wind up unregistered companies brings into play certain other sections of the Insolvency Act, even though those sections do not in terms apply to "Part V" companies.[62] These include the important provisions relating to fraudulent and wrongful trading.[63] Important though these provisions may be, they apply only to companies which are have been placed in an insolvency procedure in the UK, which in the case of an overseas company may well not happen.[64] Finally, the Company Directors Disqualification Act 1986[65] also applies to a company incorporated outside Great Britain if it is a company capable of being wound up under the Insolvency Act 1986.[66]

Company Law at EU Level

Harmonisation

6–9

The underlying policy of Pt 34 of the Act is to rely on the company law of the state of incorporation when a foreign company does business in the UK. When the European Economic Community was founded in the middle of the 1950s, a very different approach was taken in the Treaty of Rome. It was expected that, in the Community, companies based in one Member State would penetrate more readily the economies of other Member States, without necessarily establishing subsidiaries in those States. It was decided that this was acceptable only if accompanied by a programme for the mandatory harmonisation by the Community of the company laws of the Member States.[67] In other words, in the minds of the drafters of the original EC Treaty, freedom of establishment for companies and harmonisation of company laws in the EU were closely linked. Consequently, what is today art.50(2)(g) TFEU provides that the Council of Ministers by qualified majority vote, on a proposal from the European Commission and with the

consent of the European Parliament,[68] may adopt Directives[69] which aim to protect the interests of members "and others"[70] by "co-ordinating to the necessary extent the safeguards which…are required by Member States of companies and firms …with a view to making such safeguards equivalent throughout the Union". Thus, reliance on other Member States' company laws was to be accompanied by EU legislation which made those laws "equivalent", at least in certain respects.

The proposed programme for extensive mandatory harmonisation, from the top down, of Member States' domestic company laws got off to an impressive start, but by the middle 1990s, if not earlier, it had run out of steam, with only part of the proposed programme of "company law directives" enacted. This may have been because the theory linking freedom of establishment with a need for harmonised company law was never satisfactorily articulated. There was little empirical evidence that "members and others" were suffering in the EU's single market from the lack of harmonised company laws. There was also the criticism that, once a policy had been embodied in EU company law, it was more difficult to change it than in the case of domestic legislation, at least for the majority of Member States. In other words, the EU legislative process was more "sticky" than national ones.

6–10

In any event, for harmonisation to be fully successful, (a) there must exist a common best rule for all the Members States; (b) the EU Commission, which has a monopoly on the initiation of Community legislation, must be able to identify it; and (c) the participants in the Community's legislative process must accept the common rule. None of these characteristics was ever completely in place. The structure of shareholding (dispersed or concentrated) differs across the Member States, at least in relation to large companies, so that the dominant problem in some jurisdictions is the relationship between management and shareholders as a class and in other jurisdictions that between controlling and non-controlling shareholders. In some Member States board level representation of employees is an important part of the domestic industrial relations system, whilst in others it is not. Both features made the identification of a single

common rule very difficult in the most sensitive areas of company law. As to the EU Commission, it never had the time or the resources to develop the highly sophisticated comparative law analysis which legislating for an ever-growing block of countries requires. Finally, since the adoption of legislation requires a supermajority vote of the Member States, there is plenty of scope for the states to defend national interests, normally by watering down the proposals put forward by the EU Commission. It may be difficult to say whether the resistance of a Member States is driven by the fact that the EU Commission has proposed an inefficient rule for that state or by pressure from incumbent national interests which will lose out if the efficient rule is adopted.

6–11

Nevertheless, some parts of the proposed programme of company law directives were enacted by the middle of the 1990s. This period saw the adoption of the First (safeguards for third parties),[71] Second (formation of public companies and the maintenance and alteration of capital),[72] Third (mergers of public companies),[73] Fourth (accounts),[74] Sixth (division of public companies),[75] Seventh (group accounts),[76] Eighth (audits),[77] Eleventh (branches)[78] and Twelfth (single-member companies) Directives,[79] though they were not adopted in that precise order. Subsequently, there have been significant directives on takeovers, cross-border mergers and shareholders' rights (though, significantly, the twenty-first century directives are no longer allocated a number in an overall proposed programme of directives). However, the Directives are not equally important for the UK. Some of them did not significantly alter the existing national law, because the EU rule reflected existing national law or because Member States were given a range of options in implementing the Directive and could choose to preserve the status quo or because the subject-matter of the Directive was not important in the UK.[80] As far as the UK is concerned, the most important Directives have been the First (which triggered a review of the common law rules on ultra vires and agency as they applied to companies)[81]; the Second (which led to a tightening of the rules on dividend distributions and legal capital generally)[82]; and the Fourth (which led to a re-thinking of the

relationship between the law and accountancy practice).[83] Of lesser impact were the Eighth on audits[84] and the Eleventh on branches.[85] Apart from the Second, which froze the law on legal capital in an unideal position, the impact of the Directives on UK company law has been beneficial overall.

By contrast, some proposals were never adopted by the Community legislature because it proved difficult to obtain the necessary level of Member State support for the more controversial proposed harmonisation measures. This was true, in particular, of the proposed Fifth Directive which dealt with two sensitive topics upon which Member States are pretty equally split: should the board be a one-tier structure (as is the practice in the UK) or a two-tier one, consisting of separate supervisory and management boards, and, even more controversial, should employee representation on the board (whether one-tier or two-tier) be mandatory?[86] The Fifth Directive was never adopted. For many years, the issue of mandatory employee representation also held up agreement on the European Company (see below) and on a Directive on cross-border mergers, and the issue was resolved there only by abandoning any significant commitment to uniformity, or even equivalence, of rules on employee representation. Instead, the matter is regulated, mainly though not exclusively, according to the model required by the law of the state from which the merging company with the highest level of representation comes.[87] Equally controversial has been the draft Ninth Directive on corporate groups, where the majority of states deal with group problems through general mechanisms of company law, whereas Germany has developed a separate regime for addressing issues of minority shareholder and creditor protection in group situations.

A new approach and subsidiarity

6–12

Such was the state of uncertainty into which the company law harmonisation programme had fallen by the end of the twentieth century that, at the end of 2001, the Commission appointed a High Level Group of Experts with the brief of providing "recommendations for a modern regulatory European company

law framework”. The HLG’s Final Report[88] proposed a “distinct shift” in the approach of the EU to company law. Instead of the emphasis being, as hitherto, on the protection of members and creditors, the focus in future should be on what the Group saw as the “primary purpose” of company law: “to provide a legal framework for those who wish to undertake business activities efficiently, in a way they consider to be best suited to attain success”.[89] Although the proper protection of members and creditors was an element of an efficient system of company law, those protections themselves should be subject to a test of efficiency. The Commission responded to the Group’s Report in 2003 by producing a company law Action Plan which largely accepted the Group’s recommendations.[90]

What were the main features of the new approach? First, the role of the EU in the area of company law became a more modest, though still significant, one. So long as the EU’s task was viewed as one of harmonising Member States’ company laws so as to produce equivalent protections across the Member States, no serious question could be raised about the central role of the EU in this process and the whole of company law was in principle open to EU regulation. By definition, harmonisation of national systems (if it is to be achieved by legislative fiat) is something which only EU law can guarantee and national laws cannot.[91] However, once the goal is put in terms of identifying an efficient framework for company law, the issue of subsidiarity[92] is clearly raised. It is not obvious that the EU, in principle, is better equipped to identify an efficient system of company law than the Member States, especially as national contexts differ substantially. An important implication of this new approach therefore was that the EU should concentrate, as far as new Directives were concerned, on those areas of company law where it has an especial legislative advantage, principally in relation to cross-border corporate issues.[93] The most significant Directives adopted in the company law area since the adoption of the Action Plan have fitted this pattern: the Cross-Border Mergers Directive (2005)[94] and the Directive on Shareholder Rights (2007).[95] However, it should be noted, in relation to the latter, that although the driving concern of the Commission was the difficulties facing a shareholder in Member State A wishing to exercise voting rights in a company

incorporated and listed in Member State B, the Directive approaches this issue by conferring minimum rights on all shareholders in companies whose shares are traded on a regulated market. It is the limitation of the Directive to companies with publicly traded shares which really indicates the cross-border impetus of the Directive.

EU forms of incorporation

6–13

An alternative approach to harmonisation is for the EU itself to provide the corporate vehicle for businesses to adopt rather than for this to be a purely national competence. Unlike with the harmonisation of national company laws, there is no specific Treaty power for the EU to engage in this activity, and so proposals had to be put forward under the "gap-filling" powers in the Treaty, which require unanimous Member State consent.[96] This necessarily made progress difficult. After many years the EU achieved success with the creation of an optional form of EU incorporation, the European Company ("SE"),[97] designed essentially for large companies and aimed at providing a mechanism for the cross-border amalgamation of public companies. The proposals had been beset by the same two problems as afflicted the Fifth Directive proposal (above). These problems were solved by giving the SE a choice between one-tier and two-tier board structures and by making employee representation mandatory for the SE only if one of the founding companies was already subject to such requirements under its national law. More generally, the law applicable to the SE depends heavily on the company law of the state in which it is registered, so that the degree of uniformity achieved is limited. However, it may have helped in securing adoption that the SE, unlike the Fifth Directive, did not require changes in national law but made available to national companies, if they wished to use it, a form of EU re-incorporation. Those supporting the SE proposal hoped it would encourage cross-border mergers (the founding companies are normally required to be in different Member States), either at top company level or within corporate groups. In fact, there is little evidence that the SE has been used extensively for this purpose—or, indeed, extensively used at all

except in a few Member States.[98] Nevertheless, it has clearly not been an outright failure.[99]

The EU was emboldened by the adoption of the SE later to propose a European Private Company ("SPE") form of EU incorporation. This, however, is in effect a disguised harmonisation measure (it was to be available to individuals and had only a weak cross-border requirement). It constituted in fact a direct challenge to national regimes for private companies and it ran into predictable opposition from some of the Member States and was abandoned by the EU.[100] The effect of this defeat was to push the EU into producing a reduced but hybrid proposal for Single Person Company ("SUP"—*societas unius personae*). This is based on art.50 TFEU, where only a qualified majority vote of the Member States is required, and indeed it is formally an addition to the Twelfth Directive mentioned above,[101] but it requires Member States in effect to introduce a new form of incorporation into their national laws and to give that form of incorporation a common EU name (the "SUP").[102]

The single financial market and company law

6–14

An even more important conclusion which was drawn from taking subsidiarity seriously was that the creation of a single financial market in Europe was a more appropriate area for EU activity than a harmonised company law. The integration of national capital markets was seen as a crucial aspect of the construction of the Single Market, more so than company law harmonisation, which was, so to speak, the price for freedom of establishment (also an essential feature of the Single Market) rather than a direct contributor to the Single Market. One consequence of the focus on securities law was to favour the adoption of some Directives which had been regarded previously as examples of the company law harmonisation process—the line between company and securities law being inexact. Thus, a Directive on takeover bids[103] was adopted in 2004, which had originally been proposed as the Thirteenth Directive in the company law series, but it eventually emerged without that formal designation. Equally, rules on disclosure of financial information by companies, a traditional area of company law

when viewed through the lens of shareholder protection, could be re-packaged in a securities market context and presented as investor protection measures.

However, the focus of the EU on the single capital market did not just operate as a way of taking forward what might be regarded as “really” company law initiatives. Most financial market measures at EU level were aimed mainly at companies in their capacity as fund raisers on public markets. Clear examples were the Directives dealing with initial process of raising capital through public offers and the admission of securities to trading on public markets; subsequent disclosure to the market by issuers and, to some extent, their shareholders; and ensuring the non-distorted functioning of securities and other markets. The first two sets of Directives are discussed in more detail in Chs 25 and 26, below, and the third in Ch.30. All that need be noted here is that the first area (public offers and admission to trading) became a focus of EU action as long ago as the 1970s, so that for some time the company law and securities law programmes of the EU proceeded in parallel. However, a major change of gear occurred with the adoption in 1999 of a Financial Services Action Plan (“FSAP”),[104] which led to a significant level of legislative activity in the succeeding years and to the production, in particular, of Directives on prospectuses,[105] on disclosure by issuers (the Transparency Directive),[106] and on market manipulation (the Market Abuse Directive).[107] Not surprisingly, after the financial crisis of 2007 onwards, an intensification of regulation in this area occurred. A number of the earlier Directives were re-cast in a stronger form. In addition, in many cases the new EU instruments emerged as Regulations rather than Directives, since the available legal base for financial market legislation (art.114 TFEU) permitted the EU to adopt “measures” (not just Directives) “for the approximation of the provisions laid down…in Member States which have as their object the establishment and functioning of the internal market”.

The FSAP was accompanied by a further innovation in legislative procedure at EU level, known as the “Lamfalussy” procedure for the regulation of European securities markets.[108] Under this approach the EU Directive or Regulation will sometimes contain only the principles of the legislation and the

detail is laid down subsequently by the Commission, after consultation with (now) the European Securities Markets Authority, but without the need to go through the full EU legislative process.[109] The Commission has two broad types of secondary legislative powers: a narrower power relating to "technical standards" and a broader power relating to "delegated acts".[110] In both cases power to issue secondary legislation must be specifically conferred on the Commission by the parent Directive or Regulation. Where the Commission acts, the parent Directives and Regulations have to be read along with various implementing instruments (Directives or Regulations) issued by the Commission, which constitute a very significant part of the legislative process.

Corporate governance

6–15

A further implication of the new approach recommended by the High Level Group was that EU law-making, where this was required, should be less reliant on detailed Directives of the traditional type and make more use of Recommendations[111] and of instruments which imposed disclosure requirements rather than substantive rules.[112] This approach was initially particularly apparent in the sensitive area of corporate governance. Thus, the topics of board composition[113] and directors' remuneration[114] have been dealt with at EU level in this way—indeed through Commission rather than EU recommendations—with the recommendations again confined to publicly traded companies. Further, the EU rules on corporate governance codes take the form of a comply or explain obligation (as indeed is typical of national corporate governance codes) but with the content of the code being determined, not by the EU, but by national-level bodies.[115] However, nothing is stable in the battle over law-making between central and national levels. At the time of writing agreement is likely at EU level on an expansion of the Shareholder Rights Directive,[116] which will substantially extend the mandatory EU rules in the area of corporate governance, so that they are as much concerned with constraining shareholder behaviour as giving shareholders' rights.

Reform of the existing directives

6–16

Some minor steps have also been taken to address the point about the "stickiness" of EU legislation. In fact, the Commission moved on this front ahead of the High Level Group's Report. It adopted in 1996 the Simpler Legislation for the Single Market ("SLIM") initiative. This was a general initiative, not confined to company law, but several of the initial company law directives have been amended through the SLIM process, albeit with only modest results.[117] In 2015 the Commission proposed to "codify" in a single document the core company law Directives on the basis that this would make access to them easier.[118]

Corporate Mobility

6–17

Corporate mobility can mean a number of things, perhaps most obviously the question of what constraints exist on a company's freedom to move its *head* office from one jurisdiction to another, something it may want to do in order to obtain the benefit of a more favourable tax regime. However, for the purposes of this chapter corporate mobility refers to the constraints on the freedom of a company to choose the jurisdictional location of its *registered* office and, having made an initial choice, to move it to another legal jurisdiction, without at the same time having to locate its head office or any other aspect of its operations in the jurisdiction of registration or to move them on a subsequent change of jurisdiction. This is a significant question because, under the British conflicts of law rules and those of most other jurisdictions, the company law applicable to a company is determined by the jurisdictional location of its registered office. If a company can freely choose its initial jurisdiction for incorporation and subsequently alter it, it is in a position to choose and subsequently alter the company law to which it is subject. However, that freedom will be constrained if its exercise imposes requirements on the location of its operational activities.

If we assume that entrepreneurs are free to choose and subsequently alter the law applicable to their company, then the scene is set, potentially, for regulatory competition among states as they seek to offer the law which is most attractive to companies and for regulatory arbitrage by companies as they

move to the jurisdiction which offers the law which they favour. Corporate mobility does not in itself ensure regulatory competition by states and regulatory arbitrage by companies. Regulatory competition also requires that states conceive it to be in their interests to attract incorporations and regulatory arbitrage requires that companies perceive that the advantages of choosing the most favourable law outweigh any potential disadvantages. Without corporate mobility, however, regulatory competition will be weakened.

Nor does it follow that the result of competition would be that companies (or companies of a particular type) incorporate overwhelmingly in a particular state. This is certainly what has happened in the US where regulatory competition has led a large proportion of publicly traded companies to incorporate in the state of Delaware. It might be, instead, that states all bring their company laws in line with the model which companies prefer (in order not to lose incorporations) so that what competition produces is not migration of companies but convergence of states' company laws. In this perspective, the power to transfer the registered office would put some pressure on those responsible for company law in a particular jurisdiction to ensure that it remained attractive to businesses. The CLR thought this was the correct approach in principle: "In general, it is desirable that businesses should remain in Great Britain because it is attractive for them to do so, and not because company law in some sense locks them in".[119] If Member States reacted in this way to competition, then the result might be characterised as harmonisation of company laws "from the bottom up" rather than "from the top down", as under the EU's original programme of company law Directives, discussed in para.6–9. Alternatively, competition might lead not to harmonisation on a single model but to a form of "specialisation" in which different Member States offer somewhat different corporate laws, each adapted to the dominant form of business organisation to be found in their jurisdiction. Whatever the precise result, it would be the operation of competitive pressures rather than legislative fiat which determined the nature and extent of the harmonisation process.[120]

As we shall see below, whilst corporate mobility has long

been freely available in the US, in the EU that is not (or not yet) fully the case. Some jurisdictions (such as the UK ones) have long made the choice of company law on initial incorporation available and as a result of decisions of the Court of Justice of the European Union ("CJEU"), interpreting the Treaty provisions on freedom of establishment, this principle now applies throughout the EU. Freedom subsequently to alter the applicable company law by moving the registered office, however, is much less securely available—even for UK-incorporated companies or foreign-incorporated companies which wish to move into a British jurisdiction. We begin with a brief discussion of the purely domestic rules on corporate mobility before moving onto the more challenging question of how far they have been modified by EU law.

Domestic rules

6–18

As we have seen in para.6–2, British law recognises the existence of companies validly formed under the law of a foreign jurisdiction when they carry on business in the UK. This principle is applied even if the company carries on no business in its state of incorporation but operates entirely in the UK—and it was always intended by its founders that it should do so. So, the British rule of recognition of a foreign company is simply its valid incorporation elsewhere (the "incorporation rule"). Thus, at the point of initial incorporation of a company, the founders have a free choice of the applicable company law. As far as British law is concerned, they may choose any jurisdiction for incorporation and then carry on business entirely in the UK. The alternative recognition rule, used by some Member States of the EU, is the "real seat" rule, which requires the registered office to be in the same jurisdiction as the company's headquarters (or place of central management). Such a state would refuse to incorporate a company whose central management is not present in that state. Even more important, this state might well refuse to recognise the existence of a company validly incorporated in another jurisdiction under that jurisdiction's rules, but carrying out no or only insignificant activities there, thus putting its contracts and property in jeopardy in the state where it operates.

If a company incorporated in a foreign jurisdiction, but operating in the UK, wishes to move its registered office to another foreign jurisdiction, that is a matter for the jurisdictions involved. If the foreign jurisdictions allow this to happen, British law will recognise the result. However, British law is directly engaged if a company registered in one of the UK jurisdictions wishes to move its registered office to a foreign jurisdiction—or if a company registered in a foreign jurisdiction wishes to move its registered office to the one of the UK jurisdictions. Curiously, in contrast with its liberal stance at the point of incorporation, British law provides no simple mechanism whereby a company may make such a move, even as between the British jurisdictions. When the founders apply to register a company in the UK, they must state in which of the three UK jurisdictions its registered office is to be situated: England and Wales, Scotland or Northern Ireland.[121] There is no simple mechanism provided whereby the registered office can be changed subsequently from the jurisdiction of incorporation to another.[122] Thus, a company which is formed with its registered office in England and Wales cannot decide by resolution to transfer its registered office to Scotland, still less to some other Member State of the EU or to a state outside the EU.[123] Nor will it accept an incoming company on the basis of a simple resolution of its shareholders to move the registered office to the UK.

6–19

However, it is possible to produce indirectly a transfer of registered office into or out of the UK. The transferring company might go into (solvent) liquidation in its current jurisdiction and in that process transfer its assets to a company incorporated in the new jurisdiction, but the tax consequences of such a way of proceeding make that course of action unattractive. Within the UK the company might use a scheme of arrangement to effect a merger with another company located in the new jurisdiction.[124] Or the transferring company might make use of the EU's cross-border merger Directive to move its registered office into or out of the UK.[125] But a simple transfer of the registered office is not a technique which is made available. On the other hand, these alternative mechanisms contain a reasonably high level of protection for shareholders, creditors and perhaps other interests.

These protections are built into the scheme of arrangement and cross-border merger mechanisms. When the liquidation mechanism is used, the assets of the company are valued at the time of transfer and that value is paid by the new company to the former owner, thus protecting both existing shareholders and existing creditors. The transferring company's creditors are protected because the transferring company will receive the proceeds of the sale against which they can assert their claims, and the liquidation gives the shareholders of the transferring company an exit route from the company and some assurance that the transferring company's assets have been properly valued.

However, it is difficult to believe that adequate protection for members and creditors could not be provided through a set of rules applying to a simple transfer of the registered office. The Company Law Review proposed such a scheme for exit from a UK jurisdiction,[126] which was based on that laid down in the European Company Statute.[127] The SE is empowered to move its registered office from one EU State to another (albeit provided it moves its head office as well, which was not a feature of the CLR's proposals). Moreover, the CLR proposals envisaged the possibility of transfer of the registered office outside the EU and also within the UK (which is not a matter for EU regulation). The basis of the proposal was that transfer in principle should be permitted (i.e. the opposite of the present law) but subject to adequate safeguards for shareholders and creditors. The main elements of protection for members would be the requirement that the board draw up a detailed proposal about the transfer, that the proposal should require approval by special resolution of the shareholders (thus requiring a three-quarters majority approval) and that dissenting members should have the power to apply to the court which might order such relief as it thought appropriate. Thus, for shareholders, the protective techniques invoked were disclosure, supermajority approval and court control. For the protection of creditors, it was additionally proposed that the directors would have to declare the company to be solvent and able to pay its debts as they fell due for the 12 months after emigration, the creditors would have the right to apply to the court to challenge the proposal and the company would have to accept service in the UK even after emigration in respect of

claims arising from commitments incurred before emigration.[128]

Transfer would have been permitted, on compliance with these rules, to any EU or EEA Member State, but transfer to a non-EU state would be dependent upon the Secretary of State having approved that state for this purpose, the criteria for approval being related mainly to levels of creditor protection, especially for creditors resident outside the state. Finally, for transfer within the UK a less detailed proposal would need to be developed by the board and the right of dissenting shareholders to apply to the court would be removed. The full range of creditor protections, however, would apply since there are significant differences in security and property law between the three jurisdictions.[129] However, the Government rejected the CLR's proposals for international migration, on grounds of feared loss of tax revenues.[130]

EU law: initial incorporation

6–20

We now turn to the question of how far the above rules have been modified by EU law. Corporate mobility is an area where EU law has had a significant impact, but, unusually for company law, law developed by the CJEU rather than the EU legislature has been the driver of reform to date. The court has proceeded mainly on the basis of its interpretation of the freedom of establishment provisions of the Treaty. Article 49 TFEU prohibits restrictions on the freedom of establishment of nationals of one Member State in the territory of another Member State and adds that such prohibition also applies "to restrictions on the setting up of agencies, branches or subsidiaries".[131] Just to make things absolutely clear, art.54 TFEU requires companies "formed in accordance with the law of a Member State and having their registered office, central administration or principal place of business within the Community" to be treated in the same way as natural persons who are nationals of a Member State. The EU has from time to time mooted the adoption of a directive dealing with corporate mobility and it may be that, after a period of not being interested in the topic, it is about to return to the EU's agenda.[132] There is a strong case for a Directive, since the CJEU has not been able to

resolve all the issues surrounding corporate mobility. To put it briefly, the Court has established freedom for the founders to choose the applicable corporate law at the point of incorporation but has not yet established fully corporate mobility thereafter. Since UK domestic law already provided choice of law at the point of incorporation, the impact of the Court's rulings to date has been to benefit founders who wanted to operate in other Member States of the EU through companies incorporated in one of the UK jurisdictions where that other Member State applied the "real seat" theory or in some way qualified its application of the "incorporation" theory.

6–21

The first proposition which seems to have emerged from the CJEU's decisions is that a company validly established under the law of Member State A must be recognised by Member State B, even if B would not recognise the company as validly established under its own rules. This is also the domestic UK rule. As understood in the UK, its "incorporation rule" turns on valid incorporation in another Member State but it does not seek to evaluate the incorporation rules set by that state.[133] Consequently, if B is a real seat state, the rules about the location of operational activities would have to be respected for incorporation to take place in B and, in consequence, for British law to recognise the incorporation.

6–22

The starting point for the Court's development of the law was its decision in the *Centros* case.[134] In *Centros*, the Court held that Denmark had infringed a company's freedom of establishment, when that company was incorporated in England, but carried on all its business in Denmark and the Danish authorities refused to register its Danish operations as a branch. It was clear that the British incorporation had been effected in order to avoid the Danish minimum capital requirements. However, the Danish position was perhaps weakened by the fact that the Danish authorities admitted that the branch would have been registered, if the company had carried on some business in the UK, even though its main business was in Denmark, Denmark being an incorporation rule state. This reduced the force of the argument

that the minimum capital rules were a necessary protection for Danish creditors. More important was the decision in *Inspire Art*,[135] also involving an incorporation theory state, the Netherlands. Dutch law thus had no difficulty about recognising the existence of a company incorporated in another Member State (again the UK) and so did not refuse to register its branch. However, Dutch law did apply to "pseudo-foreign" companies (i.e. those incorporated elsewhere but for the purpose of doing business wholly in the Netherlands) certain rules of Dutch law, notably its minimum capital rules. The CJEU held that creditor protection did not justify the imposition of requirements additional to those imposed by the state of incorporation: creditors were sufficiently protected by the fact that the company in question did not hold itself out as a Dutch company but as one governed by English law.

6–23

These two decisions had a substantial impact in practice. Entrepreneurs from other Member States, not intending to do business in the UK, may choose to incorporate in the UK in order to avoid minimum capital requirements and expensive formation formalities in their home jurisdictions; and this produced the expected response in the shape of other Member States seeking to reduce or remove their minimum capital requirements for private companies.[136] This was a clear case of corporate mobility leading to regulatory arbitrage by companies to which the Member States affected responded by harmonising their laws on or towards the British model, at least in the narrow area of legal capital and, perhaps, formation procedures.

A particularly interesting aspect of the *Inspire Art* decision was the implication that the Eleventh Directive on branches[137] determined the maximum level of regulation a Member State was permitted to impose on companies incorporated in other Member States—subject, however, to one important exception. Restrictions of freedom of establishment by national legislatures are permitted, provided they meet the "*Gebhard* test",[138] that is, they are non-discriminatory, pursue a legitimate objective in the public interest, are appropriate to ensuring the attainment of that objective and do not go beyond what is necessary to attain it. This is the general formula used by the Court to determine the

extent to which Member States may constrain the fundamental free movement provisions of the Treaty. The test, it can be seen, sets out very general standards and it is not clear how much freedom it gives to Member States to impose national rules on pseudo-foreign companies. Would it be lawful, for example, for the German legislature to require a pseudo-foreign company to abide by its domestic rules on mandatory representation for workers on the boards of large companies?

EU law: subsequent re-incorporation

6–24

The Court of Justice has not had to decide squarely a case involving post-incorporation transfer of the registered seat alone. All the litigation to date has involved companies which transferred their headquarters or central administration to another jurisdiction and either did not want to change the applicable law or wished to change the applicable law at the same time as moving the headquarters. Some transfer cases can be disposed of under the proposition identified above about B recognising valid incorporations in A. In *Uberseering*[139] a company transferred its centre of administration from an incorporation theory state (in this case the Netherlands) to a real seat theory state (in this case Germany). The German courts refused to recognise the company's legal personality and so it could not sue to enforce its contractual rights in a German court. The CJEU held that this was an infringement of the Dutch company's freedom of establishment. Since the company was still validly incorporated under Dutch law, German law was obliged to recognise its existence, even though the company did not meet the standards for incorporation under German law.[140] Although not a case about transfer of the registered office, *Uberseering* does establish the proposition that, provided a company acts in compliance with the rules of its state of incorporation, it has a EU law, right to transfer its headquarters to another state within the EU. For UK courts, the significance of the proposition is limited, since in a UK jurisdiction transfer of the headquarters would not cast doubt on the validity of the incorporation in the UK. The importance of the proposition is that the state receiving the headquarters must continue to

recognise the validity of the UK incorporation.[141]

However, it is unclear whether the first proposition relates solely to compliance with company law rules of the state of incorporation. UK company law places no obstacles in front of transfer of the headquarters but what about tax law? An early decision of the European Court suggested that the transferring state had considerable freedom in this regard. In *Daily Mail*[142] an English-incorporated company wished to transfer its central administration outside the UK, whilst keeping its registered office in the UK, but was discouraged from doing so by a swingeing domestic tax demand. The domestic restrictions were upheld. Although some doubt on the validity of exit taxes under the Treaty provisions on freedom of establishment was generated in cases subsequent to *Daily Mail*,[143] that decision has not been overruled.

6–25

The second proposition which has emerged from the cases and which does have significance for a company seek to transfer its registered office is that the Member State's incorporation rules, whatever they may be, must be applied in an equal fashion to domestic and foreign companies. However, implicit in this proposition is acceptance that the state of current incorporation remains in control of its rules for valid incorporation—subject to any relevant EU Directives. In particular, if it is a real seat state, the Treaty provisions on freedom of establishment do not require it to abandon those rules. This illustrated by the decision in *Cartesio*.[144] Like *Uberseering*, this was a case where the company transferred its headquarters (from Hungary to Italy) and did not want to change its applicable law. Unlike *Uberseering*, the question for the Court was the validity of the company's continued incorporation in the transferring state (Hungary), not its recognition in the transferee state. Also, unlike in *Uberseering*, the transfer of the headquarters out of Hungary did affect the validity of its continued incorporation in Hungary, whose officials refused to continue the company's registration in that state. The Court (Grand Chamber) upheld the Hungarian decision, on the grounds that the determination of the factors required for the validity or continued validity of incorporation in a Member State was a matter for that state, not for EU law.[145]

However, the court did go out of its way to address the situation which was not before it, i.e. where the company wishes to transfer its registered office in order to change the applicable law. Here, by contrast, the Courts approach was different. The *Cartesio* facts were to be “distinguished from the situation where a company governed by the law of one Member State moves to another Member State with an attendant change as regards the national law applicable, since in the latter situation the company is converted into a form of company which is governed by the law of the Member State to which it has moved”. Here the Court’s view was that the national legislation of the transferor state was not justified “by requiring the winding up or liquidation of the company, in preventing that company from converting itself into a company governed by the law of the other Member State, to the extent that it is permitted under that law to do so”.[146]

6–26

In *Vale*[147] the situation arose which was in many ways the converse of the situation in *Cartesio.* In *Vale* an Italian company de-registered in Italy with a view to transferring both its registered office and its business to Hungary, but the Hungarian authorities refused to effect the transfer, on the grounds that the domestic re-incorporation provisions did not apply to foreign-incorporated companies. The Court held that this refusal was a breach of arts 49 and 54 TFEU. The core of the reasoning was as follows. Hungarian law did have provisions which allowed domestic businesses to convert from one form of incorporation to another (without loss of legal personality), just as UK law allows provides for conversion from a private to a public company and vice versa, for example. It appears that in this case *Vale* proposed to re-incorporate in Hungary as the same type of company as it had been in Italy. Nevertheless, the Court held that the exclusion of a cross-border re-incorporation from the domestic conversion provisions was in principle discrimination against foreign companies. This meant that the national authorities would have to adapt the domestic procedural rules to deal with the situation of re-incorporation by a foreign company. In particular, the Hungarian authorities would have to take account of the documentation issued by the Italian authorities in

the course of the Italian de-registration proceedings. On the other hand, there appears in the judgment to be no infringement of the principle of national control of incorporation requirements. If the Italian company had proposed not to transfer its headquarters to Hungary and this was a requirement for incorporation in Hungary (for all companies), the Hungarian authorities would have been entitled to refuse registration.

On the other hand, these decisions can be said to have implications for domestic law. The fact that the Court in *Vale* required domestic re-incorporation provisions to be adapted for use by companies incorporated in another Member State suggest the UK should introduce some simple transferring in procedure. Since the UK is an incorporation rule state, there would be no need for the transferring-in company to move its operations to the UK at the same time as it moved its registered office. Some Member States, for example, Spain[148] do permit a transfer in of the registered office, but many, including the UK, do not. Equally, the dictum in *Cartesio* suggests the UK should have some simple procedure for transferring out the registered office.

EU law: alternative transfer mechanisms

6–27

There are other mechanisms available to a company which wishes to change its applicable law. The obvious alternative technique—though it is rather more costly—is to form a subsidiary in the new jurisdiction and merge the existing company into it. Unlike for the transfer of a registered office, EU law does now provide a mechanism for a cross-border merger.[149] This is potentially significant. For example, in the US the standard mechanism for transferring incorporation to the state of Delaware is the merger of the existing company into a Delaware corporation. However, the crucial point to be made here is that the company resulting from the merger (whether a new company or an existing one) must be validly incorporated in the new jurisdiction and the Directive, following the policy of the CJEU, leaves criteria for valid incorporation to be determined by the member states.[150] Consequently, a real seat state may continue to insist that, for valid incorporation in that state, the headquarters of the resulting company be located in that state. This reduces

the attraction of the merger mechanism if what the company seeks to achieve is a simple change in the applicable law—unless it is prepared to incur the potentially substantial additional costs of moving the company's headquarters to the jurisdiction of the resulting company. By contrast, the cross-border merger directive does facilitate the choice by a company of the law of an incorporation rule state.

A further mechanism which EU law makes available is the European Company ("SE").[151] The companies which found an SE may choose any Member State in which to incorporate the new entity, whether or not any of the founding companies operated in that jurisdiction.[152] Furthermore, the SE does benefit from a EU mechanism for the simple transfer of its registered office to another Member State after formation.[153] However, the SE is currently required to have its headquarters in the same jurisdiction as its registered office,[154] thus reducing its attractiveness as a mechanism for changing the applicable company law alone. If this ceases to be the case, the state of registration must take steps to require the SE either to move its head office back to the state of registration or to move its registered office to the State where its head office now is; failing either of these things, the state of registration must have the SE wound up.[155] The SE Regulation required the Commission to report on the functioning of the SE statute after five years of operation and in particular on the appropriateness of maintaining this requirement,[156] but no reform resulted from the report.[157] Even if this restriction were removed, the costs of establishing a SE simply for the purposes of changing the applicable law might deter significant use of this mechanism.

Finally, and most obviously, the EU might act to require all Member States to amend their laws so as to provide to all companies a simple mechanism for the transfer of their registered office. Thus, the law of the state of current incorporation would have to permit the transfer of the registered office to transferee state and the law of the transferee state would have to permit re-incorporation, in both cases without the company in question being wound up, but subject to appropriate safeguards for minority shareholders, creditors and employees. But the EU appears reluctant to grapple with this issue.[158]

Conclusion

6–28

The changes in the rules governing corporate freedom to move the registered office have produced regulatory competition at the level of company formation. Whether providing an equivalent level of corporate freedom at the stage of re-incorporation would generate the same level of regulatory competition among states and regulatory arbitrage by companies is much less clear. Even if a convenient legal mechanism for transfer were provided, would states compete for re-incorporations and would companies wish to transfer their registered offices? The particular revenue gains from reincorporation which the state of Delaware obtains in the US are simply not available in the EU, though there may be other incentives for states to attract re-incorporations.[159] As for the companies themselves, the incentives for mature companies to change jurisdictions will be very different from those operating at the time of initial incorporation of small companies. They may not wish to litigate their corporate law matters in a jurisdiction with which they are not otherwise connected or, alternatively, have the courts of their headquarters jurisdiction apply a foreign law with which those courts may be unfamiliar.

However, it is not clear that there is a strong argument against permitting freedom to transfer the registered office by way of re-incorporation. On the contrary, if Member States, when reforming corporate law, are influenced mainly by a desire to provide efficient company law to their "own" companies rather than to attract re-incorporations of foreign companies, then this suggests that no element of "corporate dumping" is involved when a company does decide to move to the law of another Member State. Equally, if companies weigh all the relevant factors before deciding to re-incorporate, this suggests that the choice which is ultimately made will be the appropriate one.

6–29

The contrary argument to those put forward in favour of regulatory competition, and which constitutes the basis of the real seat theory, is that to allow a company to choose a jurisdiction for incorporation, even though it carries on no

substantial economic activities in that state or perhaps even no economic activities at all, weakens the power of the state where those activities are carried on to impose mandatory rules on companies for the benefit of members, creditors or employees. If a company does not like the rules of the state where it has based its operations, it will simply choose the law of another Member State for its incorporation.[160] What will then ensue is a "race to the bottom" among the Member States of the EU as they compete to provide company laws which companies find attractive.

Although these fears are not fanciful, they can be exaggerated and may even be misplaced. First, as a result of the EU's initial company law harmonisation programme (discussed above in this chapter), there are minimum standards in place below which no Member State's company law can go. Secondly, and most importantly, competition does not necessarily result in a reduction of protection. In the case of financial markets, competition among stock exchanges for investors' funds has led to a raising of standards, especially in areas such as insider dealing, market abuse and corporate governance. The crucial question is who decides on the distribution of the good (in this case, the incorporation decision) for which the competition exists. In the US, where incorporations are a matter for each state, where the incorporation theory prevails and where a high proportion of public companies choose to incorporate in Delaware, even though their businesses may have no connection with Delaware, the argument that this situation has produced a race to the bottom seems to be based on the proposition that re-incorporations are in practice the result of a board decision, so that Delaware has a strong incentive to produce a corporate law which is too favourable to management and which provides too little protection for shareholders and creditors.[161] One way of addressing this problem is not to make the re-incorporation decision a purely managerial one. It is relatively easy to build into the re-incorporation decision a substantial role for shareholders, creditors and employees, as the cross-border mergers Directive does. Moreover, in the case of listed companies, it is probably the rules and mechanisms of the exchange which are more important for the protection of shareholders than the provisions of company law as such.

6–30

British company law has traditionally adopted a welcoming stance towards companies incorporated elsewhere. This is shown both by the limited extent to which it applies the provisions of the British Act to such companies and its acceptance of incorporation as the connecting factor in its private international law rules. However, it is much less open to transfers by British companies of the registered office to other jurisdictions or the simple transfer in of the registered office by companies already incorporated in other jurisdictions (as opposed to their conduct of business in the UK). However, to a substantial extent, it has preferred the goals of maximising freedom of movement and promoting a degree of competition among jurisdictions as against ensuring that those dealing with foreign companies do so on the basis of a framework of law with which they are familiar. Within the EU these two objectives have been reconciled to some degree through the programme for the harmonisation of company laws, though that initiative never achieved all its promoters wished and expected of it. However, free movement and jurisdictional competition cannot be achieved by one state alone, since the migrating company is dependent also on the laws of the country to which or from which it moves. For this reason, corporate migration is undoubtedly a proper subject for the attention of the EU legislator, or failing that, of the Court of Justice of the European Union.

---

[1] See Ch.1 for a discussion of the various forms of incorporation available in Great Britain.

[2] [1933] A.C. 289 at 297 HL.

[3] In particular industries a company operating in the UK may be required to do so through a British subsidiary. Thus, banks from (non-EU) countries with a poor record of banking supervision were reported to have been required by the FSA (predecessor to the FCA) to withdraw from the business of taking retail deposits in the UK, unless they incorporated their branches as subsidiaries, which would be required to have their own capital: *Financial Times*, 25 June 2002, p.2. However, such national requirements must not infringe EU law on freedom of establishment. See Case C-221/89, *Factortame* [1991] E.C.R. I-3905.

[4] For example, where the contract is concluded over the telephone or the internet by someone in the UK with a company established in another country.

[5] See Ch.8, below. In the future the multinational parent might put all its European operations (perhaps of a particular type) into an SE—see above, para.1–40—and the SE might or might not be registered in the UK.

[6] Before 2006 the even more quaint term "oversea" company was used.

[7] 2006 Act s.1044. This means that Channel Island and Isle of Man companies are "overseas" companies as well.

[8] See above, Ch.4.

[9] See below, Ch.21.

[10] Directive 89/666/EEC [1989] O.J. L395/36.

[11] The situation seems to have arisen because the then Government was unwilling to allocate parliamentary time for primary legislation on overseas companies (which would have allowed for the integration of the two regimes) but decided instead to implement the Eleventh Directive by secondary legislation under the European Communities Act 1972.

[12] In this connection it is important to note that the Eleventh Directive applies, not only to EU companies setting up branches in the UK, but to all foreign companies so doing. Thus, its scope was parallel to that of the traditional domestic law.

[13] Oversea Companies (1999) and Final Report I, paras 11.21–11.33.

[14] Modernising Company Law, 2002, Cm 5553–1, para.6.17. The havering around the implementation of this policy in the Act itself was described in the 8th edn of this book at pp.122–123.

[15] Overseas Companies Regulations 2009 (SI 2009/1801), as amended.

[16] SI 2009/1801 regs 2, 3, 30 and 68.

[17] However, the trading disclosures requirements apply on an even broader basis: see para.6–6.

[18] [1986] 1 W.L.R. 180 at 184. See also [1990] B.C.L.C. 546.

[19] *South India Shipping Corp v Export-Import Bank of Korea* [1985] 1 W.L.R. 585 CA; *Actiesselskabat Dampskib "Hercules" v Grand Trunk Pacific Railway Co* [1912] 1 K.B. 222 CA. Registration in the UK of an establishment in order to carry on business involves the creation of a place of business, even if business has not yet commenced at the establishment: *Teekay Tankers Ltd v STX Offshore & Shipping Co* [2015] 2 B.C.L.C. 210. However, the business must be the business of the company, not of its agent or subsidiary: *Rakusens Ltd v Baser Ambalaj Plastik Sanayi Ticaret AS* [2002] 1 B.C.L.C. 104 CA; *Matchnet Plc v William Blair & Co LLC* [2003] 2 B.C.L.C. 195.

[20] This EU legislation is not otherwise dealt with here.

[21] See, for example, Directive 94/19/EC on deposit guarantee schemes, art.1(5).

[22] Case 33/78 *Etablissements Somafer v Saar-Ferngas* [1978] E.C.R. 2183.

[23] In principle, British law accepts such an arrangement, though not all European countries do: see paras 6–17 et seq., below.

[24] However, in the *Centros* case (Case C-212/97 [1999] E.C.R. I-1459) the CJEU seems to have treated as a branch, for the purposes of art.49 TFEU, the British company's place

of business in Denmark, even though it carried on no business anywhere else, including the UK, which was simply its place of incorporation. Putting the matter the other way around, this might suggest that the British head-office of a company incorporated elsewhere would also be a "branch" for the purposes of the Eleventh Directive.

[25] 2006 Act s.1046 and the Overseas Companies Regulations 2009 Pt 2. The information about the company must include a certified copy of its constitution (reg.8(1)). The residential addresses of directors or permanent representatives are subject to the same protective provisions as in the case of UK-incorporate companies: Pt 4. Although the disclosure obligation applies in principle each time the overseas company opens an establishment in the UK (reg.4(2)), the company need not repeat the company-specific information each time, but simply cross-refer to it (reg.5). This applies even though the establishments are in different UK jurisdictions.

[26] 2009 Regs Pt 3.

[27] 2009 Regs regs 11 and 17.

[28] 2009 Regs reg.6.

[29] cf. arts 2 and 8 of the Eleventh Directive. The theory, presumably, is that the more extensive information about the company is available from the national registries of EU Member States, under the provisions of the First Directive.

[30] 2006 Act ss.1056 and 1139(2)(a). In *Teekay Tankers Ltd v STX Offshore & Shipping Co* [2015] 2 B.C.L.C. 210 the judge confirmed the traditional view that, despite the apparently narrower wording of reg.7(1)(e), the service did not have to concern the business of the establishment (as opposed to the business of the company more generally). If there is no such person or if the registered person refuses to accept service, then service can be effected at any place of business in the UK (s.1139(2)(b)).

[31] 2009 Regs reg.6(1)(e).

[32] 2009 Regs reg.7(1)(f). Part 4 of the regs applies provisions equivalent to those operating in relation to domestic companies for the protection of directors' residential addresses from public disclosure. See para.14–23.

[33] See para.9–20.

[34] 2006 Act s.1051 and 2009 Regs Pt 7.

[35] 2009 Regs regs 60–61 (and at the service address of every person authorised to accept service on behalf of the company in respect of the branch).

[36] 2009 Regs reg.62.

[37] 2009 Regs reg.63.

[38] 2009 Regs reg.67.

[39] 2009 Regs reg.66. For a discussion of those civil consequences, see para.9–20.

[40] 2006 Act s.1049 and 2009 Regs Pt 5. Unlimited overseas companies are exempted (as domestic ones are) from this obligation, and special rules (not considered here) apply to credit or financial institutions (Pt 6).

[41] If the overseas company is incorporated in an EEA state, it falls within this category even if it is exempted by its parent law from the requirements to have its accounts audited or to deliver them (reg.31(1)(b)). Such exemptions are controlled by the relevant EU law, which is discussed in Ch.21.

[42] The most recent accounting documents have to be included with the initial return to the Registrar (reg.9(1),(2)). Thereafter, Pt 5 applies (reg.32(5)). The accounts delivered to the Registrar must identify the legislation under which the accounts have been prepared, which GAAP has been used, if any; and whether they have been audited and, if so, according to which Generally Accepted Auditing Standards (reg.33).

[43] 2009 Regs reg.31(2). The auditors' report is not required if the company is exempted from audit.

[44] 2009 Regs reg.34.

[45] 2009 Regs Pt 5 Ch.3. See Ch.21 below. This is a considerable improvement on the previous law which applied to overseas companies in such cases a modification of an out-dated set of accounting rules based on the 1948 Act.

[46] 2006 Act s.395, as applied to overseas companies by reg.38. This assumes, of course, that the parent law does not *require* preparation, audit and filing of the accounts of the overseas company, in which case it will fall within the first category of companies.

[47] 2006 Act s.1058 and reg.77—transfer of an establishment from one jurisdiction of the UK to another counts as the closure of one establishment and the opening of another.

[48] 2006 Act s.1053(2) and 2009 Regs Pt 8.

[49] 2006 Act s.1103(1).

[50] 2006 Act s.1105 and the Registrar of Companies and Applications for Striking Off Regulations 2009 reg.7.

[51] 2006 Act s.1045 and the Overseas Companies (Execution of Documents and Registration of Documents) Regulation 2009/1917 Pt 2

[52] The rules on company charges created by overseas companies (s.1052) are also regulatory and are considered in paras 32–28 et seq. They were reduced in scope in 2011.

[53] 2006 Act ss.1047(1),(2) and 1048—and it may alter its alternative name and toggle between its corporate and alternative names.

[54] See paras 4–13 et seq.

[55] 2006 Act s.1047(4),(5)—and to any alteration of the registered name.

[56] 2006 Act s.1047(3),(5). These controls are set out in s.57 and regulations made thereunder.

[57] Case C-167/01 *Kamer van Koophandel en Fabrieken voor Amsterdam v Inspire Art Ltd* [2003] E.C.R. I-10155, where the ECJ struck down Dutch "pseudo-foreign company" requirements applied to an overseas (in fact, British) company which went beyond the Eleventh Directive. However, the Court recognised the possibility of justification which, one would have thought, would have been applicable in principle to the domestic name requirements, on the grounds of third-party protection, not involving a disproportionate cost to the company. However, this conclusion cannot be firmly arrived at without knowing the nature and extent of the name controls applied in the Member State of incorporation. The approach of the Act simply side-steps these difficulties.

[58] See below, para.9–16.

[59] IA 1986 ss.216(8) and 217(6).

[60] IA 1986 s.220 ("any company", except, of course, those incorporated under the British companies legislation). See *Re Paramount Airways Ltd* [1993] Ch. 223 at 240 CA. Voluntary winding-up of an unregistered company, however, is not permitted: s.221(4).

[61] *Stocznia Gdanska SA v Latreefers Inc (No.2)* [2001] 2 B.C.L.C. 116 CA. However, the company must have some connection with Great Britain and there must be some good reason for winding it up here.

[62] See previous note.

[63] See *Stocznia Gdanska SA v Latreefers Inc (No.2)* [2001] 2 B.C.L.C. 116 CA; and IA 1986 ss.213 and 214. See also Ch.9, below. It seems likely that the application of ss.213 and 214 to EU companies does not infringe the Treaty provisions relating to freedom of establishment. See Case C-594/14, *Kornhaas v Dithmar* [2016] B.C.C. 116 and below fn.135.

[64] In the case of insolvent companies with the centre of their main interests in another EU Member State, Council Regulation (EU) 2015/848 on insolvency proceedings ([2015] O.J. L141/19) favours the opening of insolvency proceedings in that other Member State.

[65] See Ch.10.

[66] IA 1986 s.22(2). See also *Re Seagull Manufacturing Co Ltd (No.2)* [1994] 1 B.C.L.C. 273—Act applicable to foreigners outside the jurisdiction and to conduct which occurred outside the jurisdiction, though presumably only in relation to a company falling within the Act. In the case of undischarged bankrupts the connecting factor is instead whether the company has an established place of business in Great Britain.

[67] See J. Wouters, "European Company Law: *Quo Vadis?*" (2000) 37 C.M.L.R. 257 at 269; and G. Wolff, "The Commission's Programme for Company Law Harmonisation" in M. Andenas and S. Kenyon-Slade (eds), *EC Financial Market Regulation and Company Law* (London, 1993), p.22. This position was adopted in particular by France.

[68] Under the "ordinary" legislative procedure of the EU: art.294 TFEU.

[69] Directives are binding on the Member States as to the principles to be embodied in national legislation but give the states some flexibility in the transposition of the Directive into national law: art.288 TFEU. Article 50 does not provide for the adoption of Regulations, which are directly applicable in the Member States.

[70] This includes creditors and, probably, employees. Basing the Directive on employee involvement in the SE (see above, para.1–40) on what is now art.50 was controversial and it was eventually adopted on the basis of what is now art.352 TFEU, which requires unanimity. However, the controversy was as much about whether the SE rules could be regarded as a harmonising measure as about the subject-matter of the Directive.

[71] Council Directive 68/151 [1968] O.J. 68.

[72] Council Directive 77/91 [1977] O.J. L26/1.

[115] See art.46A of the Fourth Directive, inserted by Directive 2006/46/EC art.1(7).

[116] Above fn.95.

[117] See Directive 2003/58/EC [2003] O.J. L221/13 (amending the First Directive); Directive 2006/68/EC [2006] O.J. L264/32 (amending the Second Directive); Directives 2007/63/EC [2007] O.J. L300/47 and Directive 2009/109/EC [2009] O.J. L259/14 (amending the Third and Sixth Directives); and Directive 2009/49/EC [2009] O.J. L164/42 amending the Fourth and Seventh Directives. Others of the initial directives have been substantially expanded over the years, notably the audit and accounts directives, so that they now have a broader scope than when adopted.

[118] Proposal for a Directive relating to certain aspects of company law (codification) (COM/2015/0616 final).

[119] Completing, para.11.55.

[120] For an extended analysis of the issues discussed in this paragraph see J. Armour, “Who Should Make Corporate Law? EC Legislation versus Regulatory Competition” (2005) 58 *Current Legal Problems* 369.

[121] 2006 Act s.9(2)(b).

[122] The facility for companies whose registered office is in fact in Wales to alter the statement so as to toggle between “Wales” and “England and Wales” does not involve a change of legal jurisdiction. The change has an impact on the availability or otherwise on the use of Welsh in the company’s official documents and in communications with Companies House. See s.88.

[123] Since British law adopts the incorporation theory, a UK company may freely move its headquarters out of the UK without imperiling the validity of its incorporation in the UK in the eyes of British law. This is useful for companies which wish to retain British company law but does not address the issue of companies which wish to change the applicable company law.

[124] On schemes of arrangement see Ch.29.

[125] Cross-border mergers are discussed below at para.6–27.

[126] Completing, paras 11.54–11.70 and Final Report I, Ch.14.

[127] Reg.2157/2001/EC art.8.

[128] If the company, after emigration, maintained a place of business in the UK it would become subject to the information provision rules for overseas companies (above); if not, it would in any event have to file with Companies House contact details relating to its new jurisdiction.

[129] Immigration would also be permitted but there the regulatory burden would fall mainly on the former state of registration. The British requirements would parallel those for a domestic company which re-registers: Final Report I, para.14.12 and above, paras 4–20 et seq.

[130] Modernising, pp.54–55.

[131] The right of a company established in another Member State to set up an agency, branch or subsidiary in Great Britain is normally referred to as the right of “secondary establishment”. The right of a company to transfer its registered office to another Member State is referred to as the right of “primary establishment” and is dealt with at paras 6–22 et seq., below.

[132] The Commission has a long-standing proposal for a Fourteenth Directive in the company law harmonisation series on the transfer of the registered office, on which work has been intermittent. It ceased most recently in 2007 (Commission Staff Working Document, *Impact Assessment on the Directive on the cross-border transfer of registered office*, SEC (2007) 1707, 12 December 2007). However, in 2013 the Commission again consulted on the topic.

[133] See the quotation from Lord Wright, above para.6–2.

[155] SE Reg art.64, implemented by the Insolvency Act 1986 s.124B.

[156] SE Reg art.69(a).

[157] The Commission's report might be said to favour the arguments for removing the restriction, but the Commission did not positively recommend this course of action: *Report from the Commission … on the application of Council Regulation 2157/2001 on the Statute for a European Company (SE)*, SEC(2010) 1391, 17 November 2010, 4.2.

[158] See fn.132, above.

[159] J. Armour, "Who Should Make Corporate Law? EC Legislation versus Regulatory Competition" (2005) 58 *Current Legal Problems* 369. Whilst not disputing that the revenue-raising incentives operating on the state of Delaware have no counterpart in the case of the UK, he sees the incentive as located with the "magic circle" law firms based in London, which would pressurise the government to provide laws which encourage re-incorporations.

[160] Of course, this is an existing risk for incorporation theory states whose company law contains some feature which incorporators do not like and which some other available jurisdiction does not insist on. See the *Kamer van Koophandel en Fabrieken voor Amsterdam v Inspire Art Ltd* [2003] E.C.R. I-10155. Real seat theory states seek to protect themselves against competitive pressures through a private international law rule, whereas incorporation theory states will have to use some other technique to address the threat, such as a "pseudo-foreign" company statute.

[161] It is much controverted whether the Delaware law maximises managerial freedom or shareholder value. For a convenient short account of the, now very large, literature, see R. Romano, *The Foundations of Corporate Law* (New York: Oxford University Press, 1993), pp.87–99.

PART 2

SEPARATE LEGAL PERSONALITY AND LIMITED LIABILITY

We saw in Pt 1 that the separate legal personality of the company is a necessary feature of the creation of a company and that limited liability, although optional, is overwhelmingly chosen by those who incorporate a company. Having created an artificial person, the law has to decide how that person acts and knows. This can be done only by attributing the acts and knowledge of natural persons to the company in appropriate situations. The delineation of those situations has proved to be a taxing exercise, mainly because the rules of attribution need to vary from one area of liability to another. There is no reason to suppose that the rules should be the same in relation to, for example, contractual and criminal liability—and in fact every reason to suppose that they should not be. The first chapter in this part analyses the rules of attribution.

The remainder of this part deals with limited liability. Opinions continue to differ on the question of whether limited liability is a natural consequence of separate legal personality or a perversion of the ordinary and proper state of affairs. Nevertheless, it is clear that British company law is firmly committed to the principle and that it is only rarely that the common law will set that principle aside. Statute law has shown some greater willingness to do so in recent years (or to disqualify directors from acting through the corporate form in the future), where limited liability has been abused. These innovations have had an important impact on small companies, where the interposition of a company between the entrepreneur and his or her creditors can seem, on occasion, artificial.

The traditional response of company law to the risks of limited liability, however, has been not to set that principle aside but rather to lay down rules on "legal capital", which in British law turn out to be mainly rules restricting the freedom of the

controllers of companies to move assets out of the company when this might prejudice the company’s creditors. By contrast, British law has traditionally shown little interests in rules on minimum capital. Legal capital is an area where the British rules have been particularly influenced by EU law in the shape of the Second Company Law Directive. Again, opinions differ on the efficacy of legal capital rules in protecting creditors and on whether the statutory rules, mentioned in the previous paragraph, are a better solution to the problem, though increasingly penetrating criticisms of the concept of legal capital in general, and of the Second Directive in particular, have been advanced in recent years.

CHAPTER 7

CORPORATE ACTIONS

Introduction 7–1
Contractual Rights and Liabilities 7–4
  Contracting through the board or the shareholders collectively 7–5
  Constructive notice and the rule in Turquand's case 7–6
  Statutory protection for third parties dealing with the board 7–9
  Contracting through agents 7–16
  Agency principles 7–18
  Establishing the ostensible authority of corporate agents 7–20
  Knowledge 7–24
  Knowledge of the constitution as an aid to third parties? 7–26
  Ratification 7–27
  Overall 7–28
  The ultra vires doctrine and the objects clause 7–29
Tort and Crime 7–30
  Tortious liability 7–31
  Criminal liability 7–38
  Litigation by the company 7–47
Conclusion 7–48

INTRODUCTION

7–1

One consequence of the abstract nature of a company as a legal person is that inevitably decisions for, and actions by, it have to be taken by natural persons. Decisions on its behalf may be taken either (a) by its primary decision-making bodies (the board of directors or the members collectively); or (b) by officers (including individual directors), agents or employees of the company. Acts done on its behalf will perforce be by (b). Similar problems of attribution arise where the question is simply whether the company "knew" about a certain fact or situation. The question is whether the decision taken, act done or knowledge held by the natural persons can properly be attributed to the company. There clearly needs to be some linkage between the natural persons in question and the company for the company's legal position to be regarded as having been altered.

Much of this chapter is about identifying the linkages that the law has accepted and those it has rejected. Those connections are clearly easier to identify where the board or shareholders as a body have purported to act as the company, but corporate life would be difficult or inappropriately regulated if the company's legal position could be affected only by actions of the board or the shareholders collectively. On the one hand, a large company would find contracting a cumbersome activity if all contracts, even relatively minor ones, had to be approved by the board or the shareholders collectively. On the other, it would be surprising if a company could escape all tortious or criminal liability where the wrongful act was authorised or committed by a senior manager who was neither a director nor a shareholder.

In this chapter we are concerned with the answers to these questions primarily in two contexts. The first is where the company purports to enter into a contract with an outside third party. If a company could not acquire and enforce contractual rights and subject itself effectively to contractual duties, it would find the carrying on of its business a very difficult matter. This is obviously true of companies with a commercial purpose, but the statement is true of all companies which need to deal with third parties. The company would find it difficult to plan its future in the absence of enforceable contractual rights, and, in the absence of contractual duties enforceable against the company, counterparties would be unwilling to contract with companies or would routinely require guarantees from individuals of the company's obligations. What is required is a simple and straightforward set of rules whereby the company can contract through the actions of individuals, for the benefit of both companies and third parties.[1] The law has developed two principal approaches to providing those rules. Where the company contracts through the decision-making bodies established in its articles of association (board of directors, shareholders collectively), the solution is provided by organisational law and is straightforward. The company is bound because its constitutionally established decision-making bodies have committed it to the contract. Where, however, the contract is entered into on the company's behalf other than by these bodies, some further set of rules is required. There was no need to develop a company-specific set of overall rules to achieve this

goal. The common law of agency, applying to non-corporate as well as corporate principals and their agents, furnished the bed-rock structure. However, as we shall also see, agency and organisational rules have had to be tweaked in order to deal with some particular features of corporate structure and doctrine.

7–2

The second situation is where the individual acting on behalf of the company commits a wrongful act. Is the company liable in this situation? This question arises principally in the criminal law and in tort, though it exists in other areas, such as wrongdoing in equity. The company may seem to have an obvious interest in not being liable for the wrongdoing of those connected with it. However, on a more sophisticated view it is doubtful whether this is true. If companies, some of which are powerful economic actors and all of which contribute to the functioning of the economy, are seen to be free of liability for the wrongful acts of those acting for them, then there is likely to be increased political pressure for rules which reduce the freedom of action of companies.[2] From the point of view of the efficient enforcement of the law, it can be argued, further, that corporate liability gives those in control of the company a strong incentive to constrain wrongful action on the part of those acting on its behalf and so corporate liability contributes to law enforcement—an argument that has appealed to the legislature in recent years.

With wrongdoing it is again appropriate to hold the company liable where the constitutional decision-making bodes of the company have committed the wrong. Normally, this means the company is liable because board or shareholders collectively have authorised the wrongdoing, though in the case of a company with only a single shareholder or director, that person might actually commit the wrongful act. Beyond those bodies, general doctrines of the common law again provided a second basis for corporate liability, without the need to establish a company-specific set of rules. In the law of tort, the doctrine of vicarious liability is available to provide a framework of corporate liability and proved to be capable of dealing with most cases of corporate principals as it did with non-corporate ones. In criminal law and some cases of non-criminal liability,

however, vicarious liability has proved controversial, at least in relation to serious crimes, whether the person sought to be made vicarious liable was a company or not. Here the law developed a third layer of rules for those areas where vicarious liability did not "work" in relation to companies.

This third layer of rules, like the first, is company-specific, in the sense that they require consideration of how a particular liability rule relates to the processes whereby decisions are taken and implemented within companies. Sometimes, these rules were made by the legislature, sometimes by the courts. Thus, from the beginning of the twentieth century the courts developed the notion of corporate "direct" liability, whereby the actions and states of mind of the person connected with the company were attributed to the company so as to make it a wrongdoer. Unlike with vicarious liability, where only the liability of the connected person was visited on the company and the company itself was not a wrongdoer, with direct liability the company itself becomes a wrongdoer.[3] As we shall see below, the courts had difficulty in establishing the boundaries of direct liability and it has only recently begun to be developed in a satisfactory way. Legislative interventions to create direct liability have been uncommon. The principal example is the Corporate Manslaughter and Corporate Homicide Act 2007, which imposes criminal liability for this serious crime in circumstances where the notion of common law direct liability proved inadequate.

7–3

Overall, therefore, the broad answer to this fundamental question —how does a company decide, act or know?—is provided through a tripartite hierarchy of rules. At the top are the rules setting up the constitutional structure of the company and its decision-making bodies, i.e. its articles of association; then general doctrines of the common law such as agency and vicarious liability; and at the bottom, where neither of these approaches is available, statutory or common law rules attributing liability specifically to companies in some cases. The top and bottom layers in this tripartite division involve analysis of issues peculiar to companies (or at least corporations). The middle (and practically very important layer) consists of general common law doctrines, which are not company-specific, though

their application to companies raises some difficulties which do not arise where companies are not involved. Following the terminology developed by Lord Hoffmann in *Meridian Global Funds Management Asia Ltd v Securities Commission*[4] the first layer can be referred to as company law's "primary rules of attribution" because of their location in the constitution of the company; the second as its "general rules of attribution"—general because they apply also to principals who are not companies but natural persons; and the third as its "special rules of attribution" because their function is to provide for corporate liability in situations where such liability is thought to be appropriate but neither of the first two approaches to attribution is capable of achieving that result. The residual and ill-defined function of the third approach no doubt explains why definition of its scope has proved so controversial, both in the courts and the legislature.

Contractual Rights and Liabilities

7–4

As noted above, decisions can be taken by or on behalf of a company to enter into a contract or other transaction with a third party in two ways, either by the decision-making bodies established under the Companies Act by the company's articles of association (i.e. its board of directors or the shareholders acting collectively) or by persons (who may include individual directors) acting as its agents. Where the board or the shareholders collectively act, they constitute the company, i.e. they act *as* the company. They are not its agents. For the same reason, they will not be personally liable on any resulting contract, which will exist only between the third party and the company. Where the company contracts through an agent, the law of agency, as we shall see, produces a similar result in the standard case, i.e. that the contract exists only between the third party and the company. Despite the similarity of the results in the two cases, we need to examine them separately because the rules applicable in the two situations are not identical. We will begin with corporate contracting through the directors or shareholders collectively[5] and then move on to contracting through agents. Although there is a good deal of similarity in the

law applicable in the two situations, it is suggested that the complexity of the applicable law can better be understood by dividing the subject-matter up as proposed. It is also necessary to set out the common law agency rules, partly because they explain the form of the modern rules on contracting via the board and partly because they still largely determine legal outcomes where third parties contract other than through the board or the shareholders collectively.

Contracting through the board or the shareholders collectively

7–5

Where the articles confer management powers on the board or the shareholders collectively and the board or shareholders, in the exercise of those management powers, enter into contracts with third parties, the conclusion that an effective contract results is straightforward. If the law rejected this proposition, corporate contracting would become an unwarrantably complicated matter. Where the board or the shareholders collectively contract, the question of how authority to contract was conferred upon them is easily answered: it is to be found in the company's constitution, principally its articles. The difficulty which has exercised both the courts and the legislature since the early years of modern corporate law is how to deal with situations where either board or shareholders go beyond the powers conferred upon them by the articles. As we have seen in Ch.3, it is rare for the board and the shareholders each to have unrestricted and equivalent management powers—though it seems that the constitutional arrangements of the company could be set up in this way. Normally, the articles of association divide up the management powers of the company between the shareholders and the directors, giving the greater part to the directors. Thus, it is possible that a third party will contract with the company via the board in an area where the board cannot act or where the board's powers are restricted. The same issue may also arise in relation to contracting through the shareholders collectively. Third parties probably expect the shareholders' powers under the articles to commit the company to contracts to be limited, but, by contrast, they normally expect that the board

will have wide management powers. Consequently, they are likely to be surprised if, after apparently contracting with the company through the board, they are met with the argument that the board did not have power to bind the company.[6]

In any event, an immediate question thus arises: is the contract binding on the company if the board (or shareholders) act outside the powers conferred upon them by the articles of association? From the point of view of the shareholders as a whole in the case of a board decision or the non-assenting shareholders in the case of a shareholder decision to contract, there is an argument that the constitutional arrangements of the company should be paramount. Either the articles are followed or the company should not be contractually committed (until such time as the articles are altered). Overall, the development of the law in recent times has been in the opposite direction, i.e. towards preserving third parties' reasonable expectations that the body purporting to contract as the company had power to do so, even if that power was restricted by the articles. Given the primacy of the board in relation to the allocation of management powers under the articles of most companies, this policy was implemented in relation to board contracting, and it is upon board contracting that we will concentrate below. The modern view is thus away from the notion that restrictions in the company's articles on the contracting powers of the board are something with which third parties are expected to familiarise themselves.[7] However, this is not the position from which company law started out.

Constructive notice and the rule in Turquand's case

7–6

As the law developed in the nineteenth century the answer to the question whether the company was bound by a transaction entered into by the board (or shareholders)[8] outside their powers as laid down in the articles was perceived to turn principally on whether the third party knew (or ought to have known) that the board were acting outside their authority. If the third party knew the board had so acted, then the transaction was not binding on the company unless the company chose to ratify it.[9] Thus, the security of the third party's transaction depended on the will of

the company in such a case. The view was taken that the third party, knowing of the board's lack of authority, had no legitimate claim to hold the company to the contract against the company's wishes.

This potentially defensible position was rendered completely indefensible, however, by the doctrine of constructive notice, which deprived the third party of the security of the transaction, even though that party had no actual knowledge of the board's want of authority and no practical means of finding it out, other than a detailed study of the company's constitution. The rule developed by the courts in the nineteenth century was that anyone dealing with a company registered under the companies legislation was deemed to have notice of its "public documents", a term which certainly included its articles, which are required to be filed at Companies House.[10] By developing this rule the courts substantially enhanced the restrictive impact of provisions in the articles limiting the board's authority. By treating third parties as knowing that which they would have known had they read and understood the articles, the courts in many cases deprived the third party of a plausible claim to a reliance interest which the law should protect. The company might choose to ratify the contract but was not bound to do so, so that the third party's contractual rights and duties rested on the company's decision.

7–7

However, the nineteenth century position was not quite as harsh as the above paragraph suggests. It was modified by the so-called "rule in *Turquand's* case"[11]—sometimes referred to as the "indoor management rule". This rule had the effect that, in some cases, the third party could assume that the directors had authority to act, even if a fair reading of the articles might lead a third party to make further enquiries. In *Turquand*[12] itself security for a loan had been given by a company through its directors, but the articles provided that the directors could borrow only such sums as were authorised by the shareholders in general meeting and the requisite authority had not been given. Jervis CJ said that a third party reading the company's articles would discover "not a prohibition on borrowing, but a permission to do so under certain conditions. Finding that the

authority might have been made complete by a resolution, he would have a right to infer the fact of a resolution authorising that which on the face of the document appeared to be legitimately done”. This was a benign interpretation of the constructive notice doctrine, since the courts might have said that the constructive notice of the articles put the third party on notice to enquire whether the shareholders had in fact given the requisite authority. It should be noted this benign removal of the duty to make further enquiries must apply, a fortiori, to a third party who has actually read the articles.

In *Mohoney v East Holyford Mining Co*,[13] the *Turquand* doctrine was approved and applied by the House of Lords in an even more difficult case. Here, a bank had honoured the company’s cheques, signed by two of three named directors, after having received from the company’s secretary a copy of a board resolution giving cheque-signing powers to the three directors, to which their signatures had been appended. Unfortunately, neither “secretary” nor “directors” had been appointed but had simply acted as such. Nevertheless, the bank successfully resisted an action for the repayment of the money. Provided nothing appeared which was contrary to the articles, the bank was entitled to assume that the apparent directors had been properly appointed. This protection for third parties was partially re-affirmed by statute which originally provided[14] that the acts of a director were valid “notwithstanding any defect that may afterwards be discovered in his appointment or qualification”. However, in *Morris v Kanssen*[15] the House of Lords held that the section applied only when there had been a defective appointment and not where there has been “no appointment” at all. In the light of this, s.161 of the 2006 Act provides a somewhat expanded protection, applying not only in the case of the subsequently discovered defect in the appointment but also where the director is disqualified from holding office, has ceased to hold office,[16] is not entitled to vote on the matter in question or (which was already part of the statutory protection) the appointment was in breach of the requirement that appointments of directors be voted on individually.[17] However, the section does not render valid the acts of a person who acts as director without ever purportedly having been appointed. In this situation the decision in *Mahoney*

continues to provide protection.[18] The *Kanssen* case also establishes that the protection of what is now s.161 does not apply to a third party who actually knows of the facts giving rise to the invalidity of the director's appointment.[19]

7–8

Although immensely important in keeping the doctrine of constructive notice within some sort of bounds, the indoor management rule has significant limitations. First, it does not protect the third party if the constitution simply provides that a particular type of contract cannot be entered into by board at all. To vary the facts of *Turquand* slightly, if the articles had provided that loans above a certain amount could not be contracted for by the directors at all (i.e. third parties must contract with the shareholders in such cases), the rule would not have protected a lender whose contract was approved by the board alone, even if the restriction on the board's powers was an unusual one.[20]

Secondly, and perhaps more important, the *Turquand* rule does not apply if the third party has been put on notice or on enquiry as to the board's lack of authority. Obviously, this exception cannot arise simply out of the third party's constructive or even actual notice of the company's constitution, for that would be entirely to negate the indoor management rule. Something else is required. In the leading case on this point, *B. Liggett (Liverpool) Ltd v Barclays Bank*,[21] where the third party bank had actual knowledge of the articles, the question was whether the bank was entitled to assume that the appointment of a third director had been properly made. Such appointment required the consent of both existing directors. The letter informing the bank of the appointment was signed by only one existing director (L). The other existing director (M) had for a long time made it clear to the bank that it should not meet cheques which were not signed by himself, in line with the articles' requirement for two signatory directors, because he thought that L was improperly withdrawing money from the company's account. Nevertheless, after the "appointment" of the third director by L, the bank met cheques which carried the signatures of L and the purported third director. The prior dealing between M and the bank as to the signing of company

cheques was the "something else" which put the bank on enquiry to establish whether M had in fact consented to the appointment of the third director; the bank was not entitled to assume such consent.

Statutory protection for third parties dealing with the board

7–9

Despite the qualifications to the constructive notice doctrine which the indoor management rule had introduced, from the point of view of third parties the resulting state of the law was unattractive. No third party could safely refrain from reading and analysing the company's articles before contracting with it, for fear of finding a ban or restriction on the board's contracting powers which could not be removed by some internal corporate procedure. In modern times the policy view has been taken that commerce will be promoted by relieving third parties from the need to check the company's constitutional documents before engaging with the company's board. The company is free to limit the authority of the board, but the constitution is no longer seen as an obviously appropriate way to communicate such limitations to third parties. Other and more direct methods must be employed. In line with this policy, the legislature moved to enact statutory provisions which extended the protection afforded to third parties by the indoor management rule. The reforms were introduced in 1972,[22] revised in 1989, and the current version is s.40 of the 2006 Act.[23]

Subsection (1) of s.40 provides:

> "(1) In favour of a person dealing with a company in good faith, the power of the directors to bind the company, or authorise others to do so, shall be deemed to be free of any limitations under the company's constitution."

This provision overtakes the indoor management rule because it simply removes all limitations on the powers of the board to contract for the company which the articles impose, whether those limitations are removable by shareholder resolution or are absolute. It effectively repeals the constructive notice rule within the scope of application of the section. But the section is subject to some limitations.

(a) *"In favour of a person dealing with a company in good faith"*

7–10

This phrase makes it clear that the section is for the benefit of third parties, not the company. The company cannot rely on it to make the contract binding as against a third party where the agent lacked authority and the third party seeks to escape from the contract. However, this point is not as important as it might seem, since the company can often make the contract binding on itself and the third party by ratifying it (see para.7–27 below). More important, these words demonstrate that not all third parties are to benefit from the section. Only "good faith" third parties will do so. But other provisions make it clear that "bad faith" is going to be difficult to establish. Section 40(2) provides a three-tiered set of protections for third parties. First, it provides that a person dealing with the company "is not bound to enquire as to any limitation on the powers of the directors to bind the company or authorise others to do so".[24] This sets aside the "put on enquiry" qualification to the indoor management rule. The fact that circumstances indicated that there might be some limitation on the directors' authority in the articles and the third party failed to follow this up will not now by itself put the third party in the "bad faith" category.

Secondly, the third party is presumed to have acted in good faith, unless the contrary is proved, so that the burden of proof falls on the company rather than the third party.[25] Thirdly, and most startling, the section provides that the third party is not to be regarded as acting in bad faith "by reason only of his knowing that an act is beyond the powers of the directors under the company's constitution". This appears to contemplate that a person dealing with directors with actual knowledge that they are exceeding their powers will not necessarily be found to be in bad faith. The section does not provide, of course, that actual knowledge cannot be an ingredient in the establishment of bad faith, but it does prohibit the simple equation of knowledge and bad faith. As Nourse J said of the same phrase in s.9 of the European Communities Act 1972:

"What it comes to is that a person who deals with a company in circumstances

> where he ought anyway to know that the company has no power to enter into the transaction will not necessarily act in good faith. Sometimes, perhaps often, he will not. And a fortiori where he actually knows."[26]

However, this dictum does not help enormously in working out when a third party with knowledge will be deemed to lack good faith. One might think that only little need to be added to knowledge of lack of authority to produce bad faith.[27]

(b) "Dealing with a company"

7–11

Subsection (2) gives help in the interpretation of dealing. It provides:

> "(2) For this purpose—
>
> (a) a person 'deals with' a company if he is a party to any transaction or other act to which the company is a party."

A person deals with the company so long as he is a party to a transaction (e.g. a contract) or an act (e.g. a payment of money) to which the company is also a party. Despite this, the courts remain reluctant to bring gratuitous transactions with the meaning of the subsection.[28]

(c) Persons

7–12

Section 40 seems to apply quite generally to "persons" dealing with the company in good faith. However, there is an obvious policy question about whether corporate insiders (especially directors) should be permitted to take advantage of the section when they deal with the company. Are they truly third parties or should they be treated as persons in relation to whom the principle that they should know and understand the limitations contained in the company's constitution is a perfectly reasonable and practicable one? The issue had already arisen at common law in relation to the question of whether corporate insiders could benefit from the indoor management rule. In *Morris v Kanssen*[29] the claimant seeking to rely on the *Turquand* rule had assumed the functions of a director of the company at the time of the disputed transaction. The House of Lords held that, as he was

thus under a duty to see that the company's articles were complied with, it would be inconsistent to allow him to take the benefit of the rule. However, in *Hely-Hutchinson v Brayhead Ltd*[30] Roskill J interpreted the exclusion more narrowly: a director was an "insider" only if the transaction with the company was so intimately connected with his position as a director as to make it impossible for him not to be treated as knowing of the limitations on the powers of the officers through whom he dealt.

However, in relation to s.40, the legislature seemed to have answered the question in s.41. Where the company enters into a transaction which exceeds a limitation on the powers of the directors under the company's constitution and the other parties to the transaction include a director of the company or its holding company or a person connected with such a director,[31] the transaction, far from being enforceable against the company, is voidable at the instance of the company.[32] Furthermore, whether or not the transaction is avoided, such parties *and* any director who authorised the transaction on behalf of the company are liable to account to the company for any gains made and to indemnify the company against any loss resulting from the transaction.[33] Thus, the company might seek to stay with the contract (perhaps because it is too late to obtain a substitute performance elsewhere) but sue the director acting outside the articles for damages (for example, where at the time of contracting the substitute consideration was available at a lower price). The transaction ceases to be voidable in any of the four events[34] set out in subs.(4) but this, in principle, does not affect the company's other remedies.[35] The section does not affect the operation of s.40 in relation to any party to the transaction other than a director or a person with whom the director is connected but where that other party is protected by s.40 and the director is not, the court may make such order affirming, severing or setting aside the transaction on such terms as appear to be just.[36]

Despite the presence of s.41, a majority of the Court of Appeal (Robert Walker LJ, as he then was, dissenting on this point) held in *Smith v Henniker-Major*[37] that s.40 was not available to the director, at least on the facts of that case, where the director dealing with the company was also chairman of the

company (and therefore under an obligation to see that its constitution was properly applied) and was responsible for the error in the transaction with himself (a rare legal recognition of the importance of the chairman of the board). The point may seem an arcane one, since the director in that case clearly fell within what is now s.41, but it has some importance, because a transaction within s.40, but caught by s.41, is binding unless set aside by the company, whereas, if the transaction is outside s.40 and governed by the common law, it will not be binding on the company unless ratified by it. In other words, s.41 is more favourable to third parties than the common law. It is submitted that the reasons given by Robert Walker LJ are the more convincing, i.e. that, in the light of the fact that the legislature has expressly addressed the issue of corporate insiders in s.41, there is no need for the courts to give the word "person" an unnaturally limited meaning in s.40.[38] In short, it is submitted that corporate insiders, dealing with the company in good faith, are within s.40 but that the protection they obtain is that laid down in s.41.[39]

(d) The directors

7–13

The section removes limitations in the company's constitution on the powers of directors to bind the company or to authorise others to do so.[40] Thus, a person who deals with the company through its shareholders in general meeting obtains no benefit from the section, for example, where the company's constitution provides that the shareholders cannot commit the company to a particular type of contract without the approval of X, who might be a shareholder of the company, a director or neither. Here, the limitation in the constitution relates to the power of the shareholders, not the directors, to bind the company. So, those who deal with the shareholders are still subject to the perils of the common law, including constructive notice as modified by the indoor management rule.

Of course, it is unusual for third parties to deal with companies through the shareholders as a body, and hardly feasible except in the case of small companies. Even where the third party deals with the directors, all may not be plain sailing.

Suppose that the board has purported to act on behalf of the company but is for some reason unable to act, for example, because it is inquorate. Will the third party still have the protection of the section? It was held at first instance under the previous version of the section that the third party was not then protected: if there were not enough members of the board present under its rules to constitute a meeting of the board, the directors could not be said to have done anything.[41] However, s.40, by substituting the word "directors" for the phrase "board of directors" in the provision quoted in the previous paragraph, seems designed to settle this point in the third party's favour. If the directors collectively have decided to contract, it does not matter that their decision does not constitute a valid board decision. Nevertheless, the underlying problem remains. It can hardly be the case that third parties, dealing with persons with no connection with the company, can claim the benefit of s.40 on the grounds that the failure of those persons to be elected directors by the company is a "limitation under the company's constitution" which third parties are entitled to ignore, provided they are good faith third parties. As has been said, the "irreducible minimum" for s.40 to operate must be "a genuine decision taken by a person or persons who can on substantial grounds claim to be the board of directors acting as such".[42]

(e) Any limitation under the company's constitution

7–14

The company's constitution includes its articles of association, which constitute, in fact, the principal element of the constitution.[43] The standard definition of the constitution in the Act extends further to special and other supermajority resolutions and their equivalents.[44] But for the purposes of s.40 the constitution includes in addition ordinary resolutions of the company or a class of shareholders and agreements among the members of the company or any class of them.[45] In short, the constitution here means any formal rules laid down by the shareholders generally (or any class of them) for the conduct of the company's affairs, whether taking the form of the adoption or alteration of the company's articles or not.

(f) The internal effects of lack of authority

7–15

As the opening words of s.40 make clear, the purpose of the section is to protect good faith third parties dealing with the company. Its aim is not to alter the internal effect of directors' actions taken without authority, except insofar as such amendment is needed to protect third parties. Consequently, the Act preserves individual shareholders' powers to bring an action to restrain the directors from doing an act to which would be in excess of their powers.[46] Such relief cannot be granted, however, if it would impede the fulfilment of the company's legal obligations to the third party. The provision thus operates in the narrow window where the directors are proposing to exceed their powers, but have not yet done so, or have exceeded their powers without creating a legally binding obligation on the company (e.g. creating a contractual option in the company's favour). Further, s.40(5) preserves the liability of directors "and any other person" who causes the company to contract in breach of limitations contained in its constitution. That liability may arise under s.171, requiring directors "to act in accordance with the company's constitution".[47] Likewise, it seems likely that the section does not affect the liability of a third party to return property or its value to the company as a constructive trustee, where corporate property is received knowing (to the appropriate extent) that its transfer is in breach of directors' duties.[48]

Contracting through agents

7–16

The second situation we need to consider is where the company contracts through an agent acting on its behalf. As we have noted above, it would be highly inconvenient for companies and their counterparties if all contracts required board or shareholder approval. A low-cost mechanism is needed whereby individual managers within the scope of their duties can contract with third parties on behalf of the company. In some cases the company may wish to confer contracting authority even on outsiders. That mechanism is provided by the law of agency, which is based on the notion of authority. Under agency law a person, the principal (P), who authorises another, the agent (A), to contract on his or her behalf with a third party (T) will be bound by the contract

which results from A's successful negotiations with T. The resulting contract will exist between P and T. A will not be a party to it and will normally owe no duties to T in relation to the contract.[49] Thus, if the company (P) authorises a manager (A) to contract with third parties in a particular area of the company's activities, that manager will be able to bring about contracts between the company and third parties without the need for specific board consent for each contract.

The first and obvious question is, how does a corporate P confer authority upon a managerial A? It is conceivable that the articles will confer power upon a particular person to contract on the company's behalf, just as the articles normally confer broad managerial powers on the board. However, such provisions in the articles are rare. The articles are altered only infrequently and through a procedure requiring shareholder consent,[50] whilst the allocation of contracting powers across the company's managerial hierarchy may require frequent adjustment. More commonly, therefore, corporate agents are authorised through a process of delegation and sub-delegation of managerial powers by the board. The board will typically appoint the company's senior managers with wide managerial powers, which will explicitly or implicitly include powers to contract with third parties on the company's behalf. Those managers may appoint more junior managers with authority to contract within the scope of their functions. And so on. The result is a highly flexible system for the distribution of contracting powers across the company. In companies with large businesses contracting authority can be widely dispersed; in small businesses the articles may allocate all contracting powers to the board or even to the shareholders; and all manner of other patterns of contracting authority can be created.

7–17

The system works smoothly so long as A in fact has authority to contract. Legal dispute arises when A acts beyond the authority conferred or the purported A was never given any authority. The question arises whether the agreement negotiated by A with T purportedly on behalf of P has resulted in a binding contract between P and T. The underlying policy questions are the same as with board contracting. Is priority to be given to the

company's allocation of contracting authority (implying the company is not bound if A has exceeded the authority conferred by P or simply has no authority) or are T's reasonable expectations that A had authority to be protected (implying that *in some cases* T should be able to enforce the agreement against P despite A's lack of authority)? A principal function of the law of agency is in fact to protect the reasonable expectations of T. However, identifying the appropriate balance between T and P is not easy. There are two principal questions to be answered. First, assuming ignorance on the part of T of A's lack of authority, was it reasonable for T to suppose that the unauthorised A did in fact have authority to enter into the contract in question on behalf of the company? Second, if T knew or could have found out about A's lack of authority, does that deprive T of the protection that a positive answer to the first question would have conferred upon T?

The first question does not arise in relation to board contracting—or rather the answer to it is very straightforward—because s.40 in effect embodies the proposition that it is reasonable for good faith third parties to assume that the contracting powers of board are unlimited. Formally, s.40 removes in favour of good faith T only limitations on the board's powers which are contained in the company's constitution. Once these are taken out of the picture, however, it is difficult to see what other restrictions on the board's powers might be set up against T, since the board's managerial powers are derived from the constitution.[51] However, there is no basis for making an assumption of unlimited contracting powers in relation to sub-board agents, and to do so would deprive the board of all control over the allocation of contracting power within the company. Thus, the first question to be answered is, assuming T's ignorance of the lack of authority, on what basis is T entitled to treat (sub-board) A as authorised to contract, even though A had no actual authority to enter into the contract in question? Then follows the second question, which we have examined above in relation to board contracting. Even if the contract would be binding on P in the absence of T's knowledge of the absence of actual authority, should the opposite answer be given if T knew or had the means of finding out about A's lack of authority? The answers to these questions are provided by the common law of

agency, though, as we shall see, there is some debate about the relevance of s.40 to sub-board agents.

Agency principles

7–18

Since this is not a book on the law of agency, for our purposes we can concisely state the main features of its rules of attribution in relation to contracts as follows. P is bound by the transactions on its behalf by A if the latter acted within either:

(a) the actual scope of the authority conferred upon them by P prior to the transaction or by subsequent ratification; or

(b) the apparent (or ostensible) scope of their authority.

As far as (a) is concerned, this captures the process of delegation and sub-delegation referred to above. All that needs be added is that actual authority may be conferred expressly or impliedly. Authority to perform acts which are reasonably incidental to the proper performance of an agent's duties will be implied unless expressly excluded,[52] so that actual authority to contract may be inferred in appropriate cases from the allocation of managerial tasks to a person where no explicit reference to contracting is made. In addition, where A on previous occasions has been allowed by P to exceed the actual authority originally conferred, A may thereby have acquired actual authority to continue so to act.

As far as (b) is concerned, this is the crucial concept which agency law uses to hold P liable even in the absence of A's actual authority, in order to protect the legitimate interests of T. Apparent authority consists of (i) the authority which a person in A's position and in the type of business concerned can reasonably be expected by T to have; and (ii) the authority which the particular A has been held out to T by P as having. The line between apparent authority and implied actual authority may thus seem a fine one, but the establishment of actual authority focuses on the relationship between the P and A, whilst apparent authority focuses on the relationship between the P and T.[53]

7–19

The doctrine of ostensible or apparent authority attempts to hold

a balance between the interests of the company and of the third party. On the one hand, a company should not normally be liable for the acts of persons whom it has not authorised to act on its behalf. As a qualification to that starting point, however, it will be reasonable to hold the company to the acts of an unauthorised agent if the company has in some way misled the third party into thinking the person is so authorised. It follows from this that A cannot confer ostensible authority on himself by representing that he has actual authority.[54] That can be conferred only by conduct of the company, acting through a primary decision-making body or an agent of the company, such as a managing director, with actual authority to make representations as to the extent of the authority of the company's officers or agents. The position rather is that, if the company has made such representations on which the third party has acted in good faith, the company will be estopped from setting up the truth of the relationship between the company and the agent as a ground of non-liability.[55]

Establishing the ostensible authority of corporate agents

7–20

The application of these general principles of the law of agency to establish a corporate agent's actual or apparent authority is a fact-dependent exercise, focusing on the P/A or P/T relationship, as the case may be. Nevertheless, certain broad lines of approach have emerged. Individual non-executive directors have no managerial responsibility unless the board specifically delegates it to them, and the courts have accordingly been restrictive in their approach to the apparent authority of such directors.[56] Even they, however, may be assumed to have some individual ministerial authority, for example, to authorise the use of the company's seal.[57] By contrast, if the person acting for the company is its chief executive officer or managing director, then, unless there are suspicious circumstances, or the transaction is of such magnitude as to imply the need for board approval, that person may safely be assumed to be authorised. In practice, that person will probably have actual authority[58] but, even if not, he or she will have ostensible authority and his or

her acts will bind the company.[59] Moreover, it is not uncommon for the board of directors to allow one of their number to assume the position of managing director even though never formally appointed to that position and in these circumstances the courts have treated that person as having the actual authority of a managing director.[60]

7–21

Much the same applies to other executive directors, except that, if the descriptions of their posts suggest particular areas of responsibility ("finance director", "sales director" or the like), they cannot be assumed to have authority outside those areas. Some decisions have even suggested that a non-executive chairman of the board has, as such, individual authority equating with that of a managing director.[61] But why the right to take the chair should imply a right to manage out of the chair is difficult to understand and the proposition has been doubted.[62] This is not to deny that the chair of the board has important corporate governance responsibilities[63] but rather to question whether those responsibilities involve contracting on behalf of the company. Nor is it to deny that a company might appoint someone to a chairman post with executive responsibilities, though the corporate governance rules frown on the cumulation of the positions of chief executive and chair of the board.[64]

7–22

A third party may deal with an officer or employee below the level of director. For many years, the courts showed a marked reluctance to recognise any ostensible authority even of a manager.[65] But this has now changed and it may be taken that a manager, even if actual authority is lacking, will generally have ostensible authority to undertake everyday transactions relating to the branch of business which he or she is managing (though probably not if they are really major transactions)[66] and that the secretary will similarly have such authority in relation to administrative matters.[67] Indeed, almost every employee of a trading company must surely have apparent authority to bind the company in some transactions, though the extent of that authority may be very limited. For example, people behind the counter in a department store clearly have ostensible authority to

sell the goods on display for cash and at the marked prices. Whether their apparent authority extends beyond that (for example, to take goods back if the customer returns them) we shall probably never know, for it is unlikely to be litigated—at any rate against the customer.[68]

7–23

In all the above cases the question has been whether the agent had actual or apparent authority to *contract* on behalf of the company. In a relatively recent line of cases, however, the question has arisen whether the company is bound if the agent has authority, not to contract, but to make representations on behalf of the company about whether another person with actual authority to contract has committed the company to the contract. Can the company be bound on the basis of such a representation, even if that representation is false? In *First Energy (UK) Ltd v Hungarian International Bank Ltd*[69] a senior manager was held to have ostensible authority to communicate to a third party head office approval of a loan application, even though he did not have authority to contract on the bank's behalf, as the third party knew, and the head office had not in fact approved the loan. Once the third party had accepted the "offer" communicated by the manager, it could sue the bank on the resulting contract. Again, it has been held that a company can be bound as a result of a representation, made by an agent with ostensible authority to make it, to the effect that another agent of the company was authorised to contract with the third party on behalf of the company. When the third party purported to contract with the company through the second agent, the company was bound, even though neither first nor second agent had actual or ostensible authority to enter into the contract in question.[70] This new line of authority advances the security of third parties' transactions but is capable, unless closely confined to the facts of particular cases, of extending companies' liability for unauthorised contracts and of undermining the proposition that an agent cannot create apparent authority for himself through his own assertions.[71]

Knowledge

7–24

We now turn to the second question identified in para.7–17, above. Even if A has apparent authority, it can be argued that T has no legitimate claim to protection if T knows or ought to have known that the agent was not actually authorised. Under the agency rules the balance shifts decisively in favour of P, if T knew A did not have actual authority to contract. The law will also deprive T of the benefit of the doctrine of apparent authority if T was put on enquiry as to whether A was acting within the scope of authority. Thus, in one case, where T had contracted with a single director rather than with the board as a whole, that director was held not to have created a contract with the company because the contracts were abnormal in relation to the business of the company (implying no apparent authority) and because the circumstances were such as to raise questions about whether A was acting properly (T put on enquiry).[72]

In addition, at common law T may also be deprived of transactional security on the basis of constructive notice of the constitution, as discussed above in relation to board contracting,[73] i.e. where A has entered into a contract in breach of a provision in the articles limiting A's authority—even though T has not read the articles. The rule in *Turquand's Case* modifies the constructive notice doctrine to some extent, as we have seem, but otherwise the constructive notice doctrine (as modified by *Turquand*) continues to operate at common law. It may well be that this issue is less important in relation to sub-board agents, because the restrictions on their authority are less likely to be found in the company's articles and more likely to be contained in the internal decision whereby authority was delegated to the agent. Since the constructive notice doctrine does not catch such internal restrictions, which will not show up in the company's file in the public registry, T is less exposed to the risk of constructive knowledge. Yet, it is not impossible to think of cases where the articles might be relevant to sub-board agents' contracting powers. Take our stock example. Suppose there is a provision in the articles requiring shareholder approval for contracts above a certain value. If this is couched as a prohibition on anyone other than the shareholders contracting, the constructive notice doctrine will defeat T contracting via a sub-board agent. If, to vary the situation slightly, sub-board agents are permitted to contract for high-value contracts

provided they have obtained the prior approval of the shareholders, then the indoor management rule will probably save T.

7–25

Thus, given the importance of knowledge in the law of agency, there is some incentive for T dealing with sub-board agents to try and bring themselves within s.40, even though that section applies only to limitations on authority located in the company's constitution. The advantages T may seek are from s.40 are, in relation to constitutional limitations, (i) escape from the doctrine of constructive notice; (ii) where T has some knowledge, not being put under a duty to enquire; and (iii) again where T has some knowledge, benefitting from the wide definition of good faith in the section. There are two situations where this question may arise. First, assume T contracts with a single director (in the case of a company having multiple directors) rather than the board. Can T invoke s.40 in relation to authority limitations in the articles? Before 2006 the answer was clearly in the negative because the section referred to "the power of the board of directors" whilst now it refers to "the power of the directors" to bind the company. We have suggested in para.7–13, above a reason why this change was made. That reason suggests the change was intended to extend the section only to cases of the directors acting collectively (but, for some procedural reason, not as a board) rather than to cases of contracts with individual directors, which the wording is not apt to cover. Even if s.40 can be extended, it should be noticed that s.40 does not operate so as to confer ostensible authority on a single director but only to allow T potentially to rely on such ostensible authority as the director has despite T's actual or constructive knowledge. The ostensible authority of the single director has to be established as a prior step in the argument on the basis of the principles discussed in para.7–20, above.

Secondly, the section protects from limitations in the articles not only the power of the directors to bind the company but also their power "to authorise others to do so".[74] Thus, if the articles state that only the shareholders can enter into high-value contracts, a good faith T can rely as against the company on an agreement made either by the board or by someone who has

been specifically authorised by the board to enter into high-value contracts. It is not clear whether s.40 goes beyond this base case. First, does it apply only where the board gives express actual authority to T or does it capture situations of implied actual authority as well?[75] In other words, must the board authorisation expressly say that A may enter into high value contracts or is it enough to appoint A to a managerial position incidental to which is entering into high-value contracts? Second, must A have been appointed by the directors or is it enough that A was appointed by a senior manager who was appointed by the directors and whose functions include the appointment of junior managers? The underlying question is whether the extension in s.40 to "authorising others" was intended to cover only situations where the board approves the contract in principle but delegates the actual contracting decision to a manager or whether the extension is designed to exempt the management hierarchy as a whole from the restrictions in the articles on their contracting power. It seems likely that, if Parliament had intended the broader result, it would have used clearer words. Overall, therefore, it seems that A's authority to bind the company, where A is not the board of directors or an apparent board, will be determined overwhelmingly by the common law of agency coupled with constructive notice of the company's public documents as modified by *Turquand*.[76]

Knowledge of the constitution as an aid to third parties?

7–26

So far, we have considered knowledge (actual or constructive) of the company's constitution as something negative from T's point of view, as something which could deprive T of the security of the transaction with the company. Can T rely on knowledge of the articles as a building block in a claim against the company? As far as constructive knowledge of the constitution is concerned, the courts have held that the fact that T was deemed to have notice of the contents of the articles did not mean that T could rely on something in those documents to estop the company from denying the ostensible authority of an officer of the company who would not otherwise have had authority of the

relevant type. Constructive notice was a negative doctrine curtailing what might otherwise be the apparent scope of the authority and not a positive doctrine increasing it.[77] The position might be different, however, if T had actual knowledge of the articles and had relied on some provision in them. Even here, however, what is clear is that mere knowledge that the board of directors might have delegated authority to a particular person does not estop the company from denying that it has done so. It would be necessary for T also to establish that "the conduct of the board, in the light of that knowledge, would be understood by a reasonable man as a representation that the agent had authority to enter into the contract sought to be enforced".[78] Thus, actual knowledge of the articles coupled with conduct of the board might be enough to generate apparent authority, but there seems to be no reported case in which that has occurred. If estoppel is to arise in these circumstances, it will generally be because of conduct by the company's primary decision-making bodies and not because of any provision in its articles.[79]

Ratification

7–27

We have already noted that the legal effect of lack of actual or ostensible authority on the agent's part is that the transaction is not binding on the company unless it is ratified by the company. The company thus has an option to take up the transaction or to treat it as not binding on it. Determining who has the power to ratify the transaction is a matter for the company's constitution. There is no requirement in the Act, as there is for breaches of directors' duties, that ratification must be by the shareholders,[80] though it appears the shareholders will usually be able to ratify unauthorised actions of the board or sub-board agents.[81] Normally, it is a matter of finding who, under the company's constitution, has actual authority to enter into the transaction and securing their approval of it. In addition, it is not necessary that ratification should take the form of an express decision to approve the transaction. Ratification can be implied from conduct[82] and the conduct may amount to ratification if the company has knowledge of the essentials of what the agent has done, even if it did not know that the agent had acted without

authority.[83] If there is ratification, it has retrospective effect, i.e. it renders the transaction with the company binding on it as from the time it was entered into by the agent. It is sometimes difficult to distinguish a subsequent ratification (which is a unilateral act of the company) from the entering into by the company and the third party of a new transaction which replaces the one entered into by the agent without authority.[84] There is also a time limit on the ratification process in the sense that ratification will not be permitted if it would unfairly prejudice a third party.[85]

Overall

7–28

A third party dealing with the company through its board of directors has a higher level of security of transaction than a person dealing with the company otherwise. In the former case, the primary rules of attribution start from the position that the board has power to bind the company—subject to the articles—and s.40 goes on to protect a good faith third party (widely defined) from attack based on limitations contained in the articles. By contrast, where T deals with an agent, A's authority to bind the company needs to be established under the standard agency rules and s.40 offers less (probably much less) protection against attacks based on limitations contained in the articles, throwing T in some cases back onto the indoor management rule. This may not be an inappropriate result. The standard division of powers within a company is one which allocates general management powers to the board.[86] So, the third party's expectations as to the security of the transaction will be particularly high when that person deals with the company through the board. The primary rules of attribution and s.40 recognise this. By contrast, where the company contracts through an agent, it has a legitimate claim to be able to limit the scope of its agents' authority, just as a natural person can. Otherwise, the directors would lose a significant method of controlling the conduct of the company's business and boards would either have to run the risk of acquiring contractual obligations through unauthorised means or devote a disproportionate amount of board time to the contracting process. T can have no legitimate expectation that the board

would routinely delegate all its powers to any particular person. However, even in this case, the interests of the third party are by no means neglected. The general rules of attribution—agency rules—will protect the third party who has acted reasonably but been misled by the company as to the authority of the corporate agent, just as they do when P is not a company.

The ultra vires doctrine and the objects clause

7–29

Before finishing our consideration of corporate contracting, we need briefly to consider the ultra vires doctrine and its relationship with a particular clause often found in the articles, namely, the objects clause. Although the ultra vires doctrine caused a lot of anxiety to third parties during its history,[87] that is no longer the case because the third party is protected against its effects by s.39 of the Act, whether the third party has acted in good faith or not. The objects clause defines the capacity of the company, i.e. it states what the company is legally capable of doing, whether it acts through its board or via the shareholders collectively or through an agent. A company was required by the early legislation to include a statement of its objects in its memorandum of association and from that the courts deduced that the company did not have legal capacity to act outside its objects. Any such action was in principle void. This was normally referred to as the ultra vires doctrine.[88] It had a major and adverse impact on the security of third parties' transactions with the company. Not even ratification was available in relation to ultra vires acts. So, it is not surprising that the doctrine was the object of reform; what is surprising is that reform took so long.

There is no longer a provision in the Act requiring a company to set out its objects.[89] Unless it chooses otherwise, the company's objects will be unrestricted, i.e. it will have unlimited capacity.[90] Even if a company chooses to adopt restrictions on its capacity (which will appear today necessarily in the articles rather than the memorandum of association),[91] those restrictions will not affect the validity of the acts of the company: s.39(1) provides that "the validity of an act done by a company shall not be called into question on the ground of lack of capacity by

reason of anything in the company's constitution". Thus, the ultra vires doctrine, so far as it is based on the company's objects clause,[92] no longer threatens the security of third parties' transactions.[93] A company may also amend or remove its object clause by the same means as it can use for altering its articles,[94] except in the case of charitable companies.[95]

Nevertheless, many existing companies will continue to have objects clauses and some newly created ones may choose to adopt them. The central point is that, whilst the ultra vires doctrine is dead as a restriction on the capacity of the company, objects clauses continue to limit the authority of the board, the shareholders collectively or any of its agents to bind the company, in the same way as any other provision in the articles. The objects clause is part of the company's constitution and the rules discussed above, including s.40 of the Act, apply to it accordingly. Equally, a director may be liable to the company for exceeding the limits in the objects clause, as with any other authority limitation in the articles. Indeed, it is precisely because the rules on authority hold the balance between the interests of the company and of third parties in what is now regarded as the appropriate way that it was possible for s.39 to be cast in such blunt terms.

Tort and Crime

7–30

We have suggested above that both companies and their potential counterparties benefit from rules which facilitate contracting between them. The rules discussed in the first part of this chapter are designed to effect such facilitation. Since the purpose of the rules is to produce a contract between P and T, it is wholly acceptable that in the normal case those who act as or on behalf of the company do not acquire any liability under the contract. Whether the company contracts via its constitutional bodies or via an agent, we have seen that this is the result which is normally achieved. If the company contracts through the board, the directors do not become parties to the contract. If the company acts through an agent, once negotiations are successfully concluded between A and T, A drops out of the picture, becoming neither a party to the contract nor personally

liable under it, unless A chooses to accept liability under it (something that may not be entirely easy to determine).[96] Perhaps surprisingly, this rule also applies where a contract with P fails to come into existence because of A's lack of authority.[97] Here, however, A may be liable to the third party on a "warranty of authority" for the loss suffered by T through the failure of the contracting process, if the agent has misrepresented the extent of his authority, no matter how innocently.[98]

In the situations we discuss in the second part of this chapter, however, the non-liability of the person acting as or on behalf of the company cannot be the typical outcome. These are situations of wrongdoing and it would be odd if the addition of corporate liability removed liability from the individual. Thus, whereas with contracting it is necessary to explain instances where those contracting as or on behalf of the company become liable, with wrongdoing the situation is the other way around: explanation is needed if the addition of corporate liability appears to remove liability from the individual.[99] If responsibility for wrongdoing is attributed to the company on the basis of vicarious liability, the outcome is in accordance with this postulate. It will be the case that both agent/employee and company are liable. The liability of the agent is attributed to the company but not the wrongful acts of the agent. The agent remains a wrongdoer; indeed, if the agent does not, vicarious liability cannot arise.[100] Where, however, the basis of the principal's liability is not vicarious liability, the question will arise whether the company is liable but not the agent. Sometimes, perhaps often, they will both be liable but sometimes not.

Tortious liability

Vicarious liability

7–31

Actions against the company in tort (and for other forms of civil liability) are overwhelmingly based on the vicarious liability of the company for the wrongs of its agents and employees, so that both employee/agent and company are liable. Nevertheless, the mere fact of being an employee or agent of the company is not enough to generate liability in tort for the company in relation to

torts committed by those agents or employees. There must be some connection between the company's activities and the acts of the tortfeasor if the company is to be held liable as well. Defining the nature of this link may be said to constitute the central problem within the doctrine of vicarious liability. Over the years, the nature of the link has been broadened by the courts. From an early date, the courts were unwilling to confine the scope of the company's (or any principal's) vicarious liability to those actions actually authorised by the company. Thus, it has been clear for some time that a company or other employer does not escape vicarious liability simply because the agent has done an act which the agent or employee has been prohibited from doing or even because the agent has done a deliberate act for his own benefit which has prejudiced the employer.[101] This led to the famous (but unclear) dichotomy between doing an unauthorised act (no vicarious liability) and doing an authorised act in an unauthorised way (vicarious liability). In its more recent decisions on the doctrine,[102] the House of Lords/Supreme Court moved beyond that distinction and imposed vicarious liability when there was a sufficiently close connection between the wrongful acts of the agents or employees and the activities which those persons were employed to undertake. The fact that the wrongful acts were clearly unauthorised and not for the employer's benefit did not prevent the imposition of liability, if this test was satisfied.

At a general level, the doctrines of a "sufficiently close connection" in tort and of ostensible authority in the law of agency perform a similar role, i.e. the protection of the legitimate interests of third parties coming into contact with businesses. However, they are by no means identical doctrines: ostensible authority turns on a holding out by the principal of the agent to the third party,[103] whereas vicarious liability does not depend upon what the third party understood to be the agent's connection with the company—the third party may not even know of it at the time the tort was committed—but upon an objective assessment of the relationship between the agent's actions and the company's activities. In other words, the focus in the case of vicarious liability is on the relationship between the employee or agent and the company, not on the relationship between the company and the third party. The approach is more

like that used by the courts to identify the actual authority of agents,[104] but the tort test is much broader since it may lead to liability in tort for acts which were clearly unauthorised and, indeed, may have been expressly forbidden.

Assumption of responsibility

7–32

However, difficult problems can arise when the law of tort and the law of contract come together to regulate the process of contracting. Suppose an agent acting for a company makes negligent statements about the promised contractual performance during the contracting process. If the third party subsequently sues in contract, only the company will be liable; if the third party sues in tort, the maker of the statement might be thought to be primarily liable and the company liable only vicariously. The company will be liable on either theory, but the choice of claim will be important if the company is not available to be sued (for example, because it is insolvent). The issue is particularly important in small companies, for example, where the shareholder, director and main employee are the same person. If the suit is in contract, the personal assets of the shareholder/director will be protected; if in tort, they will not be.

After some uncertainty, the House of Lords[105] avoided that adverse result for the one-person company[106] by holding that a person who makes negligent misstatements whilst contracting on behalf of a company does not assume personal responsibility for the truth of the statements made, assumption of responsibility being a necessary ingredient for liability in the tort of negligent misstatement. Responsibility is to be treated as assumed (in the usual case) only on behalf of the company. Thus, it is the company which has committed the tort (by making the false statement through the agent) rather than the agent; the company's liability is thus direct, not vicarious.[107] As the court made clear, this approach applies not only to negligent misstatements but also to cases of negligent delivery of services due under a contract, where again contractual and tortious duties coincide. However, two points should be noted about the scope of this decision. First, it is a statement only of the starting point for the courts' analysis. A director or other agent of the company

may on the facts be treated as having assumed personal responsibility for the negligent misstatement or the negligent provision of services.[108] Moreover, the test for assumption of personal responsibility is not the subjective one of what the agent believed to be the case; rather the test is objective, something along the lines of whether it was reasonable for the third party to conclude that the director or other agent had accepted personal responsibility.[109] The principle of *Williams* may thus apply in different ways to different types of business.[110]

Secondly, the result in *Williams* was achieved, not by applying any special doctrine of company law, but by relying on the requirement for an assumption of responsibility as a necessary ingredient of liability under the tort of negligence in relation to the misstatements. It follows that a director or other agent will not escape liability where assumption of responsibility is not a necessary ingredient for tortious liability, for example, in deceit.[111] Thus, as far as tortious liability is concerned, the personal liability of directors of companies is crucially dependent upon the common law of tort rather than upon any provisions in the Companies Act or even the common law of companies. A negligent director will escape liability in tort only on the basis of rules which apply also to all agents.

Fraud

7–33

At one stage, it seems to have been thought that a company could not be held vicariously liable for fraudulent conduct on the part of an employee or agent, at least where the fraud was directed at benefiting the agent rather than the company.[112] However, the clear view today is that such cases are to be explained on the basis that the agent or employee was acting outside the scope of their authority when carrying out the fraud and that, had this not been the case, the company or principal would have been liable for the fraud.[113] As far as corporate liability towards third parties is concerned, the tort of deceit and other torts based on fraudulent conduct are thus to be treated in the same way as other torts. There is no special exclusionary rule for such conduct. It is still necessary, of course, to show that the individual was acting in the course of his or her employment

when committing the fraud, but the introduction of the "sufficiently close connection" test for establishing this relationship has also made this task easier for the claimant. Indeed, the denial of a special exclusionary rule for fraud and the introduction of the "sufficiently close connection" test for determining the scope of employment both point in the same direction: the company or other employer carries (and thus has an incentive to control) the risks to third parties generated by fraud within its business activities, even if some of the risks in question harm the company as well.[114]

Recovery by the company from the agent

7–34

Even if the third party successfully sues the company in tort, the company may be able to recover from the agent at least some of the amount it has to pay to the third party. In all cases of vicarious liability, agent and company are joint tortfeasors,[115] and so the company can claim a contribution from the agent towards the damages payable to the third party. Since the company is a wholly innocent party, that contribution will usually be a complete one, i.e. an indemnity.[116] Of course, there may be good non-legal reasons for reluctance on the part of an employer to seek a contribution from an employee. Equally, where the employee has acted in a way required by the employer in the discharge of his duties, the employee may have a claim for an indemnity against the employer, so that the employer's contribution claim would be barred for circularity. However, this will not be the case where commission of the tortious act constituted a breach of duty or of the contract of employment on the part of the agent or employee.[117]

Liability of non-involved directors

7–35

So far, we have discussed the respective liabilities in tort to third parties of the company's agents (who may be its directors or who may be, and often are, more junior members of the organisation) and the company, on the assumption that the agent is a tortfeasor. However, the question has been raised in a number of cases of whether a director of a company, who is not

the tortfeasor, can be liable in tort to a third party simply by virtue of his directorship of the company. Many of the cases concern tortious acts consisting of infringements by the company's agents of another person's intellectual property rights, such as patents or copyright. It seems clear that, in principle, the answer is in the negative, even if the tortfeasors are other directors of the company. As long ago as 1878, Fry J said in a case of fraudulent misrepresentation[118] that two classes of person could be responsible for the fraud (the agent who actually made the fraudulent misrepresentations and the principal on the basis of vicarious liability) but that "one agent is not responsible for the acts of another agent". This principle has been confirmed in a number of subsequent cases.[119] It supports the proposition that involvement in the management of the company does not lead to personal liability, unless the director or manager himself commits a wrong.

Accessory liability

7–36

However, there is an important qualification to be made to the statement of Fry J. If a director, whilst not committing the tort him- or herself, authorises or procures the commission of the tortious act by someone else, whether that act constitutes deceit or some other tort, there will be liability on the part of the director as a joint tortfeasor with the person who commits the tort. This liability arises under the normal rules applying to accessory liability in the law of tort, but it is an important extension of tort liability in the company context. Given the managerial role of directors in companies' affairs, they are more likely to procure the commission of tortious acts than to commit those acts themselves. It is not necessary that that the director authorising or procuring the tortious acts should realise their tortious nature or display any other particular mental element in relation to the acts, unless this is a requirement of the tort being so authorised or procured.[120]

The rules about accessory liability for directors who procure tortious acts, together with the vicarious liability of the company for unauthorised and forbidden acts sufficiently connected with the company's business, provide a strong incentive for directors

to acquaint themselves with, and to secure observance by the company's agents of, the tort rules which impinge upon the company's business. Nevertheless, the principle of personal liability is still controversial in some quarters.[121]

Direct liability

7–37

Overwhelmingly, the tortious liability of companies is approached by the courts through the doctrine of vicarious liability, i.e. the company, like any other person, is liable for torts committed by an agent or employee, provided that person's torts have a sufficiently close connection with the business of the company. As with contractual liability, however, the company can also be liable on the grounds that its constitutional bodies (board or shareholders collectively) have committed a tort. In this case, the company's liability is direct,[122] not vicarious. Normally, this will be on the basis that the constitutional bodies have authorised the tort and, unlike with contracting by the board, the directors will also normally be tortiously liable for authorising the wrongdoing.[123] Given the width of the doctrine of vicarious liability, it is rarely necessary to consider, in a claim by a third party against the company,[124] whether the company is liable directly or vicariously. However, in some cases of statutory civil liability, the drafting of the statute does make it important to establish whether the company's liability is direct or vicarious, because the statute excludes vicarious liability. The courts have also concluded that the same issue may arise in some areas of civil liability at common law where vicarious liability is not available.[125] But above all, the issue has arisen in relation to the criminal liability of companies, for in criminal law vicarious liability is treated with some reserve, since it is a form of strict liability, whether applied to companies or other principals. We will therefore treat these instances together in the next section where we deal with criminal liability. As we shall see, the central question is how far liability should be imposed beyond the actions of the company's constitutional bodies.

Criminal liability

7–38

As we have just seen, vicarious liability provides the bedrock upon which companies are held liable in tort. In criminal law, by contrast, vicarious liability is regarded with suspicion in relation to serious crimes involving mens rea. Consequently criminal law has had to place greater reliance on the direct liability of the company. On this approach, the acts and state of mind of officers or employees are treated at those of the company. However, the criminal law has had great difficulty in determining the criteria for direct liability. If they are broadly set, there will be little difference from the company's point of view between vicarious and direct liability; if narrowly set, companies will often escape criminal punishment.

Regulatory offences

7–39

In the case of regulatory offences based on strict liability, it will be relatively easy to convince the court that Parliament intended to attribute the acts of even junior persons in the business to the company.[126] In an important decision the Court of Appeal was prepared to go further and apply this approach in the case of a hybrid offence, where the strict liability was qualified by a "reasonably practical" defence.[127] In this case, it was not a defence for the company that the senior management had taken all reasonable care to avoid a breach of the statutory duty; it was necessary that those actually in charge of the dangerous operation should have done so. Where liability is imposed, then on usual principles the fact that the employees were acting contrary to their instructions does not necessarily provide the company with a defence.[128]

Identification

7–40

Outside the area of regulatory offences, the traditional approach has been to impose liability on the company only on the basis of an "identification" doctrine. This doctrine has its origins in the area of statutory civil liability and was only later transferred to the criminal law. The classic formulation is to be found in *Lennard's Carrying Co Ltd v Asiatic Petroleum Co Ltd*,[129] concerning corporate civil liability under the merchant shipping

legislation which required a finding of “actual fault or privity” on the part of the company. This formulation was taken to exclude vicarious liability as a technique for holding the company liable. There, Lord Haldane based identification on the concept of a person “who is really the directing mind and will of the corporation, the very ego and centre of the personality of the corporation”.[130] This was both an anthropomorphic and limited concept of attribution. Lord Haldane extended the directing mind and will concept beyond the constitutional bodies of the company only to include persons given the equivalent of board powers by the articles or by the general meeting.[131]

In the period immediately after the Second World War the same idea was applied in the criminal law and its use was eventually approved and clarified by the House of Lords in 1972 in the case of *Tesco Supermarkets Ltd v Nattrass*.[132] Their lordships took a similar view of what constituted the directing mind and will as in the earlier case, except that they added persons to whom the board had delegated its functions.[133] Of course, the concept is needed only in circumstances in which the formulation of the offence is thought to rule out the attribution to the company of the acts and state of mind of persons not falling within the “directing mind and will” concept. Where the crime is more broadly formulated, the company can be held liable on the basis of what those other employees thought and did, as Tesco itself discovered in a later case.[134]

The third area where the directing mind and will theory was accepted was accessory liability for breach of fiduciary duty. This was a more surprising development since, for the purpose of civil litigation by third parties against companies, the actions and states of mind of agents are normally attributed to the principal, so that the “directing mind and will concept” need not be deployed. However, in *El Ajou v Dollar Land Holdings Plc*,[135] the knowledge of a director who had responsibility for a particular category of transactions on the company’s behalf was attributed to the company for the purposes of making the company liable for knowing receipt of the proceeds of a fraud. It has been disputed academically whether this result could have been achieved on the basis of normal agency principles and that criticism has received some judicial support.[136]

7–41

However, the position reached in the *Nattrass* case in the early 1970s did not prove stable, for two reasons. First, the line between regulatory offences where the liability of the company could readily be inferred and other crimes where the much more restrictive identification doctrine held sway proved difficult to draw.[137] Secondly, the use of a concept—the "directing mind and will"—which has its origins in relation to natural person provided very little guidance about the function and scope of this concept in relation to an abstract person such as a company.[138] Consequently, the definition of who counted as the directing mind and will of the company continued to be uncertain. A partial breakthrough came in *Meridian Global Funds Management Asia Ltd v Securities Commission*,[139] a case involving administrative penalties for breaches of securities legislation. Lord Hoffmann sought to take an approach based on analysis of the rule in question rather than on the company's internal decision-making. Where statutory liability was imposed on a company, then, where the company's constitutional bodies had not acted and the doctrine of vicarious liability was not available for some reason, the question was who, for the purposes of the statute, was to be treated as the company. Whilst Lord Haldane's phrase might have suited the statute and the corporate structure he had to deal with, it did not define the correct overall approach. "The question is one of construction rather than metaphysics." The true question in each case was who, as a matter of construction of the statute in question, or presumably other rule of law,[140] is to be regarded as "the company" for the purpose of the identification rule. In appropriate cases, that might be a person who was less elevated in the corporate structure than those Lord Haldane had in mind. In *Meridian* itself, where the question was whether the company was in breach of the New Zealand laws requiring disclosure of substantial shareholdings knowingly held by an investor,[141] the relevant persons were held to be two senior investment managers who were not members of the company's board. Given the purpose of the statute—speedy disclosure of shareholdings—it was appropriate to treat those in charge of dealing in the markets

on behalf of the company as its “controllers” in this respect.

Welcome and more straightforward though the new approach is, it inevitably still leaves uncertainty as to who will be regarded as the relevant person within the corporate hierarchy for the purposes of the identification rule in any particular case. According to the statute, this might range from almost any agent or employee of the company acting within the scope of his or her authority to only those holding senior management positions, perhaps in some cases only the board itself. Since, however, a precise answer to the question of whose acts and knowledge are to be attributed to the company depends ex hypothesi on an analysis of the context of the particular rule with which the court is dealing, it is doubtful whether more certainty can be provided at a general level.[142] In this respect it is helpful that these “special” rules of attribution are needed only where the “primary” and “general” rules of attribution are unavailable.[143]

Criminal liability of directors

7–42

Is a director exposed to criminal liability where he or she has not committed the criminal act for which the company is vicariously or directly liable? In principle, the answer is in the negative, but criminal liability on the director may arise in some cases. The common law normally treats as guilty of the offence those who counsel or procure the commission of that offence, for example, by a company. They are liable for the principal offence as well as those who actually commit it, just as tort law treats persons as joint tortfeasors in such cases.[144] This common law liability will arise even in relation to statutory offences, unless the statute excludes it. Further, many statutes expressly impose a somewhat similar liability expressly upon directors and managers where they consent to or connive at the commission of an offence by the company.[145] Under this rule the director or manager can be criminally liable personally where he or she is fully aware of or approves the corporate criminal offence, even though that awareness or approval do not encourage or assist the commission of the offence by the company. The imposition of criminal liability in this situation puts strong pressure on directors and managers to intervene and prevent wrongdoing

within the company when they are aware of it.

Liability for the principal offence is also imposed under another common statutory formula which, however, goes considerably beyond consent or connivance. Under this second statutory formula liability is imposed when neglect by a director or manager has contributed to the commission of the offence by the company.[146] Here, a causal link between the neglect by the director and the commission of the offence by the company must be shown (an element not required under the "consent or connivance" formula) but the director or manager is made liable for the principal offence without necessarily being subjectively aware of the wrongdoing within the company. The Law Commission has suggested that it is unfair to impose liability upon the director for the principal offence in this second case, if the offence requires proof of fault or conviction carries a high stigma. However, the Commission did accept that it is appropriate in some circumstances to impose a separate liability for negligently failing to prevent the commission of an offence by the company.[147]

Finally, the director (or manager) might be civilly liable to the company for the loss suffered by it as a result of the commission of an offence, on the grounds that permitting or causing the company to commit the offence was a breach of duty or breach of contract by the director as against the company.[148]

Corporate manslaughter

7–43

The *Meridian* approach to corporate liability may come to dominate the issue in relation to statutory crimes. However, the Court of Appeal refused to adopt it in respect of the common law crime of manslaughter by gross negligence. Accordingly, for this important common law crime a company could be convicted only if an identifiable human being could be shown to have committed that crime and that individual met the strict test for the identification of that person with the company (i.e. the "directing mind and will" test).[149] Consequently, in respect of this important crime it was difficult to secure the conviction of other than small companies when serious fatalities occurred in the course of the company's business. The gross negligence

required could rarely be located sufficiently high up in the corporate hierarchy. As long ago as 1996, the Law Commission proposed a solution to this difficulty in its recommendation that a company should be criminally liable if management failure was a cause of a person's death, without the need to show that any human being was guilty of manslaughter or, indeed, any other crime.[150] On this approach the company could be liable criminally even though none of those whose actions were attributed to it was criminally liable. The focus would be on the quality of the operating systems deployed by the company rather than the guilt of individuals.

After a remarkably tortuous legislative passage, extending over a number of years, the Corporate Manslaughter and Corporate Homicide Act 2007[151] eventually reached the statute book. It creates an offence for companies[152] to cause a person's death as a result of the way its activities are organised or managed where that organisation or management amounts to a gross breach of a duty owed by the company to the deceased. The new statutory offence replaces the common law as far as companies are concerned.[153] The requirement for a gross breach of duty owed to the deceased[154] reflects the common law of manslaughter by gross negligence. From the point of view of the above discussion the crucial point is that no individual has to be identified whose acts constitute the offence of manslaughter and whose acts and knowledge can then be attributed to the company. The company can be convicted on its organisational failings alone, irrespective of the guilt of any individual person. However, some rule has to be provided to identify the persons whose organisational failings are attributed to the company. Here, the notion that the company should be found guilty only for failings at a senior level is retained in the provision that corporate guilt arises "only if the way in which its activities are managed or organised by its senior management is a substantial element in the breach".[155] If the failings are wholly at subordinate level, the company will not be guilty. However, significant failings at lower levels are bound to raise the question of whether the senior levels of management should have picked up these lower level failings.

Sanctions

7–44

If the company is found guilty under the Act, it is liable to an unlimited fine.[156] How is this supposed to further the deterrent aims of the criminal law, either in the case of corporate manslaughter or more generally? The financial penalty falls on the shareholders rather than on the senior management whose failings led to the criminal offence.[157] It may be that this will encourage the shareholders to take action which is adverse to the interests of the directors (e.g. removing them) or put pressure on them to avoid repetitions of the offence. Whether the imposition of a penalty on the company will have such effects will depend in part on the nature of the shareholder/management relations in the company. It is perhaps least likely to operate in this way in large companies for which the 2007 Act was particularly designed. Greater pressure on the shareholders to take action might arise if the consequence of a criminal conviction were the exclusion of the company from a certain area of business, but this raises even more strongly the question of the rationale for imposing a penalty on shareholders for managerial wrongdoing.

A greater deterrent impact may result from the reputational harm the management will likely suffer if the company is found guilty of corporate manslaughter whilst they were in charge of it. In this respect, the court's power to order the company to give publicity to the fact of its conviction may be helpful.[158] At one stage it had been mooted that convictions would be required to be reported in the company's Operating and Financial Review.[159] Although neither the 2007 Act nor the provisions governing the Business Review (which replaced the OFR) in terms require this, such publication could be required as part of a court's publicity order.

The court has a further power—which may operate more directly on the management of the company—to order a convicted company to take steps, not only to remedy the breach and any matter resulting from it which were a cause of the death, but also "any deficiency, as regards health and safety matters, in the organisation's policies, systems or practices of which the relevant breach appears to the court to be an indication". The application for the order may be made only by the prosecution, which must consult the relevant enforcement authority (for

example, the Health and Safety Executive) about what should be asked for. The order will set a time limit for the specified steps to be taken and may require the company to provide evidence to the relevant enforcement authority that those steps have been taken.[160] However, the enforcement authority is given no greater monitoring role in relation to the management of the company than this, though it may think it appropriate to use its general inspection powers more vigorously in relation to a company which has been convicted of corporate manslaughter than one which has not.

Personal liability under the 2007 Act

7–45

Since the deterrent effect of the sanction turns on its impact on the management of the company, one may wonder whether the criminal liability of the company is something of a side-show, unlike in tort law where the compensatory goals of tort law are advanced by corporate liability. One might further wonder whether the crucial issue rather is the personal criminal liability of the directors or other senior managers, as discussed in para.7–42, above, rather than the liability of the company. Thus, it is not surprising that, during the passage of the 2007 Act, there was an intensive debate about whether penalties—whether by way of criminal sanctions or by way of disqualification—should be imposed on those members of the senior management of the company who were to blame for the organisational failings. In this debate, the wheel thus came full circle: under the directing mind and will doctrine the crimes of individual managers make the company liable; now the question was how far corporate crime should make individual managers liable. The Government resisted strongly any moves in this direction. The 2007 Act creates corporate offences only and excludes criminal liability even in relation to the counselling and procuring form of the offence, though disqualification is possible.[161]

Failure to prevent criminal acts

7–46

The Corporate Manslaughter and Corporate Homicide Act creates strong incentives for companies to organise their

businesses so as not impose risks of serious harm on their employees and outsiders. Criminal liability for failure to address risks within the organisation could be imposed on a wider basis. It appears to be becoming attractive to the legislature to impose such liability where the risk in question is the risk of a criminal act being committed within the organisation, presumably on the basis that the senior management of the company are better at discouraging criminal acts within it than are the ordinary law enforcement bodies. A significant step was taken in the Bribery Act 2010. This Act not only updates and extends the substantive offence of bribery, but it also imposes (in ss.7 and 8) criminal liability on companies for failing to prevent bribery by a person associated with the company. In addition, s.14 imposes on "senior officers" (not just directors) of the company "consent or connivance" liability (see para.7–42, above) in respect of the failure. The associated person could be simply an employee or agent of the company. The liability arises only if the associated person was intending to obtain a business advantage for the company. More important, it is a defence for the company that it has in place adequate procedures designed to prevent bribery by employees and agents. In essence, the threat of criminal liability is used to induce companies to put in place adequate internal controls over bribery. This incentive rationale for imposing criminal liability for failure to prevent crime could be used extensively in relation to crime committed within the scope of a company's business. In its *Anti-Corruption Plan*[162] the government stated that it "will therefore examine the case for a new offence of corporate failure to prevent economic crime and look at the rules on establishing corporate criminal liability more widely".

Litigation by the company

7–47

We have been concerned in this part of the chapter with how a company becomes liable in respect of wrongdoing when the wrongful acts and states of mind must necessarily have been those of natural persons. Our core case has been an action by the third party against the company. But we have noticed at various points that the company itself might sue in respect of the

wrongdoing, either against those whose acts or states of mind made it liable or against third parties (in the case of companies, typically its auditors) who ought to have discovered the wrongdoing and notified it to the company. We discuss these claims in other chapters, notably Ch.16 (actions against directors) and Ch.22 (auditors). All we need note here is that the rules on attribution which apply in actions by third parties are not the same as those which apply in the case of actions against the third party by the company. If they did, the company's action might be blocked on the grounds of consent or illegality. It is now recognised, in both civil[163] and criminal[164] law, that to block the company's action against the director on the grounds that the company was is some sense party to the illegality would be to undermine the duties owed by directors to their companies and that, except for rare cases, this is not the law. The position of the auditor is less clearly settled, though it is moving in the same direction.

Conclusion

7–48

As we observed at the beginning of this chapter, since the company is a separate but abstract legal person, it can act only through natural legal persons. From this trite proposition a complex body of law has emerged to determine which people in which circumstances can be regarded as having acted as or on behalf of the company. Nevertheless, some lines on the map are clear. In relation to contracting the modern tendency has been to promote the security of third parties' transactions by reducing the impact of restrictions in the company's constitution upon the effectiveness of the contracting process. As far as directors are concerned, the operation of the rules of agency normally means they are not liable or entitled on the resulting contracts, but only the company is. By contrast, in the area of tort and crime the personal liability of those acting on behalf of the company is the normal rule. The tendency has been to extend somewhat corporate liability in tort and crime in recent years, through expansion of the scope of vicarious liability, downgrading the "directing mind and will" test and statutory interventions in the area of criminal liability.

[1] At least this is the "ex ante" position, i.e. before any contracting has taken place. Ex post, i.e. once a "contract" has been made and has been broken, one or other party may have an interest in arguing that the agreement was never effective as a contract. Ex ante, however, where neither company nor counterparty will know whether it will wish to enforce or avoid the agreement, it is suggested that both will be in favour of rules facilitating contracting.

[2] An analogy is provided by the application in the nineteenth century of the ultra vires doctrine to companies (see para.7–29, below). In this case the externality which drove the application of this restriction seems to have been fear of the negative impact of limited liability on the position of creditors.

[3] *Jetivia SA v Bilta (UK) Ltd* [2015] 1 B.C.L.C. 443 at [70] (Lord Sumption) and [186] & [203] (Lords Toulson and Hodge). Thus, although Lord Sumption disagreed with the approach of the other judges to the disposition of this case, both accepted this distinction between vicarious and direct liability.

[4] *Meridian Global Funds Management Asia Ltd v Securities Commission* [1995] 2 A.C. 500 at 506 PC. In the nineteenth century the courts did often categorise the board as the agent of the company, but this view seems not to have survived the early twentieth century re-characterisation of the articles as a constitution, dividing the powers of the company between the shareholders collectively and the board. See para.14–6 and the use by the Act of the term "constitution" to refer to the articles of association (s.17). For a discussion of this development whereby the board came to be seen as acting as the company rather than on its behalf, see Lord Walker of Gestingthorpe NPJ in *Moulin Global Eyecare Trading Ltd v Comr of Inland Revenue* [2014] 3 HKC 32 HKCFA at [61]–[64].

[5] The directors or shareholders may operate not by making a contractual offer to or accepting an offer made to them by a third party but by approving the agreement in principle and by authorising someone else to contract on behalf of the company when all the details have been settled. So, board involvement in the contracting process does not necessarily mean that the board contracts as the company; instead an agent may contract on the company's behalf acting within the authority conferred by the board. Where the company contracts directly, its decision needs to be manifested in some way to the counterparty. Until the last quarter of the nineteenth century, the company executed a contract by having its seal attached to a written contract by a person authorised to attach it, and that procedure is still available (s.43). Now the contract may be executed by a company without a seal, normally by the signatures of two directors or of a director and the secretary or of one director whose signature is attested by a witness (s.44) and a company need no longer have a common seal (s.45). If, however, the company wishes to execute the contract as a deed, rather than a simple contract, the rules are somewhat more constraining: ss.44 and 46 (these sections do not apply in Scotland). For benevolent interpretation of s.44 see *Williams v Redcard Ltd* [2011] 2 B.C.L.C. 350 CA.

[6] Thus, even in relation to private companies, the model articles confer responsibility for the management of the company on the board and provide that "for which purpose they may exercise all the powers of the company" (Model Articles for private companies, art.3). By implication the powers of the shareholders do not extend to management, except to the extent that the articles of a particular company (or, of course, the Act) explicitly confer management powers upon them. Under the model articles a major qualification to art.3 is to be found in art.4 which gives the shareholders a reserve power of intervention: the shareholders at any time by special resolution may instruct the directors what action to take or refrain from taking in a specific situation.

[7] This approach clearly favours third parties and reduces the transaction costs associated

with corporate contracting. But it does not turn the allocation of management powers in the articles into a dead letter. The directors may still be liable to the company for acting in breach of the articles (a liability expressly preserved by s.40(5) of the Act and then identified by s.171—see paras 7–15 and 7–24, below). The directors may thus be liable to make good to the company any loss it suffers as a result of unauthorised contracting and, in the unlikely event the shareholders get wind of proposed unauthorised contracting, they might be able to secure an injunction against the directors to restrain it.

[8] In the nineteenth century the question arose really only in relation to the board because the shareholders' powers were then regarded as unlimited (except by the objects clause). See para.14–6, below.

[9] On ratification see para.7–27.

[10] *Ernest v Nicholls* (1857) 6 H.L.C. 401 HL: "If [third parties] do not choose to acquaint themselves with the powers of the directors, it is their own fault and if they give credit to any unauthorized persons they must be contented to look to them only", per Lord Wensleydale.

[11] *Royal British Bank v Turquand* (1856) 6 E. & B. 327 Exch.Ch.

[12] The account in the text of the facts has been somewhat altered to relate the holding to a modern company.

[13] *Mohoney v East Holyford Mining Co* (1875) L.R. 7 H.L. 869.

[14] See, for example, s.285 of the 1985 Act.

[15] *Morris v Kanssen* [1946] A.C. 459; applied in *Re New Cedos Engineering Co Ltd* [1994] 1 B.C.L.C. 797, a case decided in 1975.

[16] This was the issue in *Morris v Kanssen* itself, where an originally valid appointment had expired without being renewed and this was treated as "no appointment at all" when the director continued to act as such.

[17] The extensions result from the incorporation into the Act of provisions previously found in art.92 of Table A, the current model articles containing no provisions of this type. On the requirement for voting individually, see para.14–25.

[18] It may be wondered how the shareholders are protected against the actions of rogues unconnected with the company who manage to persuade a third party that they are the directors of the company and can contract with him. In *Mahoney* it was an important part of the reasoning that the shareholders had acquiesced in the activities of the de facto directors.

[19] See also *Channel Collieries Trust Ltd v Dover etc Light Railway Co* [1914] 2 Ch. 506; and *British Asbestos Co Ltd v Boyd* [1903] 2 Ch. 439.

[20] *Irvine v Union Bank of Australia* (1877) 2 App. Cas. 366 PC extended this proposition. The directors' authority to borrow was limited to a certain amount unless a "special vote" of the shareholders had enlarged their powers. If there had been such a special vote, it would have been required to be notified to the Registrar of companies and be made publicly available in the same way as the articles. The court refused to apply *Turquand* on the ground that inspection of the company's registered documents would have revealed whether the directors' powers had been enlarged or not. This suggests that *Turquand* is limited to cases where the necessary shareholders' resolution is one that does not need registration in the public registry.

[21] *B. Liggett (Liverpool) Ltd v Barclays Bank* [1928] 1 K.B. 48. For a more modern

example see *Wrexham Associated Football Club Ltd v Crucialmove Ltd* [2007] B.C.C. 139 CA.

[22] Somewhat surprisingly in s.9 of the European Communities Act of that year. It was required upon the UK's entry into the EU to comply with the First Company Law Directive. Without this stimulus it is very unclear when this sensible reform would have been introduced.

[23] Section 40 does not apply to a charitable company, except in the cases set out in s.42, principally where T (i) is unaware the company is a charity; or (ii) gives full consideration in the transaction and is unaware of the directors' lack of authority. In addition, ratification of an unauthorised act requires the consent of the charity commissioners. For Scotland see s.112 of the Companies Act 1989 which makes similar provisions.

[24] 2006 Act s.40(2)(b)(i).

[25] 2006 Act s.40(2)(b)(ii).

[26] *Barclays Bank Ltd v TOSG Trust Fund Ltd* [1984] B.C.L.C. 1 at 18.

[27] In *Ford v Polymer Vision Ltd* [2009] 2 B.C.L.C. 160 the judge was prepared to send to trial the issue of the third party's good faith where the disputed transaction was so one-sided against the company as to raise the question whether the claimant knew or ought to have known the directors were acting in breach of duty in entering into it. Note that the breach of duty was not the directors' failure to observe the articles; to allow bad faith to be established on the basis of breach of that duty would completely undermine the section.

[28] *EIC Services Ltd v Phipps* [2004] 2 B.C.L.C 589 CA at [35], excluding an issue of bonus shares on the grounds that the subsection requires either a bilateral transaction or an act to which both company and third person are parties and which is binding on the company, if s.40 is to apply; and *Re Hampton Capital Ltd* [2016] 1 B.C.L.C. 374, excluding restitutionary claim for money misappropriated from the company. See also *International Sales and Agencies Ltd v Marcus* [1982] 3 All E.R. 551 at 560, but decided on different wording.

[29] *Morris v Kanssen* [1946] A.C. 459 (para.7–7, above). See also *Howard v Patent Ivory Manufacturing Co* (1888) 38 Ch. D. 156.

[30] *Hely-Hutchinson v Brayhead Ltd* [1968] 1 Q.B. 549.

[31] 2006 Act s.41(2), (7)(b). The meaning of "connected person" is discussed in para.16–71.

[32] 2006 Act s.41(2).

[33] 2006 Act s.41(3). There is a defence for non-director defendants (i.e. connected persons who are not directors) if they can show they did not know the directors were exceeding their powers: s.41(5).

[34] (a) restitutio in integrum is no longer possible; (b) the company has been indemnified; (c) rights of a bona fide purchaser for value (other than a party to the transaction) would be affected; or (d) the transaction is affirmed by the company.

[35] But note that actual indemnification is one of the situations in which the transaction ceases to be voidable: s.41(4)(b).

[36] 2006 Act s.40(6). See *Re Torvale Group Ltd* [1999] 2 B.C.L.C. 605.

[37] *Smith v Henniker-Major* [2002] 2 B.C.L.C. 655 CA.

[38] For the same reason it is submitted that the dicta in *EIC Services v Phipps* [2004] 2 B.C.L.C. at [37] CA to the effect that even shareholders are not intended to be protected by s.40, should not be followed. Since Parliament dealt with the position of directors in s.41, it is unlikely it would not have dealt with that of shareholders, if it had wished to qualify the protection conferred on them by s.40.

[39] It is true that s.41(1) preserves "any rule of law by which the transaction may be called in question" but the *Smith* decision proceeded on the basis of an interpretation of s.40, not by application of an independent rule of law.

[40] The significance of the extension of the section to those authorised by the directors is discussed in para.7–25.

[41] *Smith v Henniker-Major & Co* [2002] B.C.C. 544, upheld on appeal ([2002] 2 B.C.L.C. 655 CA), but with only Carnwath LJ fully supporting the judge's reasoning on this point and Robert Walker LJ taking the contrary view. In other words, in the latter's view the quorum requirement is to be treated as one of the limitations in the company's constitution which the section is designed to override.

[42] *Smith v Henniker-Major & Co* [2002] 2 B.C.L.C. 655 at [41], per Robert Walker LJ. Under the current law the word "directors" should be substituted for "board of directors".

[43] 2006 Act s.17(a).

[44] 2006 Act s.29.

[45] 2006 Act s.40(3).

[46] 2006 Act s.40(4).

[47] See para.16–24. "Constitution" of the purposes of s.171 is defined in s.257. The "other person" might be someone who assists the director in the breach of duty.

[48] *International Sales and Agencies Ltd v Marcus* [1982] 3 All E.R. 651; *Re Hampton Capital Ltd* [2016] 1 B.C.L.C. 374.

[49] The classic exception to this statement is where A does not disclose to T the fact of the agency (the "undisclosed principal" case). On discovering the truth, T can choose to continue to hold A to the contract or to treat the contract as one with P.

[50] See para.3–31, above.

[51] An example might be thought to be where the shareholders have exercised their art.4 powers (above, para.7–14) to direct the board by special resolution not to exercise a power that art.3 prima facie confers on the board. However, the definition of the company's constitution (s.17) includes special resolutions (s.29). Of course, the board's managerial powers might be limited by a mandatory rule of company law (as was previously the case with the ultra vires doctrine) but such restrictions are rare.

[52] *Hely-Hutchinson v Brayhead Ltd* [1968] Q.B. 549 CA, per Lord Denning.

[53] See previous note. Suppose a person has just been appointed to a position within a company, to which certain powers are normally attached, but the powers granted in the particular case have been unusually restricted by the appointer and that restriction has not been communicated to third parties. The person appointed would not have implied actual authority to act within the restricted area, but might well have apparent authority

to do so. See *Hopkins v T L Dallas Group Ltd* [2005] 1 B.C.L.C. 543—fraud of agent took his actions outside the scope of his implied actual authority but not his apparent authority. Equally, where A has been permitted by P to act in excess of formal authority in the past, A might acquire implied actual authority, even though persons in A's position do not normally have that authority and P had not signalled the extension to T.

[54] *Armagas Ltd v Mundogas SA* [1986] A.C. 717 HL; *Hudson Bay Apparel Brands LLC v Umbro International Ltd* [2011] 1 B.C.L.C. 259 CA.

[55] Contrary to what was thought at one time, this is so even if the officer or agent has forged what purported to be a document signed or sealed on behalf of the company: *Uxbridge Building Society v Pickard* [1939] 2 K.B. 248 CA; explaining dicta in *Ruben v Great Fingall Consolidated* [1906] A.C. 439 HL; *Kreditbank Cassel v Schenkers* [1927] 1 K.B. 826 CA; *South London Greyhound Racecourses v Wake* [1931] 1 Ch.496; *Lovett v Carson Country Homes Ltd* [2009] 2 B.C.L.C. 196.

[56] *Rama Corp v Proved Tin & General Investments Ltd* [1952] 2 Q.B. 147.

[57] cf. Model articles for public companies, art.81. On the seal see fn.5, above.

[58] *Hely-Hutchinson v Brayhead Ltd* [1968] 1 Q.B. 549 CA.

[59] *Freeman & Lockyer v Buckhurst Park Properties Ltd* [1964] 2 Q.B. 480 CA, especially the judgment of Diplock LJ at 506. However, within a corporate group a senior executive of a subsidiary cannot be assumed to have authority to bind the parent, though such authority may be established on the facts of the case: *Hudson Bay Apparel Brands LLC v Umbro International Ltd* [2011] 1 B.C.L.C. 259 CA.

[60] See, e.g. *Biggerstaff v Rowatt's Wharf Ltd* [1896] 2 Ch.93 CA; *Clay Hill Brick Co v Rawlings* [1938] 4 All E.R. 100; *Freeman & Lockyer v Buckhurst Park Properties Ltd* [1964] 2 Q.B. 480 CA.

[61] *B.T.H. v Federated European Bank* [1932] 2 K.B. 176 CA; *Clay Hill Brick Co v Rawlings* [1938] 4 All E.R. 100.

[63] See para.14–75, below.

[64] See para.14–75, below.

[65] *Houghton & Co v Nothard, Lowe & Wills* [1927] 1 K.B. 246 CA; affirmed on other grounds [1928] A.C. 1 HL; *Kreditbank Cassel v Schenkers* [1927] 1 K.B. 826 CA; *South London Greyhound Racecourses v Wake* [1931] 1 Ch. 496; see also the observations of Willmer LJ in *Freeman & Lockyer v Buckhurst Park Properties Ltd* [1964] 2 Q.B. at 494.

[66] See *Armagas Ltd v Mundogas SA* [1986] A.C. 717 HL. There an employee who bore the title of "Vice-president (Transportation) and Chartering Manager" was held not to have authority to bind his company to charter back a vessel which it was selling. But there were complicating factors in that case for the employee was colluding with an agent of the other party in a dishonest arrangement and did not purport to have any general authority to bind the company but merely alleged that he had obtained actual authority for that particular transaction. *MCI WorldCom International Inc v Primus Telecommunications Inc* [2004] 1 B.C.L.C. 42—in-house lawyer negotiating a contract did not have apparent authority to give undertakings as to the future financial soundness of a parent company.

[67] *Panorama Developments Ltd v Fidelis Furnishing Fabrics Ltd* [1971] 2 Q.B. 711 CA. How far, if at all, the secretary's ostensible authority extends to the commercial side of the company's affairs is still unclear; see, per Salmon LJ at 718.

[68] The issue might arise in litigation between salesperson and employer.

[69] *First Energy (UK) Ltd v Hungarian International Bank Ltd* [1993] B.C.L.C. 1409 CA. See also *The Raffaella* [1985] 2 Lloyd's Rep. 36.

[70] *ING Re (UK) Ltd v R&V Versicherung AG* [2007] 1 B.C.L.C. 108.

[71] See the reservations expressed by the Singapore Court of Appeal in *Skandinaviska Enskilda Banken AB (Publ), Singapore Branch v Asia Pacific Breweries (Singapore) Pte Ltd* [2011] SGCA 22.

[72] *Hopkins v T L Dallas Group Ltd* [2005] 1 B.C.L.C. 543.

[73] See para.7–6.

[74] 2006 Act s.40(1). It is clear that the section creates no presumption that A has been authorised by the board to contract. Only if A has been so authorised will the exclusion of limitations in the articles on the board's powers to authorise be removed in favour of a good faith T. See *Wrexham Associated Football Club Ltd v Crucialmove Ltd* [2008] 1 B.C.L.C. 508 CA at [47]. But see fn.5 above on why it might be convenient for the board to act in this way.

[75] For this distinction see para.7–18.

[76] The Companies Act 1989 contained a provision (inserted as s.711A into the Companies Act 1985) which would have abolished generally the doctrine of constructive notice arising from the public filing of corporate documents. However, the section was never brought into force and the Companies Act 2006 contains no equivalent provision.

[77] Any doubt on this point was finally dispelled by the Court of Appeal in *Freeman & Lockyer v Buckhurst Park Properties Ltd* [1964] 2 Q.B., especially Diplock LJ at 504.

[78] per Diplock LJ in *Freeman & Lockyer v Buckhurst Park Properties* [1964] 2 Q.B. 508. See also Atkin LJ in *Kreditbank Cassel v Schenkers* [1927] 1 K.B. 826 CA at 844.

[79] *Mercantile Bank of India v Chartered Bank of India* [1937] 1 All E.R. 231 is sometimes misunderstood in this regard. The headnote is misleading in suggesting that it was the fact that the articles expressly empowered the board to delegate by powers of attorney that brought about the estoppel. It was the actual exercise of that power by the board that did so. The only relevance of the articles (of which third parties were deemed to have notice) was that they did not preclude the grant of such powers of attorney.

[80] See para.16–117, below.

[81] *Grant v United Kingdom Switchback Railway Co* (1888) 40 Ch.D. 135 CA. If ratification would involve a breach of the articles *by the shareholders*, then shareholder approval, it seems, would need to be by a majority equivalent to that for a change in the articles.

[82] *Re Mawcon Ltd* [1969] 1 W.L.R. 78.

[83] *ING Re (UK) Ltd v R&V Versicherung AG* [2007] 1 B.C.L.C. 108.

[84] This was the point upon which the "ratification" failed in *Smith v Henniker-Major* [2002] 2 B.C.L.C. 655.

[85] See the discussion ibid. and *The Borvigilant* [2003] 2 All E.R. (Comm) 736 CA.

[86] See para.14–3, below.

[87] For a brief history of the ultra vires doctrine and its reform in 1972 and again in 1989 see the fifth edition of this book (London: Sweet & Maxwell, 1992) at pp.166 et seq.

[88] Ultra vires is a Latin expression which lawyers and civil servants use to describe acts undertaken beyond (ultra) the legal powers (vires) of those who have purported to undertake them. In this sense its application extends over a far wider area than company law. For example, those advising a minister on proposed subordinate legislation will have to ask themselves whether the enabling primary legislation confers vires to make the desired regulations.

[89] This is based on an interpretation of art.2(b) of the Second Directive (Directive 2012/30/EU) as requiring the company's articles to state its objects (if it has them) but not as requiring the company to have objects.

[90] 2006 Act s.31(1).

[91] See para.4–33, above.

[92] For the possible deployment of the ultra vires doctrine from other doctrinal bases see para.12–9, below.

[93] 2006 Act s.39 does not attempt to deal with the internal aspects of the ultra vires doctrine, thus underlining that these are matters to be dealt with according to the ordinary rules on directors' duties or the enforcement of the articles as between shareholder and company. A particularly complex issue of this sort is addressed in s.247, concerning gratuitous payments by directors to employees where a company is closing down or transferring a business. In *Parke v Daily News* [1962] Ch. 927 such payments were held to be ultra vires the company. That issue is no longer relevant and the matter is large dealt with in the section as one of directors' duties. However, interestingly the section does mandatorily extend the powers of the directors to make such payments, even if the company's constitution does not confer such powers. However, there are strict controls over the exercise of the power in the interests of the shareholders and other creditors of the company.

[94] This provision applies equally to companies in existence when this reform was introduced by the Companies Act 2006 and which necessarily had objects clauses in their memorandum of association. Objects clauses set out in the memorandums of existing companies are to be treated as provisions in the articles, by virtue of s.28(1), and as such will benefit from s.39 and also from the new alteration/removal regime.

[95] 2006 Act s.31 preserves the operation of ss.197 and 198 of the Charities Act 2011, applying in England and Wales. The broad effect of that section is that where a charity is a company, no alteration which has the effect of the body ceasing to be a charity will affect the application of any of its existing property unless it bought it for full consideration in money or money's worth. In other words, although the company is not prevented from changing its objects (so long as it obtains the prior written consent of the Charity Commission) in such a way that they cease to be exclusively for charity, its existing property obtained by donations continues to be held for charitable purposes only. In effect, the company will be in an analogous position to an individual trustee of a charitable trust; part of its property will be held for charitable purposes only and part of it not. And, presumably, it will have to segregate the former. Scotland and Northern Ireland have separate legislation on this point.

[96] For a discussion of this issue in the context of pre-incorporation contracts, see para.5–

25, above, where, however, the default position is that A is liable.

[97] *Lewis v Nicholson and Parker* (1852) 18 Q.B. 503.

[98] *Collen v Wright* (1857) 8 E. & B. 647.

[99] Campbell and Armour, (2003) 62 Cambridge L.J. 290.

[100] See *Jetivia SA v Bilta (UK) Ltd* [2015] 1 B.C.L.C. 443. "Such vicarious liability is indirect liability; it does not involve the attribution of the employee's act to the company. It entails holding that the employee has committed a breach of a tortious duty owed by himself, and that the company as his employer is additionally answerable for the employee's tortious act or omission", per Lords Toulson and Hodge at [186].

[101] *Lloyd v Grace, Smith & Co* [1912] A.C. 716 HL (fraud on client by solicitors' clerk); *Morris v CW Martin & Sons Ltd* [1966] 1 Q.B. 716 CA (theft by employee of customer's coat).

[102] *Lister v Hesley Hall Ltd* [2001] 2 All E.R. 769 HL (sexual abuse of children in a care home by the staff employed to look after them); *Dubai Aluminium Company Ltd v Salaam* [2003] 1 B.C.L.C. 32 HL (firm vicariously liable for knowing assistance by a solicitor partner in a breach of trust); *Mohamud v WM Morrison Supermarkets Plc* [2016] UKSC 11 (assault by employee on a customer for reasons personal to the employee). At the same time, the range of "employee like" relationships which may give rise to vicarious liability of the government has been expanded: *Cox v Ministry of Justice* [2016] UKSC 10 (vicarious liability for acts of a prisoner).

[103] See above, para.7–18.

[104] See above, para.7–18.

[105] *Williams v Natural Life Health Foods* [1998] 1 W.L.R. 830 HL.

[106] The decision applies, of course, to all sizes of company, but it is suggested that the one-person company was the difficult case. With large companies, it will be even more difficult to find that the agent assumes personal responsibility.

[107] The decision is not explicit on whether the company was liable in the tort of negligent misstatement, but it is submitted that it was in that case where the maker of the statement was clearly its "directing mind and will". However, since the court was apparently laying down a general approach, it may be better to view the analysis as being that the assumption of responsibility by any agent acting within his authority is attributed to the company.

[108] Thus, *Fairline Shipping Corp v Adamson* [1975] Q.B. 180 is now to be seen as a case where the director did personally assume responsibility for the performance of the services which the company had contracted to provide, despite the rather thin evidence of such an assumption. See also para.28–64, below, for the application of this principle to statements made by target boards in takeover bids.

[109] *Williams v Natural Life Health Foods* [1998] 1 W.L.R. 830 HL.

[110] Thus, the courts have been reluctant to exempt from personal responsibility agents who are professionally qualified. See *Merrett v Babb* [2001] Q.B. 1174 CA (surveyor employed by a partnership); *Phelps v Hillingdon LBC* [2001] 2 A.C. 619 HL (educational psychologist employed by LEA). These cases, especially the first, may contribute to the debate whether the *Williams* principle will be applied by the courts to LLPs (see para.1–4, above). It is submitted that it will but perhaps not with the same benefits for agents of LLPs running professional businesses as it provides for non-

professional businesses.

[111] *Standard Chartered Bank v Pakistan National Shipping Corp (No.2)* [2003] 1 A.C. 959 HL; *Contex Drouzhba Ltd v Wiseman* [2008] 1 B.C.L.C. 631 CA.

[112] See in particular *Ruben v Great Fingall Consolidated* [1906] A.C. 439 HL.

[113] *Uxbridge Permanent Benefit Building Society v Pickard* [1939] 2 K.B. 248 CA; *Armagas Ltd v Mundogas SA* [1986] 1 A.C. 717 HL; *Credit Lyonnais Bank Nederland NV v Export Credit Guarantee Department* [2000] 1 A.C. 486 HL; and see the cases cited in fn.101 above.

[114] Note, however, the reluctance of the Singapore Court of Appeal, even under the "sufficiently close connection" test, to hold the company vicarious liable for the self-interested fraud of a manager which the third party was in a better position to discover than the company: *Skandinaviska Enskilda Banken AB (Publ), SingaporeBranch v Asia Pacific Breweries (Singapore) Pte Ltd* [2011] SGCA 22.

[115] *New Zealand Guardian Trust Co Ltd v Brooks* [1995] 1 W.L.R. 96 PC.

[116] Civil Liability (Contribution) Act 1978 s.1; *Lister v Romford Ice and Cold Storage Co* [1965] A.C. 555 HL.

[117] The duties of directors are discussed in Ch.16. For non-director managers the conduct might be a breach of their contracts of employment. See M.R. Freedland, *The Personal Employment Contract* (Oxford: OUP, 2003), pp.146–147.

[118] *Cargill v Bower* (1878) 10 Ch.D. 502 at 513–514.

[119] *Rainham Chemical Works Ltd v Belvedere Fish Guano Co Ltd* [1921] 2 A.C. 465 HL; *Performing Right Society Ltd v Ciryl Theatrical Syndicate Ltd* [1924] 1 K.B. 1 CA; *British Thomson-Houston Co Ltd v Stirling Accessories Ltd* [1924] 2 Ch. 33.

[120] *C Evans & Sons Ltd v Spritebrand Ltd* [1985] 1 W.L.R. 317 CA; *Mancetter Developments Ltd v Garmanson Ltd* [1986] Q.B. 1212 CA; *MCA Records Inc v Charly Records Ltd* [2003] 1 B.C.L.C. 93 CA; *Koninklijke Philips Electronics N V v Princo Digital Disc GmbH* [2004] 2 B.C.L.C. 50; cf. *White Horse Distilleries Ltd v Gregson Associates Ltd* [1984] R.P.C. 61.

[121] See the attempt by Nourse J in the *White Horse* case (see previous note) to restrict the director's personal liability to those situations where he acted "deliberately or recklessly and so as to make [the tortious conduct] his own, as distinct from the act or conduct of the company". This approach seems to have been motivated by a desire to preserve the benefits of limited liability, especially in a one-person company. In other words, Nourse J proposed a general "assumption of responsibility" test (for all torts) in the case of tortious conduct authorised by the directors. See also *MCA Records* (see previous note) where the court drew a distinction between control exercised through the constitutional organs of the company (e.g. voting at board meetings—not attracting tortious liability) and control exercised otherwise (potentially attracting tortious liability).

[122] *Jetivia SA v Bilta (UK) Ltd* [2015] 1 B.C.L.C. 443 at [187].

[123] See above para.7–36.

[124] The point may become important where the company sues the director to recover the loss suffered (see para.16–111) or a third party for failing to discover the directors' wrongdoing (see para.22–41).

[125] *El Ajou v Dollar Land Holdings Plc* [1994] 1 B.C.L.C. 464 CA; *Royal Brunei Airlines Bhd Shd v Tan* [1995] 2 A.C. 378 PC.

[126] This step was taken at an early stage. See *Moussell Brothers Ltd v London & North Western Railway Co* [1917] 2 K.B. 836.

[127] *R. v British Steel Plc* [1995] I.C.R. 586 CA. The doctrine used to achieve this result was that the company had a "non-delegable duty" to produce a safe workplace. This case only opens up the potential for imposing liability for hybrid offences. Whether a particular statute does so is again a matter of construction.

[128] *Re Supply of Ready Mixed Concrete (No.2)* [1995] 1 A.C. 456 HL.

[129] *Lennard's Carrying Co Ltd v Asiatic Petroleum Co Ltd* [1915] A.C. 705 HL. See also *The Truculent* [1952] P. 1; *The Lady Gwendolen* [1965] P. 294 CA.

[130] *Lennard's Carrying Co Ltd v Asiatic Petroleum Co Ltd* [1915] A.C. 705 at 713. Lord Haldane's dictum was probably influenced by the clear distinction drawn between agents and organs in German company law, Haldane having studied in his youth in Germany.

[131] In the case itself the defendant company was held liable on the basis of the actions of the managing director of another company which managed the ship on behalf of the defendant company, but this was on the basis that the defendant company had failed to reveal the nature of the manager's relationship with the defendant company.

[132] *Tesco Supermarkets Ltd v Nattrass* [1972] A.C. 153. The earlier cases included *DPP v Kent & Sussex Contractors Ltd* [1944] K.B. 146; *R. v ICR Haulage Ltd* [1944] K.B. 551 CCA; *Moore v Bresler* [1944] 2 All E.R. 515; and *Bolton (Engineering) Co Ltd v Graham & Sons* [1957] 1 Q.B. 159—in some of which a very broad interpretation was given to the concept of the directing mind and will.

[133] Since the individual whose acts were in question was a lowly employee in the case, the judges did not have to explore in detail what board delegation meant: was delegation of board powers enough (as Lord Diplock suggested) or did the board need to delegate in addition its responsibility for a certain area of the company's business (as Lord Reid indicated)?

[134] *Tesco Stores Ltd v Brent LBC* [1993] 1 W.L.R. 1037 DC.

[135] *El Ajou v Dollar Land Holdings Plc* [1994] 1 B.C.L.C. 464 CA.

[136] Watts, (2000) 116 L.Q.R. at 529. See *Jetivia SA v Bilta (UK) Ltd* [2015] 1 B.C.L.C. 443 at [197].

[137] See in particular the decision of the CA in *Tesco Stores Ltd v Brent LBC* [1993] 2 All E.R. 718 CA, not following the earlier *Tesco* case (previous note). See also Law Commission, *Criminal Liability in Regulatory Contexts*, Consultation Paper 195, 2010, paras 5.45–5.83.

[138] Ferran, (2011) 127 L.Q.R. 239.

[139] *Meridian Global Funds Management Asia Ltd v Securities Commission* [1995] 2 A.C. 500 at 509. The case is noted by Sealy, [1995] C.L.J. 507; Wells, (1995) 14 I.B.F.L. 42; and Yeung, [1977] C.F.I.L.R. 67.

[140] See *El Ajou v Dollar Land Holdings Plc* [1994] 2 All E.R. 685 CA, where the Court of Appeal, including Hoffmann LJ, as he then was, applied a similar approach to the question of whether a company was in equity in knowing receipt of trust property. See

also *Lebon v Aqua Salt Co Ltd* [2009] 1 B.C.L.C. 540 PC—same approach used to determine whether a director's knowledge is to be attributed to the company under Mauritian law.

[141] For the equivalent British rules see Ch.26, below.

[142] Despite the uncertainty, the Law Commission (above fn.137, paras 5.103–5.110) has commended this approach to the courts in all cases where the statute does not itself deal with the issue of corporate liability. On this approach the identification doctrine, at least in its classic form, would be just one possible result of the exercise of statutory construction. For an example of the traps inherent in this approach see *St Regis Paper Co Ltd v R.* [2011] EWCA Crim 2527.

[143] See para.7–3 for a description of these terms.

[144] See para.7–36, above.

[145] The standard formulation covers "a director, manager, secretary or similar officer", those who purport to act as such, and the members of the company if its affairs are conducted by the members and the member had a membership function. See e.g. Fraud Act 2006 s.12.

[146] An example is s.400 of the Financial Services and Markets Act 2000—which imposes consent or connivance liability as well.

[147] Above fn.137, paras 7.41–7.52. This would avoid the stigma associated with conviction for the principal offence, e.g. where the company has been convicted of an offence involving dishonesty. See further para.7–46, below.

[148] *Safeway Stores Ltd v Twigger* [2010] 2 B.C.L.C. 106; reversed ([2011] 2 All E.R. 841 CA) on the grounds that it would be inconsistent with the purpose of the particular statute imposing liability on the company that the company should recover its loss from the directors.

LIMITED LIABILITY AND LIFTING THE VEIL

The Rationale for Limited Liability	**8–1**
Legal Responses to Limited Liability	**8–5**
Disclosure of information	**8–6**
Lifting the Veil	**8–7**
Under statute or contract	**8–8**
At common law	**8–10**
Conclusion	**8–17**

THE RATIONALE FOR LIMITED LIABILITY

8–1

The company laws of all economically advanced countries make available corporate vehicles through which businesses can be carried on with the benefit of limited liability for their members. For shareholders this means that their liability for the company's debts is limited to the amount they have paid or have agreed to pay to the company for its shares. For most shareholders this means that, once the shares have been paid for, whether they were acquired directly from the company or from an existing shareholder, the worst fate that can befall them if the company becomes insolvent is that they lose the entire value of their investment.[1] However, their other assets—their homes, pension funds, domestic goods—will be unaffected by the collapse of the company in which they have invested. To put the matter from the creditors' perspective, their claims are limited to the assets of the company and cannot be asserted against the shareholders' assets. This can be regarded as a strong rule because, if the opposite economic development occurs and the company is highly successful, the shareholders are likely to receive all the residual benefit of that success, once the creditors have been satisfied, either through dividends or the capital appreciation of their shares.[2] So, there is an apparent asymmetry in the risks and rewards which are allocated to shareholders: they benefit, through limited liability, from a cap of their down-side risk, whereas the chance of up-side gain is unlimited.

Why does the law treat shareholders in this favourable way? During the battle for legislative acceptance of the principle of limited liability in the middle of the nineteenth century,[3] the argument which seems to have weighed most heavily with the legislator was that limited liability would facilitate the investment by members of the public, who were not professional investors, of their surplus funds in the many large capital projects which companies were being set up to carry out at that time, in particular the construction of a national network of railways. Members of the public, whose primary activity and expertise did not lie with the running of companies, would be much less likely to be willing to buy shares in such companies, if the full range of their personal assets were to be put at risk. They might be prepared to become lenders of money to such companies, but it was the flexibility of risk capital through shares which those companies sought.[4] The shareholders might earn a big return if the company's project was successful, but equally, at least in the case of ordinary shares, the company would be free to pay them nothing or very little, if the project achieved only modest success, whereas debt holders would normally be entitled to their fixed return by way of interest and repayment of capital, no matter whether the project was successful, provided the company stayed out of insolvency.

Halpern, Trebilcock and Turnbull[5] have pointed out that limited liability, in addition, facilitates the operation of public securities markets, because it relieves the investor of the need to be concerned about the personal wealth of fellow investors. Under a rule whereby the shareholders were jointly and severally liable for a company's debts, my shares would be more valuable to me if the wealth of my fellow investors increased (because I would be less likely to have to pay more than the proportion of the company's debts which my shares constituted of the company's total share capital), and vice versa if the wealth of my fellow shareholders decreased. So limited liability facilitates the trading of the company's shares at a uniform price on the public exchanges and reduces shareholders' monitoring costs. This adverse effect of unlimited liability could be mitigated, of course, by making the shareholders liable only on a proportionate basis (i.e. liability on the part of each investor only for his or her "share" of the company's debts).[6]

Further, limited liability encourages equity investment by those of modest means by facilitating diversification of investment across a number of companies in different sectors and perhaps countries, thus reducing the investor's company-specific and country-specific risks. Under a regime of unlimited liability, investors would be incentivised to monitor closely the companies in which they were invested and this would push them towards reducing the range of their investments in order to reduce monitoring costs.

8–2

The above arguments in favour of limited liability are stronger in relation to companies which have offered their shares to the public, but are less persuasive for companies which have not and do not plan to do so, i.e. for all private companies (which constitute the overwhelming number of companies on the register)[7] and even for some public companies. Yet, as we saw in Ch.2, a great deal of effort was expended on the part of practitioners in the second half of the nineteenth century in securing the extension of limited liability to all companies, including the smallest, a goal achieved when the House of Lords handed down its decision in *Salomon v Salomon*,[8] and the legislature decided not to reverse that decision. That decision has remained controversial,[9] but so entrenched in our law is the principle of limited liability for all companies, large or small, that arguments for the reversal of *Salomon* have made no progress with policy-makers.

During the Company Law Review at the turn of the last century, the argument was made that the flexibility of organisational rules, which those running small businesses seek, should be provided outside company law, through a new and optional organisational form with unlimited liability, whilst those who seek limited liability should have to accept the burdens of company law, which indeed might well be somewhat enhanced, especially in relation to minimum capital requirements.[10] The Company Law Review, anxious not to place barriers in the way of the organic growth of small companies and to encourage entrepreneurship, rejected the arguments for a separate form of incorporation and a reduction in the availability of limited liability for small businesses,[11] and in fact, under the

banner "Think Small First", proposed some further deregulation of company law as it applies to small companies.[12] Moreover, as we saw in Ch.1,[13] the Government later did provide a separate and highly flexible form of business organisation through the limited liability partnership, introduced by the Limited Liability Partnership Act of 2000, but crucially attached limited liability to it. Indeed, the main object of the reform was to make a partnership-like form available but with the benefit of limited liability.

The rationales for limited liability, identified above, are more persuasive, perhaps even assume, that the shareholders are natural persons. However, very many businesses are today carried on through a group of holding and subsidiary companies rather than through a single company.[14] This raises the question of whether the doctrine of limited liability should apply only as between the holding (or parent) company and its shareholders or also within the group, i.e. between the holding company and the subsidiaries and among the subsidiary companies. Whether or not the parent benefits from limited liability as against its subsidiaries, the shareholders of the parent cannot lose more than the value of their investment provided the parent is subject to the doctrine. In fact, the doctrine does apply within groups, a conclusion which the courts have arrived at without any deep consideration of the matter as an inevitable consequence of the doctrine of separate legal personality. This could be justified on the grounds that it encourages investment by "outside" investors in the subsidiaries (as opposed to the parent), but this argument does not carry weight in relation to wholly-owned subsidiaries, which are the norm in the UK.

8–3

The rationales for limited liability so far identified equate the societal benefit of limited liability with the greater ease with which companies can raise risk capital. From the creditors' point of view, however, limited liability seems unattractive as it confines their claims to the company's assets. It might be argued that this does not matter because creditors, as well, have limited liability: their downside exposure is capped at the amount they are owed by the company.[15] Unlike shareholders, however, creditors' upside potential is meagre: their claim on the company

does not normally increase if the company does well—though the probability of actually receiving that claim may improve. However, limited liability may in fact decrease the probability of repayment to creditors. Shareholders with their asymmetrical awards may fail to constrain management engaged in taking reckless risks, thus increasing the probability of corporate failure. In response, creditors may monitor management more closely, thus increasing the costs of providing credit. So, creditors might prefer unlimited liability for shareholders because that would throw the additional monitoring costs onto the shareholders. From the point of view of corporate finance, however, it may not matter where those costs are allocated, provided that the costs of effective monitoring are roughly the same in the two cases.

However, a rationale for limited liability has been advanced which takes as its starting point the monitoring incentives of creditors and provides a general justification for limited liability precisely on the grounds that it *reduces* the costs of creditor monitoring (and not only in relation to free-standing, publicly traded companies). This is the "asset partitioning" rationale.[16] What limited liability facilitates, together with the concept of separate legal personality, is the segregation of collections of assets between investors and the company, in the case of a single company, or as among different companies in corporate groups. Although the doctrines are normally presented as hindering the enforcement of claims by corporate creditors, it can be argued that they work to their benefit. Just as limited liability prevents creditors of a company from asserting their claims against the shareholders' assets, so also the doctrine of the company as a separate legal person prevents the creditors of a shareholder from asserting their claims against the company's assets. Within a group the same argument applies in relation to the creditors of subsidiary and of the parent company (or a fellow subsidiary). In other words, a creditor of the company does not have to face competition from the shareholder's creditors, just as the corporate creditor does not compete with the creditors of the shareholder. Each set of creditors is thus safe in confining their monitoring efforts to the company's or the shareholder's assets, as the case may be, and creditors may be expected to specialise in these different forms of monitoring. Overall, creditors'

monitoring costs can be expected to be reduced under a system of asset partitioning. More generally, whilst the shareholder will not normally be pushed into bankruptcy by the failure of the company in which they have invested, because they lose only their investment, so equally the creditors of the shareholders will not be able to seize the company's assets to satisfy their claims. This is likely to be of overall benefit to society because it protects the integrity of the assets which the company has assembled to conduct its business and the benefits the company generates, not only for its investors, but also for others by way of employment and tax payments. This rationale for asset partitioning is as powerful within groups as between the parent and its shareholders.

8–4

An alternative or supplementary way of looking at limited liability emphasises that it is not a mandatory rule. Limited liability is, it might be said, a default rule and those who do not like it can contract out of it. The incorporators themselves may opt out of limited liability across-the-board, by forming an unlimited liability company—though this occurs but rarely.[17] Alternatively, particular creditors may contract with the company and its shareholders on the basis that both will be liable on the obligations undertaken. Where the rationales for limited liability are most in question, in relation to groups and small companies, it is in fact common for some creditors to contract out of limited liability. Those setting up small companies, into which they are not willing to inject a significant amount of share capital, will usually find that a bank will not lend money to the company unless the shareholders give a personal guarantee of the loan to the company.[18] In this way, the personal assets of the shareholders become available to the bank if there is default on the loan; the bank is not confined to the assets of the company. Equally, those dealing with an undercapitalised company in a group of companies may obtain a guarantee from the parent company[19] or, less securely, the parent company may issue a "letter of comfort" to the subsidiary's auditors, allowing them to certify the subsidiary's accounts on a going concern basis, or to a third party contemplating contracting with the company.[20] The implication of the contractual approach might be thought to be

that there is no need for the law to control limited liability for it lies in the hands of those contracting with the company to protect their interests themselves. In the case of large or frequent creditors this is very often true. But not all creditors can adjust their contractual relations with the company so as to reflect the riskiness of their situation and for such "non-adjusting" creditors, notably tort victims, the default rule of the law is a crucial determinant of the legal position.[21]

Finally, sight should not be lost of the argument that the incentives to take risks, associated with the asymmetric position of the shareholders, has a positive value. The purpose of commercial companies is to embark on risky ventures. A company dominated by risk-averse creditors might not add much to the store of social wealth because they would put pressure on the management to avoid risk.

Legal Responses to Limited Liability

8–5

Of course, the supporters of limited liability do not deny that there is a role for company law beyond the adoption of the principle of limited liability. There are two potential roles for company law to fulfil given the establishment of a doctrine of limited liability. First, it might be able to promote creditor monitoring (i.e. self-help on the part of the creditors); secondly, it might be able to protect creditors against the opportunistic conduct on the part of shareholders or directors to which the doctrine of limited liability exposes them, for example, when they move assets out of the company just before the creditor assets its claim against the company. Monitoring by creditors can operate effectively only if creditors have the tools available to them to implement supervision. As we shall see at many points in this Part, a crucial legal tool for creditors is simply the law of contract, for example, terms inserted into loan contracts, rather than company law. However, the focus in this Part is on the contribution which company law makes to the promotion of creditor monitoring beyond what creditors can achieve for themselves via contract. Company law provides standardised rules more cheaply than creditors can do through contract. However, contract allows the rules to be adjusted to the specific

situation of each company and creditor and facilitates re-negotiation of the rules as circumstances change. Consequently, the role for the law here is subordinate to contract. In relation to the second role, company law might be better able than contract to protect creditors against opportunistic behaviour by directors or shareholders because of the more powerful enforcement mechanisms and remedies it has at its disposal. Here, the potential role for standardised rules is somewhat larger.

Before we turn to company law, however, it is worth pointing out that the major contribution of statutory law to creditor protection is not provided by company law at all but by insolvency law (which we discuss, but in outline only, in Ch.33, below). When the company becomes insolvent, the directors responsible to the shareholders are replaced by an insolvency practitioner responsible to the creditors. At this point, the law facilitates creditors' access to the corporate assets in order that those assets can be best deployed so as to meet their claims.

Disclosure of information

8–6

The techniques available to the law to achieve these two goals are various. We discuss them in this Part of the book. Perhaps the most obvious response of the law is to require publicity for the fact that corporate creditors' claims are confined to the assets of the company, since knowledge of that fact is an essential pre-requisite for any effective self-help action on the part of creditors. The legislature has always made it an essential condition of the recognition of corporate personality with limited liability that it should be accompanied by wide publicity, starting with disclosure that the company has limited liability through mandatory attachment of the suffix "ltd" or "plc" to the company's name.[22] Although third parties dealing with the company will normally have no right of resort against its members, they are nevertheless entitled to see who those members are, what shares they hold and who holds the beneficial interests in those shares, if substantial, so that they can know who is in ultimate control of the company. They are also entitled to see who its officers are (so that they know with whom to deal), what its constitution is (so that they know what the

company may do and how it may do it), and what its capital is and how it has been obtained (so that they know whether to trust it). And unless it is an unlimited company they are also entitled to see its accounts, or at least a modified version of them—again in order to know whether to trust it. The exemption of the unlimited company from the obligation to file accounts with the Registrar[23] is a particularly strong illustration of the link between publicity and limited liability.

Normally, however, third parties are neither bound nor entitled to look behind such information as the law provides shall be made public; in addition to the veil of incorporation, there is something in the nature of a curtain formed by the company's public file in the companies registry (or with the regulator of the stock exchange), and what goes on behind it is concealed from the public gaze.[24] But sometimes this curtain also may be raised. For example, inspectors may be appointed to investigate the company's affairs,[25] in which case they will have the widest inquisitorial powers; indeed they may even be appointed for the purpose of going behind the company's registers to ascertain who are its true owners.

Lifting the Veil

8–7

Disclosure is a fundamental regulatory tool, but its effectiveness depends upon how well those receiving the information can make use of it. At the opposite end of the spectrum, the law might tackle the limited liability principle head-on and make the shareholders liable for the debts and other obligations of the company in certain cases, so that the need for creditors to monitor is substantially reduced. This may happen as a result of judicial creativity or explicit legislative policy. Legislative breaches of the doctrine of limited liability tend to be few and targeted. We discuss the principal examples of this targeted approach in the following chapter. Judicial breaches are potentially wide-ranging, under the doctrine of "lifting the corporate veil". As the phrase suggests, the discussion in these cases tends to revolve around the applicability of the doctrine of the separate legal personality of the company rather than that of limited liability. The point is that, if the separate legal

personality of the company is ignored, there is no scope for the doctrine of limited liability, because nothing now stands between the creditors and the shareholders. There are in fact very few cases where the courts have concluded that the wording and policy of the statute require the separate legal personality of the company to be ignored so that personal liability can be imposed on shareholders. However, ignoring the separate legal personality of the company may operate the other way around, that is, permit those holding entitlements against the shareholder to enforce those entitlements against the company, thus undermining the asset partitioning function of company law. As we shall see below, more of these cases can be found. In particular, the courts are willing to constrain shareholders' use of the corporate form to escape pre-existing liabilities.

Under statute or contract

8–8

When analysing the judicial decisions on lifting the veil, it is crucial to distinguish between those situations where the court is applying the terms of a statute (other than the legislation relating to companies) or, less often, a contract, from those where, as a matter of common law, the veil is lifted. The reason is that the justification for lifting the veil in the former group of cases is to be found in the wording of the statute or the contract. As we have noted, it is perfectly in line with the doctrine of limited liability that parties should contract out of it and so there is nothing remarkable in the courts' deciding that this has occurred in a particular case, provided the parties' intention has been accurately identified. Equally, Parliament is free to decide that the policy of a particular statute requires that the doctrine of limited liability needs to be overruled, though it is doubtless the case that if Parliament took this step routinely, one would begin to have doubts about its commitment to the doctrine of limited liability.

In looking at the statutory cases, it is also crucial to distinguish between those cases where the courts decide that the separate legal personality of the company should be disregarded and those where, in consequence of this disregard, the additional consequence follows that the shareholders are made liable for

the company's debts or other obligations or the company for the shareholders' obligations. Only in these latter cases is the doctrine of limited liability set aside. Typically, as a result of ignoring the separate legal personality of the company, some legal issue other than the limited liability of the shareholders is determined in a way which is different from the way in which it would have been determined, had the separate legal personality been maintained. Thus, in *Re FG (Films) Ltd*[26] a US company had incorporated a shell company in Britain for the purposes of claiming a declaration that a film it produced was British. The result of the failure by the courts to uphold the separation between the British and US companies was that the film was not classified as British, so that the subsidiary could not claim a subsidy which was contingent on the film being British, but the parent's liability for the debts of its subsidiary was simply not an issue in the case. In some cases, in fact, ignoring the separate legal personality of the company has been for the benefit of its shareholders.[27]

One statutory provision which does bring the company's liability home to its controllers is that which empowers the courts to make a "non-party costs order" against corporate controllers in favour of a successful party in litigation. This can be used where the controllers of the company (normally the persons who are both the shareholders and directors of the company) have used the company as a vehicle for litigation without considering whether the company had an independent to make interest in the litigation and knowing that it would be unable to meet the costs of failure.[28] Although important in practice, in principle this statutory provision needs little comment, since it clearly implements a policy that liability for costs should fall on the person in whose interests the litigation is being conducted.

In deciding whether to lift the veil in statutory cases, the courts are guided by their understanding of the statute in question, and so the decision arrived at is likely to vary from statute to statute. Nevertheless, it is difficult to avoid the conclusion that the courts are slow to find that the statutory wording has clearly overridden the separate legal personality doctrine. Thus, in *Prest v Petrodel Resources Ltd*[29] the Supreme

Court refused to hold that the Matrimonial Causes Act 1973 permitted the court routinely to treat an asset owned by the company as the asset of its sole controlling shareholder simply because it would further the policy of that Act. The court achieved justice in that case by the alternative reasoning that, on the facts of the case, the property was held by the company on trust for the sole shareholder. A general doctrine of the law of equity thus did the work of an expansive interpretation of the wording of a statute.

8–9

Another example of a refusal to lift the veil, to the benefit of the employee/shareholder, is afforded by *Lee v Lee's Air Farming Ltd*.[30] There Lee, for the purpose of carrying on his business of aerial top-dressing, had formed a company of which he beneficially owned all the shares and was sole "governing director". He was also appointed chief pilot. Pursuant to the company's statutory obligations he caused the company to insure against liability to pay compensation under the Workmen's Compensation Act. He was killed in a flying accident. The Court of Appeal of New Zealand held that his widow was not entitled to compensation from the company (i.e. from their insurers) since Lee could not be regarded as a "worker" within the meaning of the Act. But the Privy Council reversed that decision, holding that Lee and his company were distinct legal entities which had entered into contractual relationships under which he became, qua chief pilot, an employee of the company. In his capacity of governing director he could, on behalf of the company, give himself orders in his other capacity of pilot, and hence the relationship between himself, as pilot, and the company was that of servant and master. In effect the magic of corporate personality enabled him to be master and servant at the same time and to get all the advantages of both (and of limited liability). No doubt the court was influenced by the fact that Lee had acted in pursuance of a purported statutory obligation and had in fact paid the necessary contributions over a period of time, thus forgoing the opportunity of making alternative insurance arrangements. More recent cases in Britain have accepted that in principle a person who is a 100 per cent shareholder in a company may enter into a valid contract of

employment with that company, even though that person also appears, in effect, on the other side of the employer/employee relationship, so that the control element, normally inherent in the employment contract, is missing.[31]

At common law

8–10

Challenges to the doctrines of separate legal personality and limited liability at common law tend to raise more fundamental questions, because they are formulated on the basis of general reasons for not applying them, such as fraud, the company being a "sham" or "façade", that the company is the agent of the shareholder, that the companies are part of a "single economic unit" or even that the "interests of justice" require this result. However, the courts seem, if anything, more reluctant to accept such general arguments against the doctrines than arguments based on particular statutes or the terms of particular contracts. The decision of the House of Lords in *Salomon v A Salomon and Co Ltd*,[32] where the court refused to hold the sole owner of the company's shares liable for its debts, has stood the test of time. The leading modern case is *Adams v Cape Industries Plc.*[33] That case raised the issues in a sharp fashion. It concerned liability within a group of companies and the purpose of the claim was to circumvent the separate legal personality of the subsidiary in order to make the parent liable for the obligations of the subsidiary towards involuntary tort victims. Thus, the case encapsulated two features—internal group liability and involuntary creditors—where limited liability is most questionable. The facts of the case were somewhat complicated but for present purposes it suffices to say that what the Court had ultimately to determine was whether judgments obtained in the US against Cape, an English registered company whose business was mining asbestos in South Africa and marketing it worldwide, would be recognised and enforced by the English courts. In the absence of submission to the foreign jurisdiction on the part of Cape, this depended on whether Cape could be said to have been "present" in the US. On the facts, the answer to that question turned on whether Cape could be said to be present in the US through its wholly owned subsidiaries or

through a company (CPC) with which it had close business links. The court rejected all the arguments by which it was sought to make Cape liable.[34]

The "single economic unit" argument

8–11

The first of these, described as the "single economic unit argument", proceeded as follows: Admittedly there is no general principle that all companies in a group of companies are to be regarded as one; on the contrary, the fundamental principle is unquestionably that "each company in a group of companies is a separate legal entity possessed of separate rights and liabilities".[35] Nevertheless, it was argued that, where the group companies are operated as a single unit for business purposes, the court will ignore the distinction between them, treating them as one. For this proposition a number of authorities were cited, but the court distinguished them all as turning on the interpretation of particular statutory or contractual provisions.[36] After reviewing these authorities the Court in *Cape* expressed some sympathy with the claimants' submissions and agreed that:

> "To the layman at least the distinction between the case where a company trades itself in a foreign country and the case where it trades in a foreign country through a subsidiary, whose activities it has power to control, may seem a slender one."[37]

It seems, therefore, that in aid of interpretation (of statute or contract) the court may have regard to the economic realities in relation to the companies concerned. But that now seems to be the extent to which the "single economic unit" argument can succeed.

Façade or sham

8–12

In *Cape* the court accepted that "there is one well-recognised exception to the rule prohibiting the piercing of the 'corporate veil'".[38] This exception today is generally expressed (and was in *Cape*) as permitting disregard of the company when the corporate structure is a "mere façade concealing the true facts"—"façade"[39] or "sham" having replaced an assortment of epithets[40] which judges have employed in earlier cases. The difficulty is to know what precisely may make a company a

“mere façade”.

In general, the court felt that it was “left with rather sparse guidance as to the principles which should guide the court in determining whether or not the arrangements of a corporate group involve a façade…” but, unfortunately, it declined to “attempt a comprehensive definition of those principles”.[41] It did, however, decide that one of Cape’s wholly owned subsidiaries (AMC incorporated in Liechtenstein) was a façade in the relevant sense. Scott J had found as a fact that arrangements made in 1979 regarding AMC and other companies concerned in the marketing of Cape’s asbestos “were part of one composite arrangement designed to enable Cape asbestos to continue to be sold into the United States while reducing, if not eliminating, the appearance of any involvement therein of Cape or its subsidiaries”.[42] What seems to have been regarded as decisive was the fact that AMC was not only a wholly owned subsidiary of Cape but also no more than a corporate name which Cape or its subsidiaries used on invoices.[43] However, the implications of that were not pursued because all the court was concerned with was whether Cape could be regarded as present in the US and “on the judge’s undisputed findings AMC was not in reality carrying on any business in the United States”,[44] and therefore could not cause Cape to be regarded as present there. Presumably, however, those who, as a result of the invoices, thought they were dealing with AMC would, if AMC failed to perform the contract, have been able to sue Cape.

What mattered in relation to establishing that Cape was present in the US was whether another company, CPC, incorporated and carrying on business in the US, was a façade. Despite the fact that CPC was a party to the same arrangement as AMC and that it probably had been incorporated at Cape’s expense, that did not in itself make it a mere façade. On the facts the court was satisfied that it was an independent corporation, wholly owned by its chief executive and carrying on its own business in the States and not the business of Cape or its subsidiaries. Moreover the court declared[45] that it did not accept that:

“as a matter of law the court is entitled to lift the corporate veil as against a

> defendant company which is the member of a corporate group, merely because the corporate structure has been used so as to ensure that the legal liability (if any) in respect of particular future activities of the group (and correspondingly the risk of enforcement of that liability) will fall on another member of the group rather than the defendant company. Whether or not this is desirable, the right to use a corporate structure in this manner is inherent in our corporate law."[46]

The agency and trust arguments

8–13

A company having power to act as an agent (most companies) may do so as agent for its parent company or indeed for all or any of its individual members if it or they authorise it to do so. If so, the parent company or the members will be bound by the acts of its agent so long as those acts are within the actual or apparent scope of the authority.[47] But there is no presumption of any such agency relationship between company and even a controlling shareholder and, in the absence of an express agreement between the parties,[48] it will be very difficult to establish one. In *Cape* the attempt to do so failed.[49] While it was clear that CPC rendered services to Cape and in some cases acted as its agent in relation to particular transactions, that did not suffice to satisfy the conditions which the Court had held to be necessary if Cape was to be regarded as "present" in the US. The same analysis can be applied to the argument that a company holds its assets on trust for its shareholders. This is not the normal case, even if the shares are held by a single shareholder, but on the facts of a particular case a trust may be found.[50]

The interests of justice

8–14

Although the interests of justice may provide the policy impetus for creating exceptions to the doctrines of separate legal personality and limited liability, as an exception in itself it suffers from the defect of being inherently vague and providing to neither courts nor those engaged in business any clear guidance as to when the normal company law rules should be displaced. Consequently, it is difficult to find cases in which "the interests of justice" have represented more than simply a way of referring to the grounds identified above in which the veil of incorporation has been pierced.[51]

8–15

In a number of recent cases the courts have considered the principle that the corporate veil can be set aside on the grounds that the company has been used in order to avoid the impact of a legal obligation or an order of the court. The impact of ignoring the separate legal personality of the company in such cases is usually to allow the holder of a legal entitlement against a shareholder to enforce it against the company, thus cutting against the asset partitioning which separate legal personality and limited liability together bring about.[52] In *Prest v Petrodel Resources Ltd*[53] Lord Sumption engaged in an heroic effort to identify the situations where this would be justified. On his approach, ignoring the separate personality of the company would be justified only where the corporate form had been adopted in order to evade an existing legal obligation. In that case the argument failed because the companies had been established and had carried on business long before the legal obligation in question had come into being.

He put forward as examples of his principle the decisions in *Gilford Motor Co Ltd v Horn*[54] and *Jones v Lipman.*[55] In the former a director of a company sought to avoid a personal post-employment competition restraint by setting up the rival business through a company which he controlled, rather than carrying it on directly. The important point about the decision was that the court extended the injunction to the company as well as to Horne himself. Again, in *Jones v Lipman* a defendant sought to avoid a decree of specific performance against himself by conveying the land subject to the order to a company he owned. The order was enforced against the company. In both cases, however, the result could be explained without recourse to the doctrine of lifting the veil, on the basis that the knowledge of the sole shareholder was to be imputed to the company. By contrast, ignoring the separate personality of the company in order to create a liability on the shareholder which would not otherwise exist was impermissible. So, in the Supreme Court's slightly earlier decision, *VTB Capital Plc v Nutritek International Corp*,[56] the court refused to ignore the legal

personality of the company where the purpose of so doing was to make the controlling shareholders liable on a contract which the company had entered into. To do so would be to create a liability on the shareholders which had not previously existed rather than to ensure that the shareholders could not avoid an existing liability by use of the corporate form.

8–16

Lord Sumption distinguished this "evasion" principle from what he identified as the "concealment" principle. Combatting concealment did not involve ignoring the separate legal personality of the company. Rather, "the interposition of a company or perhaps several companies so as to conceal the identity of the real actors will not deter the courts from identifying them, assuming that their identity is legally relevant. In these cases the court is not disregarding the 'façade', but only looking behind it to discover the facts which the corporate structure is concealing". An example was *Gencor ACP Ltd v Dalby*,[57] where a director had diverted money in breach of fiduciary duty to a company controlled by him which received it as his nominee. The order against the director could be upheld on the concealment principle and the order against the company on the grounds that the shareholder's knowledge about the tainted source of the funds was to be attributed to it.

Impropriety, thus, has a very narrow meaning: adopting the corporate form deliberately to avoid a liability which either has arisen or is imminent. It does not embrace designing the corporate structures so as to minimise the impact of future liabilities on the firm's business. After all, in *Cape* itself the company was aware of the risk of negligence liability which was inherent in its activities and took steps to quarantine the impact of such liability within certain of the group companies. The court took the view that, far from being improper, this was an entirely legitimate use of the group corporate structure.[58] However, even this limited doctrine is more than some think is appropriate. In the *VTB* case counsel for the defendants argued vigorously to the Supreme Court that the doctrine of ignoring the legal personality of the company does not exist at all in English law. In the *Prest* case the Supreme Court seem to have been convinced, in Lord Sumption's words, that a limited exception to the separate legal

personality doctrine "is necessary if the law is not to be disarmed in the face of abuse".[59]

Conclusion

8–17

The doctrine of lifting the veil plays a small role in British company law, once one moves outside the area of particular contracts or statutes. Even where the case for applying the doctrine may seem strong, as in the undercapitalised one-person company, which may or may not be part of a larger corporate group, the courts are unlikely to do so. As Staughton LJ remarked in *Atlas Maritime Co SA v Avalon Maritime Ltd, The Coral Rose*[60]:

> "The creation or purchase of a subsidiary company with minimal liability, which will operate with the parent's funds and on the parent's directions but not expose the parent to liability, may not seem to some the most honest way of trading. But it is extremely common in the international shipping industry and perhaps elsewhere. To hold that it creates an agency relationship between the subsidiary and the parent would be revolutionary doctrine."

This is in contrast to the law in the US where the veil is lifted more readily.[61] However, even in the US it seems the courts have never lifted the veil so as to remove limited liability in the case of a public company and will not do so as a matter of routine in private companies.[62] Probably, the most significant addition to the grounds for lifting the veil which US law adds to the categories recognised by British law is that of inadequate capitalisation. As we shall see in the next chapter, British law has approached that problem through the statutory doctrine of wrongful trading rather than through lifting the veil. Indeed, at a more general level, the approach of British law to regulation of the abuse of limited liability is a combination of facilitating self-help and statutory constraints. The common law doctrine of piercing the veil is a technique available to the courts but it has not been developed in such a way as to be the central legal strategy for addressing abuses of limited liability. Instead, the burden of action has fallen on the legislature, which has developed certain targeted rules to impose liability on shareholders or directors of companies in the case of abuse of limited liability, which we turn to in the next chapter.

[1] Section 3 of the 2006 Act gives the shareholders/incorporators the option of limiting shareholders' liability in two ways via provisions in the articles: either to the amount, if any, unpaid on the shares (company limited by shares) or to the (usually nominal) amount the members agree to contribute in a winding up (company limited by guarantee—a much less popular choice). Section 3 is reinforced by the Insolvency Act 1986 s.74. In the absence of choice, the liability of the shareholders is unlimited.

[15] It is possible to conceive of the law imposing liability upon a lender, beyond loss of the amount of the loan or deposit, if the borrower becomes insolvent, but since the lender has limited access to the up-side benefit of corporate success, such a rule would be likely to choke off the supply of debt to companies. Debt investors are usually seeking relatively modest returns for relatively modest risk. However, "lender liability" is imposed if the lender involves itself in the running of the company to the extent of becoming a "shadow" director (see para.9–7), but this is precisely because the lender has moved out of that limited role and involved itself in the central management of the company.

[30] *Lee v Lee's Air Farming Ltd* [1961] A.C. 12 PC.

[31] *Neufeld v Secretary of State for Business, Enterprise and Regulatory Reform* [2009] 2 B.C.L.C. 273 CA.

[32] *Salomon v A Salomon and Co Ltd* [1897] A.C. 22; see para.2–1, above.

[33] *Adams v Cape Industries Plc* [1990] Ch. 433, Scott J and CA (pet. dis. [1990] 2 W.L.R. 786 HL).

[34] Note, however, the alternative legal approach to the problem, by-passing the separate legal personality issue by postulating a duty owed in tort by the parent company directly to the asbestos victims (the employees of the subsidiary): *Connelly v RTZ Corp Plc* [1998] A.C. 854 HL; *Lubbe v Cape Plc* [2000] 1 W.L.R. 1545 HL; *Chandler v Cape Plc* [2012] EWCA Civ 525. Doctrinally, this approach leaves the separate legal personality and limited liability concepts intact within groups but in fact imposes liability on the parent towards tort victims of subsidiaries. Whether a duty of care will be imposed on the parent turns on the degree of control exercised by the parent over the relevant activities of the subsidiary. If developed extensively, the tort doctrine could in practice remove limited liability within groups in relation to tort victims, not necessarily a matter of regret since limited liability is most questionable in relation to non-adjusting

creditors. However, to date the courts have been cautious: for the parent company simply to appoint the directors of the subsidiary will not attract liability to the parent nor will running the subsidiaries as a division of the parent, if the separate legal personalities of the companies are respected: *Thompson v The Renwick Group Plc* [2014] 2 B.C.L.C 97 CA.

[35] *Adams v Cape Industries Plc* [1990] Ch. 433 at 532; quoting Roskill LJ in *The Albazero* [1977] A.C. 744 CA and HL at 807.

[36] *The Roberta* (1937) 58 L.L.R. 159; *Holdsworth & Co v Caddies* [1955] 1 W.L.R 352 HL; *Scottish Co-operative Wholesale Society Ltd v Meyer* [1959] A.C. 324 HL (Sc.); *DHN Food Distributors Ltd v Tower Hamlets LBC* [1976] 1 W.L.R. 852 CA (probably the strongest case in the tort victims' favour, because it was strongly arguable that the court there did not base itself on the particular statutory provision but on a more general approach founded on the idea of single economic entity); *Revlon Inc v Cripp & Lee Ltd* [1980] F.S.R. 85; and the Opinion of the Advocate General in Cases 6 and 7/73 [1974] E.C.R. 223.

[37] *Adams v Cape Industries Plc* [1990] Ch. 433 at 536B.

[38] *Adams v Cape Industries Plc* [1990] Ch. 433 at 539.

[39] Used, clearly, in its secondary meaning (the primary one being "the face of a building"), i.e. "an outward appearance or front, especially a deceptive one".

[40] Such as "device", "creature", "stratagem", "mask", "puppet" and even (see *Re Bugle Press* [1961] Ch.270 at 288 CA) "a little hut".

[41] *Adams v Cape Industries Plc* [1990] Ch. 433 at 543D.

[42] *Adams v Cape Industries Plc* [1990] Ch. 433 at 478F; approved by the Court of Appeal at 541G–H, 544A and B.

[43] *Adams v Cape Industries Plc* [1990] Ch. 433 at 479E and 543E. If the motives of those setting up the companies are dishonest, that will make it easier for the court to conclude that the company is a sham: *Kensington International Ltd v Republic of the Congo* [2006] 2 B.C.L.C. 296.

[44] *Adams v Cape Industries Plc* [1990] Ch. 433 at 543G.

[45] *Adams v Cape Industries Plc* [1990] Ch. 433t 544D, E.

[46] Hence Cape's wholly owned American subsidiary NAAC which, prior to its winding up, had performed a similar role to that undertaken thereafter by CPC had equally to be regarded as a separate entity: see at 538.

[47] See Ch.7, above.

[48] As in *Southern v Watson* [1940] 3 All E.R. 439 CA, where, on the conversion of a business into a private company, the sale agreement provided that the company should fulfil existing contracts of the business as agents of the sellers, and in *Rainham Chemical Works v Belvedere* [1921] 2 A.C. 465 HL where the agreement provided that the newly formed company should take possession of land as agent of its vendor promoters.

[49] Both in relation to CPC (at 547–549) and to its predecessor, NAAC (fn.46, above) despite the fact that it had been Cape's wholly owned subsidiary (at 545–547).

The prohibition 9–17
Exceptions 9–19
Misdescription of the Company and Trading Disclosures 9–20
Company Groups 9–21
Limited liability 9–21
Ignoring separate legal personality 9–24
Conclusion 9–25

9–1

From the beginnings of modern company law in the middle of the nineteenth century, the legislature has been ready, in a small number of cases, to remove the shield of limited liability and impose responsibility for the company's obligations on the shareholders personally. More often it imposed the liability on the directors of the company. Some of the examples which survived into modern law were surprising, because the sanction of personal liability seemed disproportionate to the importance of the rules which the sanctions upheld. A good example was the imposition of personal liability on the remaining shareholder where the number of members was reduced below two, a provision not repeated in the 2006 Act.[1] This rule was the final remnant of a legislative policy which attached significance to the number of members of a company as a protection for those who dealt with it. The Limited Liability Act 1855 applied only to companies with at least 25 members, and as late as 1980 public companies had to have at least seven members. But this policy was effectively undermined by the decision in *Salomon*'s case[2] in 1897, allowing nominee shareholders (e.g. those holding shares as bare trustees for another person) to count towards the required statutory number.

9–2

In fact, in modern law it is extremely difficult to find examples of the companies legislation imposing personal liability on shareholders in order to combat opportunistic behaviour encouraged by the doctrine of limited liability. The target of the anti-abuse legislation is rather those in charge of the company's central management, i.e. typically its directors. Directors, responsive to shareholder interests, are much more likely to be in a position to initiate such action on the company's part than the shareholders, because of the concentration of power and authority in the board.[3] Shareholders are not excluded from such liability if they involve themselves in the central management of the company (for example, as "shadow" directors) or in the conduct which the law wishes to prohibit. But they are not liable personally simply because they are shareholders.

Premature Trading

9–3

A public limited company, newly incorporated as such, must not "do business or exercise any borrowing powers" until it has obtained, from the Registrar of Companies, a certificate that it has complied with the provisions of the Act relating to the raising of the prescribed minimum share capital or until it has re-registered as a private company.[4] The link between this provision and the doctrine of limited liability is that requiring a company to hold assets to a certain value when it is formed is arguably a protection for those whose claims are confined to the assets of the company, though it is highly doubtful whether the actual minimum capital rule found in the Companies Act operates to confer any such protection.[5] If the company enters into any transaction in contravention of this provision, not only are the company and its officers in default liable to fines,[6] but if the company fails to comply with its obligations in relation to the transaction within 21 days of being called upon to do so, the directors of the company are jointly and severally liable to indemnify the counterparty in respect of any loss or damage suffered by reason of the company's failure to comply.[7]

Whether this is a true example of lifting the veil is questionable; technically it does not make the directors liable for

the company's debts but rather requires the directors to indemnify creditors for any loss suffered as a result of the company's default in complying with the section. But the effect is much the same. The section, however, is unlikely to be invoked often since it is unusual for companies to be formed initially as public ones. Usually, companies are formed as private companies and later convert through re-registration to public status. If this way of proceeding is adopted, however, obtaining the required minimum share capital is made a pre-condition to re-registration[8] and so trading as a public company without the authorised minimum is avoided in that way.

Fraudulent and Wrongful Trading

9–4

Of far greater practical importance are the provisions on fraudulent trading. These provisions recognise that the separate entity and limited liability doctrines generate an incentive for company controllers to defraud creditors, knowing that the creditors' claims are limited to the company's assets. The fraudulent trading provisions aim to redress the balance. They come in both a criminal[9] and a civil liability form. Section 993 (constituting the single-section Pt 29 of the Act) creates a specific, but widely defined, criminal offence of carrying on the business of a company with intent to defraud the creditors[10] of the company or of any other person or for any other fraudulent purpose. Every person knowingly party to the carrying on of the business in this manner commits a criminal offence. So, here the personal scope of the criminal liability is defined by reference to being party to the fraud. Shareholders may be included in this class but are not liable simply as shareholders. The civil liability is imposed by ss.213 and 246ZA of the Insolvency Act 1986.[11] These sections are analysed further below but, in essence, they operate on the basis of the same test for liability as does the criminal provision.

Abuse in the shape of hiding behind limited liability to effect fraud is easy to identify as something the law should address, as the long-standing provisions against fraudulent trading indicate. More significant are the provisions on wrongful trading, added initially in the 1980s. These seek to address the risk, when the

company is in the vicinity of insolvency, but has not yet entered a formal insolvency procedure, that the directors will take excessive risks with the business of the company, in the hope of escaping from its financial troubles, but knowing that, if the gamble is unsuccessful, limited liability will place most or all of the additional losses on the creditors. If such action is taken deliberately, it will probably fall within the fraudulent trading provisions. The wrongful trading provisions of the Insolvency Act give directors, contemplating this strategy—but without fraud or at least provable fraud—an incentive to accord greater consideration to the interests of the creditors. The creditors are highly exposed to the downside risk of the strategy whilst the benefits of it, if they occur, will accrue overwhelmingly to the shareholders. This can been seen most clearly if, at the time the strategy is adopted, the company's assets are just enough to meet its liabilities, but no more, so that, if the company then stopped trading and were wound up, the creditors would be repaid but the shareholders would receive nothing. If the directors continue trading, the shareholders will be no worse off, but have a chance (perhaps a small one) of being much better off, whilst the creditors will be no better off but have a chance (perhaps a large one) of being much worse off. Whilst continuing to trade is not necessarily against the interests of the creditors, doing so in a risky way in likely to be, whilst potentially benefitting shareholders. The wrongful trading provisions attempt to re-set the incentives of the directors by making them personally liable for the increased liabilities of the company if the gamble fails and the court adjudges the directors to have acted negligently. Again, it is to be noted that the persons potentially made liable are the controllers of the company (directors and shadow directors) rather than its shareholders. The latter will fall within the scope of the provisions only if they fall within the category of a "shadow director" (see below). However, it is directors responsive to the interests of the shareholders who are most likely to fall foul of s.214.

The importance attached by the legislature to the provisions on fraudulent and wrongful was demonstrated by their reform in 2015. Previously, they had applied only when the company was in insolvent liquidation but they were extended to companies in administration,[12] a significant change since administration often

precedes, or even eliminates the need for, liquidation.[13] The 2015 reforms also made it easier for liquidators and administrators to obtain financing for litigation to enforce these liabilities, as is discussed below.

Civil liability for fraudulent trading

9–5

The Insolvency Act mimics for the purposes of civil liability the criteria laid down in s.993 of the Companies Act for criminal liability, i.e. that the business of a company was carried on with intent to defraud the creditors of the company or of any other person or for any other fraudulent purpose. However, ss.213 and 246ZA require in addition that the company be in the course of administration or winding up (which the criminal section does not) before the liability can be enforced.[14] Assuming this to be the case, the court, on the application of the administrator or liquidator, may declare the persons who were knowingly parties to carrying on[15] the business of the company in this way "liable to make such contributions (if any) to the company's assets as the court thinks proper."[16] Since the company in winding up will be in need of such a contribution only where its assets are insufficient to meet its liabilities, this is in effect an indirect way of making the persons in question liable for the company's debts (to at least some degree).[17] As with criminal liability, the persons liable are those party to carrying on the business of the company in the fraudulent way; they need have no other connection with the company, i.e. they do not need to be directors of or shareholders in the company—though they often will be.[18] It is enough to establish liability that only one creditor was defrauded and in a single transaction.[19] However, in the case of a one-off fraud there is a risk that the court will not be able to conclude that the business of the company was carried on for fraudulent purposes, in which case liability will not arise.[20]

Given the wide personal scope of the sections, banks and parent companies (third parties) have at times felt inhibited from providing finance to ailing companies, fearing that they may thereby fall foul of these provisions as persons knowingly party to the fraud. It is sometimes said that their fears are unfounded so long as they play no active role in running the company with

fraudulent intent.[21] However, the extent of the exposure of a third party company to liability under the sections will depend in part on what rule of attribution is used to determine the extent of the knowledge the third party company possesses of the activities within the fraudulently run company. In *Re Bank of Credit and Commerce International SA (No.15)*[22] the Court of Appeal rejected the proposition that only the knowledge of the board of the third party was to be attributed to it. Here, the court attributed to the defendant company the knowledge of a senior manager who had been given authority by the board to set the terms of transactions with the company whose business was being carried on fraudulently and to which fraud the manager had turned a blind eye. Thus, as was already clear and as this case illustrates, a third party can fall within the sections if it participates, with knowledge,[23] in the fraudulent activity of a company, even though that party could not be said to have taken a controlling role within the company.[24] Overall, therefore, these rules encourage third parties, whose dealings with a company might assist the fraudulent running of that company's business, to have in place internal controls designed to identify at an early stage and to deal with situations where relevant employees of the third party have knowledge of the fraudulent activities. In this way the third party may hope to avoid the risk that it will be liable to contribute under the sections.[25]

As to whether those conducting business are doing so fraudulently, it has been said that what has to be shown is "actual dishonesty involving, according to current notions of fair trading among commercial men, real moral blame".[26] That may be inferred if "a company continues to carry on business and to incur debts at a time when there is, to the knowledge of the directors, no reasonable prospect of the creditors ever receiving payment of those debts",[27] but it cannot be inferred merely because they ought to have realised there was no prospect of repayment. It was this need to prove subjective moral blame that led the Jenkins Committee in 1962 vainly to recommend the introduction of a remedy for "reckless trading"[28] and the Cork Committee, 20 years later,[29] successfully to promote it under the name of "wrongful trading".

Wrongful trading

9–6

Sections 214 and 246ZB empower the court to make a declaration similar to that under ss.213 and 246ZA where the company has gone into *insolvent* administration or liquidation. An insolvent is distinguished from a solvent procedure on a balance-sheet test, i.e. were the assets of the company sufficient to meet its liabilities and the costs of the procedure at the point the company entered into it.[30] The basis for imposing the obligation to contribute is that the director (or shadow director) knew, or ought to have concluded, at some point *before* the administration or winding-up, that there was no reasonable prospect that the company would avoid going into insolvent administration or liquidation.[31] A declaration will then be made unless the court is satisfied that the person concerned thereafter took every step with a view to minimising the potential loss to the company's creditors as he ought to have taken, on the assumption that he knew there was no reasonable prospect of avoiding insolvency.[32] In judging what facts the director ought to have known or ascertained, what conclusions the director should have drawn and what steps should have been taken, the director is to be assumed to be a reasonably diligent person having both the general knowledge, skill and experience to be expected of a person carrying out the director's functions in relation to the company[33] and the general knowledge, skill and experience that the director in fact has.[34] This formulation heavily influenced the general duty of care now imposed on directors by s.174 of the Companies Act 2006[35]. The wrongful trading provisions, s.174 of the 2006 Act and the director disqualification provisions (discussed in the following chapter) constitute the three main areas where sanctions are imposed on directors for negligent discharge of their duties. In the case of ss.214/246ZB, however, the beneficiaries of the duty to take care are the creditors rather than the shareholders, whom s.174 of the 2006 Act protects.

Section 214 poses two questions which have to be answered, both on an objective basis. Should the director have realised there was no reasonable prospect of the company avoiding insolvent liquidation and, once that stage has been reached, did the director take all the steps he or she ought to have taken to minimise the loss to the company's creditors, especially, no

doubt, by seeking to have the company cease trading? Both these judgments will depend heavily on the facts of particular cases: what sort of company was involved, what were the functions assigned to or discharged by the director in question, what outside advice was taken and what was its content?[36]

Shadow directors

9–7

Section 214 applies to shadow directors as well as to directors, i.e. a person, other than a professional adviser, in accordance with whose directions or instructions the directors of a company are accustomed to act.[37] This considerably widens the class of persons against whom a declaration can be made, though not as widely as under s.213 which brings in any person who is party to the fraudulent trading (see above). The shadow director definition catches only the person who influences at least a certain category of board decisions on a continuing basis.[38] The two potential defendants of greatest interest are, once again, banks and parent companies. As far as the former are concerned, the courts have so far taken a cautious line, initially on the grounds that the definition of a shadow director required that the board cede its management autonomy to the alleged shadow director. This was not regarded as occurring as a result of the bank taking steps to protect itself, provided the company retained the power to decide whether to accept the restrictions put forward by the bank, even though the company might be thought to have no other practicable alternative.[39]

In relation to parent companies, such a degree of cession of autonomy by the subsidiary may be more easily found, but much will still depend upon how exactly intra-group relationships are established. The degree of control exercised by parent companies may vary from detailed day-to-day control to virtual independence for the subsidiary’s board, with many variations in between. It would seem that the establishment of business guidelines within which the subsidiary has to operate would not make the parent inevitably a shadow director of the subsidiary.[40] However, the Court of Appeal has rejected the proposition that it is necessary for the board to cast itself in a subservient role or surrender its discretion in order for the alleged shadow director

to be found to be such, thus casting doubt on the “cessation of autonomy” test and potentially broadening the scope of shadow director liability.[41] It is important to note that the shadow director definition in s.251 of the Insolvency Act does not exclude parent companies, in contrast to the exclusion in s.251 of the Companies Act which provides that a parent company is not to be considered a shadow director “by reason only that the directors of the subsidiary are accustomed to act in accordance with [the parent’s] directions or instructions”. It would thus seem that, so long as the subsidiary is a going concern, the parent company may impose a common policy on the group companies without being in danger of infringing their general duties in relation to the subsidiary. Once insolvency threatens the subsidiary, however, the interests of its creditors take priority over the interests of the parent and the group policy.[42] When ss.214/246ZB are triggered, they will apply to the actions of the boards of both the subsidiary and the parent company (provided the latter falls within the definition of a shadow director).

The declaration

9–8

Section 215 contains certain procedural provisions common to both fraudulent and wrongful trading. Those provisions are to have effect notwithstanding that the person concerned may be criminally liable.[43] The court may direct that the liability of any person against whom the declaration is made shall be a charge on any debt due from the company to that person or on any mortgage or charge in that person’s favour on assets of the company. This enables the company to set off what it owes to the director against what the director is declared liable to contribute to the company, which may prove valuable in the bankruptcy of the director.[44] In addition, s.215[45] provides that the court may direct that the whole or any part of a debt, and interest thereon, owed by the company to a person against whom a declaration is made, shall be postponed to all other debts, and interest thereon, owed by the company. Thus, even if, for example, the court makes only a small contribution order, which the director is able to meet, the director may suffer a further financial loss by having his or her debts due from the company

subordinated to those of the company's other creditors, a potentially important provision since the company ex hypothesi is insolvent.

The central question, however, is the amount of the contribution, a matter with which s.215 does not deal. The fraudulent and wrongful trading provisions simply say that the amount of the contribution shall be "as the court thinks proper".[46] It is now established that contribution orders in relation to both wrongful and fraudulent trading are intended to be compensatory in relation to the company.[47] The outer boundaries of the contribution are thus set by the amount by which the company's assets have been depleted by the director's conduct. Thus, the trading provisions will not replace the Insolvency Act rules on preferences, which deal with the situation where the company improperly pays one creditor ahead of another. As far as the company is concerned, a preference is balance-sheet neutral: assets are certainly paid out to the preferred creditor but the company's liabilities are reduced to the same extent, so that overall the company is no worse off. Preference rules are apt to deal with the improper distribution of assets among creditors; trading rules with situations where the creditors as a class are disadvantaged by the directors' actions.

Within the parameter of the overall loss to the company, the court has a discretion to fix the amount to be paid as it thinks proper. The assessment is to be made against each defendant individually rather than on some basis of collective responsibility.[48] Despite this method of calculating the upper limit on the contribution, the contribution from the directors is to the assets of the company generally and not for the particular benefit of those who became creditors of the company during the period of wrongful or fraudulent trading. Consequently, pre-wrongful trading creditors may actually benefit from the wrongful trading,[49] a somewhat ironic result but one driven, presumably, by a desire for simplicity.

Impact of the wrongful trading provisions

9–9

The wrongful trading provisions are capable of playing a central role in re-orienting the duties of directors as the company's

insolvency becomes overwhelmingly likely. However, the drafters of the wrongful trading provisions were careful not to specify the precise action directors are required to take to meet its requirements. Instead, the provisions lay down a standard to which the director must conform in order to avoid liability, i.e. "to take every step with a view to minimising the potential loss to the company's creditors as (assuming him to have known that there was no reasonable prospect that the company would avoid going into insolvent liquidation or entering insolvent administration) he ought to have taken".[50] A central question is whether the section requires the directors, in all cases where there is no reasonable prospect of avoiding insolvent liquidation, to cause the company to cease trading and put the company into an insolvency procedure. Certainly, one of the commonest forms of wrongful trading is to keep the company's business on foot even after the accounts or other management information have clearly revealed that the company is in a chronically loss-making position.[51] However, there are good reasons for not requiring this response across the board. In the interests of both creditors (higher recovery of their debts) and of shareholders and other stakeholders (such as employees) it may well be better if the company can be turned around or its business disposed of in some other way, which an immediate cessation of trading might jeopardise.

The courts can adjust the section to the needs of the "rescue culture" either by postponing the point at which they conclude the directors ought to have realised the company had no reasonable prospect of avoiding insolvency or by taking a broad view of the appropriate actions of the directors once that point is reached. An example of the first approach can be seen in *Re The Rod Gunner Organisation Ltd*,[52] where the court refused to find "no reasonable prospect" for a period of six months after the company became unable to meet its debts as they fell due, on the grounds that the directors reasonably thought an outside investor was going to come in with substantial funding (though that analysis no longer held once it became clear that the investor would not live up to the directors' expectations of him). Similarly, in *Re Continental Assurance Co of London Plc (No.4)*,[53] where a substantial insurance company had suffered unexpected losses, the court refused to find "no reasonable

prospect" during a period of some six months in which the directors commissioned a report as to the company's solvency and decided to continue trading on the basis of the report received, until it later became clear that the company was in fact insolvent. Park J was very aware of the dangers of judging the directors' conduct on the basis of hindsight, and he remarked pithily in relation to the general issue that "ceasing to trade and liquidating too soon can be stigmatised as the cowards' way out". Once the point of "no reasonable prospect" is reached, however, the section appears to shift the risk of continued trading onto the directors. If the continued trading reduces the company's net deficiency, no contribution will be required of them. But in the opposite case they will be exposed.[54]

9–10

However, any analysis of the impact of the wrongful trading provisions also requires an assessment of the effectiveness of its enforcement. In contrast to litigation under the disqualification provisions discussed in the next chapter, where the public purse pays for the cases and there has been a high level of activity, litigation about wrongful trading seems to have been sparse and certainly there are few reported cases. As we have seen, the Act places the initiation of litigation in the hands of the liquidator or administrator ("office holders"), who does not have access to any public funds to support any litigation it is proposed to bring. Assuming the insolvent company does have some realisable assets, the office holder may contemplate using those to fund the litigation in the hope of swelling the ultimate amount available for distribution to the creditors. However, even if the office holder can secure solicitors who will take the case on a conditional fee basis—not always possible—the litigation is likely to involve some costs (for example, for the insurance to meet the other side's costs if the litigation is unsuccessful), and so the office holder is likely to be unwilling to risk the company's already inadequate assets on litigation unless there is a very strong chance of success.[55] The office holder might conceivably seek funding for the litigation from a floating charge holder, but there is little incentive for such a creditor to provide funding, for the proceeds of fraudulent and wrongful trading claims go to benefit the unsecured creditors, not the

holders of a floating charge.[56]

The obvious step for the office holder to take, faced with this uncertainty, is either to sell the claim to a third party or to obtain funding for the claim by assigning some part of the fruits of the litigation to a third party. A third party whose business consists of buying or funding such claims is in a position to take a more adventurous view of which claims may be litigated, because it spreads its risks across a number of such claims, unlike the office holder who has only "one shot" on behalf of the unsecured creditors of any particular company. However, until the reforms of 2015 the office holder could not sell the wrongful trading claim under the general power to dispose of the company's assets, because the right to claim under the section is vested in the office holder personally, not in the company.[57] The 2015 reforms sensibly cut through this difficulty by giving the office holder an express statutory right to assign a wrongful or fraudulent trading claim (or the proceeds of such an action).[58] However, the rule that the proceeds of such an action are not the property of the company is retained.[59] This means that the proceeds are not swept up by the holders of any floating charge the company has issued, but rather remain available for the benefit of the unsecured creditors.

Common Law Duties in Relation to Creditors

9–11

The wrongful trading reforms of the mid-1980s, discussed in the previous section, create a statutory duty of care on the part of directors towards creditors at the point when insolvency seems unavoidable. Despite this statutory reform, the common law has not entirely neglected the interests of creditors at this point in the company's life-cycle and we analyse that development in this section. Although the statutory codification of the duties of directors in s.172 of the Companies Act 2006[60] does not in terms list creditors among those to whose interests the directors must have regard when promoting the success of the company, nevertheless it does recognise and preserve this common law development. Section 172(3) provides that the duty the section creates "has effect subject to any enactment or rule of law requiring directors, in certain circumstances, to consider or act in

the interests of the creditors of the company". This removes any doubt that might otherwise have existed about whether the wrongful trading rules had been in any way qualified or reduced as a result of the enactment of s.172, but this provision also preserves ("or rule of law") the common law developments.[61]

9–12

Starting in Australia in the 1970s,[62] the notion of a common law duty upon directors to take account of the interests of creditors as insolvency approaches has been widely accepted throughout the common-law world. The principle was adopted by the Court of Appeal in *West Mercia Safetywear v Dodd*.[63] As with most significant common-law developments in their relatively early stages, there was and still remains considerable uncertainty about the conceptual boundaries of this doctrine. There are still uncertainties about when the duty bites, about its content, the remedies available and, to a lesser extent, the mechanisms for enforcing it. On the answer to these questions turns the broader issue of what, if anything, the common law duty adds to the statutory wrongful trading remedy.

9–13

Only the most imprecise indications have been given by the courts as to when the duty is triggered, except that there appears to be general acceptance that the duty can bite in advance of the company being insolvent.[64] In *Brady v Brady*, Nourse LJ said that the interests of the company were really the interests of the creditors when the company was "doubtfully solvent",[65] whilst in *Nicholson v Permakraft (NZ) Ltd*[66] the judge conceivably was prepared to go a bit further by suggesting the duty was triggered by "a course of action which would jeopardise solvency". In any event, while it is clear that the common law duty, like the statutory one, may apply before the company is insolvent, it is unclear whether the common law applies at a pre-insolvency point which is earlier than under the statutory test of "no reasonable prospect of avoiding insolvent liquidation or administration". This question is not made any easier to answer by the fact that the statutory test itself carries a penumbra of uncertainty (when does the reasonable prospect finally disappear?).

9–14

Assuming the duty has been triggered, how does it require directors to behave? There are some indications in the early cases[67] that the duty is akin to the duty of care under the statute. It is a duty to protect the creditors from further harm rather than a duty to promote the interests of the creditors in a more general sense. For example, the directors of a financially troubled company might adopt a course of action designed to advance the interests of the shareholders, provided it did not increase the riskiness of the creditors' claims on the company.[68] However, the most recent cases treat the common law duty as a fiduciary duty, by analogy with the core directors' duty set out in s.172(1).[69] At first glance, this seems disadvantageous to creditors since it is well established that this core duty is a subjective one, i.e. the directors must act in what they consider (not what a court would consider) to be the best way to further creditor interests. By contrast, as we have seen, under the statutory duty of care the minimum standard of care is set objectively.[70] Thus, the directors appear to have greater freedom of action under the fiduciary approach. However, the contrast may be more apparent than real, at least in the typical case. These are cases where the court finds that the directors acted without considering the creditors' interests at all. The failure itself may constitute a breach of duty or at least open the way for the court to apply the objective test of whether a reasonable director would have acted in the same way as the directors in the instant case.[71]

Where directors do seek to fulfil their fiduciary duty to creditors, there are uncertainties about what is required of them. In some cases the interests of the creditors are described as "paramount", implying that creditor interests are to be the sole concern of the directors, once the duty has been triggered.[72] Other cases do not adopt this approach or even reject it,[73] suggesting that directors may pursue the interests of the shareholders as well as of the creditors once the duty is triggered. Probably, the required action turns on the financial condition of the company. Where the company is hopelessly insolvent or the decision facing the directors, if taken a particular way, will put the company into that position, only the creditors'

interests should be considered by the directors. If the company is in financial difficulties of a less serious sort, there may be scope for taking action to promote shareholder interests whilst still protecting creditors.[74] In this sense the creditors' interests are always "paramount" (they must always be protected) but, depending on the company's financial position, they may not have to be the exclusive focus of directorial action.

This analysis may be particularly important when the duty is triggered significantly in advance of insolvency, so that, whilst the risk of future insolvency has increased substantially to the detriment of the creditors, the shareholders still have some equity in the business. Where the directors seek to keep the company going rather than, as is typical in the decided cases, extract assets from it, there is some scope for action which advances both shareholder and creditor interests, provided the duty is not one to maximise the welfare of the creditors. After all, even from a purely creditor point of view, continued trading is not necessarily contrary to their interests. As Scott VC recognised in *Facia Footwear Ltd v Hinchliffe*[75] "a continuation of trading might mean a reduction in the dividend eventually payable to creditors but it represented the creditors' only chance of full payment. It is, therefore, not in the least obvious that in continuing to trade the directors were ignoring the interests of the creditors".

9–15

The remedies available for breach of fiduciary duty are superior to those for breach of the duty of care. Both will provide recompense for loss (equitable compensation, damages respectively), but if assets extracted from the company have ended up in the hands of the directors, as will often be the case, the fiduciary claim may give the company a proprietary and not just a personal claim for their return.[76] As the previous sentence implies, the creditor-regarding duty, like the other duties of directors, is owed to the company and is therefore enforceable by the company alone, not by individual creditors.[77] As Gummow J said in the Australian High Court, "the result is that there is a duty of imperfect obligation owed to creditors, one which the creditors cannot enforce save to the extent that the company acts on its own motion or through a liquidator".[78]

Typically, enforcement will be by the liquidator, as with enforcement of the wrongful trading duty. However, in principle the company or a shareholder suing derivatively could seek to enforce breaches of the duty outside insolvency. This could conceivably occur where the former creditors of the company have taken control of it via a debt for equity swap as a means of avoiding its liquidation. The main disadvantage of the common law duty being owed to the company, not to individual creditors—and it is a significant one—is that its proceeds would appear not to go primarily to the unsecured creditors, but are typically caught by any security interests the company has granted. As we have seen, this result is avoided under the wrongful trading provisions.[79]

However, breach of the creditor-facing duty may avail litigants who bring personal actions against the company or its directors, because the breach of duty displaces an answer to the claim which the defendants would otherwise have. Thus, in *Colin Gwyer and Associates Ltd v London Wharf (Limehouse) Ltd*[80] a shareholder challenge to the validity of a board resolution succeeded because the breach of the creditor duty was held to disqualify the director from being counted towards the quorum required under the articles. Recognition of creditors' interests in advance of insolvency may also have an impact on litigation brought against directors for breaches of their non-creditor duties. Such breaches cannot be ratified by the shareholders in the vicinity of insolvency because they are no longer the ones primarily interested in the value of the company's assets.[81]

Phoenix Companies and the Abuse of Company Names

9–16

The Company Law Review described the "Phoenix company" problem in the following terms:

> "The 'phoenix' problem results from the continuance of a failed company by those responsible for that failure, using the vehicle of a new company. The new company, often trading under the same or similar name, uses the old company's assets, often acquired at an undervalue, and exploits its goodwill and business opportunities. Meanwhile, the creditors of the old company are left to prove their debts against a valueless shell and the management conceal their previous failure from the public."[82]

However, it also went on to point out that the actions just

described are not necessarily improper. They will be so where their purpose is to deprive the creditors of the first company of the value of that company's assets by transferring them at an undervalue to the second company; or where the purpose of the actions is to mislead the creditors of the second company by disguising the lack of success of the business when it was carried on by the first company. In other cases, however, such purposes may be lacking, The failure of the first company may be for reasons outside the control of its directors and, further, "the only way to continue an otherwise viable business and their own and their employees' ability to earn their livelihood may be for them to do so in a new vehicle using the assets and trading style of the original company".[83] Thus, the regulation of the Phoenix company is not an easy matter: too light a regulation may permit abuses to continue; too heavy a regulation may lead to the cessation of otherwise viable businesses.

The prohibition

9–17

As will be clear, the Phoenix problem needs to be tackled from two angles. One is the transfer of the assets of the first company at an undervalue to a new company controlled by the same persons. Since the claims of the creditors are confined, at least in principle, to the assets of the first company, this is a problem generated by limited liability. Within company law, the regulation of such an event is primarily the function of ss.190 et seq. (substantial property transactions with directors), which we discuss in Ch.16. Here the CLR recommended reforms but they were not taken up in the Companies Act 2006.[84] So, the law continues as before. The second angle is the re-use of the first company's name by the second company. This is perhaps the converse abuse of limited liability. The company against which the creditors' claims lie is in this case the second company, but it appears to be a more credit-worthy operation than it really is, because it appears at first glance to be the first company, whose demise is concealed.[85] In this case, substantial reform, involving the imposition of personal liability for the debts of the second company, was brought about by s.216 of the Insolvency Act 1986. It proceeds by laying down a broad prohibition about the

re-use of the first company's name or a name similar to it (to which prohibition both criminal and civil sanctions are attached) and then providing certain exceptions to it. Its primary objective seems to be to prevent the creditors of the new company from being misled about the history of the company with which they are dealing. The prohibition is attached to the directors and shadow directors of the first company and is triggered if the first company goes into insolvent liquidation.

9–18

In somewhat more detail, s.216 of the Insolvency Act makes it an offence (of strict liability)[86] for anyone, who was a director or shadow director of the first company at any time during the 12 months preceding its going into insolvent liquidation, to be in any way concerned (except with the leave of the court or in such circumstances as may be prescribed) during the next five years in the formation or management of a company, or business, with a name by which the original company was known or one so similar as to suggest an association with that company (known as a "prohibited name"). The prohibited name may be the first company's name or a name under which that company carried on business; and the prohibition applies to both the second company's corporate and trading names.[87] Whether the similarity of names is made out is to be judged by the court by reference to the circumstances in which the companies with the allegedly similar names operate, and so it is a highly fact-specific determination.[88] It is clear that no person needs to have been misled by the prohibited act; it is enough to show that the names had a tendency to mislead.[89] Finally, it should be noted that the prohibition applies whether or not the first element of the classic "Phoenix" syndrome is present, i.e. the transfer of assets from first to second company. The syndrome may have provided the rationale for the legislation but the section is not formally tied to it and has a life of its own separate from the Phoenix rationale.[90]

In addition to the criminal offence, s.217 makes a person acting in breach of s.216 personally liable, jointly and severally with the new company and any other person so liable, for the debts and other liabilities of the new company incurred while he or she was concerned in its management in breach of s.216.[91] In this case, therefore, the defendant is personally liable in relation

to a specific set of debts rather than liable, as under the fraudulent and wrongful trading provisions, to make a general contribution to the assets of the company in order to help meet the claims of all its creditors. This somewhat different approach follows on from the fact that the liability arises under s.216 towards the creditors of the second company and arises whether or not the second company is in insolvent liquidation or, indeed, any particular form of financial difficulty, although it typically will be. Also liable is anyone involved in the second company's management who acts or is willing to act on the instructions given by a person whom he knows, at that time, to be in breach of s.216.[92] Use of s.217 seems somewhat higher than the use of the wrongful trading provisions.[93] This may be because s.217 can be triggered by a wider range of claimants than the wrongful trading provisions, i.e. individual creditors rather than just the liquidator or administrator. Not only does this rule generate more potential claimants but the restrictions on the assignment of claims which have affected liquidators in the past do not apply to third-party creditors.[94]

Exceptions

9–19

The policy behind the provisions is perhaps most clearly revealed in the three prescribed cases, set out in the Insolvency Rules,[95] where liability is not imposed. The first, and probably most important, of the cases is where a successor company purchases the whole of the insolvent company's business from an insolvency practitioner acting for the transferor company (thus reducing the risk of a sale at undervalue) and gives notice of the name the successor company intends to use to all the creditors of the insolvent company. The Court of Appeal held that this exception is available only where the directors of the insolvent company were not already directors of or involved in the management of the successor company at the time the notice was given, on the grounds that the warning function (see below) of the rules would otherwise be undermined.[96] This ruling caused difficulty in two situations. First, where the successor company (with common directors) bought the business from a company which, although insolvent, was not in liquidation, but, for

example, in administration, it was common for the successor company to give the requisite notice in case, not in itself unlikely, the first company should go into liquidation after the administration. Secondly, and more limited, this first case, as originally drafted, would not apply if the directors were already directors of the successor company at the time notice was given, even if at that time the successor company was not known by a prohibited name (though it subsequently acquired one). In 2007 the Insolvency Rules were amended so as to extend the first exception to these two situations.[97]

Overall, the first case might be thought to suggest that the aim of the section is partly the protection of the creditors of the insolvent company. This is because the insertion of the insolvency practitioner is intended to ensure that the sale by the insolvent company is not at an undervalue and the notice to the creditors of that company ensures that they are not misled into thinking that they may assert their claims against the new company.[98] However, if the requirements of this case are not met, the liability of the directors is not to the creditors of the insolvent company but to those of the successor company, as indicated above. Nor is the successor company itself, which simply falls outside s.216, liable for the debts of the insolvent company. The CLR considered, but rejected, a proposal that the liability of the successor company and those acting in breach of s.216 should be extended to the creditors of the insolvent company, but rejected it.[99] So, the extent of the protection afforded by s.216 to the creditors of the insolvent first company is limited.

The third case[100] excepts from s.216 the situation where the "new" company has been known by the prohibited name for the whole of the 12 months ending with the liquidation of the first company.[101] The purpose of this provision is, in particular, to permit the transfer of businesses within an existing group of companies. The risk of the creditors being misled, although it exists, is not in this case the result of action taken after the liquidation of the original company but of decisions taken in advance of the liquidation by a period of at least one year—a period thought to be enough to prevent opportunistic use of this exception.[102] This exception has been given a broad

interpretation by the courts: it is not necessary to show that the company was known during the 12-month period by the prohibited name it had at the time the debt arose (provided it was known during that period by one or more prohibited names) or that it used the prohibited name in relation to the whole of its business.[103]

Misdescription of the Company and Trading Disclosures

9–20

This is an area of creditor protection where personal liability is no longer imposed after the 2006 Act, but the underlying disclosure obligation still exists in the current legislation. The notion is that a company should be required fully to disclose its name when transacting so that a creditor who wishes to carry out a search of the company's records in Companies House (or elsewhere) is put in a position to do so. By what was s.349(4) of the Companies Act 1985, if the correct and full name of the company did not appear on cheques and related instruments or orders for goods signed by an officer (or even an employee) of the company, the signatory would be personally liable to pay if the company did not.[104] It made no difference that the third party concerned had not been misled by the description. The requirement to state the company's name correctly on cheques, etc. is only one of a number of disclosure requirements imposed by the legislation on companies in relation to those who deal or might deal with them (known as "trading disclosures"), but it was the only one in relation to which personal liability was imposed. Those requirements are re-stated in Ch.6 of Pt 5 of the 2006 Act, where the Secretary of State is given power to make regulations requiring the company to give specified information, not only in "specified descriptions of documents or communications" but also in specified locations (such as the company's place of business or its website) or to those who deal with the company.[105]

Although the sanction of personal liability has been removed for failure to state the company's name correctly on cheques, etc. such a failure is not devoid of civil consequences, though they are now visited wholly on the company.[106] Moreover, these civil consequences now apply to any breaches of the trading

disclosure requirements, whether involving the misstatement of the company's name on a cheque, etc. or some other failure to conform to them.[107] Where a company seeks to enforce a right arising out of a contract made in the course of business and the company was in breach of the disclosure requirements at the time, the court is required to dismiss the company's claim if the defendant shows that he or she has a claim against the company which the defendant is unable to pursue because of the company's breach of the disclosure requirements or that he or she has suffered a financial loss by reason of the company's breach. Even in these two cases, the court may permit the company's claim to continue if it thinks it just and equitable to do so.[108] Thus, not only are the civil consequences of misdescriptions confined to the company but the company will bear them only where the misdescription has caused harm to the defendant and, even then, the court may permit the company's claim to proceed (for example, where the harm to the defendant was out of proportion to the harm the company might suffer by being denied its contractual rights and the defendant's loss could be taken into account in calculating the company's damages).

Overall, the thrust of the disclosure rules is now on fostering self-help on the part of those dealing with the company,[109] rather than with providing them with an additional avenue of civil redress against company officers or employees, and on making the company liable only where those dealing with it have suffered harm as a result of the misdescription.

Company Groups

Limited liability

9–21

The final area for consideration is the operation of the doctrine of limited liability within groups of companies. Even relatively modest businesses often operate through groups of companies and large businesses invariably do so, and so the issue is one of great practical importance. Where the companies in the group are wholly owned, directly or indirectly, by the parent, only the rationale of asset partitioning[110] provides a reason for the extension of limited liability to intra-group relations, since the

raising of equity capital and the trading of shares on public exchanges could occur effectively with limited liability confined to the shareholders of the parent company. Where the subsidiary is only partly owned by the parent, and in particular where the "outside" shares are traded on a public market, the other rationales for limited liability also apply within groups.[111] British law does in fact apply the doctrine of limited liability to intra-group shareholders as much as to extra-group shareholders and, as we saw in the previous chapter,[112] the courts will not pierce the veil within a group of companies simply on the grounds that the group constitutes a single economic entity. However, from time to time there have been proposals for statutory provisions to modify the veil within groups, both at EU level and domestically, but, so far, without result.

How might creditors of a subsidiary be disadvantaged as a result of the company becoming, or being, a member of a group of companies? In general the answer is because, at least in a group with an integrated business strategy,[113] business decisions may be taken on the basis of maximising the wealth of the group as a whole (which usually means the value of the parent company), rather than of the particular subsidiary of which the claimant is a creditor. This phenomenon may show itself in a variety of ways. Three examples may be given. Most obviously, the parent may instruct the board of the subsidiary to do something which is not in the best interests of the subsidiary, because that decision will maximise the benefits of the group. Secondly, the parent may allocate new business opportunities to the subsidiary which can maximise the benefit for the group, even though another subsidiary could develop the opportunity effectively, if less profitably. Finally, if a subsidiary falls into insolvency, the parent may refrain from rescuing it, even though the group has sufficient funds to do so.

It is far from clear that the actions described above in the second and third examples do, or ought to, involve any illegality on the part of those involved. Unless the business opportunity had been generated by a particular subsidiary,[114] it is not clear that it has, or ought to have, any claim to take all the opportunities arising within the group which it could effectively develop. Nor is it obvious that the descent into insolvency of a

properly capitalised subsidiary which has fully disclosed the risks of its business should be allowed to threaten the economic viability of the remainder of the group's operations. In short, the overruling of limited liability within corporate groups is likely to require sophisticated and nuanced regulation if it is to make sense in policy terms.

9–22

The strongest case for intervention is the first: directions to the subsidiary to act in a way which is disadvantageous to it (and its creditors and outside shareholders) in order to benefit the parent (and its creditors and shareholders). Egregious cases of this type are already caught by existing British law, for example, the application of the rules against fraudulent trading to all those party to it and of wrongful trading to shadow directors, both of which extensions may bring in parent companies, at least in some circumstances.[115] These are examples of the overall domestic approach to group problems, i.e. the extension of general creditor-protection rules to deal with the particular situation of group creditors. An alternative approach would be the development of distinct rules for corporate groups. This alternative approach is to be found in German law dealing with public companies which contains a separate section dealing with the issue of creditor and minority shareholder protection within groups,[116] though even these provisions do not purport to deal comprehensively with group issues but focus predominantly on the first example of disadvantageous behaviour given above. Even within Germany, however, these provisions are not thought to work effectively.[117]

The German statutory regulation of public companies provides two models of regulation, one of which is contractual and thus optional. Under the optional provision, in exchange for undertaking an obligation to indemnify the subsidiary for its annual net losses incurred during the term of the agreement, the parent acquires the right to instruct the subsidiary to act in the interests of the group rather than its own best interests. This option has been taken up only by a small number of companies, presumably because the incentive to do so (i.e. protection from the potential liabilities for ignoring the separate legal personality of the subsidiary) is too small. The Company Law Review

proposed something similar: in exchange for a guarantee by the parent of the liabilities of its subsidiary, the subsidiary would be freed from the obligation to publish separate accounts, thus reducing the costs of running the group.[118] However, the proposal was not proceeded with, partly because it was again thought that the incentive provided was not large enough to induce a substantial take-up of the option and, partly and conversely, because there were fears about loss of information about subsidiary companies if the option were taken up, especially where the subsidiary was the main British operating company of a foreign parent.[119]

The second strand of the German statutory regime is mandatory and applies to de facto groups. The core provision[120] is that the parent is liable for the damage to the subsidiary if the parent causes the subsidiary to enter into a disadvantageous transaction, unless, within the fiscal year, the parent has compensated the subsidiary for the loss or agreed to do so. The provision has proved less effective than expected seemingly because of difficulties of proof, both in relation to identifying particular disadvantageous transactions (where there is a continuous course of dealing between parent and subsidiary) and to identifying the loss caused by those transactions. This weakness of the de facto group regime undermines also the contractual group rules, since it is escape from the former which could provide a major incentive for companies to enter into the optional regime.[121]

9–23

Nevertheless, the German model, which has been followed within the EU only by Portugal and Croatia, was used by the European Commission in its preliminary consideration of a draft Ninth Company Law Directive on groups in the early 1980s. However, so remote from the traditions of the other Member States was this idea that the draft was never adopted by the full Commission. The Report of the High Level Group of Company Law Experts,[122] whilst not proposing a revival of the Ninth Directive, did propose that Member States should be required to introduce into their company laws the principle that the management of the parent company should be entitled to pursue the interests of the group, even if a particular transaction was to

the disadvantage of a particular subsidiary, provided that, over time, there was a fair balance of burdens and advantages for the subsidiary.[123] The modalities of the incorporation of this principle into national law would be for each Member State to decide. The Report thus put as much stress on the need for group management to be able to run a coherent group policy as it did on the protection of creditors and minority shareholders in the subsidiary. In fact, British law has a somewhat similar approach, but applies it to the directors of the subsidiary, not the parent.[124] The directors of a subsidiary ought to consider whether it is in the interests of the subsidiary to follow instructions from the parent—though it is likely that the subsidiary directors, who will often be employees of the parent, do not in fact go through this exercise. It may well be in the interests of the subsidiary to do what the parent requires, for example, where the business of the subsidiary is dependent on inputs from other group companies.

The High Level Group also proposed greater disclosure of information about the group, both of a financial and, more important, of a non-financial kind, relating, in particular, to control relations within the group and the types of dependency created. Although the latter proposal has achieved some legislative result in the Takeovers Directive,[125] proposals for action beyond disclosure have not been taken up at EU level.

Finally, in some jurisdictions, part of the solution to the group problem, especially in the case of the third example given above, is to be found in insolvency law, where the court may be given a discretion in certain circumstances to bring a solvent group company into the insolvency of another group company.[126] The High Level Group also supported this principle.

Ignoring separate legal personality

9–24

If it is rare for British law to ignore the principle of limited liability within groups, it would be completely wrong to conclude that the law is not prepared to override the separate legal personality of companies within groups where this does not involve any infringement of the principle of limited liability. There are many instances in which domestic company law takes account of group structures, though these instances tend to be

rather ad hoc, rather than the result of the application of a single general principle.

Perhaps the best known example is in the area of financial reporting. It has long been recognised that, in relation to financial disclosure, the group phenomenon cannot be ignored if a "true and fair" view of the overall position of the company is to be presented, and that accordingly when one company (the parent or holding company) controls others (the subsidiary and sub-subsidiary companies) the parent company must present group financial statements as well as its own individual statements, thus avoiding the misleading impression which the latter alone might give.[127] The subordinate companies in the group must also produce individual accounts. This is discussed more fully in Ch.21.

The Companies Acts have also long used the concept of the parent-subsidiary relationship in areas other than that of financial disclosure. Clearly if one is to ban or control certain types of transaction between a company and its directors it is essential to ensure that this cannot be easily evaded by effecting the transactions with or through another company in the group. Hence many of the sections in Ch.4 of Pt 10 (Transactions with Directors Requiring Approval of Members) contain such anti-avoidance provisions.[128] Similarly, the prohibition on financial assistance for the purchase of a company's own shares extends to financial assistance by any of its subsidiaries.[129]

In non-legal and much legal discourse, the expressions "parent" and "holding" company are used interchangeably. Until the Companies Act 1989, UK company legislation used the latter, but the EU Company Law Directives use the former, which seems preferable, since "holding" suggests that the sole function of the parent is to control the operations of subsidiaries whereas it too may well be undertaking one or more of the trading activities of the group. Now, in the Act, the two terms have slightly different meanings, the definition of a "parent" company being broader than that of a "holding" company; and the term "parent" company being used in relation to company accounts and that of "holding" company elsewhere where the Act recognises group situations.[130] This came about because, when the Seventh Directive compelled a change in the definition

for the purposes of accounts, it was represented that to apply the whole of the extended definition to other cases would introduce an unreasonable degree of uncertainty.[131] Hence it was decided to adopt a narrower definition in the non-accounts area, albeit one based on the EU definition. While it is a pity that it was thought necessary to have different definitions for what is essentially the same concept, there is no doubt that both are considerable improvements on the previous definition[132] since they recognise that what counts is "control" and not majority shareholding which, because of non-voting shares or weighted voting, will not necessarily afford control.

Under s.1159 the definition of "holding" and "subsidiary" company now is:

> "A company is a 'subsidiary' of another company, its 'holding company', if that other company
>
> (a) holds a majority of the voting rights in it, or
>
> (b) is a member of it and has the right to appoint or remove a majority of its board of directors, or
>
> (c) is a member of it and controls alone, pursuant to an agreement with other members, a majority of the voting rights in it.
>
> or if it is a subsidiary of a company which is itself a subsidiary of that other company."[133]

Conclusion

9–25

Since the Cork Committee[134] reported in 1982, statutory willingness to impose liability towards creditors on the directors of companies which abuse the mechanism of limited liability has significantly increased. Both the wrongful trading provisions and those dealing with the re-use of corporate names were a response to primarily small company problems. Together with the provisions on the disqualification of directors,[135] also aimed primarily at small companies, they may be said to constitute the legislature's preferred alternative to compulsory minimum capital requirements[136] for dealing with the abuses of limited liability in small companies. These provisions, however, are not formally limited to small companies; and the wrongful trading provisions, through the use of the idea of shadow directors, are capable also of catching abuses outside small companies, in

particular within corporate groups. However, the issue of limited liability within groups has not received the same degree of legislative attention. Like the judges, whose decisions on lifting the veil we examined in the previous chapter, the legislature has touched on limited liability within groups only gingerly, whilst showing itself perfectly able to recognise group structures in other areas of company law.

---

[1] Companies Act 1985 s.24—a provision applying initially to all companies but from 1992 only to public companies since private companies were then empowered to have a single member. This is now the position for public companies as well: CA 2006 s.7.

[2] *Salomon v Salomon* [1897] A.C. 22. See above, para.2–1.

[3] See para.14–3, below.

[4] See s.761 and para.11–8, below.

[5] See below para.11–9.

[6] 2006 Act s.767(1),(2).

[7] 2006 Act s.767(3). The validity of the transaction, however, is not affected.

[8] 2006 Act ss.90 and 91.

[9] Fraud is a general criminal offence, of course, but it has been regarded as less confusing for juries to face them with a single charge of fraudulent trading rather than with numerous charges of individual acts of fraud: see *R. v Kemp* [1988] Q.B. 645 CA. (pet. dis. [1988] 1 W.L.R. 846 HL). The legislature thought so well of the offence that it enacted in s.9 of the Fraud Act 2006 a similar offence in respect of those businesses carried on by persons falling outside the scope of s.993, including sole traders. This shows that the absence of limited liability is not a guarantee of the absence of fraud.

[10] The section embraces fraud on future, as well as present, creditors: *R. v Smith* [1996] 2 B.C.L.C. 109 CA.

[11] The shift of the civil liability provision out of the companies legislation and into the insolvency legislation occurred as a result of the recommendations of the Cork Committee on Insolvency Law (Cmnd. 8558 (1981), Ch.44).

[12] Insolvency Act 1986 ss.246ZA and ZB, inserted by s.117 of the Small Business and Enterprise Act 2015.

[13] For a discussion of the role of administration see paras 32–43 et seq, below.

[14] The fraudulent trading will have occurred before the company went into administration or liquidation. In fact, there is no limit in the section on the prior period which may be scrutinised for evidence of fraudulent trading. The company being in liquidation or administration is simply a condition for the claim being brought. However, the longer-lived the fraudulent scheme, the less likely it is the early creditors will have suffered a loss. So, older fraud is likely to be less relevant to the setting of the amount of the contribution: see para.9–8, below.

[15] A business may be regarded as “carried on” notwithstanding that the company has ceased active trading: *Re Sarflax Ltd* [1979] Ch. 592.

[16] 1986 Act ss.213(2)/246ZA(2).

[17] Unlike the situation before 1985, it is no longer possible to impose liability under ss.213 and 246ZA in respect of particular debts or in favour of particular creditors: cf. *Re Cyona Distributors Ltd* [1967] Ch. 889 CA.

[18] And it is no bar to inclusion within the section that the activities in question occurred abroad: *Jetivia SA v Bilta (UK) Ltd* [2015] 1 B.C.L.C. 443 SC. This is on the basis that the winding up of a company incorporated in the UK has effect, as far as domestic law is concerned, in relation to all the assets of the company, no matter where situated. This reasoning would seem equally applicable to liability for wrongful trading under ss.214/246ZB of the Act.

[19] *Re Cooper Chemicals Ltd* [1978] Ch. 262 (only one creditor defrauded). Indeed, for criminal liability to arise it is not clear that it is necessary for any person actually to be defrauded provided that the business of the company was carried on with intent to defraud (*R. v Kemp* [1988] Q.B. 645 CA—only potential creditors defrauded).

[20] *Morphitis v Bernasconi* [2003] 2 B.C.L.C. 53 CA. The defrauded person will have remedies under the general law of fraud.

[21] In *Re Maidstone Building Provisions Ltd* [1971] 1 W.L.R. 1085 an attempt to obtain a declaration against the company's secretary, who was also a partner in its auditors' firm, failed because, although he had given financial advice and had not attempted to prevent the company from trading, he had not taken "positive steps in the carrying on of the company's business in a fraudulent manner". In *Re Augustus Barnett & Son Ltd* [1986] B.C.L.C. 170 an attempt against its parent company (Rumasa) failed on the same ground.

[22] *Re Bank of Credit and Commerce International SA (No.15)* [2005] 2 B.C.L.C. 328 CA, following the lead given in *Meridian Global Funds Management Asia Ltd v Securities Commission* [1995] 2 A.C. 500 PC (above, at para.7–41). This step was facilitated by the separation of the criminal and civil liability for fraudulent trading, so that there is no implication from this decision that the same attribution rule would be applied if criminal liability were in question: at [107] and [129].

[23] The required degree of knowledge is "blind eye" knowledge, i.e. "a decision to avoid obtaining confirmation of facts in whose existence the individual has good reason to believe" (*Re Bank of Credit and Commerce International SA (No.15)* [2005] 2 B.C.L.C. 328 CA at [14] quoting Lord Scott in *Manifest Shipping Co Ltd v Uni-Polaris Shipping Co Ltd* [2003] 1 A.C. 469 at [116]). See also *Re Bank of Credit and Commerce International SA (No.14)* [2004] 2 B.C.L.C. 236.

[24] In *Re Gerald Cooper Chemicals Ltd* [1978] Ch. 262 it was held that a declaration could be made against a creditor who refrained from pressing for repayment knowing that the business was being carried on in fraud of creditors and who accepted part payment out of money which he knew had been obtained by that fraud. *Gerald Cooper Chemicals* was followed in *Re Bank of Credit and Commerce International SA (No.14)* [2001] 1 B.C.L.C. 263.

[25] In *Re Bank of Credit and Commerce International SA (No.15)* [2005] 2 B.C.L.C. 328 CA it was left open whether the third party's liability could not be more simply and widely established on the basis of the third party's vicarious liability for breaches of s.213 by its employees. See *Dubai Aluminium Co Ltd v Salaam* [2003] 2 A.C. 366 HL and para.7–31. This approach would strength the incentives of third parties to control participation by their employees in the fraudulent conduct of the company's business.

[26] *Re Patrick Lyon Ltd* [1933] Ch. 786 at 790, 791.

[27] *Re William C Leitch Ltd* [1932] 2 Ch. 71 at 77, per Maugham J. See also *R. v Grantham* [1984] Q.B. 675 CA, where the court upheld a direction to the jury that they might convict of fraudulent trading a person who had taken an active part in running the business if they were satisfied that he had helped to obtain credit knowing that there was no good reason for thinking that funds would become available to pay the debts when they became due or shortly thereafter. That dishonesty may be inferred in these cases does not mean, of course, that it can never be established in other cases: *Aktieselskabet Dansk Skibsfinansiering v Brothers* [2001] 2 B.C.L.C. 324 HKCFA.

[28] Cmnd. 1749, para.503(b).

[29] Above fn.11. For the argument that the Cork Committee overestimated the potential role of the wrongful trading provisions, partly because existing Companies and Insolvency Act provisions already cover much of the ground, partly because defendants financially able to meet the liability are likely to be few, see R. Williams, "What can we expect to gain from reforming the insolvent trading remedy?" (2015) 78 M.L.R. 55.

[30] 1986 Act ss.214(6)/246ZB(6). Section 213 formally applies in any winding up (solvent or insolvent) but in practice it is needed only in insolvent winding up.

[31] 1986 Act ss.214(2)/246ZB(2). It appears it is sufficient that the directors should have anticipated, for example, insolvent liquidation but the company ends up in insolvent administration.

[32] 1986 Act ss.214(3)/246ZB(3). The burden of proof on knowledge is on the claimant, on "every step" on the directors: *Brook v Masters* [2015] B.C.C. 661.

[33] This includes functions entrusted to the director even if the director has not carried them out: ss.214(5)/246ZB(5). If the director has failed the objective test he or she cannot be excused by the court, under Companies Act 2006 s.1157, on the ground that the director has acted honestly and reasonably: *Re Produce Marketing Consortium Ltd* [1989] 1 W.L.R. 745.

[34] 1986 Act ss.214(4)/246ZB(4).

[35] Below, para.16–15.

[36] The directors are likely to be treated with a particular lack of sympathy by the court if they have not abided by the statutory requirements for keeping themselves abreast of the company's financial position: *Re Produce Marketing Consortium Ltd (No.2)* [1989] B.C.L.C. 520 at 550, which requirements Knox J referred to as the "minimum standards". See Oditah, [1990] L.M.C.L.O. 205; and Prentice, (1990) 10 O.J.L.S. 265.

[37] Insolvency Act 1986 s.251.

[38] *Secretary of State for Trade and Industry v Becker* [2003] 1 B.C.L.C. 565; *Secretary of State for Trade and Industry v Deverell* [2000] 2 B.C.L.C. 133 CA.

[39] *Re Hydrodan (Corby) Ltd* [1994] 2 B.C.L.C. 180; *Re PFTZM Ltd* [1995] B.C.C. 280; cf. *Re A Company Ex p. Copp* [1989] B.C.L.C. 13.

[40] In *Re Hydrodan (Corby) Ltd* [1994] 2 B.C.L.C. 180 the judge was prepared to treat the indirect parent as a shadow director of a company, but that was because the directors of the company in question were corporate bodies and so must have received their instructions from elsewhere. Even here, the *directors* of the indirect parent were held not to be shadow directors.

[41] *Secretary of State for Trade and Industry v Deverell* [2000] 2 B.C.L.C. 133 CA, where the precise definition of "shadow director" was determinative of the appeal. The court also decided that the central question was whether the board in fact did what the alleged shadow directors proposed and not whether those proposals were couched as directors or instruction or mere "advice"; nor was it necessary to prove the subjective expectations of the alleged shadow director and directors as to whether the advice would be followed.

[42] For the general duties see Ch.16, below.

[43] 1986 Act s.215(5), applied to administrations by s.246ZC.

[44] Including any assignees from that person (other than a good faith assignee for value without notice): IA 1986 s.215(2) and (3).

[45] 1986 Act s.215(4).

[46] 1986 Act ss.213(2)/246ZA(2) and 214(1)/246ZB(1).

[47] See *Re Produce Marketing Consortium Ltd* [1989] 1 W.L.R. 745, for wrongful trading and *Morphitis v Bernasconi* [2003] 2 B.C.L.C. 53 CA, for fraudulent trading, the latter reversing the previous understanding in relation to fraudulent trading where a penal element was thought appropriate in some cases.

[48] See the dicta of Park J in *Re Continental Assurance Co of London Plc (No.4)* [2007] 2 B.C.L.C. 287 at [382]–[390] (s.214); and *Re Overnight Ltd* [2010] 2 B.C.L.C. 186 (s.213). The defendants' liability may, but need not, be put on the basis of joint and several liability.

[49] Assume a pre-wrongful trading position of assets 50, liabilities 100, so creditors paid 50p in the pound. Assume wrongful trading which increases liabilities to 150 and a contribution which raises assets to 100. Creditors now receive 66p in the pound (assuming no transaction costs).

[50] 1986 Act s.214(3).

[51] See *Re Produce Marketing Consortium Ltd* [1989] 1 W.L.R. 745; *Re Brian D. Pierson (Contractors) Ltd* [2001] 1 B.C.L.C. 275.

[52] *Re The Rod Gunner Organisation Ltd* [2004] 1 B.C.L.C 110. Similarly, *Roberts v Frohlich* [2011] 2 B.C.L.C. 501.

[53] *Re Continental Assurance Co of London Plc (No.4)* [2007] 2 B.C.L.C. 287. See also *Re Sherborne Associates Ltd* [1995] B.C.C. 40, in which the judge held that the liquidator had to identify and then stick to a particular date by which it was argued the directors should have realised the company had no reasonable prospect of avoiding insolvent liquidation. Contrast *Singla v Hedman* [2010] 2 B.C.L.C. 61: causing a company without any secure financing to begin contracting for production was a breach of s.214.

[54] *Grant v Rails* [2016] B.C.C. 293, where Snowden J held that continued trading in favourable conditions did not afford the directors a defence under the "every step" provision because new creditors would be worse off, i.e. "every step" was equated with every creditor.

[55] The issue that the costs of the s.214 litigation might not count as costs of the liquidation was determined in favour of the liquidator by an amendment to r.4.218 of the Insolvency Rules 1986/1925, made in 2002 and by s.176ZA of the IA 1986, inserted by s.1282 of the Companies Act 2006, which gives liquidation expenses priority over both

preferential debts and assets secured by a floating charge (subject to exceptions to prevent abuse), overruling the result of *Buchler v Talbot* [2004] 2 A.C. 298 HL. Thus, the disincentive to liquidator litigation arising from the risk of the liquidator being left to bear the litigation costs personally has been considerably reduced, if not eliminated.

56 *Re Yagerphone Ltd* [1935] 1 Ch. 395.

57 A liquidator or administer who sought to avoid this rule by assigning the fruits of the litigation rather than the claim itself would find it difficult to give the funder sufficient control of the litigation. See *Grovewood Holdings Plc v James Capel & Co Ltd* [1995] Ch. 80; *Re Oasis Merchandising Services Ltd (In Liquidation)* [1998] Ch. 170 CA; *Ruttle Plant Ltd v Secretary of State for the Environment, Food and Rural Affairs (No.3)* [2009] 1 All E.R. 448; *Rawnsley v Weatherall Green & Smith North Ltd* [2010] 1 B.C.L.C. 658.

58 1986 Act s.246ZD.

59 1986 Act s.176ZD.

60 See para.16–16, below.

61 The CLR in fact proposed that the wrongful trading duty should be embodied in the statutory statement of directors' duties (CLR, Final 1, p.348 (Principle 9)), but the Government rejected this proposal on the grounds that decoupling the substantive provisions at present in s.214 from the remedies available under the 1986 Insolvency Act would be "incongruous" (*Modernising Company Law*, Cm. 5533-I, July 2002, para.3.12). Had this step been taken, the common law duties would have been wrapped up into the statutory statement as well (CLR, Final I, para.3.17).

62 *Walker v Wimborne* (1976) 137 C.L.R. 1.

63 *West Mercia Safetywear v Dodd* [1988] B.C.L.C. 250 CA. In this case the payment by the insolvent company to a particular creditor involved both a breach of fiduciary duty by the director and also a fraudulent preference (being motivated by a desire to protect the director from liability under a personal guarantee to the creditor).

64 Even then it is often unclear whether the court is using a balance sheet definition of insolvency (liabilities exceed assets) or a cash-flow approach (company does not have enough cash to pay its debts as they fall due).

65 *Brady v Brady* [1988] B.C.L.C. 20, 40 CA.

66 *Nicholson v Permakraft (NZ) Ltd* [1985] 1 N.Z.L.R. 242.

67 For example, *Re Welfab Engineers Ltd* [1990] B.C.L.C. 833.

68 Thus, the directors might continue the trading of an unprofitable but balance sheet solvent company, in the hope of returning to profitability, without altering the risk profile of the company's business, even though the creditors' interests would most obviously be advanced by liquidating the company now and allowing them to crystallise their claims against the company's assets.

69 See para.16–37, below for a discussion of this duty.

70 See para.9–6.

71 *Re HLC Environmental Projects Ltd* [2014] B.C.C. 337 at [92]. The reasonable director approach is based on *Charterbridge Corp Ltd v Lloyds Bank Ltd* [1970] Ch. 62 (see para.16–42, below).

[72] *Colin Gwyer and Associates Ltd v London Wharf (Limehouse) Ltd* [2003] 2 B.C.L.C. 153 at [74]; *Re HLC Environmental Projects Ltd* [2014] B.C.C. 337.

[73] *Bell Group Ltd (In Liquidation) v Westpac Banking Corp (No.9)* [2008] WASC 239 at [4436]; *Ultraframe (UK) Ltd v Fielding* [2005] EWHC 1638 (Ch).

[74] See fn.68.

[75] *Facia Footwear Ltd v Hinchliffe* [1998] 1 B.C.L.C. 218 (an application for summary judgment). For a similar approach to wrongful trading see above, para.9–9.

[76] See para.16–112, below.

[77] *Yukong Line Ltd of Korea v Rendsburg Investments Corp of Liberia (The Rialto)* [1998] 1 W.L.R. 294; *Kuwait Asia Bank EC v National Mutual Life Nominees Ltd* [1991] 1 A.C. 187, 217 (Lord Templeman); *Spies v R* [2000] HCA 43; [2000] 201 C.L.R. 603 Aust HC. In this respect the dictum of Lord Templeman in *Winkworth v Edward Baron Development Co Ltd* [1986] 1 W.L.R. 1512 at 1517 goes too far. But in the same vein see the decision of the Supreme Court of Canada, *Peoples Department Stores v Wise* [2004] 3 S.C.R. 461, adopting the notion of direct duties to individual creditors (criticised by Stéphane Rousseau, correctly it is submitted, on the basis that the case involved a reversal of "a fundamental principle of corporate law": "Directors' Duty of Care after *Peoples*: Would it be Wise to Start Worrying about Liability?" (2005) 41 *Canadian Business Law Journal* at 225).

[78] *Sycotex Pty Ltd v Baseler* (1994) 122 A.L.R. 531, 550.

[79] See para.9–10, above. Indeed, there is a broader question here of what the duty to the creditors means when there are several classes of creditor. Junior creditors, who are "out of the money" at the time of the relevant decision, may, like shareholders, have an interest in taking on very risky projects, because only in that way have they any hope of recovering anything. Senior creditors, by contrast, may be better off by stopping trading at once.

[80] Above fn.72.

[81] *Kinsela v Russell Kinsela Pty Ltd* [1986] 4 N.S.W.L.R. 722.

[82] Final Report I, para.15.55.

[83] Final Report I, para.15.56. The facts giving rise to the application to use a similar name in *Re Lightning Electrical Contractors Ltd* [1996] 2 B.C.L.C. 302 might be thought to be an example of this: the administrative receivership of a medium-sized company was brought about by the failure of two large client companies to pay the money due from them; the successor company's use of the similar name was supported by the receivers since it enable them to maximise the value of the first company's assets.

[84] CLR, Final Report I, paras 15.65–15.72. The problem with the existing law is perhaps demonstrated by the background facts of *Secretary of State for Trade and Industry v Becker* [2003] 1 B.C.L.C. 565.

[85] If misleading the creditors as to the creditworthiness of the second business is the rationale of the section, it is perhaps understandable that the prohibition extends even to the carrying on of the second business in non-corporate form (i.e. potentially without limited liability): (s.216(3)(c)). However, no personal liability is imposed in this case, presumably on the basis that it is unnecessary: s.217(1). In many cases the defendant will be liable as partner or sole trader, but it is conceivable that a person could "directly or indirectly be concerned or take part in the carrying-on" of a non-corporate business

without attracting personal liability as a partner or sole trader, so that the absence of personal liability under s.217 is important.

[86] *R. v Cole* [1998] 2 B.C.L.C. 234 CA.

[87] 1986 Act s.216(6)—an important extension, for otherwise the prohibition could be easily avoided by the transferee company's registered name being quite dissimilar from the transferor company's but by the transferee then carrying on business under a similar name. See *R. (Griffin) v Richmond Magistrates Court* [2008] EWHC 84 (Admin). The CLR found that this was a practice used effectively to avoid the impact of the provisions, even though ostensibly caught by them.

[88] *First Independent Factors and Finance Ltd v Mountford* [2008] 2 B.C.L.C. 297.

[89] *Ricketts v Ad Valorem Factors Ltd* [2004] 1 B.C.L.C. 1 CA; *Revenue and Customs Commissioners v Walsh* [2005] 2 B.C.L.C. 455, though in the former case there was a disagreement among the judges as to whether the facts needed only to "suggest" an association or give rise to a probability that members of the public would associate the two companies.

[90] *Ricketts v Ad Valorem Factors Ltd* [2004] 1 B.C.L.C. 1 CA.

[91] 1986 Act s.217. That the liability is restricted to debts incurred by the company in the period during which the person was in breach of s.216 (and did not extend to all the debts incurred whilst that person was a director of the company) was accepted by Arden LJ in *ESS Productions Ltd v Sully* [2005] 2 B.C.L.C. 547 at [75]. See also *Glasgow City Council v Craig* [2009] 1 B.C.L.C. 742: liability confined to the debts of that part of the business which was carried on under the prohibited name.

[92] Though such a person does not commit a criminal offence. For the purpose of both ss.216 and 217, "company" includes any company which may be wound up under Pt V of the Insolvency Act, i.e. virtually any company or association: s.220.

[93] The CLR reported that the Official Receiver was aware of 134 cases of breaches of s.216 in 1999/2000, which led to 118 warning letters and nine convictions, but these figures apparently relate only to criminal liability under the section: Completing, para.13.105.

[94] *First Independent Factors and Finance Ltd v Mountford* [2008] 2 B.C.L.C. 297—claim brought by debt factor which had acquired the claims from two trade creditors at a discount. cf. fn.57 above.

[95] Insolvency Rules (SI 1986/1925), rr.4.228 to 4.230; and the Insolvency (Scotland) Rules (SI 1986/1915), rr.4.78 to 4.82.

[96] *First Independent Factors and Finance Ltd v Churchill* [2007] 1 B.C.L.C. 293 CA.

[97] The Insolvency (Amendment) Rules 2007 (SI 2007/1974).

[98] See *Penrose v Secretary of State for Trade and Industry* [1996] 1 W.L.R. 482. In the *Churchill* case (fn.96, above) the Court of Appeal put the function of the notice rather differently: it was to help creditors of the first company make an informed assessment of the risks of extending credit to the successor company, i.e. the focus was on protection of the creditors of the successor company. This approach seems more consistent with the drafting of the section. On the other hand, it is not then clear why the notice has to be given before the directors of the first company become involved with the successor company: it should be enough if notice is given before creditors of the first company extend credit to the successor company.

[99] Final Report I, para.15.62.

[100] The second case (r.4.229) is ancillary to the provision permitting a person to act in breach of s.216 if the court gives permission. The second case permits a director, who applies for leave within seven days of the first company going into liquidation, to continue to act in breach of s.216 for a period of six weeks or until the court disposes of the application for leave, whichever is the shorter.

[101] Rule 4.230—and has not been a dormant company. Otherwise, a shelf company could be formed purely for the purpose of triggering this exception.

[102] Though cf. *Morphitis v Bernasconi* [2003] 2 B.C.L.C. 53 CA: scheme to avoid s.216 by the directors resigning from the company at least a year before it was liquidated.

[103] *ESS Production Ltd v Sully* [2005] 2 B.C.L.C. 547 CA.

[104] See *Atkins v Wardle* (1889) 5 T.L.R. 734 CA; *Scottish & Newcastle Breweries Ltd v Blair*, 1967 S.L.T. 72; *Civil Service Co-operative Society v Chapman* [1914] 30 T.L.R. 679; *British Airways Board v Parish* [1979] 2 Lloyd's Rep. 361.

[105] 2006 Act s.82(1) and the Company Limited Liability Partnership (Names and Trading Disclosure) Regulations 2015 (SI 2015/17) Pt 6.

[106] This is a more radical response than that recommended by the CLR which would have kept personal liability but on a narrower basis: Final Report I, paras 11.55–11.57.

[107] This is new: previously, other than as provided by s.349(4), the sanctions for breach of the disclosure requirements were only criminal. However, the civil liability imposed by s.83 is modelled on that imposed by s.5 of the Business Names Act 1985 which already applied to companies trading other than under their corporate name. The criminal sanctions are retained in s.84 of the 2006 Act.

[108] 2006 Act s.83(1),(2). The restriction does not apply if the company seeks to enforce its contractual rights in proceedings brought by another person (for example, by way of counter-claim): s.83(3).

[109] Hence the importance of disclosure of the company's name, not only in correspondence, but on its website and at any place of business: Trading Regulations, regs 4 and 6(2).

[110] The rationales for limited liability are discussed at paras 8–1 et seq.

[111] This situation is not usual, but is certainly not unknown, in the UK: "Governance concerns rise after London IPOs", *Financial Times*, 16 June 2011.

[112] At para.8–11, above.

[113] This does not include all groups of companies: in conglomerate groups (i.e. groups of diversified businesses) the advantages of common ownership may well reside in something other than the imposition of a single business strategy (for example, access to sources of finance or managerial expertise).

[114] On "corporate opportunities" see para.16–86, below.

[115] For an example of the use of the strategy of disqualifying directors (discussed in the following chapter) see *Re Genosyis Technology Management Ltd* [2007] 1 B.C.L.C. 208—directors disqualified for causing debts due to subsidiary to be paid to parent company.

[116] *Aktiengesetz*, Book Three.

[117] For a discussion of German “*Konzernrecht*”, see K.J. Hopt, “Legal Elements and Policy Decisions in Regulating Groups of Companies” in C.M. Schmitthoff and F. Wooldridge (eds), *Groups of Companies* (London: Sweet & Maxwell, 1991), p.81; H. Wiedemann, “The German Experience with the Law of Affiliated Enterprise”, in K.J. Hopt (ed.), *Groups of Companies in European Laws, Legal and Economic Analyses on Multinational Enterprises*, Vol. II (Walter de Gruyter, 1982) 21. For a comparative perspective, see Forum Europaeum Corporate Group Law, “Corporate Group Law for Europe” (2000) 1 European Business Organization Law Review 165; and V. Priskich, “Corporate Groups: Current Proposals for Reform in Australia and the United Kingdom and a Comparative Analysis of the Regime in Germany” in (2002) 4 I.C.C.L.J. 37; and K.J. Hopt, “Groups of Companies” in J. Gordon and G. Ringe (eds), *Oxford Handbook of Corporate Law and Governance* (OUP, online ed, 2015).

[118] Completing, Ch.10. On parent and subsidiary company reporting requirements see immediately below.

[119] Final Report I, paras 8.23–8.28. Nevertheless, a variant of the idea (exemption from audit but not from producing accounts in exchange for a guarantee from the parent) has been implemented in UK law: see para.22-7.

[120] *Aktiengesetz*, s.317.

[121] A possible partial solution, which the German courts have used for private companies (GmbH), would be to use the contractual group model under which exercise of influence to disadvantageous ends would make the parent liable for all the subsidiary’s losses, whether they could be related to a particular disadvantageous contract or not.

[122] Brussels, 4 November 2002, Ch.V. See above, para.6–12. For more detailed consideration of the options, see Forum Europaeum, above fn.117. The proposal was made again—this time for an EU Recommendation—in the *Report of the Reflection Group on the Future of EU Company Law*, Brussels April 2011, Ch.4.

[123] This is often referred to as the *Rozenblum* doctrine, after the name of the French case (*Bulletin criminel* 1985 No.54) in which the principle was articulated.

[124] See further para.16–47, below. The potential liability of the parent company as a shadow director of the subsidiary is largely excluded by s.251(3) of the CA 2006, unless the subsidiary is in the vicinity of insolvency.

[125] See para.28–25.

[126] On New Zealand law and Australian proposals, see R.P. Austin, “Corporate Groups” in R. Grantham and C. Rickett (eds), *Corporate Personality in the Twentieth Century* (Oxford: Hart Publishing, 1998), especially at pp.84–87.

[127] To take a simplified example: if a parent company A has two wholly-owned subsidiaries, B and C, and in a financial year B makes a loss of £100,000 while C makes a distributable profit of £10,000 all of which it pays to A by way of dividend, the individual accounts of A (assuming it has broken even) will show a profit of £10,000 whereas in fact the group has made a loss of £90,000.

[128] See para.16–70, below.

[129] See para.13–47.

[130] “Parent company” is defined in s.1162 and Sch.7 (see para.21–10) and “holding company” in s.1159 and Sch.6.

[131] For purposes of consolidation a measure of uncertainty is acceptable because, when in doubt, one can play safe and consolidate.

[132] 1948 Act s.154. Under the former s.154(10)(a)(ii) holding more than half in nominal value of a company's equity share capital (voting or non-voting) made it a subsidiary.

[133] Unfortunately, this relatively simple definition requires additional refinement to make it work (which is contained in Sch.6 to the Act) and, as *Enviroco Ltd v Farstad Supply A/S* [2011] 2 B.C.L.C. 165, SC demonstrated, that refinement was not itself sufficiently refined because it failed to take full account of the definition of a "member" in s.112 of the Act.

[134] See above fn.11.

[135] Discussed in the next chapter.

[136] See para.11–8, below.

CHAPTER 10

DISQUALIFICATION OF DIRECTORS

Disqualification Orders and Undertakings 10–2
Scope of disqualification orders and undertakings 10–3
Compensation 10–4
Disqualification on Grounds of Unfitness 10–5
The role of the Insolvency Service 10–7
The role of the court 10–8
Disqualification on Grounds other than Unfitness 10–12
Serious offences 10–12
Disqualification in connection with civil liability for fraudulent or wrongful trading 10–13
Failure to comply with reporting requirements 10–14
Register of Disqualification Orders 10–15
Bankrupts 10–16
Other Cases 10–17
Conclusion 10–18

10–1

In the previous chapter we examined the provisions which, at the instigation of those in charge of the insolvency of a company, may lead to the imposition of a financial liability on directors and shadow directors who, in the period preceding the insolvency, engaged in conduct which exploited the vulnerabilities of creditors and caused a diminution in the company's assets. The Cork Committee, which recommended this reform in 1982, went further, however, and argued that "proper safeguards for the public" required that wrongful trading be supplemented by provisions which ensure that "those whose conduct has shown them to be unfitted to manage the affairs of a company with limited liability shall, for a specified period, be prohibited from doing so".[1] In particular, they thought the law should "severely penalise those who abuse the privilege of limited liability by operating behind one-man, insufficiently capitalised companies".[2] This recommendation is now embodied in the Company Directors Disqualification Act 1986,[3] as later amended. Like the wrongful trading provisions, the central provisions of the Act (disqualification on grounds of "unfitness") apply to shadow directors as well as directors.[4] The law was here to be used in general deterrence mode, for the protection of

future creditors of companies as a whole, rather than to seek compensation for existing creditors. However, under the Small Business and Enterprise Act 2015 a compensation power was grafted onto the disqualification provisions, thus holding out some prospect that the provisions will aid in addition the creditors of the company whose directors have been disqualified.

A further significant feature of the Act is that initiation of disqualification action lies exclusively in the hands of the public authorities in the case of the most commonly used provisions, i.e. where disqualification is based on "unfitness".[5] Initiation of the disqualification process is assigned to the Secretary of State ("SS") (i.e. the relevant government minister), though the minister may delegate that function, and normally does, to the Insolvency Service, a government agency.[6] The SS also has exclusive control over the initiation of the new compensation provisions.[7] Outside the area of unfitness, the liquidator or any past member or creditor may apply for a disqualification order,[8] but it is unclear that they will have any great incentive to do so, because the benefits of disqualification accrue to future creditors. In other words, the forward looking disqualification process and its initiation by the public authorities are linked features of the legislation. When compensation was grafted onto the legislation in 2015, the opportunity might have been taken to open up the range of potential initiators, but it was not.

The introduction of a compensation mechanism was not the only significant reform after 1986. In particular, reforms in the Insolvency Act 2000 introduced the notion of an out-of-court "disqualification undertaking" in cases of unfitness to supplement the "disqualification order", which only a court can make.[9] In addition, the 2015 Act[10] made reforms aimed at taking into account the cross-border environment in which many companies now operate but which national prudential rules often ignore. These changes make it possible for conduct of the director in relation to overseas companies (i.e. companies incorporated outside Great Britain)[11] to be taken into account in appropriate circumstances by the court or SS when considering disqualification. However, powers already contained in Pt 40 of the Companies Act 2006[12] have not been used to date. These empower the SS to make regulations so that a person

disqualified in a foreign jurisdiction would or could be prohibited from acting in relation to a company incorporated in Great Britain. New s.5A (see para.10–12, below) gets close to this principle, but is based on conviction abroad for a serious offence, not disqualification abroad. The attraction of the more general principle clearly depends upon the equivalence of the foreign jurisdictions' disqualification provisions to those in the UK. It is an issue in which the EU is likely to show interest.

In addition to the general ground of unfitness, there are a number of more specific cases in which disqualification can be imposed on persons. Although these persons are typically directors or shadow directors of companies, these disqualification provision apply more broadly in some cases. The specific instances can best be analysed as falling within the following categories:

(a) commission of a serious offence, usually involving dishonesty, in connection with the management of a company;

(b) being found liable to make a contribution to the assets of the company on grounds of fraudulent or wrongful trading;

(c) failure to comply with the provisions of the companies or insolvency legislation relating to the filing of documents with the Registrar.

Finally, there is a long-standing provision in the companies legislation which disqualifies an undischarged bankrupt from being involved in the management of companies, to which was added in 2002 the notion of "bankruptcy restriction orders".

Disqualification Orders and Undertakings

10–2

The power to disqualify has generated a high level of activity. In the years 1997–1998 to 2000–2001 between 1,250 and 1,500 directors were disqualified each year by court order and in 2001–2002, when disqualification undertakings were introduced, the total of orders and undertakings was nearly 2,000.[13] Since then, the total of orders and undertakings has fluctuated within a slowly declining pattern. In 2014/15 there was a total of 1,227

(899 undertakings and 328 court orders)—about 4 per cent of the total number of directors of failed companies in that year. Over 80 per cent of the orders and undertakings were on grounds of unfitness.[14] Thus, the Act has been the basis of a considerable activity on the part of the public authorities. The rationale behind the introduction of undertakings in unfitness cases by the Insolvency Act 2000 was the fact that, under the previous legislation, even where the public authorities and the director could reach agreement on how the provisions of the Act should apply in the particular case, it was necessary to go to court to obtain an order and it was doubtful whether the court could simply accept, and rubber-stamp, the agreement between them.[15] The amended Act permits the SS and the director to reach an agreement out-of-court on a disqualification undertaking, which will restrict the director's future activities in the same way as a disqualification order, but without the need for a court hearing.[16] The director can always trigger a court hearing by refusing to agree terms for an undertaking, though he or she will normally be liable for the SS's costs, as well as his or her own costs, if the court makes an order. Alternatively, a director who has accepted an undertaking may subsequently apply to the court, apparently at any time, for the period of the disqualification to be reduced or for the undertaking to cease to apply.[17] This is equivalent to the power which the court has under the Insolvency Rules to review, vary or rescind disqualification orders.[18] Although the power is broadly framed, the courts are likely to find it appropriate to alter the undertaking for the future (the court has no power to declare that it ought not to have been made) only in limited circumstances. In particular, it would be likely to undermine the undertaking procedure if directors, having entered into an undertaking, were able freely to invoke the section.[19]

Scope of disqualification orders and undertakings

10–3

The scope of the disqualification order or undertaking is obviously a crucial matter in the design of the legislation. It would be too limited for such an order to prohibit a person from acting only as director of a company, since there are many ways of controlling a company's management without being a director

of the company. A way forward might have been to extend the prohibition to being a shadow director of a company but the Act in fact avoids the difficulties of that definition and takes an even broader approach. The prohibition imposed by a disqualification order or undertaking extends to "in any way, directly or indirectly, be[ing] concerned or tak[ing] part in the promotion, formation or management of a company".[20] The courts have taken a broad approach to what being concerned or taking part in the management of a company may embrace.[21] In addition, the disqualified person is prohibited from acting as an insolvency practitioner.[22] Finally, the disqualified person is denied access to limited liability through some corporate form other than a registered company, such as a limited liability partnership, a building society or an incorporated friendly society.[23]

Adherence to a disqualification order or undertaking is secured by criminal penalties[24] and, probably much more important, by personal liability for the debts and other liabilities of the company incurred during the time the disqualified person was involved in its management in breach of the order or undertaking.[25] This demonstrates that it is misuse of the facility of limited liability which lies at the heart of disqualification orders. Personal liability is also extended to any other person involved in the management of the company who knowingly acts on the instructions of a disqualified person.[26] Indeed, entrusting the management of a company to someone known to be disqualified might well be a basis for disqualifying the entrusting director on grounds of unfitness.[27]

The temporal scope of the disqualification order is also important in assessing its rigour. The approach of the Act is to set maxima and then to leave the actual disqualification period to be fixed in the order or undertaking. The maxima vary from one disqualification ground to another, the longest being in the case of disqualification on grounds of unfitness, where it is set at 15 years.[28] There is also a minimum period of two years in the case of unfitness in relation to insolvent companies.[29] After some lack of clarity in the cases the Court of Appeal has opted for setting the actual period of disqualification on grounds of unfitness by assessing how far below the conduct expected of a director the respondent fell.[30] In *Re Sevenoaks Stationers (Retail) Ltd*[31] the

Court of Appeal divided the 2–15 year period for unfitness disqualification into three brackets, reflecting different levels of seriousness, though it cannot be said that it drew the dividing line between them very clearly.[32]

The prohibition (except that part of it which relates to acting as an insolvency practitioner) may be relaxed by the court, which may give leave to the disqualified person to act in a particular case. In the case of disqualification on grounds of unfitness under s.6, it is the practice to consider such applications at the same time as the disqualification order is made (in those, now minority, cases in which the disqualification is imposed by the court).[33] The leave granted, which obviously must not be so wide as to undermine the purposes of the Act,[34] often relates to other companies of which the applicant is already a director, which are trading successfully and whose future success is thought to be dependent on the continued involvement of the applicant. Often the leave is made conditional upon other steps being taken to protect the public, such as the appointment of an independent director to the board.[35] Overall, what the court has to do is to balance the need to protect the public, especially future creditors, as demonstrated by the conduct which has rendered the director unfit, with the interest of the director or other persons dependent on the company in relation to which leave is sought in the director having access to trading with limited liability.[36]

Compensation

10–4

The compensation provisions introduced in 2015 mean that the disqualification process may have significance for present as well as future creditors. The provisions apply to all classes of disqualification order or undertaking, provided that the company has become insolvent, the conduct for which the person was disqualified caused loss to one or more creditors and the disqualified person was at any time a director of it.[37] This appears to mean that only present or former directors may be subject to compensation orders (not shadow directors, for example) but that the conduct leading to the disqualification need not be conduct as a director (it might be conduct as a

shadow director provided that person was at some point a director of the company). The initiation of the compensation procedure lies in the hands of the SS, by way of application to the court or acceptance of a compensation undertaking, who has two years from the initial disqualification order or undertaking to seek to add compensation to it—though both may be dealt with at the same time.[38] In effect, the company's creditors piggy-back on the efforts of the public authorities to enforce the disqualification provisions. But the creditors have no independent right of action. The utility of the new compensation provisions thus depends on the SS's willingness to use them. Where there is clear loss to creditors and an available mechanism for distributing the compensation, there is no reason why the SS (or, rather, the Insolvency Service on his behalf) should not use them.[39] But a pre-condition of use of the compensation power is the existence of a disqualification order or undertaking. The Insolvency Service has power to seek these on grounds of unfitness—the most widely deployed ground—only where it regards this course of action as being "in the public interest".[40] It is unclear whether the Service will regard simple loss to creditors as a ground for seeking disqualification and then compensation. The amount of the compensation is not specified precisely, but is to be fixed (by the court or SS) having regard "in particular" to the amount of the loss caused, the nature of the conduct which led to the loss and any recompense already made.[41] This suggests that the loss suffered as a result of the director's conduct sets the outer boundary of the compensation to be awarded and, within that, the seriousness of the conduct will be crucial.

Disqualification on Grounds of Unfitness

10–5

There are in fact two mechanisms in the 1986 Act for obtaining disqualification on unfitness grounds, the initiative in both cases lying with the SS. Under ss.6 and 7 the SS may apply to the court to have a director[42] or shadow director[43] of an insolvent[44] company disqualified where the SS thinks it is expedient in the public interest to do so.[45] Instead, the SS may accept a disqualification undertaking from the director in such

circumstances.[46] Secondly, under s.8 the SS may apply to the court or accept an undertaking in relation to a similar range of people, whether the company is insolvent or not, if he or she decides it is in the public interest to do so.[47] Under s.6 disqualification is mandatory for a minimum period of two years, if unfitness is found; the maximum period is 15 years under both sets of provisions.[48] Thus, although in the wake of the Cork Report business opposition fought off the idea of automatic disqualification in the case of directors of insolvent companies, the Government managed to avoid leaving the issue entirely to the discretion of the courts.[49]

Once the company has become insolvent, the director is liable to have the whole of his or her conduct as director of that company scrutinised for evidence of unfitness. Unlike the wrongful trading provisions considered in the previous chapter, that scrutiny is not confined to the director's conduct in the period immediately before the insolvency. Moreover, ss.6(2) and 8(2) include within the scrutiny the director's conduct of other companies where that person was a director or shadow director. These other companies may not have fallen into insolvency and there need be no particular business or other link between the "lead" company and the other companies in order for the director's conduct in relation to them to be taken into account.[50] In short, once the unfitness provisions are triggered, the scrutiny is capable of reaching out into the whole of the activities of the directors of that company in their capacity as directors.[51] In an important extension made by the 2015 Act these additional companies include companies incorporated outside Great Britain, so that geography no longer confines the court's examination—though evidential difficulties may do so.[52]

10–6

Despite the fact that ss.6–8 apply to shadow directors, in 2015 the disqualification provisions were extended to other "influencers" of directors' "unfit" conduct. This means that a disqualification order may be made against or a disqualification undertaking accepted from a person in accordance with whose directions or instructions the director has acted.[53] These additional provisions are ancillary in the sense that they may be invoked, in the case of an order against the influencer,[54] only if

there is a disqualification order or an undertaking on grounds of unfitness in place against the director. In the case of an undertaking given by the influencer, one or other of those two situations must exist or the SS must be satisfied that an undertaking could be accepted from the director.[55] In many cases the influencer will be a shadow director and so can be tackled directly under ss.6–8. But the extension does not depend, as with a shadow director, on the board as a whole being accustomed to act in accordance with the non-director's directions or instruction. The focus is on the relationship between the influencer and the person disqualified. Nor does the person disqualified need to be accustomed to act as the influencer wishes, provided the conduct forming the basis of the underlying conduct was in fact influenced in the required way. The extension seems to have been part of a general policy which was being promoted in the run up to the 2015 Act of making transparent where control of companies lies and bringing responsibility home to the real controllers.[56]

The role of the Insolvency Service

10–7

When recommending what is now s.6, the Cork Committee[57] said that its aim was to "replace by a far more rigorous system the present ineffective provisions". The effectiveness in practice of s.6 can be said to depend upon two matters. The first is the assiduity of the Insolvency Service, to which the SS normally delegates disqualification powers, in enforcing the provisions of the Act; and the second is the courts' approach to s.6, especially their interpretation of the central concept of unfitness and how they set the period of disqualification.

In order to maximise the chances of applications being made, the Cork Committee[58] recommended that applications by liquidators or, with leave, other creditors should be permitted, and so confining applications to the SS was regarded at the time of the passage of the Insolvency Act 1986 as a retrograde step. There are two reasons why the Insolvency Service might not prove effective. The first is lack of information about directors' conduct, especially when the company is being wound up voluntarily, so that the Official Receiver is not involved.[59] This

is addressed by the imposition of a requirement on liquidators, administrators and receivers to report to the SS on the conduct of directors and shadow directors of companies for whose affairs they are responsible though the quality of the information provided is not always high.[60] In 2015 the obligation was strengthened to require a report of relevant information in all cases and not only where the office holder believed there had been a breach of s.6.[61] Secondly, there was doubt about the quantity and quality of the resources the government would devote to the enforcement of the legislation. Although the early efforts of the Insolvency Service were criticised,[62] the enforcement effort is now substantial, as we have noted, though only a small percentage of the directors of failed companies are disqualified. Nevertheless, it is clear that the Service still experiences difficulties in commencing applications within the two-year period originally permitted by the statute[63] and in prosecuting them with sufficient vigour to avoid striking out on grounds of delay or infringement of the director's human rights (i.e. the right to have one's civil rights and obligations determined within a reasonable time, as required by art.6(1) of the European Convention on Human Rights).[64] The response of the legislature in 2015 was to extend the period for commencing proceedings to three years—though this does not help, but rather exacerbates, the human rights issue.

There is an additional risk that the human rights of directors will be threatened by the disparity between the state resources available to the Insolvency Service and those available to the director, who, in the case of a small company, may be virtually bankrupt. In particular, there is a danger that the impoverished director will give a disqualification undertaking because he or she cannot afford the costs of a full-scale court examination of the issues. So far, these issues have been addressed rather little in litigation, though appreciation of the situation may lie behind the courts' unwillingness to impose too high a level of competence on directors under the disqualification provisions.[65] As far as the European Convention on Human Rights is concerned, both the domestic courts and the European Court of Human Rights seem agreed that disqualification proceedings are civil in nature, not criminal, so that a lower, but not negligible, standard of fairness is required in conducting them.[66] In

particular, the domestic courts have concluded that the Human Rights Convention does not require the automatic exclusion of evidence against the director which was obtained from him or her under statutory powers of compulsion.[67] However, the exclusion of such evidence has been achieved in fact, as a matter of interpretation of the domestic law, in the case of the statutory provisions most likely to be of use to the Insolvency Service. Under ss.235 and 236 of the Insolvency Act 1986 the liquidator of a company and the Official Receiver are empowered to require answers to questions which they put to directors of companies in insolvent liquidation and to require the production of documents, but the Court of Appeal has held that these provisions cannot be used for the purpose of supporting disqualification applications.[68]

The role of the court

10–8

Turning to the role of the courts, some guidance is given in Sch.1 on how the courts (and indeed the SS) should approach disqualification determinations. The Schedule was revised in 2015 so as to set out the relevant matters at a higher level of generality than previously, so as to emphasise the width of the courts' investigation. The applicability of the Schedule was also widened since it now applies to all disqualification decisions, not just to the determination of unfitness.[69] In all cases the court must take into account the extent to which the company was in breach of legislative requirements (not necessarily just the requirements of the companies legislation), the defendant's responsibility for the company[70] becoming insolvent, the loss actually or potentially caused by the defendant's conduct and the frequency with which a director has engaged in conduct caught by the Schedule. Where the defendant is a director—the standard case—the court must have regard to the director's breach of fiduciary duties or other duties applying specifically to directors.

Breach of commercial morality

10–9

It is possible to divide the cases in which the courts have found unfitness into two rough categories: probity and competence.[71]

However, it must be remembered that the concept of unfitness is open-ended, so that it cannot be claimed that all potential, or even actual, disqualification applications can be forced into one or other of these categories. Further, in the nature of things, many disqualification cases display aspects from both categories. Nevertheless, it is thought that identifying the two categories is a useful starting point.

The first category, breach of commercial morality,[72] has at its centre the idea of conducting a business at the expense of its creditors. A leading example, though only an example, of such conduct is the Phoenix company described by the Cork Committee in terms of a person who sets up an undercapitalised company, allows it to become insolvent, forms a new company (often with assets purchased at a discount from the liquidator of the old company), carries on trading much as before, and repeats the process perhaps several times, leaving behind him each time a trail of unpaid creditors.[73] More generally, the courts have been alert to find unfitness where the directors have apparently attempted to trade on the backs of the company's creditors.[74] It was thought at one time that particular obloquy attached to directors who attempted to trade out their difficulties by using as working capital in the business monies owed to the Crown by way of income tax, national insurance contributions or VAT, on the grounds that the Crown was an involuntary creditor. Although that view has been rejected by the Court of Appeal, the same court has affirmed that, in relation to any creditor, paying only those creditors who pressed for payment and taking advantage of those creditors who did not, in order to provide the working capital which the company needed, is a clear example of unfitness.[75] If the directors of the financially troubled company are at the same time paying themselves salaries which are out of proportion to the company's trading success (or lack of it) or making disguised distributions to themselves of corporate assets, the likelihood of a disqualification order being made is only increased.[76]

Recklessness and incompetence

10–10

In the previous section the cases considered highlighted

opportunistic behaviour by directors towards the creditors of the company by failing to pay the creditors whilst continuing trading. The cases considered in this section focus more generally on the recklessness or incompetence of the directors' conduct of the business. They may pay the creditors the money due to them, as long as the company is able to do so, but the directors may be regarded as responsible for bringing about the situation where the company ultimately has to default on its commitments because of the way they have chosen to run it. In many cases, of course, both aspects of unfitness can be found.

The early cases put liability on the basis of recklessness,[77] but more recently it has been said that "incompetence or negligence to a very marked degree"[78] would be enough. The danger which the courts have to avoid in this area is that of treating any business venture which collapses as evidence of negligence. To do so would be to discourage the taking of commercial risks, which must be the life-blood of corporate activity. However, creating a space for proper risk-taking is no longer thought to require relieving directors of all objective standards of conduct. In *Re Barings Plc (No.5)*[79] the Court of Appeal gave guidance on what constitutes a high degree of incompetence in the common situation of the directors having properly delegated functions to lower levels of management. Provided the articles of association permit such delegation, as they inevitably will in large organisations, delegation in itself is not evidence of unfitness. However, the responsible director may be found to be unfit if there is put in place no system for supervising the discharge of the delegated function or if the director in question is not able to understand the information produced by the supervisory system. In other words, in large organisations directors must ensure there are in place adequate internal systems for monitoring risk and failure to do so may be grounds for disqualification.

However, the proposition that directors "have a continuing duty to acquire and maintain a sufficient knowledge and understanding of the company's business to enable them properly to discharge their duties as directors"[80] applies not just to duties delegated to sub-board level but also to reliance by directors on their board colleagues to take responsibility for particular functions and duties. Although such reliance is again

in principle acceptable, so that there can be a division of functions on the board, most obviously between executive and non-executive directors, all directors must maintain a minimum level of knowledge and understanding about the business so that important problems can be identified and dealt with before they bring the company down. Thus, in *Re Richborough Furniture Ltd*[81] a director was disqualified for three years, on the basis of "lack of experience, knowledge and understanding. She did not have enough experience or knowledge to know what she should do in the face of the problems of pressing creditors, escalating Crown debts and lack of capital. It seems that she was not sufficiently skilful as regards the accounts functions to see that the records were inadequate." Disqualification of incompetent directors has thus become a crucial tool in the enforcement of directors' standards of competence, perhaps more so than actions for breach of the director's general duty of care,[82] which must be funded by private litigants. The two areas of law will no doubt continue to influence each other.

10–11

In this area, particular importance is attached by the courts to failure by directors to file annual returns or, in future, confirmation statements, produce audited accounts and to keep proper accounting records.[83] These are the practical expressions of a more general view that all directors must keep themselves au fait with the financial position of their company and make sure that it complies with the reporting requirements of the companies legislation, for otherwise they cannot know what corrective action, if any, needs to be taken.[84] Although this duty may fall with particular emphasis on those responsible for the financial side of the company, all directors must keep themselves informed about the company's basic financial position.[85] On the other hand, seeking and acting on competent outside advice when financial difficulties arise will be an indication of competence, even if the plan recommended does not pay off and the company eventually collapses.[86] It should also be remembered that, in the disqualification area, the courts have required a "marked degree" of negligence[87] before declaring a director unfit. There is a contrast here with wrongful trading and the standard of care under the directors' general duties[88] where

there is no suggestion that a low standard of care is to be applied to directors.[89] It is suggested that this contrast is explained by the fact that a disqualification order can often have the effect of depriving the director of his livelihood and that, once unfitness is found, a two-year disqualification is mandatory.

Disqualification on Grounds other than Unfitness

Serious offences

10–12

The remaining provisions of the 1986 Act permit, but do not require, the court to disqualify a director, on various grounds. With one exception, disqualification here is based on a court order. Disqualification by means of undertaking is not generally available. These other grounds of disqualification will be dealt with briefly, partly because they have not generated as much controversy as the unfitness ground. Disqualifications under s.2 (disqualification on conviction of an indictable offence) apparently constitute the second most common source (after unfitness) for disqualification orders.[90]

In relation to serious offences, there are two routes to a disqualification order, depending upon whether the person concerned has actually been convicted of an offence. If there has been a conviction, a disqualification order may be made against a person, whether a director or not, who has committed an indictable offence in connection with the promotion, formation, management, liquidation or striking off of a company or in connection with the receivership or management of its property.[91] Usually, the disqualification will be ordered by the court by which the person is convicted and at the time of his or her conviction. However, if the convicting court does not consider the issue, the SS or the liquidator or any past or present creditor or member of the company in relation to which the offence was committed may apply to any court having jurisdiction to wind up the company to impose the disqualification.[92] Here, too, the courts have taken a wide view of what "in connection with the management of the company" means in this context.[93] Where a person has been convicted of an equivalent offence outside Great Britain the SS may seek a

disqualification order from the High Court or Court of Session or accept an undertaking from that person.[94]

Where there has not been a conviction, but the company is being wound up, then if it appears that a person has been guilty of the offence of fraudulent trading[95] or has been guilty as an officer[96] of the company of any fraud in relation to it or any breach of duty as an officer, then the court having jurisdiction to wind up the company may impose a disqualification order.[97]

Disqualification in connection with civil liability for fraudulent or wrongful trading

10–13

In addition to the array of civil orders which the court may make under ss.213 and 214 of the Insolvency Act 1986 when it finds fraudulent or wrongful trading,[98] s.10 of the Disqualification Act adds the power to make a disqualification order. The court may act here on its own motion, that is, whether or not an application is made to it by anyone for an order to be made. Since there are only low levels to litigation to recover contributions in cases of fraudulent and wrongful trading, the number of disqualifications is also low.[99]

Failure to comply with reporting requirements

10–14

Again, there are separate provisions according to whether the person to be disqualified has been convicted or not. If he or she has been convicted of a summary offence in connection with a failure to file a document with or give notice of a fact to the Registrar, then the convicting court may disqualify that person if in the previous five years he has had at least three convictions (including the current one) or default orders against him for non-compliance with the reporting requirements of the Companies and Insolvency Acts.[100] If the current conviction is on indictment, then the provisions of s.2 (above) apply, but, where the current conviction is summary, the fact that the earlier convictions were on indictment does not prevent the convicting summary court from taking them into account.[101]

Where there has been no conviction, the SS and the others

mentioned in s.16(2)[102] may apply to the court having jurisdiction to wind up the companies in question for disqualification orders to be made on the grounds that the respondent has been "persistently in default" in complying with the reporting requirements of the Companies and Insolvency Acts.[103] The "three convictions or defaults in five years" rule applies here too, but without prejudice to proof of persistent default in any other manner.[104] Since the offences involved in these sections may be only summary ones, the maximum period of disqualification is limited to five, instead of the usual 15, years. Nevertheless, the fact that these provisions are in the Act at all is a testimony to the importance attached recently to timely filing of accounts and other documents. However, the improvement recorded in this area may be due more to the introduction of late filing penalties than the disqualification orders.

Register of Disqualification Orders

10–15

Crucial to the effective operation of the disqualification machinery is that publicity should be given the names of those who have been disqualified. Thus, the Act requires the SS to create such a register of orders and undertakings, which register is open to public inspection.[105] The register is also to contain details of any leave given to a disqualified person to act despite the disqualification. However, either because of doubts about the accuracy of the register or to relieve the Registrar of the need to check it, the 2006 Act contains a power for the SS to make regulations about the returns which companies have to make to the Registrar about the appointment of directors and secretaries. The regulations may require the return to contain the statement in relation to a disqualified person that the leave of the court to act has been obtained.[106]

Bankrupts

10–16

The prohibition on undischarged bankrupts acting as directors or being involved in the management of companies can be traced back to the Companies Act 1928. Although bankruptcy does not

necessarily connote any wrongdoing, the policy against permitting those who have been so spectacularly unsuccessful in the management of their own finances taking charge of other people's money is so self-evident that it has not proved controversial. The prohibition is now contained in s.11 of the 1986 Act, which makes so acting a criminal offence,[107] and the main point of interest about it for present purposes is that it is an automatic disqualification, not dependent upon the making of a disqualification order by the court. In 2002 the prohibition was extended to include acting in breach of a bankruptcy restriction order or undertaking, themselves creations of the legislative reforms of that year.[108] Bankruptcy restriction orders and undertakings, clearly modelled to some extent on directors' disqualification orders and undertakings, put restrictions on a former bankrupt's activities after discharge from bankruptcy, in general an earlier event than had previously been the case.

However, the disqualification is not absolute, because the bankrupt or previous bankrupt may apply to the court for leave to act in the management of a company, other than as an insolvency practitioner.[109] In other words, the statute really reverses the burden of taking action, by placing it upon the bankrupt to show that he or she may be safely involved in the management of companies rather than upon the state to demonstrate to a court that the bankrupt ought not to be allowed to act.

Other Cases

10–17

Disqualification has become a popular legislative technique in recent years. The 1986 Act itself applies to those in charge of other corporate bodies as if they were companies formed under the Companies Acts, such as building societies, incorporated friendly societies, NHS foundation trusts, registered societies and charitable incorporated organisations.[110] Another extension is to apply disqualification to the directors of companies for breaches of provisions other than company law rules. Thus, ss.9A–9E make provision for disqualification orders and undertakings in relation to directors (and shadow directors) of companies which have broken competition law where a court or

regulator is of the opinion that the director is in consequence unfit to be involved in the management of a company. Finally, breaches of sector-specific rules, such as in the banking sector, could form the basis for disqualification, for example, on grounds of unfitness, but the Government stopped short of giving sectoral regulators disqualification powers under the 1986 Act: instead, they have to operate through the Insolvency Service. Of course, sector-specific legislation may give sectoral regulators disqualification powers in relation to the areas of economic activity they regulate, as is the case with financial regulators—but such provisions are outside the scope of this chapter.

Conclusion

10–18

For many years the disqualification provisions of the successive Companies Acts seemed to make little impact. Important in principle as a technique for dealing with corporate wrongdoing of one sort or another, especially on the part of directors, the practical consequences of the provisions were limited. The combination of the substantive reforms recommended by the Cork Committee and of acceptance by Government that the promotion of small, and not-so-small, businesses needed to be accompanied by action to raise the standards of directors' behaviour and to protect the public from the scheming and the incompetent, brought the disqualification provisions to the fore. Further, as we have seen in Ch.7,[111] controversy about whether directors whose companies are convicted of the proposed new corporate killing offence should be disqualified from acting in connection with businesses delayed progress on that reform proposal, though in the end the legislation did not make use of the disqualification technique. As to disqualification orders in company law, judged by the level of disqualification orders and undertakings, the provisions now have a substantial impact. An independent survey[112] found a widespread consensus that the provisions performed a useful role and should be retained, although they were certainly capable of improvement, especially at the level of securing compliance with the disqualification orders made.[113]

However, it would be wrong to see disqualification as solely a response to abuses of limited liability within small companies. There is some evidence that the public authorities use disqualification to inflict reputational harm on directors of companies which have failed in circumstances giving rise to public condemnation and where no other remedy is readily available. We noted above the disqualification of directors of Barings Bank which collapsed as a result of failure to identify and prevent large foreign exchange bets being placed by a junior trader.[114] Another example is the disqualification undertakings, offered by the four directors of MG Rover Group Ltd after its well-publicised collapse, and accepted by the SS. The company had gone into administration in April 2005, owing creditors nearly £1.3 billion, causing many employees to lose their jobs and ending large-scale, British-owned car manufacturing. In this case, the ground work for the disqualification had been provided through a lengthy and expensive public investigation into the collapse of the company.[115] The removal of the investigation pre-condition to the use of s.8 by the SS may increase this use of the provision in the future.

[5] 1986 Act ss.6 and 8.

[6] 1986 Act s.7.

[7] 1986 Act s.15A(1).

[8] 1986 Act s.16.

[9] 1986 Act ss.1 and 1A. See further below, para.10–2.

[10] For the policy behind the 2015 Act in the disqualification area see BIS, *Transparency & Trust: Enhancing the Transparency of UK Company Ownership and Increasing Trust in UK Business: Government Response*, April 2014 (BIS/14/672) Ch.5–9.

[11] 1986 Act s.22(2A). The reference is to “Great Britain” rather than the “United Kingdom” because Northern Ireland has separate disqualification legislation—The Company Directors Disqualification (Northern Ireland) Order 2002—though its scope is similar.

[12] 2006 Act s.1184.

[13] DTI, *Companies in 2001–2002* (2002), Table D1.

[14] Companies House, *Statistical Tables on Companies Registration Activities 2014–2015*, Table D1.

[15] Though the courts had developed a summary procedure for dealing with non-contested cases: *Re Carecraft Construction Co Ltd* [1994] 1 W.L.R. 172; and Practice Direction [1999] B.C.C. 717. The summary procedure has effectively been overtaken by the out-of-court undertaking, though in principle it is still available.

[16] 1986 Act ss.1 and 1A.

[17] 1986 Act s.8A. This is separate from the director's power to apply to the court for leave to act notwithstanding the undertaking, a power which applies also to orders: s.17. See below, para.10–3.

[18] Insolvency Rule r.7.47(1).

[19] *Re INS Realisations Ltd* [2006] 2 B.C.L.C. 239—director not normally able to use the section to challenge the facts on which the undertaking was premised, but in the particular circumstances of that case the power was used to cause the undertaking to cease to operate. See also *Re Morija Plc* [2008] 2 B.C.L.C. 313.

[20] 1986 Act ss.1(1) and 1A(1). If a court makes a disqualification order, it must cover all the activities set out in the statute, but the court could give the disqualified director limited leave to act despite the order. See *Re Gower Enterprises (No.2)* [1995] 2 B.C.L.C. 201; and *Re Seagull Manufacturing Co Ltd* [1996] 1 B.C.L.C. 51 and below.

[21] Management of a company is thought to require involvement in the general management and policy of the company and not just the holding of any post labelled managerial, though in small companies it may not be possible to distinguish between policy-setting and day-to-day management: *R. v Campbell* (1983) 78 Cr. App. R. 95 CA (acting as a management consultant); *Drew v HM Advocate*, 1996 S.L.T. 1062; *Re Market Wizard Systems (UK) Ltd* [1998] 2 B.C.L.C. 282.

[22] 1986 Act ss.1(1)(b) and 1A(1)(b).

[23] 1986 Act ss.22A–C and E–F and the Limited Liability Partnership Regulations 2001 (SI 2001/1090), reg.4(2). The disqualified director is also prohibited from acting as the trustee of a charitable trust, whether that trust is incorporated or not: Charities Act 2011 ss.178 et seq., though the charity commissioners may give leave to act.

[24] 1986 Act ss.13 and 14. The equivalent offence in relation to acting when bankrupt has been held to be one of strict liability (*R. v Brockley* (1993) 92 Cr. App. R. 385 CA) and the arguments used to support that conclusion would seem equally applicable to the offence of acting when disqualified.

[25] 1986 Act s.15(1)(a).

[26] 1986 Act s.15(1)(b). The various people made personally liable by s.15 are jointly and severally liable with each other and with the company and any others who are for any reason personally liable: s.15(2).

[27] See *Re Moorgate Metals Ltd* [1995] 1 B.C.L.C. 503.

[28] 1986 Act ss.6(4) and 8(4).

[29] 1986 Act s.1A(2) applies the minima to undertakings as well.

[30] *Re Grayan Building Services Ltd* [1995] Ch. 241 CA. In this case the Court of Appeal held that the respondent could not reduce the period of disqualification by showing that, despite past shortcomings, he was unlikely to offend again. Such evidence, however, could be taken into account on an application for leave. See also *Re Westmid Packing Services Ltd* [1998] 2 All E.R. 124 at 131–132 CA.

[31] *Re Sevenoaks Stationers (Retail) Ltd* [1991] Ch. 164 at 176 CA.

[32] The court distinguished between a top bracket of over ten years for "particularly serious" cases; a middle bracket of six to ten years for serious cases "which do not merit the top bracket"; and a minimum bracket for "not very serious" cases. See also *Re Westmid Packing Services Ltd* [1998] 2 All E.R. 124 CA: fixing of length of disqualification to be done on the basis of "common sense")—ibid. at 132.

[33] *Secretary of State for Trade and Industry v Worth* [1994] 2 B.C.L.C. 113 CA, which indeed puts the applicant under some costs pressure to apply then, if his application is based on circumstances existing at the time of the order. If disqualification is by undertaking, a separate application for leave will, of course, be necessary. Leave cannot be given by the Secretary of State, only by the court.

[34] *Secretary of State for Trade and Industry v Barnett* [1998] 2 B.C.L.C. 64; *Re Britannia Homes Centres Ltd* [2001] 2 B.C.L.C. 63: leave refused where director with history of insolvencies wished to incorporate a new and wholly-owned company to carry on trading in same line of business.

[35] *Re Cargo Agency Ltd* [1992] B.C.L.C. 686; *Re Chartmore Ltd* [1990] B.C.L.C. 673; *Re Clenaware Systems Ltd* [2014] 1 B.C.L.C. 447. The practice has been followed in Scotland despite doubts whether the power to give leave confers upon the courts the power to specify conditions: *Secretary of State for Trade and Industry v Palfreman* [1995] 2 B.C.L.C. 301. If the conditions attached by the court are not strictly complied with, the director is in breach of the disqualification order and so exposed to personal liability: *Re Brian Sheridan Cars Ltd* [1996] 1 B.C.L.C. 327.

[36] *Re Barings Plc (No.3)* [2000] 1 W.L.R. 634; *Re Tech Textiles* [1998] 1 B.C.L.C. 259.

[37] 1986 Act s.15A(3)(4), insolvency being defined so as to include insolvent liquidation, administration and administrative receivership.

[38] 1986 Act s.15A(5).

[39] 1986 Act s.15B(2) provides that the compensation may be ordered in favour of the Secretary of State for distribution among the specified creditors (whoever they may be) or, as with wrongful trading awards, take the form of a contribution to the assets of the company. It is implicit in the second case that the company is in the hands of an insolvency practitioner. It is likely that the Insolvency Service will favour the latter method of distribution, if only because it avoids the costs of undertaking this task.

[40] 1986 Act s.7(1)(2A).

[41] 1986 Act s.15B(3).

[42] Including a de facto director (s.22(4)), i.e. a person who acts as a director even though he has not been validly appointed as a director or even though there has been no attempt at all to appoint him as director: *Re Kaytech International Plc* [1999] 2 B.C.L.C. 351 CA.

[43] 1986 Act s.22(5). On the meaning of "shadow director" see the previous chapter at para.9–7 and, below, Ch.16 at para.16–8.

[44] A company is insolvent if it goes into liquidation with insufficient assets to meet its liabilities, if an administration order has been made in relation to the company or if an administrative receiver is appointed: s.6(2). Thus, the disqualification provisions, unlike the wrongful trading provisions, are not confined to companies which go into insolvent liquidation. The court is specifically given power to look at the director's conduct post-insolvency. Sections 21A–C apply the Act to the specialised mechanisms for bank insolvencies and administrations.

[45] 1986 Act s.7(1).

[46] 1986 Act s.7(2A).

[47] Until 2015 this power was exercisable only on the basis of information obtained via official investigation into the company (under a variety of powers). The s.8 power was previously rarely used; it remains to be seen whether the reform will change that.

[48] 1986 Act s.6(1)(4), 8(4) and 1A(2).

[49] See A. Hicks, "Disqualification of Directors—Forty Years On" [1988] J.B.L. 27 at 35 and 38–40.

[50] *Secretary of State for Trade and Industry v Ivens* [1997] 2 B.C.L.C. 334 CA. However, it would seem that a director cannot be disqualified on the basis of his conduct of the non-lead companies alone.

[51] And, indeed, post-insolvency activities: s.6(2).

[52] The court may look at the conduct in relation to "one or more other companies or overseas companies": ss.6(1)(b),(1A) and 8(2),(2B).

[53] 1986 Act ss.8ZA(2), 8ZD(3).

[54] 1986 Act ss.8ZA(1), 8ZD(1).

[55] 1986 Act ss.8ZC(1), 8ZE(1).

[56] BIS Ch.4 ("Opaque corporate control through irresponsible 'front' directors").

[57] See above, fn.1 at para.1809.

[58] See above, fn.1 at para.1818.

[59] In Scotland, where there are no Official Receivers, even compulsory liquidations are handled by insolvency practitioners and the potential scope of the problem is accordingly greater.

[60] See S. Wheeler, "Directors' Disqualification: Insolvency Practitioners and the Decision-making Process" (1995) 15 L.S. 283. Moreover, the statutory scheme does not bite if the company is simply struck off the register (see below, paras 33–35 et seq.) without going through any of these procedures.

[61] 1986 Act s.7A and SI 2016/180. The obligation is to provide any information about conduct which may help the Insolvency Service decide whether to implement disqualification proceedings. Previously, this information was to be provided by the insolvency practitioner only if the Service asked for it. The request power now exists in relation to all persons other than the insolvency practitioners (s.7(4)).

[62] National Audit Office, *The Insolvency Service Executive Agency: Company Director Disqualification* (1993) H.C. 907.

[63] 1986 Act s.7(2). The court may give leave to commence the application out of time, though the Secretary of State must show a good reason for any extension: *Re Copecrest Ltd* [1994] 2 B.C.L.C. 284 CA; *Re Instant Access Properties Ltd* [2012] 1 B.C.L.C. 710.

[64] *Re Manlon Trading Ltd* [1996] Ch. 136; *Davies v UK* [2006] 2 B.C.L.C. 351 ECtHR (a case decided in 2002); *Eastaway v UK* [2006] 2 B.C.L.C. 361 ECtHR. However, in the last of these cases the Court of Appeal refused to set aside the disqualification agreement entered into by the director under the *Carecraft* procedure (above, fn.15), even though the ECtHR had held the proceedings to have taken too long: *Eastaway v Secretary of State for Trade and Industry* [2007] B.C.C. 550. The National Audit Office, above, fn.62 para.18; found that the Insolvency Service in most cases took nearly the full two-year period permitted to bring an application and that up to a further four years might elapse before a disqualification order was made, during which period the director was free to carry on business with limited liability.

[65] See para.10–10, below and the extra-judicial remarks of Lord Hoffmann, Fourth Annual Leonard Sainer Lecture in (1997) Company Lawyer 194.

[66] *R. v Secretary of State for Trade and Industry Ex p. McCormick* [1998] B.C.C. 379 CA; *DC v United Kingdom* [2000] B.C.C. 710 ECtHR.

[67] *Official Receiver v Stern* [2000] 1 W.L.R. 2230 CA. Contrast the decision in *Saunders v United Kingdom* [1998] 1 B.C.L.C. 362 ECtHR.

[68] *Re Pantmaenog Timber Co Ltd* [2001] 4 All E.R. 588 CA.

[69] 1986 Act s.12C (replacing the former s.9).

[70] This includes not just the “lead” company but all other companies, including overseas ones, brought in under s.6(1)(b).

[71] “Those who trade under the regime of limited liability and who avail themselves of the privileges of that regime must accept the standards of probity and competence to which the law requires company directors to conform” (per Neill LJ in *Re Grayan Building Services Ltd* [1995] Ch. 241 CA).

[72] Of course, simple fraud will be a basis for disqualification. As a proposition of substantive law this is straightforward; the complications are procedural. See *Secretary of State v Doffmann (No.2)* [2011] 2 B.C.L.C. 541.

[73] Cork Committee, para.1813. For the operation of the rule forbidding re-use of corporate names in this situation, see Ch.9, above. For examples in the disqualification case law, see *Re Travel Mondial (UK) Ltd* [1991] B.C.L.C. 120; *Re Linvale Ltd* [1993] B.C.L.C. 654; *Re Swift 736 Ltd* [1993] B.C.L.C. 1.

[74] *Re Keypak Homecare Ltd* [1990] B.C.L.C. 440.

[75] *Re Sevenoaks Stationers (Retail) Ltd* [1991] Ch. 164 CA; *Secretary of State for Trade and Industry v McTighe (No.2)* [1996] 2 B.C.L.C. 477 CA.

[76] *Re Synthetic Technology Ltd* [1993] B.C.C. 549; *Secretary of State v Van Hengel* [1995] 1 B.C.L.C. 545; *Secretary of State for Business Innovation and Skills v Doffman (No.2)* [2011] 2 B.C.L.C. 541.

[77] *Re Stanford Services Ltd* [1987] B.C.L.C. 607.

[78] *Re Sevenoaks Stationers (Retail) Ltd* [1991] Ch. 164 CA at 184.

[79] *Re Barings Plc (No.5)* [2000] 1 B.C.L.C. 523 CA. The case involved the insolvency

of an old and respected merchant bank brought about by the huge losses generated by the unauthorised trading activities of a junior employee whose activities were neither well understood nor effectively monitored by his superiors.

[80] *Re Barings Plc (No.5)* [2000] 1 B.C.L.C. 523 at 536. See also *Re Westmid Packing Services Ltd* [1998] 2 All E.R. 124; and *Re Vintage Hallmark Plc* [2007] 1 B.C.L.C. 788.

[81] *Re Richborough Furniture Ltd* [1996] 1 B.C.L.C. 507.

[82] See para.16–15.

[83] These may be ingredients in a finding of unfitness, even though, as we see below, para.10–14, non-compliance with the reporting requirements of the legislation is a separate ground of disqualification, albeit only for up to five years. For further discussion of what is required in this area see Ch.21.

[84] *Re Firedart Ltd* [1994] 2 B.C.L.C. 340; *Re New Generation Engineers Ltd* [1993] B.C.L.C. 435.

[85] *Re City Investment Centres Ltd* [1992] B.C.L.C. 956; *Secretary of State v Van Hengel* [1995] 1 B.C.L.C. 545; *Re Majestic Recording Studios Ltd* [1989] B.C.L.C. 1; *Re Continental Assurance Co of London Plc* [1977] 1 B.C.L.C. 48; *Re Kaytech International Plc* [1999] 2 B.C.L.C. 351 CA.

[86] *Re Douglas Construction Services Ltd* [1988] B.C.L.C. 397. Conversely, ignoring a plan produced by outside accountants is likely to be characterised as “obstinately and unjustifiably backing [the director’s] own assessment of the company’s business”: *Re GSAR Realisations Ltd* [1993] B.C.L.C. 409.

[87] See above, fn.78.

[88] See para.9–6, above, and para.16–16, below.

[89] Of course, keeping an insolvent company going can be grounds for disqualification for being unfit but only in strong cases. See, for example, *Re Living Images Ltd* [1996] 1 B.C.L.C. 348, where the directors were aware of the company’s parlous condition and keeping it going was described as “a gamble at long odds” and “the taking of unwarranted risks with creditors’ money”, so that there was a lack of probity involved and not just negligence. cf. the refusal to make a disqualification order in *Re Dawson Print Group Ltd* [1987] B.C.L.C. 601; *Re Bath Glass Ltd* [1988] B.C.L.C. 329; *Re CU Fittings Ltd* [1989] B.C.L.C. 556; and *Secretary of State v Gash* [1997] 1 B.C.L.C. 341.

[90] A. Hicks, *Disqualification of Directors: No Hiding Place for the Unfit?* (ACCA Research Report 59, 1998), p.35, found that in 1996 about one quarter of those at that time disqualified were in that position as a result of a s.2 disqualification. The proportion has probably fallen since then, with the rise of unfitness disqualifications, especially via undertakings. The Companies House figures (above, fn.14) do not distinguish among disqualifications on any of the grounds laid down in ss.2–5 of the Act, but indicate that in 2014/15 217 out of 1227 disqualifications took place under ss.2–5.

[91] 1986 Act s.2.

[92] 1986 Act s.16(2). If the criminal court does consider the matter and decide not to impose disqualification, it is an abuse of process to pursue the same issue before a civil court: *Secretary of State v Weston* [2014] B.C.C. 581. However, the courts have permitted disqualification orders to be pursued in such cases under other grounds for disqualification contained in the Act: *Secretary of State v Rayna* [2001] 2 B.C.L.C. 48;

Re Denis Hilton Ltd [2002] 1 B.C.L.C. 302.

[93] *R. v Goodman* [1994] 1 B.C.L.C. 349 CA (insider dealing by a director in the shares of his company); *R. v Georgiou* (1988) 4 B.C.C. 625; *R. v Ward*, *The Times*, 10 April 1997 (conspiracy to defraud by creating a false market in shares during a takeover bid); *R. v Creggy* [2008] 1 B.C.L.C. 625 CA (facilitating criminal activity by third parties).

[94] 1986 Act s.5A introduced in 2015.

[95] See para.9–5.

[96] Also included are the usual cast of liquidators, receivers and administrative receivers and also shadow directors: s.4(1)(b) and (2).

[97] 1986 Act s.4, upon application by those listed in s.16(2). It is unclear whether the breach of duty referred to must involve the commission of a criminal offence, but the use of the word "guilty" suggests so.

[98] See para.9–8.

[99] No disqualification order was made under s.10 in the period 2010–2015 (Companies House, above, fn.14) though it is possible that disqualification in relation to fraudulent trading was imposed in a few cases under s.4.

[100] 1986 Act s.5.

[101] Contrast the wording of subs.(1) and (2) of s.5.

[102] See above, text attached to fn.92.

[103] 1986 Act s.3.

[104] 1986 Act s.3(2).

[105] 1986 Act s.18 and the Companies (Disqualification Orders) Regulations 2009 (SI 2009/2471).

[106] CA 2006 s.1189. At the time of writing no regulations have been made.

[107] Acting in breach of the prohibition also attracts personal liability for the company's debts (s.15—though this may not be of much utility in relation to bankrupts) and could, apparently, give rise to the making of a disqualification order under s.2 (above, para.10–9): *R. v Young* [1990] B.C.C. 549 CA).

[108] These changes were effected by Sch.20 to the Enterprise Act 2002, introducing a new Sch.4A into the Insolvency Act 1986.

[109] IA1986 ss.11(1) and 390(4)(a).

[110] 1986 Act ss.22A–C, E–F.

[111] See above, para.7–45.

[112] By A. Hicks; see fn.90, above. The report makes a number of interesting and thought-provoking suggestions for reform. For a more sceptical account see R. Williams, "Disqualifying Directors: a Remedy Worse than the Disease?" (2007) 7 J.C.L.S. 213.

[113] *Companies in 2005–2006* (above, fn.13) reveals that some 90 prosecutions for breach of disqualification orders or of the prohibition on bankrupts acting as directors were launched in that year, producing 81 convictions. More recent statistics appear not to be available. It is difficult to know whether this relatively modest total indicates a

high level of compliance with the disqualifications or a low level of detection of breaches.

[114] See above, fn.79.

CHAPTER 11

LEGAL CAPITAL, MINIMUM CAPITAL AND VERIFICATION

Meaning of Capital	**11–1**
Nominal Value and Share Premiums	**11–3**
Nominal value	**11–3**
No issue of shares at a discount	**11–4**
The share premium	**11–6**
Minimum Capital	**11–8**
Objections to the minimum capital requirement	**11–9**
Disclosure and Verification	**11–10**
Initial statement and return of allotments	**11–11**
Abolition of authorised capital	**11–12**
Consideration received upon issue	**11–13**
Share capital and choice of currency	**11–19**
Capitalisation Issues	**11–20**
Conclusion	**11–21**

MEANING OF CAPITAL

11–1

In the previous two chapters we saw how the law applies sanctions to the controllers of companies who abuse the facility of limited liability. In particular, personal liability for the company's obligations and disqualification from being involved in the management of a company in the future are techniques used by the law in these cases. Both are ex post techniques, i.e. the sanctions are applied after the event, normally after the company has fallen into insolvency. Sanctions are applied on the basis, most often, that the court has concluded that the controllers have infringed some broad and general standard laid down for the assessment of their conduct, for example, engaging in "wrongful" trading or displaying "unfit" conduct. In this chapter and the next two, by contrast, we consider ex ante approaches to controlling abuse of limited liability, i.e. the rules, generally of a precise and detailed character, which apply before the company is in insolvency or even in the region of insolvency. Given that creditors' claims are confined to the assets of the company, the techniques now discussed seek to ensure that the

shareholders contribute to or maintain in the company an appropriate level of assets for the benefit of creditors. A good level of shareholder-contributed assets, it can be argued, will both reduce the chances of the company falling into insolvency and increase the likely size of the pay-out to creditors if insolvency does occur. This idea can be given expression in a number of ways, which will be explored in these chapters.

The traditional protective mechanism of company law in this area, which is as old as limited liability itself, involves laying down rules about the raising and maintenance of "capital". "Capital" is a word of many meanings,[1] but in company law it is used in a very restricted sense. It connotes the value of the assets contributed to the company by those who subscribe for its shares. By and large, the value of what the company receives from investors in exchange for its shares constitutes its capital.[2] One talks about the value of what is received, rather than the assets themselves, because those assets will change form in the course of the business activities of the company. If the company receives cash in exchange for its shares, the directors will turn that cash into other types of asset in order to promote its business: indeed, if they did not, they would probably be in breach of duty. So, the focus is on using the number in the company's accounts which indicates the value of what was received by the company in the exchange for the shares to constrain the actions of the company in various ways, in UK law principally to constrain the company's freedom to make distributions to its shareholders.

The value of the assets which the company receives in exchange for its shares (its legal capital) will normally be less than the total value of the company's assets. Even where the company has not yet begun to trade, it may have raised money in ways other than share issues. For example, it may have borrowed money from a bank or a group of banks, which loan contributes to the company's cash assets. The value of such loans does not count towards its legal capital, however. This is because the aim of the capital rules is to protect creditors as a class and only assets contributed by shareholders do this effectively.[3] The cash provided by the lender will be exactly counterbalanced by an increase on the liabilities side of the company's balance sheet, so

that the creditors as a whole are no better off. Once a company has begun trading and if it has done so profitably, it will have assets which represent the profits. These, too, do not count as part of the company's legal capital: they may have been earned, at least in part, by deploying the shareholders' contributions to the business but the profits were not contributed by the shareholders. Nevertheless, the totality of the surplus of assets over the liabilities is a very important accounting concept and is often referred to as "the shareholders' equity" or the company's "net asset value". The law distinguishes between the company's "net asset value" and the value of the assets contributed by the shareholders (its legal capital). Broadly, the company is free to distribute to the shareholders the difference between the net asset value and the legal capital value—provided that is a positive number! By contrast, therefore, if the company trades unsuccessfully, it may run through any profits made in previous years and begin to eat into the value of the assets contributed by its shareholders. In this situation its net asset value may fall below the value of its legal capital, and no distribution is permitted to be made. In short, the value of the assets contributed by the shareholders is not a measure of the company's net worth, which may be higher or lower than the legal capital figure at any one time and only by chance will the two figures be the same.

11–2

An alternative use of the legal capital figure is to use it to identify the amount the shareholders must contribute to the company's assets before it is permitted to begin trading. Such rules are called minimum or initial capital rules. British law has never made much use of this concept. Minimum capital has been required of public companies, since the implementation in the UK of the Second European Company Law Directive of 1977,[4] but private companies are not subject to the rule and, historically, apart from a short period in the early years of modern company law in the middle of the nineteenth century, British law has not attached importance to minimum capital requirements for any class of company.

However, and contrary to what is sometimes thought, British law currently does make use of legal capital to constrain to a

significant extent distributions to shareholders. On this approach the law leaves companies wholly or substantially free to decide their own level of legal capital, but attaches legal consequences to the amount of legal capital the company in fact chooses to raise. This second policy has been central to British company law since its origins and remains so. From the early days the courts have laid down that, given limited liability, "it is clearly against the intention of the legislature that any portion of the capital should be returned to the shareholders without the statutory conditions being complied with".[5] The rule against the return of capital to shareholders is elaborated in a three main ways. First, as noted, the value of the company's legal capital is used as a yardstick to measure the amount of a company's assets which may be returned to the shareholders by way of a dividend or other form of distribution. We consider this aspect of the "no return" policy in Ch.12. All modern jurisdictions place constraints on distributions to shareholders but it is controversial whether such rules should be based on the concept of legal capital, as the British ones currently are. Secondly, the repurchase or redemption of its shares by the company may occur only through tightly controlled procedures which aim to maintain the value of the company's legal capital. Thirdly, the company may reduce the value of its legal capital in its accounts only through procedures which are designed to protect the interests of the creditors. The second and third manifestations of the "no return" policy are considered in Ch.13, together with the rules prohibiting a company from giving financial assistance to a person in connection with the acquisition by that person of its shares. The second and third sets of rules are normally lumped together under the heading of "capital maintenance", though it is debatable whether the financial assistance rules are linked to the notion of legal capital.

In this chapter we elaborate some of the basic elements of the concept of legal capital and consider in particular the role of the minimum or initial legal capital rule.

Nominal Value and Share Premiums

Nominal value

11–3

We have talked so far about legal capital being the amount that the company receives from those who subscribe for its shares. Very broadly, this is true, but the law arrives at this result in a surprisingly complex way. This is because the law distinguishes between the "nominal" value of the share and any amount received above the nominal or "par" value, which is referred to as the "premium". The Act stipulates that shares in a limited company "must each have a fixed nominal value" and that an allotment of shares not meeting this requirement is void.[6] In other words a monetary value needs to be attached to the company's shares. In consequence, one talks of the company having issued a certain number of "£1 shares" or "10p shares" and so on. The par value is a doubtfully useful concept because it does not normally indicate the price at which the share is likely to be issued to investors; still less the price at which the share is likely to trade in the market after issue. The only linkage between the nominal value of the share and the price the subscriber pays for it is the rule that a share may not be issued at less than its nominal value[7]—often referred to as the "no discount" rule.[8] However, the company, whilst being obliged to attach a nominal value to the share, maintains full control over its level. This freedom, coupled with the "no discount" rule, gives the company an incentive to keep the nominal value of the share low in relation to its issue price. The lower the nominal value, the less likely the company is to find itself in the situation, either now or in the future, where investors will be prepared to buy its shares only at less than their nominal value.

If a further tranche of shares already in issue is offered to the public, then the par value is likely to be even less related to the purchase price. Suppose a company has initially issued shares at par, has traded successfully, re-invested the profits and seeks capital for further expansion. The second tranche of shares will naturally be issued at a price higher than par; otherwise, the second set of shareholders would obtain a disproportionately large interest in the company. In effect, they would be obtaining an interest in the profits earned in the past without having contributed any of the capital which was used to earn them. The situation can be rectified by setting the share price on the second issue so that it reflects the total value of the shareholders' interest in the company. In the case of publicly traded

companies, this will be what market price of the share reflects.

The CLR contemplated abolishing par value for private companies,[9] but eventually resiled from the proposal. The Second Directive was thought to require the retention of par value, or something very much like it,[10] for public companies, and the transitional difficulties likely to arise when a company moved from private to public were thought to militate against this reform.[11] So, unless and until the Second Directive is amended on this point, par values will remain part of the law.

No issue of shares at a discount

11–4

For investors the nominal value requirement is potentially misleading because it tells them nothing about the market price of the share or its value measured in any other way. Does the rule, which was established by the courts in the nineteenth century,[12] that shares must not be issued at a discount to their nominal par value act as a protection for creditors? The common law rule is now stated in the Act,[13] which specifically provides that, if the shares should be so issued, the allottee is liable to pay to the company the amount of the discount with interest.[14] This provision is of some value to creditors, but of only limited value, given the company's control over the setting of the nominal value. The creditor is probably more interested in the actual price at which the share was issued and in the total value of the consideration received by the company from its share issue. In fact, it could be argued that the rule against discounts to nominal value harms creditors, at least where the company nears insolvency. Suppose that, because of the unsuccessful trading of the company, its shares are in fact trading on the market at less than par. The company needs to raise new capital. No sensible investor will pay more than the market price for the shares and yet the Act seems to prevent the company from recognising the economic reality of its situation in the pricing of any new issue, which may help it back to solvency.[15] Yet, in this situation creditors will benefit if the legal capital of the company is increased, no matter how little the company receives for any one of its shares. Any contribution from shareholders increases the amount available to satisfy the claims of the creditors.

In fact, there are a number of ways around this problem, though it cannot be guaranteed that in every situation one will be available. For example, a new class of share may be created with a lower par value but otherwise with rights substantially the same as the existing shares. This new class of share can be issued without infringing the prohibition on issuing shares at a discount.

Nevertheless, as noted, the risk that the par value rule will hamper the company in the future gives companies some incentive to fix low par values initially and to raise most of the consideration for the shares by way of premium, so that the par value displays an even more remote relationship to the issue price than it might otherwise do.

11–5

It might be argued that the rule is better understood as a protection for the shareholders. The rule, it might be said, was intended to protect existing shareholders from directors who proposed to devalue (or "dilute") the existing shareholders' interest in the company by issuing shares to new shareholders too cheaply. However, dilution arises only if the shares are issued to new investors at a price which is lower than the current market price of the shares, so that the "no shares at a discount" rule is not well adapted to shareholder protection either. It will be under-protective of shareholders where the market price is above nominal value and over-protective where it is below. Indeed, what is surprising from a shareholders' perspective is that there is no precise statutory obligation laid on the company to issue shares at a premium, where the market will bear one.[16] This is probably because the company may have a number of good reasons to contract on the basis that the share will be issued at less than its full market price.[17] However, the directors' duty to promote the success of the company for the benefit of its members[18] will normally require the directors to issue shares at the best obtainable price; otherwise the company will be overpaying for its capital, just as it would be if it bought raw materials at above market price.[19]

The share premium

11–6

It is clear that the amount received by the company by way of the nominal value of the shares issued constitutes part of its legal capital. The amount (often much more significant) received by way of premium is today treated in much the same way. Prior to 1948, when companies issued shares at a premium, the value of the premium was treated differently from the par value. Legal capital was regarded as determined by the nominal or par value of the shares; if they had been issued at a price above par the excess was not "capital" and, indeed, constituted part of the distributable surplus which the company, if it wished, could return to the shareholders by way of dividend.[20] This was, of course, a ridiculous rule, except on the basis that it might be an indirect way of subverting the capital-based distribution rules. If the price paid for the shares was £100,000, the amount received by the company was also £100,000 (assuming no transaction costs) and it should make no difference to the analysis whether the £100,000 was obtained by issuing 100,000 £1 shares at par or by issuing 100,000 1p shares at £1 (i.e. at a premium of 99p per share). In either case, the issue price (£1 in both cases) determined the amount raised by the company, whilst the par value, set by the company, is a figure determined in order to give the company maximum flexibility under the Act.[21] This situation was changed, however, by the 1948 Act. The rule, now stated in s.610 of the 2006 Act, is that a sum equal to the aggregate amount or value of the premiums shall be transferred to a "share premium account" which, in general, has to be treated as if it were part of the paid-up share capital. However, the Act does not fully assimilate share capital and the share premium. It is still necessary to refer expressly to both, and for the company, in its annual accounts and reports, to distinguish between the share capital account and the share premium account. What, if it were not for arbitrary par values, would be a single item—capital—has to be treated as two distinct items, albeit for most purposes treated identically.

11–7

However, share capital and share premium are not treated as wholly identical, though the 2006 Act has narrowed some of the differences between them. Section 610 provides two "exceptions" and two "reliefs" for the share premium account

which do not apply to the capital account. The first exception is that a company may apply the share premium account in paying up bonus shares.[22] A bonus share is a share issued to the existing shareholders, without requiring any payment from them, but is paid for, in this case, by reducing the share premium account.[23] Since the effect of this transaction is to reduce the share premium account but to increase the share capital account by an equivalent amount, it is wholly unobjectionable from the creditors' point of view,[24] and it is hardly an exception to the main rule laid down by s.610. It would, of course, be impossible thus to apply share capital account but to apply share premium account in this way is unobjectionable since the only effect is to convert it, or a part of it, to share capital proper. The second exception is that the share premium account may be applied in writing off the expenses of or the commissions paid on the issue of the shares which generated the premiums.[25] This is a real exception, but now is a relatively minor contrast with share capital. Within limits, share capital may also be used to pay commission.[26] Although the rule in relation to the share premium account is somewhat more broadly phrased than that relating to the capital account, the share premium rule is now tighter than it was previously.[27]

More important (and more interesting) are the "reliefs". Section 610 (as did its predecessors) expressly applies to issues at a premium "whether for cash or otherwise". The result of this was held to be that if, say, on a merger one Company (A) acquired the shares of another (B) in consideration of an issue of A's own shares and the value of B's shares exceeded the nominal value of those issued by A, a share premium account had to be established in respect of the excess.[28] The result of this was that B's undistributed profits formerly available for distribution by way of dividend ceased to be distributable. This caused something of a furore in commercial circles. However, in 1980 the question was again litigated and the earlier decision fully upheld.[29] In consequence, "merger relief" was introduced in the Companies Act 1981. The general effect of the merger relief provisions[30] is that the premium does not have to be transferred to the share premium account when, pursuant to a merger arrangement, one company has acquired at least 90 per cent of *each*[31] class of equity shares[32] of another in exchange for an

allotment of its equity shares at a premium.

The Act also modifies (rather than removes) the requirement for a transfer to the share premium account in certain cases of reconstruction within a group of companies.[33] The relief applies in the case of issues at a premium by a wholly-owned subsidiary in consideration of a transfer to it of non-cash assets from another company in the group comprising the holding company and its wholly-owned subsidiaries. In this case the company issuing the shares is permitted to value the assets received, not by reference to their market value, but by reference to the cost of their acquisition by the transferor company or their value in the books of the transferor company. In this way, the value of the assets received in exchange for the shares will often be understated, but, to the extent that this understated value in fact exceeds the nominal value of the shares issued, the excess must still be transferred to the share premium account.[34] If this relief is available on the facts of a particular case, the more extensive merger relief is not.[35]

Finally, the Secretary of State is empowered by s.614 to make regulations providing further relief in relation to premiums other than cash premiums or for modifying the reliefs in the Act (but has not done so).

Minimum Capital

11–8

With the above preliminaries, we can turn to an analysis of the minimum capital rule. As we have noted, as a result of the Second Directive,[36] a minimum capital requirement was introduced for public companies. Section 761 requires that the *nominal* value of the company's allotted share capital meet a certain minimum level That was set at the derisory level (for a public company) of £50,000 (or, currently, €57,100),[37] though that is double the amount required by the Directive.[38] Moreover, that £50,000 (or assets of equivalent value) does not have to be handed over to the company at the time of issue of the shares. It is enough, as with all share issues by public companies, that one quarter of the nominal value of the shares be paid at the time of issue.[39] The rest may remain unpaid, though of course subject to being called up by the company at a later date or in its

liquidation. Nevertheless, the minimum capital requirement puts a little pressure on public companies not to issue shares at a hefty premium (because the premium does not count towards the required minimum). However, the Act retains its traditional aversion to minimum capital requirements in respect of private companies, where none is imposed. This is said to have been a major factor behind the incorporation in England of companies from other EU countries which applied minimum capital requirements to their equivalents of private companies.[40]

In the relatively unusual case of a company being formed directly as a public company, the minimum capital requirement operates, not as a condition of its formation, but as a condition of its commencing business.[41] In order to commence business (or to exercise any borrowing powers—an important addition) it must apply to the Registrar for a "trading certificate"[42] (in addition to the formation certificate which it will already have obtained); and the condition for the issuance of a trading certificate is that the nominal value of the company's allotted share capital must be not less than the required or "authorised" minimum.[43] The company is under some pressure to obtain the trading certificate, because if it does not do so within a year from incorporation, it may be wound up by the Court and the Secretary of State may petition for that to happen.[44] A public company which trades or borrows without a certificate is liable to a fine, as is any officer of the company (including therefore its directors) who is in default.[45] However, the interests of third parties are properly protected in this case. Transactions entered into by the company in such a case are valid, and further, if the company fails to comply with its obligations, the directors of the company are jointly and severally liable to indemnify third parties in respect of any loss or damage suffered.[46] Thus, personal liability of the directors, criminal and civil, operates to give them a strong incentive not to trade without a trading certificate.

In the more usual case of a company becoming public upon conversion from private status, the requirement that the company's allotted capital be not less than the authorised minimum operates as a condition for the re-registration of the private company as a public one.[47]

If the nominal value of the company's allotted share capital

meets the authorised minimum, on either of the occasions described above, it will normally remain at that level thereafter. This is because the nominal value of the shares does not change, no matter how much the value of the company may decline. However, in relatively rare cases the nominal value of the company's allotted capital might subsequently fall below the authorised minimum. There is no general provision in the Act dealing with this eventuality. Rather, provision is made on an ad hoc basis. Thus, if under the reduction of capital procedure[48] the company's capital is reduced below the authorised minimum, the normal requirement is that the company must re-register as a private company before the reduction of capital order is finalised.[49] Further, the Secretary of State has power to alter the authorised minimum by regulation (subject to affirmative resolution).[50] Were that alteration to be in an upward direction, the Secretary of State also has the power to require existing public companies to bring their nominal values into line with the new authorised minimum or to re-register as a private company.[51]

Objections to the minimum capital requirement

11–9

There are two objections which can be made to minimum capital rules. First, company laws normally set only one (as in the UK) or a small number of minimum capital rules (for example, one for private and another for public companies), but in fact, to be effective, the minimum capital requirement ought to be related to the riskiness of the business which the company undertakes. General minimum capital requirements tend either to be too low effectively to protect creditors (as in the case of the current British requirement) or too high, in which case they reduce competition (by discouraging new entrants into the field) whilst over-protecting creditors. However, adjusting capital requirements to the riskiness of the company's business would be a complex and continuing activity, as is shown by the special regulation necessary to implement such a principle in those industries, for example banking and insurance, where capital adequacy requirements are taken seriously (and also where "capital" means net asset value, not "legal" capital). Thus, it is

not surprising that the approach of company laws to minimum capital requirements is relatively crude; and in practice in developed economies tends towards the “too low” end of the spectrum, thus conferring no substantial protection on creditors but conceivably discouraging the incorporation of companies.

If, therefore, the minimum capital requirement has no claim to be a genuine assessment of the amount of risk capital the company needs to survive the vicissitudes of its business, could it nevertheless be justified as a “cushion” of assets provided by the shareholders for the protection of the creditors? This is also a difficult argument to sustain. The creditors need the protection of an asset cushion when the company begins to trade unprofitably. A minimum capital requirement imposed at the time the company commences trading does not guarantee any particular level of assets being available for the creditors at this later date or when the company goes into an insolvency procedure. For example, a minimum capital requirement of, say, £3,000 for a private company, even if paid in cash, could soon be returned quite legitimately to the incorporators by means of salary payments for services rendered to the company[52] or it could be satisfied by the contribution to the company by the incorporators of a depreciating asset, such as a second-hand car. Thus, minimum capital rules are likely to be ineffective beyond a very short initial period unless coupled with rules which require the directors to take action if the net value of the company’s actual assets declines below the value of its legal capital.

The Act does in fact contain a rule which requires action on the part of the company if its net asset value falls below a certain proportion of its legal capital. However, this rule is not linked to the minimum capital requirement and would therefore survive even if the authorised minimum were abolished. Nor does the rule specify the substantive action the company should take in this situation. Section 656 requires a public company to convene an extraordinary meeting of the shareholders if the net value of its assets falls below one half of its called-up share capital, which may be, and typically will be, far in excess of the authorised minimum.[53] The section does not require the shareholders or the directors to take any particular action in this situation (for example, cause the company to cease trading or

raise further capital from the shareholders).[54] This section seems not to be very important in practice, probably because, before it becomes operative, large lenders will have exercised rights under their loan contracts to replace the failing management or otherwise to redress the situation[55] or the wrongful trading provisions[56] will have required the directors to take corrective action. Consequently, it can be argued that, at the initial stage, the minimum capital requirement is too low to confer substantial protection on creditors and that subsequent adverse developments in the company's trading ability are dealt with through mechanisms other than those which focus on the minimum capital.[57]

Disclosure and Verification

11–10

Whether or not a legal system imposes a minimum capital requirement, there are obvious arguments in favour of requiring the company to disclose the amount it has raised by way of the issuance of its shares and providing some assurance that the amounts stated in the capital accounts are accurate. This information will facilitate creditor self-help, i.e. making it easier for creditors to decide whether to lend to the company and on what terms. The extent of the facilitation should not be over-estimated. It will perhaps be useful at the point of issuance of the shares, but the creditor is really interested in the company's overall net asset position which, as the company trades, is likely to be more and more divorced from its legal capital figure.[58] Thus, the creditor is likely to pay more attention to the verification of the company's assets and liabilities as a whole, not just the amounts raised through share issues; and that assurance is provided, to the extent that it is, through the company's annual financial statements and their audit.[59] In addition, those who are shareholders at the time the shares are issued will have an interest in knowing and verifying the amounts raised through share issues, in order to be satisfied that new shareholders are not being admitted to the company too cheaply.[60]

UK company law has developed over time a number of rules which address the above policies, and they were substantially

added to when the Second Directive was implemented in the UK.

Initial statement and return of allotments

11–11

When a company is formed, assuming it is limited by shares, the application for registration must contain a statement of capital and initial shareholdings. This requires disclosure of information relating to the totality of the shares to be taken by the subscribers and to their individual subscriptions. In particular, the number of shares, their aggregate nominal amount, the amounts, if any, to be left unpaid and the prescribed rights attached to the shares must be disclosed.[61] In practice, the answer will often be one £1 share taken by each of two people, upon which nothing is paid up, the two people being employees of a company formation business, which has created a shelf private company. When more serious amounts of shares are issued at a later date, similar information has to be given to the Registrar of companies via a "return of allotments".[62] Thus, data about those to whom shares of various classes have been issued,[63] the amounts paid for the shares and the main rights and obligations attached to those shares is public information, but this is a disclosure provision, not a provision which regulates the amount or type of share the company issues. Although it is a criminal offence knowingly or recklessly to deliver a false statement to the Registrar,[64] these provisions do not otherwise provide verification of the information delivered.

Abolition of authorised capital

11–12

The 2006 Act did away with the former concept of "authorised capital", as recommended by the CLR.[65] This was a concept which sounded important but which fulfilled no identifiable creditor-protection role. Under the old law, a company with a share capital (unless it was an unlimited company) was required to state in its memorandum "the amount of the share capital with which [it] proposes to be registered and the division of that share capital into shares of a fixed amount".[66] Until the authorised capital was allotted, i.e. an investor agreed to take some shares in

exchange for a consideration provided to the company, the authorised capital in no way increased the company's assets. The company's authorised capital might have been 10 million shares of £1 each, but if only two of those shares had been issued, say at par, then its legal capital was £2. If anything, authorised capital served to confuse the potential investor.

In fact, the requirement for authorised capital had more to do with relations between directors and shareholders than with creditor relations. The directors could not issue more than the amount of the company's authorised capital without returning to the shareholders for approval of an increase in the authorised amount.[67] However, if the authorised capital was set at a high level, as it normally was, this was not a significant constraint on the directors. Shareholder control of share issues is now effected by other sections of the Act and shareholders, if they wish, can put stronger controls in the company's constitution, so that authorised capital is not needed for the protection of shareholders either.[68]

Consideration received upon issue

11–13

We next turn to the rules which focus on the quality and even the reality of the consideration received by a company upon the issuance of its shares, whether the shares are issued to satisfy the minimum capital requirement or not and irrespective of whether that consideration is referable to the nominal value of the share or the premium payable. Before 1980 the domestic rules in this area were exiguous, but they were strengthened as a result of the Second Directive, which, however, was somewhat relaxed in 2006.[69] As a result, there is a marked divergence between the rules applying to all companies and to public companies only.

Rules applying to all companies

11–14

We should first note that the law does not require that the consideration promised for the shares be immediately due to the company. There is thus a distinction between paid-up capital and uncalled capital, the former being, for example, the amount paid

on allotment and the latter the amount payable when the company calls upon the shareholder for the payment in accordance with the terms of the allotment.[70] Long-term uncalled capital could be a valuable indication of creditworthiness since, in effect, it affords a personal guarantee by the members, but it is doubtful whether it is extensively used in private companies.[71]

A potentially important creditor protection rule restricts the use of capital to pay commissions etc. Payment by way of commissions, brokerage or the like to any person in consideration for subscribing or agreeing to subscribe is prohibited,[72] even if the shares are issued at a premium, except to the limited extent to which they are explicitly permitted. Without this rule, the amount actually received by the company from an investor in exchange for its shares might be substantially less than appears. However, the Act permits commission for subscribing for shares (or procuring others to do so) to be paid out of capital provided it is limited to 10 per cent of the issue price and is authorised by the articles (which may set a lower percentage).[73] It would be logical if this restriction on the payment of commission did not apply to payments out of distributable profits, since creditors have no claim to limit what the company does with such funds. This is what s.552 appears to say, since it provides that a company "must not apply any of its shares or capital money" in the payment of commissions etc.[74] However, the section no longer attempts to do that which earlier drafts of the statute attempted, i.e. to make clear the consequences of infringing the prohibition. Those drafts provided that, if there were an agreement to pay commission, etc. in breach of the prohibition, the agreement was to be void; if the payment had been made, the amount of the inducement was to be recoverable, either from the person to whom it was paid or any third party who knew of the circumstance constituting the contravention and benefited from it.[75] A court could deduce these consequences from the prohibition contained in the current section.

Payment does not have to be in cash; it can instead be made in kind[76] and very frequently is in private companies.[77] But, except in relation to public companies, it seems that the parties' valuation of the non-cash consideration will be accepted as

conclusive[78] unless its inadequacy appears on the face of the transaction[79] or there is evidence of bad faith.[80] Hence on an issue for a non-cash consideration it is possible to some degree to "water" the shares by agreeing to accept payment in property which is worth less than the value of the shares.

Public companies

11–15

Shares allotted by a public company must be paid up (in cash or in kind) at least as to one quarter of their nominal value and the whole of any premium due.[81] If this does not occur, the share is nevertheless to be treated as if this had happened and the allottee is liable to pay the company that amount, with interest. This provision reduces the company's and creditors' exposure to the continuing solvency of its shareholders, although it is relatively uncommon for companies not to require full payment upon allotment. Where the company does want to stagger the payments for the shares, this rule creates a disincentive to setting the nominal value of the shares well below the issue price,[82] because the whole of the premium must be paid up on allotment.

The remaining rules for public companies concern the regulation of non-cash issues, but before turning to them it is important to note the width of the definition of "cash consideration" in s.583(3), for these rules do not apply where the consideration is cash, as defined. The section includes within the definition of "cash consideration" an undertaking to pay cash to the company in the future, thus putting the company at risk of the insolvency of the shareholder, but also the reducing the disincentive mentioned at the end of the previous paragraph.[83] Also treated as cash is the release of a liability of the company for a liquidated sum.[84] The latter is a useful provision in facilitating equity for debt swaps whereby the creditors of an insolvent company forgo their claims as debtors against the company in exchange for the issue to them of equity shares. The company is thereby released from an often crippling burden of interest payments and the removal of the debt may even produce by itself a surplus of assets over liabilities. This will be to the immediate benefit of the shareholders and non-converting creditors, though if the company prospers in the future, the

original shareholders will naturally find that their equity interest has been extensively diluted. It seems that no infringement of the rule forbidding issuing shares at a discount to par value occurs where the face value of the debt is taken for the purposes of paying up the new shares, even though the market value of the debt at the time of the swap was less than its face value because of the debtor's insolvency.[85]

A public company may not accept, in payment for its shares or any premium on them, an undertaking by any person that he or another will do work or perform services for the company or any other person.[86] If it should do so, the holder of the shares[87] at the time they are treated as paid up (wholly or partly) by the services is liable to pay the company an amount equal to the nominal value of the shares plus the premium or such part of that amount as has been treated as paid up by the undertaking.[88] Nor may the company allot shares as fully or partly paid-up if the consideration is *any* sort of undertaking to provide a non-cash consideration which need not be performed until after five years from the date of the allotment.[89] If the undertaking should have been performed within five years but is not, payment in cash then becomes due immediately.[90] And (though this is of minimal importance) shares taken by a subscriber to the memorandum of association in pursuance of his undertaking in the memorandum must be paid for in cash.[91]

Valuation of non-cash consideration

11–16

Finally, the possibility of "share-watering" by placing an inflated value on the non-cash consideration is tackled in the case of public companies by requiring that consideration to be independently valued. Under Ch.6 of Pt 17 a public company may not allot shares as fully or partly paid-up (as to their nominal value or any premium) otherwise than in cash unless:—(i) the consideration has been valued in accordance with the provisions of the Part; (ii) a report is made to the company during the six months immediately preceding the allotment; and (iii) a copy is sent to the proposed allottee.[92] To this there are exceptions in relation to bonus issues[93] and in relation to most types of takeovers and mergers.[94] But, in other cases, if the

allottee has not received the copy of the valuation report or there is some other contravention of the Part, which he knew, or ought to have known, amounted to a contravention, once again he or she is liable to pay in cash with interest.[95] These provisions clearly protect existing shareholders as well as creditors.

However, if the correct valuation steps are taken, there is no statutory prohibition on the company issuing shares in a transaction which puts a higher valuation on the non-cash consideration than has emerged in the valuation process. In that situation the directors might well be in breach of their fiduciary duties[96] and the subscriber would be in a poor position to assert that he or she was unaware of this.

The valuation has to be made by a person "qualified to be appointed, or continue to be, an auditor of the company"[97] and that person must meet statutory tests of independence from the company.[98] The expert has a right, similar to that of an auditor, to require from officers of the company the information and explanations required to produce the valuation.[99] The expert may, however, arrange for and accept a valuation from another person who appears to him to have the requisite experience and knowledge and who is not an employee or officer of any company in the group.[100] In practice, therefore, the report will be by the company's auditor supported by another professional valuation of any real property or other consideration which the auditor does not feel competent to value on his own. The report has to go into considerable detail[101] and must support the conclusion that the aggregate of the cash and non-cash consideration is not less than the nominal value and the premium.[102]

A private company proposing to convert to a public one cannot evade these valuation requirements by allotting shares for a non-cash consideration shortly before it re-registers as a public one. In such a case, the Registrar cannot entertain the application to re-register unless the consideration has been valued and reported on in accordance with the above provisions.[103]

11–17

This relatively straightforward mandatory valuation procedure, imposed where a public company issues shares for a non-cash

consideration, is extended by the Act to a category of cases where the company acquires a non-cash asset in exchange for something other than the issuance of shares.[104] This extension applies only during the period of two years after the company has been issued with a trading certificate[105]; only to agreements on the part of the company to acquire non-cash assets from anyone who was a subscriber to the memorandum on the company's formation or a member of it on its conversion to a public company[106]; and only where the consideration to be provided by the company is at least equal to one tenth of its issued share capital. This provision is aimed at a purchase by the company of property from the promoters of the company at an excessive price, though it seems relatively easy to avoid by simply not becoming a member of the company until just after either of the two dates which trigger the mandatory valuation rule. Again, these controls protect both creditors and "outside" shareholders, but a significant feature of the extended rule is that it places greater emphasis on the protection of the shareholders through the imposition of the additional requirement that the shareholders approve of the proposed transaction.[107]

The valuation requirements, especially on a small issue of shares, are potentially time-consuming and expensive. However, they are required by the Second Directive.[108] In 2006 the Directive was amended so as to permit certain assets to be valued without an independent expert's report.[109] Although the Act contains a power for the Secretary of State to make regulations to modify the independent valuation requirements,[110] the Government did not propose to take up the options offered by the amendment to the Directive, on the grounds it was not clear the amendments did relax the provisions of the Directive and, in any event, they would not simplify the legislation.[111]

Further provisions as to sanctions

11–18

The above provisions, both those relating to all companies and those applying to public companies alone, impose civil liability on the allottee (normally) towards the company, as we have seen. However, by the time the company comes to enforce that liability, it is not unlikely that the shares will be in the hands of

someone else. The general policy of the Act is to impose liability jointly and severally with the allottee on the subsequent holder[112] of the shares, but subject to a major defence.[113] Following normal equitable principles, that defence is that the holder is a purchaser for value in good faith (i.e. without actual knowledge of the contravention concerned) of the securities or someone who derives title from such a purchaser.[114] Consequently, if the shares have been traded in the normal way on a public market, the current holder will not be liable. On the other hand, a donee of the shares would be jointly and severally liable.

The liability which the above provisions impose on the allottee or the current holder of the shares is potentially substantial, in respect of what might be only a technical breach of the statute, for example, the allottee has not been sent a copy of the valuer's report, though the allottee is in fact aware of its contents. Even where there has been a more than technical breach, the liability imposed may be penal. For example, a failure to have non-cash assets valued makes the allottee liable to pay the whole of the consideration due for the shares in cash with interest,[115] without any account being taken of the actual value of the non-cash assets transferred. Consequently, the court has the power to grant relief against liability to make a payment to the company in most cases,[116] but that power to grant relief is limited.[117] In particular, the court must have regard to two "overriding principles", namely:

(a) that a company which has allotted shares should receive money or money's worth at least equal in value to the aggregate of the nominal value of those shares and the value of the premium or, if the case so requires, so much of that aggregate as is treated as paid-up[118]; and

(b) that when the company would, if the court did not grant exemption, have more than one remedy against a particular person it should be for the company to decide which remedy it should remain entitled to pursue.[119]

Share capital and choice of currency

11–19

The Act requires the minimum capital requirement for public

companies to be satisfied by shares denominated in either pounds sterling or euros, presumably for some sort of verification reason.[120] However, apart from this, the company has considerable freedom to denominate shares in such currency as it wishes. It has never been doubted that this was possible in relation to the share premium account (and other capital reserves) but the issue was debated in relation to the share capital account until it was decided in favour of giving the company this freedom in *Re Scandinavian Bank.*[121] The Act now puts the point beyond doubt.[122] Moreover, the Act adds to this freedom by providing a simple procedure for re-denominating share capital from one currency to another (into or out of sterling or from one non-sterling currency to another), including the re-denomination of the shares used to satisfy the minimum capital requirement when trading began. Formerly, this could be achieved only by the cumbersome and potentially expensive procedure of a reduction of capital and an issue of new shares in the desired currency.[123] Now any limited[124] company, subject to contrary provision in its articles, may re-denominate its shares by ordinary resolution of the members.[125] Such re-denomination does not affect the currency in which dividends are required to be paid by the company or calls on shares smet by the shareholder.[126]

Such re-denomination, which must be carried out at prevailing rates of exchange,[127] could produce new nominal values of a rather awkward kind, for example, $2.24. The company may respond in two ways: by capitalising distributable reserves so as to increase the nominal values to a more acceptable level, for which no special statutory permission is needed,[128] or by reducing the nominal values so as to achieve the same result, which the statute permits without the need to follow the full reduction of capital procedure. All that is required is a special resolution of the members, provided the decision is taken within three months of the re-denomination resolution and does not reduce the company's share capital by more than 10 per cent.[129] Further, the amount of the reduction must be carried to a "re-denomination reserve" which is a new undistributable reserve created by the Act.[130] It is also conceivable that the reduction following re-denomination could produce the result that neither the euro nor the sterling requirements for the authorised

minimum capital of a public company is met, in which case the company will have to re-register as a private company.[131]

Capitalisation Issues

11–20

The net worth of a business will fluctuate from time to time according to whether the company makes profits and ploughs them back or suffers losses. But a company's legal capital, i.e. the issued share capital plus share premium account (if any) does not automatically fluctuate to reflect this. It remains unaltered until increased by a further issue of shares, which must be made in conformity with the rules dealt with above, or reduced in accordance with the rules dealt with in Ch.13. If, however, the company has made profits and not distributed them as dividends, a necessary consequence of the static nature of its capital accounts is that its net asset value will exceed its legal capital. This is not necessarily something either company or shareholders need worry about—in fact, they should welcome the profits—but an accounting device is needed to bring the company's books back into balance. This is to be found by including a (notional) liability on the balance sheet in order to balance the "assets" and "liabilities". This is normally described as a "reserve", an expression which may confuse those unaccustomed to accounting practice since it may suggest (falsely) that the company has set aside an actual earmarked fund to meet some potential or actual liability. The crucial point is that this reserve is a distributable reserve, unlike the capital accounts, i.e. the company can distribute assets to its shareholders up to the value in the reserve, and keep its books in balance by reducing the reserve accordingly.

Should a profit-rich company wish to bring its legal capital more into line with its net worth, it can do so by making a "bonus" or "capitalisation" issue[132] to its shareholders. The former expression is likely to be used by the company when communicating with its shareholders (in the hope that they will think that they are being treated generously by being given something for nothing) and the latter when communicating with the workforce (which might otherwise demand a bonus in the form of increased wages). In fact, such an issue is merely a

means of capitalising reserves by using them to pay-up shares newly issued to the shareholders.[133] We have already noted one form of bonus issue, where the shares are paid up out of the share premium account, which is accordingly reduced to the extent of the nominal value of the bonus shares, whilst the share capital account is correspondingly increased. Here, however, the bonus shares are paid up out of the distributable profits reserve. For example, suppose that before the issue the net asset value (taking book values) of the company was £2 million and the issued capital one million shares of £1 each. The shares, on book values, will be worth £2 each.[134] The company then makes a one-for-one bonus issue paid up out of the distributable profits reserve. The immediate effect on a shareholder is that for each former £1 share worth £2 he or she will now have two £1 shares each worth £1.[135] However, a more significant change has occurred, which may have implications for the future. The formerly distributable profit can no longer be distributed because it has been converted into share capital. The company is thus signalling a need to have greater permanent risk capital than might previously have been understood to be the case. Further, it is likely to stop short of capitalising undistributed reserves to an extent which would impair its freedom to pursue an appropriate dividend policy in the future. Thus, a bonus share paid up out of distributable reserves is a potentially more significant event than an issue of bonus shares paid up from the share premium account, where the decrease in one undistributable account is balanced by the increase in another.

Conclusion

11–21

The requirement that a public company have a minimum allotted capital when it begins trading is of doubtful utility to creditors, given the low level at which it is set. Protections of creditors which take as their base the nominal value of the share (notably the rule against issues at a discount to nominal value) are also of doubtful utility, given the company's freedom to set the nominal value of the share, and may even be harmful to their interests in certain circumstances. The rules designed to ensure that a company receives assets of a value equal to the price at which it

has issued the shares are more useful to creditors and also promote equal treatment of different groups of members holding the same class of share. However, such rules do not depend for their effectiveness on a concept of legal capital. Such rules could equally well be formulated and enforced even if there were no legal capital rules. The main claim that the legal capital rules have to remain part of our company law must rest, therefore, on their role in constraining the payment of distributions to the members of the company to which we turn next.

---

[1] cf. Capital punishment, capital letter, capital ship, capital city, capital of a pillar, capital and labour, capital and income, and "capital!".

[2] In *Kellar v Williams* [2000] 2 B.C.L.C. 390, the Privy Council accepted that it was possible for an investor to make a capital contribution to a company, other than in exchange for the purchase of shares, in which case the contribution is to be treated in the same way as a share premium (see below, para.11–8). Such a procedure is very unusual, of course, since the contributor is left substantially in the dark as to what he or she is getting in exchange for the contribution. However, one can see that an existing shareholder in a company wholly controlled by him might act in this way. The difficulty is to distinguish between such a capital contribution and a loan to the company.

[3] Of course, a contribution made by a creditor may in fact benefit other creditors, for example, a loan made to a company just before insolvency may mean the creditors as a class obtain a larger percentage pay out than if the loan had not been made, but that benefit to the earlier creditors is paid for by the later lender.

[4] Council Directive 77/91/EC [1977] O.J. L26/1 (now replaced by Directive 2012/30/EU [2012] O.J. L315/74, to which version the references in this chapter relate). See para.6–11.

[5] *Re Exchange Banking Co, Flitcroft's Case* (1882) 21 Ch. D. 519, per Jessel MR.

[6] 2006 Act s.542(1),(2). This implements the requirements of the Second Directive, although the requirement of a nominal value was not introduced into UK law by that Directive.

[7] 2006 Act s.580.

[8] Note, however, the discount here is to the nominal value of the share, not to its market value, which is the issue addressed by the pre-emption rules. See para.24–6.

[9] Strategic, paras 5.4.26–5.4.33. The Gedge Committee, Cmd. 9112, had recommended as long ago as 1954 that no-par equity shares should be introduced and the Jenkins Committee (Cmnd. 1749, 1962, paras 32–34) recommended this reform in relation to all classes of share. The reform has been widely introduced in common law jurisdictions elsewhere, but now seems unlikely to be introduced here unless the Second Directive is amended on this point. Introduction of no-par shares would require some matters to be expressed differently or regulated differently in the contract of issue. For example, the dividend on a preference share is normally expressed as a percentage of its nominal value (but could as easily be expressed as so many pence per share) and surplus assets are distributed on a winding in accordance with nominal values, so that a different formula would have to be adopted. See *Birch v Cropper* (1889) 14 App. Cas. 525.

[10] The Directive (art.8) refers to “accountable par” as a permitted alternative to “nominal value” (but without defining it). The concept appears to be that one takes the total consideration raised through the issue of shares and divides it by the number of shares in issue at any time. Two consequences follow: the shares do not have a fixed nominal value (because the accountable par would change on a new share issue at a different price) but a par value does exist at all times; and the company has no freedom to set the nominal value: it is simply the result of an arithmetical exercise. See Bank of England, *Practical Issues Arising From the Euro*, Issue 8, June 1998, Ch.6 at paras 24–28.

[11] Completing, para.7.3.

[12] Finally in *Ooregum Gold Mining Co v Roper* [1892] A.C. 125 HL.

[13] 2006 Act s.580(1).

[14] 2006 Act s.580(2).

[15] See the facts of *Ooregum Gold Mining Co v Roper* [1892] A.C. 125 HL where the “no discount” rule enabled the existing shareholders to act in a wholly opportunistic way towards an investor who was willing to inject new money into the company at market value (but less than the nominal value) of the shares at a time when the existing shareholders were unwilling to advance further capital.

[16] *Hilder v Dexter* [1902] A.C. 474 HL. The argument was there rejected that failing to obtain the premium amounted to the payment of a commission, contrary to what is now s.552 (see below). The decision was undoubtedly right on its facts, since the right to purchase further shares at par was an explicit part of the contract under which the investor had originally become a shareholder in a corporate rescue.

[17] See the previous note and directors’ share option schemes, the essence of which is that the director has the right to subscribe in the future for shares in the company at today’s share price.

[18] See para.16–64.

[19] “If the share stands at a premium, the directors *prima facie* owe a duty to the company to obtain for it the full value which they are able to get. It is true that it is within their powers under the Companies Acts to issue it at par, even in such a case, but their duty to the company is not to do so unless for good reason.” (per Lord Wright in *Lowry v Consolidated African Selection Trust Ltd* [1940] A.C. 648, 679.) See also *Shearer v Bercain Ltd* [1980] 3 All E.R. 295: “Those who have practised in the field of company law for any length of time will have spent many hours convincing directors that it is wholly wrong for them to issue to themselves and their friends shares at par when they command a premium, however great the company’s need for capital may be.” (per Walton J). See also *Re Sunrise Radio* [2010] 1 B.C.L.C. 367.

[20] *Drown v Gaumont British Corp* [1937] Ch. 402. See C. Napier and C. Noke, “Premiums and Pre-acquisition Profits” (1991) 54 M.L.R. 810.

[21] In some cases, the nominal value of the share has a more substantial significance. The dividend entitlement of a preference share is normally set as a percentage of the nominal value of the share, so that choosing a low nominal value for a preference share might imply a high percentage dividend. To produce the equivalent of a 10 per cent dividend on a £1 share, the dividend entitlement on a 1p share would have to be 1000 per cent! In general with preference shares, given their bond-like characteristics (see para.23–7), the nominal value will be set much closer to the issue price, since the nominal value will also determine what the preference shareholder receives in a reduction of capital or liquidation, at least if the holder has no right to participate in surplus assets.

[22] 2006 Act s.610(3).

[23] The bonus issue could also be funded by distributable profits. See below at para.11–20.

[24] The issuance of a bonus share has little impact on the shareholders either in the normal case. The shareholder now has more shares, but since the value of the company is not increased by this exercise, the market price of each share in the expanded class will fall. Sometimes bonus shares are issued precisely to achieve this result because it is thought that the market value of the share has become so large that it is an obstacle to trading them. See *EIC Services Ltd v Phipps* [2004] 2 B.C.L.C. 589 CA, where the (botched) bonus issue was aimed at reducing the trading price of the shares. A similar result can be obtained by effecting a “stock split” under s.618, an exercise which is possible no matter whether the company has a share premium account of any size.

[25] 2006 Act s.610(2).

[26] 2006 Act s.553 and see below, para.11–14.

[27] Under the 1985 Act the share premiums account could be written off against a wider range of share issue expenses which, in particular, did not necessarily have to have been incurred in relation to the shares generating the premiums.

[28] *Head & Co Ltd v Ropner Holdings Ltd* [1952] Ch. 124.

[29] *Shearer v Bercain Ltd* [1980] 3 All E.R. 295.

[30] 2006 Act ss.612–613.

[31] 2006 Act s.613(3).

[32] Which will include preference shares if they have a right to participate in either dividends or surplus on a winding up beyond a fixed amount: ss.616(1) and 548.

[33] 2006 Act s.611.

[34] 2006 Act s.611(2)–(5), defining the “minimum premium value”.

[35] 2006 Act s.612(4).

[36] See above, fn.4, art.6.

[37] 2006 Act s.763 and the Companies (Authorised Minimum) Regulations 2009 (SI 2009/2425) reg.2.

[38] Second Directive art.6: €25,000.

[39] 2006 Act s.586.

[40] See M. Becht, C. Mayer and H.F. Wagner, “Where do Firms Incorporate? Deregulation and the Cost of Entry” (2008) 14 *Journal of Corporate Finance* 241.

[41] 2006 Act s.761.

[42] The form of the application, containing a statement of compliance on the part of the company, is set out in s.762. It is not demanding and the Registrar may accept the company’s statement of compliance as sufficient evidence of the matters stated in it, and the Registrar must issue the certificate if satisfied the minimum capital requirements are met: s.765(2). The trading certificate, once issued, is conclusive evidence that the company is entitled to commence business: s.761(4). However, by analogy with the decisions referred to in para.4–35 in relation to the certificate of incorporation, it appears

that, as this section is not expressed to bind the Crown, the Registrar's decision could be quashed on judicial review at the instance of the Attorney-General.

[43] 2006 Act s.761(2). A company's capital may be stated in euros in which case s.763 deals with the fixing of the equivalent prescribed euro amount. Where a company has some share capital denominated in pounds and some in euros, the company's application for a certificate must be made by reference to the sterling capital or to the euro capital alone and not by reference to a mixture of the two types of capital: s.765.

[44] Insolvency Act 1986 ss.122(1)(b) and 124(4)(a).

[45] 2006 Act s.767(1),(2).

[46] 2006 Act s.767(3),(4).

[47] 2006 Act ss.90(1)(b), (2)(b) and 91(1)(a).

[48] See Ch.13.

[49] 2006 Act.650(2). The court may order otherwise. Section 651 provides an expedited procedure for re-registering as a private company in such cases. See also s.662(2)(b), dealing with the consequences of a forced cancellation by a public company of its own shares.

[50] 2006 Act s.764(1),(4).

[51] 2006 Act s.764(3)—no doubt through an expedited procedure.

[52] As we shall see below at para.12–9, directors' remuneration would not normally be caught by the rules controlling distributions by companies.

[53] 2006 Act s.547 makes it clear that called up share capital includes capital payments to be made in the future if those future payment dates are laid out in the company's articles, the terms of allotment of the shares or other arrangements for the payment of the shares. This section implements domestically art.19 of the Second Directive. Article 19 refers to the company's "subscribed" capital, which probably means the nominal value of the issued share capital, thus reducing the impact of the rule.

[54] As is the case in some continental European jurisdictions.

[55] See paras 31–26 et seq.

[56] See paras 9–6 et seq.

[57] See Chs 9 and 10, above.

[58] Above, para.11–1.

[59] See Chs 21 and 22.

[60] Above, para.11–5.

[61] 2006 Act s.10. Prescribed are details of the right to vote, to receive a distribution either by way of dividend or capital, and provisions about redemption: Companies (Shares and Share Capital) Order 2009/388 art.2.

[62] 2006 Act s.555 and see para.23–6.

[63] As we see in para.26–18, those who take the shares may be nominees for others who have the financial interest in them, but this is perhaps of less moment to the creditors whose main interest is in the amount of shares issued, rather than data about their

holders. Since the shareholders’ liability is limited, it does not matter to the creditors whether the shareholders are rich or poor, at least once the shares are fully paid up.

[64] 2006 Act s.1112.

[65] Modernising, para.6.5.

[66] 1985 Act s.2(5)(a).

[67] 1985 Act s.121.

[68] See Ch.24.

[69] A set of relaxations to the original version of the Second Directive was made by Directive 2006/68/EC ([2006] O.J. L264/32). However, in relation to the issues discussed below the Government took the view that the permitted relaxations were so minor and so hedged about with qualifications that it was not worth taking them up: DTI, *Implementation of the Companies Act 2006: A Consultation Document*, February 2007, para.6.23.

[70] 2006 Act s.547 defines called-up capital so as to include that amount represented by calls which have been made, whether or not they have been met, and the amount payable under the articles or the terms of allotment on a specified future date, even though that date has not arrived.

[71] Or, indeed, by public ones. As the CLR proposed, the Act no longer contains provisions which permit a company to determine by special resolution that any part of its capital which has not been called up shall be incapable of being called up except in a winding up.

[72] 2006 Act s.552.

[73] 2006 Act s.553. Section 552(3) also permits the payment of “such brokerage as has previously been lawful”—an obscure and potentially wide permission. On the use of the share premium account to pay commissions, etc. see above, para.11–7.

[74] Of course, for a company to make such a payment, even out of distributable profits, might infringe the prohibition on a company giving financial assistance towards the purchase of its own shares, but the latter rule no longer applies to private companies: see para.13–55, below.

[75] *Modernising Company Law—Draft Clauses*, Cm 5553-II, July 2002, cl.28.

[76] 2006 Act s.582(1) restates the general rule that “shares allotted by a company may be paid-up in money or money’s worth (including goodwill and know-how)” but this is followed by exceptions and qualifications relating to public companies only. Again, bonus shares are specifically allowed.

[77] For example, when the proprietor of a business incorporates it by transferring the undertaking to a newly formed company in consideration of an allotment of its shares.

[78] *Re Wragg* [1897] 1 Ch. 796 CA; *Park Business Interiors Ltd v Park* [1992] B.C.L.C. 1034.

[79] *Re White Star Line* [1938] Ch. 458.

[80] *Tintin Exploration Syndicate v Sandys* (1947) 177 L.T. 412.

[81] 2006 Act s.586.

[82] See para.11–3, above.

[83] 2006 Act s.583(3)(d). There is no apparent limit on the future date which may be fixed for the actual payment, for the five-year limit in s.587 (see below) applies only to non-cash payments, but the undertaking must be one given to the company in consideration of the allotment of the shares: *System Controls Plc v Munro Corporation Plc* [1990] B.C.C. 386. And the "cash" must be given to the company, not a third person: s.583(5).

[84] 2006 Act.583(3)(c). So, if the company owes the investor a sum of money, the release by the investor of the company from that obligation in exchange for the shares amounts to the provision of a cash consideration for them: *EIC Services Ltd v Phipps* [2004] 2 B.C.L.C. 589 at [36] to [52] (Neuberger J).

[85] *Re Mercantile Trading Co, Schroeder's Case, Re* (1871) L.R. 11 Eq. 13; *Pro-Image Studios v Commonwealth Bank of Australia* (1990–1991) 4 A.C.S.R. 586, though it should be noted that in this case both the debt and the consideration for the new shares were immediately payable. Independent valuation of the debt is not required because its release constitutes a cash consideration.

[86] 2006 Act s.585. But this section (nor s.587 below) does not prevent the company from enforcing the undertaking: s.591. If a private company wishes to convert to a Plc such undertakings must first be performed or discharged: s.91(1)(d).

[87] Including the holder of the beneficial interest under a bare trust: s.585(3).

[88] 2006 Act s.585(2).

[89] 2006 Act s.587(1). If contravened the consequences are similar to those for contravention of s.585, except that the liability falls on the allottee: s.587(2). If a contract of allotment does not offend s.587(1) but is later varied so as to produce this consequence, the variation is void: s.587(3).

[115] 2006 Act s.593(3).

[116] There is no relief power in relation to the allottee in the case of issuance of shares at a discount or breach of the paying-up requirements: s.589(1).

[117] 2006 Act ss.589 and 606.

[118] The importance of which is demonstrated in *Re Bradford Investments Plc (No.2)* [1991] B.C.L.C. 688; cf. *Re Ossory Estates Plc* (1988) 4 B.C.C. 461.

[119] 2006 Act ss.589(5) and 606(4). For other matters which the court should take into account, see ss.589(3),(4) and 606(2),(3). When proceedings are brought by one person (e.g. a holder of the shares) against another (e.g. the original allottee) for a contribution in respect of liability the court may adjust the extent (if any) of the contribution having regard to their respective culpability in relation to that liability: ss.589(6) and 606(5). And see s.606(6) for exemption from liability under s.604(3)(b).

[120] 2006 Act s.765(1).

[121] *Re Scandinavian Bank* [1988] Ch. 87. Of course, until the rules on share capital were brought into line with those on share premium, the company was not in a position to exercise freedom of choice in relation to currency.

[122] 2006 Act s.542(3): shares "may be denominated in any currency and different classes of shares may be denominated in different currencies" (subject, of course, to s.765, above, fn.120).

[123] As happened in *Re Scandinavian Bank* [1988] Ch. 87. For the reduction of capital procedure see para.13–30.

[124] Unlimited companies had the freedom already.

[125] 2006 Act s.622(1). The section requires the actual conversion to take place within 28 days of the adoption of the resolution (s.622(5),(6)).

[126] 2006 Act s.624(1). Other rights and obligations of members under the constitution or the terms of issue of the shares are also expressly preserved.

[127] 2006 Act s.622(3).

[128] On capitalisation issues see below, para.11–20.

[129] 2006 Act s.626. Thus, in the example in the text, the company would not be able to use this procedure to reduce the nominal value to $2, but it would be able to if the unreduced nominal value were $2.20. There must also be notification to the Registrar: s.627.

[130] 2006 Act s.628. For the significance of this for the payment of dividends see para.12–2.

[131] 2006 Act s.766 and the Companies (Authorised Minimum) Regulations 2008/729 reg.5. A speedy method of re-registration is provided.

[132] The two expressions mean the same thing and, indeed, so does a third ("scrip" issue) which is sometimes used.

[133] Technically, there is a two-stage process. First, the undivided profits of the company are capitalised and then there is the appropriation to each member who would have been entitled to a distribution of the profits by way of dividend of the amount needed to pay up as fully paid the shares to be issued. See *Topham v Charles Topham Group Ltd* [2003] 1 B.C.L.C. 123, especially at 139–141, where the failure of a parent company to carry out the first step (because its accounts in fact showed no distributable profits, though its subsidiary did have such profits) meant that the issue of the bonus shares was ineffective to create any right in the shareholders to receive the shares. cf. *Re Cleveland Trust* [1991] B.C.L.C. 424, where the company's accounts erroneously showed a distributable profit (in fact the profit so shown was repayable to a subsidiary) and the issue of the bonus shares was held to have been effective, as far as the statute was concerned, but rendered void by the common law doctrine of common mistake.

[134] This does not mean that listed shares will be quoted at that price: that will depend on many other factors, including in particular the expected future profits and dividends. And the book values, of fixed assets in particular, may not reflect their present values.

[135] The *quoted* price is not likely to fall by a half because it is to be expected that the company will seek to maintain approximately the same level of dividend per share as before the issue.

The central issues	**12–16**

The Basic Rules

12–1

The rules on legal capital, discussed in the previous chapter, have their main impact on companies through their role in setting the maximum amount payable by way of dividend or other form of distribution to shareholders. Whether the company chooses to make the maximum distribution permitted by the distribution rules is, in most circumstances, a matter for it. Where a company has substantial distributable profits, it will often not pay them all out to the shareholders but will keep some for re-investment. The legal rules have their bite where the company does in fact hold enough cash to pay a dividend but the rules to be discussed in this chapter prevent a distribution at the level the company would otherwise desire.

The distributions rules discussed in this chapter are aimed at protecting creditors. This will be our main focus. However, there may also be shareholder/board conflicts over the level of distributions, managers perhaps preferring to re-invest surplus cash in the business, the shareholders preferring cash in hand.[1] The respective roles of the board and the shareholders in determining the level of dividend are left to be determined in the articles of association (subject, of course, to the constraints

imposed by the creditor protection rules). The model articles for private and public companies limited by shares require both a recommendation from the board and shareholder approval for a dividend, but with the shareholders not permitted to approve a level of dividend above that recommended by the directors.[2] In effect, this is a mutual veto arrangement.[3] If the articles, unusually, say absolutely nothing about the mechanism for determining dividends, then on normal principles that decision would rest with the shareholders alone. There is no apparent reason why the articles should not give the dividend decision entirely to the directors, though it is rare to do so (except in relation to interim dividends). It is thought that it would require very clear words to produce that result, i.e. the court would be unlikely to deduce exclusive director control over dividends from a general grant of management powers to the board, since dividends are as much an investment as a management matter.

Public and private companies

12–2

Turning to creditor protection, the inter-relationship between the legal capital rules and the rules on distributions appears most clearly in the rule applicable to public companies only and set out in s.831 of the Act.[4] It applies a balance-sheet test for the legality of a distribution. It is unlawful for a company to make a distribution if its net assets (assets minus liabilities) are (or would be after the distribution) less than its called up share capital and undistributable reserves.[5] Its undistributable reserves include its share premium account.[6] Thus, to take a simple example, a company which has issued as fully paid up 200 £1 shares at an issue price of £1.50 will have a share capital of £200 and a value of £100 in its share premium account. Consequently, for such a company it will not be enough to permit a distribution of, say, 10p per share that it has positive net assets of £20, so that it can pay the dividend and still have assets in balance with its liabilities. Instead, it must have positive net assets of £320 before it pays the dividend. The legal capital rules thus lead to greater conservatism in the payment of dividends than would a "bare" net assets test for the legality of dividend payment. One can also see from this example the significance of the share

premium account being classified as an undistributable reserve in domestic law.[7] If, as before 1948, the share premium account were a distributable reserve, the company would need to have positive net assets of only £220 before it made the dividend payment. And had the company chosen to set the par value at 10p (but still issued the shares at the same price, generating a premium of £1.40 per share), it would have needed positive net assets of only £40 before it made the dividend payment.

Undistributable reserves include more than the share premium account. Also added is the "capital redemption reserve" which we shall consider in the following chapter.[8] That is created when a company re-purchases or redeems its shares, and it simply replaces the reduction in the share capital account which the re-purchase or redemption brings about. In other words, the capital redemption reserve operates so as to hold legal capital constant in this situation but it does not increase it. Further, there is added any other undistributable reserve created by an enactment other than Pt 23 of the Act (Disbributions).[9] The company itself may also add restrictions in its articles by creating an undistributable reserve.[10] There is one final item in the list of undistributable reserves which, however, is best examined after looking at the distribution rule which applies to all companies.

12–3

The general rule, applying to companies public or private, is set out in s.830[11] and states that a company may "make a distribution only out of profits available for the purpose". It then defines "profits available for the purpose" as the company's "accumulated realised profits, so far as not previously utilised by distribution or capitalisation, less its accumulated, realised losses, so far as not previously written off in a reduction or reorganisation of capital duly made".[12] This second rule, unlike the first one, seems focused on the company's profit and loss account, rather than its balance sheet. The thrust of the rule is on two points. First, the company needs to assess its accumulated profits and losses over the years to determine whether, at the point a dividend is under consideration, there are profits to support it. Thus, what are sometimes called "nimble dividends" are not permitted, i.e. the paying of dividends out of profits earned in a particular year, even though in previous years the

company has made losses, which have not been replaced.[13] More fully, the company must subtract from the profits it has made over the years any amounts already paid out by way of dividend or any profits which have been capitalised,[14] but it may also deduct from its losses it has made over the years any amount properly written off through a reduction or reorganisation of capital.[15] If the company's aggregate profits over the years exceed its aggregate losses over the years, it may make a distribution under this rule to the extent of the surplus profit, subject, however, to one further—and crucial—qualification.

The second feature of s.830 is that it applies to only "realised" profits and "realised" losses. "Unrealised" profits and losses are left out of account in the calculation required by s.830.[16] "Realised" profits and losses are not defined in the Act which delegates the solution to accounting practice.[17] In fact, the precise line between the two is a matter of some controversy,[18] but for present purposes it is perhaps enough to give two clear examples, one on each side of the line. Suppose a company has a piece of real property which it acquired some years ago for £1 million. Because of inflation in asset prices, the property is now worth £5 million. If the company sells the property at its current valuation, receiving £5 million in cash in exchange, it will report a profit of £4 million (assuming no taxes or transaction costs) which it may distribute in whole to its shareholders (assuming it has no accumulated realised losses from the past which it must set against the profit). If, however, the company simply re-values the property in its books at £5 million (but does not dispose of it), which is something it might do in order to demonstrate that a takeover bidder was offering too low a price for the company or because it has adopted accounting principles which systematically deal with its assets and liabilities on a "mark to market" basis, it has recorded simply an unrealised profit.[19] Since the property will be reflected in the balance sheet at this higher value, under historic cost accounting a counterbalancing entry is needed, which will probably take the form of a "revaluation reserve".[20] The same principles apply to losses: only realised losses count against the amount of distributable profit.

12–4

What is the interrelationship between the two rules laid down in ss.830 and 831? Since the former applies to all companies and the latter to public companies alone, the latter presumably prevents certain amounts contributing towards a distribution by a public company which would count in the case of a private company distribution. The general rule focusses on successive profit and loss accounts and the public company rule on the current state of the balance sheet. The profit and loss account records the company's financial success (or lack of it) over a period of a year, the balance sheet its assets and liabilities at the end of the year.[21] Although the profit or loss in a particular year inevitably feeds into the balance sheet at the end of the year, the crucial difference between the two tests appears to be that the public company test incorporates legal capital into its constraints on distributions. The general rule, by contrast, requires only cumulative profits to support a distribution. A public company, therefore, must have both cumulative profits of the requisite size and, after the distribution, net assets on its balance sheet at least equivalent to its legal capital and undistributable reserves.

The further difference between ss.831 and 830 appears to be that the latter takes no account of unrealised losses. Under the test for all companies, a company with an accumulated positive balance of realised profits and losses may lawfully distribute them, even if it is carrying extensive unrealised losses (though it may be a breach of directors' duty or imprudent to do so). In the case of public companies the unrealised losses must be taken into account when establishing the amount available for distribution, except to the extent that the unrealised losses are covered by unrealised gains.[22]

Identifying the Amount Available for Distribution

12–5

It is apparent from the foregoing that, in determining whether distributions can be made in accordance with the statutory rules, what counts in most cases are the relevant figures in the company's accounts. This may seem an obvious way to proceed: companies are normally required by the Act to produce accounts annually and, except for small companies, to have them audited, thus providing a degree of verification; and the declaration of a

dividend is normally one of the decisions for the annual general meeting of the shareholders, at which the accounts will be considered as well. At least for public companies, use of the accounts is mandated by the Second Directive in respect of the net asset restriction in s.831[23] and it probably also applies—though this is less clear from the wording of the Directive—to the accumulated net profits rule of s.830. Certainly, the Directive has been interpreted by the drafters in the UK as requiring both tests to be applied by reference to the numbers in the accounts, and that approach has been applied to private companies as well.

The statute calls the accounts which are to be used for assessing the legality of the distribution the "relevant" accounts. Since dividends are paid by individual, not groups of, companies, it is the individual accounts of the paying company, not the group accounts, which are the relevant ones.[24] Beyond that, the general rule is easy to state: the most recent statutory accounts should be used.[25] When that is so, the distribution is lawful so long as it is justified by reference to those accounts and the accounts have been properly prepared in accordance with the Act, or have been properly prepared subject only to matters not material for determining whether the distribution would be lawful.[26] These accounts must have been duly audited, if subject to audit, and, if the auditors' report is qualified, the auditors must also state in writing whether the respect in which the report was qualified is material in determining whether the distribution would be lawful. This statement must have been laid before the company in general meeting, or sent to the members where no meeting is held.[27]

Interim and initial accounts

12–6

In two cases, however, special accounts will be needed. The first is where the distribution would contravene the statutory distribution rules if reference were made only to the last annual accounts. In that event the company may be able to justify the distribution by reference to additional "interim accounts".[28] The second is where it is proposed to declare a dividend during the company's first accounting period or before any accounts have been presented in respect of that period.[29] In that event it will

have to prepare "initial accounts". Initial accounts enable the company to make a distribution before its first set of financial statements is produced. Interim accounts allow the company to take advantage of an improvement in its financial position since the previous statutory accounts were produced. This might occur, for example, when a realised profit had been made on the sale of fixed assets after the date of the last annual accounts and the company wanted to distribute part or all of it to its shareholders without waiting for the next annual accounts. It could also occur if the net trading profits in the current year are seen to be running at a rate considerably higher than formerly and the directors wished to give the shareholders early concrete evidence of this by paying an immediate dividend. In both these examples the previous year's accounts might well not justify the payment and would have to be supplemented by interim accounts.[30]

Interim dividends

12–7

The term "interim accounts", although now well established in the Act, is potentially confusing because it might lead one to suppose that such accounts are needed whenever it is proposed to declare interim (which are very common) or special dividends, in addition to the normal dividend for the year. That is not so. So long as the company has duly complied with its obligations under the Act in respect of its annual accounts for the previous year, it can, in the current year, pay interim or other special dividends in addition to the final dividend for the year so long as these dividends are supported by those accounts.[31] It is only when the last annual accounts would not justify a proposed payment that it is necessary to prepare interim accounts. Normally, however, it will not be necessary to prepare interim accounts merely because the company pays quarterly or half-yearly interim dividends, in anticipation of the final dividend for the year, to be declared by the company when that year's accounts are presented. The previous year's accounts are used to support the interim dividends. The articles normally provide for interim dividends to be paid on the authority of the directors alone, there not being any regularly scheduled meeting of the

shareholders to which the matter could be put.[32]

Adverse developments subsequent to the accounts

12–8

The need for interim accounts arises out of possible improvements in the company's financial position which may have occurred since the last statutory accounts were drawn up. What, however, about the opposite situation, where the company's financial position has deteriorated since the statutory accounts were drawn up? If the directors have discovered that the relevant accounts were so seriously inaccurate that they did not in fact give a true and fair view of the state of the company's affairs and its profits or losses at the time the accounts were signed, they clearly should not recommend a dividend, and should withdraw any recommendation they have made; for the dividend, if paid, would be unlawful on the part of the company.[33] If, however, the relevant accounts truly reflected the position as at their date but there has occurred some financial calamity thereafter, payment of the dividend would not, seemingly, be unlawful under the statute. However, as we have seen, a directors' recommendation as to the level of the dividend is, normally, an essential part of the dividend-setting process. Consequently, the fiduciary duties of directors (discussed in Ch.16) are relevant to this particular decision of the board, as to any other. Payment in such circumstances might constitute a breach of the directors' fiduciary duties—for example, to promote the success of the company—or an act of wrongful trading.[34] The Company Law Review recommended[35] that the statute itself should provide that subsequent losses, of which the company was aware at the time of taking the decision to declare a dividend, should be deducted from the distributable profits shown in the relevant accounts, so that it would be unlawful for the company to make a distribution above that amount. However, this has not been implemented, and so the law on directors' duties fills the gap. One significant difference between the two approaches is that a distribution not permitted by the statutory distribution rules is an unlawful act of the company, which the shareholders cannot ratify, whereas they can in principle ratify a breach of duty by the directors—and may well

want to if the breach consists in the payment of a dividend.[36]

A related and more general issue is that, under modern developments in accounting, there is an increasing emphasis on using current market valuations, rather than historic ones, in the accounts. Such an approach can produce considerable volatility in companies' profits from year to year.[37] Even if no particular calamity has struck the company but "mark to market" accounting policies produce volatility in the company's reported profits, the directors' fiduciary duties would require them to take that fact into account in setting the level of dividend.[38]

However, it is possible that a failure to take post-accounts events into consideration when making a distribution would constitute, not simply a breach of duty on the part of the directors, but an unlawful act on the part of the company. This is because, despite the statutory restrictions on distributions, the Act preserves "any rule of law" restricting dividends.[39] Thus, the common law rule prohibiting the return of capital to shareholders[40] continues in force in relation to distributions. In principle, this is odd, since there is some uncertainty about the scope of the common law principle and to have it running in the background of the precise statutory rules creates a legal risk for companies which is difficult to justify.[41] Nevertheless, in the particular situation under discussion, it may have a useful role to play. Since the common law rule applies on the basis of the financial position of the company at the time the distribution is declared, it would be breached if company made a distribution on the basis of profits shown in the accounts which had been dissipated by the time the directors came to declare the dividend.[42]

Disguised Distributions

12–9

The above rules apply to "distributions" by companies. Beyond making it clear that a distribution need not be in cash and that the definition is intended to be extensive, the statutory definition is not very helpful: "every description of distribution of a company's assets to its members, whether in cash or otherwise".[43] No doubt, this is sufficient to catch the most common form of distribution, the yearly or semi-yearly payment

of a dividend by a company to its shareholders, usually in cash but sometimes with the alternative of subscribing for additional shares in the company. The statutory definition is clearly intended to go beyond that simple situation, by its reference to non-cash dividends, but how far? Does it catch what are sometimes referred to as "disguised distributions", i.e. transactions between a company and a shareholder on other than an arm's length basis, so that value is transferred from the company to the shareholder? In many cases, the implementation of such a transaction will be a breach of duty on the part of the directors who authorised it, but, if the distribution rules apply, the transaction will be an unlawful one (sometimes referred to as an "ultra vires" transaction)[44] on the part of the company as well.

Many, though not all, of the relatively few cases on disguised distributions have been decided on the basis of the common law rule, so it perhaps best to begin by setting it out. In *Ridge Securities Ltd v Inland Revenue Commissioners*[45] Pennycuick J said:

> "A company can only lawfully deal with its assets in furtherance of its objects. The corporators may take assets out of the company by way of dividend, or, with the leave of the court, by way of reduction of capital, or in a winding-up. They may of course acquire them for full consideration. They cannot take assets out of the company by way of voluntary distribution, however described, and if they attempt to do so, the distribution is ultra vires the company."[46]

This passage suggests that the common law rule is broader than the statutory provisions on distributions, for it indicates that any return of corporate assets to the shareholders, which is not justified by a statutory provision or the pursuit of the company's objects, will be unlawful, even if the company has distributable profits. However, if there are distributable profits the statutory provisions discussed above provide a mechanism for making a distribution which does not breach the common law rule. Consequently, if there are no distributable profits, both the statutory and common law rules will be broken, but the common law rule will catch any improper return of assets to the shareholders whether that return is classified as a distribution or not.

12–10

The core element of a disguised contribution is that it is a

transaction between the company and a shareholder which does not purport to be a distribution but which contains a transfer of value to the shareholder[47] because of a discrepancy between the value provided to the company by the shareholder and the greater value provided to the shareholder by the company. It is not necessary that the transaction be a sham to be characterised as a disguised distribution: it is the imbalance in the considerations that is the focus of the courts' concerns. The two main issues arising are: (i) how rigorously will the courts examine the discrepancy in the values provided to and by the company; and (ii) what is the relevance of the good faith or otherwise of the parties to the transaction? As we shall see, these questions are to some degree interlinked.

In some cases the discrepancy is obvious, not necessarily because the value transferred to the shareholder is large but because the shareholder provides nothing or virtually nothing to the company in exchange for the value transferred.[48] These may be thought of as virtually gratuitous transactions. Outside gratuitous transactions, the courts are clearly reluctant to be put in a position where they may have to scrutinise routinely the exchange of values in commercial transactions between shareholders and their companies. In *Progress Property Co Ltd v Moorgarth Group Ltd*[49] Lord Walker stated that the parties should have a "margin of appreciation" in relation to the assessment of the value of what was transferred under the contract, at least where the transaction was entered into in good faith. In other words, it would be necessary to show a very large discrepancy between the values provided and received by the company in such a case for the disguised contribution rule to be triggered.

However, it is clear that good faith will not take the parties to the transaction outside the scope of the disguised distribution rule altogether. In *Re Halt Garage (1964) Ltd*[50] the shareholder and the company (in effect the same person, as is often the situation in these cases) had acted entirely honestly, having been misled by professional advice. However, the company had paid for services which in effect had never been received and the amount paid had to be accounted for to the company (now in liquidation). This case might be distinguished as in effect a

gratuitous transaction. Certainly, in *Aveling Barford Ltd v Perion Ltd*,[51] which was not a gratuitous transaction but a case of a transfer of corporate property to a controlling shareholder at a considerable undervalue, Hoffmann J put some emphasis on the fact that the parties (again in effect a single controlling shareholder) knew and intended the sale to be at an undervalue. In *Progress Property Co Ltd v Moorgarth Group Ltd*[52] Lord Walker thought that sometimes the parties' subjective intentions would be relevant and sometimes they would not, but he did agree that an apparent distribution disguised as an arm's length commercial transaction was the "paradigm case" where subjective intentions were relevant.

> "If the conclusion is that it was a genuine arm's length transaction then it will stand, even if it may, with hindsight, appear to have been a bad bargain [for the company]. If it was an improper attempt to extract value by the pretence of an arm's length sale, it will be held unlawful. But either conclusion will depend on a realistic assessment of all the relevant facts, not simply a retrospective valuation exercise in isolation from all other inquiries."[53]

It may be that a question which it will often be helpful to ask is whether the company would have been willing to enter into the same transaction with a non-shareholder. In *Aveling Barford* the answer was clearly "no", whereas in *Progress Property*, where an honest mistake was made as the existence of a liability between the parties, the answer was "yes" (i.e. the company would not have altered the contractual price if the purchaser had been a non-shareholder, assuming a similar mistake about the liability existed). If the company would not have been willing to enter into the transaction on the same terms with a non-shareholder, it will be caught by the common law rule, but may of course be justified in one of the ways mention by Pennycuick J. Thus, a gratuitous payment to a shareholder will almost always be caught the common law rule, but would be capable of being justified as a distribution by a company with distributable profits.

Intra-group transfers

12–11

In *Aveling Barford Ltd v Perion Ltd*[54] the company, which was solvent (in the sense that it could pay its debts as they fell due) but had accumulated heavy losses, and so was not in a position

to meet the general rule requiring distributions only out of accumulated profits, transferred to another company, controlled by the same person as was its controlling shareholder, an important asset at an undervalue as compared with its current market value.[55] The decision that the transfer was unlawful caused considerable alarm in commercial circles about the legality of intra-group transfers of assets, which are, of course, a common occurrence as a result of the carrying on of business through groups of companies.[56] Such transfers are usually effected on the basis of the value of the asset as stated in the transferring company's accounts (its "book" value), which may not reflect the current market price of the asset.[57] Advice was given that the common law rule might strike down a transaction where a company transferred an asset at book value to another group company, if the asset was in fact worth more than its book value, possibly even where the transferring company had distributable reserves (which was not the case in *Aveling Barford* itself).

The 2006 Act deals with this problem by laying down rules about distributions in kind which apply to both the statutory restrictions on distributions and any other rule of law restricting distributions.[58] The core new provision[59] applies where the transferring company has profits available for distribution.[60] Where this is not the case, the common law will continue to apply unamended, with the apparent requirement that the asset would have to be transferred at market value to be sure of avoiding the risk of infringing the common law rules on distributions. Given the risk of opportunism on the part of controlling shareholders where the company has no distributable profits, this restriction in the new section is probably wise. Assuming distributable profits, the amount of the distribution is assessed under the section at zero, provided the consideration received for the asset is at least equivalent to its book value, and otherwise is restricted to the amount by which the book value exceeds the consideration.[61] If, by contrast, the consideration received upon the transfer of the asset exceeds its book value, the distributable profits of the transferring company are increased by the amount of the excess.[62] Of course, the rules relating to directors' fiduciary duties[63] are unaffected by these changes.

Recovery from members

12–12

No criminal sanctions are provided in the Act in respect of distributions which it renders unlawful, but something (though precious little) is said about the civil consequences. This is done by s.847 which provides that, when a distribution[64] is made to a member which the member knows, or has reasonable grounds for believing, is made in contravention (in whole or in part) of the statutory distribution rules, that person is liable to repay it or, if the distribution was otherwise than in cash, its value.[65] Thus, by virtue of this section, the payment, though "unlawful", is neither void nor voidable but can nevertheless be recovered from any recipient of it who knew or ought to have known that it was unlawful.

This provision has been interpreted to mean that there is liability to repay the dividend if the recipient knows it has not been paid out of distributable profits, even if that person is unaware that such distributions are illegal.[66] The section is thus potentially wide-ranging in its impact on shareholders if this limited definition of what has to be known is coupled with a broad approach to what "knowledge" consists of. This raises the question of whether "reasonable grounds for believing" means that a shareholder is treated as knowing those facts which would have been discovered through proper enquiries (constructive knowledge) or only those to which the recipient turned a blind eye.[67] On the former approach it might be argued that a shareholder who had received the annual reports should be treated as knowing, for example, that the company had no distributable profits or that the auditor had not included the required statement in the case of a qualified report,[68] even if he or she had not in fact read them, and that such knowledge is all that is required to trigger the repayment obligation.[69]

However, this section does not constitute the only basis on which a claim for repayment of dividend can be made against a shareholder. The company may claim repayment at common law.[70] This is on the basis that the payment of an unlawful

dividend amounts to a misapplication by the directors of corporate property and where "the transferee of the assets has knowledge of the facts rendering the disposition ultra vires, that party is under a duty to restore those assets to the company because he is deemed to hold them as constructive trustee".[71] The common law claim, which may or may not be broader than the statutory claim in terms of its definition of knowledge,[72] operates by making the recipient a constructive trustee of the distribution.[73]

Recovery from directors

12–13

The statute provides for no specific remedy against the directors, who authorised the unlawful distribution, but here again the common law provides a remedy.[74] It has been clear since the decision in *Flitcroft*'s case[75] in the nineteenth century that directors who cause the company to pay unlawful dividends are under a duty to restore to the company the value of the assets wrongfully paid away. In *Bairstow v Queens Moat Houses Plc*[76] the principle was applied to hold directors liable where the accounts failed to give a true and fair view[77] of the company's financial situation as a result of accounting irregularities of which the directors were aware. This rule applies whether the distribution was unlawful under the statutory rules (as in *Bairstow*) or by virtue of the common law (as in *Flitcroft's* case). The principle that the directors should restore the value of corporate assets unlawfully paid away is potentially a much broader one than the claim that a shareholder should return to the company dividends improperly paid to that shareholder. The director might have received no dividends him- or herself and yet be liable, in principle, to restore the whole of the amount wrongfully paid out of the company's assets. However, in *Bairstow* the court showed little interest in confining the scope of the directors' liability. The principle in *Flitcroft*'s case, the court held, was not limited to companies which were insolvent at the time of the claim against the director (where the directors' payment would go to benefit the creditors) but applied also to solvent companies, so that the directors might end up putting the company in funds whereby it could pay the dividend all over

again.[78]

A long debated issue is whether the directors' liability to restore the value of the distribution is a strict one or is based on fault, requiring dishonesty or at least negligence. In *Re Paycheck Services 3 Ltd*[79] Rimer LJ thought obiter that the liability was strict, but subject to the court's discretion to grant relief under s.1157 of the Act, where the director had acted "honestly and reasonably".[80] On appeal to the Supreme Court this view was endorsed, again obiter, by three of the justices.[81] Reliance on court discretion to grant relief is obviously less attractive to a director than a fault requirement for initial liability.

12–14

It follows from the principle that the director is liable to restore to the company the assets wrongfully paid away that the amount of that liability is not limited to the loss suffered by the company as a result of the wrongful payment.[82] If, for example, the distribution was not supported by proper set of accounts, the directors are in principle liable to restore the whole of it, even if a properly drawn set would have allowed some lower level of distribution to be made or even the level of distribution which was actually made. However, this last point has been somewhat qualified in subsequent cases. Where there is a properly drawn set of accounts in existence which justify a distribution up to a particular level but the company exceeds that level, it seems that the requirement to make "a distribution out of profits available for the purpose" means that the directors act improperly only to the extent of the excess.[83]

The upshot of these rules is that directors who make improper distributions are more likely to be held liable to compensate the company than the shareholders, who receive them, to restore them to the company. If directors cannot meet the requirements of s.1157, it is probably right that they are liable to the company for the full amount of the unlawful dividend, since the dividend rules, being tied to the accounting numbers, are not difficult to comply with. Although recovery of small amounts of dividend from numerous shareholders is probably not practicable, it is not clear that recovery should be confined to those who receive the dividend with knowledge of its unlawfulness where this practical

objection does not apply.[84]

Finally, one should not forget the possibility of an action by the company against its auditors if it can be shown that their negligence led the directors to approve a defective set of accounts.[85]

Reform

12–15

This chapter has shown that that British law has developed a complex set of rules for the purpose of setting the maximum level of dividend (or other distribution) payable by a company in respect of a particular financial period. Those rules take as their central idea that, for public companies, a distribution should be made only if, after it has been made, the company will retain assets whose value exceeds its liabilities by the amount of the company's legal capital. It is not enough that, post the distribution, the company's assets should equal its liabilities. As it has been put, the requirement is that the assets should exceed the liabilities by a "margin" and that margin is set by the amount of the company's legal capital.[86] It is clearly a sensible measure of creditor protection that a company should be subject to constraints on its freedom to transfer assets to shareholders by way of a distribution (for which it receives nothing tangible in return). There would be little point in giving the creditors priority over the members in a winding up if there were no limits on the company's freedom to return assets to members whilst it is a going concern, and the rules of insolvency law, operating only in the vicinity of insolvency, can be argued not to fill the whole of this regulatory need. The question, however, is whether basing those constraints around the notion of legal capital is the most appropriate technique.

It is sometimes said that the centrality of legal capital in the distribution rules is the result of the Second Directive. This is only partly true. British law adopted the notion of distribution rules based on legal capital at a very early stage of its development in the nineteenth century.[87] And it was in 1948, before the EU was created and long before the UK joined it, that domestic law adopted the position that the share premium must be treated in virtually the same way as the nominal value of the

share for the purposes of legal capital rules,[88] probably the single most important step in making the distribution rules an effective constraint on companies. Whilst the Second Directive undoubtedly did tighten the previously applicable distribution rules, for example, by ruling out "nimble" dividends,[89] it did not introduce a fundamentally new approach into domestic law. The inflexibility of the Second Directive relates rather to fundamental reform of the distribution rules. As far as public companies are concerned, it is not possible for the UK to move away radically from the test of positive net assets plus a margin represented by legal capital for the legality of dividends, without a reform at EU level.[90] Without reform of the public company rules, there is little demand for reform of the rules for private companies, since s.831 does not apply to them anyway.[91] Reform at EU level, of course, could take the form either of the adoption by EU law of a test for distributions no longer based on legal capital or of a decision that the setting of distribution rules is a matter for the Member States, in which the EU has no or only a limited interest.[92]

The central issues

12–16

Whether reform takes place primarily at EU or at domestic level, the question still remains of the strength of the case for reform. There are really three questions which need to be considered, which can only be sketched out here. First, do the current rules provide creditor protection effectively? There are reasons to think that they do not, for the reason that many, perhaps all, classes of creditor do not rely on them. Sophisticated (i.e. large-scale and repeat) creditors, such as banks, place their trust in the terms of their loan contracts, which deal with many risks other than excessive distributions.[93] Trade creditors use other protective techniques, such as retention-of-title clauses or simply not becoming heavily exposed to a single debtor. Finally, involuntary creditors (notably tort victims) necessarily do not rely on the company's balance sheet and really need a guarantee that their claims will be met, which the legal capital rules do not provide (though they may help) but compulsory insurance would—and does in some cases.[94] In other words, it is not at all easy to

identify the beneficiaries of the current rules or, therefore, those who would be harmed if those rules were substantially amended.[95]

Secondly, however, it might be argued that, although the distribution rules may not do much good, they cause little harm and so should be left in place to pick up those cases where self-help or mandatory insurance, for one reason or another, do not deal with the problem. This approach would be acceptable if it were clear that the current distribution rules carry with them no costs—or at least fewer costs than benefits. The second question therefore relates to the costs of the current distribution rules. The argument that the current rules do carry considerable costs was vigorously propounded in the Rickford Report.[96] At the centre of its argument was a change in the role of the company accounts to which, as we have seen, the present distribution rules are tightly linked. The trend from historic cost accounting to reporting on the basis of current values for assets and liabilities, associated with the adoption of International Financial Reporting Standards,[97] is designed to make the accounts more helpful for shareholders and investors, but can be argued to have distorted the creditor protection function of the accounts. Reported profits have become more volatile, whilst retention of the "realised profits" rule for distributions[98] does not permit the company to take advantage of the upward fluctuations in asset values when considering distributions.

Even so, the case for reform is still not made out unless a workable alternative test for the legality of distributions can be advanced. As it happens, there is considerable comparative experience with alternative tests, since the US jurisdictions abandoned legal capital a long time ago and so have had to devise alternative tests, and some Commonwealth countries, notably New Zealand, have taken the same step. The Rickford Report, which gives an account of alternatives, recommended an approach based on a solvency test.[99] This is not an entirely new technique even in domestic law, where it is used in certain limited areas.[100] However, its adoption as the test for the legality of distributions would be novel. In essence, the directors would have to form a judgment about what level of dividend the company could appropriately pay, without endangering its

solvency. The directors already take a similar decision when deciding, within the limits set by the distribution rules, what level of distribution it is appropriate to make to shareholders and how much to keep in the company for investment in future projects. Under the reform proposal the role of the directors' judgment would be expanded to embrace creditors' as well as shareholders' interests.

Since company law is structured so as to require the directors to put the shareholders' interests first, so long as the company is a going concern, the obvious risk with this proposal is that the directors will undervalue the interests of the creditors and overvalue those of the shareholders when taking this new or expanded decision. At present, the rule-based distribution test gives directors no discretion about the maximum which is distributable; under the reform proposal that issue would become a matter of the directors' judgment about the impact of the proposed distribution on the company's ability in the future to meet its debts as they fall due. In order to counteract a pro-shareholder bias the directors would be required to certify (through a public "solvency statement") that the proposed distribution would not affect the company's ability to meet its debts, either immediately or for a period after the distribution (probably one year). Sanctions (probably both criminal and civil) would be attached to directors whose statement was made negligently. Of course, the threat such liability might cause directors to be cautious in their dividend decisions, in which case the alleged pro-shareholder bias of the solvency test would be counteracted, but it might also make directors unenthusiastic about the proposed reform.[101]

---

[1] Theoretically, it is far from clear that there is a real conflict here. If management retains earnings to invest in good projects, which the market evaluates appropriately, then the company's share price will rise and a shareholder seeking income can sell part of the (now more valuable) shareholding. So, the issue is simply the form of the income: dividend or capital gain. But investors may not trust managers to make good investment decisions or may have different time-frames from the managers for realisation of their investments.

[2] Model articles for private companies art.30; for public companies art.70. But directors may unilaterally declare interim dividends. Dividends must be declared pro rata, which is an important protection for minority shareholders. See further Ch.19.

[3] Of course, the shareholders' general governance rights (e.g. to remove directors) may make the board responsive to the shareholders' interests in relation to dividends, or

capital market pressures may produce a similar result.

[4] The rule is derived from art.15(1)(a) of the Second Directive (77/91/EEC).

[5] 2006 Act s.831(1),(2).

[6] 2006 Act s.831(4)(a). On the share premium account see para.11–6.

[7] 2006 Act s.610 and para.11–6.

[8] Below, para.13–11.

[9] An example of an undistributable reserve created elsewhere in the Act is the re-denomination reserve created by s.620 of the Act. See para.11–19. This operates in the same way as the CRR.

[10] Which was the cause of the problems in *Re Cleveland Trust Plc* [1991] B.C.L.C. 424 where the company's constitution provided that certain realised profits "shall be dealt with as capital surpluses not available for the payment of dividends", which provision, however, was overlooked.

[11] Derived from art.15(1)(c) of the Directive.

[12] 2006 Act s.830(2). With one exception, the Act does not distinguish between trading profits and capital profits, such as that made on the ad hoc disposal of the company's head office, and both are distributable. In the case of investment companies, however, only revenue profits are in principle distributable: ss.832–835.

[13] This reverses the common law: *Lee v Neuchatel Asphalte Co* (1889) 41 Ch.D. 1 CA; *Ammonia Soda Co v Chamberlain* [1918] 1 Ch. 266 CA.

[14] See para.11–20.

[15] See Ch.13.

[16] This again reverses the English common law rule which allowed unrealised profits on fixed assets to be distributed: *Dimbula Valley (Ceylon) Tea Co Ltd v Laurie* [1961] Ch. 353. Scots law took a stricter view: *Westburn Sugar Refineries v IRC*, 1960 S.L.T. 297.

[17] 2006 Act s.853(4): they are "such profits or losses of the company as fall to be treated as realised in accordance with principles generally accepted at the time when the accounts are prepared". However, s.841 does lay down that provisions in the accounts (other than revaluation provisions) should be treated as realised losses (for example, depreciation provisions); s.844 requires development costs to be treated as a realised loss, even if stated as an asset in the accounts; and s.843 makes provisions about the realised gains and losses of long-term insurance businesses.

[18] See CLR, *Capital Maintenance: Other Issues*, paras 62–66; ICAEW, *Guidance on the Determination of Realised Profits and Losses in the Context of Distributions under the Companies Act 2006*, Tech 01/09.

[19] If, however, the re-valued asset is later distributed *in specie* to its shareholders (a perfectly possible, if not common, course of action, because distributions do not have to be in cash) the amount of the unrealised profit is treated as a realised profit for the purpose of determining the legality of the distribution: s.846. The purpose of this provision is to make it possible for the company to distribute assets at book value, even if the value to be found in the company's accounts represents a revaluation of the assets. See further below at para.12–11. The provision was driven initially by a perceived need to facilitate de-mergers, in which assets or shares held by a company might be

distributed to its shareholders.

[20] Which is a undistributable reserve unless it represents realised gains: Fourth Directive (78/660/EEC) art.33(2)(c). Where assets are valued on a "mark to market" basis, there will be no revaluation reserve, but the valuation will not add to distributable profits unless the asset is readily convertible into cash (as with gilts or treasury bills).

[21] See further, Ch.21 below.

[22] 2006 Act s.831(4)(c). "This means that, in calculating the amount available for distributions, a public company must reduce the amount of its net realised profits available for distribution by the amount of its net unrealised losses" (ICAEW, above fn.18, at 2.31).

[23] See art.17(1) but cf. art.17(3).

[24] 2006 Act s.836(2). For an example of the problems that ignoring this point can cause see *Inn Spirit Ltd v Burns* [2002] 2 B.C.L.C. 780.

[25] 2006 Act s.836(2).

[26] 2006 Act s.837(2). If the directors knew or ought to have known of a serious defect in the company's accounts, they will not be "properly prepared" nor give a true and fair view, so that any distribution by the company will be unlawful: *Re Cleveland Trust Plc* [1991] B.C.L.C. 424. This may also be the case if the directors are non-negligently ignorant of the defect, but they might then seek to protect themselves against liability by invoking s.1157 (see para.12–13, below).

[27] 2006 Act s.837(3),(4). The auditor's statement may be made whether or not a distribution is proposed at the time when the statement is made and may refer to all or any types of distribution; it will then suffice to validate any distributions of the types covered by the statement: s.837(5). This rule also applies if the directors choose to have an audit, although not obliged to do so. The need for the auditors' statement where the accounts are qualified is frequently overlooked and the resulting distribution will be unlawful: *Precision Dippings Ltd v Precision Dippings Marketing Ltd* [1986] Ch. 447 CA; *BDS Roof-Bond Ltd v Douglas* [2000] 1 B.C.L.C. 401.

[28] 2006 Act s.836(2)(a).

[29] 2006 Act s.836(2)(b).

[30] The requirements for interim and initial accounts are set out in ss.838 and 839. They are onerous for public companies, though interim accounts need not be audited. Listed companies probably meet the statutory requirements routinely since they are subject to the FCA's requirements for regular half-year financial statements. See para.26–3.

[31] 2006 Act s.840.

[32] As do the model articles for both public (art.70) and private (art.30) companies.

[33] *Re Cleveland Trust Plc* [1991] B.C.L.C. 424. See fn.26, above. And the accounts should be revised; there are now statutory provisions for this: see para.21–31.

[34] See above, para.9–6.

[35] Maintenance, para.38.

[36] If the company is in the vicinity of insolvency, the creditors' interests are dominant within directors' duties and the shareholders may not be allowed to ratify a breach. See further para.9–15.

[37] See J. Rickford, “Reforming Capital” (2004) 15 E.B.L.R. 1, especially Ch.4 dealing with pension scheme deficits.

[38] ICAEW, above fn.18, paras 2.3–2.5.

[39] 2006 Act s.851(1)—unless otherwise expressly provided, as discussed in para.12–11.

[40] *Trevor v Whitworth* (1887) 12 App. Cas. 409 HL.

[41] After some havering, the CLR proposed to reverse the position that the common law and statutory regimes operate in tandem and to make the statute the exclusive source of rules in this area (see Formation, para.3.66; Maintenance, Pt II; Completing, para.7.21), but this proposal was not taken up in the Act.

[42] See *Peter Buchanan Ltd v McVey* [1955] A.C. 516 at 521–522, a decision of the High Court of Justice of Eire.

[43] 2006 Act s.829(1). Certain transactions are specifically exempted from the term: an issuance of bonus shares (for the reasons given at para.11–20); transactions regulated elsewhere in the Act (reductions of capital and redemption or re-purchase of shares (see the following chapter)); and distributions on a winding up (regulated by the Insolvency Act 1986): s.829(2). The exclusion of bonus shares permits companies to capitalise unrealised (and thus undistributable) profits, assuming they have power in the articles so to do.

[44] This is a different use of the term “ultra vires” from the one we examined in para.7–29. There it meant a transaction outside the company’s own objects clause; here it means a transaction not permitted by general company law. The directors’ duties implications of self-dealing transactions are considered in paras 16–54 et seq.

[45] *Ridge Securities Ltd v Inland Revenue Commissioners* [1964] 1 W.L.R. 479, 495; approved by Lord Walker in *Progress Property Co Ltd v Moorgarth Group Ltd* [2010] UKSC 55 at [1]. The relatively small number of cases on disguised dividends is probably to be explained on the grounds that the greatest temptation to make such payments is in the period immediately prior to insolvency when specific provisions of the Insolvency Act 1986 (especially ss.238 and 242—transactions at an undervalue—and 239 and 243—preferences) may be easier to use.

[46] See also *MacPherson v European Strategic Bureau Ltd* [2000] 2 B.C.L.C. 683 CA. “In my view, to enter into an arrangement which seeks to achieve a distribution of assets, as if on a winding up, without making proper provision for creditors is, itself, a breach of the duties which directors owe to the company; alternatively, it is ultra vires the company” (per Chadwick LJ); and *Barclays Bank Plc v British and Commonwealth Holdings Plc* [1996] B.C.L.C. 1 (replacement of obligation of an insolvent company to redeem shares by an obligation to pay damages of like amount in respect of the failure to redeem would have been ultra vires if it had not been approved by the court as part of a statutory scheme of arrangement—see Ch.29).

[47] Normally, that shareholder is a controlling shareholder (i.e. the controller is extracting value from the company to the detriment of the non-controlling shareholders or the company’s creditors) but the other party to the transaction may be all the shareholders in the company. See *Clydebank Football Club Ltd v Steedman*, 2002 S.L.T. 109.

[48] See *Re Halt Garage (1964) Ltd* [1982] 3 All E.R. 1016—payment of remuneration where no services rendered held to be a disguised return of capital; *Ridge Securities Ltd v IRC* [1964] 1 W.L.R. 479—payment of interest “grotesquely out of proportion” to the amount lent.

[49] *Progress Property Co Ltd v Moorgarth Group Ltd* [2010] UKSC 55 at [31]–[33].

[50] *Re Halt Garage (1964) Ltd* [1982] 3 All E.R. 1016.

[51] *Aveling Barford Ltd v Perion Ltd* [1989] B.C.L.C. 626.

[52] *Progress Property Co Ltd v Moorgarth Group Ltd* [2010] UKSC 55 at [27]–[31].

[53] *Progress Property Co Ltd v Moorgarth Group Ltd* [2010] UKSC 55 at [29]. This relatively relaxed approach may have been encouraged by the specific statutory controls which exist over substantial property transactions with directors. See paras 16–123 et seq.

[54] *Aveling Barford Ltd v Perion Ltd* [1989] B.C.L.C. 626.

[55] The fact that the payment was made to a company controlled by its main shareholder rather than to the shareholder directly was regarded as "irrelevant".

[56] The nature of the reaction to the decision is set out by the CLR in Maintenance, Pt II.

[57] Since accounts are often, even today, constructed on a "historical" basis, an asset is likely to be shown in the company's balance sheet at the price paid for it (or perhaps less, if it has been depreciated), rather than at its current market value, which might be higher.

[58] 2006 Act s.851(2)—thus embracing not only the common law rules but also rules contained in a statute other than the Act (unless that Act overrides the Act explicitly or by necessary implication).

[59] 2006 Act s.846 (above, fn.19) is also added to the common law rules.

[60] 2006 Act s.845(1)—the amount of the distributable profits needs to be enough to cover any discrepancy between the contract price and the book value but does not need to cover the gap between the contract price and the market value. So, for a transfer at book value, distributable profits of £1 will do.

[61] 2006 Act s.845(2).

[62] 2006 Act s.845(3).

[63] On the duties of directors in self-dealing transactions, see paras 16–54 et seq., below.

[64] Other than a distribution which constitutes financial assistance for the acquisition of the company's own shares given in breach of the Act (see para.13–44, below) or any payment made in respect of the redemption or purchase of shares in the company (para.13–7): s.847(4).

[65] 2006 Act s.847(2).

[66] *It's A Wrap (UK) Ltd v Gala* [2006] 2 B.C.L.C. 634 CA, a case which illustrates the arbitrary nature of many of the legal capital rules. The defendants, who ran a small business which was unsuccessful, paid themselves a modest remuneration, which they could have received entirely lawfully as salary under their service contracts with the company or as directors' fees. See para.11–9, above. However, they were diverted from this course of action by advice that it would be more tax efficient for the remuneration to be paid by way of dividend.

[67] Arden and Chadwick LJJ were divided on this issue in *It's A Wrap (UK) Ltd v Gala* [2006] 2 B.C.L.C. 634 CA —the point not being relevant to the decision in that case. The former is a more natural reading of the language of the section and conforms to the

approach of the common law (see below), whilst the latter is a more natural reading of the language of the Directive (an irregularity of which the recipient "could not in view of the circumstances have been unaware"), which the section implements in the UK.

[68] Above, para.12–5 and see *Precision Dippings Ltd v Precison Dippings Marketing Ltd* [1986] Ch. 447.

[69] It seems fanciful to suppose that any court would hold that a small shareholder in a listed company should study the relevant accounts and the documents accompanying them and read them with an understanding of the Act to check that their dividends are lawfully payable, no matter how much that court may be committed to the doctrine that ignorance of the law is no excuse. In relation to an institutional investor, however, or a "business angel" who has invested in a start-up company, the proposition is not so fanciful.

[70] This basis of claim is specifically preserved by s.847(3).

[71] *Rolled Steel Products (Holdings) Ltd v British Steel Corp* [1986] Ch. 246, 303–304, per Browne-Wilkinson LJ. Not surprisingly, the principle applies equally where the transferee is the director receiving the dividend as shareholder: see *Allied Carpets Plc v Nethercott* [2001] B.C.C. 81; following the earlier case of *Precision Dippings Ltd v Precison Dippings Marketing Ltd* [1986] Ch. 447. Indeed, a director of the company or of another group company is the person in respect of whom the knowledge requirements can most easily be met.

[72] Constructive knowledge appears to suffice for liability at common law: see *Rolled Steel Products (Holdings) Ltd v British Steel Corp* [1986] Ch. 246 at 297–298, per Slade LJ.

[73] See further at para.16–106, below.

[74] If the director is a recipient shareholder, then, of course, he or she may be liable in that way. See fn.71.

[75] *Re Exchange Banking Co* (1882) 21 Ch.D. 519 CA.

[76] *Bairstow v Queens Moat Houses Plc* [2001] 2 B.C.L.C. 531 CA.

[77] On the meaning of this phrase see para.21–14.

[78] The so-called "windfall" objection to the principle of repayment. The objection works, of course, only if the directors have the resources to repay the dividend and if the company could lawfully pay out the money restored by the directors, for example, if properly drawn accounts would reveal a distributable surplus. The court did leave open the possibility that the repaying directors could claim an equitable contribution from the shareholders who had received the improper dividend with notice of the facts.

[79] *Re Paycheck Services 3 Ltd* [2009] 2 B.C.L.C. 309 at [81]–[85] CA. There are two competing lines of authority on the point, as laid out in the judgment in this case.

[80] See para.16–125, below. If the company's claim is brought, as it often is, by a liquidator acting under s.212 of the Insolvency Act 1986 the court has a power to order an account of such amount "as the court thinks just". It is unclear whether this discretion adds to what is available to the court under s.1157 of the Companies Act 2006. See the debate among the judges in *Re Paycheck Services 3 Ltd* [2009] 2 B.C.L.C. 309 CA.

[81] *Re Paycheck Services 3 Ltd* [2011] 1 B.C.L.C. 141 at [45]–[47] (Lord Hope); [124] (Lord Walker); and [146] (Lord Clarke).

[82] *Bairstow v Queens Moat Houses Plc* [2001] 2 B.C.L.C. 531 at 548–550 CA; distinguishing *Target Holdings v Redferns* [1996] A.C. 421 HL. Hence, the risk of a windfall to the company if the directors restore the assets. See fn.78, above. See also *Inn Spirit Ltd v Burns* [2002] 2 B.C.L.C. 780, where a subsidiary had paid a dividend directly to the shareholders of the parent company and the court refused to entertain the question of whether the same amount of dividend could have reached the shareholders' pockets by way of a distribution to the parent and then a distribution by the parent.

[83] *Re Marini Ltd* [2004] B.C.C. 172.

[84] For an attractive argument that shareholders should always be liable to repay the dividend, subject to a defence of change of position, see J. Payne, "Unjust Enrichment, Trusts and Recipient Liability for Unlawful Dividends" (2003) 119 L.Q.R. 583.

[85] See para.22–36, below.

[88] Above, para.11–6.

[89] Above, para.12–3.

[90] Arguably, this statement is subject to the strong qualification that the Second Directive does not require the share premium to be treated as part of legal capital, in which case the impact of the current distribution rules could be heavily reduced by reducing the margin to the amount of the nominal value of the shares. A legal capital test for distributions would be left in place but it would be largely ineffective. See above, para.11–6. On the pros and cons of such an approach see J. Rickford, "Reforming Capital: Report of the Interdisciplinary Group on Capital Maintenance" [2004] E.B.L.R. 1, 51 at 70 et seq.

[91] The one area where "private companies only" reform has occured is in relation to financial assistance (see para.13–55, below), but the financial assistance rules are not a necessary consequence of distribution rules based on legal capital.

[92] The Commission carried out a feasibility study on alternatives to the current capital maintenance regime, but concluded that reform of the Directive was unnecessary. See KPMG, *Feasibility Study on an alternative to the capital maintenance regime established by the Second Company Law Directive*, Berlin, 2008. For a critique of the KPMG approach see K. Fuchs, "The Regulation of Companies' Capital in the European Union: What is the Current State of Affairs?" (2011) 22 E.B.L.R. 237.

[93] See para.31–24, below.

[94] The most pressing classes of claim (from road accident victims and employees) are subject to mandatory insurance, which, suggestively, is required to be taken out by all those engaged in the relevant activity, whether they operate with limited liability or not.

[95] See J. Armour, "Share Capital and Creditor Protection: Efficient Rules for a Modern Company Law" (2000) 63 M.L.R. 355; and "Legal Capital: An Outdated Concept" (2006) 7 E.B.O.R. 5; and the slightly more optimistic conclusions of D. Kershaw, "The Decline of Legal Capital: An Exploration of the Consequences of Board Solvency-based Capital Reductions" in D. Prentice and A. Reisberg (eds), *Corporate Finance Law in the UK and EU* (Oxford: Oxford University Press, 2011) Ch.2.

[96] Above, fn.86, especially Chs 3 and 4.

[97] See para.21–18, below.

[98] Above, para.12–3.

[99] Above, fn.86, Ch.5. For counter-argument see W. Schön, “Comment: Balance Sheet Tests or Solvency Tests—or Both?” (2006) 7 E.B.O.R. 181.

[100] For the operation of such a scheme in relation to reductions of capital out of court by private companies, see para.13–40, below.

[101] That there is personal liability for directors even under the current rules is clear (above, para.12–13) but directors might consider a rule-based system as easier to comply with than one based on a standard.

CHAPTER 13

CAPITAL MAINTENANCE

Acquisitions of Own Shares	13–2
The general prohibition	13–2
Redemption And Re-Purchase	13–7
Introduction	13–7
Creditor protection: all companies	13–11
Private companies: redemption or purchase out of capital	13–12
Protection for shareholders	13–19
Payments otherwise than by way of the price	13–23
Treasury shares	13–24
Failure by the company to perform	13–28
Conclusion	13–29
Reduction of Capital	13–30
Why are reductions of capital allowed?	13–30
The statutory procedures	13–33
Procedure applying to all companies	13–34
Procedure available to private companies only	13–39
Financial Assistance	13–44
Rationale and history of the rule	13–44
The prohibition	13–47
The exceptions	13–50
Exemption for private companies	13–55
Civil remedies for breach of the prohibition	13–56
Conclusion	13–59

13–1

In the previous chapter we analysed at some length the rules limiting the maximum amount a company may make by way of a distribution to its shareholders. There are two clear ways in which a company might seek to circumvent this rule. First, instead of making a distribution (for example, paying a dividend) to its shareholders, it could offer to buy back some of the shares held by them. In this way the company would be returning assets to its shareholders (or some of them), as would occur in a distribution, and so the interests of the creditors would be engaged in such a move. However, the distribution rules would not apply on the basis that this exercise was not a gratuitous transaction (assuming shares repurchased at market price). In addition, the company would be reducing the amount standing in its share capital and, possibly, share premium accounts through

the repurchases. By returning assets to its shareholders in this way a public company would be making it easier to carry out a regular distribution to shareholders in the future. The reduction of the amounts in the capital accounts would lessen the impact of the distribution rule discussed in the previous chapter, i.e. that after the distribution the company should have net assets at least equal to its capital. Perhaps it is not surprising that, for both these reasons, the nineteenth century view was that a company could not acquire its own shares. However, a less draconian approach—close to that eventually adopted in the modern reforms—would have been to subject the acquisition, by analogy, to the distribution rule.

Secondly, a public company could seek directly to reduce the amounts standing in its share capital and other capital accounts, thus facilitating distributions, either immediately after the reduction or in the future. This might seem to be a straightforward and unlawful manipulation by the company of its accounts. Having insisted on the creation of capital accounts in the first place and having imposed a distribution rule by reference to the balance sheet, how could the law permit the company to adjust downwards the amounts stated in those accounts? The answer, of course, is that the company is permitted no such general freedom. However, there are circumstances in which it might be in the interests of all involved—shareholders and creditors alike—to permit a reduction of the amounts stated in the capital accounts. This might be so even in the case of a private company, for example, to avoid the rule about not issuing shares at a discount to nominal value (see para.11–4, above). The law thus provided from an early stage a procedure by which the capital figures might be reduced, whilst protecting shareholder and creditor interests, and in the 2006 reforms an additional and more flexible procedure was added for use by private companies.

We look first at acquisitions by a company of its shares, then at the capital reduction procedure and finally turn to the matter of a company giving financial assistance for the purchase of its own shares. This third issue seems only tangentially related to the issue of legal capital, though it has traditionally been so regarded, and so we take it last.

The general prohibition

13–2

It was held by the House of Lords in the nineteenth century that a company could not acquire its own shares, even though there was an express power to do so in its memorandum, since this would result in a reduction of capital.[1] Assuming that on acquisition by the company the shares were cancelled and nothing put in their place this would necessarily reduce the capital yardstick represented by issued share capital and it could also be regarded as objectionable as a diversion of the company's assets to the shareholders whose shares were acquired, possibly in circumstances in which an ordinary dividend could not be paid because of the rules discussed in the previous chapter. Today, however, acquisitions by companies of shares held by their investors are common. Acquisitions may occur because the company is able to meet its investment needs from internally generated profit and so has less need of externally provided equity finance, or because it wishes to give investors who no longer rate the company an attractive opportunity to exit it, whilst retaining those shareholders who think the company's prospects are good. Thus, the story of the law's development is from prohibition of acquisition to specification of circumstances in which acquisition by a company of its own shares is allowed. As we shall see, the Act now legitimises two forms of acquisition: redemption and re-purchase.

The 2006 Act begins by confirming the common law rule that a limited company "shall not acquire its own shares whether by purchase, subscription or otherwise".[2] If it purports to do so, the company and every officer in default is liable to a fine and the purported acquisition is void.[3] In addition, a public company is prohibited from taking a lien or charge over its own shares (that is also treated as void), except to cover the unpaid liability on a partly paid share.[4] Moreover, this central prohibition is buttressed by two further statutory restrictions.

Acquisition through a nominee

13–3

First, the prohibition could be avoided in certain cases if the company acquired the shares through a nominee rather than directly. Accordingly, in such a case the shares are treated as held by the nominee on its own account and the company is regarded as having no beneficial interest in them.[5] Further, if the nominee does not meet the financial obligations attached to the shares, then that liability will fall on the other subscribers to the memorandum (where the nominee is a subscriber) and in the other cases it will fall on the directors of the company at the time the shares were issued to or acquired by the nominee.[6] In both cases it is a joint and several liability.

However, this liability rule is applied only when the nominee for the company acquires the shares as a subscriber to its memorandum, where the shares are issued by the company to the nominee, or when the nominee acquires the shares partly paid from a third person.[7] It does not apply if the nominee acquires fully paid shares from a third party, even if the nominee does so with funds provided by the company.[8] This suggests that the rationale of the nominee rules is to ensure that the company receives the full price of the shares it issues, which price the company will necessarily have received before the nominee's acquisition of the shares in the case of the acquisition of fully paid shares by a nominee from an existing holder. Furthermore, where shares are acquired by a nominee for the company rather than by the company directly, the shares remain in the hands of the nominee (i.e. are not cancelled) so that the company's capital accounts remain unaffected. This also helps to explain why the general prohibition applies, by contrast, to direct acquisition by the company of even fully paid shares in the company.

Company may not be a member of its holding company

13–4

Secondly, the prohibition on acquisition of own shares is supplemented by s.136 which provides that a company cannot be a member of its holding company, either directly or through a nominee,[9] and any allotment or transfer of shares in the holding company from an existing shareholder in the parent to the subsidiary or its nominee is void. Section 136 is aimed at

preventing the de facto reduction of capital which would result from a subsidiary company acquiring shares in its holding company. The holding company, through its subsidiary, would be returning assets to the selling shareholder.[10] Nevertheless, s.136 does not apply where the subsidiary, at the time of acquisition of the shares in the holding company, is not a subsidiary of it, but later becomes so, for example, as a result of a takeover.[11] The upshot of the exception is that the resources of the holding company may be expended in buying (in effect) its own shares (i.e. when it completes the takeover), but it has been held, nevertheless, that this result cannot be prevented by relying on the general prohibition on a company acquiring its own shares (s.658) rather than s.136.[12] Presumably the desire to permit a useful commercial transaction was thought, in this instance, to outweigh the policy behind the prohibition on the acquisition of own shares.

Specific exceptions to the general prohibition

13–5

This apparently comprehensive set of prohibitions is, however, subject to a number of exceptions. Thus, a company may acquire its own shares by way of gift[13] or by way of forfeiture for non-payment of calls.[14] In the latter case, however, a public company must cancel the shares and reduce its capital account accordingly if the shares are not disposed of within three years of the forfeiture.[15] Both these exceptions are of long-standing. In 1983 there was added a further complex set of rules to deal with possible problems faced by public companies in relation to shares acquired by the trustees of a company's employee share scheme or pension scheme.[16] These do not need to be further analysed in a work of this kind. There are also scattered throughout the Act provisions which permit the court to order that a company acquire shares from a shareholder, as a remedy for some wrong which has been done to that shareholder. The best known example is a compulsory purchase order made by the court under the unfair prejudice provisions, considered in Ch.20.[17] Finally, an acquisition of shares by the company under a reduction of capital carried out under the provisions discussed below is exempted from the prohibition.[18]

13–6

Where a public company is permitted to acquire its own shares, whether directly or through a nominee, then so long as it holds those shares (i.e. does not cancel or dispose of them) and decides to show those shares as an asset in its balance sheet, an amount equal to the value of the shares must be transferred out of profits available for dividend to an undistributable reserve.[19] In effect, the amount available for distribution will be reduced by the value of the purchase. Thus, suppose a public company acquires through a nominee fully paid shares from a third party, providing the nominee with the funds to effect the purchase. The company's net asset value will remain the same, the reduction in cash being offset by the value of the shares acquired. However, by virtue of the requirement to create an undistributable reserve, the amount of the profit available for distribution will be reduced, thus protecting creditors.[20] To put the matter another way, the purchase of the shares is treated as a distribution to the shareholder whose shares the nominee acquired.

Redemption And Re-Purchase

Introduction

13–7

However, the developments in the modern law which most directly qualify the "no acquisition" principle are those which specify the conditions under which a company may redeem or re-purchase its own shares. In these cases the legislature has taken the view that the transactions could be structured in such a way as not to endanger the interests of creditors and that the nineteenth century prohibition was over-inclusive in its reach.

Redeemable shares are shares which are issued on the basis that they are to be or may be redeemed (i.e. bought back) at a later date by the company. The terms of issue may be that the shares will be redeemed at a certain point or that they may be, and in the latter case the option to redeem may be allocated to the shareholder or the company or both. The process of redemption is thus different from the process of re-purchase, where the Act, under certain conditions, permits the company to re-purchase shares, something which would otherwise be

unlawful. With re-purchase, however, there is no obligation upon the company to make an offer to re-purchase or, if one is made, upon the shareholder to accept it. The redemption arrangement, by contrast, will always create some rights or duties to redeem or be redeemed.

Redeemable shares thus involve an element of planning of its financial structure by a company, because the terms of the redemption have to be set at the time of issue. As compared with non-redeemable shares, the holder of a right to have the shares redeemed is not locked into the company and able to dispose of the shares only to an investor who is prepared to buy them at the prevailing market prices. An investor may welcome the right to exit the company at a particular period in the future on terms set out in advance. Such an arrangement makes the redeemable share a hybrid between debt and equity, the debt holder also being someone who normally has a repayment right at an identifiable point in the future and on pre-set terms. Equally, the company may wish to issue redeemable shares over which it has a redemption right, perhaps as an alternative to standard preference shares which can normally also be squeezed out through a reduction of capital.[21]

However, the freedom of the company and the shareholder to agree upon a re-purchase of shares is more useful than the redemption procedure, precisely because it does not involve commitment in advance. It is a mechanism which can be resorted to as occasions arise, whilst the occasions when it is desirable to redeem some of the company’s shares may be difficult to identify in advance. It is true that the re-purchase provisions do not create a mechanism whereby the shareholder can be compelled to sell the shares back to the company or whereby the company can be compelled to buy them, but there are many instances where company and shareholder interests are aligned so that the repurchase is likely to go ahead in those cases, if the law permits it, as it now does. The company may wish to return unwanted equity capital to the shareholders, either because it has no need at all for the financing represented by the shares repurchased or because it wishes to replace that financing with an alternative, such as debt. More questionably, the incumbent board may wish to buy out a group of shareholders

who are causing trouble for the incumbent management—a process referred to in the US literature as "greenmail", presumably after the colour of the dollar bill. As we shall see, there are features of the re-purchase mechanism aimed at combating such opportunism. As for the shareholders, some may welcome the chance to exit the company at an attractive price, whilst those remaining may hope that the company's earnings per share will increase when some of the shareholders are paid off, if indeed it was the case that the capital returned to them was not earning a high reward or if it can be replaced by a cheaper form of financing.

Some history

13–8

Redeemable shares have been permissible since the Companies Act 1929. However, prior to the 1981 Companies Act, only preference shares could be issued as redeemable.[22] Now, however, as s.684 provides, a company may issue shares of any class which are to be redeemed or are liable to be redeemed, whether at the option of the company or the shareholder. However, the 1929 Act made the crucial breakthrough because it introduced a method whereby redemption could take place without prejudicing the interests of creditors and this method was adopted again when, also in 1981, companies were empowered to re-purchase their own shares, whether or not they were issued as redeemable.[23] This method has two crucial creditor-protection features, which are discussed further below. First, the shares may be redeemed or re-purchased only out of distributable profits or (in most cases) out of the proceeds of a fresh issue of shares made for the purposes of the redemption or re-purchase. Insofar as distributable profits (as defined in the previous chapter) are used to fund the redemptions or re-purchases, the creditors have no cause to complain, since the company could have used them to fund dividends instead. Secondly, as far as the capital accounts are concerned, the capital created by the fresh issue will replace the capital removed by the redemption or re-purchase and so the level of protection afforded to the creditors through the capital accounts will be the same. In addition, provided it is disclosed that redemption or re-purchase

of existing shares is the reason for the fresh issue, creditors will not be misled into thinking that the company is issuing shares in order permanently to raise the amounts stated in its capital accounts. However, the impact of a purchase on the company's capital accounts remains to be dealt with if the redemption or re-purchase is funded out of distributable profits. Once the shares are re-purchased the amount stated in the company's capital accounts will be reduced, thus lowering the level of creditor protection. This problem was met by requiring the company to establish an undistributable reserve of an amount equal to the capital reduction when the redemption or re-purchase was funded out of distributable profits. This is known as the "capital redemption reserve" ("CRR").

General restrictions on redeemable shares and on repurchases

13–9

Redeemable shares may not be issued unless the company has also issued shares which are not redeemable.[24] This provision eliminates the risk of the company ending up with no members if and when all the redeemable shares are redeemed.[25] However, the Act makes no stipulation as to the number or value of the non-redeemable shares which are required to have been issued, and so the main form of equity financing for the company could be via redeemable shares. Somewhat similarly, a re-purchase cannot be made if the result would be that there were no longer any members of the company holding non-redeemable shares or only treasury shares remained.[26]

In the case of a public company redeemable shares may not be issued unless the company is authorised in its articles to do so and, in the case of a private company, the articles may exclude or restrict the issue of redeemable shares.[27] Thus, the default rule is in favour of the private company having the power to issue redeemable shares and against it in the case of public companies. This requirement is additional to the provisions discussed in Ch.24 which, in some cases, require the directors to seek the authorisation of the shareholders before they take advantage of the power to issue any type of share. The default rule addresses the logically prior question of whether the company has power to

issue redeemable shares at all. Nevertheless, both sets of rules create a requirement for shareholder consent. The main difference between them appears to be that, in the case of a public company, authority to issue shares can be given to the directors by ordinary resolution.[28] By contrast, a provision in the articles conferring power on the company to issue redeemable shares must either be there from the beginning, and thus be consented to by all the subscribers to the memorandum, or be introduced at a later date by special resolution of the members altering the articles. This higher level of shareholder consent might be thought to be justified by the drain on the company's cash resources that redemption is likely to entail, thus reducing the cash available to pay dividends to the other shareholders or to invest in projects for the benefit of the shareholders as a whole.

A company may purchase its own shares (including redeemable shares),[29] subject to any restriction or prohibition in the company's articles.[30] Thus, the default rule for both public and private companies is that the company does have power to re-purchase its shares. The contrast with the default rule for public companies in relation to redeemable shares (no power to do so) can be explained by the greater protection for shareholders which exists in relation to the actual implementation of the re-purchase, as we shall see below.[31]

13–10

Concern about the impact of the redemption on the non-redeemable shareholders also lies behind a long-running debate concerning the setting of the terms of the redemption. Under the 1985 Act, in order to protect the shareholders whose shares were not to be redeemed (and indeed the offerees of the redeemable shares), the terms and manner of the redemption were required to be set out in the company's articles, so that all would know the position.[32] However, this was thought to be an inflexible requirement and the rule now embodied in the Act is somewhat more flexible.[33] Fixing the terms in the articles remains the default rule,[34] but, provided either the articles or an ordinary resolution of the company permit it, the directors may fix the terms and conditions of the redemption.[35] Protection for the shareholders is maintained by the requirement that the directors,

if they set the terms, must do so before the shares are allotted and the company's statement of capital provided to the Registrar must include the terms of the redemption.[36]

The Act contains two further relevant provisions, one restrictive, the other facultative. First, redeemable shares may not be redeemed until they are fully paid[37]; and the same rule is applied to re-purchases.[38] This avoids the acquisition wiping out the personal liability of the holders in respect of uncalled capital. Secondly, the terms of redemption may provide that, by agreement between company and shareholder, the amount due is to be paid on a date later than the redemption date[39]; whereas the requirement that the shares be paid for on re-purchase is unqualified.[40]

Once the acquisition is effected, the Registrar must be informed in the usual way and supplied with details of the transaction.[41]

Creditor protection: all companies

13–11

The core of the nineteenth century objection to redemption and re-purchase of shares was creditor protection. Therefore, the crucial step in permitting these transactions was producing a solution to the creditor protection issue. That solution, as now embedded in the 2006 Act, consists of two sets of rules: one applying to all companies and a set of relaxations which only private companies can take advantage of. We will look first at the rules applying to all companies and then at the private company relaxations.

The general solution to the creditor protection issue consisted, as noted, of providing that shares could be redeemed or re-purchased only out of distributable profits or out of the proceeds of a fresh issue of shares made for the purpose of the redemption or re-purchase.[42] Any premium payable on redemption or re-purchase must be paid out of distributable profits alone, unless the redeemed or re-purchased shares were issued initially at a premium, in which case the redemption premium may be paid out of the proceeds of a new issue, up to the amount of the premium received on issue or the value of the company's current

share premium account, whichever is the less.[43] This rather complicated rule ensures that the money received on the new issue of shares is paid out only to the extent that it reflects the reduction in the capital accounts arising out of the redemption or re-purchase. If more is needed to redeem the shares, the excess must be provided out of distributable profits.[44]

Once the shares have been redeemed, they are treated as cancelled and the amount of the company's issued share capital is diminished by the nominal value of the shares redeemed.[45] The company may also cancel its repurchased shares. In these cases the company must create an (undistributable) CRR. The amount of this reserve is equivalent to the amount by which the company's issued share capital is diminished by a purchase wholly out of profits[46] or, where the redemption is financed partly by the proceeds of a new issue and partly by distributable profits, the amount by which the proceeds of the new issue fall short of the amount paid on redemption or re-purchase.[47] However, since 2003 the company has had the option not to cancel shares which have been re-purchased but instead to hold them "in treasury", usually for later re-issue. (Treasury shares are considered further at paras 13–24 et seq., below.) This is a significant difference between the redemption and re-purchase procedures. Where shares are held in treasury, the creation of a CRR is unnecessary, because the company's capital accounts are not altered.

Private companies: redemption or purchase out of capital

13–12

In relation to both redemptions and re-purchases of shares, special concessions are made to private companies. It is thought often to be impossible for a private company to redeem or purchase its own shares unless it could do so out of capital and without having to incur the expense of a formal reduction of capital with the court's consent. There might not be sufficient distributable profits, and there might be no available takers for a fresh issue of shares. The whole concept of raising and maintaining capital is, in relation to such companies, of somewhat dubious value. Hence it was decided that, subject to

safeguards, they should be empowered to redeem or buy without maintaining the former capital yardstick. In particular, the aim was to permit entrepreneurs to withdraw assets from their company to fund their retirement rather than by selling control to a larger competitor.

There are in fact now two concessions. The first, introduced in 2013 and applying to repurchases only, simply allows a private company to spend in any financial year up to (the lower of) £15,000 or 5 per cent of the nominal value of its share capital on re-purchases. There are no additional formalities to be met, provided only that the company is authorised by its articles to take this action.[48] This provision is clearly crafted with small-scale but potentially frequent re-purchases in mind, probably linked to employee share schemes, rather than one-shot retirement exercises.

13–13

The second set of provisions, which date back to 1981, are now contained in Ch.5 of Pt 18 of the Act. They have been retained even though there has now been provided to private companies a non-court based method of reducing capital.[49] These rules apply to redemptions as well as repurchases, but, to shorten exposition, the rules are stated here in relation to re-purchases.[50]

Section 709 provides that, subject to what follows, a private company, unless restricted or prohibited by its articles from so doing, may make a payment in respect of the purchase of its shares otherwise than out of its distributable profits or the proceeds of a fresh issue of shares. Such a payment is termed a payment "out of capital".[51] This is a very wide definition and may explain why it was thought there might be some cases where re-purchase "out of capital" would be available, whereas a reduction of capital would not. Suppose a company wishes to acquire shares for a price above their nominal value but has no share premium or capital redemption reserve. No matter how much the share capital account is reduced, this will not free up a sufficient amount of assets to be distributed so as to meet the redemption premium. Assuming, however, that the company has sufficient cash, it may be able to engage in re-purchase by making a payment "out of capital" under s.709. This section

helpfully says that a payment other than out of distributable profits or the proceeds of a fresh issue is a payment out of capital (and so in principle permitted) "whether or not it would be regarded apart from this section as a payment out of capital". Provided the company has the necessary cash and follows the provisions of this part of the Act, that is all it needs to be concerned with.[52]

The extent of any such payment out of capital is restricted, however, to what is described as "the permissible capital payment" ("PCP").[53] In brief, the rule is that any distributable profits and any proceeds of fresh issue made for the purpose of the re-purchase must first be used before resort may be had to a payment out of capital. The rules for determining distributable profits are those considered in the previous chapter in relation to dividends, but there are certain amendments,[54] perhaps the most important of which is that the accounts by reference to which the profits are calculated must be prepared within a period of three months ending with the date of the statutory declaration which the directors are required to make.[55]

The principal protective techniques used in the Chapter in respect of the PCP are, in the case of creditors and shareholders, the requirement for a solvency statement from the directors; in the case of shareholders, the requirement for approval of the proposed re-purchase by special resolution; and, in both cases, the availability of a right of objection to the court.

Directors' statement

13–14

As far as the solvency statement is concerned, the requirements of the Act are similar to those applied in the case of a solvency statement upon a reduction of capital out of court by a private company, including the requirement for the directors to take into account contingent and prospective liabilities.[56] However, they are not the same. In particular, the directors are apparently unable to make the required forward-looking statement in the case of a purchase out of capital, if they intend to wind the company up within 12 months of the proposed payment.[57] And the forward-looking statement, applying to the immediately following year, is required to be a little fuller. The form of the

required statement is that, having regard to the "the amount and character of the financial resources" which will be available to the company in the directors' view, the directors have formed the opinion that the company will be able to carry on business as a going concern throughout that year (and accordingly will be able to pay its debts as they fall due).[58] The emphasis is thus on an opinion which envisages a continuing business, not just the ability of the company to pay its debts.[59] Perhaps because of these differences the statement required on a purchase is termed a "directors' statement" in the Act, whilst the term "solvency statement" is reserved for the statement required of directors under the out-of-court reduction procedure, though both statements are, substantively, statements about the solvency of the company.

The Act applies to the directors' statement the same criminal liability for negligence as is applied to the solvency statement.[60] There is also a limited statutory civil liability in negligence to the company if the company goes into winding up within one year of the payment being made to the shareholder.[61] However, a major difference with the solvency statement is that the directors' statement needs to be accompanied by a report from the company's auditors stating their opinion that the amount of the PCP has been properly calculated and that they are not aware of any matters, after inquiry into the company's affairs, which renders the directors' statement unreasonable in all the circumstances.[62]

Shareholder resolution

13–15

The solvency statement can be said to protect both the creditors of the company and the shareholders who will remain in the company after the re-purchase. An additional protection for the shareholders is the special resolution which is required to be passed within a week of the directors' statement and on the basis of prior disclosure to the members of the directors' statement and auditors' report.[63] In this case it is explicitly provided that the resolution is ineffective if these requirements are not complied with.[64] Further, the resolution will not be effective to authorise the purchase out of capital if the shares to which the

resolution relates vote on the resolution and their votes were necessary to secure its adoption.[65]

Appeal to the court

13–16

The final protective device (for both creditors and dissenting members) is court scrutiny. The Act entitles any member of the company, who has not consented to or voted for the resolution, and any creditor of the company, to apply to the court for the cancellation of the resolution, provided this action is taken within five weeks of the passing of the resolution.[66] The court is given the widest powers. For example, it can cancel the resolution, confirm it, or make such orders as it thinks expedient for the purchase of dissentient members' shares or for the protection of creditors, and may make ancillary orders for the reduction of the company's capital.[67]

Legal capital consequences

13–17

If there is no court objection, the PCP must be made between five and seven weeks after the adoption of the resolution.[68] Upon the re-purchase of the shares, the company's share capital account will be reduced accordingly, but, because this is a permitted payment out of capital, there will be no need to transfer a corresponding amount to the CRR, as would happen in the case of a purchase out of distributable profits.[69] A transfer to CRR will be needed only to the extent that distributable profits have been used in part to fund the purchase of the shares.[70] Where the PCP is greater than the nominal value of the purchased shares (i.e. they are being purchased at a premium), the company is given permission to reduce its CRR, share premium account and its revaluation reserve accordingly.[71] In other words, the company's capital yardstick will in all probability be reduced to the extent of the PCP.[72] This is, after all, the object of the exercise. Overall, indeed, the effect of the foregoing provisions is that a private company may be able to make a return to one or more of its members which will exhaust its accumulated profits available for dividend and reduce both its assets and its capital yardstick.

13–18

As far as the Companies Act is concerned, this is the end of the procedure. However, the Insolvency Act contains a limited mechanism for unscrambling the acquisition. If the company goes into liquidation within one year of the payment being made to the shareholder, that person is liable to return to the company the amount of the payment out of capital, to the extent that this is needed to meet any deficiency of the company's assets in relation to its liabilities.[73]

Protection for shareholders

13–19

We now turn to how the law handles intra-shareholder conflicts arising in redemptions and re-purchases generally (i.e. beyond the specific shareholder protection put in place for acquisitions out of capital). This is particularly needed for re-purchases. Redemptions, if not out of capital, tend not to raise issues for shareholders because the terms of the redemption are set out at the time of issue of the shares. By contrast, it is clear that re-purchases have implications for the relations of shareholders among themselves. Controlling shareholders—or shareholders whom the management wish to see exit the company—may be given the opportunity to sell their shares when other shareholders are excluded, or may be given the opportunity to sell on more favourable terms. The Act contains some provisions aimed at controlling such abuses. These protections vary according to whether the purchase is to be an "off-market" or a "market" purchase. The essential distinction between the two situations is whether the purchase takes place on a "recognised investment exchange", i.e. one authorised by the Financial Conduct Authority.[74] In broad terms this means that it is a market purchase if it takes place on the main market of the London Stock Exchange or on the Alternative Investment Market.[75] Market purchases create fewer risks of abuse since the offer will be a public one and the purchases will be effected at an objectively determined market price. If there is no market, the opportunities for favouritism are much greater.

Off-market purchases

13–20

Under s.694 an off-market purchase can be made only in pursuance of a contract the terms of which have been authorised by a resolution of the shareholders before it is entered into.[76] Until 2013 a special resolution was required, but now an ordinary one will suffice.[77] The contract so approved may take the form of a "contingent purchase contract", i.e. one where the company's obligation or entitlement to purchase shares is subject to a contingency which may arise sometime in the future.[78] Contingent purchase contracts may be particularly useful because they enable the company to bind or entitle itself to purchase the shares of a director or employee upon termination of employment, or, as an alternative to the creation of a new class of redeemable shares, to meet the requirements of a potential investor in an unquoted company who wants assurance that he or she will be able to find a purchaser if the investor needs to realise his investment.[79] The authorisation can subsequently be varied, revoked or renewed by a like resolution.[80]

In the case of a public company the authorising resolution must specify a date on which it is to expire and that date must not be later than five years after the passing of the resolution,[81] so that directors may not subsequently act on a "stale" authority, but no such rule applies to private companies.[82] Moreover, on any such resolution, whether of a public or private company, a member, holding shares to which the resolution relates, may not exercise the voting rights of those shares[83] and if the resolution would not have been passed but for those votes the resolution is ineffective.[84] This is an interesting example of the exclusion of interested shareholders from voting on resolutions in which they have a personal financial interest—a rule which normally does not apply at common law.[85] The resolution is also ineffective unless a copy of the contract or a memorandum of its terms is available for inspection by members, and in the case of a resolution passed at a meeting it must be available at the company's registered office for not less than 15 days before it is held.[86] The same requirements apply on a resolution to approve any variation of the contract[87] or to an agreement whereby the company releases its rights under the contract,[88] since both

variation and release provide opportunities for favourable treatment of insiders just as the initial off-market contract does.

Essentially, the shareholder protection technique deployed in the case of an off-market purchase is the requirement for approval by the shareholders in advance of the terms of the re-purchase contract with the potential sellers excluded from voting.

Market purchases

13–21

Under s.701 a company (necessarily a public one) cannot make a market purchase of its own shares unless the making of such purchases has first been authorised by ordinary resolution of the company in general meeting.[89] Those whose shares are to be purchased are not excluded from voting, for the very good reason that, with a market purchase, their identities will not be known in advance. For the same reason, the shareholders are asked to approve in this case, not a contract (even a contingent one) for the purchase of the shares of specified members, but an authorisation to the company (in practice, its directors) to go into the market in the future and acquire its shares on certain terms. The authorisation may be general or limited to shares of any particular class or description and may be conditional or unconditional[90] but it must specify the maximum number of shares to be acquired, the maximum and minimum prices,[91] and a date on which it is to expire, which must not be later than five years after the passing of the resolution.[92] Thus, the potential for a re-purchase resolution to create uncertainty about the appropriate market price of the share is reduced. Moreover, a copy of the resolution required by the section has to be sent to the Registrar within 15 days,[93] so that the market is formally aware of the company's intentions or at least its powers. Thus, the directors are given a re-purchase authority but one which is exercisable only within the specified limits as to price, amount and timing.

Companies with a premium listing

13–22

In the case of a re-purchase effected by a company with a premium listing on the Main Market of the London Stock Exchange, the Listing Rules add a further and significant set of rules relating to the exercise by the company of the authority conferred upon it under the statutory provisions, whether the re-purchase is on- or off-market. In order to provide some degree of equality of treatment of shareholders in relation to substantial market re-purchases, which might affect the balance of power within the company, the Listing Rules require re-purchases of more than 15 per cent of a class of the company's equity shares[94] to be by way of a tender offer to all shareholders of the class (i.e. to be on-market) or, alternatively, that the full terms of the re-purchase have been "specifically" approved by the shareholders.[95] A standard tender offer is an offer open to all the shareholders of the class on the same terms for a period of at least seven days, capable of being accepted by the shareholders pro rata with their existing holdings, and setting a fixed or maximum price for the purchase.[96] Thus, in a fixed price tender a shareholder holding 2 per cent of the class may sell shares to the company up to the amount of 2 per cent of the shares the company acquires through the tender process. Where the tender is at a maximum (but not a fixed) price, the shareholder has to indicate the price at which it is prepared to sell its shares to the company (a price not exceeding the maximum set by the company) and the company will implement the tender by accepting the lowest-priced offers first and continue up the price curve until it has fulfilled its tender. Even where the purchase is of less than 15 per cent, the company must either use the tender offer procedure or limit the price it is offering to not more than 5 per cent above the market price of the shares over the five days preceding the purchase.[97] This limits the possibilities for favoured shareholders to sell their shares to the company at an above-market price.

Listing Rules also require the prior consent of any class of listed securities convertible or exchangeable into equity shares of the class to which the re-purchase proposal relates, unless the terms of issue of the security provided that the company may re-purchase the relevant equity shares.[98] Thus, in principle, the holders of convertible bonds will need to consent (by special resolution in a separate meeting) to a re-purchase of the equity

shares into which the bonds are convertible. Further, where an off-market transaction is contemplated, the Listing Rules apply their rules concerning related-party transactions.[99] These exclude from voting on the resolution a wider range of persons than would the statute, because the statute excludes only those whose shares are to be re-purchased, whereas the Listing Rules also exclude their associates.[100] Finally, the FCA's Rules not surprisingly address market issues, such as the need for the market to be informed immediately of all the stages of a share re-purchase, from proposal to results[101]; and the need to avoid insider trading by excluding, subject to exceptions, re-purchases during prohibited trading periods.[102] In addition, the Investment Association guidelines[103] propose that companies should always act by special resolution even if the statute permits an ordinary resolution, so that listed companies, or at least those with large institutional shareholdings, will tend to follow this path, even if the statute does not formally require it.

Payments otherwise than by way of the price

13–23

It is conceivable that a company might pay money to a shareholder, not as the price for the shares purchased, but, for example, by way of consideration for:

(a) acquiring any right (for example an option) to purchase under a contingent purchase contract;

(b) the variation of any off-market contract; or

(c) the release of any of the company's obligations under any off-market or market contract.[104]

Although such payments are not strictly part of the purchase price,[105] none of them is normal expenditure in the course of the company's business but rather constitute a distribution to members, and the payment would not have been made but for the fact that the company was minded to agree to purchase its shares. Such payments ought therefore to be treated, so far as practicable, in the same way as the purchase price. It is highly unlikely that a company would contemplate making a new issue of shares for the purpose of financing any such payment.[106] Hence, as a matter of creditor protection, the Act provides that

they must be paid for out of distributable profits only. If this is contravened, in cases (a) and (b) above, purchases are not lawful, and in case (c) the release is void.[107]

Treasury shares

13–24

The question of whether a company can itself hold the shares it acquires is another issue that arises only in relation to re-purchases of shares, since a cancellation rule is imposed in the case of redemptions.[108] Re-purchases of treasury shares were not permitted under the original reforms of 1981, but the subsequent history has been one of progressive liberalisation. In 1998, the Government began consultation over the proposition that companies should be able to retain re-purchased shares and re-issue them, as required.[109] The main argument in favour of this reform was that it would permit companies to raise capital in small lots but at a full market price by re-selling the re-purchased shares as and when it was thought fit to do so. The argument against was that the freedom to re-sell would give boards of directors opportunities to engage in the manipulation of the company's share price, i.e. an argument based on investor protection rather than creditor protection. In 2001, the Government issued a further consultation document which accepted the idea in principle, but only for companies whose shares were traded on a public market, and consulted on further issues related to its implementation.[110] The manipulation danger was thought to be addressed by the separate provisions, contained in the FSMA 2000, dealing with market abuse,[111] and by the restriction on the amount of the treasury shares to 10 per cent of any class (as then required by the Second Directive).

13–25

These proposals were implemented in 2003[112] and Ch.6 of Pt 18 of the 2006 Act re-stated them without substantive change. In 2009, however, following amendments to the Second Directive, the 10 per cent limit was removed.[113] Under the 2003 reforms only "qualifying shares"[114] could be re-purchased. These were publicly traded shares. In 2013, however, the restriction to qualifying shares was removed from the legislation,[115] so that all shares subject to re-purchase may be held in treasury and all

companies may hold treasury shares (the previous approach having necessarily excluded private companies from holding shares in treasury).

The principal restriction today on holding treasury shares is that their re-purchase must have been financed out of distributable profits, even in the case of a private company.[116] This limitation seems to have been imposed because it was thought that there would be little demand for re-purchases out of new issues. This approach also simplifies the legal capital issues. Deployment of distributable profits has no impact on the company's capital accounts. Moreover, no balancing transfer to the capital redemption reserve is required where the re-purchased shares are not cancelled.

Sale of treasury shares

13–26

The underlying rationale of the treasury share scheme is achieved by the provision that treasury shares may at any subsequent time be sold by the company for cash.[117] When this happens, there is a sale by the company of existing shares, not an allotment of new shares. Consequently, the rules requiring shareholder authorisation of directors to allot shares do not apply,[118] thus facilitating speedy action by the directors. The same argument could be advanced in relation to pre-emption rights for shareholders on allotment, but the Act artificially extends the statutory concept of allotment so as to make pre-emption rights applicable on sales of ordinary shares held in treasury.[119] Although shareholders can waive pre-emption rights in advance, the fact that treasury shares are in principle subject to these rights is another example of the attachment of institutional shareholders to pre-emption rights.[120]

Where the proceeds of the sale are equal to or less than the purchase price paid by the company, the money received by the company is to be treated as a realised profit and so potentially distributable by the company.[121] Since the shares will have been acquired out of distributable profits, which were thereby diminished, there can be no creditor-protection objection to the proceeds of the sale being treated as a realised profit. Any excess of the price received by the company over that paid by it,

however, must be transferred to the share premium account.[122] This again seems correct. The increase in the price of the shares presumably represents an increase in the value of the company since the shares were purchased, so that the portion of the price obtained on re-sale which represents that increase in value should be treated as legal capital, just as the premium received by the company on the initial issue of shares would be so treated.[123]

Alternatively, the company may transfer treasury shares to meet the requirements of an employees' share scheme.[124] Or it may do what it could have done when it originally acquired the shares, i.e. cancel them.[125] In this latter case its share capital account must be reduced by the amount of the nominal value of the shares cancelled and an equivalent amount transferred to the capital redemption reserve.[126] In the usual way the company has to inform the Registrar when it disposes of the shares (in either of the permitted ways) or cancels them, giving the necessary particulars.[127]

Whilst the shares are in treasury

13–27

Whilst the shares are still held by the company, it may not exercise any of the rights attached to them (notably the right to vote) and any such purported exercise is void,[128] so that the directors cannot strengthen their position in the general meeting of the company through the use of the treasury shares. Nor may a dividend be paid or any other distribution be made on the treasury shares.[129] However, the company may receive (fully paid) bonus shares in respect of the treasury shares, for otherwise the proportion of the equity represented by the treasury shares would decline. The bonus shares so allotted are to be treated as treasury shares purchased by the company at the time they were allotted.[130] On a subsequent sale of the bonus shares their purchase price is to be treated as nil, so that the full amount received for them must be transferred to the share premium account.[131] This seems correct, since the purpose of issuing bonus shares is to capitalise profits and so the sale price of the bonus shares needs to be added to the company's capital accounts and not be treated as a realised profit.[132]

Failure by the company to perform

13–28

So far, we have assumed that the company has discharged its obligation to redeem shares under the terms of their issue or to re-purchase shares as a result of a contract entered into with the shareholder. Normally, this will be the case but it is conceivable that the company will not fulfil its obligations. This may occur because the company decides to break the contract or because it cannot lawfully perform it since, for example, the new issue of shares has not raised the proceeds expected and the company has inadequate available profits.[133] What are the remedies of a shareholder if the company does not perform the contract to redeem or purchase his shares? Section 735 provides that the company is not liable in damages in respect of any failure on its part to redeem or purchase.[134] It was thought that damages were not an appropriate remedy; it would result in the seller retaining his shares in, and membership of, the company and yet recovering damages (paid perhaps out of capital) from the company.[135] Any other right of the shareholder to sue the company is expressly preserved, but, even then, it is provided that the court shall not grant an order for specific performance (perhaps a more appropriate discretionary remedy) "if the company shows that it is unable to meet the costs of redeeming or purchasing the shares in question out of distributable profits".[136] Apart from this, the section gives no indication of what "other rights" the shareholder might have. There is little doubt that these would include the right to sue for an injunction restraining the company from making a distribution of profits which would have the effect of making it unlawful for the company to perform its contract.

However, the ban on the recovery of damages can be circumvented by using an indirect procedure to this end. In *British & Commonwealth Holdings Plc v Barclays Bank Plc*[137] a consortium of banks had promised to take the shares from the shareholder if the company could not redeem them and the company had promised to indemnify the banks in respect of actions by it which made it impossible for it to redeem. It was held that the section did not prevent the banks suing the

company on its promises, even though the aim of the whole scheme was to ensure that the shareholder would be able to redeem even if the company had no distributable reserves. The case strongly suggests, but does not finally decide, that s.735 is concerned only with the range of remedies available to the shareholder rather than with ensuring that a company never in effect redeems shares out of capital.

A second issue which arises is the position if the company goes into liquidation before the shares have been redeemed or re-purchased. The Act provides that the terms of redemption or purchase may be enforced against the company in winding up,[138] but subject to the restriction on specific performance noted above. However, the shareholder will gain little or nothing by enforcing the contract if the winding up is an insolvent liquidation since the member is a deferred creditor. Any claim in respect of the purchase price is postponed to the claims of all other creditors—and, indeed, to those of other shareholders whose shares carry rights (whether as to capital or income) which are preferred to the rights as to capital of the shares to be redeemed or purchased.[139] Moreover, even this limited right may not be enforced in liquidation if the terms of redemption or purchase provided for performance to take place at a date later than that of the commencement of the winding-up; or if during the period beginning with the date when redemption or purchase was to take place and ending with the commencement of the winding-up, the company did not have distributable profits equal in value to the redemption or purchase price.[140] In this case it appears the member is treated in the winding-up as if there were no obligation on the company to redeem or purchase the shares and as if he or she were still a member of the company.

Conclusion

13–29

Even if one takes the view that legal capital is a central doctrine of company law, the above discussion has shown that it is relatively easy to reconcile it with the acquisition by a company of its own shares, provided certain conditions are met. In particular, acquisitions out of distributable profits, coupled with an appropriate adjustment to the company's capital accounts,

present no threat to the integrity of the doctrine of legal capital. We should note, however, that the facility for a private company to purchase shares out of capital, provided the decision is supported by what is, in effect, a solvency statement, is a legislative move towards the adoption of an alternative to legal capital as the primary protection mechanism for creditors. In the case of re-purchases, where the directors have a greater discretion than in the case of redemptions, shareholder agency problems emerge as an issue which has to be faced, but a combination of the standard techniques of disclosure and shareholder approval, plus in appropriate cases, reliance on the functioning of a public market, ought to be sufficient to address those problems as well.

Reduction of Capital

Why are reductions of capital allowed?

13–30

Acquisition by a company of its shares through redemption or re-purchase is akin to a distribution to shareholders, discussed in the previous chapter, to the extent that assets are returned by the company to its shareholders. Unlike a distribution, which is a gratuitous disposition by the company, in a redemption or re-purchase the company receives shares in exchange for the assets. However, if the shares are immediately cancelled, the acquisition has a largely gratuitous character; and the cancellation generates a reduction in the company's legal capital yardstick. Only if the re-purchased shares are held in treasury does the company obtain value for the price paid, to the extent that the re-purchased shares can be sold again to investors.

A reduction of capital, by contrast, does not necessarily involve a return of assets to shareholders, though it may pave the way for such action, either immediately or in the future. What is reduced in a reduction of capital are the amounts stated in the company's capital accounts.[141] The initial puzzle is why the company should be permitted by the law to take this step at all. Having built a creditor-protecting distribution rule, which turns on the numbers in the company's balance sheet, and especially those in its capital accounts, why should the law allow the

company to reduce those numbers so as to facilitate a distribution to shareholders, either immediately or in the future? More generally, the creditors might conceivably rely on the numbers stated in the capital accounts as an indication of its creditworthiness, that is, as indicating the level of the shareholders' commitment to the company. In principle, the company cannot reduce its capital, but the law has long recognised that it is legitimate to do so in some circumstances, subject to safeguards to protect creditors and to deal with intra-shareholder conflicts, especially conflicts among different classes of shareholder.

13–31

The following are examples of situations where a reduction of the numbers in the capital accounts might be thought to be legitimate. Suppose the company has traded unsuccessfully, so that its net asset value (assets less liabilities) is less than its legal capital. However, the company has found a new investor who is prepared to inject funds into the company so that it can try an alternative business plan. In return, however, the new investor wants to make sure that any profits made in the future can be paid out immediately and that he or she obtains the fair share of those profits. Thus, the investor requires that, before the issue of new shares is made, the value of the company's legal capital accounts is reduced to reflect the value of the existing shareholders' equity in the company. In short, the new investor does not want his investment to fund the past losses of the company nor that existing shareholders should participate in future profits except to the extent that their investments have survived the company's previous trading misfortunes. Both these aims can be achieved if the company's legal capital is reduced to the level of its current net asset value.[142] For example, if the company's net asset value is half its legal capital, the shares having all been issued at par, equilibrium could be achieved by reducing the nominal value of the existing shares by half. The new investor would then obtain twice the number of shares—again assuming issuance at par—when the new money is injected compared to the pre-reduction situation. This ensures fairness as between old and new investors as well as allowing future profits to be distributed immediately they are earned.

There is no particular reason for the creditors to object to this procedure: any contribution by the new investor to the assets of the company improves their position because their claims on the company's assets have priority over those of the shareholders (old and new).

13–32

A situation at the opposite end of the spectrum is where the company has more equity capital than it needs and wishes to reduce its capital by repaying the holders of a particular class of share. Here, the reduction of capital is indeed accompanied by a return of assets to the shareholders. One might say that the return of assets to the shareholders is the driving force behind the transaction and the reduction of capital is the consequent adjustment to the balance sheet which is necessary to reflect what has been done. Here, reduction of capital appears as a functional substitute for a redemption or re-purchase of shares, as discussed in the previous section of this chapter. However, there is one significant difference. The outcome of the reduction procedure is a decision which is binding on all the shareholders in question. This may also be the case in a redemption (depending on how the terms of issue were drafted), but it is not the case in a re-purchase where, as we have seen, the statutory procedure simply makes it lawful for company and shareholder to agree to the re-purchase.[143] In this example, since assets are being returned to shareholders, the interests of creditors can be said to be engaged, whilst the decision as to which shareholders are to be squeezed out of the company and on what terms may provide fertile ground for intra-shareholder conflicts.

The statutory procedures

13–33

For many years successive Companies Acts have provided a procedure through which the reduction can be effected and the claims of shareholders and creditors that the proposed reduction is adverse to their interests can be evaluated and protection provided, if it is due.[144] Before the passage of the 2006 Act there was only one procedure. The general principle was that a company might reduce its capital if the proposal was adopted by a special resolution of the shareholders and confirmed by the

court. However, a private company rarely needed to resort to that procedure. The main situation in which a private company may wish to reduce capital is when it needs to buy out a retiring member of the company or to return to the personal representatives of a deceased member his share of the capital, but has insufficient profits available for dividend to enable it to do so except out of capital. As we have seen above,[145] when companies were empowered to purchase their own shares, special concessions were made to private companies to enable them to do so out of capital and without the need for a formal reduction. This provided a substitute for capital reduction which met the needs of private companies in many cases.[146] However, the 2006 Act introduced an alternative procedure for the reduction of capital by private companies, for which court confirmation is not needed, but it left in place the special rules enabling private companies to re-purchase shares out of capital. In the case of public companies, the 2006 Act left the previous law unchanged.

Whichever procedure is used, the Act provides that a company may reduce its share capital "in any way"[147] but it then sets out three typical situations, which are important because of their different implications for creditor protection. The three situations are: (a) by reducing or extinguishing the amount of any uncalled liability on its shares[148]; (b) by cancelling any paid-up share capital "which is lost or unrepresented by available assets"[149]; (c) by paying off any paid-up share capital which is in excess of the company's wants.[150] Situations (b) and (c) are exemplified by the examples discussed in paras 13–31 and 13–32. In situation (a), which arises only where the company has issued shares as not fully paid up, a shareholder's liability to the company is terminated and so the interests of the creditors are engaged, as are the interests of the shareholders whose commitments to the company are fully paid up.[151]

Procedure applying to all companies

13–34

Under the procedure applying to all companies a reduction of capital requires a special resolution of the members and confirmation by the court.[152] It is the requirement for court

approval which is supposed to provide the necessary protection for creditors (as well as for minority shareholders insofar as the supermajority vote requirement does not achieve that end). The obtaining of shareholder consent is most likely to raise tricky issues where there is more than one class of share and the reduction does not affect all the classes rateably. If the rights of a class of shareholders are affected by the reduction proposal, the separate consent of that class will be required under the "class rights" provisions discussed in paras 19–13 et seq.[153] In particular, companies have often wanted to cancel the shares issued to preference shareholders, whose entitlement to a fixed preference dividend has moved out of line with interest rates in the market, so that the contribution of those shareholders can be re-financed more cheaply. The courts have held that mere cancellation of preference shares does not infringe their rights, provided the preference shareholders are treated in accordance with the rights they would have on a winding up of the company.[154] Thus, the question becomes whether the reduction of the preference shares meets this test. Although the court probably has discretion to approve a reduction of shares which infringes class rights and which has not secured the consent of that class, it is highly unlikely to do so.[155] Where there is only one class of share, the minority's protections are less extensive,[156] though they do have the chance to oppose the confirmation of the reduction by the court under the reduction procedure.

Creditor objection

13–35

Creditor protection is provided solely through the mechanism of court confirmation of the reduction proposal.[157] The practical pressure generated by the procedure used to be towards making the company discharge or secure all the creditors' claims outstanding at the time of the reduction before application was made to the court for confirmation. These were the remedies the court could order in favour of an objecting creditor.[158] In order to avoid the difficulty of identifying every one of a fluctuating body of trade creditors, companies often felt obliged to short-circuit the objection procedure and arrange for a sufficient sum

to be deposited with or guaranteed by a bank or insurance company to meet the claims of all the unsecured creditors before applying for court confirmation. The Company Law Review ("CLR") thought that the interests of creditors were thus often over-protected, because creditors obtained either payment of or security for their previously unsecured debts, whether or not their chances of repayment had been adversely affected by the repayment of capital.[159] However, its proposal for reform did not make its way into the Act. Nevertheless, the story did not end there. In 2006 the European Union amended the Second Directive's provisions on reduction of capital[160] so as to make them less protective of creditors. The Government's initial reaction was not to take advantage of this new flexibility,[161] but after consultation changed its mind.[162] The reduction of capital provisions of the 2006 Act were then amended by statutory instrument[163] so as to make the procedure less protective of creditors, thus achieving, albeit by slightly different wording, the policy recommended by the CLR.

The crucial change is that it is no longer the case that every creditor is entitled to object to the reduction of capital who, at the relevant date, has a debt or claim which would be admissible in proof were the company being wound up.[164] Under the prior law this was the position where the reduction fell within cases (a) or (c) above (para.13–33) or analogous cases.[165] Now, in order to obtain a right of objection the creditor, upon whom the burden of proof lies, must demonstrate not only the existence of situations (a) or (c) and an admissible debt or claim but, in addition, "a real likelihood that the reduction would result in the company being unable to discharge the debt or claim when it fell due".[166] The list of objecting creditors will, in future, thus consist of those who have demonstrated that their claim is subject to real risk of non-payment if the reduction goes ahead, so that the pressure on the company to settle the claims of all creditors should be mitigated, if not eliminated.

Confirmation by the court

13–36

In principle, the court is required to settle a list of creditors and to do so as far as possible without requiring an application from

a creditor to be included on the list.[167] However, this rarely happens.[168] In the past this was because creditors were repaid or secured before confirmation was sought, as indicated above. It would be an unwanted side-wind of the introduction of the "real likelihood" test if court consideration of the claims of objecting creditors became routine. In fact, the court has power to order that the creditor objection procedure shall not apply in a particular case.[169] Under the new test companies are likely to rely on evidence about their business prospects over the next few years as grounds for dispensing with the objection procedure. This is a form of non-statutory solvency certification. To date the courts have been disposed to accept such evidence as grounds for disapplication, stressing in particular that the test is whether the reduction of capital creates a "real risk" of non-payment for the creditor, so that the creditor's continued exposure to the general risks of the company's business is not as such permissible ground for objection.[170]

Even if there are no objecting creditors or their objections have been dealt with, it appears that the court must still have regard to creditor interests when deciding whether to confirm the reduction "on such terms and conditions as it thinks fit". This is shown by the case law concerning reductions of capital because that capital was not represented by available assets (i.e. case (b) above). Here, there is no right of objection for creditors, unless the court so orders.[171] Nevertheless, the courts might regard the interests of creditors in such a case as requiring protection at the confirmation stage. A standard situation falling within case (b) is where a company is required to write down the value of an asset in its accounts (for example, a loan which the company now thinks is unlikely to be re-paid), thus extinguishing its distributable profits. It then wishes to reduce its share capital (and probably its share premium account) so as to permit the distribution of future profits. However, a variation on this theme is where, on the facts, it is possible (and foreseeable at the time of the write-down) that the asset may recover in value. In that case the court may impose a condition that any amount recovered in the future should be put in an undistributable reserve. However, it seems that this will be required only if needed to protect the creditors existing at the time of the write-down[172] and that future creditors are regarded as sufficiently

protected by the publicity requirements for the reduction of capital (below).

13–37

The court may make ad hoc publicity requirements part of its order confirming the reduction, including the requirement that, for a specified period, the company include the words "and reduced" in its name.[173] In addition, the company must deliver a copy of the court order and a statement of its capital,[174] as now reduced, to the Registrar, who must register and certify them[175]; the registration must be publicised; and the reduction takes effect only upon registration.[176] It is conceivable that the reduction in capital would mean that the company no longer met the minimum capital requirements for a public company, in which case it must re-register as a private company before the Registrar will register the reduction (unless the court orders otherwise).[177]

13–38

Minority shareholders as well may seek—or the court may provide—protection at the confirmation stage, even if the requirements for shareholder meetings have been met before application to the court. The two main requirements for shareholder protection which the court will insist on are that the reduction treat the shareholders equitably and that the reduction proposal be properly explained to the shareholders who approved it. It is established that the court must be satisfied on these matters, even if the petition for confirmation is unopposed, as it often will be.[178] However, before a conclusion of inequitable treatment is reached, a significant risk to those shareholders arising out of the reduction must be identified. Thus, in *Re Ransomes Plc*[179] a substantial reduction in share premium account was permitted over the objections of preference shareholders, in order to permit a distribution to the ordinary shareholders, on the grounds that the preference shareholders' entitlements to dividend and return of capital (non-participating in both cases) were not put at risk by the proposed distribution. Even after the proposed distribution, the company would have assets and projected profits well in excess of what was required to meet the preference shareholders' entitlements. In other words, the protection for both creditors and shareholders

now revolves around the same general notion: their objections will be plausible if the reduction is likely significantly to harm their entitlements. The apparently strict procedural requirements of proper explanation have been somewhat qualified by the adoption of a "no difference" rider, i.e. the court may forgive procedural inadequacies if convinced that following the correct procedure would have led to the same result.[180]

Procedure available to private companies only

13–39

The provisions for reduction of capital without court confirmation apply only to private companies. These were introduced in 2006 to mitigate the delay and cost involved in court confirmation. The CLR wished to make this procedure available to public companies as well, but with the rider, needed to meet the requirements of the Second Directive, that creditors entitled to object to the reduction could invoke the court to veto or modify the reduction.[181] In place of court confirmation reliance would be put on a solvency statement made by the directors. For both types of company the procedure with court confirmation (above) would be kept as an alternative, because it allows directors to avoid the potential liabilities arising out of the solvency statement.[182] However, in the event the Act makes the procedure of reduction without court approval available to private companies only (which retain the option of using the court-based procedure).[183]

Solvency statement

13–40

Under the procedure available to private companies only, a special resolution of the shareholders is still required,[184] as discussed above, with the need to hold separate meetings of each class of shares whose rights are varied by the proposed reduction. However, the resolution of the members is to be supported by a solvency statement from the directors rather than confirmed by the court. The essence of the solvency statement is that to some degree it transfers responsibility for the reduction from the court to the directors of the company. This is a gain for the company in terms of speed and cost, but a potential risk for

the directors, in so far as personal liability attaches to their approval of the solvency statement.[185] The solvency statement, which must accompany the resolution, is not an entirely novel device in British company law. It was required as part of the (now repealed) "whitewash" procedure available to private companies wishing to give financial assistance for the purchase of their own shares.[186] Something similar is also to be found in the rules governing share re-purchases by private companies from capital.[187] However, unlike the re-purchase statement, the solvency statement on a reduction of capital is not required to be audited.

The solvency statement is a statement by each director of the company, who must each sign it.[188] Each director asserts in it that he or she has formed an opinion on two matters. The first relates to the company's current financial position at the time the statement is made and is to the effect that "there is no ground on which the company could be found unable to pay (or otherwise discharge) its debts".[189] The second relates to the future and covers a period of one year after the date of the statement. The second opinion comes in two alternative forms.[190] If it is intended to commence the winding up of the company within a year,[191] then the required opinion is that the company will be able to pay or otherwise discharge its debts within 12 months of the winding up. In any other case, it is that the company will able to pay (or discharge) its debts as they fall due within the 12 months after the date of the statement. The required opinion relates only to the payment or discharge of debts (i.e. claims on the company to pay a liquidated sum). However, the directors are required to take into account contingent and prospective liabilities when forming their opinions.[192] The obligation to take into account prospective liabilities is hardly surprising, since these are liabilities which will certainly become due in the future (though it may not be clear precisely when). Contingent liabilities are those which may arise in the future because of an existing legal obligation or state of affairs. In other words, directors have to take account of contingent and prospective liabilities which may become debts payable by the company and imperil its ability to pay its debts, either at the date of the statement or, more likely, as they fall due over the 12-month period required to be considered under the second opinion.[193]

13–41

The transfer of responsibility to the directors is most graphically illustrated by the provision in the Act that it is a criminal offence for a director to make a solvency statement without having reasonable grounds for the opinions expressed in it—unless the solvency statement is not delivered to the Registrar, so that the reduction does not take effect.[194] This criminalises purely negligent conduct on the part of the director, an unusual step, for the Act normally confines criminal sanctions to knowing or reckless misstatements. The greater liability imposed by the Act is an indication of the importance attached by the legislature to the accuracy of the solvency statement. The Act is silent on the civil liabilities of the directors for making an inaccurate solvency statement. The CLR had recommended that there should be an express civil liability on the directors to pay up the capital reduced,[195] but this suggestion is not taken up in the Act. However, it seems clear, at least where the reduction involves a return of assets to the shareholders, that the directors could be liable to the company for the loss suffered on the grounds that they are in breach of their general duties to the company; and that those who receive the assets with knowledge of the breach, whether directors or shareholders, would be liable to restore them to the company, under the principles discussed in relation to unlawful dividends.[196] It is further arguable that the reduction is ineffective where the directors have not made a solvency statement in accordance with the requirements of the Act, in particular where they do not have reasonable grounds for the opinions expressed in it.[197] In this case, the recipients could be said to be liable to return the company's assets, whether they know of the breach or not, subject only to defences such as change of position.[198]

13–42

A copy of the solvency statement must be provided to the members voting on the reduction resolution (in different ways according to whether the vote is at a meeting or by written resolution),[199] but it is expressly provided that failure to observe these requirements does not affect the validity of the resolution passed.[200] The solvency statement must precede the date on which the resolution is passed by no more than 15 days and, if

this is not the case, it appears the resolution cannot be said to be supported by a solvency statement. Thus, if the date for passing the resolution slips for one reason or another, the directors will be required to review and re-issue their solvency statement. After the passing of the resolution, the company has a further 15 days to file the copy of the resolution and the solvency statement and a current statement of the company's capital with the Registrar.[201] It is only with the registration of these documents by the Registrar (thus making them publicly available) that the reduction is effective.[202] Failure to deliver the documents to the Registrar on time does not affect the validity of the resolution but it does constitute an offence on the part of every officer of the company in default.[203]

Reduction, distributions and re-purchase

13–43

Provided a private company observes the requirements of the Act, especially the requirement laid upon the directors to have reasonable grounds for the beliefs stated in the solvency statement, it is provided with an inexpensive and quick method of reducing its capital. It is arguable that, in consequence, the test for the legality of a distribution by such a company is a solvency test. Although the cumulative profits test, discussed in Ch.12, still applies to private companies, the impact of that rule can be mitigated by reducing the company's capital to write off losses, provided the solvency test (and other requirements of the private company procedure) are met. However, it may be that this step does not generate profits for a distribution even after the company's capital has been reduced, even to near vanishing point. Consequently, in this case the net accumulated profits rule will still operate as a binding constraint on distributions, especially if the private company was only thinly capitalised in the first place.[204]

The simplified procedure for reduction of capital without court approval also constitutes a functional substitute for a re-purchase or redemption out of capital, as discussed above.[205] Which will prove more popular where both mechanisms are available? Re-purchase out of capital has the virtue of familiarity and may continue to be used quite widely, at least initially, but

the procedure for reduction out of court seems simpler and cheaper. No auditors' report is required on the directors' solvency statement, no special accounts have to be prepared[206] and there is no right of objection to the court on the part of creditors or non-approving members.

FINANCIAL ASSISTANCE

Rationale and history of the rule

13–44

Section 678 prohibits a public company (or its subsidiary) from giving financial assistance to a person for the acquisition by that person of the company's shares, whether the assistance is given in advance of or after the acquisition. The history of this rule does not constitute one of the most glorious episodes in British company law. The rationale for its introduction was under-articulated; it has proved capable of rending unlawful what seem from any perspective to be perfectly innocuous transactions; and it has proved resistant to a reformulation which would avoid these problems. The CLR eventually decided that, for private companies, the only way forward was to take them out of the scope of the rule altogether, which reform proposal was implemented in the 2006 Act. The CLR also proposed a series of amendments to the rule as it applies to public companies,[207] but most of these were not implemented in the 2006 Act. The Government took the view that the Second Directive prevented significant changes to the rule as it applies to public companies.[208] Since then, the Second Directive itself has been amended,[209] but the Government regarded the relaxations introduced as not significant[210] and pinned its hopes on a more radical reform of the Directive in the future (which, however, seems unlikely to occur).

The rule against financial assistance for acquisitions of the company's shares was not developed by the nineteenth century judges as part of the capital maintenance regime. Rather, it was a statutory reform introduced in the 1929 Act as a result of the recommendations of the Greene Committee.[211] Although conventionally dealt with, as in this work, under the heading of legal capital, it is clear that in formal terms financial assistance

may have no impact on the company's legal capital. If a company lends £100,000 to someone to purchase its shares from another investor and that person does not act as a nominee for the company but acquires the shares beneficially, the company's share capital, share premium account and capital redemption reserve will not be in any way altered by that loan or the subsequent purchase of the shares. The Greene Committee seems to have thought that financial assistance offended against the spirit, if not the letter, of the rule in *Trevor v Whitworth* (company prohibited from acquiring its own shares),[212] but the Jenkins Committee commented that, had the ban "been designed merely to extend that rule, we should have felt some doubt whether it was worth retaining".[213]

Nor does financial assistance necessarily reduce the company's net asset position. If in the above example the borrower is fully able to repay the loan, the company is simply replacing one asset (cash) with another (the rights under the loan) and possibly the latter will earn the company a higher rate of return. For obvious reasons, there is no general principle of creditor protection in company law which prohibits the company from altering the risk characteristics of its assets,[214] and so it is by no means clear that the rule against financial assistance be justified on that ground.

13–45

In fact, the Greene Committee seems to have been heavily, perhaps inappropriately, influenced by the use of financial assistance in schemes which it disapproved of for more general reasons. The Committee thought, in particular, that it was abusive to finance a takeover by a loan and immediately repay it by raiding the coffers of the cash-rich company which is taken over or to use the assets of the new subsidiary as security for the takeover loan.[215] Now that highly leveraged takeovers are a common event, this worry looks somewhat overdone. More to the point, as it has operated in recent years, the financial assistance rule has not proved a major hindrance to such takeovers. In particular, the legislation has for some time permitted a payment of cash from the new subsidiary to the parent provided it is made by way of lawful dividend.[216] This suggests that, at least under the current law, the objection is not

to the use of the subsidiary's cash balances to repay the loan but rather that the aim is to allow repayment only in a way which protects both creditors (by requiring the dividend to be paid in accordance with the distribution rules)[217] and minority shareholders, since dividends are paid pro rata to the proportion of the share capital held.[218] In other words, the financial assistance prohibition does not express a policy about desirable and undesirable takeovers but more general concerns about creditor and minority shareholder protection. However, the financial assistance rule seems too broad to be supported on a simple creditor or minority shareholder rationale, as the above example of a loan to purchase shares suggests. For example, if the loan were for some purpose other than the purchase of shares, the rule would not bite, yet the borrower might be less able to repay the loan than the borrower for the share purchase.

13–46

However, the Greene Committee's recommendations were enacted as s.45 of the 1929 Act, which was re-enacted with amendments as s.54 of the 1948 Act. Section 45 immediately revealed the difficulties involved in drafting a prohibition that was properly targeted on the perceived abuses. That section, despite its relative brevity, became notorious as unintelligible and liable to penalise innocent transactions while failing to deter guilty ones. The Jenkins Committee[219] suggested an alternative approach very similar to that eventually adopted in 1981 in relation to private companies, but at the time no action was taken on that suggestion and, when the Second Company Law Directive was adopted, it became impracticable in relation to public companies.[220]

However, in 1980 two reported cases[221] caused considerable alarm in commercial and legal circles, suggesting, as they did, that the scope of the section was even wider, and the risk of wholly unobjectionable transactions being shot down even greater, than had formerly been thought. Hence it was decided that something had to be done about it in the 1981 Act which was then in preparation. Probably more midnight oil was burnt on this subject than on all the rest of that Act, and the resulting elaborate provisions were certainly some improvement on s.54. However, they still did not produce the holy grail of a precisely

targeted prohibition and, after the controversy generated by the House of Lords decision in *Brady v Brady*,[222] the Government made proposals for the further relaxation of the provisions.[223] However, before these proposals could be implemented, the CLR was established, with the results described above. In the meantime, the difficulty of producing a targeted formula continued to be demonstrated in litigation, for example, in the decision of the Court of Appeal in *Chaston v SWP Group Ltd*[224] in 2002.

The prohibition

13–47

Section 678 distinguishes between assistance given prior to the acquisition and that given afterwards.[225] Its subs.(1) says that, subject to exceptions:

> "where a person[226] is acquiring or is proposing to acquire[227] shares in a public company, it is not lawful for that company, or a company that is a subsidiary of that company,[228] to give financial assistance directly or indirectly[229] for the purpose of that acquisition before or at the same time as the acquisition takes place."

Subsection (3) provides that, subject to the same exceptions, when a person has acquired shares in a company and any liability has been incurred (by that or any other person) for that purpose, it is not lawful for the company or any of its subsidiaries to give financial assistance, directly or indirectly, for the purpose of reducing or discharging that liability, if at the time the assistance was given the company in which the shares were acquired was a public company. Thus, if A (probably a bank) lends B (a bidder) £1 million to enable B (an acquisition vehicle) to make a takeover of a target company and C (probably B's parent company) guarantees repayment, it will be unlawful for any financial assistance to be given by the target, when taken over, to B or C towards the discharge of their obligations to A. However, since private companies are now excluded from the rule, it is important to know whether the target whose shares were acquired and which is now giving the financial assistance is a public company at the time the assistance is given by it. Thus, in this example, if the target company were a public company, it could nevertheless give financial assistance after the acquisition, provided it had by then been re-registered as a private company.

This step is commonly taken in private equity buy-outs.

13–48

Section 683 provides that a reference to a person incurring a liability includes:

> "his changing his financial position by making an agreement or arrangement (whether enforceable or unenforceable and whether made on his own account or with any other person)[230] or by any other means"

It adds that reference to a company giving financial assistance to reduce or discharge a liability incurred for the purposes of acquiring shares includes giving assistance for the purpose of wholly or partly restoring the financial position of the person concerned to what it was before the acquisition. This results in an enormous extension of the normal meaning of "liability" and seems to mean that, before a company can give any financial assistance to *any* person (whether or not the acquirer), it must assess his overall financial position before and after the acquisition[231] and if, afterwards, it has deteriorated, must refrain from any form of financial assistance which is not covered by one of the exceptions—at any rate if there is a causal connection between the deterioration and the acquisition.

The scope of the prohibition depends crucially on what is meant by "financial assistance". Section 677 apparently defines financial assistance, but in fact fails to do so. It defines the types of financial assistance falling within the Act, without defining what "financial" assistance is—as opposed to other forms of assistance. Given that limitation, however, the section widely defines the types of financial assistance which are covered. In addition to such obvious assistance as gifts, loans, guarantees, releases, waivers and indemnities,[232] the definition includes any other agreement under which the obligations of the company giving the assistance are to be fulfilled before the obligations of another party to the agreement,[233] and the novation of a loan or of other agreement; or the assignment of rights under it. If the financial assistance is of one or more of these types, it is irrelevant whether or not the net assets of the company providing it are reduced by reason of the assistance.[234]

However, this is not all. The list of types of financial assistance concludes with "any other financial assistance given

by a company, the net assets[235] of which are thereby reduced to a material extent, or which has no net assets". The effect of this is that, even if the financial assistance does not fall within the specific types that the drafter was able to foresee, it will nevertheless be unlawful if the company has no net assets or if the consequence of the assistance is to reduce its net assets "to a material extent". Only in this last case, and where the company has net assets, does it seem to be a requirement of the definition of financial assistance that the company giving it should suffer a financial detriment. Clearly "materiality" is to be determined to some extent by the relationship between the value of the assistance and the value of the net assets: assistance worth £50 would reduce the net assets materially if they were only £100 but immaterially if they were £1 million. But how far is that to be taken? A company with net assets of £billions might regard a reduction of £1 million as immaterial, but it seems unlikely that judges (most of whom are not accustomed to disposing of £millions) would so regard it. At the other end of the scale, it was held in *Chaston*[236] that an expenditure of £20,000 by a subsidiary, whose net assets were only £100,000, was material, even though the assistance was in relation to the purchase of the shares of the parent at a price of some £2.5 million.[237]

13–49

As noted, however, assistance will not be unlawful unless it is "financial". Merely giving information (even financial information) is not financial assistance.[238] Moreover, even if financial, the assistance must fall within the admittedly wide definition if it is to be unlawful. In other words, the definition of the types of financial assistance which fall within the Act seems intended to be exhaustive. Thus, timely repayment of a debt due, even if done in order to assist the creditor in the purchase of the debtor's shares, would not seem to be caught,[239] but it might be if the debt were paid early because it could then be said to have an element of gift in it.[240]

Finally, the impugned transaction must actually be capable of assisting the acquirer to obtain the shares. In *British & Commonwealth Holdings Plc v Barclays Bank Plc,*[241] the promises, made by the company to banks which could be required to acquire the shares from the shareholder if the

company did not redeem them, were regarded as an “inducement” to the shareholder to acquire the redeemable shares in the first place but not as financial assistance to it to do so. However, in *Chaston*[242] this decision was explained on the basis that the company did not expect to have to meet its obligations at the time the promises were made and it was held that there was no general rule that an inducement could not constitute financial assistance. In *Chaston* the subsidiary of the target had paid for an accountant’s report on the target, which was an inducement to the potential bidder to make the offer, but it was also financial assistance in the sense that it reduced the costs the potential bidder incurred in investigating the worth of the target.

Chaston is another example of the financial assistance prohibition striking down an entirely innocuous transaction. The company (or rather its subsidiary) spent a modest amount of money to further a sale of the company to a purchaser—a sale which was clearly in the shareholders’ interests (as the subsequent litigation showed) and which carried no additional risks (probably the opposite) for its creditors. For this exemplary business decision the directors of the company were found to be in breach of their fiduciary duties to the company (by providing the unlawful financial assistance) and held personally liable to restore the amount of the assistance to the company, i.e. to the purchaser, which sued as assignee of the subsidiary’s claim.[243]

The exceptions

Specific exceptions

13–50

The Act provides a number of exceptions to the prohibitions. Some are unconditional, i.e. always excepted. They include allotment of bonus shares, lawful distributions, anything done in accordance with a court order, reductions of capital or redemptions or purchases of shares under the provisions discussed above, and anything done under the reconstruction provisions discussed in Ch.29.[244] Others are conditional. In the case of a public company the conditional exemptions apply only to certain types of financial assistance, which are thought to be

harmless, for example, where lending money is part of the ordinary business of the company and the financial assistance is provided within that business or the assistance is provided in connection with an employees' share scheme.[245] Even then, the exemption applies only if the company's net assets are not thereby reduced or, if reduced, the reduction is financed out of distributable profits.[246]

13–51

The interesting point about the conditional exceptions for public companies is that they do link the financial assistance rules to the underlying policy of creditor protection. If there is no reduction in net assets or, even if there is, the creditors cannot legitimately complain because the reduction is financed out of distributable profits, the conditional exceptions apply. Article 25 of the Second Directive, in its current version[247] no longer contains a prohibition on financial assistance but allows (but does not oblige) Member States to permit financial assistance, subject to certain conditions. One of these is that the financial assistance should be financed out of distributable profits if it involves a reduction of net assets. It is thus open to the UK government to remove the financial assistance prohibition generally—not just in the specific cases mentioned above—where the assistance is financed from distributable profits. This would establish a firm link between the prohibition and the capital maintenance rules. However, the government has not chosen to take this step, because of the additional conditions set out in art.25, which would also need to be met as part of such a reform and which were regarded as onerous.[248] In particular, it would be necessary to impose liability upon the directors if the assistance were not provided "under fair market conditions", to require the company to carry out due diligence on the creditworthiness of the person receiving the assistance, and to make the assistance subject to a special resolution of the shareholders, acting upon a report from the directors.

General exceptions

13–52

As things stand, however, the main and most debated exception to the prohibition is to be found in s.678 itself. This was intended

to allay the fears aroused by two decisions in 1980.[249] The section relates to the purposes for which the financial assistance was given. It is a necessary pre-condition for liability under s.678 that the financial assistance should have been given for the purpose of the acquisition of the shares. In some cases the company will be able to show that, although the financial assistance was given in connection with an acquisition of shares, it was not given for that purpose.[250] However, the exceptions come into play where that cannot be shown, i.e. where the purpose of the financial assistance was to facilitate the acquisition of shares. Under s.678(2) the prohibition on a company from giving financial assistance before or at the time of the acquisition nevertheless does not apply if:

(a) the company's principal purpose in giving the assistance is not to give it for the purpose of any such acquisition; or

(b) if the giving of the assistance for that purpose is only an incidental part of some larger purpose of the company; and the assistance is given in good faith in the interests of the company.

Subsection (4) provides similarly that the prohibition does not apply to assistance given subsequently to the acquisition if:

(a) the company's principal purpose in giving the assistance is not to reduce or discharge any liability incurred by a person for the purpose of the acquisition of shares in the company or its holding company; or

(b) the reduction or discharge of any such liability is only an incidental part of some larger purpose of the company; and the assistance is given in good faith in the interests of the company.

13–53

On the meaning of these difficult subsections there is an authoritative ruling from the House of Lords in the case of *Brady v Brady*,[251] a case remarkable both because of the extent of the judicial disagreement to which it gave rise and because it was ultimately decided on a ground not argued in the lower courts. It related to prosperous family businesses, principally concerned with haulage and soft drinks. The businesses were run and

owned in equal shares by two brothers, Jack and Bob Brady, and their respective families, through a parent company, T. Brady & Co Ltd (Brady's), and a number of subsidiary and associated companies. Unfortunately Jack and Bob fell out, resulting in a complete deadlock. It was clear that unless something could be agreed amicably, Brady's would have to be wound-up—which was the last thing that anyone wanted. It was therefore agreed that the group should be reorganised, sole control of the haulage business being taken by Jack and that of the drinks business by Bob. As the respective values of the two businesses were not precisely equal, this involved various intra-group transfers of assets and shareholdings which became increasingly complicated as the negotiations proceeded. It suffices to say that, in the eventual agreement, one of the companies had acquired shares in Brady's and the liability to pay for them thus incurred was to be discharged by a transfer to it of assets of Brady's. Bob, however, contended that further valuation adjustments were needed and refused to proceed further unless they were made. Jack then started proceedings for specific performance which Bob defended on various grounds among which was that it would require Brady's to give unlawful financial assistance.

It was conceded that the transfer of assets would be unlawful financial assistance unless, in the circumstances, the prohibition was disapplied by what is now s.678(4). On the face of it one might have thought that the circumstances afforded a classic illustration of the sort of situation that the above provisions were intended to legitimate. At first instance, that view prevailed. In the Court of Appeal,[252] however, while all three judges thought that the conditions relating to "purpose" were satisfied, the majority thought that those relating to "good faith in the interests of the company" were not. In contrast, in the House of Lords it was held unanimously that the good faith requirements were complied with but that the purpose ones were not. Hence the contemplated transfer would be unlawful financial assistance if carried out in the way proposed.

Lord Oliver, in a speech concurred in by the other Law Lords, subjected the purpose requirements to detailed analysis.[253] He pointed out that "purpose" had to be distinguished from "reason" or "motive" (which would almost always be different and wider)

and that the purpose requirements contemplated alternative situations. The first is where the company has a principal and a subsidiary purpose: the question then is whether the principal purpose is to assist or relieve the acquirer or is for some other corporate purpose. The second situation is where the financial assistance is not for any purpose other than to help the acquirer but is merely incidental to some larger corporate purpose.[254] As regards the first alternative, he accepted that an example might be where the principal purpose was to enable the company to obtain from the person assisted a supply of some product which the company needed for its business.[255] As regards the second, he offered no example, merely saying that he had "not found the concept of larger purpose easy to grasp" but that:

> "if the paragraph is to be given any meaning that does not provide a blank cheque for avoiding the effective application of [the prohibition] in every case, the concept must be narrower than that for which the appellants contend."[256]

13–54

The trial judge, and O'Connor LJ in the Court of Appeal,[257] had thought that the larger purpose was to resolve the deadlock and its inevitable consequences; and Croom-Johnson LJ[258] had found it in the need to reorganise the whole group. But if either could be so regarded, it would follow that, if the board of a company concluded in good faith that the only way that a company could survive was for it to be taken over, it could lawfully provide financial assistance to the bidder—the very "mischief" that the legislation was designed to prevent. The logic is, of course, impeccable. But the result seems to reduce the purpose exceptions to very narrow limits indeed and to make one wonder whether the midnight oil burnt on the drafting of the two subsections had achieved anything worthwhile.

The transaction was in fact saved by application of the special provisions then applying to private companies (now repealed). However, the (eventually) successful outcome in that particular case did not get rid of the awkward issues raised by it. The DTI[259] floated the ideas of substituting "predominant reason" for "principal purpose" or relying solely on the test of good faith in the interests of the company. The CLR supported the first of these suggestions.[260] However, these suggestions do nothing to address the arguments put forward in the House of Lords in

favour of giving the purpose requirements a strict interpretation, if the prohibition is to remain a meaningful restriction. In any event, the 2006 Act retains the established wording.

Exemption for private companies

13–55

In the reforms of 1981 a more relaxed regime for private companies was introduced, allowing assistance if this did not involve a reduction of the company's net assets or if the financial assistance was given out of distributable profits.[261] The effect of this provision was to tie the financial assistance rule more clearly to the creditor protection concerns of the rules applying to distributions.[262] The 2006 Act went further and removed the financial assistance prohibition from private companies, as the CLR recommended. Section 678 applies only to financial assistance given to a person who is proposing to acquire shares in a public company or, in relation to an acquisition which has occurred, where the company whose shares have been acquired is at the time of the assistance a public company. Consequently, where a public company is taken over and then re-registered as a private company, it may give financial assistance by way of reducing or discharging the liabilities of the (new) parent incurred for the purpose of the acquisition.[263] The limitation in s.678 thus focusses on the private status of the company whose shares are subject to the acquisition. Consequently, if a private subsidiary gives financial assistance for the purchase of the shares of its public parent, as in the *Chaston* case,[264] that situation will still be caught by the prohibition. Moreover, the prohibition is extended by s.679 to catch financial assistance given by a public company towards the acquisition of shares in its private holding company—an unusual but not impossible situation.[265] In this case the status of the provider of the assistance as a public company subsidiary is enough to trigger the rule.

Civil remedies for breach of the prohibition

13–56

The only sanctions prescribed by the Act for breaches of the prohibition are fining the company[266] and fining or imprisoning

(or both) its officers in default.[267] More important are the consequences in civil law resulting from the fact that the transaction is unlawful. Unfortunately, precisely what these consequences are has vexed the courts both of England and of other countries which have adopted comparable provisions and it is a pity that the current Act did not attempt to clarify the position.[268]

What has caused the courts to make heavy weather of this is the somewhat curious wording of the prohibition down the years. Since the object of the section is to protect the company and its members and creditors, one would have expected it to say that it is not lawful for any person who has acquired or is proposing to acquire shares of a company to receive financial assistance from the company or any of its subsidiaries. That would have pointed the courts in the right direction to work out the consequences. But instead it declares that it is unlawful for the company to give the assistance, and follows that by imposing criminal sanctions on the company and (the one thing that makes good sense) on the officers of the company who are in default. This could be taken to imply (and was so taken by Roxburgh J in *Victor Battery Co Ltd v Curry's Ltd*)[269] that the object of the prohibition was not to protect the company but to punish it and its officers by imposing fines. This calamitous decision continued to be accepted in England, and was cited with apparent approval by Cross J (subsequently a Law Lord) 20 years later,[270] though rejected by the Australian Courts whose decisions helped those in England eventually to see the light. The decision has now been disapproved or not followed in a series of cases[271] and is accepted to be heretical.

13–57

Freed from the fetters of that heresy the courts have since given the section real teeth and it is submitted that the following propositions can now be regarded as reasonably well established:

(a) An agreement to provide unlawful financial assistance, being unlawful, is unenforceable by either party to it. This proposition is undoubted and authority for it is the decision of the House of Lords in *Brady v Brady*.[272] However, if the contract could be performed legally (i.e. without giving

unlawful financial assistance), but unlawful financial assistance is in fact provided, then the legality of the contract depends on whether the other party to it was party to a common design to act unlawfully.[273]

(b) However, the illegality of the financial assistance given or provided by the company normally does not taint other connected transactions, such as the agreement by the person assisted to acquire the shares. It would be absurd if, for example, a takeover bidder which had been given financial assistance by the target company, or by a subsidiary of the company, could escape from the liability to perform purchase contracts which it had entered into with the shareholders of the target. Clearly, it cannot.

(c) This, however, is subject to a qualification if the obligation to acquire the shares and the obligation to provide financial assistance form part of a single composite transaction. The obvious example of this would be an arrangement in which someone agreed to subscribe for shares in a company (or its holding company) in consideration of which the company agreed to give him some form of financial assistance. In such a case the position apparently depends on whether the terms relating to the acquisition of shares can be severed from those relating to the unlawful financial assistance. If they can, those relating to the acquisition can be enforced. If they cannot, the whole agreement is void. The authorities supporting this proposition are the decisions of Cross J in *South Western Mineral Water Co Ltd v Ashmore*[274] and of the Privy Council in *Carney v Herbert.*[275] In essence, the facts of both were that shares of a company were to be acquired and payment of the purchase price was to be secured by a charge on the assets of, in the former case, that company and, in the latter, its subsidiary. The agreed security was, of course, unlawful financial assistance. In the former case, the shares had not been transferred or the charge executed; in the latter, they had. In the former it was held that unless the sellers were prepared to dispense with the charge (which they were not) the whole agreement was void and that the parties must be restored to their positions prior to the agreement. In the latter it was held that the unlawful charge could be severed from

the sale of the shares and that the sellers were entitled to sue the purchaser for the price. Despite the different results, the Privy Council judgment, delivered by Lord Brightman, cited with approval the decision of Cross J in the earlier case. In both cases a fair result seems to have been arrived at and certainly one preferable to that for which the assisted purchaser contended in *Carney*, namely that he should be entitled to retain the shares without having to pay for them.[276] It is therefore to be hoped that even in a single composite transaction the courts will permit severance or order restitutio in integrum unless there are strong reasons of public policy[277] why the whole transaction should be treated as unlawful so as to preclude the court from offering any assistance to any party to it.

(d) If the company has actually given the unlawful financial assistance, that transaction will be void. The practical effect of that depends on the nature of the financial assistance. If it is a mortgage, guarantee or indemnity or the like, the party to whom it was given cannot sue the company upon it.[278] It is that party who suffers,[279] and the company, so long as it realises in time that the transaction is void, need do nothing but defend any hopeless action that may be brought against it. If, however, the unlawful assistance was a completed gift or loan, the company will need to take action if it is to recover what it has lost. And a long line of cases has established that, in most circumstances, this it will be able to do.[280] Its claim may be based on misfeasance, when recovery is sought from the directors or other officers of the company, or on restitution, conspiracy, or constructive trust, when the claim is against them or those to whom the unlawful assistance has passed or who have otherwise actively participated in the unlawful transaction. The most popular basis seems to be constructive trust, the argument being that the directors committed the equivalent of a breach of trust when they caused the company's assets to be used for the unlawful purpose and the recipients became constructive trustees thereof. The constructive trust is discussed further in Ch.16, below.

(e) In the light of propositions (a)–(d) it would also seem to

follow that if the unlawful assistance given by the company is a loan secured by a mortgage or charge on the borrower's property[281] then, so long as the company has rights of recovery from the borrower under proposition (d), it should be able to do so by realising its security. This would certainly be so if the mortgage or charge could be severed from the unlawful loan—which, however, might be regarded as impossible since the consideration given for the mortgage or charge *was* the unlawful loan. But, since the effect of the recent case law is to recognise that the object of the prohibition, despite its wording, is to protect the company, the courts ought not to boggle at the conclusion that the security given to the company can be realised to recover what is due to it by the borrower.

(f) The above points all go to the validity of the financial assistance transaction and transactions associated with it. In addition, the directors who cause the company to give the unlawful finance assistance may be found to have been in breach of their duties to the company and the company is not prevented from enforcing those duties against the directors (normally to recover any loss suffered) by virtue of the fact that the company's act in providing the assistance was unlawful.[282]

13–58

It will therefore be seen that we have come a long way from the time when it was believed that the only likely sanctions were derisory fines on the company and its officers in default. These developments have caused the banking community some alarm, for there is no doubt that banks could find themselves caught out —as indeed they have been in the past.[283] The fact that money passing in the relevant transactions is likely to do so through banking channels inevitably exposes banks to risks.[284] The government proposed, in consequence, that transactions in breach of the prohibition should no longer be void for that reason alone,[285] but the Act did not take up this proposal.

Conclusion

13–59

The elaborate rules on preservation of legal capital, discussed in this chapter, can be justified only if the role of legal capital in controlling distributions by companies is regarded as a valuable one. This was discussed in Ch.12. If the concept of legal capital were removed from the distribution rules, the Act could be simplified substantially by largely removing the rules on reduction of capital—or at least by confining them to their shareholder protection aspects—and simplifying those on the redemption and re-purchase of shares. Creditor protection would then turn on other concepts. The financial assistance rules, by contrast, are a candidate for reform even if the concept of legal capital is maintained, since they have no necessary connection with that doctrine in their current form. Further, the other goals which the financial assistance rules might be thought to promote are, these days, probably better targeted by other provisions with less potential for disruption of innocuous transactions. For example, where a target company in a takeover lends money to, or indemnifies against loss, known sympathisers who buy its shares or where, on a share-for-share offer, either or both of the target and predator companies do so to maintain or enhance the quoted price of their own shares, such practices are now regulated by the provisions on market abuse or by the rules of the Takeover Panel.[286] Again, in the case of abuses in the period prior to insolvency the provisions on wrongful trading may be better targeted.[287] Progress on either front, however, requires changes to EU law in the shape of the Second Directive, since that Directive is still committed to legal capital as a required element in the test for distributions by public companies and its relaxation in 2006 of the financial assistance rules did not go far enough to encourage significant domestic reform.

---

[1] *Trevor v Whitworth* (1887) 12 App. Cas. 409 HL. Since at this stage in the development of UK company law, there was no distinction between public and private companies, the rule necessarily applied to all companies incorporated under the Acts.

[2] 2006 Act s.658(1)—the exemption of unlimited companies from this prohibition shows the connection between the rule and creditor protection.

[3] 2006 Act s.658(2).

[4] 2006 Act s.670. There are also exceptions for companies whose ordinary business includes the lending of money and the charge is part of that business, and for charges taken by a private company before it re-registered as public.

[5] 2006 Act s.660(2). In effect, the nominee arrangement is unwound by the law.

[6] 2006 Act.661(2), but the court has the power to relieve a director or subscriber who has acted honestly and reasonably from the whole or part of the liability: s.661(3)–(4).

[7] 2006 Act s.660.

[8] Though the financial assistance rules, below, para.13–44, may apply.

[9] 2006 Act s.144.

[10] However, if such a transaction were permitted, the parent's legal capital account would not be reduced by the fact that one of its members is a subsidiary—any more than in the case of shares held by a nominee—so that it would not become easier for the parent to make distributions.

[11] 2006 Act s.137(1)(b), (c). The company may not exercise the voting rights attached to the shares, once it becomes a subsidiary (s.137(4)), but this does little to help creditors.

[12] *Acatos & Hutchinson Plc v Watson* [1995] 1 B.C.L.C. 218. Technically, the basis of the decision was that the bidder was acquiring the shares of the its new subsidiary, not its own shares.

[13] 2006 Act s.659(1)—"otherwise than for valuable consideration". This was held to be permissible at common law in *Re Castiglione's Will Trust* [1958] Ch. 549, where the acquisition was through a nominee, but the Act permits direct acquisition in such a case.

[14] 2006 Act s.659(2)(c).

[15] 2006 Act s.662(1)(a),(2),(3)(a).

[16] These problems were originally tackled by the Companies (Beneficial Interests) Act 1983: see now the 2006 Act ss.671–676. The acquisition of such shares is likely to be financed by the company and the company may have a residuary beneficial interest in them which, under these provisions, may be disregarded.

[17] 2006 Act s.659(2)(b), which also lists three other situations where the court may order the purchase of shares, i.e. under ss.98, 721(6) and 759.

[18] 2006 Act s.659(2)(a).

[19] 2006 Act s.669.

[20] This result will be achieved as a result of the requirement in s.831 that a public company may make a distribution only to the extent that its net assets (unchanged in this example) exceed its legal capital and undistributable reserves (increased in the example by the value of the share purchase).

[21] See para.19–35.

[22] Perhaps because they were already capable of being squeezed out through the reduction procedure (see para.19–35, below) and the redemption mechanism allowed the parties to contract about the handling of this process.

[23] The crucial policy document was *The Purchase by a Company of its own Shares* (DTI, 1980, Cmnd. 7944).

[24] 2006 Act s.684(4).

[25] Moreover, after issue, the non-redeemable shares cannot be re-purchased so as to produce the result that the company has only redeemable or treasury shares in issue: s.690(2). Nor may a private company reduce its share capital through the solvency

statement regime so as to produce the result that it has only redeemable shares in issue: s.641(2). In the case of the court-centred reduction, the court could permit such a reduction but, presumably, would be unlikely to do so.

[26] 2006 Act s.690(2). On treasury shares, see below para.13–24.

[27] 2006 Act s.684.

[28] 2006 Act s.551 and see para.24–4.

[29] Thus enabling the company to "redeem" them prior to a date fixed in the terms and conditions if it can reach agreement with the holder.

[30] 2006 Act s.690. A purported re-purchase in breach of the articles would be void, because the company would no longer be protected from the operation of s.658(2) (above, para.13–2); cf. *Hague v Nam Tai Electronics Inc* [2007] 2 B.C.L.C. 194 PC.

[31] See paras 13–19 et seq.—though that protection was somewhat reduced in 2013.

[32] 1985 Act s.160(3).

[33] Though not as flexible as the CLR's recommendation, which would have given the directors an unconditional power to set the terms of the redemption: Final Report I, para.4.5.

[34] 2006 Act s.685(4).

[35] 2006 Act.685(1),(2).

[36] 2006 Act s.685(3).

[37] 2006 Act ss.686(1).

[38] 2006 Act s.691(1).

[39] 2006 Act s.686(2)—otherwise the shares must be paid for on redemption: s.686(3).

[40] 2006 Act s.691(2)—except in relation to a private company purchasing shares pursuant to an employee share scheme. For the problems to which this lack of flexibility can give rise see *Peña v Dale* [2004] 2 B.C.L.C. 508; *Kinlan v Crimmin* [2007] 2 B.C.L.C. 67 (though in the latter case the judge managed to avoid requiring the shareholder to return to the company the money received by resort to the defence of a good faith change of position).

[41] 2006 Act ss.689 (redemption) and 707 (re-purchase).

[42] 2006 Act ss.687(2) and 692(2).

[43] 2006 Act ss.687(3), (4) and 692(2)(b), (3).

[44] To see this, let us suppose that, immediately before the re-purchase, a public company has net assets exactly equivalent to its then legal capital. Thus, it has distributable profits of zero. It raises money by issuing 100 new shares at par at £2 per share. Its share capital account will increase by £200. It uses the money to re-purchase 100 £1 shares at a premium of £1, the shares having been originally issued at par. After cancellation of the re-purchased shares, the company's share capital will be reduced by £100 (the nominal value of the shares). However, by raising the finance for the re-purchase in the way indicated, the company has brought about a net increase in its legal capital of £100 (the increase arising out of the new issue (£200) less the nominal value of the shares re-purchased and cancelled (£100)). It cannot distribute the amount needed to finance the

redemption premium without reducing its net assets below the (newly increased) capital yardstick. It must thus finance the premium on re-purchase out of distributable profits or not pay a redemption premium at all.

[45] 2006 Act s.688.

[46] 2006 Act s.733(2).

[47] 2006 Act s.733(3).

[48] 2006 Act s.692(1ZA).

[49] See para.13–39, below.

[50] 2006 Act s.709(1).

[51] 2006 Act s.709(2).

[52] HL Debs, Grand Committee, Tenth Day, 20 March 2006, cols.31–32.

[53] 2006 Act s.710.

[54] 2006 Act s.711.

[55] 2006 Act s.712(6),(7). The available profits so determined have then to be treated as reduced by any lawful distributions made by the company since the date of the accounts and before the date of the statutory declaration: s.712(3),(4).

[56] 2006 Act s.714(4). On the requirements for a capital reduction see para.13–40, below.

[57] Presumably on the grounds that a re-purchase to enable the founding entrepreneur to retire is in those circumstances unnecessary: the withdrawal can take place as part of the winding up. Section 714(3)(b) requires the statement to say that the directors' opinion is that the company will be able to carry on business as a going concern in the following year "having regard to their intentions with respect to the management of the company during the year", so that they could not honestly make the required statement if they contemplated a winding up.

[58] 2006 Act s.714(3)(b).

[59] As to the opinion about the current position, that relates to the position "immediately following" the date on which the PCP is proposed to be made (s.714(3)(a)) rather than the date of the statement (cf. s.643(1)(a)), so that it requires a small degree of foresight.

[60] 2006 Act s.715 cf. s.643(4) (see below, para.13–41).

[61] Insolvency Act 1986 s.76. See fn.73, below.

[62] 2006 Act s.714(6). The less demanding "solvency statement" approach is used for payments out of capital for purchases under an employee share scheme (s.720A).

[63] 2006 Act s.718(1),(2)—the method of disclosure varying according to whether a written resolution or a resolution at a meeting is contemplated.

[64] 2006 Act s.718(3), cf. s.642(4) applying to solvency statements, where the validity of the resolution is expressly preserved (see para.13–42, below) and reliance is placed instead on criminal sanctions to produce compliance with the disclosure obligation: s.644(7).

[65] 2006 Act s.717, cf. s.695.

[66] 2006 Act s.721(1),(2). The shareholder should know about the resolution but the creditor may not. Consequently, s.719 requires publicity to be given to the resolution, within one week of its adoption, giving the relevant details, including the amount of the PCP and naming a place where the directors' and auditors' reports may be consulted.

[67] 2006 Act s.721(3)–(7).

[68] 2006 Act s.723.

[69] See para.13–12 above. Since this is a private company procedure, there is no question of the company holding the shares in treasury. See para.13–24.

[70] 2006 Act s.734(4).

[71] 2006 Act s.734(3). Section 734(4) deals with the complication where the purchase is partly by way of PCP and partly by way of the proceeds of a fresh issue.

[72] But note the example given above in para.13–13 where the PCP is greater than the company's CRR and share premium account.

[73] Insolvency Act 1986 s.76. The directors of the company who signed the statement are jointly and severally liable with the shareholders unless the director can show reasonable grounds for the opinion set out therein.

[74] 2006 Act s.693(2),(5). See para.25–8, below.

[75] However, even if the trade takes place on a RIE it will not count as a market purchase if the market authorities have given only restricted permission for trading in the shares: s.693(3)(b).

[76] The contract may be entered into before approval, but in that case no shares may be purchased in pursuance of it before approval is obtained: s.694(2)(b). Under s.693A the requirements discussed in this section are somewhat modified in connection with purchases under an employee share scheme, but these variations are ignored here.

[77] The Government's reasons for downgrading minority protection were not particularly persuasive: below, fn.82 at para.25 ("sufficient other safeguards" but none as effective).

[78] 2006 Act s.694(3).

[79] There is the potential small disadvantage to the contingent purchase contract that the consideration for the contract or any variation of it must be provided out of distributable profits (s.705). However, the actual acquisition of the shares may be funded in accordance with the rules discussed in para.13–11.

[80] 2006 Act s.694(4).

[81] 2006 Act s.694(5). Until 2009 the period was 18 months.

[82] BIS, *Implementation of Nuttall Review – Recommendation V: Government response to consultation* February 2013, para.22, interprets s.694 as meaning that a private company cannot give advance approval at all but it is far from clear that this is what the section says.

[83] Or, on a written resolution, vote any shares held: s.695(2).

[84] 2006 Act s.695 which also provides (a) that it applies whether the vote is on a poll or by a show of hands; (b) that, notwithstanding any provision in the company's articles, any member may demand a poll; and (c) that a vote and a demand for a poll by a member's proxy is treated as a vote and demand by the member.

[85] See also s.239 for the exclusion of shareholders from voting on the ratification of their own wrongdoing as directors (para.16–193).

[86] 2006 Act s.696. In the case of a written resolution the information is sent to the members at or before the copy of the proposed resolution: s.696(2)(a). In either case the names of members holding shares to which the contract relates must be disclosed. These rights, being for the benefit of the shareholders, may be waived by their unanimous agreement: *Kinlan v Crummin* [2007] 2 B.C.L.C. 67; and see para.15–8.

[87] 2006 Act ss.697–699.

[88] 2006 Act s.700.

[89] As in the case of off-market purchases, the authority may be varied, revoked or renewed by a like resolution: s.701(4).

[90] 2006 Act s.701(2).

[91] 2006 Act s.701(3). The resolution may specify a particular sum or a non-discretionary formula for calculating the price (for example, by reference to the market price of the shares): s.701(7).

[92] 2006 Act s.701(5). Again, 18 months until 2009. But the purchase may be completed after the expiry date if the contract to buy was made before that date and the authorisation permitted the company to make a contract which would or might be executed after that date: s.701(6).

[93] 2006 Act s.701(8), applying Ch.3 of Pt 3 of the Act to this ordinary resolution.

[94] This includes preference shares which are participating in either dividend or distributions on a winding up: LR, Glossary Definition, "equity share capital".

[95] LR 12.4.2.

[96] LR, Glossary Definition, "tender offer".

[97] LR 12.4.1. If a higher limit is permitted under the market stabilisation rules (see para.30–37), that will replace the 5 per cent figure.

[98] LR 12.4.7–8.

[99] LR 12.3.1. The rule will catch on-market transactions as well if there was an understanding at the time of the resolution to repurchase that a particular related party would be able to take up the offer.

[100] LR 11.1.7(4)(b). "Associate" is defined widely in LR, Glossary Definition, "associate".

[101] LR 12.4.4–6. In addition the legislation requires ex post disclosure of the shares purchased in the directors' annual report: SI 2008/410 Sch.7 Pt 2.

[102] LR 12.2.1. The specific protections against liability for market abuse in the course of share buy-backs are dealt with in para.30–44, below.

[103] Investment Association, *Share Capital Management Guidelines*, 2014, 1.3.1.

[104] These difficulties do not arise in relation to redemptions. Nor does the issue of payment for a variation arise in relation to a market contract since these cannot be varied.

[105] Though, in case (a), the division of the total price between that paid for the option

and that paid on its exercise may be arbitrary.

[106] Which, in case (a) and perhaps (b), would be made some time before any actual purchase and which in cases (a) and (c) might never be made at all.

[107] 2006 Act s.705.

[108] 2006 Act s.688(a).

[109] See DTI, *Share Buybacks*, URN 98/713 (1998).

[110] DTI, *Treasury Shares*, URN 01/500 (2001).

[111] FSMA 2000 Pt VIII, especially s.118 and the Financial Services and Markets Act 2000 (Prescribed Markets and Qualifying Investments) Order 2001 (SI 2001/996). See Ch.30. Note also that a company cannot assign its rights under a contract to re-purchase shares (s.704), whether the shares are to be held in treasury or not, and this rule reduces the company's ability to trade in its own shares.

[112] By the Companies (Acquisition of Own Shares) (Treasury Shares) Regulations 2003 (SI 2003/1116) and the No.2 Regulations (SI 2003/3031). See G. Morse, "The Introduction of Treasury Shares into English Law and Practice" [2004] J.B.L. 303.

[113] This was achieved through the repeal of s.725.

[114] 2006 Act s.724(1),(2), as originally enacted.

[115] 2006 Act s.741(1),(2), as amended.

[116] 2006 Act s.724(1)(b).

[117] 2006 Act s.727(1)(a). Cash is widely defined in s.727(2). There is one minor restriction: where a company has been the subject of a successful takeover offer (which included the treasury shares) and the bidder is using the statutory squeeze-out procedure, the treasury shares can be sold only to the bidder: s.727(4) and see para.28–69, below.

[118] See para.24–4, below.

[119] 2006 Act s.560(3).

[120] See para.24–14, below.

[121] 2006 Act s.731(2).

[122] 2006 Act s.731(3). On the share premium account see para.11–6.

[123] Of course, what is transferred to the share premium account is the excess above the nominal value of the share (see para.11–6), whereas what is being transferred here is the excess above the purchase price.

[124] 2006 Act s.727(1)(b).

[125] 2006 Act s.729. It may be obliged to cancel them if the shares cease to be "qualifying shares": s.729(2),(3).

[126] 2006 Act ss.729(4) and 733(4). The directors may do this without following the reduction of capital procedure: s.729(5).

[127] 2006 Act ss.728 and 730.

[128] 2006 Act s.726(1),(2).

[129] 2006 Act s.726(3)—including a distribution on a winding up.

[130] 2006 Act s.726(4)(a),(5). On capitalisation issues see para.11–20.

[131] 2006 Act.731(4)(b).

[132] By the same token, the value treasury shares acquired by purchase will be reduced by the bonus issue, thus reducing the amount of realised profit arising on their re-sale.

[133] The company could, presumably, protect itself from being in breach by expressly providing in the contract that the purchase is conditional upon its having the needed proceeds or sufficient profits.

[134] 2006 Act s.735(2).

[135] In any event, the section does not protect the company against paying damages in all cases as a result of its failure to redeem. See *British & Commonwealth Holdings Plc v Barclays Bank Plc* [1996] 1 W.L.R. 1 CA, below.

[136] 2006 Act s.735(2),(3). This ignores the possibility that it has adequate proceeds of a fresh issue but has nevertheless decided to break the contract. Surely the seller should then be entitled to specific performance?

[137] *British & Commonwealth Holdings Plc v Barclays Bank Plc* [1996] 1 W.L.R. 1 CA. The case also raises issues about financial assistance which are discussed at para.13–49, below.

[138] 2006 Act s.735(4). Hence in respect of these shares the seller will cease to be a member or "contributory" and will become a creditor in respect of the price.

[139] 2006 Act s.735(6). In a solvent liquidation the shareholder may be worse off than if shares had not been redeemed or purchased, if the share gave a right to participate in surplus assets but the purchase or redemption price did not reflect the value of this right.

[140] 2006 Act s.735(5).

[141] 2006 Act s.641, introducing the reduction procedures, in terms applies only to the share capital account, but the share premium account and capital redemption reserve are treated as share capital for the purposes of the reduction procedure: ss.610(4) and 733(6).

[142] There are other techniques which could be used to achieve the same result, such as issuance at par of a new class of share to the new investor where the new class has a lower par value than and priority as to dividends over the existing shares, but issuing shares of the same class after a reduction may reduce the risk of intra-shareholder disputes in the future.

[143] See para.13–7, above.

[144] Reduction of capital is to be distinguished from the situation where the company simply divides its share capital into shares of a smaller nominal value or consolidates them into shares of a larger nominal value, but where the aggregate nominal value of the shares (and thus the company's share capital) remains the same, though there is a smaller or a larger number of shares representing that aggregate. These steps present no creditor protection issues and the matter is one for the shareholders alone (s.618). However, there are potential issues of intra-shareholder conflict with divisions: see *Greenhalgh v Arderne Cinemas* [1946] 1 All E.R. 512 CA; and para.19–18, below.

[145] Above at para.13–13.

[146] 2006 Act s.617(5) makes it clear that a repurchase or redemption of shares in accordance with the Act does not fall foul of the prohibition on altering share capital contained in that section.

[147] 2006 Act s.641(3).

[148] 2006 Act s.641(4)(a)—in the unlikely event of its having uncalled capital.

[149] 2006 Act s.641(4)(b)(i). Technically share capital (a notional liability) cannot be "lost" (see Ch.11, above) but may well be "unrepresented by available assets". However, this does not seem to have bothered the courts which have interpreted "lost" to mean that the value of the company's net assets has fallen below the amount of its capital (i.e. its issued share capital, and, if any, its share premium account and capital redemption reserve) and that this "loss" is likely to be permanent.

[150] 2006 Act s.641(4)(b)(ii).

[151] Where there is a reduction of capital by means of extinguishing uncalled capital, it is normal accounting practice to create a reserve to reflect the reduction. Section 654 says the reserve is to be undistributable, but allows the Secretary of State to specify cases where the prohibition does not apply. Making ample use of this power reg.3 of the Companies (Reduction of Share Capital) Order 2008/1915 says the reserve is to be treated as a realised profit under both procedures, unless the court order, the company's articles or a company resolution specify otherwise.

[152] 2006 Act s.641(1)(b). The previous requirement that the company have power under its articles to reduce its capital has been removed.

[153] The issue of how to identify of the rights of preference shareholders is discussed in Ch.23.

[154] The proposition that the preference shareholders are treated in breach of their rights by cancellation of their shares and deprivation of a favourable dividend entitlement was decisively rejected by the Court of Appeal in *Re Chatterly-Whitfield Collieries* [1948] 2 All E.R.593, so that the issue has become whether the terms of the reduction are in accordance with the rights which they would have on a winding up. The effect of the decision was to make preference shares in effect redeemable by the company, even if not formally issued as redeemable, provided the company could satisfy the requirements of the reduction procedure. It is to be noted that a reduction in order to replace preference shares with a cheaper form of financing does not clearly fall within any of the three categories specified in s.641(4) but it does fall within s.641(3)—reduction "in any way": *Re Hunting Plc* [2005] 2 B.C.L.C. 211.

[155] 2006 Act s.645 in terms requires only a resolution of the company, not of the class in question.

[156] These possibilities are also discussed in Ch.19.

[157] 2006 Act s.645(1).

[158] 2006 Act s.648(2).

[159] Strategic, para.5.4.5.

[160] Directive 2006/68/EC amending art.32 of Directive 77/91/EEC (now art.36 of the 2012 version of that Directive).

[161] DTI, *Implementation of the Companies Act 2006*, February 2007, Ch.6.

[162] *The Government response to the consultation on the implementation of amendments to the 2nd Company Law Directive*, 28 October 2007.

[163] The Companies (Share Capital and Acquisition by Company of Own Shares) Regulations 2009 (SI 2009/2022) reg.3. The Secretary of State has power under s.657 to amend a number of the elements in Pt 17 of the Act, in addition to the usual powers under s.2 of the European Communities Act 1972.

[164] Not all claims a creditor might make in the future are provable: see *Re Liberty International Plc* [2010] 2 B.C.L.C. 665 (debtor liable only if a third party exercises a discretion so as to impose the liability).

[165] See s.645(2). The court has a dispensing power under s.645(4), but this was rarely used against creditors whose claims had not been secured. In case (b) there is no right of objection, unless the court so orders: s.645(4).

[166] 2006 Act s.646(1)(b). That likelihood, "beyond the merely possible, but short of the probable", will be more difficult to demonstrate the further into the future the debt falls due: *Re Liberty International* [2010] 2 B.C.L.C. 665 at [19]–[20].

[167] 2006 Act s.646(2)(3).

[168] In *Re Royal Scottish Assurance Plc*, 2011 S.L.T. 264 Lord Glennie stated that this had not been done, in either Scotland or England, since 1949.

[169] 2006 Act s.645(2)—this was the formal basis on which the prior practice avoided the creditor objection procedure. Under s.645(3) the court may also order that the procedure shall not apply to particular class or classes of creditor because of "the special circumstances of the case".

[170] Re *Vodafone Group Plc* [2014] 2 B.C.L.C. 422; *Re Sportech Plc*, 2012 S.L.T. 895; *Re Royal Scottish Assurance Plc*, 2011 S.L.T. 264.

[171] 2006 Act s.645(4).

[172] *Re Grosvenor Press Plc* [1985] B.C.L.C. 286; cf. *Re Jupiter House Investments (Cambridge) Ltd* [1985] B.C.L.C. 222.

[173] 2006 Act s.648(3)(4).

[174] Equivalent to that required on an allotment of shares.

[175] The certificate constitutes "conclusive evidence" that the statutory reduction requirements have been complied with and that the company's share capital is as stated in the statement of capital: s.649(6).

[176] 2006 Act s.649. There is more flexibility about the effective date where the reduction is part of a scheme of arrangement because that is normally upon delivery of the order to the Registrar, a matter under the control of the company (see Ch.29 and CLR, Final Report, para.13.11): s.649(3)(a).

[177] 2006 Act s.650. An expedited re-registration procedure, which dispenses with shareholder authorisation, may be used if the court authorises it (s.651). The basis for this provision is presumably the shareholder authorisation which was a necessary step in the reduction procedure.

[178] *Re Ransomes Plc* [1999] 2 B.C.L.C. 591, 602 CA.

[179] *Re Ransomes Plc* [1999] 1 B.C.L.C. 775 (affirmed on appeal; see previous note). See also *Re Ratners Group Plc* [1988] B.C.L.C. 685; and *Re Thorn EMI Plc* (1988) 4 B.C.C.

698 (reduction of share premium account to write off goodwill arising out of the same transaction as generated the premium).

[180] See previous note—a hypothetical and sometimes difficult judgment, which the courts should use sparingly.

[181] Company Formation and Capital Maintenance, para.3.27. However, in the absence of creditor objection, court involvement would not be necessary.

[182] Completing, para.7.9.

[183] DTI, *Company Law Reform*, Cm. 6456, para.4.8 rejected the application of the alternative procedure to public companies. It was thought that the possibility of creditor objection and thus court involvement would lead public companies to opt for the court-confirmation route, though it is not clear that this is a strong argument against making the option available to public companies.

[184] 2006 Act s.641(1)(a).

[185] Under the court procedure, liability (for example, in negligence) could attach to the directors for proposing the reduction, but they would be protected to a considerable extent against such liability in practice by the subsequent examination of the scheme by the court.

[186] Companies Act 1985 s.155. The financial assistance rules no longer apply to private companies: see below, para.13–55.

[187] See above, para.13–14.

[188] 2006 Act s.643(1),(3) and the Companies (Reduction of Share Capital) Order 2008/1915 reg.2. Although the section does not extend to shadow directors, the term “director” does include de facto directors: see s.250. In *Re In A Flap Envelope Co Ltd* [2004] 1 B.C.L.C. 64, a case arising under the financial assistance whitewash procedure, a director who resigned for part of a day in order that the statement could be signed by his replacement, was held to be a de facto director during this period and thus liable to make the statement required under those provisions.

[189] 2006 Act s.643(1)(a).

[190] 2006 Act s.643(1)(b).

[191] So that the reduction of capital is a prelude to a winding up, as in *Scottish Insurance Corp Ltd v Wilsons and Clyde Coal Co Ltd* [1949] A.C. 462 HL.

[192] 2006 Act s.643(2).

[193] The language of s.643 reflects to some considerable degree the language to be found in s.123(1)(e) of the Insolvency Act, on which see R. Goode, *Principles of Corporate Insolvency Law*, Student Edn (London: Sweet & Maxwell, 2005) paras 4–15 to 4–23 and 4–28 to 4–29.

[194] 2006 Act s.643(4). The offence is punishable by imprisonment, whether tried summarily or on indictment: s.643(5).

[195] *Company Formation and Capital Maintenance*, para.3.35.

[196] See para.12–12. However, the specific statutory rules on distributions will not be relevant since a reduction of capital in cases (a) and (c) does not amount to a distribution for the purposes of Pt 23 (s.829(2)(b)) and in case (b) no assets are returned to the shareholders.

[197] If a solvency statement is not made in accordance with s.643, the resolution for the reduction of capital appears not to be "supported by a solvency statement" as s.642(1) requires and no other provision of the Act explicitly saves the resolution from this defect.

[198] cf. *MacPherson v European Strategic Bureau Ltd* [2000] 2 B.C.L.C. 683 CA.

[199] 2006 Act s.642(2),(3). On these different methods of shareholder decision-making see Ch.15.

[200] 2006 Act s.642(4). However, it is an offence on the part of every officer in default to fail to comply with this requirement: s.644(7)–(8), but liability is restricted to a fine.

[201] 2006 Act s.644(1),(2) and the Shares Regulations reg.10.

[202] 2006 Act s.644(3),(4).

[203] 2006 Act s.644(6),(7).

[204] For a discussion of the general test applying to distributions by private companies see para.12–3.

[205] See para.13–13.

[206] Though the directors can hardly make the required statement unless they have at least up-to-date management accounts.

[207] *Company Formation and Capital Maintenance*, paras 3.42 and 3.43. These proposals were derived in the main from proposals for reform made earlier by the DTI itself.

[208] DTI, *Company Law Reform*, Cm. 6456, March 2005, paras 42–43.

[209] Now arts 25 and 26 of the current version of the Second Directive (Directive 2012/30/EU).

[210] DTI, *Implementation of Companies Act 2006: A Consultative Document*, February 2007, para.6–26.

[211] Cmnd. 2657 (1926).

[212] See fn.1, above.

[213] Cmnd. 1749 (1962), para.173. Of course, if the shares are held by the person to whom the assistance is given, not beneficially, but as a nominee for the company, then the provisions discussed above at para.13–3 will apply (so that the financial assistance rules are not necessary to address the nominee situation).

[214] Lenders may impose such constraints by contract, of course. See para.31–24.

[215] On variations on this theme see *Selangor United Rubber Estates v Cradock (No.3)* [1968] 1 W.L.R. 1555; *Karak Rubber Co v Burden (No.2)* [1972] 1 W.L.R. 602; and *Wallersteiner v Moir* [1974] 1 W.L.R. 991 CA (pet. dis.) [1975] 1 W.L.R. 1093 HL.

[216] 2006 Act s.681(2).

[217] See paras 12–1 and 12–2.

[218] See para.19–2.

[219] Cmnd. 1749 (1962) paras 170–186.

[220] See art.23 of Directive 77/91 [1977] O.J. L26/1.

[221] *Belmont Finance Corp v Williams Furniture Ltd (No.2)* [1980] 1 All E.R. 393 CA; *Armour Hick Northern Ltd v Whitehouse* [1980] 1 W.L.R. 1520.

[222] *Brady v Brady* [1989] A.C. 755 HL.

[223] DTI, *Company Law Reform: Proposals for Reform of Sections 151–158 of the Companies Act 1985* (1993); DTI, *Consultation Paper on Financial Assistance* (November 1996).

[224] *Chaston v SWP Group Ltd* [2003] 1 B.C.L.C. 675, helpfully considered by E. Ferran, "Corporate Transactions and Financial Assistance: Shifting Policy Perceptions but Static Law" (2004) 63 C.L.J. 225.

[225] On the other hand, the drafters seem to have thought of financial assistance, whether given before or after the event, as a one-off transaction. For the difficulties involved in calculating the impact of the assistance on the company's net assets where the assistance is continuing, see *Parlett v Guppys (Bridport) Ltd* [1996] 2 B.C.L.C. 34 CA.

[226] The Government's interpretation of the section is that the person must be someone other than the company itself: HC Debs, Standing Committee D, 20 July 2006, cols. 856–857 (Vera Baird).

[227] In contrast with s.54 of the 1948 Act, which used the expression "purchase or subscription", this section refers to "acquire" or "acquisition" thus extending the ambit of the section to non-cash subscriptions and exchanges.

[228] The sections do not apply to financial assistance by a holding company for the acquisition of shares in its subsidiary; in such a case there is less likelihood of prejudice to other shareholders or to creditors. The subsidiary must be a "company" within the meaning of the Act (see s.1) so that foreign subsidiaries are not caught by the prohibition. This was the view taken previously: see *Arab Bank Plc v Merchantile Holdings Ltd* [1994] Ch. 755.

[229] A charge given by a company to secure a loan to the company which both lender and company knew was to be on-lent to the purchaser of a company's shares to finance the purchase constitutes indirect financial assistance: *Re Hill and Tylor Ltd* [2005] 1 B.C.L.C. 41; *Central and Eastern Trust Co v Irving Oil Ltd* (1980) 110 D.L.R. (3d) 257 Sup Ct. Can.

[230] The words "or with any other person" are somewhat puzzling; one would have expected "or that of any other person". Can there be an agreement or arrangement which is not made with some other person? And, if there can, would it not be covered by "or by any other means"?

[231] The difficulty of doing this after a takeover is mind-boggling.

[232] 2006 Act s.677(1)(a)–(c)—other than an indemnity given in respect of the indemnifier's own neglect or default.

[233] e.g. where a company which is a diamond merchant sells a diamond to a dealer for £100,000, payment to be 12 months hence, the intention being that the dealer will sell the diamond at a profit or borrow on its security thus putting him in funds to acquire shares in the company.

[234] In some cases (e.g. gifts) they will be; in others (e.g. loans or guarantees) they may or may not.

[235] Defined as "the aggregate of the company's assets, less the aggregate of its liabilities" and "liabilities" includes any provision for anticipated losses or charges: s.677(2).

[236] Above, fn.224.

[237] If the assistance had been provided by the parent, as it could well have been, no question of financial assistance would probably have arisen.

[238] But reimbursement of the costs of digesting and assessing the information could be, as in *Chaston.* Nor is assistance financial if it consists of the parent instructing its subsidiary to pay money to the vendor of the shares, where no financial asset leaves the parent and the assistance provided by the (foreign incorporated) subsidiary is lawful: *AMG Global Nominees (Private) Ltd v Africa Resources Ltd* [2009] 1 B.C.L.C. 281 CA. This is a surprising decision and the CA's reliance on the *Arab Bank* case (above, fn.228) seems misplaced, since the issue there was the legality of the assistance provided by the subsidiary and not, as in *AMG*, the assistance provided by the parent.

[239] cf. *MT Realisations Ltd v Digital Equipment Co Ltd* [2003] 2 B.C.L.C 117 CA—enforcement of security rights was recovery of a legal entitlement rather than the receipt of financial assistance.

[240] See *Plaut v Steiner* (1988) 5 B.C.C. 352, but note also the insistence by the Court of Appeal in *British & Commonwealth Holdings Plc v Burclays Bank Plc* [1996] 1 W.L.R. 1 CA that the terms used in the definition must be given their technical meaning (in this case in relation to the meaning of an "indemnity").

[241] Above, para.13–28.

[242] Above, fn.224.

[243] In *Anglo Petroleum Ltd v TFB (Mortgages) Ltd* [2007] B.C.C 407, a differently constituted CA took a more commercially robust line, notably in rejecting the argument that any payment by a company which "smoothed the path to the acquisition" of its shares constituted financial assistance.

[244] 2006 Act.681. There is no express exemption for the expenses of share issues (for example, commissions—see para.11–14), but there clearly should be.

[245] 2006 Act s.682(2). There is also a conditional exception for financial assistance given in connection with private company acquisitions, but this is of such importance that it is treated separately in para.13–55 below.

[246] 2006 Act s.682(1). Distributable profits are defined in s.683(1), which essentially tracks the rules governing distributions.

[247] Directive 2012/30/EU [2012] O.J. L315/74

[248] Above, fn.210, para.6.23. For trenchant criticism of the limited scope of the reforms to art.23, see E. Ferran, "Simplification of European Company Law on Financial Assistance" (2005) 6 E.B.O.L.R. 93.

[249] *Belmont Finance Corp v Williams Furniture Ltd (No.2)* [1980] 1 All E.R. 393 CA; *Armour Hick Northern Ltd v Whitehouse* [1980] 1 W.L.R. 1520.

[250] *Dymont v Boyden* [2005] 1 B.C.L.C. 163 CA.

[251] *Brady v Brady* [1989] A.C. 755 HL. This case is an illustration (of which *Charterhouse Investment Trust v Tempest Diesels Ltd* ([1987] B.C.L.C. 1) is another) of

how, all too often, parties agree in principle to a simple arrangement which on the face of it raises no question of unlawful financial assistance but then refer it to their respective advisers who, in their anxiety to obtain the maximum fiscal and other advantages for their respective clients, introduce complicated refinements which arguably cause it to fall foul of the prohibition on financial assistance. In the *Charterhouse* case, where the former s.54 applied, Hoffmann J, by exercising commonsense in interpreting the meaning of “financial assistance”, was able to avoid striking down an obviously unobjectionable arrangement. But the elaborate definition of that expression in the present Act leaves less scope for commonsense.

[252] *Brady v Brady* [1988] B.C.L.C. 20 CA.

[253] *Brady v Brady* [1989] A.C. 755 at 778. Agreeing with O’Connor LJ in the Court of Appeal ([1988] B.C.L.C. 20 at 25) he described the paragraph, with commendable restraint, as “not altogether easy to construe”.

[254] The layout of ss.678(2) and (4) now reflects this analysis more clearly than did the previous legislation.

[255] A situation envisaged by Buckley LJ in his judgment in the *Belmont Finance* case [1980] 1 All E.R. at 402, as giving rise to doubts under the former s.54 of the 1948 Act.

[256] *Brady v Brady* [1989] A.C. 755 at 779.

[257] *Brady v Brady* [1988] B.C.L.C. 20 at 26.

[258] *Brady v Brady* [1988] B.C.L.C. 20 at 32.

[259] *Company Law Reform: Proposals for Reform of Sections 151–158 of the Companies Act 1985* (1993).

[260] Completing, para.7.14.

[261] 1985 Act s.155(2). As we have seen, the Directive now adopts this criterion as one of the conditions under which financial assistance may be permitted (above, para.13–51).

[262] See Ch.12.

[263] Of course, the directors of the (new) subsidiary will need to continue to comply with their fiduciary duties to their company.

[264] Above, fn.224.

[265] 2006 Act s.679. An example might be where a target public company in a takeover is re-registered as a private company (to avoid the ban on its giving financial assistance to its new parent) but still has subsidiary companies which are public companies. Section 679 prevents the subsidiaries giving financial assistance to their immediate parent (unless an exception applies). At least this is what s.679(3) appears to say.

[266] Since the prohibition is intended to protect the company and its members and creditors it is difficult to conceive of a more inappropriate sanction than to reduce the company’s net assets (still further than the unlawful financial assistance may have done) by fining the company. The CLR had proposed that the criminal sanction on the company be removed: Formation, para.343(d).

[267] 2006 Act s.680.

[268] The remedies for an unlawful distribution are specifically excluded from the area of unlawful financial assistance: s.847(4)(a).

[269] *Victor Battery Co Ltd v Curry's Ltd* [1946] Ch. 242.

[270] *Curtis's Furnishing Stores Ltd v Freedman* [1966] 1 W.L.R. 1219. But he ignored it in *South Western Mineral Water Co Ltd v Ashmore* [1967] 1 W.L.R. 1110.

[271] *Selangor United Rubber Estate Ltd v Cradock (No.3)* [1968] 1 W.L.R. 1555; *Heald v O'Connor* [1971] 1 W.L.R. 497; and Lord Denning MR in *Wallersteiner v Moir* [1974] 1 W.L.R. at 1014H–1015A. The modern view helped Millett J to conclude in *Arab Bank Plc v Mercantile Holdings Ltd* [1994] Ch. 71 that the legislation applies to assistance provided by a subsidiary of an English company only where the subsidiary is not a foreign company, on the grounds that the protection of the shareholders and creditors of a company is a matter for the law of the place of incorporation. By the same token, the giving of assistance by the English subsidiary of a foreign parent ought to be regulated by the Act, though it is by no means clear that it is.

[272] *Brady v Brady* [1989] A.C. 755. See also *Re Hill and Tyler Ltd* [2005] 1 B.C.L.C. 41.

[273] *Anglo Petroleum Ltd v TFB (Mortgages) Ltd* [2007] B.C.C. 407 CA: a contract to lend money to a company where the contract did not require the sum advanced to be used to provide unlawful financial assistance but where the lender knew the money lent was to be used to repay monies due to the company's former parent from the purchaser of the company's shares from the former parent. The CA thought there was no public policy in forcing the lender to investigate whether the proposed use of the loan would constitute unlawful financial assistance and so held the contract of loan enforceable (though this view was, strictly, obiter).

[274] *South Western Mineral Water Co Ltd v Ashmore* [1967] 1 W.L.R. 1110.

[275] *Carney v Herbert* [1985] A.C. 301 PC, on appeal from the Sup. Ct. of N.S.W.

[276] Yet Lord Brightman seemed to think that this would be the consequence if severance was not possible: see [1985] A.C. at 309.

[277] In support of this caveat, see [1985] A.C. at 313 and 317.

[278] See the cases discussed under (c) and *Heald v O'Connor* [1971] 1 W.L.R. 497, where the unlawful assistance was a mortgage on the property of the company whose shares were being acquired, the purchaser guaranteeing the payment of sums due under the mortgage. The mortgage was unlawful. Hence the purchaser escaped liability on the guarantee (though that was lawful) since no payments were lawfully due under the mortgage. It would have been different had the guarantee been an indemnity.

[279] Since the mortgage is illegal and void (not merely voidable) presumably a bona fide purchaser of it without notice could not enforce it either.

[280] *Steen v Law* [1964] A.C. 287 PC; *Selangor United Rubber Estates v Cradock (No.3)* [1968] 1 W.L.R. 1555; *Karak Rubber Co v Burden (No.2)* [1972] 1 W.L.R. 602; *Wallersteiner v Moir* [1974] 1 W.L.R. 991 CA; *Belmont Finance Corp v Williams Furniture Ltd (No.2)* [1980] 1 All E.R. 393 CA; *Smith v Croft (No.2)* [1988] Ch. 114; *Agip (Africa) Ltd v Jackson* [1991] Ch. 547 CA.

[281] Unless the company is a public company and the charge is on shares in it, for then the charge may be void under s.670: see above, para.13–2.

[282] *Steen v Law* [1964] A.C. 287; *Selangor United Rubber Estates v Cradock (No.3)* [1968] 1 W.L.R. 1555; *Chaston v SWP Group Plc* [2003] 1 B.C.L.C. 675 CA. The same principle is applied to actions the company may have against third parties who are

implicated in the provision of the financial assistance: *Belmont Finance Corp Ltd v Williams Furniture Ltd* [1979] Ch. 250 CA.

[283] See, for example, *Selangor United Rubber Estates v Cradock (No.3)* [1968] 1 W.L.R. 1555; *Karak Rubber Co v Burden (No.2)* [1972] 1 W.L.R. 602.

[284] But they are afforded special protection since the prohibition does not invalidate a loan "where the lending of money is part of the ordinary business of the company" and the loan is "in the ordinary course of its business": s.682(2)(a). This recognises that it would be absurd if, on a public issue of shares by one of the major High Street banks, its branches had to refuse to honour applicants' cheques if they were customers who had been granted overdrafts.

[285] DTI, *Consultation Paper on Financial Assistance* (1996), para.14.

[286] See Chs 28 and 30, below. This example is particularly pertinent since the Greene Committee (above fn.211 at para.30) specifically mentioned the undesirability of a company "trafficking in its own shares" are a justification for the prohibition on financial assistance.

[287] See Ch.9, above.

PART 3

CORPORATE GOVERNANCE: THE BOARD AND SHAREHOLDERS

Over recent decades, corporate governance has been a highly fashionable topic in company law and has generated an enormous literature.[1] The subject came to prominence in the US with the work leading to the publication of the American Law Institute's *Principles of Corporate Governance* in 1994 and in the UK the topic is associated above all with the Cadbury Committee Report of 1992 and its associated Code of Best Practice,[2] which has provided a focal point for the subsequent spread of corporate governance codes throughout Europe.[3] Best practice is now subject to constant review.[4]

However, one could say that corporate governance, whether recognised under that name or not, is a topic which is as old as the large company. The fact which the corporate governance debate takes as its starting point is the appearance, in large companies, of a group of senior managers who are separate and distinct from the shareholders. There are good reasons why, in economically large companies with large groups of shareholders, the functions of investment and management should be carried out by separate, though possibly overlapping, groups of people. Where there are large numbers of shareholders, taking management decisions through the shareholders, meeting would be impossibly cumbersome. Further, where the company's capital needs have led to a public offering of its shares, there is no reason to suppose that those who buy the shares have the necessary expertise or commitment to run a large business organisation, and this is likely to be just as true of professional fund managers as it is of individual members of the public. In such a situation, the emergence of a specialist cadre of corporate managers is a natural development, managers who do not simply do as the shareholders say but who develop and implement corporate strategy on their own responsibility. In order for such managers to exercise these functions, it is necessary that a very

broad set of discretionary powers be conferred upon them. In some jurisdictions this is done through the companies legislation itself, but in the UK this result is achieved by the practice of including provisions in the company's articles of association giving the board of directors extensive power to manage the company's business and to exercise the company's powers.

Thus arises the central issue of the corporate governance debate, which is the accountability of the senior management of the company for the extensive powers vested in them. Since the historical development was, or is perceived to have been, one of a movement from a situation in which shareholders were both investors and managers to one in which management became a separate function from that of investment, it is natural to think of the accountability issue as being one of the accountability of the managers to the shareholders. This is the tradition in British company law, tempered only by the qualification, which we noted at several points in Pt 2 and will see again in Pt 3, that, as the company nears insolvency, accountability to the creditors is as important as, and even replaces, accountability to the shareholders. However, the separation out of management as a distinct function creates the possibility of imposing lines of accountability on management towards other groups who have a long-term interest in the company (usually referred to as "stakeholders"). One group of such stakeholders, the employees, has become the beneficiary of the accountability rules of corporate law (mainly through board representation) in about half of the Member States of the EU.[5] Though once proposed by an official committee for the UK,[6] board representation is not an idea which has taken root within British company law, though traces of it can be found. In its detailed examination of company law, the Company Law Review did not find sufficient support for the stakeholder model to justify a major shift in the accountability rules,[7] and so it concentrated its efforts on promoting a modernised and inclusive version of the tradition of accountability to shareholders.[8] That "enlightened shareholder value" approach found its way into the Companies Act 2006.

Some ("managerialists") have even gone so far as to argue that elaborate accountability structures are not necessary because management will function so as to adjudicate neutrally and

impartially among the competing claims of the various stakeholder groups on the company. This vision, however, ignores the fact that management itself is an important stakeholder group and it is difficult to see why, in the absence of accountability rules, managers would not give in to the temptation to overvalue their own claims on the company and undervalue those of other groups, for example, in the setting of their own remuneration. However, the managerialists make a better point when they argue that the accountability rules will be self-defeating if they operate so as to prevent or discourage managers from discharging effectively the tasks which the institution of centralised management entrusts to them. In other words, the accountability rules, no matter to whom the accountability lies, must not be so restrictive as to stifle the entrepreneurial talents of the managers, which talents constitute the rationale for conferring the wide discretion upon them in the first place.

Since the emergence of specialised management is not a phenomenon of just the last 20 years—large companies with such managements can be traced back at least as far as the late nineteenth century—it is not surprising that company law has always contained some mechanisms whereby the accountability issue can be addressed. The very requirement that a company appoint directors[9] provides a rudimentary mechanism for accountability. Unlike a partnership, where all the partners are prima facie entitled to participate in the management of the partnership,[10] in a company the requirement for directors presupposes that directors will play an important role, at least in large companies. In short, the default rule in partnerships is management by the partners; in companies, it is management by the directors. However, since British company law, unlike the corporate governance codes, says little or nothing about the structure and composition of the board of directors, the board's position in company law is deeply ambiguous. The board is the point of contact between the shareholders as a group and the senior management of the company, but whether, in any particular company or in companies generally, it acts predominantly as a monitor of the management on behalf of the shareholders or mechanism through which the managers promote their control of the company is a matter for empirical

investigation—and the situation may vary from company to company and from time to time. As we shall see in the following chapter, in order to reduce the likelihood of boards acting purely as instruments of management domination, modern corporate governance codes have been concerned to restrict the proportion of board seats held by the managers of the company by requiring the presence of a proportion of “non-executive” directors on the board.

Despite the ambiguous role of the board, it constitutes a convenient focus for the legislature and the courts when developing rules to constrain the exercise by management of the discretion vested in them. Whether the board monitors management or does the managing itself (or does a bit of each), imposition of accountability rules on the board should have an impact, directly or indirectly, on the way the management function is discharged. The underlying aim of the law may be control of the management function, but the subjects of the legal rules are the directors. The issue of how far those controls extend to managers who are not directors is, as we shall see, controversial. By the same token, when the articles delegate a wide discretion from the shareholders, they do so by conferring power, not on the company’s managers as such, but on the board of directors. The rules conferring the powers and the rules constraining the exercise of the powers focus on the board rather than on the senior management as a whole. Thus, although the corporate governance debate starts from the functional differentiation between investment and management, company law operates by regulating the actions, not of managers in general, but of the board of directors.

In this Part we look at three sets of rules which the courts, the legislature and business bodies have created to constrain the exercise by directors individually and the board collectively of the discretion vested in them. The first set concerns the extent to which the shareholders have the power to appoint or, more importantly, remove the directors of the company. How easy is it, for example, for the shareholders to remove directors who exercise their powers in a way of which the shareholders disapprove? The second concerns the structure and composition of the board of directors, matters upon which the Companies

Acts and the common law have traditionally had little to say, but which are a central focus for the corporate governance codes. Should the board be structured in such a way as to facilitate control over the managers of the company by the board? Thirdly, we consider a set of rules which the common law and the legislature have spent much effort in elaborating, from the very beginnings of modern company law in the first half of the nineteenth century. This is the law of “directors’ duties” and, as important, the law relating to the enforcement of those duties. These duties operate directly upon the directors so as to control the ways in which they exercise their discretion. When these duties are breached, the decision which the directors have taken may be ineffective or at least capable of being set aside, or the director may have to compensate the company for any harm it has suffered, or account to the company for profits made from the breach of duty, or some other remedy may be available.

Although the rules discussed in this Part are a central part of company law and the subject of public controversy, it is important to stress that the problem they aim to deal with is premised upon a distinction between those who are shareholders in the company and those who are its directors. In the case of economically small companies—being the majority of companies on the register—this situation does not obtain because the shareholders and the directors are the same people. For such companies, the rules analysed in this Part are of less significance. It would be wrong to say that they are of no significance, because those who are the owner/controllers of a small company may fall out with one another and one faction may be tempted to act in a way which is in breach of their duties as directors, for example, by diverting corporate opportunities away from the jointly-owned company to another controlled wholly by themselves. However, even when there is a falling out among the owner-controllers, the situation is probably better analysed as a conflict between one group of shareholder/directors and another group, rather than a conflict between shareholders on the one hand and directors on the other. We discuss this issue further in Pt 4 of the book.

Finally, even when one is dealing with an economically large company with shareholders who are distinct from the managers,

the complexity of the problems thrown up by the shareholder/director relationship depends significantly upon the structure of the company's shareholdings, in particular on whether they are concentrated or dispersed. Where there is concentrated shareholding (for example, one shareholder who holds a block of shares which gives him or her de facto control of the company), there will normally be little difficulty in that shareholder ensuring that the directors do as the shareholder wishes. The more problematic issue is likely to be whether the controlling shareholder takes appropriate account of the interests of the non-controlling shareholders. In this case, again, the potential conflict is one between controlling and non-controlling shareholders rather than between shareholders and directors, although again some aspects of directors' duties, for example, those concerning related-party transactions, may be relevant here. However, block-holder control of economically large companies is relatively uncommon in the UK, where a more dispersed pattern of shareholding still prevails, notwithstanding the increasing power of institutional investors. Consequently, the issue of shareholder and director relationships is a crucial one.

CHAPTER 14

THE BOARD

The Role of the Board 14–1
The default provision in the model articles 14–3
The power of the board—the legal effect of the articles 14–5
Default and confirmation powers of the general meeting 14–11
The mandatory involvement of shareholders in corporate decisions 14–18
The mandatory functions of the directors 14–21
Appointment of Directors 14–23
Remuneration of Directors 14–30
Composition of the remuneration committee 14–33
Mandatory shareholder approval of certain aspects of the remuneration package 14–34
Mandatory and advisory shareholder votes on remuneration policy and implementation 14–38
General disclosure: the directors' remuneration report 14–44
Removal of Directors 14–48
Shareholders' statutory termination rights 14–49
Control of termination payments 14–56
Structure and Composition of the Board 14–63
Legal rules on board structure 14–64
Legal rules on board composition 14–67
The requirements of the UK Corporate Governance Code 14–75
Enforcement of the UK Corporate Governance Code 14–77
Conclusion 14–81

THE ROLE OF THE BOARD

14–1

The board of directors is the most important decision-making body within the company. The first Principle of the UK Corporate Governance Code[1] states: "Every company should be headed by an effective board, which is collectively responsible for the success of the company", The Supporting Principles to this main principle add the following explanation about the role of the board:

> "The board should set the company's strategic aims, ensure that the necessary financial and human resources are in place for the company to meet its objectives and review management performance. The board should set the company's values

> and standards and ensure that its obligations to its shareholders and others are understood and met."

Even after making allowances for the fact that the UK Corporate Governance Code applies formally only to companies with a Premium Listing of equity shares on the London Stock Exchange,[2] and that in small companies things may appear very differently, this is a formidable specification for the board's role.

14–2

However, it would be difficult to glean any similar understanding of the importance of the board from a reading of the Companies Act. Although s.154 requires all public companies to have two directors and private companies one,[3] it leaves the determination of the role of the board very largely to the company's constitution, which is, of course, under the control of the shareholders. Unlike in many, perhaps most, other jurisdictions, the division of powers as between board and the shareholders is a matter for private ordering by the members of the company rather than something to be specified mandatorily in the companies legislation. This may reflect the partnership origins of British company law (under partnership law the partners are given a very broad freedom to arrange the internal affairs of the partnership as they wish) and it certainly facilitates the use of a single Act to regulate all manner and sizes of company. Jurisdictions which specify the role of the board for large companies in legislation often have a separate statute for smaller companies which gives the members in the latter class of company a freedom nearer to that enjoyed by the members of a British company.[4] It is also a point of some theoretical (even ideological) importance: the directors' authority is derived from the shareholders through a process of delegation via the articles and not from a separate and free-standing grant of authority from the State. This helps to underline the shareholder-centred nature of British company law.

The default provision in the model articles

14–3

Since the division of powers between board and shareholders is a matter for the articles (subject to a limited range of matters where the statute requires the participation of the shareholders in

the decisions, discussed below), it is difficult to generalise about the patterns of division found in practice. However, some limited help can be gained from the model sets of articles which apply unless excluded by the incorporators in a particular case.[5] For both public and private companies, the default provision is the same, and it is one which gives substantial authority to the board: "Subject to the articles, the directors are responsible for the management of the company's business, for which purpose they may exercise all the powers of the company".[6] This follows quite closely the provision found in earlier sets of model articles.

It is perhaps surprising that the model article for public companies refers to "management" quite generally, since it is clear that, in a large company, the totality of its management is something quite beyond the grasp of even the most talented set of directors. The provision of the UK Corporate Governance Code, quoted above, is more realistic for large companies when it gives the board the functions of setting the corporate strategy and reviewing management performance, thus indicating that the task of executive management is otherwise not for it but rather for the full-time senior employees of the company. This approach causes no formal difficulty for the model set of articles, since the model gives the board a wide power of delegation of the powers conferred upon them by the articles "to such person to such an extent and on such terms and conditions as they think fit".[7] Thus, delegation of powers by the board to the senior management of the company is provided for in the model articles. The point rather is that the strategy followed in the model set of articles for public companies of a broad grant of management power to the board which is then permitted a wide power of delegation does not tell one what pattern of division of function is in fact adopted in large companies between the board and senior (and, indeed, other) management.[8] On that, the UK Corporate Governance Code may be a better guide.

14–4

Turning to private companies, here discharge of the full management function by the board is often in fact possible, but it is equally possible in small companies for the shareholders to play a larger role in decision-making than in large companies. Often in such companies important shareholders who are not

also directors will expect to have such a role. In quasi-partnership companies in particular the incorporators may wish to reproduce the rule which would apply if the entity were a partnership rather than a company. This rule is that "any differences arising as to ordinary matters connected with the partnership business may be decided by a majority of the partners, but no change may be made in the nature of the partnership business without the consent of all existing partners".[9] Such a desire again creates no formal problem for the model articles, since the grant of management authority to the board is "subject to the articles". It is thus possible for the articles to provide that certain types of decision shall either not be given to the board at all or shall be subject to the shareholders' consent (even though such consent is not required by the Act). Again, however, the model articles provide no hint as to the ways in which or the extent to which this power is in fact used in small companies to move away from the default rule.

Thus, in both public and private companies (though for different reasons) the model articles provide only a starting point in determining the role of the board which may be modified substantially through either board decisions to delegate authority to management (in public companies) or modifications of the articles in the case of private companies so as to confer decision-making authority on the shareholders. One may wonder how useful such a default provision is, but the truth is that the variations from the default are so many and so varied (depending on the circumstances of the particular company) that it is impossible to identify a better default provision.

The power of the board—the legal effect of the articles

The board and shareholders

14–5

It is not possible to make general statements about the typical division of authority between shareholders and the board and management, because that is, in the main, open to being tailored to suit the individual company in question. But it is possible,

nevertheless, to analyse the legal effect of the articles. That has changed over time, with an evolution in the answer being given to the key question of whether the effect of the delegation of authority in the articles to the directors was simply to confer authority on the directors or also, at the same time, to restrict the authority of the shareholders in general meeting to take decisions in the delegated area. Was the relationship between company and shareholders simply one of principal and agent[10] or did the articles effect something in the nature of a constitutional division of powers as between the shareholders in general meeting and the board? At one level, this was simply a matter of choosing the appropriate default rule. A principal conferring authority on an agent does not normally restrict its own authority to act, but there is no reason why the principal should not contract on the basis that the agent has authority to the exclusion of the principal. Equally, a constitution normally divides up authority among the various relevant bodies, but there is no legal reason why a constitution should not confer concurrent competence on two or more bodies. However, the choice between these two legal analyses did affect very strongly the way in which the courts approached the interpretation of provisions in the articles of particular companies.

14–6

Until the end of the nineteenth century, it was generally assumed that the general meeting was the supreme organ of the company and the board of directors was merely an agent of the company subject to the control of the company in general meeting. It followed that the shareholders could at any time by ordinary resolution give the directors binding instructions as to how they were to exercise their management powers. Thus, in *Isle of Wight Railway v Tahourdin,*[11] the court refused the directors of a statutory company an injunction to restrain the holding of a general meeting, one purpose of which was to appoint a committee to reorganise the management of the company.

In 1906, however, the Court of Appeal in *Automatic Self-Cleansing Filter Syndicate Co v Cuninghame*,[12] made it clear that in registered companies the division of powers between the board and the company in general meeting depended entirely on the construction of the articles of association and that, where

powers had been vested in the board, the general meeting could not interfere with their exercise. The articles were held to constitute a contract by which the members had agreed that “the directors and the directors alone shall manage”.[13] Hence the directors were entitled to refuse to carry out a sale agreement adopted by ordinary resolution in general meeting where that decision fell within the management powers conferred upon the board. *Tahourdin*’s case was distinguished on the ground that the wording of s.90 of the Companies Clauses Act 1845 was different—though that section does not in fact seem to have been relied on in the earlier case.

The new approach did not secure immediate acceptance,[14] but since *Quin & Axtens v Salmon*[15] it has been generally accepted that where the relevant articles are in the normal form, as exemplified by successive model sets of articles, the general meeting cannot interfere with a decision of the directors unless they are acting contrary to the provisions of the Act or the articles.[16]

In *Shaw & Sons (Salford) Ltd v Shaw*,[17] in which a resolution of the general meeting disapproving the commencement of an action by the directors was held to be a nullity, the modern doctrine was expressed by Greer LJ as follows[18]:

> “A company is an entity distinct alike from its shareholders and its directors. Some of its powers may, according to its articles, be exercised by directors, certain other powers may be reserved for the shareholders in general meeting. If powers of management are vested in the directors, they and they alone can exercise these powers. The only way in which the general body of the shareholders can control the exercise of the powers vested by the articles in the directors is by altering their articles, or, if opportunity arises under the articles, by refusing to re-elect the directors of whose actions they disapprove.[19] They cannot themselves usurp the powers which by the articles are vested in the directors any more than the directors can usurp the powers vested by the articles in the general body of shareholders.”

And, in *Scott v Scott*[20] it was held, on the same grounds, that resolutions of a general meeting, which might be interpreted either as directions to pay an interim dividend or as instructions to make loans, were nullities. In either event the relevant powers had been delegated to the directors, and until those powers were taken away by an amendment of the articles the members in general meeting could not interfere with their exercise. As Lord Clauson[21] rightly said, “the professional view as to the control of the company in general meeting over the actions of directors has,

over a period of years, undoubtedly varied”.[22]

14–7

From 1985 onwards the model set of articles sought to make the position clear, for those companies adopting them, on the lines indicated in the above cases. Thus, in the current model sets of articles for both private and public companies, the grant of authority to the board is qualified by the phrase “subject to the articles” and there is now a specific article dealing with the “members’ reserve power”.[23] This makes it clear that the members may by special resolution (i.e. as would be needed to change the articles) instruct the directors “to take, or refrain from taking, specified action”. By implication, any instruction given by the shareholders by ordinary majority to the board within the area of authority delegated to the directors is not binding on the directors.

14–8

To some considerable extent, however, this development of the case law has been overtaken by a change made to the statute in 1948 when the power, presently in s.168, was introduced, giving the shareholders the ability to remove directors at any time by ordinary resolution (as discussed below). Thus, at the very moment when the new interpretation became fully accepted in the case law, the legislature changed the rules so as to give shareholders a removal power exercisable by ordinary majority. Although a removal power is different from a power to give instructions, the two overlap to a considerable extent, for the disgruntled shareholders can say, in effect, to the directors: if you choose not to follow our views, we will by ordinary majority seek to remove you from office. That can be a powerful inducement to the directors to follow the line of action preferred by the shareholders.

The board and senior management

14–9

The directors’ power of delegation to senior management has not given rise to any equivalent debate as to its legal effects. This has a number of explanations. Partly it is because that power of delegation is broadly drafted (see above) and includes an express

power to “revoke any delegation in whole or part, or alter its terms and conditions”. As well, managers, unlike shareholders, have no formal place in the company’s legal structure.[24] Finally, the initial division of power is not set out in the articles, so any subsequent alteration does not require an alteration of the articles; rather, when delegating, the board exercises a power conferred upon it by the articles, and in practice powers will be delegated on the basis that the delegation continues only at the pleasure of the board. The board can normally revoke its grant of authority as readily as it made it. However, although alteration or revocation of authority by the board may be effective, as we shall see below it may also constitute a breach (perhaps even a de facto termination) of the service contract entered into by the company with the manager, giving rise to claims for compensation on the part of the manager against the company, sometimes of a substantial character.

14–10

Nevertheless, in practice such delegation is of enormous importance in large companies. In particular, there is normally a very large grant of managerial power to the most senior of the company’s managers, who will invariably be a member of the board of directors as well. Such a person was traditionally known in British parlance as the “managing director” but now more often, following US terminology, as the “chief executive officer” (“CEO”), is the driving force behind the formulation and implementation of the company’s strategy. Of increasing importance as well is the “chief financial officer” (“CFO”). As we shall see below, the major motivation behind the development of the UK Corporate Governance Code was the desire to place the CEO within a framework of accountability to the board, a problem created, but not solved, by use of the extensive delegation power contained in the articles.

Default and confirmation powers of the general meeting

14–11

Despite what has been said above about the powers of the board and their impact on the powers of the shareholders, it seems that,

if for some reason the board cannot exercise the powers vested in them, the general meeting may do so. On this ground, action by the general meeting has been held effective where there was a deadlock on the board[25]; where there were no directors[26]; where an effective quorum could not be obtained[27]; or the directors were disqualified from voting.[28] These exceptions are convenient, but difficult to reconcile in principle with the strict theory of a division of powers. Their exact limits are not entirely clear. However, there seems good sense in the proposition that the shareholders may take the substantive decision only where the articles do not give them some effective way of reconstituting the board so as to remove the impediment to board decision-making.[29]

14–12

In addition, if the directors have purported to exercise powers reserved to the company in general meeting, their action can be effectively ratified by the company in general meeting. And for the purpose of ratifying past actions of the board, as opposed to conferring powers on the board for the future, it is not necessary to pass a special resolution altering the article; normally an ordinary resolution will suffice.[30]

14–13

Finally, it is generally assumed that it is perfectly in order for the board of directors, if it so wishes, to refer any matter to the general meeting either to ratify what the board has done or to enable a general meeting to decide on action to be taken. It is quite clear, as was affirmed by the Court of Appeal in *Bamford v Bamford*,[31] that an act of the directors which is voidable because, for example, it is in breach of their fiduciary duties, can be ratified by the company in general meeting if (and all the conditions are important) the act is within the powers of the company and the meeting acts with full knowledge and without oppression of the minority. It is, perhaps, less clear whether the board, without taking a decision on a matter within its powers, can initially refer it to the general meeting for a decision there. In an elaborate discussion at first instance in the *Bamford* case,[32] Plowman J had held that the general meeting then had power to act under residual powers, but he suggested that this might

depend on the terms of the articles of the company concerned. The Court of Appeal considered that this question was irrelevant to the issue before them and expressed no view on it. It seems absurd if the directors are forced to take a decision and then to ask the general meeting to whitewash them, but perhaps the safest course is for them to resolve on action "subject to ratification by the company in general meeting". Alternatively, asking the general meeting to decide might be regarded as a delegation by the board of their powers on the particular issue (back) to the shareholders.

14–14

In short, the shareholders have power to act, despite provisions in the articles apparently conferring exclusive authority on the directors: they can take, or participate in the taking of, a corporate decision if the board is unable to exercise its powers, if the board's decision is in some way defective or, perhaps, if they are invited by the board to participate in the decision.

Unanimous consent of the shareholders

14–15

Established case law indicates that the shareholders may bind the company by unanimous agreement—"unanimous" here meaning all the shareholders entitled to vote, not just all those who turn up at a meeting. The main function of this common law rule, which is discussed below,[33] is to permit shareholders in small companies to take the decisions allocated to them without the need to hold a meeting (for example, by circulating a resolution, to which they individually indicate their consent) or without observing all the formalities (for example, as to notice) which shareholder meetings entail, though this common-law facility has now been overtaken in the normal case by more extensive statutory provisions.

14–16

However, there are also dicta in the cases which suggest that the unanimous consent of the shareholders binds the company, even on matters which the constitution allocates to the board.[34] Nevertheless, none of the decided cases clearly present the situation of the shareholders unanimously taking a decision

which had been allocated by the constitution to the board. The nearest case is *Re Express Engineering Works Ltd*,[35] where the decision in question was the purchase of certain property and thus would clearly have fallen within the clause conferring general management powers on the board, but in fact all the directors were disqualified from acting on the purchase, and so the shareholders could be said to have had default powers to take this decision, under the principle discussed above.

The Company Law Review proposed that the unanimous consent rule should be codified and that this should be done on the basis that "the members of the company may, by unanimous agreement, bind or empower the company, regardless of any limitation in its constitution".[36] However, the Government decided against codification, though the new companies legislation preserves the common law rule,[37] so that it appears that the question of whether the unanimous consent rule operates within or outside the constitutional division of powers produced by the articles will be left for the courts to decide.[38]

14–17

As to the merits of allowing the shareholders unanimously to depart from the constitution, the requirement of unanimity means that there is no issue of the protection of minority shareholders, which was one of the factors which weighed with the courts when they introduced the doctrine that shareholders, by ordinary resolution, could not give directors instructions on matters within their competence. Allowing unanimous shareholder consent to override the articles would further emphasise the primacy of shareholders as against the directors. Shareholders would be able to tell the directors what to do, even within the area of competence granted by the articles to the board, provided only they acted unanimously. As against this, however, even if it is conceded that the shareholders acting unanimously are competent to act, the shareholders are not subject to the same duties as directors, so the risk is then that stakeholders other than the shareholders, perhaps especially the creditors, will not be protected from adverse corporate decisions in the same way that they are when those decisions are taken by the board. Of course, since the shareholders have statutory power to dismiss directors, as discussed below, this theoretical

conflict seems quite unlikely to emerge in practice.

The mandatory involvement of shareholders in corporate decisions

14–18

Despite the flexibility which British company law gives the company to divide decision-making powers between shareholders and the board, there are a number of situations where the legislation requires shareholder approval of the board's decision (and sometimes even permits the shareholders to initiate a decision). The main category of such cases is where decision is likely to have an impact upon the shareholders' legal or contractual rights, even if the practical impact of that change on the member in a particular case is small (as with many changes to the articles). Without giving an exhaustive list of such situations, the following can be said to constitute the main examples of this policy:

- alterations to the company's articles[39];
- alteration of the type of company, for example, from public to private or vice versa[40];
- decisions to issue shares[41] or to disapply pre-emption rights on issuance[42];
- decisions to reduce share capital, re-purchase shares; redeem or re-purchase shares out of capital in the case of private companies or give financial assistance in the case of private companies[43];
- alterations to the class rights attached to shares[44];
- adoption of schemes of arrangement[45];
- decisions to wind the company up voluntarily.[46]

All these provisions place limits on the extent to which the articles may authorise the board to proceed solely on its own initiative. They probably reflect the view that shareholder interests are potentially involved in such decisions, that shareholders are probably as well-equipped to take the decisions as the board, and that they are not decisions which occur frequently in the life of the company, but, beyond that, the

provisions do not contribute directly to the development of good corporate governance.

14–19

There are, however, four further cases where contributing directly to good corporate governance underpins the requirement of shareholder approval of:

- the appointment of the company's auditors[47];
- certain transactions entered into by directors or their associates with their company[48];
- ratification of the taking by directors of corporate opportunities[49];
- defensive measures to be taken once a takeover offer is imminent—a requirement contained in the rules of the City Code on Takeovers and Mergers, with those rules now having statutory force.[50]

The first of these requirements is designed to promote the independence of the company's auditors from its management (though it is far from clear that it always successful in doing so) and the others deal with conflicts of interest between the director and his or her company.

14–20

Finally, the Listing Rules, which apply to Premium Listed companies quoted on the London Stock Exchange, introduce a third basis for shareholder approval, namely the size of the transaction. Under those Rules, significant transactions (both acquisitions and disposals) which meet the test of being either "Class 1" transactions or "reverse takeovers" require shareholder approval. In brief, the Class 1 criteria are met if any one of four financial ratios which compare the size of the transaction with the size of the company is 25 per cent or more; and an acquisition is a reverse takeover if any of the ratios is 100 per cent or more, or if the transaction would result in a fundamental change in the company's business, board composition or voting control. The financial ratios relate to the company's gross assets, profits, consideration and gross capital.[51] The thought behind the provisions seems to be that a big transaction is as much like an

investment decision as a management decision, and so the shareholders are to be involved in the taking of the decision, along with the management. This ground for insisting on shareholder involvement in a decision has no counterpart in the Act.

The mandatory functions of the directors

14–21

Just as the Act requires shareholders to be involved in some corporate decisions, so, scattered throughout the Act, are functions which are imposed on the directors of companies and which therefore may not be given to the shareholders. It would be too tedious to list them all. What needs to be noted, however, is that they relate to two main areas of corporate life, the production of the annual accounts and reports and the regular administration of the company, in particular its communications with Companies House. Thus, the directors are under a duty to prepare accounts and reports each year; having done that, to approve them and to send copies to the Registrar; and, in most cases, to lay them before the shareholders in general meeting.[52] What these statutory provisions do not purport to do is to stipulate the division of decision-making about the company's business activities as between the shareholders in general meeting, the board and the management. That is left for stipulation in or under the company's constitution. The statutory provisions relate essentially to the administrative obligations of the company.

14–22

One further point should be made about these obligations. In many cases, the obligation is laid not only on the director, but upon any "officer" of the company, and the sanction for non-compliance, normally a minor criminal sanction, is laid on any "officer who is in default". Examples are where the company fails to carry out its third task with respect to the annual accounts, i.e. fails to send a copy to every shareholder,[53] or where the company fails to keep an accurate record of its members.[54] The Act defines "officer"[55] as including "a director, manager or secretary" and now goes on to add "any person who is to be treated as an officer of the company for the purposes of

the provision in question”. These are thus cases where the Act imposes liabilities on sub-board managers. This is sensible in principle, given that such administrative tasks are likely to be delegated to levels of management below the board.[56] The CLR recommended that the definition of manager should be restricted normally to a person who “under the immediate authority of a director or secretary is charged with managerial functions which include the relevant function”[57] but this limitation has not been adopted. The CLR also recommended that, for all those covered by the definition of officer, i.e. including directors, default should be taken to have occurred only where the person had authorised, actively participated in, knowingly permitted or knowingly failed to take active steps to prevent the action in question, and this recommendation is reflected in the Act.[58]

Appointment of Directors

14–23

The Act itself says little about the means of appointing the directors, leaving this to the articles of association. Its main concern is to give publicity to those who are appointed rather than to regulate the appointment process. On initial registration, the company must send to the Registrar of Companies particulars of the first directors[59] and a statement that they have consented to act. Thereafter the company must send particulars of any changes, with corresponding statements that any new directors consent to act.[60] The company must also maintain a register giving particulars of its directors.[61] Both registers are open to inspection by members of the public and so the public can obtain information about who the directors are either from Companies House or from the company’s registered office. This is a crucial provision, enabling people to know who controls what might otherwise appear to be faceless companies and facilitating the enforcement of the obligations to which directors are subject, whether by creditors, the public authorities or others.

However, as a result of the threats, or actual infliction, of violence by protestors on the persons or property of the directors of companies carrying on lawful activities to which the protestors objected, the scope of the information on the public registers has been reduced. No longer does the company’s public

register have to contain the director's usual residential address but only a service address (which might be the company's registered address), though the company must maintain a register of the directors' residential addresses which is not open to public inspection. Moreover, the company is prohibited from disclosing, except in limited circumstances, the residential address of a director or former director.[62] Equally, whilst the company must give to the Registrar the information which is contained in both its public and non-public registers, the Registrar must omit this "protected information" from the Registrar's public register and not otherwise disclose it, except in limited circumstances.[63]

14–24

As far as appointment is concerned, and contrary to popular belief, the Act requires neither that directors be elected by the shareholders in general meeting nor that they submit themselves periodically to re-election by the shareholders. This may often be the case, though it is far from universal practice, but, if it is, it is a consequence of the provisions of the company's articles, not of the Act's requirements. Equally, there is nothing to prevent articles providing that directors can be appointed by a particular class of shareholders, rather than the shareholders as a whole, by debenture holders or, indeed by third parties. In the case of community interest companies s.45 of the Companies (Audit, Investigations and Community Enterprise) Act 2004 explicitly empowers the Regulator of CICs to appoint a director of a CIC and for that person not to be removable by the company. In fact, the articles of public companies normally provide for retirement of board members by rotation on a three-year cycle and for the filling of the vacancies at each annual general meeting.[64]

14–25

The Act provides that each appointment in a public company shall be voted on individually[65] unless the meetings shall agree *nem. con.* that two or more shall be included in a single resolution. However, there are often provisions in the company's articles (as to notice to be given by shareholders to the company of their proposed candidates, etc.) which make it difficult for shareholders, if they are so minded, to put up candidates against

the board's nominees. So, the crucial decisions for the shareholders in public companies are normally whether to accept the board's nominees for election at the annual general meeting and whether subsequently to exercise their removal rights, as discussed below.

14–26

Unless the articles so provide, directors need not be members of the company. At one time it was customary so to provide,[66] but now the possibility of a complete separation of shareholders and directors is recognised and the model articles no longer provide for a share qualification. Of course, it is common for directors of public companies to become shareholders, often in a major way, under a share-option or other incentive scheme (discussed below), but even in these cases being a shareholder is not a formal condition of being a director.

14–27

As to age requirements, the law has undergone a complete reversal in recent years. The Cohen Committee tried to ensure that directors should normally retire when they attained the age of 70,[67] but as finally enacted this provision was so riddled with exceptions that it proved to have little impact. It no longer appears in the Companies Act, as recommended by the CLR.[68] However, the 2006 Act introduced a minimum age requirement of 16, apparently because of evidence that appointment of young directors was being used in order to exploit their immunity from prosecution or the unwillingness of public authorities to prosecute young persons.[69] Any such appointment is void, though the person appointed remains subject to the duties of directors under the Act.[70] This may mean that the company will no longer be in compliance with the requirements as to the minimum number of directors and thus be open to a direction from the Secretary of State as to the action it must take to remedy this situation.[71] However, the Secretary of State has power to make regulations permitting the appointment of classes of person under the age of 16, which regulations may make different provisions for different parts of the UK.[72] Other than this, no positive qualifications are required of directors—though, as we saw in Ch.10, they may be disqualified on the ground of

misconduct or unfitness.

14–28

Sometimes the articles entitle a director to appoint an alternate director to act for him at any board meeting that he is unable to attend. The extent of the alternate's powers and the answer to such questions as whether he is entitled to remuneration from the company or from the director appointing him will then depend on the terms of the relevant article.[73]

14–29

Finally, it should be noted that not everyone who is a called a director is a director in the terms of the Act and some people who are not called directors are directors in terms of the Act. The law does nothing to control the growing and potentially misleading practice of giving employees the title of director, even though they perform none of the central management functions of a director and are thus not directors under the Act. On the other hand, a person who is a director, as meant by the Act, need not be so called, for the term director, as used in the legislation, includes any person occupying the position of director, by whatever name called,[74] and directors of some guarantee companies are still called "governors" or the like.

Remuneration of Directors

14–30

The remuneration of directors comes from two sources: fees paid to them for acting as directors and, in the case of executive directors, money and other benefits receivable under the service contract entered into by them as managers with the company. The latter is by far the greater source of income of the executive directors of companies, especially of large companies, and it has been and continues to be a source of controversy and increasing regulatory and indeed legislative action in recent years.[75] Reflecting the trust origins of the company, a director is not entitled to a fee for acting as such, unless the articles or a resolution of the company makes provision for such payments, as they invariably will. By contrast, a person who provides additional services as a manager to the company, even if also a director, is entitled to reasonable remuneration on a quantum

meruit basis for services actually accepted by the company, even in the absence of a contract, although the two situations may not be easy to distinguish.[76] In practice, these difficulties rarely arise, since the company will have express power under its articles to remunerate directors and employ managers and an explicit contract is made in both cases.

14–31

In either case, a director dealing with the company as to fees and remuneration is in a stark position of conflict of interest, and the traditional common law rule in such a case was that the sanction of the shareholders was needed for the agreement between director and company.[77] However, directors found this rule inconvenient and, for more than a century, it has been common to provide in the articles that the board shall have power to set directors' remuneration as executives, though the director whose remuneration is at issue is not usually permitted to vote on the matter.[78] The current model article applies this rule also to directors' fees, even though under the 1985 model articles the default rule was that fees required shareholder approval.[79]

14–32

Setting remuneration in this way is a classic case where the risk of "mutual back scratching" arises: directors may not scrutinise too closely the remuneration of a fellow director in the expectation of similar treatment in return when their cases are considered. The increase in the levels of executive remuneration has been a matter of considerable public controversy in recent years, not simply because of the growing gap between executive salaries and the average incomes of others in society, but also because of the unsatisfactory negotiating process through which executive salaries are set under the typical form of articles. If directors, directly or indirectly, sit on both sides of the table when their remuneration is determined, then the results cannot be justified as emerging from a market process. Since this defect may characterise pay-setting in most companies with large shareholder bodies, it amounts to an example of a market failure, which justifies regulatory intervention.

What sort of regulation, however, should be adopted? The courts have been unwilling to scrutinise directors' remuneration

decisions on grounds of excess or waste, refusing even to prescribe that pay must be set by reference to market rates, provided the decision on remuneration is a genuine one and not an attempt, for example, to make distributions to shareholders/directors where there are no distributable profits.[80] This is probably a wise decision on the part of the courts, which might otherwise find themselves saddled with developing a general policy about the remuneration of directors of large companies. Neither has the legislature shown any enthusiasm to grasp the nettle of determining, substantively, what the level, or rate of increase, of directors' pay should be.

In this situation of abstention from settling the substantive issue, attention focuses on the procedure within the company for the setting of directors' remuneration. Several options are available, some now mandatory at least for larger companies.

Composition of the remuneration committee

14–33

One strategy is further to exclude executive directors from the process of remuneration setting, so that, not only is the individual executive whose remuneration is at issue forbidden from voting on the decision, but executive directors are side-lined in the remuneration-setting process. Under this strategy, remuneration decisions are allocated principally to a committee of the board consisting of non-executive directors. We examine this strategy further when we look more generally at the role of non-executive directors later in this chapter.[81] The doubts about it relate principally to the question of how independent even non-executive directors are when it comes to the setting of executive remuneration. Nevertheless, this approach is favoured by the UK Corporate Governance Code for Premium Listed companies,[82] with associated calls for greater board diversity although not for the more controversial inclusion on remuneration committees of employee or shareholder appointees who are not board members. It also warns the committee to ensure that pay rates are not simply ratchetted up without any necessary correlation with improved performance.[83]

Mandatory shareholder approval of certain aspects

of the remuneration package

General

14–34

A further, and perhaps complementary, strategy is to revive the common law principle of shareholder approval of directors' contracts.[84] There has been an increasing regulatory and legislative creep back to this earlier position. We shall see later in this chapter that the companies legislation has reintroduced the principle of shareholder approval in relation to certain termination payments. In addition, focussing on larger companies, shareholder approval is required under the Listing Rules for certain share option schemes and other long-term incentive plans ("ltips") for directors of companies admitted to Premium Listing on the London Stock Exchange.[85] And, most recently, shareholder approval of the company's general remuneration policy (plus an advisory vote on its implementation) is required for all quoted companies.

Long-term incentive pay schemes

14–35

Under a share option scheme a director is given the right to subscribe at some time in the future (normally after a period of years) for shares in the company and to pay for them (the "exercise price") the price which the shares had at the time the option was granted. The theory is that the director is thus incentivised to increase the price of the shares over the intervening period for the benefit of the shareholders. In order to meet the obvious objection that the increase in the stock price may have little to do with the efforts of the directors, ltips substitute some other form of incentive to be provided by the company in place of the shares.

14–36

Given these concerns about the alignment, or misalignment, of incentives, the payment of performance-related remuneration to executive directors (it is less typically paid to non-executive directors[86]) is now regarded with far more caution than it was only a few years ago, and instead simpler and more transparent

pay structures are favoured.[87] The UK Corporate Governance Code in its Main Principle on remuneration now includes the statement: "Executive directors' remuneration should be designed to promote the long-term success of the company. Performance-related elements should be transparent, stretching and rigorously".[88] And, further, that "[p]erformance conditions, including non-financial metrics where appropriate, should be relevant, stretching and designed to promote the long-term success of the company. Remuneration incentives should be compatible with risk policies and systems. Upper limits should be set and disclosed".[89] Moreover, packages should be sensitive to pay and employment conditions elsewhere within the group, especially in relation to rates of increase in salary; and, finally, and by way of rejecting the popular argument of global competition driving up pay, that companies should of course benchmark against their peers, but not in a way that leads to an upward ratchet without any improved performance.[90]

14–37

Originally because the granting of share options could dilute the position of the other shareholders, the LR made the introduction of such a scheme subject to shareholder approval.[91] The principle was later extended to other forms of ltip and it now provides a convenient mechanism for the shareholders to express concerns about whether, for example, the performance criteria attached to the ltip are "challenging". However, because obtaining shareholder approval is time-consuming and leaves the director in doubt as to what ltip the remuneration package will include, the company is given permission to dispense with shareholder approval where the option scheme or other ltip is "established specifically to facilitate, in unusual circumstances, the recruitment or retention of the relevant individual". This permission is subject to disclosure in the company's next annual report of the principal terms of the scheme and the reasons why the circumstances in question were viewed as unusual.[92]

Mandatory and advisory shareholder votes on remuneration policy and implementation

14–38

This ltip intervention, just described, might have been regarded as the tip of the iceberg. Growing public sentiment against escalating remuneration packages and perceived “payments for failure” (discussed below, whereby poorly performing managers are nevertheless contractually entitled to handsome rewards on their departure) inevitably prompted renewed consideration of whether shareholders should have a binding vote on some or all aspects of general remuneration policy or particular remuneration agreements.[93] The policy tension is evident: regulation of remuneration packages is fraught with difficulties, practical, policy-based and political; and rewards for failure are of course undesirable, but corporate ventures are inherently risky, and not every risky venture will succeed however good the management—in those circumstances, termination payments are unfairly condemned as rewards for failure. This concern is evident in the increasingly explicit focus in the CGC on possible “claw-backs”, with the 2014 version now providing explicitly that performance-related schemes “should include provisions that would enable the company to recover sums paid or withhold the payment of any sum, and specify the circumstances in which it would be appropriate to do so”.[94] Given this climate, and the selective intervention adopted by the Listing Rules and the CGC, increased Government intervention was inevitable. This has happened in stages, beginning with simple disclosure rules in 2002. The current legislation, introduced in 2013, requires that (a) directors of quoted companies produce an annual remuneration report in prescribed form[95] (as discussed below); and (b) that shareholders be given a triennial binding vote on the company’s “remuneration policy”, as laid out in that report; and (c) an annual advisory vote on its implementation.[96] Moreover, the directors cannot lightly escape their obligations to put these matters to the vote. Subject to very limited defences, s.440 makes it a criminal offence on the part of every officer in default (but, rightly, not on the part of the company) to fail to give the necessary notices of meetings or put the required resolutions to the vote (as described in ss.439 and 439A, and discussed below).[97]

14–39

By way of evidence of a public vote of confidence in this

model as being an attractive regime for regulating directors' remuneration in large companies, it is possible to look to the ongoing negotiations towards a reformed EU Shareholder Rights Directive.[98] This might be read as indicating the EU-wide appeal of UK models, especially the UK Corporate Governance and Stewardship Codes,[99] but of particular relevance here is the EU proposal for a shareholder "say on pay" which largely follows the existing UK model.

14–40

The definition of a quoted company is wider than companies incorporated in the UK and subject to the Listing Rules. The statute also embraces Britishincorporated companies if they have been included in the official list of any Member State of the European Economic Area or if their securities have been admitted to trading on the New York Stock Exchange or Nasdaq.[100] The purpose of this broader definition is to remove any incentive for British companies to escape the new requirements by listing their securities elsewhere than in London. The Secretary of State has the power to alter the definition of a quoted company by regulation,[101] which, presumably, he might do if admission to trading on an exchange other than those mentioned above were to become a practical possibility for British companies.

14–41

The crucial innovation in the current version of the legislation is not mere disclosure, since much of the information was already required to be disclosed under the LR.[102] It is the requirement for a triennial[103] binding vote of the shareholders on the company's remuneration policy (s.439A), and an advisory vote on its implementation (s.439). The remuneration policy must both describe and justify: it must set out how the company proposes to pay directors, including every element of the remuneration package, and how the chosen approach supports the company's long-term strategy and performance. In addition, the policy must set out the company's approach to recruitment and loss of office payments. Once a remuneration policy has been approved, a company may only make remuneration and loss of office payments as permitted within the limits of the policy, unless the

payment has been approved by a separate shareholder resolution. Failure to pass the remuneration policy would effectively block the company's right to pay its directors. Any arrangements made contrary to approved policy are void (s.226E(1)),[104] and any payments received by the director are held on trust for the company (ss.226E(2) and (3)). In addition, any director who authorised such a payment is jointly and severally liable to indemnify the company for loss, unless the director is shown to have acted honestly and reasonably in the circumstances (ss.226E(2), (3) and (5)).

14–42

Shareholders also have an annual advisory vote on the implementation report, which sets out how the approved pay policy has been implemented, including a single figure for the total pay directors received that year (with this designed to allow shareholders to make ready comparisons year-on-year, and between companies). In this case, however, an adverse vote does not affect director's entitlements,[105] although the failure will trigger the need for the company to put the remuneration policy to shareholders the following year. But failure to pass the report would inevitably have significant practical effect because of likely market reaction, so perhaps the real benefit of the annual advisory vote is that it gives the shareholders a further guaranteed opportunity to express their views on the directors' remuneration, which, without s.439, they would be able to do only if they requisitioned a resolution to be added to the agenda of the accounts meeting or requisitioned an extraordinary meeting of the shareholders, neither of which is necessarily easy to arrange.[106]

14–43

In all of this, "remuneration" is defined very broadly: it includes any form of payment or other benefit made to or otherwise conferred on a person in return for them holding, agreeing to hold or having held office as a director of the company (or any other role in connection with the management of the affairs of the company or its subsidiaries whilst a director of the company) (s.226A). The restrictions on remuneration payments therefore apply to payments such as those which might be made to new

directors to buy-out existing remuneration entitlements at their existing company. The restrictions on payments for loss of office extend to amounts paid to settle statutory or contractual claims arising in connection with a director's loss of office. In each case, therefore, unless the remuneration policy contemplates such remuneration payments or payments for loss of office, they must be separately approved by the shareholders (although where other legislation or a court requires a payment to be made, the Act will not prevent the company from paying it).

General disclosure: the directors' remuneration report

14–44

Public disclosure—transparency—is commonly used to support effective market control, especially in areas where targeted regulation is difficult. The disclosure obligations imposed on companies in relation to the remuneration of their directors vary according to whether the company is a "small company" (ss.381–384), an unquoted company, or a "quoted company" (s.385). Section 412 gives the Secretary of State power to make provision by regulations requiring information about directors' remuneration to be given in notes to a company's annual accounts. Predictably the most onerous rules are imposed on quoted companies, and we start with those. The necessary information must be provided in the directors' remuneration report ("DRR"), with its contents now prescribed in enormous detail by the Secretary of State in regulations.[107] The regulations divide the remuneration report into two parts: one, which is not subject to audit, relates to the company's remuneration policy, and another, which is subject to audit, concerns payments actually made to directors in the financial year in question.[108] The approach to legislative requirement for the disclosure of remuneration policy in the DDR is interesting: it requires the board to justify, rather than simply report, the company's remuneration arrangements[109]; but it does that in a very detailed way, requiring the company to provide standardised information, often in tabular form, by which the policy might be assessed, including details of specific remuneration components and the objectives sought to be achieved by their inclusion, with

illustrative workings of the ramifications for current directors over time. In addition, details are required explaining the way in which the company's overall pay policy has been derived, and how the views of shareholders have been accommodated.

14–45

The audited part of the remuneration report concerns payments actually made to persons who served as directors during the financial year. The ambition is to require companies to provide reports in a standardised way so that shareholders can compare remuneration outcomes in a variety of ways, whether between directors, across different years, and with other companies. To that end, this part of the report requires the company to list its directors by name and provide in a tabular display the "single total remuneration figure" for each of them, along with its component parts (as prescribed and defined in the regulations, and including the total amount of salary and fees, all taxable benefits, all money or other assets received by way of performance bonus, and all pension benefits). Any sums subject to claw back must be noted, and previous year comparisons of all elements must be provided.[110] All that must be audited. In addition, the implementation report must also provide performance graphs and tables which set out a number of matters, including the percentage change in the remuneration of the chief executive officer over his term in office, comparing that with the percentage change in employee pay (with provisions for considering corporate groups as a whole)[111]; the total company spend, and the relative spend on remuneration and distributions to shareholders. Other options, such as the mandatory disclosure of top-to-bottom pay differentials, appear now to be seen as uninformative and therefore as potentially counter-productive[112]; and the mandatory capping of executive pay has never attracted serious support. Finally, the report must contain statements of how the directors' remuneration policy of the company will be implemented in the next financial year; the consideration given by directors to the matter of remuneration; and a statement of the detailed result of the voting on any resolutions in respect of the directors' remuneration report or policy at the last general meeting of the company. To further improve transparency, from 1 October 2013, whenever a director

leaves office, companies will need to publish a statement setting out what payments the director has received or may receive in future. This statement must be published as soon as reasonably practicable. All of this provides an enormous amount of detail, not just to shareholders, and it is difficult to say how it will be used, or by whom.

14–46

Even unquoted companies cannot remain entirely silent on the subject of directors' remuneration. The matters about which information may be required include gains on the exercise of share options; benefits receivable under long-term incentive schemes; compensation for loss of office (as defined in s.215); contributions and benefits receivable with respect to past services; and consideration receivable by third parties for making available the services of a director (s.412(2)). The information must also include benefits receivable by a person "connected with" a director, or by a body corporate "controlled by" a director (s.412(4), and see ss.254 and 255 for interpretation of these terms). However, the relevant rules do not require a binding shareholder vote on policy, and there is no equivalent of the detailed implementation report. All that is required is the disclosure of aggregate remuneration only, or, where the data is further broken down, does not require recipients to be identified by name.[113] A small company can omit this information from the accounts it files at Companies House.

14–47

In an extension of the usual role of the auditor, if the auditor concludes that the information required, of either a quoted or unquoted company, in relation to directors' remuneration has not been provided, then a statement giving the required particulars must be contained in the auditor's report, so far as the auditor is reasonably able to provide it.[114] This is presumably thought to be a more effective remedy than fining the directors for failure to produce proper accounts and reports, though that sanction is available as well.

Removal of Directors

14–48

Accountability of the directors to the shareholders is obviously enhanced if shareholders can influence directly the choice of those who sit on the board. As we have seen above, company law does little to enhance shareholders' control over the appointment process, which is regulated predominantly by the company's articles of association. As far as company law is concerned, it would not be a breach of any mandatory rule for the articles to provide that none of the directors should be required to stand for re-election and that the existing directors, again without shareholder sanction, should choose any replacements for directors who resigned or were removed. In other words, shareholders could be wholly written out of the appointment process. In practice such extreme cases are rare, though for reasons that reflect market rather than legal constraints: large companies might find it difficult to sell their shares to institutional investors on the basis of such articles. This fact of life is reflected in the CGC whose "best practice" provision is that "all directors should be submitted for re-election at regular intervals, subject to continued satisfactory performance".[115]

Shareholders' statutory termination rights

14–49

When we turn to the removal of directors, however, we find that the legal rules are entirely different, although this has been the case only for the past half century or so. Until 1948, the power of the shareholders to remove directors depended, as with their appointment powers, on the provisions of the articles of association. However, under what is now s.168 of the Companies Act 2006, a director can be removed by ordinary resolution of the shareholders at any time. This expressly applies notwithstanding anything to the contrary in any agreement between the company and the director.[116] The articles may provide additional grounds for the removal of directors, the most common being a request from fellow directors.[117]

In comparative terms, this is a very strong provision. It means that the notion of a term of office for a director has little meaning. The articles may in fact provide that directors shall be appointed for three years at a time and things may be carefully

arranged so that no more than one third of the board comes up for election in any one year,[118] but these provisions cannot be relied upon because the shareholders may intervene at any time to secure a removal. It means also that there is little point in the board securing the appointment of a director over the vigorous opposition of the shareholders, since this may simply provoke them to remove those of whom they disapprove. Finally, as we have already noted,[119] there is now a certain policy tension between the common law decisions, discussed above, which prevent the shareholders from giving directions by ordinary resolution to directors on matters within their exclusive competence, and the statutory provisions permitting the removal of directors at any time by ordinary resolution. In practice, presumably, the latter overshadows the former:

directors may commit no legal wrong if they refuse to obey such instructions, but they will be aware that disobedience may trigger their removal from office.

14–50

There are two principal qualifications to the powers contained in s.168 which need to be noted: first, the courts have authorised provisions in the articles which provide an indirect way around the section, at least in relation to private companies; and the section itself preserves certain rights for directors upon removal, notably their right to compensation for breach of contract.

Weighted voting rights

14–51

On the first, it has been held by the House of Lords in *Bushell v Faith*[120] that the object of the section can be frustrated by a provision in the articles attaching increased votes to a director's shares on a resolution to remove him, thus enabling him always to defeat such a resolution. This apparently indefensible decision can perhaps be justified on the ground that in a small private company[121] which is, in effect, an incorporated partnership, or in a joint-venture company it is not unreasonable that each "partner" should, as under partnership law, be entitled to participate in the management of the firm in the absence of his agreement to the contrary and to protect himself against removal

by his fellow partners. Moreover, it has been recognised that the removal of a director in the case of such "quasi-partnerships" (as they have come to be called) may so strike at the essential underlying obligations of the members to each other as to justify a remedy on grounds of unfair prejudice or even the compulsory winding-up of the company on the ground that it is "just and equitable" to do so.[122] Nevertheless, the decision was much criticised[123] but has not been reversed in subsequent legislation. In effect, for private companies s.168 is only the default rule.

Director's procedural rights on termination

14–52

Even where the articles contain no provisions as to weighted voting rights, the successful operation of the section requires some pretty stringent conditions to be met. Special notice has to be given of any resolution to remove a director (and to appoint someone else instead, if that is proposed).[124] This means the proposer must give 28 days' notice to the company of the intention to propose the resolution.[125] The company must supply a copy to the director, who is entitled to be heard at the meeting.[126] Further, the director may require the company to circulate any representations which that person wishes to make.[127] The object of these restrictions is to prevent a director from being deprived of an office of profit on a snap vote and without having had a full opportunity of stating the contrary case.[128]

Director's contractual rights on termination

14–53

A more serious restraint on the members' powers of dismissal is the provision that the section shall not deprive a director of any claim for compensation or damages payable in respect of the termination.[129] This provision applies to both the termination of the directorship as such and of "any appointment terminating with that as director". Thus, compensation for termination of the executive director's service contract is included where, as is invariably the case, both directorship and service contract are terminated at the same time. In fact, the continuation of the service contract is often made conditional on the holding of the

directorship, so that the service contract terminates automatically upon cessation of the directorship.

14–54

Thus, if there is a contract of service between the director and the company, as will be the case with managing and other executive directors, the probability is that the members will be able to sack the director only at the risk of imposing on the company liability to pay damages or a sum fixed by the contract as compensation. This, it may be said, is also fair, because the company has freely bound itself by contract. However, once again, we encounter the risk that the director may have been present on both sides of the bargaining table when the provisions were negotiated which are now relied upon to provide compensation at the point of termination.[130] The members may therefore find that the directors have entrenched themselves by negotiating contracts of service by which the company has to pay them substantial sums if it exercises its statutory power to dismiss them by ordinary resolution—or indeed dismisses them in any other way[131]—other than for serious misconduct, although the disclosure and approval regimes noted earlier, especially for quoted companies, work against this.[132]

14–55

It must be emphasised, however, that the dismissed director can claim for damages for breach of contract only if a binding contract entitles the director either to hold that position or a related executive position for a fixed term, or to be dismissed only after prescribed or reasonable notice and that notice requirement is not observed by the company (as it rarely will be). Similarly, the dismissed director will be entitled to a contractual termination payment only if the relevant contract specifically so provides. So the important question is whether the dismissal of the director constitutes either a breach of a contract with the director (giving rise to damages) or a termination triggering specified contractual termination payments.

There are two broad classes of cases. First, if the director's contract (whether as director or as executive manager) simply incorporates the provisions of the company's articles,[133] then—like the articles themselves—the contract terms are usually

regarded as inherently subject to the Act (and its statutory dismissal right) and to permissible variation if the shareholders use their powers to alter the company's underlying articles. In these circumstances if the shareholders utilise their statutory dismissal powers or change their articles to effect dismissal, then neither will count as a breach of the director's contract: they will, rather, be dismissals in accordance with the terms of the contract.[134] This approach cannot, however, be used by the company to escape past liabilities to the director: on ordinary contract principles, the shareholders' acts cannot have retrospective effect.[135]

Alternatively, and typically, the director will have a separate and independent contract with the company, whether formal or informal.[136] If this contract is for a fixed term or has a notice period, or if termination triggers a compensation payment, then such provisions will inevitably be breached or triggered if the shareholders exercise their statutory dismissal powers or exercise their power to amend the company's articles, and do so in a way which enables dismissal or prevents the director from continuing as director where that is a condition of the director's independent contract. In those circumstances, although the courts will not enjoin the shareholders from exercising their statutory or constitutional powers, the company will thereby become liable to the director either for damages for breach of contract[137] or for payment of the agreed termination payment. Depending on the terms of the director's contract, these sums can be prohibitive, so much so that dismissal can become quite impractical for the company. It is to this problem that we turn next.

Control of termination payments

14–56

This issue of prohibitive termination payments (whether paid under the contract or by way of compensation) has increasingly occupied policy-makers in recent years, at least in relation to public companies. The complaint is not only that the company's hands can be tied despite s.168 powers, but that the outcome often seems to deliver "rewards for failure" to departing directors.

A director's contract can employ a number of devices to enhance the levels of compensation payable upon termination, in particular, entering into a long fixed-term contract, perhaps one with a rolling fixed term[138]; including long notice periods for the lawful termination of the contract by the company[139]; and including express entitlements to compensation if the contract is terminated.[140] None of these provisions would operate to protect a director were the company entitled to terminate the service contract without notice on grounds of a serious breach of contract on the part of the director. However, mere lack of economic success on the part of the company is unlikely to amount to such a fundamental breach of contract: economic failure by the company does not necessarily betoken lack of effort or commitment on the part of the directors. Indeed, if directors were entitled to no contractual protection on termination, they might take too cautious an approach to risky business ventures. And even where there has been clear wrongdoing by the director, the company may prefer to pay the director to go quietly, rather than insist on its contractual rights.

Company law tries to steer a course between these competing considerations by a combination of disclosure and shareholder approval requirements, both advisory and binding, in relation to agreed termination payments and other contractual terms.

Disclosure

14–57

Simple disclosure is a powerful tool. Formerly, the members might know nothing about the directors' service contracts, especially the potential consequences of any decision to remove the director. In this respect at least, their position was improved quite some time ago: each director's service contract, or a memorandum of its terms if it is an unwritten contract, must be available for their inspection at any time. This applies also to shadow directors and to service contracts with subsidiary companies.[141] The previous exemptions for service contracts with less than twelve months to run or for directors required to work wholly or mainly outside the UK have been removed.

14–58

In relation to quoted companies, as noted earlier,[142] the Act now also requires that directors produce an annual remuneration report ("DRR"), which, like the other annual reports, must be provided to the members and the Registrar.[143] The crucial features of this report are, first, that the shareholders have a binding vote on remuneration policy (s.439A), and that policy must provide details, in a prescribed and accessible form, of the company's policy on the duration of directors' contracts, on notice periods, and on termination payments.[144] Secondly, to ensure the policy and practice are aligned, the company must provide an annual implementation report, as part of the DRR, detailing all payments actually made, again broken down into accessible detail.[145]

Shareholder approval

(i) Remuneration packages—quoted companies

14–59

Failure to gain shareholder approval in advance of termination payments made to directors of quoted companies can have significant consequences. Any termination payments which are not in compliance with the company' agreed remuneration policy, or have not been separately agreed by the shareholders, cannot be made (s.226C). If they are, the company can recover the payments from the recipient director; moreover, any director who authorised the payments is jointly and severally liable to indemnify the company (s.226E). On the other hand, if the payment is in compliance with the policy, but contained in an implementation report voted down by the shareholders, this will have no effect on the validity of the payment (s.439(5)).

(ii) Terms governing the length of the contract—all companies

14–60

More generally, the legislature has sought to limit excessive termination payments by reducing the possible term for which a director can be appointed, and making sure these provisions bite whether those terms take the form of notice periods or fixed or rolling contractual terms. If such a term has the effect that the

contract cannot be terminated by the company within a two-year period (referred to as the “guaranteed term”), then prior approval by a resolution of the general meeting is required.[146] In the absence of shareholder approval, the provisions establishing the guaranteed term are void and the contract can be terminated at any time by the company on reasonable notice.[147] The section applies to shadow directors and to service contracts with subsidiaries.[148]

14–61

Despite the changes made, the sections are still open to criticism on two grounds. First, by concentrating on the length of employment, s.188 seems not to catch contractual provisions which give the company the contractual right to terminate the director’s employment at any time but then provide for substantial payments to be made to the director under the contract, if termination takes place. The CLR proposed that contractual covenants for severance payments “should be void to the extent that they provide for more compensation than would be available by way of compensation for breach of contract”,[149] but this suggestion was not taken up.

Secondly, it is arguable that for public companies the period of two years is too long. The Greenbury Committee thought there was a strong case of reducing the period to one year.[150] As a consequence, the Listing Rules[151] now require boards to report to the shareholders annually giving “the details of any director’s service contract with a notice period in excess of one year or with provisions for pre-determined compensation on termination which exceeds one year’s salary and benefits in kind, giving the reasons for such notice period”. This provision catches both notice periods and contractual severance payments and applies a one-year limit, but requires only disclosure and justification, not shareholder approval. To similar effect, the UK Corporate Governance Code, also applying to Premium Listed companies, provides: “Notice or contract periods should be set at one year or less. If it is necessary to offer longer notice or contract periods to new directors recruited from outside, such periods should reduce to one year or less after the initial period”.[152] The CGC is enforceable on a “comply or explain” basis, as discussed below, and so its provisions are not mandatory, though they are

generally observed.

(iii) Termination payments

14–62

So far in our discussions, we have focused on compensation payments received by directors because their dismissal constituted a breach of contract by the company, typically because dismissal under s.168 or under the company's articles also brought to an end some other contract the director had with the company or a subsidiary, normally a service contract, and the early termination of that contract amounted to a breach. Alternatively, the contract itself may have provided for a defined termination payment.

However, it is not impossible that the remaining members of the board might choose to make a gratuitous payment to one of their number removed from office by shareholder vote, perhaps to ensure the director goes quietly, perhaps to encourage similar treatment of themselves should they suffer the same fate in the future. This, however, is a matter where the Act has required shareholder approval since 1948. What is now s.217 makes it unlawful for a company to give a director of the company (or of its holding company) any payment by way of compensation for loss of office or as consideration for or in connection with his retirement from office,[153] without particulars of the proposed payment (including its amount) being disclosed to members of the company and the proposal being approved by the members (and the members of the holding company, where appropriate). In other words, the directors cannot increase the cost of a removal without the consent of the shareholders. The section does not apply, however, to payments by way of compensation for breach of contract, to payments to which the director is contractually entitled (unless the contract was entered into in connection with the termination), or to pension payments in respect of past services, apparently whether contractually required or not.[154]

An unauthorised payment to the director is held by the recipient on trust for the company and any director who authorised the payment is jointly and severally liable to indemnify the company for any loss suffered (for example,

where the payment is not recoverable from the recipient).[155]

Structure and Composition of the Board

14–63

When we looked at the role of the board in the first section of this chapter, we saw that, broadly, the range of business decisions to be conferred upon the board is left by the law to be determined by the company's articles of association. By contrast, in the fourth section we saw that the law plays a crucial role in setting the rules governing the removal of board members. In this fifth and final section of the chapter we look at the rules on board structure and composition. Here again the law leaves matters to be determined by the company's constitution, but this is an area in which the "corporate governance" movement of the past two to three decades has made a significant impact on listed companies, but through "soft law", in the shape of the UK Corporate Governance Code, rather than through legislation.

Legal rules on board structure

14–64

Before turning to the composition of the board, let us look at its structure. An important difference between legal systems is whether they require one-tier or two-tier boards. In Germany, for example, as we have already noted, a two-tier board is mandatory for public companies (*Aktiengesellschaften*), and so the relevant statute (*Aktiengesetz*), besides requiring both a supervisory and a managing board, stipulates the functions of each and the methods of appointment of each board. The task of running the company (in the sense of setting and executing its strategy) is entrusted to the managing board, and the supervisory board monitors the discharge by the managing board of its functions. A person may not be a member of both boards.

14–65

By contrast, in Britain, the US and the Commonwealth, the one-tier board is the norm, with managing and supervisory functions being discharged by a single body. Although this is the norm, it is not obvious that the law in Britain requires a single board. The Act does not require the directors to act as a board, and so it

hardly needs to address the further question of whether the board is to be a one-tier or a two-tier board.[156] In fact, the CLR found some evidence that "the practice of delegating [from 'the board'] day to day management and major operational questions to a 'management board' is becoming increasingly common in this country".[157] This infringes no provision of the statute, and, provided the articles permit such further delegation by the board and provided the board monitors effectively the functioning of the "management board", it involves no breach by the directors of their duties or risk of disqualification on grounds of unfitness.[158]

14–66

Domestic law does however formally recognise the possibility of a two-tier structure for one class of company. This is the SE (European Company) which opts to register in Britain. Under the SE Regulation of the EU, which is directly applicable in the UK, an SE may choose in its statutes (as its equivalent of the articles are termed) whether to have a one-tier board or a two-tier board consisting of a supervisory organ and a management organ.[159] Where the latter structure is adopted a German-style division of function between the two boards is applied: the management organ ("MO") "shall be responsible for managing the SE"[160]; and the supervisory organ ("SO") "shall supervise the work of the management organ", but the SO may not "itself exercise the power to manage the SE".[161] However, the statutes of the SE must list the categories of transaction (which may be extensive or limited) which require the authorisation of the SO.[162] Thus, there is some flexibility in fixing the line between supervision and management, since an extensive list of matters requiring SO authorisation would give that body a significant influence over the management of the company. Further, the SO itself (or its individual members) may require the MO to provide the information it requires for the discharge of its functions and may arrange for investigations to the same end.[163] Thus, the SO has some flexibility as to how vigorously it discharges its functions.

With one small exception, no person may be a member of both bodies.[164] The members of the MO are appointed by the SO, whose members, in the absence of employee representatives, will be appointed by the general meeting.[165] What goes for

appointment must apply to removal. Consequently, the shareholders' power of removal under s.168 applies to members of the SO alone, so that the members of the MO will be removable by the shareholders only indirectly.

These provisions in the regulation relating to the two-tier board provide only a skeleton of the structure, however. The detail has to be fleshed out by reference to national law. Where the regulation does not deal with a matter, or deals with it only partly, then the rules of the Member State in which the SE is registered, as they apply to public limited companies, will apply to the SE. Hence the relevance of s.168 of the 2006 Act, just mentioned. This will be the case unless the Regulation requires or empowers the Member States to adopt implementing legislation specifically for the SE, in which case that implementing legislation will prevail over general public company rules as regards the matters it deals with.[166]

There are relatively few areas where specific implementing legislation is required or permitted, but one of them is in relation to the two-tier board. Where in the domestic law of a Member State "no provision is made for a two-tier board system", that Member State "may adopt the appropriate measures in relation to the SE".[167] It might be thought that the UK was quintessentially such a atate and that specific implementing measures for the two-tier board were thus required. However, the Government took the view that, since the domestic companies legislation does not require the directors to form a board in any particular way, the law permitted domestic companies to establish one-tier or two-tier boards, as they wished. The fact that UK boards were one-tier rather than two-tier in form was a result of practice, rather than legal requirement, as the CLR's evidence could be taken to suggest.

By contrast, the Government moved a little way away from this stance in relation to the duties laid on directors by statute, including now their general duties under the 2006 Act. The domestic implementing regulations do make specific provisions in relation to such duties. Their general approach is to apply the statutory duties of directors indifferently to the members of both the organs in a two-tier system, but not so as to impose on the SO a function which is managerial and so within the sole

competence of the MO.[168] An example might be the production of the annual accounts, although other duties might be more difficult to classify.

It remains to be seen whether the adoption by SEs registered in the UK of two-tier board structures will create a practical "spill over" effect into domestic law. To date that seems unlikely however, since so far few SEs have been registered in the UK.

Legal rules on board composition

Employee representatives

14–67

If the division between one-tier and two-tier board structures is an important dividing line in European jurisdictions, an even more crucial one is the requirement for employee representatives on the board. There is an inaccurate view that most continental European company laws require employee representation on the model adopted for large companies in Germany (that is, an equal division between employee and shareholder representatives), whereas that model is unique to Germany. Nevertheless, about half the Member States of the EU require minority shareholder representation on the boards of private sector companies.[169] The UK, of course, is among the half which does not have mandatory board representation for employees, i.e. does not use company law to regulate the process of contracting for labour but leaves that task to labour law and contract law. In this context, the SE is again of interest, since EU law requires SEs, even when registered in the UK, in some situations to have employee representatives at board level. This will arise when at least one of the companies forming the SE was subject to mandatory employee representation rules under its domestic laws.[170] The experience of UK-registered companies operating a system of employee representation at board level might be instructive, but again the low level of SE registrations in the UK—with or without employee representation—makes this possibility not of immediate interest.

Gender diversity—women on boards

14–68

In 2010, Lord Davies of Abersoch was commissioned to review gender diversity on boards. His report, published in February 2011,[171]presented a business case for diversity: improving performance; accessing the widest talent pool; being more responsive to the market; and achieving better corporate governance. He rejected the use of "quotas", at least for the time being, but set out recommendations designed to achieve 25 per cent female representation on boards by 2015. The effect has been positive and the target achieved,[172] with the threat of mandatory quotas no doubt providing its own incentive for action.[173] However, it is notable that most of the increase has come in non-executive board appointments, not executive ones, and in what are anecdotally described as "more junior" roles. But the pressure continues in the UK, perhaps enhanced by the EU's decision to launch its own consultation and investigation on gender imbalance as a cross-EU issue.[174] This makes rising targets increasingly likely.

Corporate governance codes, The Cadbury Report and non-executive directors

14–69

In contrast to the lack of change in the UK in the area of board representation for employees, or the slow change in gender (or other) diversity, there has been a lively debate over the past two decades about board composition, at least of listed companies. That debate has focused on the proportion and role of non-executive directors on the board, and the regulatory results have shown themselves in what is now the UK Corporate Governance Code ("CGC") rather than in legislation. Before these changes, the non-executive director held a not especially active, prestigious or powerful role, for which he (and it generally was he) was only modestly rewarded by directors' fees.[175] The executive directors were the dominant force within the company, with the CEO as the embodiment of managerial authority. All that has now changed, at least for companies subject to the CGC, although whether the changes have improved the business success of companies is still debated.[176]

14–70

The corporate governance movement in the UK can be said to have begun with the report of the Cadbury Committee in 1992.[177] As is often the case with company law reform, this committee was constituted as a result of scandal, in this case the sudden descent into insolvency of major companies which had only recently issued annual financial statements which revealed nothing of the horror to come.[178] The Cadbury Committee concluded, however, that the causes of these problems were not to be found in the narrow area of accounts and auditing, though it gave attention to the role of auditors, but reflected more widespread defects in the corporate governance systems of large British companies. In consequence, its proposed reforms (in the "Cadbury Code" of best practice) heralded a general reform of board composition and functioning in large UK companies, for which the scandals constituted the precipitating factor but to which they did not set a limit.

14–71

What was the corporate governance problem which Cadbury sought to address? Although it identified a number of problems, the central one might be thought to have been the domination of companies, not just by top management, but by a single over-powerful managing director or CEO. The fact that other executives may take up seats on the board gives, of course, only the illusion of constraint on the CEO in such a company, because the other directors are the latter's managerial subordinates, whilst non-executive directors may equally owe their board positions to the patronage of the CEO. Whilst not taking the view that all or even a majority of large British companies were governed in this way, the thrust of the Committee's proposals was towards putting in place a board structure which would render such dominance by a single person less likely, through the introduction of various counter-balances to the executive management of the company. From the point of view of top management, therefore, the Cadbury Code might be presented as an attack on their discretion.[179]

14–72

Indeed, in that context the subsequent review by the Hampel Committee,[180] delivered six years later, can be seen as a failed

attempt by management to win back some of the ground which it had conceded to the Cadbury Committee. The Preliminary Report of the Hampel Committee[181] struck a distinctly sceptical note, asserting that "there is no hard evidence to link success to good governance", a phrase which was not repeated in the Final Report, and implicitly criticising Cadbury for giving rise to a "box ticking" approach to corporate governance. Past debate on corporate governance, it said, had focused too much on accountability and not enough on the governance contribution to business prosperity, and the Committee wished to "see the balance corrected".[182] Only in the final report could the Hampel Committee bring itself to say that it endorsed the "overwhelming majority"[183] of the recommendations of the Cadbury Committee (and of the Greenbury Committee[184] which had reported in the interim on the particular and still controversial subject of directors' remuneration). Hampel's main contribution was to propose, as indeed happened, that the recommendations of the Cadbury and Greenbury Committees, as refined by Hampel, should be brought together in a "Combined Code".

14–73

Following a further set of corporate failures, this time in the US and forever to be associated with the name of the Enron company, the Government commissioned another review of the Combined Code, which was carried out by Derek Higgs. The Government's overt role in the appointment of Mr Higgs was an innovation, since the earlier bodies had been appointed by private associations, such as the Confederation of British Industry and the accounting bodies, although they were generally observed or even serviced by civil servants. The Higgs report constituted a ringing endorsement of the approach of the Cadbury committee and contained recommendations for the strengthening of the Combined Code, but along the lines already established by that Committee.[185] For example, it contained proposals, later implemented, for an increase in the proportion of non-executive directors ("NEDs") on the board from one third to one half, at least in the largest listed companies.

14–74

Developments did not stop there, but, remuneration apart (which

remains under close scrutiny, as discussed earlier), the current principles of corporate governance in the UK are in essence the product of the Cadbury Committee whose recommendations, without much violation of the truth, are often treated as a proxy for all the corporate governance reforms in the UK since the 1990s.[186] The most important requirements of the current CGC are described below, and then we consider the special mechanism by which the Code is enforced.

The requirements of the UK Corporate Governance Code

14–75

What particular practices does the UK Corporate Governance Code recommend to listed companies as far as board structure is concerned? The principal suggestions are as follows, and they revolve around two central ideas. The primary idea is enhancement of the role of NEDs; the subsidiary one is splitting the roles of CEO and chair of the board.

- At least one half of the board as a whole should be comprised of NEDs, all of whom should be independent.[187] As well, the board "should include an appropriate combination of executive and non-executive directors (and, in particular, independent non-executive directors) such that no individual or small group of individuals can dominate the board's decision taking".[188] As with the board as a whole, the NEDs have a role both in setting the company's strategy and supervising its implementation.[189] In the case of the non-executive directors, however, "supervising" also includes monitoring the performance of the company's executive directors.[190] The CGC provides a definition of independence, which is essentially conceived of as independence from the management. Thus, a person who has been an employee of the company within the previous five years, or has had a material business relationship with it in the previous three years, or holds cross-directorships, or represents a significant shareholder, or has been on the board for more than nine years is not categorised as independent.[191]
- The qualities and qualifications of the individuals appointed

to the board are clearly crucial, and the CGC provides that there should be “a formal, rigorous and transparent procedure for the appointment of new directors to the board”,[192] with the search for board candidates being conducted, and appointments made, “on merit, against objective criteria and with due regard for the benefits of diversity on the board, including gender”.[193] To increase accountability and keep the board refreshed, directors of FTSE 350 companies should be subject to annual re-election, and directors of smaller companies to re-election at least every three years.[194] A measure of the perceived workload of executive directors, NEDs and chairs is evident in the CGC rule that boards “should not agree to a full time executive director taking on more than one non-executive directorship in a FTSE 100 company nor the chairmanship of such a company”.[195]

- The board should have remuneration[196] and audit[197] committees on which the NEDs should be the only members, and a nomination committee on which they should be the majority of the members.[198] These three committees clearly deal with the three most sensitive governance matters. The whole scheme will fail if the executive directors can control the appointment of the NEDs; remuneration decisions place the executive directors in a position of acute conflict of interest; and assessment by the shareholders of the performance of the management will be impossible in the absence of accurate financial data about the company but, by the same token, this is an area where the management has the greatest incentive to put an unduly optimistic interpretation on the company’s position.
- The CEO and the chair of the board should not be the same person.[199] Their roles are seen as quite distinct. The chair of the board, whose role is unspecified and indeed hardly recognised in statutory company law, “is responsible for leadership of the board, ensuring its effectiveness on all aspects of its role”.[200] The chairman is also responsible for “setting the board’s agenda and ensuring that adequate time is available for discussion of all agenda items, in particular strategic issues. The chairman should also promote a culture of openness and debate by facilitating the effective

contribution of nonexecutive directors in particular and ensuring constructive relations between executive and non-executive directors".[201] The chairman is responsible for ensuring that the directors receive accurate, timely and clear information.[202] The chairman should ensure effective communication with shareholders.[203]

The CGC recognises that the chair will have such extensive contact with the executive management that his or her independence will inevitably be compromised.[204] On the other hand, the chair should be independent upon appointment.[205] From this follows one of the most contentious, and disregarded, provisions of the CGC, namely, that a retiring or recently retired CEO should not move on to become chair of the board, although exceptionally the board may so decide, subject to consulting major shareholders in advance and setting out the relevant reasons at the time of the appointment and in the next annual report.[206]

- The chairman should meet the NEDs without the executives being present (it is not stipulated how often) and once a year the NEDs should meet without the chair to appraise the latter's performance.[207]
- A senior independent director should be identified and be available as a sounding board for the chair, as an intermediary for the other directors, and as a person for shareholders to contact if they think that contact through the CEO or chair of the board would be inappropriate.[208] All non-executive directors should be offered the opportunity to attend meetings with shareholders (and should attend them if requested by the shareholders). However, a particular obligation falls on the senior NED to "attend sufficient meetings with a range of major shareholders to listen to their views in order to help develop a balanced understanding of the issues and concerns of major shareholders".[209]
- There should be a formal statement of the matters on which the board's decision is necessary (i.e. of matters which are not simply left for management to decide and subsequently report to the board).[210]
- The NEDs should have access to appropriate outside

professional advice and to internal information from the company.[211]

14–76

There are two points to be made about these provisions of the UK Corporate Governance Code. The first is that the stress on the monitoring role of the independent NEDs has the effect of reproducing within the single-tier board the distinction between management and supervision (or monitoring) that is to be found within the two-tier board system, except that in the single-tier system the NEDs are necessarily involved in the formulation of company strategy. Whether it is better to extend this functional distinction into a structural division between managing and supervisory boards depends on whether one thinks that monitoring is carried out more effectively if the executives set strategy together with the monitors or separately from them. The former provides the monitors with more information, but facilitates their capture by the executive directors.[212] In any event, one can conclude that the functions performed by one-tier and two-tier boards are not fundamentally different from one another.[213]

Secondly, although independent NEDs may no longer be the cat's-paws of the CEO, which in the past they often were, it is far from clear that the UK Corporate Governance Code provisions provide the independent NEDs with effective incentives to exercise control over strong-minded CEOs. Since executive management is unlikely easily to accept supervision by the non-executives, the non-executives may well have a battle on their hands to impose their will where there is a divergence of view. Even when explicitly trained, as Higgs recommended, why should the non-executives fight this battle rather than opt for a quiet life? Self-esteem will provide some incentive to this end, no doubt, as does the NEDs' increasingly explicit accountability to the shareholders under the CGC.

But the potentially insoluble shortcomings here are, more recently, being addressed in quite a different way, by making shareholders, especially the institutional shareholders, more accountable for the exercise of their own powers over the governance of their companies.[214] The explicit linking of these

two powerful governance strands was promoted in the 2012 Kay Report,[215] which highlighted the serious problems of short-termism and consequential lack of trust in UK equity markets, with both executive remuneration packages and institutional investor practices coming into focus as needing reform.[216]

Enforcement of the UK Corporate Governance Code

14–77

We referred above to the UK Corporate Governance Code as "soft law". This is perhaps misleading. At the centre of the CGC there is a perfectly "hard" obligation. The Listing Rules require both UK-registered and overseas-registered companies with Premium Listing in the UK to disclose in their annual report the extent to which they have complied with the UK Corporate Governance Code in the previous 12 months and to give reasons for areas of non-compliance (if any).[217] More precisely, the company must explain how it has applied the Main and Supplementary Principles set out in the CGC (i.e. compliance at the level of principle is obligatory), and must also state whether it has complied with the lower-level specific "provisions" of the CGC and explain any areas of non-compliance. The sanctions which can be applied to both companies and directors for non-compliance with the listing rules are extensive.[218]

14–78

The "softness" of the law is a result of the lack of legal consequences if compliance with the disclosure obligation imposed by the LR reveals non-compliance with the CGC. It would be perfectly in compliance with the listing rules for the company to report that it has not complied with the CGC in any respect, provided it also gave reasons for its wholesale rejection. Any further action on the basis of the reported non-compliance is for the shareholders, as the recipients of the annual reports, not for the FCA or any other Governmental body. This has been called the principle of "comply or explain". It suggests that, even in relation to the relatively small group of Premium Listed companies, UK regulators still feel hesitant about their ability to devise governance structures which will be suitable for all the

companies in the identified population. The possibility of not complying fully with the Code gives the companies in question flexibility in adapting the provisions of the UK Corporate Governance Code to their particular circumstances, whilst the need to "explain" gives the Code a somewhat greater force than a recommendation which companies are free to accept or reject. The freedom to explain rather than comply in full with the Code has been used in particular by small listed companies.[219] "Comply or explain" clearly puts shareholders in a pivotal position in determining whether the Code's requirements will bite in practice, and much of its impact is due to the support which institutional shareholders have given to the Code.[220] In short, "softness" is not the same as self-regulation, with its risk of being merely self-interested: the compulsory disclosure regime, backed by the statutory right given to shareholders to dismiss directors, gives the CGC far greater bite.

14–79

How effective is this regime? There is evidence of some non-compliance with even the "hard" obligation of the LR; and some companies fail to explain areas of non-compliance and rather greater numbers give explanations which can hardly be considered as adequate.[221] The level of enforcement by the FCA is relatively low. Non-compliance with the CGC itself is a more slippery concept, since there is no obligation to abide by it provided non-compliance is adequately explained. But in general companies have chosen to comply; and indeed the move has often been from inadequate explanation of non-compliance to full compliance rather than to adequate explanation.[222] In this sense, the comply or explain mechanism is clearly changing corporate behaviour, although some companies do make proper use of the explanation mechanism to give good reasons why in their particular case one or more provisions of the CGC is inappropriate.[223]

14–80

The CGC is subject to both praise and criticism. For example, its application only to Premium Listed companies can be seen as too narrow. Certainly, the Cadbury Committee recommended that its Code of Practice should be observed by all large

companies.[224] The restriction to listed companies seems to have arisen because the Listing Rules provided a convenient enforcement mechanism, not because this category aptly defines the companies for whom such rules are most appropriate.[225] Within this limited class, however, the regime surely succeeds in putting pressure on companies to adopt higher standards of best practice, standards which would generally be seen as to onerous to be adopted as mandatory legislative minima (the composition of audit and remunerations committees is an illustration). Moreover, these standards can be regularly and flexibly reviewed in ways not possible with statutory or regulatory rules. The best evidence of these benefits might be seen in the widespread adoption of similar regimes internationally.

Conclusion

14–81

The board of directors has long been the "black box" of British company law. In large companies, with numerous and dispersed shareholding bodies, the central management of the company's business is necessarily in the hands of the board. Yet company law has traditionally specified very little about how this body should operate. That the board is central to the operation of companies was recognised from the beginning by the development of a wide range of duties (considered in Ch.16) which apply to directors who undertake to act on behalf of the company. However, the questions of which functions should be assigned to the board and of how the board should organise itself for the effective discharge of those duties were ones that company law did not seek to answer. All that constituted the "internal management" of the company which it was for the shareholders to design.

That still remains largely the case, though the case law on the disqualification of directors (considered in Ch.10), conceived with the interests of creditors in mind, has begun to lead to the formulation of more demanding principles about the proper conduct of directors of all companies. For listed companies, however, things have changed over the past quarter of a century. Now there is not only a small-scale corporate governance industry in existence, but the central tenets of its beliefs have

been given regulatory expression in the UK Corporate Governance Code which, with the support of the institutional shareholders, exerts a real, although not completely inflexible, pressure on companies to conform to a particular model of board composition and operation. A company whose business is producing outstanding profits can probably afford to ignore the CGC to large extent, but should its business performance falter, it is likely to find the pressures to conform to that model irresistible.

[2] For the meaning of "Premium Listing" see below at paras 25–6 and 25–15.

[3] After the 2006 Act at least one of those directors must be a natural person (s.155)—as opposed to a corporate director—in order to improve the enforceability of directors' obligations. The requirement however will be expanded so as to require all company directors to be natural persons, subject to certain yet-to-be-defined exceptions, as a result of s.87 of the Small Business, Enterprise and Employment Act 2015, *https://www.gov.uk/government/news/the-small-business-enterprise-and-employment-bill-is-coming* [Accessed 28 April 2016]. The Act also contains a mechanism for dealing with the situation where the company does not comply with ss.154 or 155. The Secretary of State may issue a direction to the company, specifying the action the company must take and failure to comply with the Secretary of State's direction constitutes a criminal offence on the part of the company and any officer in default, including a shadow director: s.156.

[4] Contrast, for example, Pt 4, Divisions One and Two of the German *Aktiengesetz* for large companies and of the statute for the *Gesellschaft mit beschränkter Haftung* (private company).

[5] See para.3–14.

[6] Article 3 of the model articles in each case.

[7] Article 5 of the model articles for public companies. The same provision is included for private companies limited by shares: art.5.

[8] Exercise of the delegation power also raises questions of compliance by directors with their general duties, notably in relation to the degree of supervision they should maintain over delegated functions. See paras 16–16 and 16–33, below.

[9] Partnership Act 1890 s.24(8).

[10] i.e. in legal terms. It is clear that, in terms of the functional analysis of economists, directors are agents and shareholders principals because the former have the factual power to affect the well-being of the latter. But this does not mean the authority of the directors is conferred upon them in such a way as to make them the legal agents of the shareholders.

[14] *Marshall's Valve Gear Co v Manning Wardle & Co* [1909] 1 Ch. 267.

[15] *Quin & Axtens v Salmon* [1909] 1 Ch. 311 CA; [1909] A.C. 442 HL.

[16] But for contrary views, see G. Goldberg in (1970) 33 M.L.R. 177; M. Blackman in (1975) 92 S.A.L.J. 286; and G. Sullivan in (1977) 93 L.Q.R. 569.

[17] *Shaw & Sons (Salford) Ltd v Shaw* [1935] 2 K.B. 113 CA. See also *Rose v McGivern* [1998] 2 B.C.L.C. at 604.

[18] *Shaw & Sons (Salford) Ltd v Shaw* [1935] 2 K.B. 113 at 134 CA.

[19] They can now remove the directors by ordinary resolution: s.168, below.

[20] *Scott v Scott* [1943] 1 All E.R. 582. See also *Black White and Grey Cabs Ltd v Fox* [1969] N.Z.L.R. 824 NZCA; where the cases were reviewed, as they were by Plowman J at first instance in *Bamford v Bamford* [1970] Ch. 212 CA.

[21] *Scott v Scott* [1943] 1 All E.R. 582 at 585D. Lord Clauson was sitting as a judge of the Chancery Division.

[22] This is clearly seen if the judgments in the above cases are compared with that in *Foss v Harbottle* (1843) 2 Hare 461; see below, para.17–4. The modern view was reiterated at first instance in *Breckland Group Holdings Ltd v London and Suffolk Properties Ltd* [1989] B.C.L.C. 100, noted by K. Wedderburn in (1989) 52 M.L.R. 401; and L. Sealy in [1989] C.L.J. 26.

[23] Article 4 in each case. However, the special resolution altering the articles or giving instructions to the directors does not have the effect of invalidating anything done by the directors before the passing of the resolution: art.4(2). If the directors have merely resolved to take course X before the shareholders resolve by special resolution to take contradictory course Y, then presumably the shareholder resolution constitutes a binding instruction to the directors not to implement their prior resolution. However, if in implementation of their prior resolution the directors have contracted on behalf of the company with a third party, that third-party contract would remain binding on the company. If extensive powers of direction are exercised by the shareholders, it is conceivable that they might come to be regarded as de facto or shadow directors of the company. See para.16–8, below.

[24] Unless the "manager" can be classified as a shadow or de facto director: see para.16–8. Contrast the position in other jurisdictions, such as Australia, where the general statutory duties apply not only to directors but also to "officers".

[25] *Baron v Potter* [1914] 1 Ch. 895. Contrast situations in which a board cannot do what the majority of the directors want because of the opposition of a minority acting within its powers under the articles: see, e.g. *Quin & Axtens v Salmon* [1909] A.C. 442 HL; and the decision of Harman J in *Breckland Group Holdings v London & Suffolk Properties* [1989] B.C.L.C. 100.

[26] *Alexander Ward & Co v Samyang Navigation Co* [1975] 1 W.L.R. 673 HLSc, per Lord Hailsham at 679 citing the corresponding passage from the 3rd edn of this book.

[49] Discussed below at paras 16–117 et seq. See also the mandatory role of shareholders on board remuneration: below at paras 14–30 et seq.

[50] See paras 28–20 et seq.

[51] LR 10. The FCA has the power to dispense from the strict application of this rule.

[52] 2006 Act Pt 16, discussed further in Ch.21, below.

[53] 2006 Act s.425.

[54] 2006 Act s.113.

[55] 2006 Act s.1121. Where the director or officer is itself a company, there is no liability unless one of the latter's officers is in default, in which case he or she is criminally liable as well as the corporate officer or director: s.1122.

[56] To some extent the statute is following the lead given by the decision in *Meridian Global Funds Management Asia Ltd v Securities Commission* [1995] 2 A.C. 500 PC. The CLR reported that, under the previous law, the uncertainty as to who was a manager meant that prosecution of sub-board managers was rarely attempted: Final Report, Ch.14, fn.296.

[57] Final Report, para.15.54, though for particular offences it would be possible to cast the net wider. It would not be necessary for such a manager to be employed by the company, as where the particular administrative function had been out-sourced to an independent organisation.

[58] 2006 Act s.1121(3).

[59] 2006 Act s.12.

[60] 2006 Act s.167.

[61] 2006 Act ss.162 et seq.

[62] 2006 Act ss.163, 165 and 241. The company, on the application of a member, liquidator or creditor or other person with a sufficient interest, may be ordered by the court to disclose the residential address if there is evidence that service of documents at the service address is ineffective or it is necessary or expedient to do so in connection with the enforcement of a court order: s.244.

[63] 2006 Act ss.240 and 242. The Registrar may use protected information for the purposes of disclosure to a public authority specified in regulations or, again subject to regulations, a credit reference agency, for otherwise the company might not be able to obtain credit: s.243 and the Companies (Disclosure of Address) Regulations 2009 (SI 2009/214). Further, the Registrar may put the director's address on the public record if communications sent to the director by the Registrar remain unanswered or there is evidence that service of documents at the director's service address is ineffective. The director and the company must be consulted before this step is taken. If it is, the company must alter its public record as well: ss.245 and 246.

[64] Model public company articles, art.21. The model for private companies makes no such provision. The board also has power to appoint directors (arts 17 (private) and 20 (public))—this is a useful power for filling vacancies arising unexpectedly between annual general meetings—and again, directors of public companies appointed by the board come up for re-election at the next AGM (art.21), with private companies having no equivalent.

[65] 2006 Act s.160. This is designed to prevent the members being faced with the alternative of either accepting or rejecting the whole of a slate of nominees.

[78] Model articles for public companies, arts13 and 23 (a widely expressed power). Similar provisions are to be found for private companies (arts 14, 19). For the problems which arise if the company seeks to fix the terms of executive remuneration without complying with its articles, see *Guinness v Saunders* [1990] 2 A.C. 662 HL; *UK Safety Group Ltd v Hearne* [1998] 2 B.C.L.C. 208; and below, para.16–24.

[79] Table A, art.82.

[80] *Re Halt Garage (1964) Ltd* [1982] 3 All E.R. 1016. This case involved a decision by shareholders as to the remuneration to be paid to themselves as directors. It seems likely that the same principle would be applied to a directors' decision, except that the directors would also have to meet their core duty of loyalty (see below at paras 16–52 and 16–84). In the context of unfair prejudice petitions (that is, in cases of disputes between shareholders) the courts have struck out more boldly and have been willing to assess whether the remuneration paid to the controllers as directors was appropriate: see below at para.20–10.

[81] See below, para.14–75.

[82] Principle D.2.1, and note the 2014 (and draft 2016) version of D.2.4.

[83] Principle D.1.

[84] Though one should note the argument of Professors Cheffins and Thomas that such approval is more likely to be effective in relation to sudden leaps in executive pay in a particular company than in controlling a steady, general upward drift in pay across all companies: "Should Shareholders Have a Greater Say over Executive Pay? Learning from US Experience" (2001) 1 J.C.L.S. 277.

[85] LR 9.4.

[86] Principle D.1.3.

[87] See High Pay Commission (now High Pay Centre), *Cheques with Balances: Why tackling high pay is in the national interest* (Final Report, 22 November 2011) *http://highpaycentre.org/files/Cheques_with_Balances.pdf* [Accessed 27 April 2016]; and more recently, an attack by the High Pay Centre on performance-related remuneration: High Pay Centre, *No Routine Riches: Reforms to Performance-Related Pay* (13 May 2015) *http://highpaycentre.org/files/No_Routine_Riches_FINAL.pdf* [Accessed 19 April 2016]; and *The Metrics Re-Loaded: Examining Executive Remuneration Performance Measures* (10 June 2015) *http://highpaycentre.org/files/Metrics_Reloaded.pdf* [Accessed 27 April 2016].

[88] Principle D.1.

[89] Sch.A.

[90] Principle D.1. and Sch.A.

[91] It should be noted that the statutory pre-emption rights of shareholders (see below at para.24–6) might lead to a similar requirement for shareholder approval, but the statutory rights (a) do not apply to an allotment of securities under an employees' share scheme (s.566), which might include a scheme for executive directors; and (b) can be disapplied in advance by shareholder vote (ss.569–571), whereas the rights under the LR may not be. It should also be noted that the LR do not require shareholder approval for share option schemes or other long-term incentive plans which are open to all or substantially all the company's employees (provided that the employees are not coterminous with the directors), presumably on the grounds that the wide scope of the scheme is protection against directorial self-interest: LR 9.4.2.

[92] LR 9.4.2–3.

[93] See *BIS Discussion Paper: Executive Remuneration* *http://www.bis.gov.uk/Consultations/executive-remuneration-discussion-paper* [Accessed 27 April 2016], and *Discussion paper: summary of responses* (ibid), indicating the problems with binding votes, although the possibility remains live.

[94] Principle D.1.1.

[95] 2006 Act s.420 et seq., noting especially ss.421(2A) and 422A.

[96] 2006 Act ss.439 and 439A.

[97] Finally, it is noteworthy that the FCA has in place four Remuneration Codes tailored to different types of firm, each directed at enhancing awareness of risk and ensuring that risk is better managed and better aligned with individual reward: see *https://www.the-fca.org.uk/remuneration* [Accessed 27 April 2016].

[98] Please see *http://ec.europa.eu/internal_market/company/docs/modern/cgp/shrd/140409-shrd_en.pdf* [Accessed 27 April 2016], proposing amendments to the existing Shareholder Rights Directive (Directive 2007/36/EC) and Directive 2013/34/EU. On issues relating to corporate governance reporting ("comply or explain"), the UK (through the FRC) has responded to the Commission on its progress in implementing those recommendations: *https://www.frc.org.uk/News-and-Events/FRC-Press/Press/2015/July/UK-responds-to-European-Commission-s-Recommendatio.aspx* [Accessed 19 April 2016].

[99] On the UK Stewardship Code, see para.15–30.

[100] 2006 Act s.385.

[101] 2006 Act s.385(4)–(6).

[102] For the current requirements see LR 9.8.8.

[103] Or more frequently if the policy changes, even in a minor way.

[104] The very limited transition exception is that legal obligations made before the legislation introducing these reforms was published on 27 June 2012 and which have not been amended or renewed since, will not be subject to the restrictions in 2006 Act Ch.4A: Enterprise and Regulatory Reform Act 2013 s.82.

[105] 2006 Act s.439(5). The director and company could agree of course that some item of the remuneration package should be so conditional.

[106] See paras 15–48 et seq.

[107] Large and Medium-Sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410) Sch.8, as amended by the Large and Medium-Sized Companies and Groups (Accounts and Reports) (Amendment) Regulations 2013 (SI 2013/1981) Sch.8.

[108] See Large and Medium-sized Companies and Groups (Accounts and Reports) (Amendment) Regulations 2013 (SI 2013/1981) Sch.8 Pt 5.

[109] SI 2013/1981 Pts 4 and 6.

[110] See Large and Medium-sized Companies and Groups (Accounts and Reports) (Amendment) Regulations 2013 (SI 2013/1981) Sch.8.

[111] This represents an obvious attempt to persuade directors and shareholders to focus on the issue of widening pay dispersal within companies, with the multiples by which executive directors' remuneration exceeds the average remuneration of employees increasing dramatically.

[112] The mooted mandatory disclosure of the ratio between top executive salaries and the mean or median salaries in the company seems generally to be regarded as too dependent on the size of the company, the nature of its business, and its geographical spread to provide helpful data for cross-company comparisons.

[113] Large and Medium-Sized Companies and Groups (Accounts and Reports) Regulations 2008 (SI 2008/410) Sch.5 para.1 requires the disclosure of aggregate remuneration (a rule applied to quoted companies as well), para.2 of the amount paid to the highest paid director (but without naming that person) if the aggregate remuneration exceeds £200,000, and paras 3–5, the aggregates paid by way of early retirement benefits, compensation for loss of office and to third parties by way of directors'

services.

[114] 2006 Act s.498(4). On the role of the auditor see Ch.22.

[115] CGC, Main Principle B.7. Even as late as 1985 the model set of articles (Table A) provided that "a managing director and a director holding any other executive office shall not be subject to retirement by rotation" (art.84). The current set of model articles for public companies contains no such provision (that for private companies contains no provision for regular re-election at all, whether for executive or non-executive directors).

[116] 2006 Act s.168(1). The previous version of the section (s.303 of the 1985 Act) also explicitly overrode anything to the contrary in the articles. This is not repeated in s.168, presumably on the grounds that it was unnecessary so to provide. The statute will override the articles, unless otherwise provided in the statute, although one would have thought that the same was true of a private agreement. In the case of a community interest company the Regulator is empowered to remove a director at any time, but not apparently so as to give the director a claim for compensation against the company. Instead, the director can appeal to the court against the Regulator's decision, apparently with the effect of reinstating the director if the appeal is successful: Companies (Audit, Investigations and Community Enterprise) Act 2004 s.46.

[117] The current model articles for public and private companies do not include such a provision, but see *Bersel Manufacturing Co Ltd v Berry* [1968] 2 All E.R. 552 HL (power of life directors to terminate the appointment of ordinary directors); *Lee v Chou Wen Hsien* [1984] 1 W.L.R. 1201 PC (power of majority of directors to require a director to resign).

[118] Such arrangements are what in the US are referred to as "staggered boards".

[119] See above, paras 14–5 et seq.

[120] *Bushell v Faith* [1970] A.C. 1099 HL. The shares in a private company were held equally by three directors and the articles provided that in the event of a resolution to remove any director the shares held by that director should carry three times their normal votes, thereby enabling him to outvote the other two. It was held that: "There is no fetter which compels the company to make voting rights or restrictions of general application and—such rights or restrictions can be attached to special circumstances and to particular types of resolution": per Lord Upjohn at 1109.

[121] A similar article would scarcely be practical in most other cases.

[122] See *Re Westbourne Galleries Ltd* [1973] A.C. 360 HL, and Ch.20, below. It also seems that the court could enjoin the breach of a binding agreement between members and a director on how they should vote on any resolution to remove a director, thus, in effect, affording another method of circumventing s.168. See *Walker v Standard Chartered Bank Plc* [1992] B.C.L.C. 535 CA. Such an agreement would not be caught by s.168(1) which refers only to agreements between the director and the company.

[123] See the forthright dissenting opinion of Lord Morris of Borth-y-Gest at 1106 and D. Prentice (1969) 32 M.L.R. 693 (a note on the Court of Appeal's judgments). The development of the unfair prejudice protection further reduces the need for the decision—but it equally reduces its adverse consequences, since the exercise of the legal right to remove a director may nevertheless constitute unfairly prejudicial conduct. See para.20–7.

[124] 2006 Act s.168(2). This gives rise to a potential ruse for avoiding the impact of s.168. Shortly before the meeting the directors whose removal is sought resign, having added to the board new members under their gap-filling powers (see above fn.64). The

removal resolution is now unnecessary in relation to the directors who have resigned and will be ineffective in relation to their replacements (even if the resolution states as one of its objectives the removal of the replacements) because special notice will not have been given by the proposers to the company about the removal of the replacements, since the proposers will not have known who the replacements were to be at the time they served notice on the company: *Monnington v Easier Plc* [2006] 1 B.C.L.C. 283.

[125] 2006 Act s.312. The company must then give notice to the members in the notice convening the meeting or, if that is not practicable, by newspaper advertisement or other mode allowed by the articles, normally not less than 14 days before the meeting: ibid.

[126] 2006 Act s.169(1),(2). In this case a private company cannot use the written resolution procedure: a meeting has to be held.

[127] 2006 Act s.169(3). If those representations are not received in time to be circulated, the director can require them to be read out at the meeting (s.169(4)). The same rule applies if the company does not comply with its obligations under s.169(3), but the resolution is not invalidated in such a case. This would provide an easy way for the company to avoid the director's removal.

[128] But apparently the director can be deprived of this protection if the articles contain an express power to remove a director by ordinary resolution and the company acts under that power. Section 169 is expressly limited to removals "under section 168" and s.168(5)(b) provides that s.168 does not "derogate from any power to remove a director that may exist apart from this section".

[129] 2006 Act s.168(5)(a). Although those terms themselves can be subject to statutory bars: see, e.g. ss.226B–C for quoted companies.

[130] See above, para.14–30.

[131] The board of directors can normally terminate a director's contract of service as an executive, and, under the usual provision in the articles, so can the general meeting by removing him as a director: see ibid.

[132] See above, paras 14–34 et seq.

[133] Recall that the articles do not operate as an enforceable contract between the director and the company: see above, paras 3–23 et seq. Instead, they define the terms of the separate contract between director and company: *Re Peruvian Guano Co, Ex p. Kemp* [1894] 3 Ch. 690, 701; *Re New British Iron Co, Ex p. Beckwith* [1898] 1 Ch. 324, 326–327; *Swabey v Port Darwin Gold Mining Co* (1889) 1 Meg. 385, 387 CA.

[134] *Swabey v Port Darwin Gold Mining Co* (1889) 1 Meg. 385 CA; *Read v Astoria Garage (Streatham) Ltd* [1952] Ch. 637 CA.

[135] *Swabey v Port Darwin Gold Mining Co* (1889) 1 Meg. 385 CA; *Bailey v Medical Defence Union* (1995) 18 A.C.S.R. 521 H Ct Australia.

[136] For the complications which are liable to occur in the latter event, see *James v Kent* [1951] 1 K.B. 551 CA; and *Pocock v ADAC Ltd* [1952] 1 All E.R. 294n.

[137] *Southern Foundries v Shirlaw* [1940] A.C. 701 HL; *Shindler v Northern Raincoat Co Ltd* [1960] 1 W.L.R. 1038, per Diplock J. In the light of the observations in the earlier case it seems that the court will not grant an injunction to restrain the alteration of the articles.

[138] Under a rolling fixed-term contract, the fixed term is renewed from day to day, so that the full length of the term always remains to run. Under an ordinary fixed term, a

director removed, for example, in the last three months of a fixed three-year term, would not receive much benefit from the fixed term; under a “three-year roller” the director will always have the full protection of the three-year term. Moreover, it is possible to structure the contract so that, although the company is bound by the fixed term, the director is permitted to terminate the contract by giving relatively short notice.

[139] In *Runciman v Walter Runciman Plc* [1992] B.C.L.C. 1084 the directors’ service contracts required five years’ notice for lawful termination, a provision which had been increased from three years in the face of the prospect of a takeover bid. The CGC recommends contract and notice periods of no more than one year, or at least reducing to one year even if something more is required initially to attract the director (D.1.5).

[140] This express provision may be, but need not be, a liquidated damages clause. It may give the director an entitlement which goes far beyond any compensation which would otherwise be payable to him for breach of contract. The CGC provides, however, that “the aim [when agreeing provisions which determine termination payments] should be to avoid rewarding poor performance” (D.1.4).

[141] 2006 Act ss.228 and 229. Failure to comply constitutes a criminal offence on the part of every officer of the company who is in default. Section 228 refers to “service contracts”, unlike its predecessor (s.318 of the 1985 Act) which referred to “contracts of service”. It is suggested that this change makes it clear that both contracts of service and contracts for services are covered. Section 230 brings in shadow directors (on the meaning of which see para.16–8, below).

[142] Above, at para.14–44.

[143] 2006 Act ss.423(1) and 441(1).

[144] SI 2013/1981 Sch.8 Pt 4.

[145] SI 2013/1981 Sch.8 Pt 3.

[146] 2006 Act s.188. Section 188(3) sets out a complex definition of the “guaranteed period” so as to prevent a company circumventing the legislative policy through a combination of fixed terms and notice periods, each shorter than two years but cumulatively longer. Section 188(4) performs the same role for guaranteed terms made up of more than one contract. Under the previous legislation the relevant period was the very long one of five years, but both the Law Commission and the CLR had recommended a reduction.

[147] 2006 Act s.189. That period of reasonable notice might be less than two years. Thus, the director pays a potential penalty for failing to secure shareholder approval, in that the contract may become subject to a notice period shorter than the two years which the contract could have contained without shareholder approval.

[148] 2006 Act ss.188(1) and 223.

[149] Final Report I, para.6.14.

[150] *Directors’ Remuneration, Report of a Study Group* (Gee, 1995), para.7.13.

[151] LR 9.8.8(8).

[152] CGC, para.D.1.5.

[153] The circumstances in which the section bites are widely defined in s.215. There are specific provisions in ss.218 and 219 dealing with compensation payments made in connection with takeover bids or transfers of the company’s assets, which are discussed

in para.28–28.

[154] 2006 Act s.220. The exclusion of covenanted payments, in the standard case, is in line with the previous law (*Taupo Totara Timber Co v Rowe* [1978] A.C. 537 PC; *Lander v Premier Pict Petroleum*, 1997 S.L.T. 1361) and was recommended by the Law Commission (*Company Directors: Regulating Conflicts of Interests and Formulating a Statement of Duties*, Cm. 4436 (1999), para.7.48). But, given the requirement for approval of contracts of more than two years' duration, it makes all the more peculiar the exemption from shareholder approval of covenanted termination payments equivalent to more than two years' salary.

[155] 2006 Act s.222(1), thus at last implementing the report of the Cohen Committee: Report of the Committee on Company Law Amendment, Cmnd. 6659 (1945), p.52. The recipient will normally be the director but the legislation covers compensation payments to persons connected with the director or at the direction of the director or a person connected with the director: s.215(3).

[156] For the same reason the Act says nothing about the division of function between the board and its committees nor about the role of the chair of the board.

[157] Developing, para.3.139.

[158] See above at para.10–5 and below at paras 16–34 et seq.

[159] Council Regulation 2157/2001/EC art.38 and Recital 14 (see above at para.1–40).

[160] Council Regulation 2157/2001/EC art.39(1).

[161] Council Regulation 2157/2001/EC art.40(1).

[162] Council Regulation 2157/2001/EC art.48. The UK Government decided not to take up the option available under the Regulation for the SO itself to determine the list of matters requiring its authorisation.

[163] Council Regulation 2157/2001/EC art.41(3), (4). The right of individual members of the SO to information is a Member State option which the UK has exercised. See the European Public Limited-Liability Company Regulations 2005 (SI 2005/2326) reg.63 (as amended by The European Public Limited-Liability Company (Amendment) Regulations 2009 (SI 2009/2400)).

[164] Council Regulation 2157/2001/EC art.39(3). The exception is where the SO nominates one of its members to fill a vacancy on the MO, during which period that person's supervisory functions are suspended.

[165] Council Regulation 2157/2001/EC arts 39(2) and 40(2). There is a Member State option for members of the MO to be appointed directly by the shareholders, but the UK felt unable to take it up. Article 47(4) preserves appointing rights under national law of minority shareholders or other persons.

[166] Council Regulation 2157/2001/EC art.9(1)(c).

[167] Council Regulation 2157/2001/EC art.39(5).

[168] European Public Limited-Liability Company Regulations 2005 (SI 2005/2326) reg.78(3) and (5). Nor must the application of the statutory duties require the SO and MO to take a decision jointly: reg.78(4)—both as amended by The European Public Limited-Liability Company (Amendment) Regulations 2009 (SI 2009/2400). For the Government's views on whether domestic rules were required at all and their extent see DTI, *Implementation of the European Company Statute: A Consultative Document*,

October 2003, pp.22–23 and 25; and DTI, *Implementation of the European Company Statute: Results of Consultation*, July 2004, pp.2–4.

[169] Group of Experts, *European Systems of Worker Involvement: Final Report*, Brussels, May 1977, Annex III. The subsequent enlargement of the EU has not affected this statistic.

[170] Council Directive 2001/86/EC supplementing the Statute for a European Company with regard to the involvement of employees, implemented in the UK by the European Public Limited-Liability Company Regulations 2005 (SI 2005/2326) Pt 3 (as amended by The European Public Limited-Liability Company (Amendment) Regulations 2009 (SI 2009/2400)). The provisions of this directive are notoriously complex and include an option for the employee representatives not to take up their representation rights. For an analysis see Davies, "Workers on the Board of the European Company?" (2003) 32 I.L.J. 75. Despite the attempt to protect countries with mandatory employee representation requirements from having them undermined by the formation of an SE, it seems that some German companies have found the SE attractive because it enables them to escape some aspects of their domestic laws. Although the proportion of employees may be the same, the size of the board may be reduced for the SE, as compared with, the domestic German rules, (small boards being regarded as more efficient than large ones) and all the SE's employees will be represented at board level, not just the German ones, thus arguably diluting the employees' influence. Thus, when Allianz merged with its Italian subsidiary to form an SE its supervisory board was reduced from 20 to 12 and, of the six board members for employees, four were German, one French and one British.

- Voting and verification of votes **15–73**
- Miscellaneous matters **15–82**

Conclusion **15–87**

THE ROLE OF THE SHAREHOLDERS

15–1

The previous chapter demonstrated that most decisions about the company's business will be taken by the board. Nevertheless, shareholders' decision-making still has an important, indeed crucial, role to play in the governance of companies. Quite apart from those decisions for which the Act requires shareholder consent,[1] the traditional model of directorial accountability to the shareholders depends heavily upon the ability of the shareholders to review the performance of the board (notably when the annual report and accounts are presented to them) and to take decisions if they think that performance has not been adequate, for example, by removing the existing directors and installing a new board.[2]

15–2

Shareholder activism depends on individual motivation, certainly, but is also crucially underpinned by the rights of shareholders at general meetings. Although most intervention by substantial shareholders will take place in private, moving into the public arena of the general meeting only if private pressure is unsuccessful, the pressure which such shareholders can bring to bear privately depends in large part upon the prospect of their being able to get their way in the public meeting if the private pressures are unsuccessful. Without doubt, the crucial factor, if it comes to a public fight between the incumbent management and these shareholders, is the ability of an ordinary majority of the shareholders at any time to remove the directors under the provisions of s.168.[3]

15–3

Nevertheless, the shareholder meeting has had a bad press in recent years. In small companies it is argued that the meeting is an unnecessary encumbrance, because the shareholder/directors frequently meet together informally. And in large companies shareholders do not show sufficient interest in using the general meeting, often allowing it to be captured by single-issue pressure groups whose primary objective is to advance the policies they stand for rather than any interests as shareholders. The Act has been amended incrementally over recent years to address the first set of concerns. The second, and more intractable, set of problems can only be addressed with "a sharper focus on the shareholder".[4] A "more effective machinery for enabling and encouraging shareholders to exercise effective and responsible control" was one of three core policies of the CLR in the corporate governance area,[5] an approach which increasingly chimes with current government policy initiatives.[6]

15–4

Before we consider these problems, it is important to be alert to one preliminary issue, which is the question of who is entitled to vote on shareholder decisions. It should not be supposed that all shareholders, not even all ordinary shareholders, necessarily have the right to vote on shareholder resolutions or, even if they do, that they have voting rights as extensive as those attached to other shares which apparently carry the same level of risk. As we

shall see,[7] the rights attached to classes of shares, including the number of votes per share, are matters for the company to determine in its articles of association or in the terms of issue of the shares. The exclusion of preference shareholders from voting rights, except in limited circumstances, is common, and the issuance of non-voting ordinary shares is not unknown, though it is fiercely opposed by institutional shareholders.[8] Thus, "shareholder democracy", which is in any event a democracy of shares rather than of shareholders, is, or may be, an imperfect one. Company law does not require equal voting rights for shares carrying the same risk nor equivalent rights for shares of different classes of risk.[9]

15–5

In these circumstances, there is a risk, where voting and cash-flow rights are not proportionate, that the controlling shareholder (controlling in terms of votes but not necessarily in terms of capital committed to the company) will take excessive risks with the company's business at the expense of the non-controlling shareholders (who may be the majority contributors to the company's capital) since the controller does not bear a proportionate part of the downside if the strategy is unsuccessful. Disproportionate voting structures may alternatively be used to maintain the existing directors of the company in office, because the controllers elect themselves or their nominees to the board and are reluctant to abandon their control.[10] In most cases, however, since the price of the non-controlling shares (at least where these are traded on public markets) adjusts to reflect these risks, regulatory intervention is directed at disclosure rather than prohibition.[11]

Shareholder Decision-Making without Shareholder Meetings

The nature of the problem

15–6

In small companies where shareholders and directors are the same people, requiring them to distinguish between the decisions they take as directors and those which they take as shareholders can seem unduly burdensome. They will tend in fact to take all

decisions as directors, since the rules about board meetings are largely under their control, whereas the Act contains some mandatory rules about shareholder meetings, for example, as to the length of notice required.[12] However, this approach generates legal risks, because the rules for the two types of meeting are not the same. For example, voting is normally on the basis of "one person, one vote" on the board, but on the basis of "one share, one vote" at a shareholders meeting. If the shares are not equally divided among the directors, the outcomes in the two situations may not be the same. Normally, this does not matter as long as all is going well, because decisions will in fact be taken unanimously. However, if relations between the entrepreneurs begin to deteriorate, as in small companies they often do,[13] clear decision-making mechanisms are required.

15–7

One straightforward way of resolving this problem would be to permit companies where shareholders and directors are the same people to operate with only a single decision-making organ, probably the board. This facility is provided by many state laws in the US, but when the CLR consulted on this proposal,[14] it did not find enough support for the idea to take it forward in Britain. Instead, the 2006 Act simply makes it easier for small companies to operate, but still with two decision-making bodies. If incorporators wish, formally, to roll the board and the shareholders' meetings into one whilst still retaining limited liability, they will have to operate as a Limited Liability Partnership.[15]

Written resolutions

15–8

By amending earlier statutory rules, the 2006 Act now provides for much simpler decision-taking within private companies. The default obligation on private companies to hold an AGM has been abolished, and resolutions of the members of a private company may now be taken either as a written resolution or by adoption at a meeting of the members.[16] Both forms of taking shareholder decisions are of equal validity and (with two limited but important exceptions, discussed below) any decision may be taken in either manner. Indeed, s.300 makes it clear that the

articles may not deprive the company of its right to take statutory decisions (other than the two exceptions just noted) by written resolution, though the articles could require a meeting for decisions which are wholly within the jurisdiction of the articles. A written resolution needs to be adopted by the same percentage of support as would be needed for a resolution adopted at a meeting.[17] The necessary consequence has been a greater formalisation of the rules governing written resolutions.

15–9

This approach renders decision-taking in private companies far less cumbersome, although if a member wishes to have a meeting of members and the board is unwilling to convene one,[18] then—now that a formal AGM is not required—a meeting can only be demanded if the general provisions on the calling of meetings by members have been observed. These provisions normally require the requisitionists to hold 5 per cent of the company's voting share capital.[19]

Where written resolutions not available

15–10

There are only two situations where the written resolution procedure is not available to private companies, and where the company must instead proceed by means of a meeting of its members. These are decisions for the removal of either a director[20] or an auditor[21] before the expiration of their period of appointment.[22] With directors, if the Act did not insist on a meeting, the director's entitlement[23] to be heard on the removal resolution at the meeting would be nugatory. An auditor does not have the same right to be heard, but only to make written representations to the meeting.[24] Here, the rationale for insistence upon a meeting seems to be to subject those shareholders who favour the removal to face-to-face questioning by the other shareholders, if they wish to put questions, presumably on the grounds that this will lead to more considered outcomes in relation to potentially significant changes of personnel in central parts of the company's corporate governance structure.

The procedure for passing written resolutions

15–11

Written resolutions require the same show of approval as would be needed to pass the resolution if it were proposed at a meeting.[25] This means either 50 per cent or 75 per cent, depending upon whether the resolution required is an ordinary or a special resolution.[26] Of course, in the case of a meeting the percentage figures refer to those who vote, whether in person or by proxy, whereas in the case of a written resolution it refers to those entitled to vote.[27] In practice, therefore, the consent of a higher percentage of the members is normally needed for the passing of a written resolution than for a resolution at a meeting where typically fewer than half the members attend either in person or by proxy. Nevertheless, the advantages of not having to call a meeting outweigh this potential disadvantage.

15–12

The Act requires a copy of the proposed written resolution to be sent at the same time (as far as is reasonably practical) to every member entitled to vote. However, if this can be done without "undue delay", the company may submit the same copy to each member in turn (or different copies to each of a number of members in turn) or employ a combination of simultaneous and consecutive circulation.[28] It is submitted that the courts should take a rather strict view of what constitutes "undue delay". Near-simultaneous circulation is important because it prevents the proposers circulating the resolution first to its likely supporters or those with no strong view on the matter, thus securing their support before the opponents have had the opportunity to put their case to the other members. This is important, because the written resolution is passed at the point at which it secures the requisite majority of the members, whether or not all those members to whom the resolution has been sent have voted at that time, whether the period for voting has expired or whether, indeed, all the members have been sent copies of the resolution at that point.[29] If a proposed ordinary resolution is sent to a 51 per cent shareholder and he or she signifies assent to it, before any of the other shareholders have opened their emails, the resolution will be adopted at that point.

A member signifies agreement to a proposed resolution when

the company receives from the member or someone acting on the member's behalf a document indicating agreement, the method of signifying agreement having been indicated when the resolution was circulated.[30] Once given, the consent cannot be revoked.[31] This is another consideration in favour of simultaneous circulation. Despite the importance of simultaneous circulation, non-compliance with the provisions of s.291 (which includes the requirements for informing the members of the method of signifying consent and the final voting date) does not affect the validity of the resolution, if it is passed, though it does constitute a criminal offence on the part of every officer in default.[32]

Written resolutions proposed by members

15–13

Resolutions may be proposed as written resolutions by directors or members.[33] Members holding at least 5 per cent (or some lower percentage if so fixed by the articles) of the total voting rights exercisable on the resolution in question may request circulation of a resolution,[34] along with a statement of up to 1,000 words in support of the resolution.[35] Once such a request has been made, the company must, within 21 days, initiate the written resolution procedure in the manner described above.[36]

This requirement is subject to three exceptions:

(i) The requisitionists must tender a sum necessary to cover the costs of the circulation, unless the company has resolved otherwise.[37] These should not be large if electronic circulation is possible.

(ii) The resolution must not be ineffective "whether by reason of inconsistency with any enactment or the company's articles or otherwise".[38] There is no point in securing a resolution for the company to do something which the company may not lawfully do, but, in the case of inconsistency with the articles, this may simply affect the level of support the resolution needs, i.e. it must be enough to alter the articles.[39] Nor need the company circulate the resolution if it is defamatory of any person or is frivolous or vexatious.[40]

(iii) The company or any other aggrieved person may apply to

the court for an order that the company is not obliged to circulate the members' statement on the grounds that the members' circulation rights are being abused.[41]

Wider written resolution provisions under the articles

15–14

The 1985 Act explicitly preserved the power of companies to adopt provisions in their articles on the taking of resolutions, and art.53 of Table A 1985 contained a procedure for consenting to written resolutions unanimously without a meeting. Although the 2006 Act does not retain this explicit authorisation,[42] and although the current model sets of articles do not deal with written resolutions, it is difficult to see why the 2006 Act should be construed as taking this power away from companies which do not fall within the statutory provisions. The facility may be useful to those few public companies with small shareholding bodies. For private companies, the incentive to create a special procedure in the articles is now much less, since the 2006 statutory procedure has dropped the requirement of unanimous consent.

Unanimous consent at common law

15–15

We touched on the common law rule on unanimous consent in the previous chapter,[43] where we saw that its main purpose is to allow shareholders to decide informally on matters within their competence. The common rule is preserved under the 2006 Act,[44] and applies to public as well as private companies, although it might be thought less necessary in relation to the latter given the revised and relaxed statutory provisions allowing for non-unanimous written resolutions. The written resolution procedure allows shareholders to adopt resolutions outside meetings; the unanimous consent rule permits wholly informal methods of giving shareholder consent, but requires that consent (being of all those entitled to vote) to be unanimous, regardless of the level of support that would have been required in a formal meeting or if the written resolution procedure been followed. The accepted explanation for this is that it would be inequitable to allow the company, or its members, to assert that they are not

bound by a decision or an act which all those competent to effect have decided should be effected.[45] From this rationale follow the answers to the two issues which have most concerned the courts: what counts as informal consent and how must it be manifested; and which issues lie within the competence of the shareholders to determine in this way.

15–16

On the first of these issues, Neuberger J (as he then was) summarised the principle in the following terms in *EIC Services Ltd v Phipps*[46]:

> "The essence of the Duomatic principle, as I see it, is that [certain specified formalities, here in the company's articles] can be avoided if all members of the group [being the group entitled to determine the matter in issue], being aware of the relevant facts, either give their approval to that course, or so conduct themselves as to make it inequitable for them to deny that they have given their approval. Whether the approval is given in advance or after the event, whether it is characterised as agreement, ratification, waiver, or estoppel, and whether members of the group give their consent in different ways at different times, does not matter."

This statement is supported by earlier authorities, and has been followed subsequently. It highlights a number of important and distinct matters.

15–17

First, who must consent? Buckly J in *Re Duomatic* held that only those entitled to vote on the issue must consent, not all members regardless of that entitlement. This is especially material when, for example, the informal procedure is applied to class meetings.[47] The necessary consents can be inferred even from occasions where the shareholders wear a different hat: for example, in companies where all the shareholders are directors, these individuals can act as directors in a board meeting and simultaneously act as shareholders unanimously and informally approving or ratifying their own unauthorised act as directors provided, as shareholders, they are competent to do that.[48] In similar vein, individuals representing corporate shareholders (usually by virtue of being the CEO of the corporate shareholder), can give the necessary consent on behalf of their company, if competent to so act.[49] And trustees holding shares on trust can, as the registered holder, validly consent. However, here the informality of the necessary consent generates

complications. If the trustee holds some of the shares personally and some as trustee, his or her consent is only taken as applying to those shares held personally unless it is expressed to apply to the other shares as well.[50] On the other hand, and in line with the justifications given for the informal consent rule, if the trustee could be compelled to vote in accordance with the wishes of the beneficial owners, then their consents are effective for the purpose of the rule.[51]

15–18

Secondly, the requirement that the consenting shareholders be aware of the relevant facts simply repeats the orthodox common law requirement that consent counts as such only when it is "fully informed". In this context, the "relevant facts" would, it seems, prima facie include any information made mandatory by statute in order for shareholders to take formal decisions on certain matters[52]: there is no reason to suppose that informal decision-making should be successful if less well informed. But it can be strongly argued that these information provisions are inserted solely for the protection of shareholders and can therefore be waived by them (although perhaps only on an informed basis or at least in a conscious fashion). Put another way, there seems no reason to suppose that the informal procedure specifically endorsed by statute would somehow be excluded in these contexts where the statute has specified information requirements, even if its application needs to be addressed thoughtfully.[53]

15–19

Finally, what is needed to signify the necessary consent? The passage already cited from Neuberger J (as he then was) in *EIC Services Ltd v Phipps*[54] illustrates the breadth of what will count as consent, as amply supported by decided cases.[55] Despite this breadth, however, the necessary consents must be objectively established,[56] and this necessarily means that they must be expressed in *some* way by each member (even if only by acquiescence[57]): the fact that the person would have consented if asked is not enough,[58] nor is a decision that is merely internal,[59] and of course express objection negates any possibility of inferring consent.[60]

In all of this, the cases which rely on something less than assent (albeit informal assent), and instead rely on the interplay of acquiescence, estoppel and laches, are perhaps the most difficult. *Re Bailey Hay & Co Ltd*[61] illustrates the problems. There, a resolution was passed by two votes in favour and three abstaining at a meeting attended by all the members of the company but of which the requisite length of notice had not been given, unbeknown to all present (it was one day short of the 14 days required). That information came to light within the next few months. The court denied a challenge to the validity of the resolution brought over three years later (and, it seems, for technical reasons as a means of defeating a counter-claim), holding that in the circumstances the shareholders should be taken as unanimously assenting to, or acquiescing, in the winding-up,[62] or, alternatively, that their delay (or "laches") in making the claim made it "practically unjust" now to upset the resolution (which had been for the appointment of a liquidator).[63] It might have been preferable to confine the finding of acquiescence to one that the non-voting shareholders could, in the circumstances, be taken to have acquiesced in the shorter period of notice. That would have produced the same result, and was perhaps better supported by Brightman J's analysis of the facts. Nevertheless, the case is instructive in this difficult area.[64]

15–20

The second principal issue which has troubled the courts is defining which matters may be determined by the unanimous consent rule. The rule, it seems, applies whenever the shareholders are competent to act. It follows that the shareholders cannot, even by unanimous agreement, overcome prohibitions on the company's activities imposed by the general law or the Companies Act. They cannot, for example, make illegal gifts out of capital, or distribute the company's assets in ways not authorised by law, or take decisions which are not theirs to take because that right has been given to a named individual or group.[65]

Typically, then, the rule is applied when the shareholders have the power to act, but have not followed the necessary formal decision-making requirements, whether these are found in the Act or the company's articles or a shareholders' agreement.[66]

The rule then appears to be that unanimous consent can operate to waive formalities required for the protection of shareholders, but not those required for the protection of other parties, notably creditors. Thus, in *Precision Dipping Ltd v Precision Dipping Marketing Ltd*[67] the requirement of auditor approval of a dividend, where the company's accounts were qualified, could not be waived by unanimous consent of the shareholders, because the provision was clearly one aimed at protecting creditors (and possibly shareholders as well). By contrast, in the *Atlas Wright* case,[68] the Court of Appeal was prepared to permit unanimous shareholder consent to override the procedural requirements set out above for the approval of a long service contract.[69] However, it may not always be easy to categorise the function of particular statutory requirements.[70] For example, it seems unlikely that the courts would permit the unanimous consent rule to operate in the two cases excepted from the written resolution procedure (removal of a director or auditor from office before the expiration of their term), since, it might be said, the purpose of these rules is to protect the director or officer by permitting him or her to make representations against the proposal.[71]

15–21

Finally, there are certain post-decision formalities which have to be complied with in relation to shareholder resolutions, most importantly the notification of certain resolutions to the Registrar and the making a record of them in the company's minute book. The obligation to notify the Registrar seems to apply to informal decisions,[72] but the requirement as to recording in the minute book seems not to.[73] Non-compliance involves a criminal sanction but the decision itself is not invalidated.

Improving Shareholder Participation

Analyses of shareholder participation

15–22

Ever since Berle and Means wrote their classic study of patterns of share ownership in large American corporations in the 1930s,[74] it has been common to think that shareholders, at least those in listed companies, are not in general interested in using

the rights which the law or the company's articles confer upon them to hold the management of their company to account. This has not always been true. Although the exact historical development is still unclear,[75] there is general agreement that three distinct periods of shareholder structure in such companies can be identified. There was an initial period, beginning with the development of the large company in the nineteenth century, when the shareholdings were held mainly by the founding entrepreneurs and their families. At this time, therefore, the shareholdings were in "concentrated" form and establishing the wishes of the shareholders was relatively easy. However, as the capital needs of such companies grew, some shares were offered to the public, with the outside shareholders being, however, in the minority and with most of them holding only small stakes. By the middle of the last century, family shareholdings had declined and the small outside shareholders, collectively, made up the bulk of the shareholders. This is the second period, so brilliantly analysed by Berle and Means (see below), where the shareholdings in large companies were typically "dispersed", so that the shareholders' ability to act together in a meaningful way was doubtful.

15–23

The thesis advanced by Berle and Means was that, in large companies where shareholdings had become widely dispersed, it was not worthwhile for most shareholders to devote time, effort and resources to seeking to change the policies of the managements which they thought were ineffective. Any return on their relatively small investment which success might bring would be outweighed by the certain costs of seeking to achieve such change in a large company where co-ordination of shareholder action would be intensely difficult. Since these large companies were likely to be listed on a stock exchange, the alternative and cheaper responses of accepting a takeover offer or simply selling in the market were likely to prove more attractive. Shareholders in large companies were thus "rationally apathetic" towards their general meeting rights.

15–24

Whether this was ever an entirely correct picture is controversial,

but in any event it had to be modified in the third recognisably distinct historical period. Since the 1960s, there has been a partial re-concentration of shareholdings, not into the hands of entrepreneurial families, but into the hands of "institutional" shareholders, especially pension funds and insurance companies. These different patterns of shareholding have significant implications for the ability, and perhaps the willingness, of shareholders to exercise effectively the governance rights which the law confers upon them.[76] In the early 1990s, when much of the regulatory work on this issue was first conceived, institutional shareholders held about 60 per cent of the equity shares of companies listed on the London Stock Exchange. Although it would be unusual for a single institution to hold more than 5 per cent of the equities of the largest quoted companies, nevertheless the situation is one in which a small group of institutional shareholders could often bring decisive influence to bear on the management of ailing companies. Of course, they may not always wish to do so. Even institutional shareholders will not exercise their general meeting rights simply for the sake of it. If a takeover offer provides a cheaper remedy for the problem, they may be inclined to accept that, rather than take on the incumbent management of the under-performing company themselves. Nevertheless, "shareholder activism" on the part of the institutions became a bigger part of the corporate scene than it had been, say, 20 years earlier.

However, the make-up of the institutional investors and their associated attitudes towards activism have not remained the same. For reasons which do not need to be explored here, over the past two decades UK institutional shareholders have tended to reduce their exposure to UK equities, whilst foreign institutions and hedge funds have been increasing them.[77] Some of these investors may be expected to be more passive; others, certain types of hedge fund in particular, might be expected to be even more interventionist in relation to their portfolio companies, often identifying specific business decisions which they wish the board to take.[78]

The role of institutional investors

15–25

Given the scale of institutional investment, the role of such investor-shareholders merits attention. Both the Company Law Review ("CLR") and the Myner's Report,[79] commissioned by the Treasury, and the more recent Walker Report[80] and Kay Review,[81] all concluded that the level of institutional intervention in the affairs of their portfolio companies[82] was less than was optimal in the interests of those on whose behalf the institutions invested. This was, the CLR thought, not only a matter of concern to those investors, but also "a matter of corporate governance, impinging on the properly disciplined and competitive management of British business and industry".[83]

In order to understand the possible reasons for sub-optimal intervention and the reforms which have eventually been adopted, it is instructive to take a specific illustration. Pension funds provide a useful case study, especially as early reform proposals focused in particular upon pension funds, even though, as we shall see, they are not the only significant form of institutional investment. In simplified form,[84] a pension scheme is normally promoted by an employer, who sets up a trust into which both employer and, normally, employees pay regular contributions and out of which pensions are paid.[85] Both the pensioners and the contributing employees may be seen as beneficiaries of the trust. The trustees see to the investment of the contributions, but normally do not discharge that task themselves, but contract it out to one or more specialist fund managers. The fund managers may be freestanding institutions, but, today, they are likely to be part of larger financial groups (for example, investment banks) which offer other services in addition to fund management. The contract between the pension fund and the fund manager is likely to give the manager the right to vote the shares it purchases on behalf of the fund, although the trustees may reserve the right to take voting decisions themselves, either generally or in specific classes of case. Finally, for reasons of both efficiency and prudence, the manager is not likely itself to hold the shares it purchases on behalf of the fund, but to have them held by a separate custodian company, which may well be part of a different group of companies from that in which the fund manager sits.

15–26

There are three main types of argument which have been put forward to explain the under-use by pension funds or, more often, their fund managers of the corporate governance rights which the law gives them: conflicts of interest; a desire for a quiet life; and technical difficulties of voting.

Conflicts of interest and inactivity

15–27

Conflicts of interest arise mainly where the group of which the fund manager is part provides other financial services to corporate clients. The management of a portfolio company may be unwilling to buy, or continue to buy, these other financial services, for example in connection with public share offerings,[86] if some part of the same group is using its corporate governance rights on behalf of a pension fund to make life difficult for that management.[87] Indeed, the management of the portfolio company may actively threaten to withdraw its custom from the group if the intervention on behalf of the pension fund continues. In extreme cases, such conduct may amount to the offence of corruption, but that is likely to be very difficult to prove. After floating a number of proposals, the best the CLR could come up with was a requirement that quoted companies be required to disclose in annual reports the identity of their major suppliers of financial services. This would reveal potential conflicts of interest within financial services groups, though it would not eliminate them nor, by itself, guarantee the appropriate handling of the conflicts.[88]

Inactivity on the part of fund managers may, as we have just seen, result from conflicts of interest, but it may also result, the Myners Report thought,[89] from a lack of incentives for the fund managers to be active, for example, because the costs of intervention would depress the manager's short-term performance whilst the benefits of intervention would be reaped only in the medium term, or because the benefits of intervention would accrue to all shareholders, whether they participated in the intervention or not, including rival fund managers. A similar conclusion can be drawn from the Kay Review, where appropriate intervention was seen as compromised by market-driven short-termism, lack of trust, and the easier risk-reducing

options of portfolio diversification and, if called for, "exit" rather than "voice".[90] The CLR's response to Myners' findings was a proposed requirement that managers disclose to trustees their voting record in portfolio companies on demand and a reserve power for the Secretary of State to require the publication of the voting record, so that the beneficiaries of the pension fund would be aware of it as well.[91] This proposal was controversial, to the point where the clauses were removed from the Bill in the House of Lords against the Government's wishes, but were reinstated in the Commons and are now to be found in ss.1277–1280. In line with the CLR's recommendation, the power is one to make regulations, in relation to which the Government said that it was "willing to see how market practice evolves before choosing whether and how to exercise the power".[92] Those regulations may require institutional investors (broadly defined in s.1278) to disclose, either to the public (a particularly controversial point) or specified persons only, information about the exercise or non-exercise of voting rights by the institution or any person acting on its behalf, about the voting instructions given by the institution or person on its behalf and about the delegation of voting functions (s.1280) in relation to shares which are publicly traded and in which the institution has an interest (s.1279).

15–28

The Myners Report was bolder, proposing a substantive obligation, derived from US law, on the fund manager to monitor and attempt to influence the boards of companies where there is a reasonable expectation that such activity would enhance the value of the portfolio investments.[93] This would include, but not be limited to, the exercise of the right to vote at shareholder meetings. This would not amount to an obligation to vote the shares in portfolio companies on each and every occasion. On the one hand, voting on routine proposals might be neither here nor there in corporate governance terms; on the other, merely to vote might be an inadequate form of intervention, if, for example, a private meeting with the management might solve the problem at an earlier stage and avoid an adverse vote.

Of course, it is strongly arguable that the fiduciary duties of

pension fund trustees already require them to exercise their corporate governance rights actively if they judge that this will enhance the value of the trust's assets and, therefore, to secure that a similar obligation is laid upon those to whom they contract out the exercise of their corporate governance rights. However, it may be very difficult to show that any particular piece of inaction or even a course of inaction over a period of time reduced the value of the trust's assets.

The Myners Report did not propose the embodiment of these rules in legislation, but only in voluntary Statements of Investment Principles, which the fund management industry was to observe on a "comply or explain" basis,[94] with the threat of legal regulation if voluntarism did not work. The Government, however, committed itself to legislation on the point,[95] but, for the time being, this has now been overtaken by the more general UK Stewardship Code,[96] discussed below, derived in large part from the voluntary code of practice adopted by a wide range of institutional investors (not just pension funds) in response to the Myners Report,[97] and now further strengthened in response to the Kay Review.[98]

"Fiduciary investors"

15–29

The generation of an obligation of activism in the case of pension funds takes as its starting point, as we have seen, the fact that the trustees of pension funds owe fiduciary obligations to the beneficiaries of the fund.[99] However, outside pension fund trust structures, the relationship between investors and those who invest the money on their behalf is not usually a fiduciary one. For example, the relationship between investors and insurance companies, which are as important as pension funds in the collective investment area, is predominantly contractual. Insurance companies also play an important role in the provision of pensions, especially to those who are not part of occupational schemes, although the Myners Report made no recommendations about the activism responsibilities of insurance companies.[100]

If the value of investments will be increased by voting, or other forms of exercise of their governance rights, by

institutional shareholders, it is difficult to see why this should not be required of all intermediaries, whether established as trusts or not, which acquire funds on the basis that they can manage them more effectively on behalf of investors than the investors can themselves. Indeed it was just this suggestion which the Kay Review advanced, suggesting that all intermediaries in the investment chain should be subject to fiduciary obligations in the performance of their functions.[101] However, the Law Commission, when asked to look into the possibility, came down strongly against such a rule, suggesting that it would add further confusion to an area of law which was not easily transposed to these different circumstances. Moreover, although there was a clear need for the enhanced protection of investors, the Law Commission also concluded that alternative routes, such as statutory enhancement of the provisions in FSMA s.138D to give private investors direct claims against intermediaries, were equally unworkable, especially given the potential for indeterminate liability to an indeterminate class of claimants.[102]

In short, although the objective is clear, and conceded by many to be valuable, the means of achieving it is fraught. In that climate, the task has fallen to the UK Stewardship Code, which applies—currently on a voluntary basis—to all institutional investors, whether pension funds or not, as does the reserve disclosure power contained in the 2006 Act. That regime is considered next.

The UK Stewardship Code

15–30

Given the UK's success with "soft law", it was perhaps inevitable that this would be the outcome here, and in 2010 the UK Stewardship Code, now revised, was promulgated by the FRC, applying, like the UK Corporate Governance Code, on a "comply or explain" basis.[103] The Code is addressed in the first instance to fund managers—that is, firms who manage assets on behalf of institutional shareholders such as pension funds, insurance companies, investment trusts and other collective investment vehicles.[104] It sets out good practice on engagement with investee companies, with the goal of helping to improve

long-term returns to shareholders and the efficient exercise of governance responsibilities. The FRC expects firms subject to the Code to disclose on their websites how they have applied the Code. However, the responsibility for monitoring company performance does not rest with fund managers alone, and to that end the Code refers to "institutional investors" generally, and the FRC strongly encourages all institutional investors to report if and how they have complied with the Code. For example, pension fund trustees and other owners can comply directly, or indirectly through the mandates given to fund managers.[105]

The Code adopts a similar format to the UK Corporate Governance Code: it sets out seven Main Principles, each with supporting Guidance elaborating best practice. It indicates that institutional investors should:

1. Publicly disclose their policy on how they will discharge their stewardship responsibilities (Principle 1) and robustly manage any conflicts of interest (Principle 2). "Stewardship activities" are widely defined to include "monitoring and engaging with companies on matters such as strategy, performance, risk, capital structure, and corporate governance, including culture and remuneration. Engagement is purposeful dialogue with companies on those matters as well as on issues that are the immediate subject of votes at general meetings" (Principle 1, Guidance).

2. Effectively monitor their investee companies (Principle 3), including keeping abreast of the business and its general concerns, appraising their board and committee structures (especially in the light of any departures from the UK Corporate Governance Code), meeting the chairman and directors, and, where appropriate and practicable, attending general meetings of the companies in which they have a major holding and maintaining an audit trail of their formal and informal interventions.

3. Establish clear guidelines on when and how they will escalate their stewardship activities, privately or publicly (Principle 4).

4. Be willing to act collectively with other investors where appropriate (Principle 5).

5. Have a clear policy on voting and disclosure of voting activity, seeking generally to vote all shares held and not automatically to support the board (Principle 6).
6. Report periodically on their stewardship and voting activities, maintaining a clear record of their activities (Principle 7).

While the ambition is clear, it is also evident from the FRC's own assessment of progress that there is still some way to go in enticing greater participation, encouraging closer adherence to best practice, and ensuring more informative reporting generally.[106] Perhaps as a result, the FRC has now adopted a policy of public assessment of Code signatories as either "Tier 1" (where reporting expectations are met), or "Tier 2" (where they are not).[107] This strategy of rewarding success (or naming and shaming failure) is designed to apply market pressure to resolve the problem.

The role of indirect investors

15–31

Under the typical arrangement for pension funds, described above, the shares in the portfolio company are held by a custodian company. That custodian company will appear on the portfolio company's share register as the holder of the shares, even though it holds them as a nominee, either for the fund manager or for the pension fund. Clearly, the custodian has no interest in voting the shares in question. Rather, the law is that, if the custodian is a bare nominee for a beneficial owner, the beneficial owner can instruct the nominee how to deal with the shares.[108] In order to bring this about, however, the custodian must confer with the fund manager and, perhaps, through the fund manager with the trustees. However, the registered holder is not placed under any obligation by company law to engage in this process, which, in any event, may not prove to be possible within the notice period for the meeting,[109] though there may be contractual arrangements in place between the member and others with an interest in the shares which require this consultation. It can be argued that this process would operate more smoothly if the company communicated directly with the beneficial owner or, going further, if the governance rights attached to the shares could be exercised by the beneficial (or

"indirect") owner.

15–32

The CLR proposed to remove any impediments which existed to the creation of contractual arrangements for giving non-members an input into the exercise of the governance rights attached to the shares, together with a fall-back power for the Government to require such transfers of governance rights if contractual arrangements did not continue to develop on an adequate scale.[110] The Companies Bill followed this formula but in the debates in Parliament the position of institutional investors was linked to that of many private investors who also hold shares through nominee accounts, partly as a result of the dematerialisation of shares and partly because government tax relief on private investment is often available only in relation to shares held in this way.[111] Thus, the governance rights of indirect investors became a politically much more significant matter than had been initially anticipated. The Government's fall-back proposals were defeated in the Lords.[112] The Government then consulted with those affected on alternative provisions, which contain an element of compulsion, and still have a significant fall-back element. They were introduced at a very late stage in the parliamentary process and received little debate.[113]

15–33

The reforms now contained in Pt 9 fall into two groups. As recommended by the CLR, some are purely facultative. They help companies to reassign governance rights to indirect shareholders, but do not require it. These provisions apply to all companies. The other group contains the element of compulsion, which at present relates only to shareholders' information rights in companies whose securities are traded on a regulated market, in effect the Main Market of the London Stock Exchange.[114] However, the Secretary of State has power by regulation to expand the scope of this second class of provisions so as to expand the rights provided or the types of company covered by the Act.[115]

Governance rights—voluntary transfer arrangements for all companies

15–34

Turning first to the facultative provisions applying to all companies, the view was taken in some quarters that s.126,[116] by providing that "no notice of any trust shall be entered on the register [of members] or be receivable by the registrar",[117] and a parallel provision in the articles dealing with the position of the company,[118] prevented the transfer of governance rights between the company and the holders of the beneficial interests in the shares. The CLR proposed that, if this was so, what is now s.126 be amended so as to make clear that it permits the transfer of corporate governance rights to third parties.[119] Such transfers would not be compulsory, but were to be left to contractual arrangements between those holding shares on behalf of others and the persons on whose behalf the shares were held.

15–35

The drafters of the Act clearly took the view that s.126 was not an impediment to the transfer of governance rights, for it does not deal with the issue. However, s.145(1) is drafted on the basis that a company in its articles may (and always has been able to) make provision enabling a member to nominate another person to enjoy all or any of the governance rights of the member in relation to the company. That other person need not in fact be the holder of the beneficial interest in the shares, so that, for example, a custodian could nominate a fund manager as entitled to vote the shares, even though the beneficial interest is held by the pension trust. The person to whom the rights are transferred is the "nominated person".[120]

15–36

The section does not in any way require such a transfer of governance rights to be made. Its purpose rather is to ensure that the statutory provisions discussed below in relation to meetings (and, indeed, those discussed above in relation to written resolutions) work properly where contractual governance rights are held by a nominated person. In other words, where rights under the articles are transferred to a nominated person, so are the linked statutory rights. A good example is the right to vote. As we have seen above,[121] voting rights in a company are not allocated by the statute but by the company, normally through its

articles. If the articles permit or require[122] those voting rights to be transferred to a nominated person and the right to vote is so transferred by a particular member, then s.145(3)(f) ensures that the statutory right to appoint a proxy to vote at the meeting on behalf of the voter[123] is also transferred to the nominated person.

Precisely which statutory rights are transferred under the section to a nominated person will depend upon which contractual rights have been transferred to the nominated person under the articles. The section potentially transfers eight statutory rights,[124] but operates only "so far as necessary to give effect to" a transfer of rights effected under the company's articles.[125] Where the right to vote is transferred, it seems that most of the listed statutory rights will also be transferred. Even so, if the company is a public company, the rights in relation to written resolutions will not be transferred and if the company is a private company, the right to propose a resolution at an AGM will not be transferred, since these rights are specific to private or public companies.[126]

If the linked statutory right is transferred to the nominated person, then anything the member might have done may instead be done by the nominated person and any duty owed by the company to the member is owed instead to the nominated person.[127] Thus, there is a genuine transfer of statutory powers and rights to the nominated person and away from the member, not the creation of a parallel set of provisions. However, no rights enforceable against the company by anyone other than the member are so created by the section *or* by the provisions in the articles creating the transfer system.[128] In fact, the primary sanction for many of the rights covered by the section is a criminal one, to which this provision is irrelevant, but civil rights could arise also, for example, to challenge the validity of a resolution because of an inaccuracy in the circular sent out in support of it.[129] Although the section is not absolutely crystal clear on the point, presumably its implication is that the right of the member to enforce a right against the company is not affected by the fact that the right has been transferred to a nominated person. To hold otherwise would mean a reduction in the enforceability of members' rights where there was a transfer to a nominated person.

15–37

Whether s.145 will mean much in practice will depend on the willingness of companies to adopt articles permitting or requiring the transfer of governance rights, that of nominee shareholding organisations to exercise the power of transfer (if it is permissive) and that of beneficial shareholders to put pressure on nominee shareholders to transfer rights to them and to pay for any associated costs.[130]

15–38

A further piece of apparent facilitation is to be found in s.152. This makes it clear that a member of a company holding shares on behalf of more than one person (as will typically be the case with nominees, whether they hold on behalf, ultimately, of institutional or private investors) need not exercise all the shareholders' rights (whether given under the contract of issue or provided by statute) in the same way—nor indeed need all of them be exercised on any particular occasion. Thus, the holder is enabled to give effect to the different views which the various beneficial owners may hold on the issue in question. It is doubtful whether this provision changes the previous law, although it can create its own problems.[131] What may be new, therefore, is the further provision that, if the member exercising its rights does not inform the company that not all the rights are being exercised or that some are being exercised in one way and some in another, the company is entitled to assume that all are being exercised and all in the same way.[132] Thus, this section may be more protective of the company than anything else.

15–39

An example of this form of governance contract can be found in some companies in relation to "American Depositary Receipts" ("ADRs"). A UK company acquiring a US company in a share exchange deal may not wish to issue its shares directly to the US investors, partly in order to avoid some of the complications of US securities laws and partly in order to give the US investors a security denominated in dollars. One way of achieving these consequences is the ADR, the shares being issued to a depositary institution, which in turn issues to the US investors a "depositary receipt"—one for each share—denominated in dollars, which

becomes the security which is traded in the US. In some cases, the company's articles may then require the depositary institution to appoint the ADR holder as its proxy,[133] possibly just for voting purposes but possibly for all governance purposes, including the receipt of communications from the company.[134] In such a case, one sees the company using its contracting power through the articles, as facilitated by s.145, to overcome the limitations of reliance on mere conferment of information rights (which are considered below). However, there is no legal obligation upon companies to treat the holders of ADRs in this way.

Information rights—mandatory transfer options in traded companies

15–40

A member of a company whose shares are admitted to trading on a regulated market may nominate another person to enjoy those information rights, whether the company has provided in its articles for this to happen or not. This means that the rules on transfer of information rights are mandatory as against listed companies, although of course it is not mandatory for the shareholder to confer this right on someone else. Further, the rights conferred upon the other person do not deprive the nominating shareholder of his or her right to the same information.[135] The fact that the provisions are mandatory as against the company and increase, at least marginally, the company's costs in relation to the circulation of information was a strong argument in the Government's eyes against introducing them, and the provisions are crafted so far as possible to reduce those costs. Those costs are confined to the largest companies because the provisions, at present, apply only to companies listed on a regulated market.[136] However, there are a number of other provisions which aim to cut down the cost implications of the new rule, even for these large companies.

First, the right to nominate a recipient of information rights is restricted to those members who hold shares on behalf of another person and where the recipient is that other person.[137] Secondly, the only rights which may thus be conferred are "information rights", i.e. essentially the right to receive the communications

which a company sends to its members (including its annual accounts and reports) or any class of them which includes the nominating shareholder.[138] No other governance rights may be transferred compulsorily as against the company. Thirdly, a company need not accept the conferment of only some of the shareholder's information rights.[139] The company can thus insist on an "all or nothing" conferment of information rights. Fourthly, unless the shareholder, on behalf of the nominated person, requests circulation in hard copy and provides the company with an address, the company may meet its obligation to the nominated person through website publication.[140] Fifthly, all nominations are suspended when there are more nominations in force than the nominator has shares in the company, so that the burden of sorting out the errors is moved away from the company.[141] Sixthly, the company may enquire of a nominated person once every 12 months whether it wishes to retain information rights and the nomination will cease if the company does not receive a positive response within 28 days. Seventhly, to relieve the company of the burden of staying on top of things, if the nomination is terminated or suspended for any reason,[142] the company may continue to abide by it "to such extent or for such period as it thinks fit".[143] Eighthly, the rights conferred upon the nominated person are enforceable only by the member, the rights to be treated for this purpose as if they were conferred by the company's articles.[144]

The right to enjoy information rights is thus, it may be said, rather grudgingly conferred. The main non-restrictive provision is the one which tracks s.145 and provides that any enactment or anything in the company's articles relating to communications with members has corresponding effect in relation to communications with nominated persons.[145]

15–41

The compulsory information provisions discussed above do not in any way touch on the relationship between the nominated person and the member after the information has been received. As we have seen above, the nominated person, having received notice of a meeting, for example, has power to instruct the member how to vote, if the member holds the share on a bare trust for the nominated person.[146] But there is no legal obligation

upon the member, in this case or more generally, to seek the views of the nominated person before voting, in the absence of an instruction, contrary to the position in some other legal systems. Such an obligation may be created by contract, however, either between the nominated person and the member or, conceivably, between the company and the member. This is then a governance issue, as discussed earlier.

The Mechanics of Meetings

15–42

We turn now to the various issues arising where a meeting is sought to be held, so that resolutions of the shareholders can be voted upon. This is the only method s.281 provides for the adoption of resolutions by public companies and it is open to private companies to use it instead of the written resolution method, which it may wish to do where it has a large shareholding body. These issues appear in their sharpest form where a group of shareholders wish to use the shareholders' meeting to challenge some aspect of the management of the incumbent directors. Therefore, we shall generally adopt this perspective in our analysis of the rules, though, of course, those rules may also be relevant in the more usual case where the meeting is called by the board to discuss a matter which the shareholders find relatively uncontentious.

What happens at meetings?

15–43

It is a rare shareholders' meeting which does not end up passing a resolution on some matter or another. As we saw in Ch.14, the Act requires the shareholders' consent before certain decisions can bind the company, and the articles may add to that list. By assenting to a resolution the shareholders give the consent which is necessary to make the act an act of the company. Once the shareholders have adopted an effective resolution on a particular matter, the board is empowered, and normally obliged, to take the necessary steps to put the resolution into effect. Some decisions are routinely required of shareholders, even especially important ones such as the re-appointment of directors[147] or of auditors[148] or the granting of powers to directors to issue a

certain amount of shares without pre-emption rights.[149] Others occur irregularly. However, the business of general meetings does not consist entirely of the consideration of proposals for resolutions. For example, the Act requires the annual reports and accounts to be laid before the company in general meeting,[150] but does not require the meeting to consider any resolution in relation to them. The exercise is not pointless, however, because it gives the shareholders an opportunity to question the board generally on the progress of the company and to express their views on the matter. Often, this item on the agenda provides the opportunity for a wide-ranging debate which specific resolutions would not permit. Indeed, there is no reason why an item should not be placed on the agenda simply for the purposes of having a debate, without any resolution being proposed. Nevertheless, apart for the consideration of the annual reports and accounts, it is the consideration of resolutions with which the general meetings of the shareholders largely deal.

Types of resolution

15–44

For decisions required under the 2006 Act, the Act has reduced the types of resolution which the members may take to two: an ordinary resolution and a special resolution.[151] Usually the Act specifies which type is required, and the Act then governs, but where the Act is silent about the type of resolution required, then an ordinary resolution is required unless the articles specify a higher level of approval, up to and including unanimity.[152] An ordinary resolution is one passed by a simple majority of those voting.[153] A special resolution is one passed by a three-fourths majority,[154] and the notice of the meeting must specify the intention to propose the resolution as a special resolution.[155] For example, special resolutions are required before important constitutional changes can be undertaken. The higher majority required for special resolutions obviously constitutes a form of minority protection, as compared with the simple majority required for an ordinary resolution. It means, for example, that a person with more than 25 per cent of the votes, and indeed in practice often with many fewer votes, can block the adoption of a special resolution.[156]

This s.282 definition of an ordinary resolution has had the (seemingly unintended[157]) effect, according to the government,[158] of making void an ordinary resolution passed at a company meeting by use of the casting vote of the chairman. This mechanism was routinely inserted in company articles to save general meeting resolutions from deadlock,[159] and has appeared in all the earlier versions of the Table A model articles, although not in the 2006 model articles. In response to adverse reaction, the government enacted a saving provision allowing those companies which had such a provision in their articles prior to 1 October 2007 to continue with it, or to revert to it if they had removed it (assuming it was ineffective).[160] This limited saving means that for all other companies the chairman's casting vote in shareholder meetings is abolished. There might be good reasons of shareholder democracy for outlawing this practice, although this instance would surely rank as a minor target. Indeed, it might be wondered whether s.282 does render this practice invalid: the section would clearly embrace as valid a resolution passed as a result of weighted voting rights given in the articles to a director in defined circumstances[161]; there seems little dividing such a case from that of the chairman's casting vote, except possibly an assumption that the chairman is a member, entitled to vote at the shareholders' meeting (an assumption which generally holds true).

15–45

As we shall see below, many votes at meetings are taken on a show of hands, and may never proceed further if no one challenges the result. The statute facilitates the continued use of such votes, though they are controversial, by providing that the majorities are then to be calculated by reference to the individuals entitled to and actually voting, rather than to the votes attached to their shares.[162] By contrast, if a poll[163] is demanded, then the requisite majority on a poll is that of the votes attached to the shares voted by members entitled to vote and actually voting either in person or by proxy, where proxy voting is allowed.[164] In the case of a meeting of a class of shareholders, where the same rules apply, this means the appropriate majority is of the votes of the class in question.[165]

15–46

For decisions other than those specified in the Act, the company's articles may make their own specific provision for the required voting entitlements and majorities, requiring higher, lower, weighted or even conditional (for example, conditional on the consent of a nominated person) voting requirements.[166]

Wording and notice of proposed resolutions

15–47

In order for shareholders to decide whether to attend meetings and vote, they will need to receive notice of the meeting and of "the general nature of the business to be dealt with".[167] A resolution is only validly passed if the proper notice has been given and the meeting is conducted according to the rules in the Act and the company's articles.[168] The Act adds protections. If special notice of any resolution has to be given (as is sometimes specified in the Act or the articles), then notice of "it" or "any such resolution" must be given to the company at least 28 days before the meeting.[169] Section 283(6) imposes even stricter rules for special resolutions, reflecting their more serious nature, requiring that "the resolution is not a special resolution unless the notice of the meeting included the text of the resolution and specified the intention to propose the resolution as a special resolution", and, further, that "if the notice of the meeting so specified, the resolution may only be passed as a special resolution".

All of this is clearly intended to protect those who decide not to attend the meeting, even more so than those who do attend.[170] The question then arises as to whether the meeting can vary in any way the resolution which is proposed to be passed. This, one might have supposed, would be entirely legitimate so long as the amendment was not such as to take the resolution beyond the scope of the business notified to the members in the notice of the meeting. Instead, however, the rules developed by the courts, and now reflected in both the Act and the model articles for public companies (those for private companies are silent), are far stricter in relation to special resolutions. The model articles for public companies, in art.40, allow amendments by ordinary resolution in limited circumstances: an ordinary resolution can be amended if proposed by a member and "the proposed

amendment does not, in the reasonable opinion of the chairman of the meeting, materially alter the scope of the resolution" (art.40(1)(b)); while a special resolution can only be amended if the chairman so proposes and "the amendment does not go beyond what is necessary to correct a grammatical or other non-substantive error in the resolution" (art.40(2)(b)).

The potential impact of these provisions is readily illustrated by the decision of Slade J in *Re Moorgate Mercantile Holdings Ltd*,[171] from which the statutory and model article rules are clearly derived. This case suggests that, in relation to special resolutions, no amendment can be made if it in any way alters the substance of the resolution as set out in the notice. Grammatical and clerical errors may be corrected, or words translated into more formal language, and, if the precise text of the resolution was not included in the notice,[172] it may be converted into a formal resolution, provided always that there is no departure whatever from the substance as stated in the notice.[173]

The learned judge thought that his decision was desirable on policy grounds,[174] as well as being demanded by the terms of the Act,[175] and that it would prevent the substantial embarrassment to the chairman of the meeting and to any persons holding "two-way" proxies on behalf of absent members,[176] that any less strict rule would cause. Slade J emphasised that his decision had no relevance to ordinary resolutions and that in relation to them the criteria for permissible amendments might well be wider.[177] This is clearly so if the precise terms of the resolution are not set out in the notice but come within a statement of "the general nature of the business to be dealt with at the meeting".[178] But even if the terms of an ordinary resolution are set out in the notice it seems that some amendments may be made at the meeting, and perhaps even that if the chairman refuses to allow a permissible amendment to be moved the resolution will be invalid.[179] It is submitted that an amendment is permissible if, but only if, the amended resolution is such that no member who had made up his mind whether or not to attend and vote and, if he had decided to do so, how he should vote, could reasonably adopt a different attitude to the amended version.[180] The criticisms of that test by Slade J[181] apply equally to an ordinary resolution but it is

difficult to find any other test short of applying to ordinary resolutions that applied to special resolutions, i.e. that no amendment of substance, however trivial, may be made. And does the suggested test really face the chairman and two-way proxy-holders with the substantial embarrassments that Slade J foresaw?[182]

There may, nevertheless, be one type of ordinary resolution to which the stricter rule applies. This is when "special notice" of the ordinary resolution is required. Special notice is defined by s.312 as notice to be given to the company by the proposers of the resolution (not by the company to the members in general) and the length of the notice is at least 28 days before the meeting at which the resolution is to be moved. The wording of s.312(1) bears a close resemblance to that considered in *Re Moorgate Mercantile Holdings* and makes it arguable that no amendment of substance, however trivial, can be made to the resolution stated in the special notice. Hence, if, say, special notice has been given of a single resolution to remove all the directors[183] (under s.168) or both of two joint auditors (under s.510), an amendment seeking to exclude from the resolution some or one of them may be impermissible. If so, this seems a regrettable emasculation of such powers as members have (and which the relevant sections were intended to enhance) and also seems unfair to the directors or auditors whom the members may wish to retain.[184] Even where an amendment to an ordinary resolution may be proposed on the above principles, the company's articles may aim to restrict the shareholders' freedom, say, by providing that, where the text is fully set out in the notice of the meeting, the chairman has a discretion not to consider amendments of which at least 48 hours' notice in writing has not been given to the company.

Convening a meeting of the shareholders

15–48

However, in the above discussion of amendments to resolutions we are getting rather ahead of ourselves. No resolution can be debated until there is a meeting. Clearly, therefore, the shareholders' meeting is not of much value as a vehicle of shareholder control if the meeting cannot easily be convened.

The law distinguishes between annual general meetings ("AGMs") and any other meeting of the shareholders.[185] The advantage of the former from our perspective is that, in principle, it must be held on a regular annual basis, whereas the Act provides procedures for the convening of other meetings but says nothing about their frequency. Even the AGM is not compulsory if the company is a private one.[186]

Annual general meetings

15–49

The law, rather oddly, whilst requiring the holding of AGMs by public companies and private companies which are traded companies, does not prescribe the business which has to be transacted at the AGM and in particular does not say that the annual directors' report and the accounts must be laid before the AGM[187] or that the directors due for re-election must be considered then. In fact it is normal for these matters to be taken at the AGM, and for the shareholders to have an opportunity to question the directors generally on the company's business and financial position. This customary practice has been encouraged by the UK Corporate Governance Code and its predecessors,[188] which recommends that in Premium Listed companies (i.e. those companies subjected to the requirements of the CGC) "boards should use the AGM to communicate with investors and to encourage their participation".[189]

This is now substantially strengthened by the Act: if there is enough member support,[190] s.338A allows members of traded companies to require the company to add new matters to the agenda of the AGM[191]; and at all general meetings of traded companies, the company must provide answers any question put by a member attending the meeting on any matter relating to the business being dealt with at the meeting.[192] It follows that there now seems to be no limit on the business which may be transacted at an AGM of a traded company, assuming only that it is business properly to be put before the shareholders.[193]

15–50

Following the recommendations of the CLR, the timing of the AGM is tied to the company's annual reporting cycle. The AGM

must be held yearly within the six-month period (for public companies) or nine-month period (for private traded companies) following its accounting reference date,[194] which determines the beginning and end of its financial year.[195] If a company fails to comply with the requirement to hold an AGM, every officer in default is liable to a fine.[196] This puts pressure on the directors, but the power, previously contained in the legislation,[197] for the Secretary of State, on the application of any member, to call or direct the calling of a meeting where the directors had failed to do so has been removed. Thus, the member has no direct and easy way of securing compliance with the AGM requirement, but must rely on the indirect impact of the criminal sanctions.

Other general meetings

15–51

As for the convening of meetings other than the AGM of a public company, such meetings are not required at any specific time. The board may convene a meeting of the members of a private or public company at any time.[198] And the Act provides that the directors must convene a meeting on the requisition of holders of not less than five per cent of the paid-up capital carrying voting rights.[199] The request must state the general nature of the business to be dealt with at the meeting. It may include the text of a resolution intended to be moved at the meeting, which facility the members will normally be well advised to take up.[200] However, the resolution must be one which may be "properly moved" at the meeting and, if it is not, it appears the directors are under no obligation to circulate it.[201]

If the directors fail to convene a meeting within 21 days of the deposit of the requisition, the meeting to be held within a further 28 days of the notice convening it, the requisitionists, or any of them representing more than half of the total voting rights of all of them, may themselves convene the meeting, and their reasonable expenses must be paid by the company and recovered from fees or remuneration payable to the defaulting directors.[202]

These provisions for requisitioning a meeting work reasonably well in private companies and also in public companies where, for example, the co-operation of only two or three institutional shareholders is required to get across the 5 per cent threshold.[203]

However, small individual shareholders in public companies are likely to find it a matter of considerable difficulty and expense to enlist the support of a sufficient number of fellow members to be able to make a valid requisition.

15–52

The articles may make further provision for the calling of meetings, but they are unlikely to give the members an extensive right to do so, for the management would like nothing better than to be able to call meetings when it suited them, but to be under no obligation to do so when it did not. In fact, the model set of articles for public companies provides for members to convene meetings only where the number of directors falls below two and the remaining director (if any) is unwilling to appoint a further director so as to restore the board's power to act in this area[204]; and no provision for members to convene meetings is made in the model articles for private companies.

Meetings convened by the court

15–53

Finally, s.306(1) gives the court power to convene a meeting "if for any reason it is impracticable to call a meeting in any manner in which meetings of that company may be called or to conduct the meeting in manner prescribed by the articles or this Act". This power may be exercised by the court "of its own motion or on the application—(a) of any director of the company or (b) of any member who would be entitled to vote at the meeting".[205] The meeting can be "called, held and conducted in any manner the court thinks fit" and the "court may give such ancillary or consequential directions as it thinks expedient and these may include a direction that one member of the company present in person or by proxy be deemed to constitute a meeting".[206]

15–54

Most of the litigation brought under this section has revolved around responding to quorum requirements for shareholder meetings. In the absence of a required quorum, no resolution can be effectively passed. In contrast to many other jurisdictions, the quorum requirements set by the British Act are not demanding, except in relation to class[207] meetings: two members only are

required for meetings of the shareholders as a whole, unless the company's constitution sets a higher figure,[208] and only one member in the case of a single-member company.[209] It is not even clear that the Act requires the quorum to be present throughout the meeting.[210] However, staying away can in principle be an effective way of preventing a meeting from being held in a private company with only two shareholders. If the board consists of the same two persons (or their nominees) and also has a quorum requirement of two, the company may become completely deadlocked. The question the courts have had to address is whether the provisions of s.306 can be used to overcome this deadlock.

After a certain amount of litigation in recent years, the position which the courts seem to have reached as to the exercise of their discretion under the section is as follows. In principle, the section is available to break a deadlock created by quorum requirements, because, where the shareholdings are not held equally, the normal principle of majority rule is being frustrated by the quorum requirement.[211] However, it may be that the quorum requirements have been deliberately adopted in order to produce deadlock if the parties cannot agree, and in that case the section should not be used to overrule the parties' agreement. The court is likely to conclude that this is the purpose of the quorum requirement where that takes the form of a class right attached to the shares of one of the parties.[212] Other than that perhaps unusual situation, the question of whether the quorum provision was intended to create deadlock in the case of disagreement is a matter of construction of the articles or shareholders' agreement so as to provide a context for an understanding of the quorum provisions, whether contained in the articles or shareholders' agreement or applied by the Act.[213]

It might be noted that, in future, the quorum requirement will not be effective in private companies in producing deadlock where the shareholdings of the two contestants are not equal (and, of course, the quorum provision is unnecessary if they are). This is because the holder of the majority will be able to secure the passing of at least an ordinary resolution through the written resolution procedure, discussed above, without the need for a meeting. Some different protection in the articles will be

required, such as a requirement for the consent of all shareholders to some or all resolutions of the company.

On the other hand, where the court takes the view that the provisions of the articles or the Act are being cynically exploited by a group of shareholders to block an effective meeting, it may exercise its s.306 powers in the broadest way. Thus, in *Re British Union for the Abolition of Vivisection*[214] a company whose articles required personal attendance in order to vote had had a general meeting badly disrupted by a minority of members, and the committee feared that other members would in future be deterred from attending. On an application by a majority of the committee the court ordered that a meeting be held to consider a resolution for the abolition of the personal attendance rule, at which meeting the personal attendance rule itself would not apply and personal attendance would be permitted only to the members of the company's committee.

What is a meeting?

15–55

Thanks to modern technology it is no longer necessary that a meeting should require all those attending to be in the same room. If more turn up than had been foreseen, a valid meeting can still take place if proper arrangements have been made to direct the overflow to other rooms with adequate audio-visual links enabling everyone to participate in the discussion to the same extent as if all had been in the same room.[215] This is now explicitly supported by the Act and model articles.[216] However, a meeting requires two-way, real time communication among all the participants. If relaxation of the real-time requirement is sought, it is necessary for the company, if a private one, to take decisions through the use of written resolutions.[217]

Getting items onto the agenda and expressing views on agenda items

15–56

Rather than going through the process of requisitioning a meeting in order to discuss a particular piece of business, the shareholders may wish simply to add an item to the agenda of a

meeting which the board has called in any event. This is most likely to be attractive in relation to the AGM, which, as we have seen, a public company is obliged to hold.

Placing an item on the agenda

15–57

As we have seen, the AGM is normally convened by the board and, as part of that process, the board will be able to stipulate the items which it wishes to have discussed at the meeting. Under s.338 members representing not less than one-twentieth of the total voting rights of the members entitled to vote on the proposed resolution,[218] or 100 members holding shares on which there has been paid up an average sum per shareholder of not less than £100, may require the company to give notice of their resolutions which can then be considered at the next AGM. In a company with a large shareholding body shareholders with small shareholdings may find this second criterion easier to meet than the first, whereas a small number of institutional shareholders (perhaps even one) may be able to meet the first criterion. The second criterion for requiring a resolution to be placed on the agenda has also benefited from the steps which the Act has taken to protect the interests of "indirect" investors, i.e. those who hold their shares through nominees. Subject to safeguards, the 100 "members" may include those who are not members of the company but whose interest in the shares arises from the fact that a member of the company holds the shares on their behalf in the course of a business and—a very important limitation—the indirect investor has the right to instruct the member how to exercise the voting rights.[219]

However, the company is not bound to give notice of the proposed resolution unless certain conditions are met. First, the standard conditions, discussed above in relation to member's written resolutions, about the effectiveness of the resolution and so on must be met.[220] Secondly, the requisition, identifying the resolution of which notice is to be given, must be received by the company at least six weeks before the AGM or before the company gives notice to the members of the AGM.[221]

The third condition relates to the costs of circulating the resolution. In principle, those requesting the circulation must pay

for it (unless the company resolves otherwise).[222] This was the previous law. However, the CLR proposed that members' resolutions received in time to be circulated with the notice of the AGM should be circulated free of charge.[223] The Act does not accept that proposal and makes only the limited concession that circulation shall be free if the request is received before the end of the financial year preceding the meeting, which may be up to six or nine months before the meeting is held.[224] The limited nature of this concession can be more fully understood when put in the context of a further reform proposal from the CLR which was rejected entirely.

15–58

One major problem with the members' resolution procedure is that it is all too likely that something in the AGM circulation from the board will trigger the wish to place a shareholders' resolution on the agenda, but, since the minimum period of notice for calling the AGM is 21 days,[225] though the company may in fact give longer notice, there may well not be time for the members to respond to the AGM documentation and get their resolution to the company within the six week limit. In addition, the company's costs of circulation would be much greater in the case where the AGM documentation has already gone out, for the proposed resolution would have to be circulated separately. The CLR proposed to address the problem, at least in part, by requiring quoted companies to put their annual reports and accounts on their website within 120 days of the end of the financial year, after which there would be a "holding period" of 15 clear days, during which the company would be obliged to accept a members' resolution (having the support presently required) for circulation with the notice of the AGM and at the company's cost.[226] However, this opportunity for enhanced debate over the annual reports and accounts of large companies proved too much for management interests, who secured that this reform was not adopted.

For meetings other than AGMs there is no statutory procedure whereby members can add an item to the agenda of a meeting called by the board. However, as we have noted above, the members do have a statutory power to convene a meeting at any time (without costs to themselves) and to require circulation of a

resolution to be considered at that meeting, though normally shareholders holding 5 per cent of the voting rights are needed to secure the convening of such a meeting.[227] The fact that a statutory procedure is not available for adding an item to the agenda of a meeting, other than an AGM, convened by the board probably reflects the impracticability of so doing, when the minimum notice period for convening such a meeting is only 14 days and such meetings are often held urgently.

Circulation of members' statements

15–59

However, it is not enough for the shareholders to have their resolution circulated in advance of the AGM. It will have much more effect if it is accompanied by a statement from the proposers setting out its merits. Alternatively, the shareholders may wish to circulate only a statement and not a resolution, for example, where they wish to oppose a resolution from the board rather than to propose one of their own. The directors will undoubtedly make use of their power to circulate statements in support of their resolutions. Even if the directors do not directly control many votes, they are for the moment in control of the company and they can get their say in first and use all the facilities and funds of the company in putting their views across. They will have had all the time in the world in which to prepare a polished and closely reasoned circular and with it they will have been able to dispatch stamped and addressed proxy forms in their own favour.[228] And all this, of course, at the company's expense.[229]

Until the 1948 Act, members opposing the board's resolution or proposing their resolutions had none of these advantages and, even now, only timid steps have been taken towards counteracting the immense advantage enjoyed by those in possession of the company's machinery. Such steps as have been taken are included in ss.314–316. These sections track the provisions of ss.338–340 dealing with members' requests for the circulation of resolutions and add the right, under similar conditions,[230] to have a statement of up to 1,000 words circulated to the members.

In practice, however, this provision is of limited value, except

where the statement is in support of a shareholders' resolution and is dispatched with it. The expense still has to be borne by the members—unless the company otherwise resolves[231]—and no substantial saving will result from the use of the company's facilities. In other cases (for example, when the circulars are designed to oppose proposals already forwarded by the board), little extra cost will be incurred by acting independently of the company and this will have a number of advantages. It will avoid any difficulty in obtaining sufficient requisitionists and will prevent delay, which may be fatal if notices of the meeting have already been dispatched. It will also obviate the need to cut the circular to 1,000 words and will enable the opposition to accompany it with proxies in their own favour.[232] Moreover, and from a tactical point of view this is vital, the board will not obtain advance information about the opposition's case, nor be able to send out at the same time a circular of its own in reply. Moreover, in the case of large companies the institutional investors will have mechanisms for communicating with each other which are not dependent upon the company's good offices and the financial press will often report the shareholders' concerns, thus encouraging prior communication among the shareholders and attendance at the meeting.

Notice of meetings and information about the agenda

15–60

In most cases, as we have seen, shareholder meetings are convened by the board. The main protection for the shareholders in such a case lies in the information made available to them in advance of the meeting and the length of notice required. On the basis of this information and during this period, they should be able to form a view whether the matter is sufficiently important for them to vote at the meeting or to attend it, and perhaps even to form an alliance with other shareholders to oppose the board, though, as we have noted, the shareholders start off on the back foot and will not have much time to organise their opposition.

Naturally, these rules apply also to meetings convened by the members, for the requsitionists may not represent a majority of the members, who, in such a case, need to be protected against

being “rail-roaded” into unwise decisions, whether the proposal emanates from the board or a minority of the members.

Length of notice

15–61

Prior to the 1948 Act, the length of notice of meetings, and how and to whom notice should be given, depended primarily on the company’s articles. The only statutory regulation which could not be varied was that 21 days’ notice was required for a meeting at which a special resolution was to be proposed. In other cases the Act of 1929 provided that, unless the articles otherwise directed (which they rarely did) only seven days’ notice was needed. This left far too short a time for opposition to be organised.[233] Hence, it is now provided by s.307 of the 2006 Act that any provision of a company’s articles shall be void insofar as it provides for the calling of a meeting by a shorter notice than 21 days’ notice in the case of an annual general meeting or 14 days’ notice in other cases. The company’s articles may provide for longer notice but they cannot validly provide for shorter.[234] And s.307A requires traded private companies to give 21 days’ notice for all meetings (not just the AGM), unless the company offers the facility of voting by electronic means, in which case the shareholders in general meeting may decide to reduce the period to 14 days for meetings other than the AGM.[235] In practice, neither of these statutory provisions has much significance for the AGMs of listed companies, since the UK Corporate Governance Code[236] suggests 20 working days’ notice (in effect, 28 days’ notice in statutory terms) for the AGM. However, the rules in s.307A will be significant for other meetings of listed companies.

15–62

However, if a meeting is called on shorter notice than the Act or the articles prescribe, it is deemed to be duly called if so agreed, in the case of an AGM, by all the members entitled to attend and vote.[237] In other cases a somewhat lower level of agreement will suffice.[238] This is a majority in number of those having the right to attend and vote[239] who must also hold the “requisite percentage” of the nominal value of the shares giving the right to attend and vote. That percentage is 95 per cent in the case of a

public company and 90 per cent in the case of a private company (unless the article increases the percentage, which they may do but not beyond 95 per cent).[240] The effect of requiring, other than for AGMs where unanimity is the rule, the agreement of both a majority in number of members as well as a high percentage of the voting rights is that, where there is one or a small number of major shareholders and a number of small ones, at least some of small shareholders will need to concur in the major shareholders' view that short notice is appropriate.

Special notice

15–63

As we have seen, in certain circumstances a type of notice, unimaginatively and unhelpfully designated a "special notice", has to be given, the principal examples being when it is proposed to remove a director or to remove or not to reappoint the auditors.[241] In the light of the discussion of these examples in Chs 14[242] and 22[243] respectively, little more needs to be said here except to emphasise that special notice is a type of notice very different from that discussed hitherto in this chapter. It is not notice of a meeting given *by* the company but notice given *to* the company of the intention to move a resolution at the meeting. Under s.312, where any provision of the Act requires special notice of a resolution, the resolution is ineffective unless notice of the intention to move it has been given to the company at least 28 days before the meeting.[244] The company must then give notice (in the normal sense) of the resolution, with the notice of the meeting or, if that is not practicable,[245] either by newspaper advertisement or by any other method allowed by the articles, at least 14 days before the meeting.[246]

All this achieves in itself is to ensure that the company and its members have plenty of time to consider the resolution, but in the two principal cases where special notice is required, supplementary provisions enable protective steps to be taken by the directors or auditors concerned.

15–64

Under this heading it is also to be noted that the company's articles may require notice of certain types of resolution to be

given to the company in advance of the meeting, and this requirement may limit shareholders' freedom of action at the meeting itself. For example, the articles may provide that no person shall be appointed as a director at a meeting of the company unless he or she is a director retiring by rotation, a person recommended by the board or a person of whose proposed appointment the company has been given at least 14 days' (and not more than 35 days') notice, together with the proposed appointee's consent.[247] At the general meeting of such a company it is thus not open to dissenting shareholders to put forward an alternative candidate for director on the spur of the moment, though it appears that the board could do so.

The contents of the notice of the meeting and circulars

15–65

Having previously left this matter to the articles,[248] statute now lays down some basic requirements. The notice of the meeting must give the date, time and place of the meeting; a statement of the general nature of the business to be transacted at the meeting; and any other matters required by the company's constitution.[249] The second of these three requirements is obviously the crucial one, for the member is entitled to be put in receipt of sufficient information about the business of the meeting to determine whether he or she will attend it.[250] But how specific must the notice be? If the meeting is an AGM at which all that is to be undertaken is what former Tables A described as "ordinary business",[251] all that is necessary is to list those matters. If, however, resolutions on other matters are to be proposed it is customary to set out the resolutions verbatim and to indicate that they are to be proposed as special or ordinary resolutions as the case may be. In the case of special resolutions, s.283(6) requires that the notice of the meeting contains the text of the resolution and indicates the intention to propose it as a special resolution. The notice may also indicate that the resolution shall not be passed unless passed as a special resolution. This apparently curious provision follows from the further provision that anything that may be done by ordinary resolution may also be done by special resolution.[252] In effect, this gives the proposers of the resolution an ad hoc method of raising the majority

required for the passing of an ordinary resolution to that required for a special resolution.

The CLR proposed that the requirement to set out the text of the resolution should be applied to all resolutions,[253] but this suggestion was not taken up. In all cases, the directors should ensure that, if the effect of the proposed business will be to confer a personal benefit on the directors, that should be made clear either in the notice or in a circular sent with it.[254]

In practice, the notice of a meeting will be of a formal nature but, if anything other than ordinary business is to be transacted, it will be accompanied by a circular explaining the reasons for the proposals and giving the opinion of the board thereon. Indeed, it is arguable that the common law principle that members should be put in a position to determine whether to attend the meeting requires such circulars, except where the nature of the business will be obvious to all the members from what is said in the notice of the meeting. Normally, therefore, the circular will be a reasoned case by the directors in favour of their own proposals or in opposition to proposals put forward by others. In deciding whether the nature of the business has been adequately described, the notice and circular can be read together.[255] But the circular must not misrepresent the facts; there have been many cases in which resolutions have been set aside on the ground that they were passed as a result of a "tricky" circular.[256] Misleading circulars may not only influence the vote at the meeting but also the decisions of the members whether to attend. For this reason, the fault in the circular should not be capable of cure even if the truth emerges at the meeting. For the same reason, it has been suggested that the notion of a "tricky" circular should embrace all misleading documents, whether the misinformation is the result of opportunism on the part of those putting it out or a genuine error on their part; and that the same principles should be applied to communications from shareholders to fellow members seeking their support for the requisition of a meeting of the company.[257]

If there is opposition to the board's proposals, the opposers will doubtless wish to state their case and a battle of circulars will result. It is here, however, that the superiority of the board's position becomes manifest. Even if the directors do not directly

control many votes, they are for the moment in control of the company and they can get their say in first and use all the facilities and funds of the company in putting their views across. Even institutional shareholders, who may be able to stand the cost of the circulation, may find themselves on the back foot, whilst smaller shareholders may be unable to respond effectively at all. As we have seen,[258] the statutory provisions permitting 5 per cent of the members to require the company to send a statement of their views to all the members are singularly ineffective in practice.

Communicating notice of the meeting to the members

15–66

Having prescribed the basic content of the notice, the Act then goes on to specify to whom it should be given, thus giving statutory form to something previously contained in the model articles.[259] Those entitled to receive notice of the meeting are every member of the company (whether entitled to vote or not) and every director.[260] Members include those entitled to a share on the death or bankruptcy of a member, if the company has been notified of their entitlement.[261] However, these statutory provisions are subject to any provision in the company's articles (for example, excluding non-voting members from entitlement to receive notice). This also enables companies which need to, to deal with exceptional cases (such as that where holders of share-warrants to bearer are entitled to attend and vote).[262] The articles may also contain more prosaic matters, such as the rules identifying the address which the company will use to communicate with the members and removing the member's entitlement to be notified if the address so identified proves ineffective.[263] Accidental failure to give notice to one or more members shall not affect the validity of the meeting or resolution, and the company's articles can expand this relaxation, except for meetings or resolutions required by the members.[264]

Attending the meeting

Proxies

15–67

One of the important features of company meetings is that the members do not have to appear at the meeting in person; they may appoint another person (a proxy) to attend and vote on their behalf.[265] At common law attending and voting had to be in person,[266] but early on it became the normal practice to allow these duties to be undertaken by an agent or "proxy".[267] It should be noted that the system of proxy voting is not the same as that of postal voting. With postal voting the vote is cast directly by the member who holds the vote and he or she votes without attending a meeting. With proxy voting, the proxy votes on behalf of the member and at a meeting. In practice, there may not be much difference between the two when the proxy is given precise instructions and follows them, for then the member in effect makes up his or her mind on how the vote is to be cast in advance of the meeting. The Shareholders' Rights Directive requires Member States to permit companies to offer voting "by correspondence in advance of the general meeting" to their shareholders, but does not require companies to adopt this procedure.[268]

Until the 1948 Act, however, the right to vote by proxy at a meeting of a company was dependent upon express authorisation in the articles. In practice this was almost invariably given; but not infrequently it was limited in some way, generally by providing that the proxy must himself be a member. Where there was such a limitation the scales were further tilted in favour of the board, for a member wishing to appoint a proxy to oppose the board's proposals might find difficulty in locating a fellow member prepared to attend and vote on his behalf. It was also customary to provide that proxy forms must be lodged in advance of the meeting. While this is a reasonable provision, in as much as it is necessary to check their validity before they are used at the meeting, it too could be used to favour the board if the period allowed for lodging was unreasonably short. Moreover, as already pointed out, it had become the practice for the board to send out proxy forms in their own favour with the notice of the meeting and for these to be stamped and addressed at the company's expense.

For all these reasons, although proxy voting gave an appearance of stockholder democracy, this appearance was

deceptive and in reality the practice helped to enhance the dictatorship of the board. In recognition of this, the Stock Exchange required that listed companies should send out "two-way" proxies, i.e. forms which enable members to direct the proxy whether to vote for or against any resolution. The FCA's listing rules currently require "three-way" proxies (i.e. for, against or abstain).[269]

15–68

The statutory provisions relating to proxies are now to be found in ss.324–331 of the Act. They show a further development in the movement of the proxy provisions from the articles to the Act. The effect is in many cases to make the proxy rules mandatory. Unless the Act expressly allows derogation from its provisions, the articles cannot reduce the statutory entitlements, though the Act gives the articles a general permission to improve them.[270] Any member is entitled to appoint another person (whether a member of the company or not) as his proxy to attend, speak and vote instead of himself at a meeting of the company.[271] In the case of a company having a share capital the member may appoint more than one proxy, provided each proxy is appointed to exercise rights attached to different shares.[272] Previously, this facility was subject to the articles of the company permitting it. It is now mandatory and is useful in the case for fund managers or nominee custodians[273] who may hold shares on behalf of a number of different beneficial owners who may hold different views on the matters at issue.

The members must be informed of their statutory rights to attend, speak and vote by proxy (and of any more extensive rights provided under the company's articles) in the notice convening the meeting.[274] Moreover, if proxies are solicited at the company's expense the invitation must be sent to all members entitled to attend and vote.[275] Thus, the board cannot invite only those from whom it expects a favourable response. Finally, the articles may not require that proxy forms (or other documents required to validate the proxy) must be lodged more than 48 hours before a meeting or adjourned meeting.[276]

15–69

It cannot be said, however, that these provisions have done much

to curtail the tactical advantages possessed by the directors. They still strike the first blow and their solicitation of proxy votes is likely to meet with a substantial response before the opposition is able to get under way. Even if their proxies are in the "two-way" form, many members will complete and lodge them[277] after hearing but one side of the case, and only the most intelligent or obstinate are likely to withstand the impact of the, as yet, uncontradicted assertions of the directors.

It is perhaps easy to recognise that management might give biased advice, but the same concern is also voiced in relation to proxy advisers. These firms provide voting advice, especially to institutional investors, and may therefore have considerable influence on their voting behaviour. Although taking advice is often sensible, especially given the increasing complexity of the equity markets and the large number of (cross-border) holdings of shares, two shortcomings are typically noted: the advisors may have serious conflicts of interest, given that they often provide other services to issuers; and their methodologies may not be robust. Perhaps predictably, codes of best practice have been developed, with suggestions that they be adopted on a "comply or explain" basis.[278] The issue is also likely to form part of the proposed new Shareholder Rights Directive.[279]

15–70

It is, of course, true that, once opposition is aroused, members may be persuaded to cancel their proxies, for these are merely appointments of agents and the agents' authority can be withdrawn,[280] or change their instructions, since s.324A requires the proxy to vote in accordance with the member's instructions. But in practice this rarely happens.

The issue of termination of the proxy's authority is now partly addressed in s.330. The aim of the provisions is to protect things done by the proxy from being brought into question if the company[281] has not received notification of the termination of the proxy's authority before the meeting. Thus, the proxy's vote will still be valid and the proxy will still count towards the quorum and can still validly join in demanding a poll, unless the company receives notice of termination of the authority before the commencement of the meeting.[282] The company's articles

may set an earlier time for the notification of the termination, but not so as to make it earlier than 48 hours before the meeting (excluding non-working days).[283] However, the section deals only with the termination of the proxy's authority by "notice of termination". It has been held that a member may attend and vote in person and the company must then accept his vote instead of the proxy's,[284] i.e. that the proxy's authority may be terminated by a personal vote. However, two points should be noted about that case. First, it was based on the construction of the particular articles of the company in question, and so does not purport to lay down a general rule. Secondly, the company was aware the shareholder had voted in person and that the votes held by the proxy were accordingly reduced—indeed the company in that case wished positively to insist on the proxy's votes having been reduced. Thus, outside the matters covered by the section, the terms of the articles and the company's knowledge seem to be the crucial determinants of the ability of the proxy to exercise his or her voting rights as against the company, despite the withdrawal of the member's authority.

15–71

As between the member and the proxy, on ordinary agency principles a revocation is always effective if notified to the proxy before he has voted.[285] And during the term of appointment of the proxy, s.324A (surprisingly, only since 2009) requires the proxy to vote in accordance with any instructions given by the appointing member. This would seem to overcome the problem addressed in older cases of whether there was any positive obligation on the proxy at all (or merely a negative one not to vote contrary to the principal's instructions),[286] and whether the answer depended upon whether there was a contract or a fiduciary relationship between member and proxy.[287] But failing any such statement or definite instructions from the principal, the proxy will have a discretion, and if this is exercised in good faith the proxy will not be liable, whichever way he votes or if he refrains from voting.

Corporations' representatives

15–72

Since a company or other corporation is an artificial person

which must act through agents or employees, it might be supposed that, when a member is another company, it could attend and vote at meetings only by proxy. This, however, is not so. Section 323 provides that a body corporate may, by a resolution of its directors or other governing body,[288] authorise such person or persons as it thinks fit to act as its representative at meetings of companies of which it is a member (or creditor) and that the representative may exercise the same powers as could the body corporate if it were an individual.[289] With the expansion of the powers of the proxy, on the one hand, and the removal of the previous restriction that a company could appoint only a single corporate representative, it is unclear whether the proxy or the corporate representative is the more attractive mechanism for the corporate shareholder. The representative may have the slight advantage that, unlike a proxy, he or she can simply turn up at the meeting and is not subject to any requirement for documentation to be lodged with the company in advance of the meeting, as a proxy is. This may be particularly valuable where institutional investors are in discussion with the company's management right until the last minute about the acceptability or otherwise of a resolution to be proposed at a meeting and, if those discussions break down, where it will be too late to appoint a proxy.[290]

Voting and verification of votes

Voting as a governance issue

15–73

Company law has traditionally proceeded on the basis that voting at a general meeting is a property right for those shareholders who have voting shares. This gives rise to two problems. Shareholders may choose not to exercise their votes at all; or they may vote at the behest of a non-shareholder. Both responses are capable of undermining the legitimacy of shareholder decisions, in the first case because the result is not representative of the shareholding body as a whole and in the second because it may reflect the interests of non-shareholders.

15–74

As to the first problem, we have seen above that for "fiduciary"

investors the law of trusts may impose a duty to give consideration to the question of whether voting rights should be exercised in order to promote the interests of the beneficiaries of pension trusts. Under government pressure, the institutional shareholders generally have supported the UK Stewardship Code, which embodies best practice rules on active engagement, including voting, so that for such shareholders voting is coming close to being a duty.[291] This is not a duty enshrined in the law, but a "duty" resulting from the need to ward off proposals to enshrine such a duty in the law—the typical set of factors which produces what is often referred to as "self-regulation", though that is arguably an inappropriate term. Nevertheless, these developments address to some degree the problem of non-voting. Voting levels at general meetings of large companies improved from one-half to over 60 per cent in the three years 2004 to 2007,[292] but then levelled out to just over 70 per cent by 2015.[293]

Votes on a show of hands and polls

15–75

This development has naturally led institutional shareholders to look closely at the rules on voting and to criticise rules which make their task difficult. Companies' articles normally provide for voting to be on a show of hands, unless a poll is demanded under the provisions discussed below, i.e. those present indicate their views by raising their hands. Proxies may vote on a show of hands,[294] although a proxy holding instructions both for and against a resolution may find it very difficult to know how to act. The result on a show of hands may give a very imperfect picture of where the majority of the voting rights lie.

The alternative voting mechanism is that of the poll in which members and proxies vote the shares which they represent, though a person is not obliged to vote all the shares represented or to vote them all the same way.[295] The voting process usually involves signing slips of paper indicating how many votes are being cast in each direction and the number of abstentions. This is a more cumbersome, if more accurate, voting process, and in large meetings it may not be practical to complete it during the meeting, because of the need to check proxy forms and the votes

cast, though there must be scope for increasing the speed of the voting process by use of electronic technology.[296] What is not permitted, unless the articles specifically provide for it, is voting by postal ballot.[297] The latter may be thought strange since clearly such a referendum would be a better way of obtaining the views of the members. But the fiction is preserved that the result is determined after oral discussion at a meeting, although everybody knows that in the case of public companies the result is normally determined by proxies lodged before the meeting is held.[298]

Given the potential inaccuracy of the vote on the show of hands, its retention requires some explanation, especially as it is not common in other jurisdictions and so is often misunderstood by foreign investors.[299] The main argument in its favour is its speed and simplicity, enabling the company to take uncontroversial decisions quickly, though for completely uncontroversial decisions other techniques would do equally well, such as taking decisions without a vote, if no person present demands one. Where the resolution is controversial and where the voting process therefore comes under the strongest pressure, the show of hands has two main defects. The first is that it may disguise the level of opposition to the resolution, even if the show of hands produces the same result as a poll would have done. For example, a resolution may be passed on a show of hands by 80 to 20, but if a poll had been taken it might have been revealed that 500 votes were in favour of the resolution and 400 against. It is particularly likely that the chairman of the meeting will not vote on a show of hands and yet he or she may have been appointed the person to receive the proxies solicited by the company. Such situations in particular discourage institutional shareholders from voting by proxy, because they feel their votes have no impact. In the case of companies subject to the UK Corporate Governance Code these adverse consequences are somewhat mitigated by the recommendation that companies should display on their websites the proxies lodged for and against a resolution where the vote was taken on a show of hands.[300]

The second, and more serious, defect in the show of hands is that it may produce a result different from that which would be

revealed by a poll. This situation is addressed by the legislation through rules dealing with the question of who can demand that a poll be taken, even though a result has been achieved on a show of hands, or can demand a poll even before a decision on a show of hands has been taken.[301] The articles of companies invariably direct that a demand by the chairman shall be effective.[302] This again strengthens the position of the directors, for they run no risk of not being able to use their full voting power. Further, the Act provides that the articles must not exclude the right to demand a poll on any question, other than the election of a chairman or the adjournment of the meeting. Nor may the articles make ineffective a demand by not less than five members having a right to vote on the resolution; or by members representing not less than one-tenth of the total voting rights on the resolution; or by members holding shares having a right to vote on which a sum has been paid up equal to not less than one-tenth of the total sum paid up on all the shares conferring that right.[303] Further, a proxy may demand or join in demanding a poll.[304] This makes it difficult for the articles to hamstring a sizeable opposition by depriving them of their opportunity to exercise their full voting strength. Moreover, it is the duty of the chairman to exercise his right to demand a poll so that effect is given to the real sense of the meeting, and, if he realised that a poll might well produce a different result, it seems that he would be legally bound to direct that a poll should be taken.[305]

Verifying votes

15–76

The Company Law Review received evidence that the reliability of the results produced on a poll might not always be all it should be, because votes are "lost" somewhere in the chain between the person holding the voting power giving instructions as to how the votes are to be cast and the recording of those votes at the meeting.[306] Following this, the Act gives the same percentage of the members (including indirect members) as can place a resolution on the agenda or demand a meeting of an AGM the right to requisition an independent assessor's report (normally from the company's auditors) on a poll at a general

meeting of the company (but without any cost to the requisitionists).[307] This right applies only within “quoted companies”, i.e. companies incorporated in one of the jurisdictions of the UK and listed on the Main Market of the London Stock Exchange or listed on a regulated market in another Member State of the EEA or having their shares traded on the New York Stock Exchange or Nasdaq.[308] The report must give the assessor’s opinion, with supporting reasons, on a number of matters, notably whether the procedures adopted in connection with the poll were adequate, whether the votes (including proxy votes) were fairly and accurately recorded and whether the validity of the members’ appointment of proxies was fairly assessed.[309] The context in which the right is set strongly suggests that the assessor is required to look only at the company’s practices and procedures, so that defects in the passing of voting instructions down the chain before those instructions reach the company will not be picked up.

Certainly, the rights which the assessor is given to support the discharge of the reporting function are all rights against the company and associated persons. The assessor has the right to attend the meeting of the company at which the poll is to be taken or any subsequent proceedings if the poll is not taken at the meeting itself and to be given copies of the documentation sent out by the company in connection with the meeting.[310] The assessor has a right of access to the company’s records relating to the meeting and the poll and a right to require directors, officers, employees, members and agents of the company (including the operators of its share register) to provide information and explanation (unless this would involve a breach of legal professional privilege).[311] Non-compliance with the request for information or giving knowingly or recklessly misleading information in response to a request is a criminal offence.[312] The company must put on its website a copy of the report as soon as is reasonably practicable and keep the information there for two years and, at an earlier stage, must post some information about the appointment of the assessor.[313]

Non-compliance with the requirements for an assessor’s report appears to have no impact on the validity of the resolution passed, though it is a criminal offence on the part of every

officer in default for the company not to respond within one week of receiving a valid request by appointing an independent assessor to produce the report.[314] The request will normally be made before the meeting at which the poll is likely to be requested or conducted but a valid request may be made up to one week after the date on which the poll is held.[315] The appointed person must meet the statutory requirements for independence, which, however, are drawn so as not to exclude necessarily the company's auditors,[316] and the assessor must not have any other role in relation to the poll upon which a report is to be made.[317]

Establishing who is entitled to vote

15–77

One final issue which should be mentioned is the fundamental one of establishing who is entitled to vote. There are two potential problems. The first arises when the shares in a company are constantly traded. In this case, establishing who can vote can only sensibly be done by establishing some date prior to, but not too far in advance of, the meeting as the "record date". Those who are members on that date may vote, even if by the date of the meeting they have disposed of their shares, and those who have acquired shares since that date may not (except by instructing the shareholder on record how to vote). This is not an entirely satisfactory situation and in some continental European countries it is dealt with by "share-blocking", i.e. prohibiting trading between the record date and the date of the meeting. However, the disadvantages of this device, in terms of loss of liquidity, outweigh the advantages, and it has not been used in the UK and is now in any event prohibited by art.7 of the Shareholders' Rights Directive.[318] The alternative is to set the record date close to the meeting date, so as to minimise the effect of trading post the record date, but to accept that some misallocation of voting rights will inevitably occur. This is the UK approach where the record date is set at not more than 48 hours before the meeting by the Uncertificated Securities Regulations, which are determinative in the case of publicly traded companies.[319]

The second problem is one which has emerged as a practical

issue only recently. Directors of public companies have powers under ss.793–797 to issue statutory disclosure notices calling for information about the persons interested in its shares. If there is non-compliance with the notice, the company can seek a court order restricting the rights attached to the relevant shares, including barring the right to vote. Given the powerful sanction, the company's right to seek to exercise the power to bar voting is subject to "proper purposes" constraints.[320]

Publicity for votes and resolutions

15–78

Whether or not an independent assessor is requested by the members, a quoted company is required to post on its website the text of any resolution voted on through a poll at a general meeting and give the details of the votes cast in favour of or against it.[321] This will include resolutions which are not passed. Again, failure to do so does not affect the validity of the resolution but does constitute a criminal offence on the part of every officer in default. The UK Corporate Governance Code goes a little further and suggests website publication of votes directed to be withheld and of the number of shares in respect of which valid proxy appointments were made.[322] The purpose of the latter piece of information is presumably to indicate how important or, more likely, unimportant attending the meeting actually was.

15–79

Apart from this new requirement for quoted companies, the publicity requirements for the results of meetings are of a more traditional kind. Section 355 requires every company to keep records containing the minutes of all proceedings of general meetings and copies of resolutions passed otherwise than at meetings (for example, as written resolutions or by unanimous consent), and to keep those records for 10 years.[323] Those records must be open to inspection by any member of the company (but not by the public) free of charge, who, for a prescribed fee, may require a copy of them.[324] The place of inspection is the company's registered office or some other place permitted under regulations made by the Secretary of State.[325] However, some resolutions of the company will be available

publicly because they have to be supplied to the Registrar. This is true in particular of special resolutions, including such resolutions passed by unanimous consent.[326]

15–80

The minutes of the meetings and the records of the resolutions have some legal significance. A record of a resolution passed other than at a meeting, if signed by a director or the company secretary, is evidence of the passing of the resolution, and the minutes of a meeting, if signed by the chair of that meeting or the following one, are evidence of the proceedings at the meeting. A record of proceedings at a meeting is deemed, unless the contrary is proved, to establish that the meeting was duly held, was conducted as recorded and all appointments made at it were valid. A record of a written resolution produces the same effect as to the requirements of the Act for passing written resolutions.[327]

"Empty" voting

15–81

The second problem identified above was that of members voting at the behest of non-members. In some cases this is entirely legitimate. We have noted, for example, that a nominee shareholder must vote as instructed by the beneficial owner.[328] This is unproblematic because the effect of the rule is to reunite the voting right with the person who has the economic interest in the share.[329] The issue with "empty" voting is that the right to vote is in fact exercised by a person with no or only a limited economic interest in it, to the exclusion of the person with the greater economic interest. There are two principal ways in which voting by those with no or only a limited economic interest in the shares can come about: contracts for differences ("CfDs") and stock "lending".[330] Both are fairly sophisticated market arrangements, which do have a legitimate role, but whose impact on the allocation of voting rights has not been fully thought through.

In the first case, a person typically contracts with a counterparty for the difference in the price of a security at two points in time, and the counterparty, at least in a "long" CfD,

will purchase the security in question as a hedge against its exposure under the CfD. In practice, though not as a matter of law, the holder of the CfD can often determine the way in which the counterparty exercises the votes attached to the shares acquired as a hedge. In this way a non-owner with a limited economic exposure to the share becomes in practice able to vote it. We discuss CfDs further below when dealing with takeovers, which is the one area where regulation (relating to disclosure of interests in shares) has addressed them.[331]

The second main form of "empty" voting arises out of stock "lending". This is a misnomer. With stock lending the shares are not lent by their holder to someone else but are transferred to that person on the basis that the transferee undertakes to re-transfer an equivalent number of shares (together with any dividend paid on them in the interim) upon demand to the transferor. The economic result may be near that of a loan of securities but because the legal form is an outright transfer of the shares to the other person, the right to vote is transferred to that other person as well. By the same token, because the economic effect of the transaction is that of a loan, for the transferee to exercise the voting rights leads to a disjunction between the voter and the person with the long-term economic interest in the shares (i.e. the lender). Again, there is no formal regulation of the voting rights issues arising with stock lending. The Myners Report 2007[332] reiterated its earlier recommendation that in the case of contentious votes the transferor should exercise its right to have shares re-transferred to it in order to be able to exercise the right to vote. However, it noted that, in the case of institutional shareholders, where, often, the shares were held by a custodian under a direct contract with the institution, whilst the right to vote the shares was delegated to a fund manager under a separate contract with the institution, the fund manager might be unaware whether the shares held by the custodian had been "lent" (perhaps under an automatic stock lending programme) and so would not be in a position to ask for the re-transfer of their equivalent.[333]

Miscellaneous matters

Chairman

15–82

Every meeting needs a person to preside over it, if it is not to descend into chaos. The Act lays down the default rule that a member may be elected at the meeting by resolution to be its chair, but states that this provision is subject to any provisions in the articles as to how that person is to be chosen.[334] The articles invariably do deal with the matter. The model articles for public companies[335] sensibly take the view that the chairman ought to be a member of the board and accordingly provide that the chairman of the board shall also be the chairman of the meeting, which is what normally happens. However, if the chairman of the board is not present with 10 minutes of the time appointed for the start of the meeting, the directors present must appoint a director or member to preside and, if there are no directors present, then those constituting the meeting do that job.

The position of chairman is an important and onerous one, for he or she will be in charge of the meeting and will be responsible for ensuring that its business is properly conducted. As chairman, he owes a duty to the meeting, not to the board of directors, even if he is a director.[336] He should see that the business of the meeting is efficiently conducted and that all shades of opinion are given a fair hearing. This may entail taking snap decisions on points of order, motions, amendments and questions, often deliberately designed to harass him, and upon the correctness of his ruling the validity of any resolution may depend.[337] He will probably require the company's legal adviser to be at his elbow, and this is one of the occasions when even the most cautious lawyer will have to give advice without an opportunity of referring to the authorities.

Adjournments

15–83

One situation in which it may be necessary to adjourn is when the meeting is inquorate, but this is a rare situation in public companies, because the quorum requirement is so low, i.e. two persons. What may present problems is the converse case where those attending the meeting are too many rather than too few, and the meeting becomes chaotic. It should be emphasised that an adjournment of a meeting is to be distinguished from an

abandonment of it. In the latter case the meeting ends. If a new meeting is convened, new business, as well as any unfinished at the abandoned meeting, may be undertaken so long as proper notice is given of both. In contrast, if a meeting is adjourned, the adjourned meeting can undertake only the business of the original meeting[338] or such of it which had not been completed at that meeting. Indeed, it was thought necessary specifically to provide by what is now s.332 of the Act that where a resolution is passed at an adjourned meeting it shall "for all purposes be treated as having been passed on the date on which it was in fact passed and is not to be deemed to be passed on any earlier date".[339]

The grounds for adjournment are normally set out in the articles. Article 33 of the model set for public companies[340] provides for adjournment if those present agree, either at the chairman's suggestion or by adopting a resolution to that effect off their own motion. Basically this gives effect to the common law rule under which the chairman has no general right to adjourn a meeting if there are no circumstances preventing its effective continuance.[341] However, responding to the difficulties demonstrated in the *Byng* case,[342] the model article now further provides that the chairman may unilaterally adjourn a meeting if "it appears to the chairman of the meeting that an adjournment is necessary to protect the safety of any person attending the meeting or ensure that the business of the meeting is conducted in an orderly manner". However, this part of the model article does no more than reflect the position at common law. Helpfully, in the *Byng* case[343] this element of the common law power was held to continue to operate, even though the company's articles, reflecting the earlier model sets of articles, contained an express power to adjourn only with the consent of the meeting. But the power and duty must be exercised bona fide for the purpose of facilitating the meeting and not as a ploy to prevent or delay the taking of a decision to which the chairman objects[344]; and the chairman's exercise of the common law power must be a reasonable one.[345]

Finally, under art.33 no notice has to be given if a meeting is adjourned for less than 14 days; otherwise, seven days' clear notice must be given. Clearly if the adjournment is a temporary

one and the meeting is resumed at the same place on the same day, this is fair enough; but otherwise it seems unfair to members who may, perhaps through no fault of their own, have found themselves unable to attend the meeting as they had intended. As a result they may not know that it has been adjourned and may be prevented from exercising their rights to attend the adjourned meeting.

Class meetings

15–84

In addition to general meetings it may be necessary to convene separate meetings of classes of members or debenture-holders (for example, to consider variation of rights) or of creditors (for example, in connection with a reconstruction or in a winding up). Here again, the rules to be observed will depend on the company's articles construed in the light of the general law relating to meetings. However, the Act does provide that, for meetings of classes of shareholder, the statutory rules apply as they apply to general meetings, with some modifications.[346] The most important of the shareholder protections which are not applied are the members' power to require the directors to convene a meeting and the power of the court to order a meeting.[347] As we see in Ch.19, the company, if it wishes to take certain steps, may be obliged to seek the consent of a class of shareholders and convene a meeting for that purpose, but the class has no general right on its own to meet to consider issues which concern it. On the other hand, some protections are more extensive at class meetings called to vary the rights of the class members: the two people constituting the quorum must represent at least one-third of the nominal value of the class of shares in question, except at an adjourned class meeting[348]; and any one member may demand a poll.[349]

In practice, very similar arrangements are incorporated in debenture trust deeds to regulate the conduct of meetings of debenture-holders.

At class meetings all members other than those of the class ought to be excluded, but if for convenience a joint meeting is held of the company and all separate classes, followed by separate polls, the court will not interfere if no objection has

been taken by anyone present.[350]

Forms of communication by the company

15–85

Much of this chapter has concerned information (about meetings, for example) which is required to be supplied by the company to its members. In the case of AGMs of public companies that material will typically include the company's annual accounts and reports (considered in more detail in Ch.21) which are today quite bulky documents. One important issue, therefore, is the form that the communication takes. That may be by traditional hard copy, electronically or by publication on the company's website. The Act takes some tentative steps towards encouraging the use of the latter two forms of communication, whilst not depriving members of their traditional supply of hard copy, if they wish to have it. Thus, s.1145 provides that where a member has received a communication otherwise than in hard copy (i.e. electronically or via a website), that member is entitled to be sent, without charge, a hard copy version of the document upon request within 21 days.

More generally, before a company can validly communicate with a member[351] otherwise than in hard copy, the consent or deemed consent of that member must be obtained. Electronic communication of documents is permitted only if the member has consented to that form of communication, either generally or for a specific class of documents.[352] As to website communication, that is permitted only if there has been actual agreement by the particular member,[353] as for electronic communication, or there has been deemed agreement. Deemed agreement arises where (a) the company's articles provide for website communication or the members have resolved to permit it; and (b) the particular member has been asked by the company to agree to website communication for all or a particular class of documents and the company has not received a response within 28 days.[354] The deemed agreement may be revoked at any time by the member, but the burden is on the member to take this step.[355] To the extent that the deemed consent provisions apply to website communication only, it can be said that the Act puts more pressure on members to accept that form of

communication than to accept electronic documents.

However, website communication has a number of disadvantages for the member over receiving an electronic document, which the Act aims to redress. First, unless the member constantly monitors the relevant website, he or she may not be aware of the availability of the document. Thus, the company is required to notify the member of the availability of the document, the address of the website and how to access the document.[356] This communication could be via an electronic document, if the member has consented to that form of communication. (Self-evidently, notification via the website itself will not do!) Secondly, hard copy or electronic communication gives the member their own copy of the document, whereas, unless downloaded, the member will lose access to the document when it is removed from the website. Thus, minimum rules are set for the period during which the document must be available on the website. This is 28 days from the date on which the member was notified, as above, unless a specific section of the Act sets a different period.[357] There are a number of such specific provisions relating to the passing of resolutions.[358]

Forms of communication to the company

15–86

Where the company is the communicator, it is likely to be anxious to move away from the obligation to supply hard copy. When it is the potential receiver of communications, it may not be as anxious to facilitate the members' task. With members' communications to the company, we are necessarily concerned with their freedom to use electronic communications, rather than website based communication. The general rule in the Act is that the company is not obliged to accept electronic communications from other persons unless it has actually consented to this method of communication or is deemed to have accepted it.[359] Important for our purposes is that s.333 provides, where a company gives an electronic address in a notice calling a meeting or in a document from the company inviting the appointment of proxies, it is deemed to have agreed that any document relating to the meeting or proxy solicitation may be

sent to it electronically at that address. In some other cases, the Act simply imposes a mandatory obligation on the company to accept communication in electronic form, for example, with regard to communication of assent to a written resolution.[360] Of course, a difficulty with electronic communications is authentication. What is the equivalent of a signature on a hard copy? Section 1146 provides that an electronic communication is authenticated if the identity of the sender is confirmed in the manner specified by the company or, in the absence of such specification, the document contains a statement of the identity of the sender and the company has no reason to doubt the truth of the statement.

Conclusion

15–87

At the beginning of this chapter we pointed out that the CLR recommended reforms to improve the governance rights of shareholders, as part of its policy of making a shareholder-centred system of company law operate properly. The exercise of governance rights by shareholders may not be the only or even the most effective way of providing accountability on the part of management to shareholders—the threat of a takeover bid is probably more potent—but governance rights are certainly an important element of the accountability structure of company law. Having looked at the detail of the current law, how have the proposals of the CLR fared?

There has certainly been a great deal of tidying up and modernisation, notably the facilitation of electronic communication. Beyond that, in relation to private companies the written resolution provisions are now much simpler and likely to be more attractive, especially with the abandonment of the requirement of unanimity. For public companies, a major focus of concern was voting by the institutional shareholders, in terms of both the importance institutions attached to voting and the technical difficulties faced by indirect shareholders in casting their votes. The CLR proposed to rely mainly upon market developments and governmental suasion, rather than mandatory legal rules, to deal with both problems. Thus, there were to be fall-back powers only for the Secretary of State to require

disclosure of voting by institutional shareholders[361] or to facilitate voting by indirect shareholders. As a result of pressure in Parliament, the fall-back powers designed to overcome the technical barriers to voting by indirect shareholders were given a slightly harder edge, in relation to information provision by quoted companies, but remain otherwise of a fall-back nature.[362] Meanwhile, policy-makers' understanding of the technical problems of voting has expanded with the development of the idea of "empty voting", a topic hardly touched on by the CLR, but it is not clear, even to the Shareholder Voting Working Party, consisting of those professionally involved in the area, what the correct solution should be.[363]

Finally, the CLR placed great store on the alignment of the AGM cycle with that for company reporting. Formally, that has been achieved, but the Government did not implement the further reform intended to take advantage of the alignment. This was the statutory "pause" of two weeks after circulation of the accounts and reports, during which members would be able to formulate resolutions, to be circulated by the company free of charge, to be debated at the AGM. This was undoubtedly a lost opportunity to turn the AGM into a more significant event.

---

[1] See above, para.14–18.

[2] See above, para.14–48.

[3] See above, paras 14–48 et seq.

[4] Final Report I, para.1.56.

[5] Final Report I, para.3.4. The other two were the proposed statement of directors' duties, discussed in the following chapter, and improved disclosure and transparency provisions, discussed in a number of places in this work but especially in Ch.21.

[6] See below, para.15–22. From a governmental point of view, putting pressure on shareholders to regulate boards of directors reduces the pressure on the Government to regulate substantively in the contested area. See the example of the recent re-regulation of directors' remuneration, discussed in the previous chapter at paras 14–30 et seq.

[7] See below, Ch.23.

[8] On whom, see below. Additional voting rights may be confined to certain types of resolution, for example, the "golden share" held by the Government after some recent privatisations may operate so as to allow the Government to out-vote all other shareholders on certain specified resolutions: see Graham (1988) 9 Co. Law. 24.

[9] 2006 Act s.284 lays down a rule of "one share, one vote" (for all shares, whether ordinary or preference), except where the vote is taken on a "show of hands" (see below,

para.15–75), but allows the articles to make alternative provisions, so that the distribution of voting rights (including the creation of classes of non-voting ordinary shares) is under the control of the shareholders: s.284(4). See *Re Savoy Hotel Ltd* [1981] Ch. 351 (discussed at para.29–7) where the company had created A and B shares, ranking pari passu except in relation to voting rights, with the effect that the holders of the B shares, who owned 2.3% of the equity, could exercise 48.55% of the votes.

[10] The European Commission expressed concern with the management entrenchment qualities of disproportionate capital structures, but only introduced proposals into the Takeovers Directive on an optional basis, and its general study of the issues leans towards enhanced disclosure of voting arrangements, rather than more detailed regulation of them. For the "break-through rule" in relation to takeovers, see paras 28–22 et seq.

[11] Contrast the minority report of the Jenkins Committee in 1962 which recommended a ban on nonand restricted-voting shares: *Report of the Committee on Company Law Amendment*, 1962, Cmnd. 1749, "Note of Dissent", cf. the main report at paras 123–136. The dissentients were mainly influenced by the inconsistency between the development of a market for corporate control and the issuance of non- or restricted-voting shares.

[12] See below, para.15–60.

[13] See Ch.20, below.

[14] Developing, paras 7.95f et seq.; Completing, paras 2.35–2.36.

[15] See above, para.1–4.

[16] 2006 Act s.336, requiring an AGM, applies only to public companies and to private companies which are "traded companies" (s.336(1A)—these are defined in s.360C as companies admitted to trading on a regulated market in an EEA State by or with the consent of the company) (AGMs are discussed below at para.15–49); and s.281(1) provides for private companies to take resolutions in either way.

[17] 2006 Act s.296(4), discussed below at para.15–11.

[18] 2006 Act s.302 makes it clear that the directors may always call a general meeting of the company.

[19] 2006 Act ss.303–306, discussed below at para.15–51. The rule for demanding that a written resolution be circulated also requires 5 per cent, or some lower threshold as specified in the articles: s.292.

[20] 2006 Act s.168. See the previous chapter at para.14–52.

[21] 2006 Act s.510. See para.22–19.

[22] 2006 Act s.288(2).

[23] 2006 Act s.169(2).

[24] 2006 Act s.511(3)–(6).

[25] 2006 Act s.296(4).

[26] See below, para.15–44.

[27] Referred to in s.292(4) as the "eligible" members, but s.289 defines the eligible members as those members who would have been entitled to vote on the date the resolution was circulated. The written resolution provisions do not alter the rules on the

distribution of voting rights, discussed above at para.15–4.

[28] 2006 Act s.291(3) for resolutions proposed by directors and s.293(2) for resolutions proposed by members.

[29] 2006 Act s.296(4). The period for voting is 28 days from the date of circulation or whatever other period is fixed in the company's articles: s.297. If the requisite support is not achieved by that date, the resolution lapses. The circulation date is the first date on which a copy of the resolution is sent or submitted to a member: s.290.

[30] 2006 Act s.291(2)(a). The statement accompanying the proposed resolution must also indicate the final date for voting: s.291(2)(b). Voting may be electronic: ss.296(1),(2) and 298.

[31] 2006 Act s.291(6),(7).

[32] 2006 Act s.296(3).

[33] 2006 Act s.288(3).

[34] 2006 Act s.292(4),(5). The 5 per cent figure tracks that for requiring a public company to add a resolution to the agenda of its AGM (see below, para.15–57), for which s.292 is the functional substitute, since it is not expected that private companies will typically hold AGMs. However, the original Draft Clauses had proposed that any member might require the company to initiate the written resolution procedure: *Modernising Company Law—Draft Clauses*, Cm. 5553-II, July 2002, cl.174.

[35] 2006 Act s.292(3).

[36] 2006 Act s.293(1),(3). Non-compliance is a criminal offence on the part of every officer in default but again the validity of the resolution, if passed, is not affected by non-compliance: s.293(6),(7).

[37] 2006 Act s.294.

[38] 2006 Act s.292(2)(a).

[39] See para.3–31, above.

[40] 2006 Act s.292(2)(b),(c).

[41] 2006 Act s.295. The requisitionists may have to pay the company's costs (s.295(2)) and presumably the normal rules as to costs will apply if the application is by a person aggrieved, i.e. the requisitionists will have to pay if they lose. This is a new section, though it mirrors the provision which now appears in relation to meetings (see s.317).

[42] 2006 Act s.300 is, by contrast, concerned with restraining the (private) company's power to exclude a written resolution procedure rather than its power to have a more generous one than the statutory procedure.

[43] See above, para.14–15.

[44] 2006 Act s.281(4)(a): "nothing in this Part affects any enactment of rule of law as to things done otherwise than by passing a resolution". Section 281(4)(c) also preserves the estoppel-based version of the common law rules, discussed below: "nothing in this Part affects any enactment or rule of law as to cases in which a person is precluded from alleging that a resolution has not been duly passed".

[45] *Baroness Wenlock v River Dee Co* (1883) 36 Ch. D. 675n, 681-2n (Cotton LJ); *Re Duomatic Ltd* [1969] 2 Ch. 365, 373 (Buckley J); *Re New Cedos Engineering Co Ltd*

[1994] 1 B.C.L.C. 797, 814 (Oliver J); *Wright v Atlas Wright (Europe) Ltd* [1999] 2 B.C.L.C. 301, 314-5 CA (Potter LJ, with whom other members of the CA agreed); *Euro Brokers Holdings Ltd v Monecor (London) Ltd* [2003] EWCA Civ 105; [2003] 1 B.C.L.C. 506 at [62] (Mummery LJ).

[46] *EIC Services Ltd v Phipps* [2004] 2 B.C.L.C. 589 at [122].

[47] *Re Torvale Group Ltd* [1999] 2 B.C.L.C. 605.

[48] *Re Express Engineering Works Ltd* [1920] 1 Ch. 466 CA. The qualification is important: for example, the shareholders cannot consent (whether formally or informally) to the directors making illegal gifts out of capital: this is now taken to be the ratio of *Re George Newman and Co* [1895] 1 Ch. 674. Also see below, paras 15–20 and 16–117 et seq.

[49] *Wright v Atlas Wright (Europe) Ltd* [1999] 2 B.C.L.C. 301 CA; *Multinational Gas Co v Multinational Gas Services* [1983] 1 Ch. 258; see also *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 (Ch).

[50] *Re Tulsesense Ltd, Rolfe v Rolfe* [2010] EWHC 244 (Ch); [2010] 2 B.C.L.C. 525 at [40] (Newey J). By contrast, joint holders of shares are only entitled to one vote per share, and the assent of the "senior" holder is sufficient: *Re Gee & Co (Woolwich) Ltd* [1975] Ch. 52.

[51] *Shahar v Tsitsekkos* [2004] EWHC 2659 (Ch) at [67]. But the "control" limitation is important. More generally, the Australian case of *Jalmoon Pty Ltd (In Liquidation) v Bow* (1997) 15 A.C.L.C. 230 limits consent to the registered owner. See too *Secretary of State for Business, Innovation and Skills v Hamilton* [2015] CSOH 46 at [59], obiter, simply noting the uncertainty. If there are two or more beneficial owners, then of course all must consent: *Re Tulsesense Ltd, Rolfe v Rolfe* [2010] EWHC 244 (Ch); [2010] 2 B.C.L.C. 525 at [43] (Newey J).

[52] See, for example, ss.181(5) (directors' long-term service contracts), 696(5) and 699(6) (on repurchases of company's own shares).

[53] 2006 Act s.281(4). Also see *Wright v Atlas Wright (Europe) Ltd* [1999] 2 B.C.L.C. 301 CA, and the discussion below at para.15–20.

[54] *EIC Services Ltd v Phipps* [2004] 2 B.C.L.C. 589 at [122]. See above, para.15–16.

[55] See, in addition to the cases already cited, *Re Oxted Motor Co Ltd* [1921] 3 K.B. 32; *Parker & Cooper Ltd v Reading* [1926] Ch. 975; *Re Pearce Duff & Co Ltd* [1960] 1 W.L.R. 1014; *Re Duomatic Ltd* [1969] 2 Ch. 365; *Re Bailey Hay & Co Ltd* [1971] 1 W.L.R. 1357; *Re Gee & Co (Woolwich) Ltd* [1975] Ch. 52; *Cane v Jones* [1980] 1 W.L.R. 1451; *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 242G; *Multinational Gas Co v Multinational Gas Services* [1983] 1 Ch. 258 especially at 289 CA. The unanimous consent rule is often referred to as "the *Duomatic* rule", although that case was not the first to formulate it.

[56] *Schofield v Schofield* [2011] EWCA Civ 154; [2011] 2 B.C.L.C. 319 at [32] (Etherton LJ, with whom the other members of the CA agreed).

[57] *Re Bailey Hay & Co Ltd* [1971] 1 W.L.R. 1357, 1367 (Brightman J).

[58] *Re D'Jan* [1994] 1 B.C.L.C. 561; it suffices where the only inference that can be drawn is indicative of assent and acceptance: *Hussain v Wycombe Islamic Mission and Mosque Trust Ltd* [2011] EWHC 971 (Ch) at [37] (HHJ David Cooke).

[59] *Re Tulsesense Ltd, Rolfe v Rolfe* [2010] EWHC 244 (Ch); [2010] 2 B.C.L.C. 525; see

also *Bonham-Carter v Situ Ventures Ltd* [2012] B.C.C. 717 (Ch) in which the filing of relevant forms and notices was found to be insufficient to make out a *Duomatic* decision to remove the director (the decision was reversed on appeal in [2014] B.C.C. 125 but no permission to appeal had been given on this point).

[60] *Schofield v Schofield* [2011] EWCA Civ 154; [2011] 2 B.C.L.C. 319.

[61] *Re Bailey Hay & Co Ltd* [1971] 1 W.L.R. 1357. See also *Peña v Dale* [2004] 2 B.C.L.C. 508 at [120].

[62] *Re Bailey Hay & Co Ltd* [1971] 1 W.L.R. 1357 at 1366F–1367B.

[63] *Re Bailey Hay & Co Ltd* [1971] 1 W.L.R. 1357 at 1367D–E.

[64] See *Phosphate of Lime Co v Green* [1871] L.R. 7 C.P. 43, where it was held that "acquiescence" by members of a company could be established without proving actual knowledge by each individual member so long as each could have found out if he had bothered to ask; and *Ho Tung v Man On Insurance Co* [1902] A.C. 232 PC, where articles of association, which had never been adopted by a resolution but had been acted on for 19 years and amended from time to time, were held to have been accepted and adopted as valid and operative articles.

[65] *Madoff Securities International Ltd v Raven* [2013] EWHC 3147 at [288]; *Oxford Fleet Management Ltd v Brown* [2014] EWHC 3065 at [102]–[104]. In this context, see above, paras 14–11 to 14–16 (on shareholders' residual and confirmation powers).

[66] *Re Torvale Group Ltd* [1999] 2 B.C.L.C. 605; *Euro Brokers Holdings Ltd v Monecor (London) Ltd* [2003] 1 B.C.L.C. 505 at [62] CA.

[67] *Precision Dipping Ltd v Precision Dipping Marketing Ltd* [1985] B.C.L.C. 385 CA. See Ch.12, above, at para.12–5.

[68] *Wright v Atlas Wright (Europe) Ltd* [1999] 2 B.C.L.C. 301 CA.

[69] This was a strong decision because s.319(3) of the Companies Act 1985 could be read as requiring a resolution in any event in this case, so that the principle of informal unanimous consent had no operation at all. See also *Bonham-Carter v Situ Ventures Ltd* [2012] B.C.C. 717 (Ch), in which it was held obiter that informal consent of shareholders could not waive the requirements under s.169 as these were, at least in part, for the benefit of director(s) whose removal was sought.

[70] Note the contrasting approaches of Lindsay J in *Re RW Peak (King's Lynn) Ltd* [1998] 1 B.C.L.C. 183; and Park J in *BDG Roof-Bond Ltd v Douglas* [2000] 1 B.C.L.C. 401 to the construction of the rules relating to the purchase of own shares. See further *Kinlan v Crimmin* [2007] 2 B.C.L.C. 67.

[71] See the discussion above, para.14–52. By contrast, the CLR recommended that the unanimous consent rule should also operate here, since it could be argued that the purpose of these provisions is solely to promote the interests of the members (enabling them to be better informed about the reasons for the proposed removal): Final Report I, para.7.22.

[72] See s.29(1)(b): "any resolution or agreement agreed to by all the members of the company" that would otherwise need to be a special resolution.

[73] 2006 Act s.356(2), referring only to "a resolution".

[74] A.A. Berle and G.C. Means, *The Modern Corporation and Private Property*, revised edn (New York: Transaction Publishers, 1968).

[75] Interesting work on the issue has been carried out by B. Cheffins. See *Corporate Ownership and Control: British Business Transformed* (Oxford: Oxford University Press, 2008).

[76] See P. Davies, "Institutional Investors in the United Kingdom" in T. Baums et al. (eds), *Institutional Investors and Corporate Governance* (1994); E. Boros, *Minority Shareholder Remedies* (Oxford, 1995), Ch.3; and G.P. Stapledon, *Institutional Shareholders and Corporate Governance* (Oxford, 1996), Ch.2.

[77] See B. Cheffins, "The Stewardship Code's Achilles' Heel" (2010) 73 M.L.R. 1004, 1017–18, indicating an increase in foreign investment from 16% to 42%, and a decrease in the holdings of UK pension funds and insurance companies from 52% to 26% between 1993 and 2008.

[78] See M. Kahan and E. Rock, "Hedge Funds in Corporate Governance and Corporate Control", ECGI Law Series 76/2006 (suggesting that some hedge funds make investments in order to become activists rather than in order to protect an investment which has turned out not to perform as expected) and W. Bratton, "Hedge Funds and Governance Targets", ibid., 80/2007.

[82] For example, companies in which the institution has investments.

[83] Final Report I, para.3.54.

[84] More detail can be found in Ch.5 of the Myners Report, above, fn.79.

[85] The fund may promise a certain level of benefits on retirement ("defined benefit" schemes) or only that the pensioner will be entitled to his or her share of the fund at retirement in order to purchase an annuity ("defined contribution" schemes). The distinction, though enormously important for employees in terms of the allocation of investment risk, is not significant for present purposes, though the present trend is firmly away from DB and towards DC. The proposed "activism" obligation (see below) is the same for both types of scheme.

[86] See below, Ch.25.

[87] Even a stand-alone fund manager may suffer from conflicts of interest, for example, where it manages the pension fund of a company in which another pension fund under its management is invested.

[88] In any event, the Government was not minded to pursue this particular recommendation: Modernising, para.2.47.

[89] See above, fn.79 at paras 5.83–5.88.

[90] See above, fn.81.

[91] Final Report, I, para.6.39.

[92] HL Debs, vol. 682, col. 787, 23 May 2006 (Lord Sainsbury).

[93] See above, fn.79 at para.5.89.

[108] *Kirby v Wilkins* [1929] 2 Ch. 444. If the nominee votes the shares without instructions, that right must be exercised in the interests of the beneficiary.

[109] See below, para.15–61.

[110] Final Report I, paras 7.1–7.4.

[111] See para.27–12.

[112] HL Debs, vol. 681, cols. 813 et seq., 9 May 2006.

[113] HC Debs, Standing Committee D, Twenty First Sitting, cols. 875 et seq., 21 July 2006.

[114] For the meaning of a “regulated market” see para.25–8.

[115] 2006 Act s.151. The regulations are subject to affirmative resolution by Parliament.

[116] The register of members is discussed below, at para.27–16.

[117] This section does not apply in Scotland.

[118] Thus art.45 of the model set of articles for public companies: “Except as required by law, no person shall be recognised by the company as holding any share upon any trust, and except as otherwise required by law or the articles, the company is not in any way to be bound by or recognise any interest in a share other than the holder’s absolute ownership of it and all the rights attaching to it”.

[119] Completing, paras 5.2–5.12 and Final Report I, paras 7.3–7.4.

[120] An obvious, but perhaps potentially confusing, term to employ, since the nominator will often be a nominee shareholder! Any custodian of relevant shares may use the power, whether in a pension-fund context or otherwise.

[121] At para.15–4.

[122] Although the section is permissive as to the adoption of “transfer” articles by the company, there seems no reason why the articles should not be mandatory as against the member in appropriate cases.

[123] On proxies see below, para.15–67.

[124] The rights to be sent a proposed written resolution; to require circulation of a written resolution; to require directors to call a general meeting; to require notice of a general meeting; to require circulation of a statement; to appoint a proxy; to require circulation of a resolution for the AGM of a public company; to be sent the annual report and accounts. And, in addition, in relation to “traded companies” (defined in s.360C), the right to ask questions at a meeting; and the power to include matters in the business dealt with at the AGM.

[125] 2006 Act s.145(2).

[126] 2006 Act s.145(4)(b) makes it clear that the section does not affect the requirements relating to the transfer of the shares themselves.

[127] 2006 Act s.145 (2).

[128] 2006 Act s.145(4)(a). Thus, the articles may not confer enforceable rights on third parties, even if the company wishes to do so, a somewhat strange restriction. This was tested in *In re DNick Holding Plc* [2014] Ch. 196, where the claimants, being the ultimate economic owners of certain beneficial interests in the ordinary shares, applied for relief under s.98 in respect of a special resolution for re-registration as a private company. Norris J held that they were not "holders" of the shares and therefore had no standing to make an application under s.98. Moreover, s.145 could not be read as conferring rights enforceable against the company on anyone other than the registered members: the section does not mean that "if the effective exercise of the transferred right produces a result that is not to the taste of the nominated person then the nominated person can, in order to bring about his desired outcome, himself use any of the provisions of the 2006 Act available to the transferring member" at [29]. Norris J however recognised that this result would "deprive the claimants as indirect investors of the sort of protection which those who formulated the 2006 Act thought ought to be extended to minority shareholders. That is not a particularly comfortable conclusion at which to arrive: but I consider that I would have to embark upon…an 'impermissible form of judicial legislation' to reach any other conclusion" at [31].

[129] See below, para.15–65.

[130] For an excellent survey of practice as of a few years ago and proposals for reform going beyond what the CLR recommended, see R.C. Nolan, "Indirect Investors: A Greater Say in the Company?" (2003) 3 J.C.L.S. 73.

[131] In *In re DNick Holding Plc* [2014] Ch. 196, it was noted obiter that the right of a nominee to vote both for and against particular resolutions under s.152(1) created problems, since then—for the purposes of s.98—the registered holder was "a person who has consented to or voted in favour of the resolution", and so had no standing to complain despite the partial dissenting vote [32].

[132] 2006 Act s.152(2)–(4). The provision does not specifically require the company's assumption to be a reasonable one, although the assumption only arises when the member does not inform the company otherwise, and presumably the company will need to determine this in a reasonable manner.

[133] Such provisions also prevent the depositary institution becoming a significant holder of voting rights at the company's meetings.

[134] Nolan, above, fn.130, analyses such a set of provisions in the articles of BP.

[135] 2006 Act s.150(5)(a).

[136] 2006 Act s.146(1). That regulated market may be located in any Member State but the company must be one subject to the domestic companies legislation. In other words, a company registered in any jurisdiction of the UK will not escape this obligation by listing on a regulated market in, for example, France or Germany, but a company incorporated in Germany and listed on a regulated market in the UK will not be subject to the obligation.

[137] 2006 Act s.146(2). As we saw above, s.145 is not restricted in this way, though the articles are most likely to provide for transfers of rights in such a case.

[138] 2006 Act s.146(3)(a),(4). Rights to require copies of the accounts and reports or to require hard copies of documents are also included within the notion of "information rights": s.146(3)(b).

[139] 2006 Act s.146(5).

[140] 2006 Act s.147. The right to request hard copy will also give way if the company has adopted electronic communication as its way of communicating with its members generally: s.147(4) and see below, para.15–85.

[141] 2006 Act s.148(6). Section 148(7) deals with the class right variation of this problem.

[142] Besides the two situations just described, the nomination will be terminated at the request of the member or nominated person, and will cease to have effect on the death or bankruptcy of an individual or the dissolution or the making of a winding-up order of a corporate shareholder: s.148(2)–(4).

[143] 2006 Act s.148(8).

[144] 2006 Act s.150(2).

[145] 2006 Act s.150(3)—and even that provision is subject to qualifications in s.150(4).

[146] Above, fn.108.

[147] See above, para.14–23.

[148] See below, para.22–17.

[149] See below, para.24–10.

[150] See below, para.21–42.

[151] 2006 Act ss.282 (ordinary resolutions) and 283 (special resolutions).

[152] 2006 Act s.281(3).

[153] 2006 Act s.282.

[154] 2006 Act s.283. Confusingly, this was previously the definition of an extraordinary resolution, a special resolution being one for which a "special" notice period was required. Thus, in effect, the category of special resolution has been abolished and the extraordinary resolution re-named a special resolution.

[155] 2006 Act s.283(6). And include the text of the proposed special resolution. In the case of a written resolution the text of the resolution must state that it is proposed as a special resolution (s.283(3)).

[156] See further, Ch.19, below.

[157] Since early versions of the model articles included provision for the chairman's casting vote.

[158] Please see *http://www.bis.gov.uk/policies/business-law/company-and-partnership-law/companylaw/company-law-faqs/resolutions-and-meetings#8* [Accessed 31 January 2016].

[159] And still appears in the model articles in relation to directors' meetings: art.13 (private companies) and art.14 (public companies).

[160] SI 2007/3495 Sch.5 para.2(1) and (5). But note that this exemption does not apply to traded companies: SI 2007/2194 Sch.3 para.23A(4), inserted by SI 2009/1632 reg.22.

[161] See *Bushell v Faith* [1970] A.C. 1099.

[162] 2006 Act ss.282(3) and 283(4). On a show of hands, it is not known how many

shares each voter represents.

[163] On a poll the votes attached to the shares are counted (see below, para.15–75) so that a single shareholder with 100 shares will outvote 99 shareholders with one vote each.

[164] 2006 Act ss.282(4) and 283(5). On proxy voting see below, para.15–67.

[165] 2006 Act s.281(1) and (2) make it clear that the same rules apply to voting at class meetings.

[166] For an interesting discussion on the construction of the company's bespoke article on voting entitlement and how this interacts with the corresponding Model Article regulation, see *Sugarman v CJS Investments LLP* [2014] EWCA Civ 1239 CA at [28]–[40] (Floyd LJ) and [45]–[50] (Briggs LJ).

[167] 2006 Act s.311(2), and see below, para.15–65.

[168] 2006 Act s.301.

[169] 2006 Act s.312.

[170] *Tiessen v Henderson* [1899] 1 Ch. 861, 866–7 and 870–1 (Kekewich J) recognises this as part of the purpose of notice rules.

[171] *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227. The case concerned the confirmation of a special resolution reducing the company's share premium account which had been "lost". The notice of the meeting proposed that the whole of it (£1,356,900.48) "be cancelled". Before the meeting was held it was realised that £327.17 resulting from a recent share issue could not be said yet to have been "lost". Accordingly, at the meeting the resolution was amended and it was resolved that the share premium account be reduced to £327.17. Confirmation was refused on the ground that the resolution had not been validly passed. But in a later case (Unreported, but see (1991) 12 Co. Law. at 64, 65), where the facts were virtually identical, a reduction was confirmed because the "substance" (i.e. the amount of the reduction) remained unchanged.

[172] As is now in any event required by s.283(6).

[173] *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 242C.

[174] *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 242A–243.

[175] Which was worded in terms similar to s.312 rather than the stricter s.283(6).

[176] *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 243F.

[177] *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 242H; citing *Betts & Co Ltd v Macnaghten* [1910] 1 Ch. 430.

[178] 2006 Act s.311(2).

[179] *Henderson v Bank of Australasia* (1890) 45 Ch. D. 330 CA. although contrast the explicit provision in the model articles for public companies, art.40(3).

[180] This was the advice given to the chairman in the *Moorgate* case; see [1980] 1 W.L.R. at 230A.

[181] *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 243D–G.

[182] If the articles say (as did Table A 1985, art.82) that directors' fees shall be such as "the company may by ordinary resolution determine" and the directors give notice of an

ordinary resolution to increase the fees by £10,000 p.a., surely a member should be entitled to move an amendment to reduce the increase (though the directors clearly should not be permitted to move an amendment to increase it further)?

[183] This seems to be permissible—the singular “director” includes the plural—and s.160 relates only to voting on *appointments*, not to *removals*.

[184] Nor should proxy-holders have any doubts on how they should vote. If instructed to vote for the resolution they would vote against the amendment but, if that was passed, for the amended resolution. If instructed to vote against, they would vote for the amendment but against the resolution as amended. If given a discretion they would exercise it.

[185] The law used to distinguish between AGMs and extraordinary general meetings (EGMs) but the Act no longer uses the latter term, no doubt because in the case of a private company it is the only type of meeting that can be held.

[186] 2006 Act ss.336–340, concerning AGMs, apply only to public companies. See s.336(1).

[187] But see s.437, which requires public companies to lay before the company, in a general meeting, copies of its reports and accounts.

[188] See above, para.14–69.

[189] Main Principle E.2. In particular the Code suggests that companies propose a resolution in relation to the report and accounts (Supporting Principle E.2.1). The Code envisages that the company’s relationship with institutional investors will take the form of continuing dialogue which will extend beyond the general meeting: Main Principle E.1 and also see UK Stewardship Code, above, para.15–30.

[190] 2008 Act s.338A(3) requires the company “to include such a matter once it has received requests that it do so from—(a) members representing at least 5 per cent of the total voting rights of all the members who have a right to vote at the meeting, or (b) at least 100 members who have a right to vote at the meeting and hold shares in the company on which there has been paid up an average sum, per member, of at least £100.” Section 338A(4) and (5) then set out the required format and timing (six weeks’ notice, or if later, the time at which notice is given of the meeting).

[191] 2006 Act s.338A(1), and any matters may properly be added unless they are defamatory of any person or frivolous or vexatious (s.338A(2)).

[192] 2006 Act s.319A(1), with s.319A(2) relaxing the requirement slightly by providing that no such answer need be given: “(a) if to do so would—(i) interfere unduly with the preparation for the meeting, or (ii) involve the disclosure of confidential information; (b) if the answer has already been given on a website in the form of an answer to a question; or (c) if it is undesirable in the interests of the company or the good order of the meeting that the question be answered.”

[193] In particular, the fact that a special resolution is required to transact a particular piece of business does not mean that that business cannot be considered at an AGM.

[194] 2006 Act s.336(1) and (1A) respectively.

[195] 2006 Act s.391. See below, para.21–8. Subsection (2) deals with the situation where the company changes, as is permitted, its accounting reference date.

[196] 2006 Act s.336(3),(4).

[197] CA 1985 s.367.

[198] 2006 Act s.302.

[199] 2006 Act s.303. In the case of a company without shareholders the threshold is members holding at least one-tenth of the voting rights of the members: s.303(2)(b).

[200] 2006 Act s.303(4). This is because (a) that makes their intentions clearer and (b) if what is proposed is a special resolution, notice of it has to be given to the shareholders (see above, para.15–63). The company must then give the notice to the shareholders required for a special resolution: s.304(4).

[201] The resolution is not "properly moved" if it falls within any of the three categories of resolution which the directors may refuse to circulate as a written resolution: s.303(5) and also see above, para.15–10. For an example of the operation of this principle under the prior legislation see *Rose v McGivern* [1998] 2 B.C.L.C. 593. Here a proposed resolution "to elect a new board of not more than ten members" was held to be ineffective on the grounds that it did not provide for the removal of the existing board and there were otherwise no vacancies to which the ten could be elected (quite apart from the failure to state whether the number was in fact to be ten or some lesser number and to state who the ten were to be). The leaders of the requisition subsequently submitted 25 individual resolutions to the company, removing each of the 16 existing directors and appointing nine new ones, but the company refused to circulate the individual resolutions on the grounds they were too late.

[202] 2006 Act s.305(1),(6),(7). The effect of this is that, if more than 5 per cent requisitioned the meeting, the percentage needed to call a meeting directly is itself increased. The requisitionists may act not only where the directors fail to act in time but also where they fail to include a proposed resolution in the notice of the meeting or fail to give notice of the proposed resolution as a special resolution, if such it is: ss.304(3), (4) and 305(1)(b).

[203] Activist shareholders seeking to obtain changes in the board's policy have made use of it.

[204] Model articles for public companies, art.28.

[205] 2006 Act s.306(2). The section does not make the addition originally proposed of the personal representative of a deceased member of the company who would have had the right to vote at the meeting.

[206] 2006 Act s.306(2)–(4).

[207] See below, para.15–84.

[208] 2006 Act s.318(2).

[209] 2006 Act s.318(1) (in this case, the rule overrides anything to the contrary in the articles).

[210] Table A 1985 art.41 made it clear that this was required. The present model articles revert to ambiguity.

[211] *Re El Sombrero Ltd* [1958] Ch. 900 where the applicant shareholder held 900 of the company's 1,000 shares, the remaining 100 being held by the two directors whom the applicant wished to remove in exercise of his statutory powers under what is now s.168 and who refused to attend the meeting. The court directed that one member present in person or by proxy should constitute a quorate meeting. See also *Re Opera Photographic Ltd* [1989] 1 W.L.R. 634; *Re Sticky Fingers Restaurant Ltd* [1992]

B.C.L.C. 84; and *Smith v Butler* [2012] B.C.C. 645 CA at [49]–[55] (Arden LJ).

[212] *Harman v BML Group Ltd* [1994] 1 W.L.R. 893 CA. On class rights generally see below, para.19–13.

[213] *Ross v Telford* [1998] 1 B.C.L.C. 82 CA; *Union Music Ltd v Watson* [2003] 1 B.C.L.C. 453 CA; *Re Woven Rugs Ltd* [2002] 1 B.C.L.C. 324; *Vectone Entertainment Holding Ltd v South Entertainment Ltd* [2004] 2 B.C.L.C. 224.

[214] *Re British Union for the Abolition of Vivisection* [1995] 2 B.C.L.C. 1. Contrast *Monnington v Easier Plc* [2006] 2 B.C.L.C. 283, where the judge took the view that a meeting to remove a director could be convened and conducted in accordance with the Act, but the result, as a consequence of the drafting of the removal section, would be ineffective. In that case the court had no jurisdiction to use its s.306 power to reform the Act.

[215] *Byng v London Life Association* [1990] Ch. 170 CA. The Company Law Review proposed that this be made clear in legislation, if there was any doubt about the principle: Final Report, para.7.7.

[216] 2006 Act s.360A; model articles for private companies, art.37, and for public companies, art.29.

[217] See above, para.15–8.

[218] Thus, the section operates on the basis of the distribution of voting rights in the company. Non-voting shares do not count, and multiple voting shares will make the 5 per cent target easier or more difficult to reach according to whether or not their holders support the requisition.

[219] 2006 Act.153. The right to instruct the member as to the exercise of voting rights is most likely to arise by way of contract between the registered and beneficial owners. The safeguards are designed to verify that the non-members are indirect investors and that there is no double-counting of shares.

[220] 2006 Act ss.338(2), 338A(1) and (2). See above, para.15–13. Besides being effective, the resolution must not be defamatory or frivolous or vexatious.

[221] 2006 Act ss.338(4), 338A(4). Thus, the board cannot frustrate the requisitionists by convening a meeting on less than six weeks' notice after the receipt of the request or by giving very long notice of the AGM.

[222] 2006 Act ss.340(2), 340B(2).

[223] Completing, paras 5.33–5.35.

[224] 2006 Act ss.340(1), 340B(1), 437 and 442. However, the costs of circulation should not be large if the members' resolution can be circulated along with the general circulation for the AGM. The company is obliged to circulate the resolution with the notice if this is possible: ss.339(1).

[225] 2006 Act s.307(2). For listed companies the recommended period is rather longer (20 working days), but still not long enough to obviate the problem under discussion: CGC Provision.E.2.4. On notice periods see below, para.15–61.

[226] Final Report, paras 8.66 and 8.100–101. One can find only a pale reflection of this idea in the provisions enabling 5 per cent of the shareholders to require the company to place on its website a statement about the audit of the company's accounts or an auditor's ceasing to hold office for discussion at the company's accounts meeting

(normally its AGM): ss.527–531, discussed at para.22–22.

[227] See above, para.15–51.

[228] On proxies, see below.

[229] *Peel v LNW Railway* [1907] 1 Ch. 5 CA. For an excellent description of the relative weakness of the opposition, see per Maugham J in *Re Dorman Long & Co* [1934] Ch. 635 at 657–658.

[230] Including the extension of the "100 member" right to indirect investors: s.153(1)(a). The main differences are that the request for the circulation has to be received only one week before the meeting: (s.314(4)(d)) and the company, or any person aggrieved, can make an application to the court for exemption from the obligation to circulate on grounds of abuse (s.317), as in the case of members' statements in support of written resolutions (above, para.15–13).

[231] 2006 Act s.316—subject to the limited concession where the request is received before the end of the financial year preceding the meeting. The company is likely so to resolve if the members' resolution is passed (which is unlikely) and may conceivably do so even if it is lost. In cases where it has not so resolved, there have sometimes been disputes on precisely what are properly to be regarded as "the company's expenses in giving effect" to the requisition—e.g. does it include the costs of a circular opposing the members' resolution? It ought not to.

[232] There is clearly no reason why the members' circular should not invite recipients to cancel any proxies previously given to the board but it seems that the company could refuse to despatch the members' proxy forms unless, perhaps, the words in them were counted against the 1,000 words allowed.

[233] Particularly as the period might be reduced still further by provisions requiring proxy forms to be lodged in advance of the meeting: see below, para.15–67.

[234] 2006 Act s.307(3). The previous requirement of 21 days' notice in the case of special resolutions has been removed. Section 360 makes it clear that in this and related contexts "days" means "clear days", i.e. excluding the day of the meeting and the day on which the notice is given.

[235] 2006 Act s.307A does not apply to meetings of shareholders called to approve defensive measures proposed by management in a takeover. See s.307(1A)(b).

[236] Supplementary Principle E.2.4. On the CGC, see above, para.14–69.

[237] 2006 Act s.337(2).

[238] 2006 Act s.307(4),(7). See also *Schofield v Schofield* [2011] 2 B.C.L.C. 319 CA, where the court held there was no agreement to a shorter notice period, and so the resolutions (dismissing the minority shareholder as director and appointing the majority shareholder in his place) were not validly passed, in circumstances where the minority shareholder had attended and voted at the meeting on the clearly maintained basis that the meeting had not been validly convened by reason of falling short of the 14-day requirement pursuant to s.307 (Etherton LJ).

[239] 2006 Act s.307(5).

[240] 2006 Act s.307(5),(6). In the case of companies without share capital the percentages relate to the total voting rights of all the members at the meeting.

[241] 2006 Act ss.168 and 510. See for instance *Bonham-Carter v Situ Ventures Ltd* [2012]

B.C.C. 717 (Ch).

[242] At paras 14–48 et seq.

[243] At paras 22–19 et seq.

[244] 2006 Act s.321(1). This applies whether the resolution is proposed by the board or by a member. But the notice is effective if the meeting is called for a date 28 days or less after special notice has been given, so that the board can, in effect, forgive its own tardiness: s.312(4).

[245] e.g. if notices of the meeting have already been despatched.

[246] 2006 Act s.312(2),(3). But it seems that this notice has to be given only if the resolution is to be put on the agenda and that the mover cannot compel the company to do this unless he can and does invoke s.338, above: *Pedley v Inland Waterways Ltd* [1971] 1 All E.R. 209.

[247] Such a provision was included in Table A 1985 art.76, but it no longer appears. See the difficulties caused for the requisitionists by such a provision in *Rose v McGivern* [1998] 2 B.C.L.C. 593, above, fn.201.

[248] See, for example, Table A 1985 art.38.

[249] 2006 Act s.311, with additional requirements specified in ss.311(3) and 311A in relation to traded companies where the rights and responsibilities of members at meetings must be further elaborated.

[250] Contrast *Choppington Collieries Ltd v Johnson* [1944] 1 All E.R. 762 CA; with *Batchellor & Sons v Batchellor* [1945] Ch. 169.

[251] The distinction between “ordinary” and “special” business of an AGM disappeared from Table A of 1985.

[252] 2006 Act ss.283(6)(b) and 282(5).

[253] Developing, para.4.45.

[254] On circulars and the cases applying this principle to circulars, see below.

[255] *Tiessen v Henderson* [1899] 1 Ch. 861 at 867; *Re Moorgate Mercantile Holdings Ltd* [1980] 1 W.L.R. 227 at 242F.

[256] *Kaye v Croydon Tramways Co* [1898] 1 Ch. 358 CA; *Tiessen v Henderson* [1899] 1 Ch. 861; *Baillie v Oriental Telephone Co* [1915] 1 Ch. 503 CA; and see *Prudential Assurance v Newman Industries Ltd (No.2)* [1981] Ch. 257; [1982] Ch. 204 CA. The circular must be construed in a commonsense way. In the case of listed companies there is a further safeguard in the requirement that non-routine circulars have to be approved in advance by the FCA: see Listing Rules 13.2 but also the exceptions set out in LR 13.8.

[257] *Rose v McGivern* [1998] 2 B.C.L.C. 593; on the former point following the Australian case of *Bain and Co Nominees Pty Ltd v Grace Bros Holdings Ltd* [1983] 1 A.C.L.C. 816.

[258] See above, para.13–56.

[259] 2006 Act s.310. For the former model provision see Table A 1985 art.38.

[260] 2006 Act s.310(1).

[261] 2006 Act s.310(2).

[262] The usual practice is to give notice by a newspaper advertisement. The Listing Rules require this form of communication. On bearer shares see para.24–22, below.

[263] See arts 79–80 of the model articles for public companies.

[264] 2006 Act s.313. The “accidental omission” provision, of course, would not cover the deliberate omission to give notice to a troublesome member, nor does it cover a deliberate omission based on a mistaken belief that a member is not entitled to attend the meeting: *Musselwhite v Musselwhite & Son Ltd* [1962] Ch. 964. But, if the omission is “accidental”, it applies even if the meeting is called to pass a special resolution: *Re West Canadian Collieries Ltd* [1962] Ch. 370.

[265] For a discussion of the problems in this area, see Shareholder Voting Working Group, *Discussion Paper on Shareholder Proxy Voting* (July 2015) at *http://uk.practicallaw.com/9-616-7485* [Accessed 15 June 2016].

[266] *Harben v Philips* (1883) 23 Ch.D. 14 CA; and see *Woodford v Smith* [1970] 1 W.L.R. 806 at 810, per Megarry J.

[267] The word “proxy” is used indiscriminately to describe both the agent and the instrument appointing him.

[268] The Shareholders’ Rights Directive (Directive 2007/36/EC) art.12. The Directive was implemented in the UK by the Companies (Shareholders’ Rights) Regulations 2009 (SI 2009/1632). The articles may already provide for postal ballots under domestic law: see fn.297, below.

[269] LR 9.3.6. Notwithstanding recommendations that this should be a statutory requirement in all cases (e.g. by the Jenkins Committee, Cmnd. 1749, para.464) it still is not. An abstention from supporting a management proposal on the part of a larger shareholder is taken as a significant event in the case of listed companies. See also CGC Provision E.2.1.

[270] 2006 Act s.331.

[271] 2006 Act s.324(1). The restrictions under the previous law as to (a) the proxy’s right to speak at meetings of public companies; (b) the proxy’s right to vote on a poll; or (c) the member’s right to appoint a proxy at all in a company not having a share capital, have all been swept away. The proxy may also demand a poll (s.329) and may even be elected the chair of the meeting (s.328).

[272] 2006 Act s.324(2).

[273] See above, para.15–25.

[274] 2006 Act s.325. Failure to comply does not affect the validity of the meeting or anything done at it, but does constitute a criminal offence on the part of every officer in default: s.325(2)–(4). This notice is not given to the person nominated under s.146 to receive communications from the company (see above, para.15–40). That person is told that he or she may have a right to appoint a proxy or to instruct the member how to vote, depending on the agreement between the nominated person and the member (s.149). This is not a very useful notice but it is the best that can be provided.

[275] 2006 Act s.326(1), unless a proxy form or other information is issued at the request of the member and is available to all members upon request: s.326(2). As with s.325 (previous note) non-compliance is a criminal offence. Nothing is said about the impact of non-compliance on the validity of what is done at the meeting, presumably because

s.326, unlike s.325, does not concern the content of the notice of the meeting.

[276] 2006 Act s.327. Hence proxies may now validly be lodged between the original date of the meeting and any adjournment for more than 48 hours. In the case of votes taken on polls, which are sometimes delayed, the relevant time is the time the poll is demanded or, if the poll is not to be taken within 48 hours of being demanded, 24 hours before the time appointed for the taking of the poll.

[277] Encouraged by the fact that postage is prepaid. Most two-way proxies provide that if neither "for" nor "against" is deleted the proxy will be used as the proxy thinks fit (i.e. as the board wish). LR 9.3.6 requires this to be expressly stated.

[278] Following ESMA's report into the role of the proxy advisory industry, a group of six proxy advisers published a set of best practice principles for the industry in March 2014. The three main principles, which are supplemented by additional guidance, are service quality, conflicts of interest, and communications, and they apply on a "comply or explain" basis. The group will monitor implementation of the principles and will formally review them within the next two years. ESMA is currently conducting a review of the operation of the best practice principles. See *https://www.esma.europa.eu/press-news/esma-news/esma-publishes-report-proxy-advisors%E2%80%99-best-practiceprinciples* [Accessed 31 January 2016].

[279] In April 2014, the European Commission published a draft Directive to revise the Shareholder Rights Directive (2007/36/EC). This includes a wide variety of different proposed measures, including a number of new provisions relating to identifying shareholdings and facilitating the exercise of shareholder rights such as shareholder voting, and enhancing the transparency of proxy advisors. Please see: *http://eur-lex.europa.eu/legal-content/EN/TXT/?qid=1398680488759&uri=COM:2014:213:FIN* [Accessed 31 January 2016]. Although mandatory rules are proposed, these seem likely to emerge in the form of "comply or explain" requirements.

[280] Unless it is an "authority coupled with an interest" (e.g. when given to a transferee prior to registration of his transfer) or is an irrevocable power of attorney under the Power of Attorney Act 1971 s.4.

[281] Or someone other than the company if the articles require or permit the notice to be given to someone else: s.330(4).

[282] 2006 Act s.330(2),(3). In the case of voting at a poll to be held more than 48 hours after it is demanded the relevant time is the time appointed for the poll (s.330(3)(b)).

[283] 2006 Act s.330(5)–(7) (noting that s.330(6)(c) has been repealed from 26 May 2015).

[284] *Cousins v International Brick Co* [1931] 2 Ch. 90 CA.

[285] Unless the agency is irrevocable, see fn.280, above.

[286] This was discussed, but not decided, in *Oliver v Dalgleish* [1963] 1 W.L.R. 1274, which also left open the question of how far the company is concerned to see whether the proxy is obeying his instructions.

[287] See, e.g. *Second Consolidated Trust v Ceylon Amalgamated Estates* [1943] 2 All E.R. 567 at 570; *Re Dorman Long & Co* [1934] Ch. 635 (this case contains an admirable discussion of the general problems of proxy voting). But in both the cases the proxy-holders were present at the meeting: quaere whether (in the absence of mandatory instruction now, as per s.324A) they can be compelled to attend: see [1934] Ch. 664 at 665.

[288] e.g. its liquidator: *Hillman v Crystal Bowl Amusements Ltd* [1973] 1 W.L.R. 162.

[289] 2006 Act s.323(2). This is really a statutory example of an officer acting as an organ of the company rather than as a mere agent.

[290] 2006 Act s.323 (3) and (4) deal with the situation where more than one representative is authorised to act on behalf of the company. It has been suggested that these provisions, as revised by the Companies (Shareholders' Rights) Regulations (SI 2009/1632), now make it clear that representatives can be assigned voting rights in respect of different parcels of shares held by the corporate shareholder in the way that is explicitly provided for in the case of a proxy. See s.324(2).

[291] See paras 15–27 et seq. Since December 2010 all UK-authorised Asset Managers are required under the FCA's Conduct of Business Rules (r.2.2.3) to produce a statement of commitment to the Stewardship Code or explain why it is not appropriate to their business model.

[292] *Review of the impediments to voting UK shares*, Report by Paul Myners to the Shareholder Voting Working Group, July 2007 (hereafter Myners 2007 Report). The issue of "empty" voting is considered at para.15–81, below.

[293] See FRC, *Developments in Corporate Governance and Stewardship 2015*, at *https://www.frc.org.uk/Our-Work/Publications/Corporate-Governance/Developments-in-Corporate-Governance-and-Stewa-%281%29.pdf* [Accessed 31 January 2016], citing figures from European Voting Results Report; ISS; September 2015.

[294] 2006 Act s.324(1). Previously this was a matter left to be regulated by the articles.

[295] 2006 Act s.322. See also s.152. Thus, the chairman of the meeting, under a typical three-way proxy, will hold some votes for and some against the resolution to be voted on and some instructions to abstain, and can give effect to each set of instructions.

[296] If proxies have been gathered only by the company and have been lodged with, for example, the chairman of the meeting, calculating the vote will be easy. It is where there have been multiple proxy solicitations that the process can extend beyond the meeting.

[297] *McMillan v Le Roi Mining Co* [1906] 1 Ch. 338. The articles rarely do so provide except in the case of clubs or other associations formed as companies limited by guarantee.

[298] As was well said in an American case (*Berendt v Bethlehem Steel Corp* (1931) 154 A. 321 at 322), statements made to a meeting of proxy-holders fall "upon ears not allowed to hear and minds not permitted to judge: upon automatons whose principals are uninformed of their own injury".

[299] Nevertheless, the second sub-paragraph of art.14 of the Shareholders Rights Directive (above, fn.268) appears to permit the UK to keep it.

[300] CGC Provision E.2.2. For the coverage of the CGC see para.14–69, above.

[301] It is a question of construction of the relevant article whether a poll can be demanded before there has been a vote on a show of hands: *Carruth v ICI* [1937] A.C. 707 at 754–755 HL; *Holmes v Keyes* [1959] Ch. 199 CA. The model set of articles for private companies (art.44) and for public companies (art.36) provide for a poll to be demanded in advance of the meeting or at the meeting but before the show of hands decision has been taken, as well as immediately after the result has been declared of the show of hands vote.

[302] The model articles for private and for public companies, arts 44 and 36, respectively,

also allow the directors to call for a poll, which facilitates the calling for a poll by the company in advance of the meeting.

[303] 2006 Act s.321. In the absence of anything in the articles any member may demand a poll (*R. v Wimbledon Local Board* (1882) 8 Q.B.D. 459 CA), and, of course, the articles may be more generous than s.321: see arts 44 and 36 of the model private and public company articles, which entitles two members, rather than the statutory five, to demand a poll.

[304] 2006 Act s.329.

[305] *Second Consolidated Trust v Ceylon Amalgamated Estates* [1943] 2 All E.R. 567. In this case the chairman held proxies (without which there would have been no quorum) which, if voted, would have defeated the resolutions passed on a show of hands.

[306] Final Report, para.6.25. See also the Myners Report 2007 (above fn.292) pp.1–4.

[307] 2006 Act s.342. The right extends to class meetings at which it is proposed to vary the rights of any class of member: s.352. On variation of class rights see para.19–14.

[308] 2006 Act s.385. Section 354 gives the Secretary of State the power by regulations, subject to affirmative resolution in Parliament, to extend the types of company to which the assessor's report requirement applies (but also to limit them).

[309] 2006 Act s.347(1).

[310] 2006 Act s.348.

[311] 2006 Act s.349.

[312] 2006 Act s.350.

[313] 2006 Act ss.351 and 353.

[314] 2006 Act s.343.

[315] 2006 Act s.342(4)(d).

[316] 2006 Act s.344. See notably s.344(2).

[317] 2006 Act s.343(3)(b).

[318] Above, fn.268.

[319] The Uncertificated Securities Regulations 2001 (SI 2001/3755) reg.41(1). See below at para.27–4.

[320] See the extended discussion of *Eclairs Group Ltd v JKX Oil & Gas Plc* [2015] UKSC 71, at paras 16–26 et seq.

[321] 2006 Act s.341. This meets the requirements of art.14 of the Shareholders' Rights Directive.

[322] E.2.2.

[323] The provisions apply also to class meetings: s.359.

[324] 2006 Act s.358(3).

[325] 2006 Act ss.358(1) and 1136.

[326] 2006 Act ss.29–30.

[327] 2006 Act s.356.

[328] Above, fn.108.

[329] Though perhaps less clear, other rules conferring voting rights on non-members can be justified as giving the vote to the person with the primary economic interest in the share. See, for example, the unpaid vendor of shares (*Musselwhite v CH Musselwhite & Sons Ltd* [1962] Ch. 964; but cf. *Michaels v Harley House (Marylebone) Ltd* [2000] 1 Ch. 104). Or the law may be indifferent as to the allocation by contract of the voting right as between two people each with an economic interest in the share: *Puddephatt v Leith* [1916] 1 Ch. 200 (mortgagor and mortgagee).

[330] ADRs (above, para.15–39) can also give rise to empty voting unless the depository is required to pass the governance rights onto the holder of the depository receipt.

[331] See para.28–45 and, generally, paras 26–20 et seq.

[332] Above, fn.292. The Commission has consulted on a provision to be included in a Commission Recommendation which would say that "borrowed" shares should be voted only on instructions from the "lender".

[333] This situation could also lead to the fund manager purporting to vote shares the custodian did not hold at the relevant time and to the manager's proxy instructions to the company being rejected by the company on the grounds that they related to more shares than were held.

[334] 2006 Act s.319.

[335] Model articles for public companies art.31. The model articles for private companies are in the same form (art.39).

[336] See *Second Consolidated Trust v Ceylon Amalgamated Estates* [1943] 2 All E.R. 567. Conversely, it seems a director may act as chairman of the meeting even though a resolution to be debated is critical of the board's policy: *Might SA v Redbus Interhouse Plc* [2004] 2 B.C.L.C. 449.

[337] For the sort of situation with which the chairman may have to cope if the members of a public company turn up in far larger numbers than the board has foreseen, see the case of *Byng v London Life Association Ltd* [1990] Ch. 170 CA (below) where his well-meaning efforts were in vain and the company had to convene a new meeting.

[338] Model articles for public companies, art.33(6); and for private companies, art.41(6). But a meeting can be adjourned despite the fact that it was not a meeting at which any substantive resolution could be passed: see *Byng v London Life Association Ltd* [1990] Ch. 170 CA. This must be right for otherwise an inquorate meeting could not be adjourned, as all Tables A have provided that they can.

[339] Were it otherwise, the company might unavoidably contravene the obligation to deliver to the Registrar a copy of the resolution within 15 days of its passage, as required, in the case of a considerable number of resolutions, under s.380.

[340] And similarly art.41 for private companies.

[341] *National Dwellings Society v Sykes* [1897] 3 Ch. 159; *John v Rees* [1970] Ch. 345 (which concerned, not a company meeting, but one of a Divisional Labour Party); *Byng v London Life Association* [1990] Ch. 170 CA.

[342] *Byng v London Life Association* [1990] Ch. 170 CA.

[343] *Byng v London Life Association* [1990] Ch. 170 CA.

[344] If the chairman purports to adjourn for such a reason, the meeting may elect another chairman and continue.

[345] *Byng v London Life Association* [1990] Ch. 170 CA.

[346] 2006 Act ss.334 and 352 (and s.335 deals with class meetings of companies without share capital).

[347] 2006 Act ss.334(2) and 335(2) and above, paras 15–48 to 15–54.

[348] 2006 Act ss.334(4) and 335(4). At an adjourned meeting one person holding shares of the class or his proxy suffices. This makes sense only if the adjournment is because there was no quorum at the original meeting.

[349] 2006 Act ss.334(6) and 335(5).

[350] *Carruth v ICI* [1937] A.C. 707 HL.

[351] "Person" is the term used in Sch.5 in relation to actual consent, so that its provisions embrace not just members but also those to whom governance rights have been transferred or information rights have been given (see above, para.15–31). The deemed consent provisions (see below) apply only to "members" but that term is expanded to include the two groups mentioned in the previous sentence: Sch.5 para.10(1).

[352] 2006 Act Sch.5 para.6.

[353] 2006 Act Sch.5 para.9(a).

[354] 2006 Act Sch.5 para.10(2),(3). The request may be repeated at twelve-monthly intervals if it does not produce acceptance or deemed acceptance. Similar provisions exist for debenture-holders: para.11.

[355] 2006 Act Sch.5 para.9(b).

[356] 2006 Act Sch.5 para.13(1).

[357] 2006 Act Sch.5 para.14. The Act does often require a longer period, for example, quoted companies being required to maintain website availability of the annual accounts and reports until the next set is available: s.430. There are also minimum standards set for the quality of the website: para.12.

[358] For example, s.299 (written resolutions: period is from date of circulation to date resolution lapses); s.309 (general meetings: date of notification to date of conclusion of meeting, which would include any adjournment of it). The latter section is also a little more prescriptive about the detail of the notification to be given when it concerns website documents for a general meeting.

[359] 2006 Act Sch.4 para.6.

[360] 2006 Act s.296(2).

[361] Now ss.277 et seq. See above, paras 15–25 et seq.

[362] See above, para.15–40.

[363] See the Myners Report 2007, above, fn.292. Also see Shareholder Voting Working Group, *Discussion Paper on Shareholder Proxy Voting* (July 2015) at *http://uk.practicallaw.com/9-616-7485* [Accessed 15 June 2016].

Introduction

16–1

In Ch.14 we saw that it is common for the articles of large companies to confer extremely broad discretionary powers upon the boards of such companies. The arguments in favour of giving the centralised management a broad power to run the company are essentially arguments of efficiency. At the same time, the grant of a broad discretion creates a real risk that the powers will be exercised by the directors other than for the purposes for which they were conferred, and in particular will be exercised more in the interests of the senior management themselves than of anyone else. A central part of company law is thus concerned with providing a framework of rules which, on the one hand, constrains the potential abuse by directors of their powers, whilst on the other hand does not so constrain the directors that the efficiency gains from having a strong centralised management

are dissipated. This is an age-old problem for company law and one that is constantly re-visited by successive generations of rule-makers, for no one approach can be shown to have struck the balance in an appropriate manner. It was a major issue in the debates leading up to the passage of the Companies Act 2006.

On the part of the rule-makers a number of distinct responses to this intractable problem can be identified. In Ch.14 we examined the extent to which rules relating to the structure and composition of the board itself and to the power of the shareholders to remove members of the board are used to constrain the exercise by the board of its powers and to produce accountability to the members of the company. In the previous chapter, we analysed the opportunities which the shareholders have to intervene directly in the management of the company by securing the passing at general meetings of resolutions binding the company or by subjecting the performance of the management to critical review. The taking of managerial decisions by the shareholders themselves is necessarily an activity of limited potential in large companies, since it flies in the face of the efficiency arguments for centralised management in the first place. Indeed, well-directed criticism of board performance may be more effective, especially if accompanied by an implicit or explicit threat of removal if performance is not improved.

In addition to rules on board structure and the governance rights of the members of the company, there is a third set of rules of great longevity in our law which are intended to operate so as to constrain the board's exercise of its powers. These are the duties which company law lays directly on the members of the board as to limits within which they should exercise their powers. These rules for directors were developed by the courts at an early stage, often on the basis of analogy with the rules applying to trustees. The substantial corpus of learning on the nature and scope of these general fiduciary or equitable duties and duties of skill and care has remained until very recently largely within the common law. Both the Law Commission and the Company Law Review ("CLR"),[1] however, recommended a "high level" statutory restatement of the common law principles. This recommendation, controversial though it was, made its way

into the Companies Act 2006 Ch.2 of Pt 10 of which is headed: "General Duties of Directors".

16–2

The main aim behind the proposal for a "high level" statutory statement of directors' duties was to promote understanding of the basic principles underlying this area of law, especially among directors themselves. It was thought that this objective would be furthered if there was a relatively brief statutory statement of those principles in place of the previous situation whereby those principles had to be deduced from an elaborate body of case law. The behavioural premises upon which this view was based were never extensively investigated. And indeed the CLR and the Law Commission differed on whether the statutory statement should be comprehensive, in the sense of setting out at a high level all the duties to which directors were subject (the CLR's view) or only the principal duties, leaving the courts to develop duties which had not yet been clearly formulated in the cases (the Law Commissions' view).[2] In the end, and despite the initial behavioural premises, the Act probably comes closer to the Law Commissions' view: s.170(3) makes it clear that that only "certain" duties are set out in the statute, and so, for example, the issue of directors' duties to consider the interests of creditors is not dealt with comprehensively in Pt 10 of the 2006 Act and the courts remain free to develop this aspect of the law, even at the level of general principle.[3] But the likelihood of significant common law additions is small: the seven general duties set out in Ch.2 of Pt 10 have been long established at common law, and the courts have been able to deal with new problems by development of those general duties rather than by seeking to create new ones.

There were strong objections to codification. One, which was strongly advocated in particular by the Law Society and some of the leading commercial firms of solicitors in the City of London, was that such a reform was in danger of "freezing" the law of directors' duties and impeding its further development as circumstances changed. This contention could be refuted on two fronts. First, the statutory statement was intended to be, and in the Companies Act 2006 is, a "high level" statement, which gives the courts plenty of interpretative scope when applying the

principles to the changing circumstances of commercial life. In addition, s.170(4) adds two propositions: first, the statutory general duties "shall be interpreted and applied in the same way as the common law duties or equitable principles", so that the existing case law on the common law duties will remain, in most cases, relevant to the interpretation of the statutory duties; and secondly, "regard shall be had to the corresponding common law rules and equitable principles in interpreting and applying the general principles". This second proposition is less obvious in its purpose, which seems, however, to be as follows. The law relating to directors was often developed by the courts by analogy with the rules relating to the duties of trustees to their beneficiaries and agents to their principals. Those rules continue to be embodied largely in the common law. The second proposition enables the courts, in developing the statutory duties of directors, to take into account developments in the equivalent common law duties applying to trustees and agents.[4] Thus, there was no desire on the part of the legislature to cut the law of directors' duties off from its historical roots in the duties applying to other persons acting in a fiduciary character.

A second objection to codification was that a high-level statutory statement would cause confusion or uncertainty about the relationship between the statutory statement and existing or future decisions of the courts at common law. These matters are dealt with in subss.170(3) and (4). The first subsection establishes the proposition that the general duties replace ("have effect in place of") the common law principles on which they are based. Consequently, in future, any allegation of breach of duty by the director to the company needs to be identified as a breach of one or more of the general duties set out in the statute, except insofar as the statutory statement preserves, as it does in relation to creditors' interests, the common law duties. And s.170(4) indicates, as described earlier, how the common law cases are to be used.

16–3

However, there is a difficulty underlying subss.170(3) and (4), arising from the fact that, as we shall see, the statutory statement is more than simply a restatement of the common law. In some cases it clarifies areas of uncertainty in the common law, for

example, in relation to the standard of care expected of directors, whilst in other cases it adopts a different approach from that of the common law, for example, in relation to the authorisation by independent directors of conflicts of duty. Where there is a departure in the statutory statement from the previous common law, it will obviously be inappropriate for the courts to refer to that common law in the interpretation of the statutory duties.[5] Since, however, the Act does not on its face reveal where it is confirming and where it is departing from the common law, it will be necessary to understand when the statute departs from the common law in order to determine the relevance of common law decisions to the interpretation of the statute.

The seven duties set out in Ch.2 of Pt 10 cover only the substantive content of the directors' duties. The CLR hoped to be able to recommend codification of the remedies for breaches of duty as well, but did not have enough time to produce a workable schema. The Government initially continued with this work after the CLR's final report but eventually abandoned the idea. However, the considerable work done in this direction has not been entirely lost since the work of Professor Richard Nolan, written for the CLR, has been published.[6] The failure to carry through this project is regrettable, since the remedies for breach of duty constitute an area where the law is confused and inconsistent and where practitioners as well as business people would have benefited from reform and restatement. In the result, the Act simply provides in s.178 that the civil consequences of breaches of the statutory duties are to be those which would apply at common law.

To Whom and by Whom are the Duties Owed?

To whom are the general duties owed and who can sue for their breach?

The company

16–4

Before turning to the substance of directors' duties, we need to ask who are their beneficiaries, i.e. to whom are they owed? The answer in British law is clear: the common law formulation was

that the duties of the directors were owed to "the company" and that is repeated in s.170(1) in respect of the statutory duties. The importance of this point arises mainly in relation to the enforcement of those duties. First, it tells us that those duties are not owed to persons other than the company, for example, individual shareholders or employees. Secondly, it tells us that only those who are able to act as or on behalf of the company can enforce the duties. As we shall see in Ch.17, the issue of who can act on behalf of the company to enforce its rights, and in particular the question of whether an individual shareholder can do so through the so-called "derivative action", has caused considerable controversy ever since the emergence of modern company law in the nineteenth century. That is also an area where the Companies Act 2006 has introduced a major reform.

But even the seemingly straightforward notion that the company itself can enforce these duties has been subjected to some recent perturbations. The straightforward alignment between directors' duties being owed to the company and the company being able to sue for their breach is clearly crucial in maintaining the incentive structures underpinning directors' duties. This requires some careful thought about the rules of attribution in company law. In particular, even though a director's wrongdoing is commonly attributed to the company to make the company a wrongdoer and subject to claims brought by third parties, those same attribution rules do not necessarily apply when the company sues its directors. If they did, the company's action might be blocked on the grounds of consent or illegality. It is now recognised, in both civil[7] and criminal[8] law, that to block the company's action against the director on the grounds that the company was is some sense party to the illegality, or knew of and consented to the wrong, would be to undermine the duties owed by directors to their companies and that, except for rare cases,[9] this is not the law. Although the fact that it is not the law seems so sensible as not to merit debate, the reason why this is so is less clearly articulated than might be hoped. When, if ever, is a director's act, knowledge, or intention to be attributed to a claimant company? In *Bilta (UK) Ltd (In Liquidation) v Nazir*, Lord Neuberger put it this way[10]:

> "the question is simply an open one: whether or not it is appropriate to attribute an action by, or a state of mind of, a company director or agent to the company or the

agent's principal in relation to a particular claim against the company or the principal must depend on the nature and factual context of the claim in question."

A little more guidance will undoubtedly become necessary as more cases test the boundaries, especially in the face of the contrary findings in *Safeway Stores Ltd v Twigger*.[11] A workable rule of attribution is ideally one which applies generally to individuals, not exclusively to directors, and applies whether the company is a claimant or a defendant. One suggestion is simply that no individual can benefit from claims which rely on *their own* acts counting as corporate acts so as to give them either a claim or a defence against the company.[12] This would explain most of the decided cases, but not all.[13]

Individual shareholders

16–5

We shall leave the derivative action until Ch.17. However, we need to touch briefly on the question of duties owed by directors directly to individual shareholders. It is clear that the statutory duties are owed only to the company, but equally clear that the Act does not purport to answer the question whether fiduciary or other duties are owed by the directors to shareholders individually. That issue is left to the common law. Traditionally, and still today, the common law has been reluctant to recognise directors' general duties as being owed to shareholders individually. This is hardly surprising. Recognition of duties owed individually would undermine the collective nature of the shareholders' association in a company. It would also undermine the rule that the duties are owed to and are enforceable by the company. If the directors owed to individual shareholders a set of duties parallel to those owed by them to the company, the restrictions on the derivative action could easily be side-stepped by means of the individual shareholder suing to enforce, not the company's rights, but his or her own rights.[14]

However, the precept that directors' duties are not owed to individual shareholders applies only to those duties which directors are subject to simply by virtue of their appointment and actions as directors. There may well be in a particular case dealings between one or more directors and one or more of the shareholders as a result of which a duty of some sort becomes

owed by a director to one or more shareholders. This principle is now fully accepted in English law as a result of the decision of the Court of Appeal in *Peskin v Anderson*,[15] where Mummery LJ distinguished clearly between the fiduciary duties owed by directors to the company which arise out of the relationship between the director and the company, and fiduciary duties owed to shareholders which are dependent upon establishing “a special factual relationship between the directors and the shareholders in the particular case”.

The crucial question, therefore, is what sort of dealing needs to take place between director and shareholder in order to trigger a fiduciary or other duty owed to an individual shareholder by the directors. Such a duty will certainly arise where, on the facts, the directors place themselves, as against shareholders individually, in one of the established legal relationships to which fiduciary duties are attached, such as agency. This may arise, for example, where the shareholders authorise the directors to sell their shares on their behalf to a potential takeover bidder.[16] If, in the course of such a relationship, the directors come across information which is pertinent to the shareholders' decision whether or on what terms to sell the shares, they would normally be obliged to disclose it to the shareholders on whose behalf they are acting. On the other hand, in *Percival v Wright*,[17] which is the leading authority for the proposition that the directors' duties as directors are not owed to the shareholders individually, the directors purchased shares from their members without revealing that negotiations were in progress for the sale of the company's undertaking at a favourable price. They were held not to be in breach of duty through their non-disclosure. Here, though, the shareholders approached the directors directly and sought to persuade the directors to purchase their shares themselves rather than to act as the shareholders' agents to sell the shares to third parties.

16–6

Nevertheless, there is no doubt that the directors of a company are likely to have much more information at their disposal about the company and so are likely to be at an advantage when dealing with the members. The law of agency, as we have just seen, will cover some, but not all of this ground. Can the

doctrine of a "special factual relationship" be extended beyond the law of agency? Commonwealth authority established some time ago that it can. In *Coleman v Myers*[18] the New Zealand Court of Appeal found that a fiduciary duty of disclosure arose, even in the absence of agency, in the case of a small family company where there was a gross disparity of knowledge between the directors and the shareholders and where the shareholders of the company had traditionally relied on the directors for information and advice. When the directors negotiated with the shareholders for the purchase of their shares and, therefore, were clearly not acting on behalf of the shareholders, they were nevertheless held to be subject to a fiduciary duty of full disclosure of relevant facts about the company to the shareholders. The New Zealand decision was approved by the English Court of Appeal in *Peskin v Anderson*,[19] though the English decision also reveals the limits of the rule. In the English case, directors were not obliged to disclose to shareholders their plans for the company, even though the shareholders' decision on the sale of their shares would have been affected by the knowledge, where the directors were not parties to or otherwise involved in the sale of the shares, and the company's interests arguably required the directors' plans to be kept secret until they matured.[20]

This means that, despite the recent significant developments in English law based on a "special relationship" exception to the general proposition that directors do not owe duties directly to the shareholders, the exception is essentially one of significance for family or small companies, and does not substantially reduce, within companies with large shareholder bodies, the significance of the general proposition. The cases already noted affirm that this is true even where advice is given by directors in the course of a takeover bid. In *Re A Company*[21] Hoffmann J held that directors were not obliged to offer their shareholders advice on the bid, but, if they did so, they must do so "with a view to enabling the shareholders to sell, if they so wish, at the best price" and not, for example, in order to favour one bid, which the directors supported, over another, which they did not.[22] This identifies two strands: the directors' advice must be careful, and must also be given so as to achieve its (proper) purposes, and not the directors' own (improper) purposes.[23] Neither strand imports

a "fiduciary" duty of loyalty to the shareholders.

Other stakeholders

16–7

If British company law has been reluctant to recognise general duties owed by directors to individual shareholders, it perhaps goes without saying that it has not recognised such duties owed to individual employees or creditors[24] or other groups[25] upon whom the successful functioning of the company depends. It is important to distinguish this issue (duties owed directly to stakeholder groups) from the question of how far directors' duties owed to the company require the directors to take into account the interests of stakeholder groups. Explicit duties of this latter kind were recommended by the CLR and were embodied in the 2006 Act. We shall deal with them below in our analysis of the statutory duties.

By whom are the general duties owed?

De facto and shadow directors

16–8

The general statutory duties to be discussed in this chapter are clearly owed by those who have been properly appointed as directors of the company. From the early days, however, the courts have applied the common law and statutory duties also to persons who act as directors, even though they have not been formally appointed as such—normally referred as "de facto directors". There seems to be no doubt that the general statutory duties apply to de facto directors,[26] whatever the debate over whether a person is indeed a de facto director or is merely performing some lower-level management role.[27] Although there is no single test for de facto directors, the central question which the courts seek to answer is whether the individual was "part of the corporate governing structure"[28] or has "assumed the status and functions of a company director"[29] so as to attract responsibility under the Act as if he or she were a de jure director.

This factual question is often difficult to answer, but the problem is exacerbated where the issue is whether a de jure

director of one company can, in the course of acting in that role, become a de facto director of another company. Does the formal role with one company protect against liability to the other company? In answering this question, the Supreme Court in *Commissioners of HM Revenue and Customs v Holland*[30] divided 3:2 over what Lord Collins described as differences over matters of law and principle.[31] The issue was whether an individual who was the only active director of the sole corporate director[32] of the principal companies was, in those circumstances, also a de facto director of the principal companies, held to be part of the corporate governance of them and having fiduciary and other directors' duties imposed on him in relation to them. Those in the majority thought that such a finding would contradict the principle of separate legal personality, and reflect a failure to recognise the distinction between a company and its directors, where, as here (so they held), the individual had done nothing other than discharge his duties a director of the corporate director, and in circumstances where the law condones corporate directorships.[33]

This argument has its attractions. Indeed, it follows, although not explicitly, the approach adopted in determining the individual liability of company directors to third parties in contract and in tort in circumstances where the company, by virtue of the acts of its directors, is also liable to the same parties.[34] In the fiduciary arena it is suggested that the question to ask is not whether the purported director assumed fiduciary responsibilities to the company; the answer to that, at least from the director, is likely to be precisely not (and hence the corporate directorship structure). Better to ask, as in negligent misstatement cases,[35] whether, in the circumstances, and looking at what the purported director did, the company is entitled to demand that the individual be subjected to fiduciary obligations. Where the formal structure of a corporate directorship has been transparently erected, the answer is surely no, even though, absent that structure, it would perhaps equally certainly have been yes.

The practical effect in *Holland* was that the principal companies' acknowledged liability to the Inland Revenue was not met by the principals, which were insolvent, nor by the

corporate director, which though liable was an undercapitalised intermediary, nor by Holland, since he was not a de facto director of the principal companies.[36] In the circumstances it is difficult not to feel some sympathy for the views of the dissenting minority: Lords Walker and Clarke would have preferred a conclusion that, while a de facto director is not formally invested with office, if what he actually does amounts to taking all the important decisions affecting the relevant company, and seeing that they are carried out, he is acting as a director of that company.[37] Lord Walker even suggested that the majority's contrary characterisation of Holland's activities amounted to "the most arid formalism",[38] adding that if on these facts Holland could not be found to be both the de jure director of the corporate director and, at the same time, the de facto director of the principal companies, then it was difficult to imagine facts which would ever give rise to such a conclusion; the result, Lord Walker thought, would be to make it "easier for risk-averse individuals to use artificial corporate structures in order to insulate themselves against responsibility to an insolvent company's unsecured creditors".[39] This, clearly, is not the goal, although nor too is riding roughshod over legitimate corporate risk allocation structures.

16–9

As well as rules on de jure and de facto directors, some years ago the legislature created a third category of director—the "shadow director". This is a person, not formally appointed as a director, but in accordance with whose directions or instructions the directors of a company are accustomed to act.[40] A number of specific statutory duties which supplement the general duties, and are to be found in Chs 3 and 4 of Pt 10, are expressed to apply also to shadow directors. In relation to the general duties contained in Ch.2, s.170(5) initially unhelpfully provided that they apply to shadow directors "to the extent that the corresponding common law rules or equitable principles apply"; this has now been amended to provide that shadow directors will equally be subject to the general duties "where and to the extent that they are capable of so applying".[41]

This legislative change conclusively confirms the slow judicial working towards the same position. In the early case of

Ultraframe (UK) Ltd v Fielding,[42] Lewison J had taken the view that directors' fiduciary duties did not automatically apply to shadow directors, on the grounds that a shadow director, unlike a de facto or properly appointed director, had not undertaken to act on behalf of the company and so had not put him- or herself in a fiduciary relationship with the company. This decision showed the continuing influence of the trustee analogy in the development of directors' duties, although earlier editions of this book had suggested that the analogy was an unfortunate one, since it provided a relatively easy route for the true mover behind the company's strategy to distance him- or herself from liability for the decisions taken, by appointing a compliant board and giving it instructions at crucial points.[43] By contrast, almost a decade later the equally careful analysis of Newey J in *Vivendi SA v Richards*[44] doubted this approach and concluded that, by definition of the role,[45] a shadow director's self-appointed involvement in influencing governance decisions must at law inevitably mean that shadow directors commonly owed fiduciary duties to at least some degree.[46] This judicial and statutory change is welcome. If the purpose of the law of directors' duties is to constrain the exercise of the discretion vested in the board, it would be unfortunate if those rules did not reach all those involved in that exercise.

The early source of this definitional difficulty probably lay in the firm distinction which the courts sought to draw between a de facto and a shadow director. Although the language used to define a shadow director is of some antiquity,[47] the term "shadow director" was applied as a short-hand way of referring to the definition only in the Companies Act 1980. As we have indicated, this was done in order to make clear the scope of application of the specific duties created by that Act which applied to certain transactions entered into by directors with their companies, the modern forms of which we discuss below. The 1980 Act set the courts off on the task of defining the difference between a de facto and a shadow director. In *Re Hydrodam (Corby) Ltd*[48] Millett J took the view that in nearly all cases the two categories were mutually exclusive:

> "A *de facto* director…is one who claims to act and purports to act as a director, although not validly appointed as such. A shadow director, by contrast, does not claim or purport to act as director. On the contrary, he claims not to be a director.

He lurks in the shadows, sheltering behind others who, he claims, are the only directors of the company to the exclusion of himself."

16–10

This view that the categories are mutually exclusive is increasingly doubted,[49] but nevertheless it remains important to draw some distinction in a statutory context because certain statutory provisions apply to both shadow directors and directors whilst others apply only to directors, in which category the courts have long included de facto directors. Nevertheless, the modern view, especially given the statutory change in terminology in s.170(5), is that the differences between the two categories of directors should not be the main focus of attention when deciding the applicability of the general statutory duties of directors. As Robert Walker LJ pointed out in *Re Kaytech International Plc*,[50] "the two concepts do have at least this much in common, that an individual who was not a *de jure* director is alleged to have exercised real influence in the corporate governance of a company".[51] In principle, the general duties should apply to all these people with "real influence". If there is a difference, it is practical, and likely to be that the general rules should be applied to shadow directors only to the extent that they have exercised control over the board: it is not inherent in the definition of a shadow director that he or she should have controlled all the activities of the board[52]; by contrast, most de facto directors assume general directorial responsibilities.

Finally, in the context of shadow directors, two statutory exceptions are provided. First, it is recognised that boards are very likely—indeed are well-advised—to act in accordance with the directions, advice or guidance of their professional advisers or of parties acting under statutory or Ministerial authority. These advisers are not thereby to be regarded as shadow directors (s.251(2)). Secondly, and perhaps more controversially, a company is not to be regarded as the shadow director of its subsidiary for the purpose of the general duties by reason only that the directors of the subsidiary are accustomed to act on the instructions of the parent (s.251(3)).[53] And, although the Act is silent on this, the parent is also unlikely to be classified as a de facto director, rather than a shadow director, if it is not involved in a direct way in the central management of the subsidiary. A

parent company can thus impose a common policy on the group of companies which it controls without placing itself in breach of duty to the subsidiary (for example, because the group policy is not in the best interests of the subsidiary). Note, though, that s.251(3) does not answer the separate question of whether the directors of the subsidiary can agree to implement the group policy without placing themselves in breach of duty to the subsidiary, which is discussed in para.16–36, below.

Senior managers

16–11

The general statutory duties set out in Ch.2 of Pt 10 clearly do not apply to managers who are not directors of the company. However, it is important to note that, when applying the law relating to directors' duties, the courts do not distinguish between the actions of the director as director and actions as manager, where the director is an executive director of the company. Those duties will apply to both aspects of the director's activities.[54] In consequence, some actions by senior managers of the company, provided they are also directors of the company, will be subject to the controls of the general statutory duties. Although management theory may posit that it is the role of the board in large companies to set the company's strategy and to oversee its execution, rather than to execute it itself, the law of directors' duties does not make this distinction in the case of a director who has both a board position and a non-board executive function. This is consonant with the traditional provision in companies' articles that the management of the company is a matter for the board of directors.

However, it can also be asked whether these general statutory duties (or common law fiduciary duties) apply to the senior managers of the company who are not formally appointed as directors. In *Canadian Aero Services Ltd v O'Malley* the Canadian Supreme Court approved a statement from an earlier edition of this book that directors' common law fiduciary duties (as they then were) apply to those "officials of the company who are authorised to act on its behalf and in particular to those acting in a senior management capacity".[55] That view has not been adopted expressly in any English court. Moreover, it is

clear that, in principle, the employment relationship is not a fiduciary relationship, so that it would be inappropriate to apply the full range of fiduciary or directors' duties even to senior employees. However, this proposition is subject to a number of qualifications. First, a senior employee who does in fact discharge the duties of a director may be classed as a de facto director, under the principles discussed above. Secondly, the courts have held that, as a result of the specific terms of an employee's contract and of the particular duties undertaken by him or her, a common law fiduciary relationship may arise between employee and employer, even in the case of employees who are not part of senior management, though the fiduciary duty may be restricted to some part of their overall duties.[56] The view of the Canadian Supreme Court is not inconsistent with these developments, since it too was derived from an analysis of the functions of the employees in question as senior management employees, though there will be scope for argument on the facts of each case about how extensive the fiduciary aspects of the employee's duties are. It goes without saying that, should a senior manager place him- or herself in an agency relationship with the company, then the normal fiduciary incidents of that relationship would arise. Thirdly, the implied and mutual duty of trust and confidence which is imported into all contracts of employment can in some cases operate in substantially the same way as certain directors' general duties.[57] This is particularly the case in relation to competitive activities on the part of an employee or the non-disclosure by senior managers of the wrongdoing of fellow employees and in some cases their own wrongdoing.[58]

16–12

The exclusion of senior managers as such from the statutory general duties of directors probably depends upon the continuation of the UK practice, as recommended in the UK Corporate Governance Code,[59] that the board should contain a substantial number of executive directors. If British practice were to move in the US direction of reducing the number of executive directors on the board, sometimes to one (the CEO), and there are indications of a move in that direction, then confining the statutory duties to members of the board might

become a policy which needed to be re-considered.[60]

Finally, the above discussion has concerned the fiduciary duties of employees and directors. In relation to the statutory duty of care (see below), which equally applies only to directors, the common law duty of care required of employees seems to come very close to that now required of directors (taking account of the fact that the application of the reasonable care standard will produce different results in different circumstances).[61]

Former directors

16–13

At common law the general duties of directors attach from the date when the director's appointment takes effect[62] but do not necessarily cease when the appointment ends. The second part of the common law position is explicitly confirmed by s.170(2) which provides that a person who ceases to be a director continues to be subject to two of the seven general duties, namely those relating to corporate opportunities of which he had become aware whilst still a director and the taking of a benefit from a third party in respect of acts or omissions whilst still a director. However, those two duties are to be applied by the courts to former directors "subject to any necessary adaptations", for example, to take account of the fact that the former director may no longer have up-to-date knowledge of the conduct of the company's affairs. In this way it can be said that liability is imposed in respect of actions which straddle the time before and after the director ceased to hold office.[63]

Particularly difficult issues can arise in relation to the analysis of actions by directors, whilst still directors, but after they have given notice of resignation. In such cases the director is not (yet) a former director and the issue is discussed below at para.16–94.

Directors of insolvent companies

16–14

When a company enters into an insolvency procedure (liquidation, administration or receivership), the situation under British law, unlike that in the US, is that the powers of the directors are substantially curtailed and the direction of the

business passes into the hands of the insolvency practitioner appointed to act in one or other of these roles and who acts in the interests of the creditors. This is likely to have a substantial impact on what the law of directors' duties requires of the directors in practice, but does not in principle relieve the directors of their obligations to the company.[64]

Directors' Duties of Skill, Care and Diligence

Historical development

16–15

We turn now to the substance of the duties which directors assume when they take up office. It is common in comparative analysis of company law systems to divide those duties into duties of loyalty and duties of care. Although the line between these two sets of duties is not absolutely clear, they broadly correspond to the two main risks which shareholders run when management of their company is delegated to the board. The board may be active, but not in the direction of promoting the shareholders' interests; or the board may be slack or incompetent. We shall adopt this division here, for it corresponds also to the two basic common law sources of the rules on directors' duties in English law: duties of loyalty based on equitable principles, developed initially by courts of equity, and duties of skill and care which now rest, with some particular twists, on the principles of the law of negligence. However, it should be noted that the general duties laid out in Ch.2 of Pt 10 are not divided in this way. The duty of care appears as the fourth of the seven duties. It is nevertheless with this duty that we begin.

The issue in this area which has long been debated is that of the appropriate standard of care to be required of directors. Historically, the common law was based upon a very low standard of care, because it was subjectively formulated. The traditional view is to be found in a stream of largely nineteenth-century cases which culminated in the decision in 1925 in *Re City Equitable Fire Insurance Co.*[65] Those cases seem to have framed the directors' duties of skill and care with non-executive rather than executive directors in mind and, moreover, on the

basis of a view that the non-executive director had no serious role to play within the company but was simply a piece of window-dressing aimed at promoting the company's image.[66] The result was a conceptualisation of the duty in highly subjective terms. The proposition was famously formulated by Romer J in the *City Equitable* case that "a director need not exhibit in the performance of his duties a greater degree of skill than may reasonably be expected from a person of *his* knowledge and experience".[67] The courts were also influenced by a model of corporate decision-making which gave the shareholders effective control over the choice of directors. If the shareholders chose incompetent directors, that was their fault and the remedy lay in their hands. As we have seen,[68] that is no longer an accurate picture of the degree of control exercised by shareholders over boards of directors in most public companies. Furthermore, the proposition formulated by Romer J was highly inappropriate for executive directors, appointed to their positions and paid large, sometimes very large, sums of money for the expertise which they assert they can bring to the business. The implicit view of the role of the non-executive director also became anachronistic after the development of the corporate governance codes in the 1990s, which allocated a major role to the non-executive directors in the monitoring of the executive directors.[69]

Even before the enactment of the Companies Act 2006 this was an area of the law of directors' duties which was beginning to change. The courts were influenced by the development of more demanding and objective statutory standards for directors whose companies were facing insolvency[70] and began to develop the common law requirements by analogy with those specific statutory provisions. The beginnings of the modern approach at common law can be found in *Dorchester Finance Co v Stebbing*,[71] but it was a pair of first instance decisions by Hoffmann J[72] in the 1990s which marked a move towards a fully objective approach. He explicitly adopted as an accurate expression of the common law the test contained in s.214(4) of the Insolvency Act in relation to wrongful trading.[73] This inchoate change in the common law was endorsed by both the Law Commissions and the CLR and now finds expression in s.174 of the 2006 Act. This section first requires that "a director

of a company must exercise reasonable care, skill and diligence" and then goes on to define what is meant by reasonable care, using a formulation which tracks very closely s.214 of the Insolvency Act 1986:

> "This means the care, skill and diligence that would be exercised by a reasonably diligent person with (a) the general knowledge, skill and experience that may reasonably be expected of a person carrying out the same functions carried out by the director in relation to the company, and (b) the general knowledge, skill and experience that the director has."

However, it should be noted that in one particular area the statute has exempted directors from liability for negligence. In the case of misstatements in or omissions from the directors' report and the directors' remuneration report liability arises on the part of directors to the company only on the basis of knowledge or recklessness.[74]

The statutory standard

16–16

The crucial difference between the statutory formulation and that of Romer J is that in the latter the director's subjective level of skill sets the standard required of the director, whereas under the 2006 Act the director's subjective level does so only if it improves upon the objective standard of the reasonable director. Limb (a) of the statutory formula sets a standard which all directors must meet and it is not one dependent on the particular director's capabilities; limb (b) adds a subjective standard which, however, can operate only to increase the level of care required of the director.[75] Whether the statutory provision is to be regarded as simply endorsing the current common law or, probably better, as effecting a change in the common law which was under consideration but not fully developed by the courts, this is clearly an area where a court applying s.174 should be cautious in its use of the older common law authorities as an aid to interpretation under s.170(4).

What does this all mean or not mean for directors? First, although directors, executive and non-executive, are subject to a uniform and objective duty of care, what the discharge of that duty requires in particular cases will not be uniform. As the statutory formulation itself recognises, what is required of the

director will depend on the functions carried out by the director,[76] so that there will be variations, not only between executive and non-executive directors[77] but also between different types of executive director (and equally of non-executives) and between different types and sizes of company.

Secondly, the imposition of an objective duty of care does not necessarily require a directorship to be regarded as a profession. The vexed issue of what constitutes a profession does not have to be addressed; all that is required is an assessment of what is reasonably required of a person having, as the statute puts it, the knowledge, skill and experience which a person in the position of the particular director ought to have. Given the enormous range of types and sizes of companies, it would be odd if all directors were to be regarded as professional. On the other hand, as was pointed out by the Court of Appeal of New South Wales, an objective approach does require even non-executive directors, as a minimum, to "take reasonable steps to place themselves in a position to guide and monitor the management of the company".[78] The days of the wholly inactive or passive director would thus seem to be numbered—or, at least, a director who is so runs a high risk of being held negligent.

16–17

Thirdly, directors are permitted to engage in substantial delegation of management functions to non-board employees. This is an inevitable reflection of the fact that companies are organisations, sometimes very big organisations, the running of which may require a large staff. In *City Equitable* Romer J put this point in very robust terms. He said that "in respect of all duties that, having regard to the exigencies of business, and the articles of association, may properly be left to some other official, a director is, in the absence of grounds for suspicion, justified in trusting to that official to perform such duties honestly".[79] In the more recent cases of *Daniels v Anderson* and *Norman v Theodore Goddard*,[80] where objective tests were applied, at least some of the directors escaped liability as a result of the application of this proposition. However, insofar as this dictum suggests that, once an appropriate delegate has been chosen and the task delegated to that person, the director is under no further duties, it cannot stand with recent developments in the

law, as the next point indicates.

Fourthly, an objective standard of care is not inconsistent with extensive delegation nor, however, does it permit the directors to escape from the second requirement of always being in a position to "guide and monitor" the management. These two things are to be reconciled by the directors ensuring that there are in place adequate internal control systems which will throw up problems in the delegated areas whilst there is still time to do something about them. As it has been put, the freedom to delegate "does not absolve a director from the duty to supervise the discharge of the delegated functions".[81] The need for adequate internal control systems was stressed by the Report of the Turnbull Committee,[82] one of the lesser known of the reports which contributed to the Combined Code, and its successor the UK Corporate Governance Code, but arguably the most important for what it has to say about directors' responsibility for sub-board structures of control. Although neither the Turnbull Report nor the UK Corporate Governance Code are legislative instruments binding the courts, it is likely that, in appropriate cases, the courts' view of what an objective standard of care requires will be influenced by these provisions. Indeed, that process is already evident in the area of disqualification of directors on grounds of unfitness. Thus, in *Re Barings Plc (No.5)*[83] directors were disqualified for failing to have such internal controls in place in relation to trading activities in an overseas subsidiary, whose losses eventually caused the demise of the bank.

Fifthly, the principles relating to delegation to sub-board managers apply also to the division of functions among the directors themselves. Inevitably, executive directors will carry a greater load of management responsibility than non-executive directors and, even within the executive directors, there will be specialisation (for example, the chief financial officer will carry particular responsibility in that area). However, all directors "have a continuing duty to acquire and maintain a sufficient knowledge and understanding of the company's business to enable them properly to discharge their duties as directors" and certainly no board may permit itself to be dominated by one of their number.[84]

16–18

Further, however, it follows from the inevitable acceptance of extensive delegation, at least in large companies, that directors cannot be guarantors that everything is going well within the company. Subordinate employees may be fraudulent or negligent and the directors may not discover this in time, but this does not necessarily mean that the directors have been negligent. That conclusion will depend on the facts of the situation, including the quality of the internal controls.[85]

Sixthly, although nearly all decided English cases have arisen out of alleged failures by directors to act or to act effectively, negligence suits can equally arise where the directors have indeed acted, but their actions have delivered disastrous consequences for their company. Here too, however, since companies are in business to take risks, the fact that a business venture does not pay off and even leads the company into financial trouble does not necessarily indicate negligence, though it may encourage the shareholders to replace the directors. In the US, where an objective standard for directors' competence is well-established, the "business judgment" rule generally operates to relieve the directors of liability in such cases (i.e. cases where the directors have acted, not those where they have failed to act). The business judgment rule involves the specification of a set of procedural steps, which, if followed, will give the directors the benefit of a presumption that they were not negligent. The Law Commissions thought such a rule unnecessary in the UK;[86] and there is certainly a risk with the business judgment rule that the courts will come to regard cases where the procedural standards have not been met as presumptively negligent.[87] The Commissions thought that one could expect the courts to be alive to the probability that they are better at dealing with conflicts of interest than with the assessment of business risks and to the desirability of avoiding the luxury of substituting the courts' hindsight for the directors' foresight.[88]

Finally, as with auditors,[89] showing breach of a duty of care is one thing; showing that the loss suffered by the company was a consequence of the breach of duty may be quite another. Thus, the true explanation of the finding of no liability in *Re Denham*

& Co[90] is only in part that the director was entitled to rely on others. Equally important was the judge's view that, even if the director had made the inquiries he should have made, he would probably not have discovered the fraud.

16–19

Overall, it can be said that the recent developments at common law and, now, in the Act, have brought the standard of care, skill and diligence required of directors into line with that required generally in other areas of social life by the law of negligence. However, an inevitable result of the move from a subjective to an objective test will be to give the courts a greater role in defining the functions of the board, no matter how sensitive the courts are to the need to avoid the use of hindsight. For example, the courts' decisions on the rigour with which the board has to supervise the discharge of delegated tasks will help to define the monitoring role of the board, whilst decisions about whether the audit committee of the board has sufficiently scrutinised the tasks carried out by the external auditors will help to define the relationships between audit committee, auditors and management. Twenty years ago one might have predicted that the courts would either be ineffectual in the discharge of these responsibilities (through a desire to avoid reliance on hindsight) or produce undesirable interventions. However, today, as a result of developments associated with the emergence of the UK Corporate Governance Code, discussed in Ch.14, there is a body of best practice available, on which the courts can draw, though not be bound by, at least in the case of large companies. A striking example of the creative use of such material is to be found in the judgment of Austin J in *ASIC v Rich*[91] in which the Australian court had recourse to a wide range of "best practice" material, including corporate governance reports from the UK, in holding that the duties of the chair of the board of a listed company extended beyond responsibility for simply chairing meetings of the board.

Remedies

16–20

The standard remedy for breach of a director's duty of care is compensation for the harm caused to the company by the

director's negligence. Section 178(2), specifying the remedies for breach of the general duties, may suggest that the remedy for this breach of duty (s.174) will be assessed on common law, not equitable, principles, thus laying to rest the debates in that area.[92] In any event, the better view, it is suggested, is that the remedy is not assessed differently merely because the director is a fiduciary. As Millett LJ said in *Bristol and West Building Society v Mothew*,[93] "it is inappropriate to apply the expression [breach of fiduciary duty] to the obligation of a trustee or other fiduciary to use proper skill and care in the discharge of his duties". Nor does it matter that the duty of care to which the director is subject was developed, historically, by the courts of equity before the common law developed its own more widely applicable version. This history led to the use of different terminology ("compensation" in equity; "damages" at common law), and different appropriately contextual explanations of issues of standards of care, rules on causation, remoteness and measure of damages. But even in equity the breach gave access only to compensatory remedies, and the modern tendency has been to assimilate the requirements for liability for breach of the duty of care in equity and at common law.[94]

Introduction to Directors' Various Duties of Good Faith and Loyalty

Historical background

16–21

As noted earlier, the duties of good faith and loyalty which the law requires of directors were developed by the courts by analogy with the duties of trustees. It is easy to see how, historically, this came about. Prior to the Joint Stock Companies Act 1844 most joint stock companies were unincorporated and depended for their validity on a deed of settlement vesting the property of the company in trustees. Often the directors were themselves the trustees and even when a distinction was drawn between the passive trustees and the managing board of directors, the latter would quite clearly be regarded as trustees in the eyes of a court of equity in so far as they dealt with the trust property. With directors of incorporated companies, the description "trustees" was less apposite because the assets were

now held by the company, a separate legal person, rather than being vested in trustees. However, it was not unnatural that the courts should extend it to them by analogy. For one thing, the duties of the directors should obviously be the same whether the company was incorporated or not; for another, historically the courts of equity tended to apply the label "trustee" indiscriminately to anyone in a fiduciary position. Nevertheless, to describe directors as trustees is today neither strictly correct nor invariably helpful.[95] In truth, directors are agents of the company or (when acting together) one of its organs, not trustees of its property. But, as agents, the directors stand in a fiduciary relationship to their principal, the company. The duties of good faith and loyalty which this relationship imposes are in material respects identical with those imposed on trustees. Moreover, when it comes to remedies for breach of duty, the trust analogy can provide a strong remedial structure. Directors who dispose of the company's assets in breach of duty, for example, are regarded as committing a breach similar to a breach of trust, and those persons (including the directors themselves) into whose hands the assets come may find that they are under a duty to restore the value of the misapplied assets to the company.[96]

The analogy of directors as agents of the company is also less than perfect, however. As we saw in Ch.7, the authority of the directors to bind the company as its agents normally depends on their acting collectively as a board, unless authority has (or can be assumed to have) been further delegated under the company's constitution upon an individual director.[97] By contrast, their duties of loyalty are owed by each director individually. One of several directors may not as such be an agent of the company with power to saddle it with responsibility for his acts, but he will invariably be a fiduciary of it, and will also owe separate but related equitable duties. To this extent, directors again resemble trustees who must normally act jointly but each of whom severally owes duties of loyalty towards the beneficiaries. Moreover, as noted earlier, when the directors act collectively as a board, the modern view is not so much that they are agents of the company but that, so long as they act within their powers, they act as the company.[98]

Given the modern statutory statement of the general duties

owed by directors, these analogies and their various limitations are of less substantive importance than they once were. Nevertheless, an eye must be kept on them for two reasons: the statutory duties themselves are subject to interpretation in the light of analogous common law cases (s.170(4)); and the remedial consequences of statutory breaches remain to be determined by the appropriate corresponding common law rules (s.178).

Categories of duties

16–22

Turning now to the main elements of the directors' duties of good faith and loyalty, we divide them as below into six categories, following the scheme of the Act. The first three categories describe distinct duties, all being concerned with the manner in which directors exercise their powers, being that the directors must:

(1) act within the scope of the powers which have been conferred upon them, and for proper purposes;

(2) exercise independent judgment; and

(3) act in good faith to promote the success of the company.

The final three categories are all examples of fiduciary duties of loyalty, and in particular the rule against directors putting themselves in a position in which their personal interests (or alternatively their duties to others) conflict with their duty to the company. However, it is useful to sub-divide this "no conflict" principle further because the specific rules implementing the principle differ according to whether the conflict arises:

(4) out of a transaction with the company (self-dealing transactions);

(5) out of the director's personal exploitation of the company's property, information or opportunities; or

(6) out of the receipt from a third party of a benefit for exercising their directorial functions in a particular way.

For the purposes of statutory enactment and analysis it is inevitable that the duties are separated out in some way such as

that adopted in the 2006 Act. However, s.179 specifically provides that, except where a duty is explicitly excluded by something in the statute, "more than one of the general duties may apply in any given case". This provision applies also to the duty of care. In practice, here as in other areas of the law, the facts will frequently suggest breach of more than one of the duties and, where this is so, the claimant can choose to pursue all or any of them.[99]

Duty to Act within Powers

16–23

Requiring the directors to act only within the powers that have been conferred upon them is an obvious duty for the law to impose. Indeed, this is not a duty confined to directors, or even to fiduciaries; later on we shall examine similar restrictions as they apply to shareholders.[100] As regards the directors, however, s.171 deals with two manifestations of this principle: the director must "act in accordance with the company's constitution" and must "only exercise powers for the purposes for which they are conferred". We look at each in turn.

Acting in accordance with the constitution

Constitutional limitations

16–24

As we saw in Ch.3,[101] in contrast to many other company law jurisdictions, the main source of the directors' powers is likely to be the company's articles, and the articles, therefore, are likely also to be a source of constraints on the directors' powers. The articles may confer unlimited powers on the directors, but they are likely in fact to set some parameters within which the powers are to be exercised, even if the limits are generous, as they typically will be. So, it is perhaps not surprising that s.171 contains the obligation "to act in accordance with the company's constitution". And it should be noted that the term "constitution" helpfully goes beyond the articles. It includes resolutions and agreements which are required to be notified to the Registrar and annexed to the articles, notably any special resolution of the company.[102] It also embraces any resolution or decision taken in

accordance with the constitution and any decision by the members of the company or a class of members which is treated as equivalent to a decision of the company.[103] Thus, the duty includes an obligation to obey decisions properly taken by the shareholders in general meeting, for example, giving instructions to the directors without formally altering the articles.[104]

This duty was recognised in the early years of modern company law and is reflected in a number of nineteenth-century decisions, usually involving the purported exercise by directors of powers which were ultra vires the company[105] or payments of dividends or directors' remuneration contrary to the provisions in the company's articles.[106] The remedies for this type of breach are considered below.[107]

Other situations?

16–25

Besides limitations on the directors' powers suggested by s.171 (i.e. limitations found in the company's constitution or in the general limitation on the exercise of powers for improper purposes), the general law may also limit what directors may do (or what companies may do, which will necessarily control the actions of the board), or limitations may be found in the Companies Act or in the common law relating to companies. Often these provisions will suggest that liability is strict, in that the motivations of the director are immaterial. As well, these provisions may set out the consequences of any failure to abide by the relevant rules, and, where this is the case, those rules will prevail. But where no remedies are specified, the law of directors' duties may provide an answer, directly or by analogy.

Improper purposes

The rule

16–26

The second proposition contained in s.171(b) is that a director must "only exercise powers for the purposes for which they are conferred". Often the improper purpose will be to feather the directors' own nests or to preserve their control of the company in their own interests, in which event it will also be a breach of

one or other of the various duties, considered below, to act avoid conflicts and to act in good faith to promote the success of the company. Indeed, the particular wording of the s.172(1) statutory duty to act in good faith to promote the success of the company can be seen as assisting generally in defining proper purposes.[108] But even if no other breach is committed, directors may nevertheless be in breach of this particular duty if they have exercised their powers for a purpose outside those for which the powers were conferred upon them. The improper purposes test, like the requirement to act in accordance with the company's constitution, is an objective test.[109] Or, more precisely, the question of whether a particular purpose is proper or not is a question of law, decided objectively, while the question of which purposes actually motivated the particular director in question is, of course, subjective.[110] Notice the narrow limits to the proper purposes rule: if the directors have acted for purposes which are objectively proper, not improper, then the court will not, in addition, review the decision as also being either reasonable or unreasonable,[111] with the potential for substituting their own view as to the judgements the directors should have reached in managing the company.[112]

The leading authority in this area is the 2015 Supreme Court decision in *Eclairs Group Ltd v JKX Oil & Gas Plc*,[113] but it is helpful to begin discussion with an earlier decision. The statutory formulation of the proper purposes duty reflects the prior common law case law. That case law was reviewed by the Privy Council in *Howard Smith Ltd v Ampol Petroleum Ltd*,[114] which considered the decisions on this subject of courts throughout the Commonwealth. It concerned, as have many of the cases, the power of directors to issue new shares, but the duty is by no means so confined.[115] In this case a majority shareholder (Ampol) in a company called Millers made an offer to acquire the shares in Millers it did not already own. However, the directors of Millers preferred a takeover offer from Howard Smith, which could not succeed so long as Ampol retained a majority holding. Consequently, the directors caused the company to issue sufficient new shares to Howard Smith that Ampol was reduced to a minority position and Howard Smith could launch its offer with some hope of success, since its bid price was higher than Ampol's.

It was argued that the only proper purpose for which a share-issue power could be exercised was to raise new capital when the company needed it.[116] This was rejected as too narrow.[117] There might be a range of purposes for which a company may issue new shares—a view reflected in the statutory reference to proper purposes in the plural. It might be a proper use of the power to issue shares to use that power in order to secure the financial stability of the company[118] or as part of an agreement relating to the exploitation of mineral rights owned by the company.[119] Provided the purpose of the issue was a proper one, the mere fact that the incidental (and desired) result was to deprive a shareholder of his voting majority or to defeat a takeover bid would not be sufficient to make the purpose improper. But if, as in the instant case, the purpose of the share issue was to dilute the majority voting power so as to enable an offer to proceed which the existing majority was in a position to block,[120] the exercise of the power would be improper despite the fact that the directors were acting in what they considered to be the best interests of the company, and were not motivated by a desire to obtain some personal advantage.

Which purposes are improper?

16–27

Perhaps the greatest puzzle in this area is to know by what criteria the courts judge whether a particular purpose is proper. This is generally stated to be a matter of construction of the articles of association.[121] That is all very well if the articles are prescriptive, but this is rarely the case. In *Howard Smith v Ampol*, for example, the clause giving the directors power to issue shares was drawn in the widest terms. The "purposes" limitation which the Privy Council read into the directors' powers derived not from a narrow analysis of that clause, but from placing the share issue power within the company's constitutional arrangements as a whole, as demonstrated in particular by the terms of its articles of association. In essence, to do what the directors did in that case was regarded as undermining the division of powers between shareholders and the board which the articles had created[122]; and in that context the case comes close to deciding that it is always a breach of the

directors' duties to exercise their powers to promote or defeat a takeover offer, which decision should be left to the existing body of shareholders. This is certainly the proposition upon which the City Code on Takeovers and Mergers (the Takeover Code) is based, which provisions will prevail once a bid for a listed company is imminent.[123] In *Criterion Properties Plc v Stratford UK Properties LLC,*[124] however, neither Hart J nor the Court of Appeal ruled out the possibility that in some cases it might be a proper purpose of the exercise of directors' powers for them to be used to block or discourage a takeover, but the issue was not presented in a sharp fashion in that case, since both courts were agreed that the "poison pill" adopted by the directors in that case was disproportionate to the threat faced by the company. It follows from this approach, however, that in a different type of company with a different constitution, in which, say, ownership and control were not separated, a broader view might be taken of the directors' powers under the articles.

In other words, the context is all-important. This seems to be the explanation of the expansive approach taken in *Re Smith and Fawcett Ltd*,[125] where the clause in question (regarding the admission of new members to a small company) was widely construed so as to produce the effect equivalent to the partnership rule of strict control by the board over the admission of new members.

But these illustrations indicate the difficulty, and provide little by way of real guidance when the context is novel, as it was in *Eclairs Group Ltd v JKX Oil & Gas Plc.*[126] The opposing judgments as the case made its way up to the Supreme Court are instructive. JKX suspected a hostile takeover by Eclairs, one of its shareholders, whom it alleged was seeking to destabilise it and ultimately acquire it at less than its proper value. The directors of JKX had the power[127] to request details of the parties who held interests in Eclairs' shares, and to disenfranchise Eclairs if it failed to respond adequately to the request. This the company did. It was not disputed that the power to disenfranchise had been exercised so as to disentitle these shareholders from voting at JKX's AGM, thus ensuring the passage of certain resolutions, rather than for the purpose of enforcing the company's demand for information. At first

instance,[128] Mann J held this to be an improper purpose, so the purported restrictions on voting were held ineffective. The Court of Appeal allowed the appeal (Briggs LJ dissenting),[129] distinguishing previous cases of improper purposes on three overlapping grounds[130]: that here the purported "victim" was a "victim of his own choice, not a victim of any improper use of a power of the board of directors" since it was his choice how to respond to the questions properly raised[131]; that since no restrictive purposes had been expressed in the statute or the articles, none should be implied unless that was necessary to their efficacy; and, in any event, a restricted proper purpose test would essentially frustrate the purpose or utility of the provisions in question. Although the Court of Appeal did not put it so strongly, their expansive approach could essentially denude the proper purposes doctrine of any substantive role whenever a power was expressed in wide terms—as powers typically are. The Supreme Court disagreed, holding unanimously that the proper purpose doctrine had a central role to play in controlling the exercise of power by directors. But they too provided little guidance as to how these "proper purposes" should be discovered. Lord Sumption SCJ, with whom the other judges agreed, suggested that the relevant improper purposes would "usually [be] obvious from [the] context", and should be inferred from the "mischief" which might follow from exercise of the power.[132]

16–28

That is not much to go on, but, taking the cases together, perhaps two broad categories of "improper purpose" can be identified as operating quite generally, even when powers are expressed in the widest possible terms: use of a power for the purpose of "feathering the director's nest" (these are the easy cases) or for influencing the outcome of existing constitutional balances of power in the company (the harder cases) will typically be regarded as improper.[133] Note that it is not the incidental, or even inevitable, delivery of these ends which is outlawed: many perfectly proper actions by directors will deliver such results. Rather, it is this being the motivation for the exercise of the power, where that motivation has been deemed improper. But even this is not the end of the analysis; there is a further

question.

When is a power exercised for improper purposes?

16–29

Directors are rarely actuated by a single purpose. This was true in the *Howard Smith* case, where the company did have a genuine need for fresh capital. If the directors are motivated by a variety of purposes, some proper and some improper, how should the courts determine whether the exercise of power is tainted? Section 171(b) indicates that a director must "only exercise powers for the purposes for which they are conferred". This suggests that *any* improper motivating purpose will constitute a flaw. Nevertheless, and perhaps for very pragmatic reasons, that has never been the rule applied in the corporate context except where the exercise of power is motivated by the director's dishonesty or self-interest.[134] Otherwise the courts have typically suggested that a decision will be considered flawed only if the proven improper purpose is the "primary" or dominant purpose for the decision,[135] or if the decision would not have been taken "but for" the improper purpose (even if the improper purpose was not the dominant purpose),[136] or perhaps an either/or version of these two tests[137] if it is thought that they are likely to lead to different answers on the facts. Each alternative poses enormous forensic difficulties, since all require proof of matters peculiarly within the minds of the directors and in relation to which the directors' evidence is "likely to be both artificial and defensive".[138] But in *Eclairs Group Ltd v JKX Oil & Gas Plc*, Lord Sumption SCJ (with whom Lord Hope SCJ agreed) put forward a principled preference for the "but for" test[139]:

> "The fundamental point [in selecting the right test], however, is one of principle. The statutory duty of the directors is to exercise their powers 'only' for the purposes for which they are conferred. … If equity nevertheless allows the decision to stand in some cases, it is not because it condones a minor improper purpose where it would condemn a major one. … The only rational basis for such a distinction is that some improprieties may not have resulted in an injustice to the interests which equity seeks to protect. Here, we are necessarily in the realm of causation. … One has to focus on the improper purpose and ask whether the decision would have been made if the directors had not been moved by it. If the answer is that without the improper purpose(s) the decision impugned would never have been made, then it would be irrational to allow it to stand simply because the directors had other, proper considerations in mind as well, to which perhaps they

> attached greater importance. … Correspondingly, if there were proper reasons for exercising the power and it would still have been exercised for those reasons even in the absence of improper ones, it is difficult to see why justice should require the decision to be set aside.”

However persuasive that might seem, and whatever the practical advantages of a single simple test, the majority of the Supreme Court declined to commit themselves to this as a statement of the law, given that the issues surrounding mixed purposes had not been argued before the Supreme Court.[140] The matter thus remains unsettled. But it is hard to fault the logic that a decision should be held improper only if it would not in fact have been taken the way it was but for the improper consideration. If that test is not met, then—as Lord Sumption put it—no injustice has been done, and the decision should stand.

The only troubling element is the hypothetical rider aired by the court. The problem raised was this: assume the directors in fact decided the way they did only because of the presence of an improper purpose, but they might still have decided the same way had that improper purpose not been present. Should their decision then be allowed to stand? The answer, surely, is no, it should not stand. Principle suggests the court’s task is simply to determine whether the decision *actually* taken by the directors should stand. It is not to hypothesise about what the directors might have done for exclusively “proper” motivating purposes. The focus of the court’s intervention is not on judging the practical outcome reached, but on judging the directors’ motivations in reaching it. And in any event, in practice the question would seem impossible to contemplate sensibly on most facts before the court: *JKX* and *Howard Smith* are surely illustrative of that—the directors could insist they would have taken the same decisions if acting only for proper purposes, but their targets and timing make that seem unlikely.

Despite this, in the early stages of the JKX litigation, Mann J raised this question himself, and also held that the facts supported the conclusion that the JKX directors would indeed have taken the same decision if they were acting for exclusively proper purposes, but he declined to let the company take the argument at that late stage in the litigation.[141]

Remedies

16–30

The directors necessarily breach the duty in s.171 if they act contrary to its provisions; it is irrelevant that the contravention was in the interests of the company, or that the directors were not subjectively aware of their breach of s.171.[142] In other words, directors are under a duty to acquaint themselves with the terms of the company's constitution and its limits, and to abide by them. A breach by the directors of s.171 affects the validity of any decision so made, and that in turn may affect third parties relying on the decision. In addition, if the flawed decision causes loss to the company, the company may seek compensation from its defaulting directors. The relevant remedies map the common law and equitable rules (s.178).

Starting with the validity of the flawed decision: at common law different legal consequences follow for acts done without power (or "in excess" of power, s.171(a)) and acts done within power but in abuse of it (s.171(b)). At common law, where an act or decision of the directors is beyond their constitutional capacity as set out in the company's constitution (and subject to claims of ostensible authority) (i.e. in breach of s.171(a)), it is void, i.e. of no effect. Moreover, this is also one of the situations where the trust analogy is used to strong effect. If the contravention of the constitution has involved the improper distribution of the company's assets, the directors are regarded by analogy as if in breach of trust and are liable to replace the assets, whether or not they were the recipients of them.[143] This gives the directors a strong incentive to remain within the company's constitution.[144]

Where the directors act for an improper purpose (in breach of s.171(b)), however, then at common law their act is voidable by the company (i.e. valid until set aside by the company, and incapable of being set aside if third party rights have intervened),[145] not void as in the case where the directors purport to exercise a power they do not have. Thus, bona fide third parties are safe if they act before the shareholders (or liquidator, or other) set aside the directors' decision.[146]

16–31

In both cases, however, the impact of these common law rules

on third parties' interests has now been substantially softened by the statutory protections (especially s.40) for those dealing with the company in good faith.[147] In favour of such persons the powers of the directors to bind the company are treated as free of any limitation contained in the company's constitution. Helpful as this is to third parties, it does not help the directors, for s.40(5) makes it clear that liability on the part of the director to the company may be incurred under s.171, even if—perhaps especially if—the third party with whom the directors dealt on behalf of the company is able to enforce the transaction against the company.[148] In fact, to the extent that s.40 protects the position of third parties as against the company it increases in importance the company's potential remedy against the director. Companies that are now restricted in their ability to escape from transactions with third parties on the grounds that the directors have exceeded their powers may be tempted to look to the directors to recover compensation for the loss suffered as a result of entering into them.

It is also worth recalling at this point the related provisions of s.41, which apply where the third party contracting with the company is a director of the company or a person connected with the director. Then the protection afforded by s.40 does not apply and instead s.41 imposes liability both on directors who authorise such transactions (as s.171 does)[149] *and* on the director[150] (or connected person) who enters into the transaction with the company.[151] Both sets of directors are liable to account to the company for any gain made from the transaction and to indemnify the company for any loss which it suffered as a result of the transaction. Section 41 in its specific area of operation thus reinforces the principle underlying s.171 that directors should observe the limitations on their constitutional powers.

The jurisdiction to bring claims is worth further comment. It is clear that both duties stated in s.171 are owed to the company, as are the other statutory duties, and so may be pursued by the company directly, or by shareholders in a derivative claim. But can the defaulting directors be sued by parties other than the company? A failure on the part of the directors to observe the express limits on their powers contained in the company's constitution (i.e. s.171(a) breach) may also put *the company* in

breach of the contract with the shareholders created by the articles. As we saw in Ch.3,[152] at least some breaches of the articles by the company can be complained of by a shareholder, who might, for example, obtain an injunction to restrain the company from continuing to act in breach of the articles—in effect restraining the directors from causing the company to act in breach of its articles. Equally, such acts by the directors may form the basis of a claim in unfair prejudice.

Where the breach is of the duty to act for proper purposes (i.e. s.171(b)), however, then allowing a wider class of people to complain has been more poorly defended; no case seems to have turned on standing. In some cases, minority shareholders have been allowed to sue but the question of their standing has often not been argued nor its basis explained.[153] As a matter of logic and of equitable precedent, this duty to act for proper purposes, owed by directors to the company, may also be owed (at common law only, since there is no enacted statutory equivalent) by the directors to a wider class of people, entitling this wider class to seek common law or equitable remedies from the directors for breach.[154] Alternatively, or in addition, and as described above, the directors' wrongs to the company may entitle the shareholders to pursue related or parasitic remedies, such as for breach of the contract in the articles (although note the arguments against),[155] or a claim in unfair prejudice.[156]

16–32

Finally, as noted earlier, these remedies are sometimes applied by analogy when directors act, not contrary to the company's constitution, but contrary to some other statutory or common law rule which constrains the powers of directors to act in particular ways.[157] If the rule itself does not set out specific consequences of failure, then the law of directors' duties may provide an answer, directly or by analogy. We have already seen an example of this situation in Ch.12 where the directors, in breach of the Act, made a distribution to shareholders otherwise than out of profits. In the absence of statutory specification of the liabilities of the directors to the company in that situation, the courts have had recourse to the notion that if directors, "as quasi-trustees for the company, improperly pay away the assets to the shareholders, they are liable to replace them".[158] Another

example is to be found in Ch.13,[159] where directors are regarded as having acted in breach of trust when they used the company's assets to give financial assistance for the purchase of the company's shares in breach of the statutory prohibition. In this way, directors who apply the company's assets in breach of restrictions contained in the Act are made liable to replace them. It is not thought that these liabilities, derived from the trustee-like duties imposed on directors in the handling of the company's assets, have been overtaken or displaced by the statutory duties set out in Ch.2 of Pt 10 and in s.171 in particular.

What is even more typical in this area is that different potential routes lead to the same remedial ends. An illustration is found in the decision of the Court of Appeal in *MacPherson v European Strategic Bureau Ltd.*[160] Here the directors of an insolvent company caused it to enter into a number of contracts which, the court found, amounted to an informal winding up of the company. Under the contracts, the directors as creditors were the primary beneficiaries rather than the creditors of the company as a whole, as would have been the case had the company been wound up formally under the provisions of the Act and the insolvency legislation. Chadwick LJ said that it was a breach of the duties which directors owe to the company for them to attempt such a scheme[161]:

> "It is an attempt to circumvent the protection which the 1985 Act aims to provide for those who give credit to a business carried on, with the benefit of limited liability, through the vehicle of a company incorporated under that Act."

In consequence, the contracts were not enforceable by the directors (who were obviously aware of the facts giving rise to the breach of duty) against the company. This case can thus be seen as demonstrating a limitation on the directors' powers derived from the statutory rules on limited liability and payments to shareholders out of capital. It could also be seen as a breach of the directors' core duty of loyalty (discussed immediately below) as it applies in the vicinity of insolvency where the creditors' interests are predominant.

Duty to Exercise Independent Judgment

16–33

At common law, this issue is typically described as a duty not to

fetter the exercise of discretion. In s.173, this is put in positive terms, as a duty to exercise independent judgment. At the level of principle the requirement is uncontroversial. However, there are four points relating to the practical working of this principle which need to be considered.

Taking advice and delegating authority

16–34

First, and perhaps most obviously, the principle does not prevent directors seeking and acting on advice from others. Indeed, the board might well infringe its duty to take reasonable care if it proceeded to a decision without appropriate advice from outsiders (investment bankers, lawyers, valuers). What the board cannot do is treat the advice as an instruction, although in complex technical areas the advice may leave the board with little freedom for manoeuvre, for example, where lawyers advise that the board's preferred course of action would be unlawful. The board must regard itself as taking responsibility for the decision reached, after taking appropriate advice.

Secondly, just as the duty of care does not prevent a board from delegating its functions to non-board employees (provided it has in place appropriate internal controls—see above), so the duty to exercise independent judgment does not prohibit such delegation.[162] However, it seems that s.173 was not intended to overrule the common law rule that *delegatus non potest delegare*, i.e. that a person to whom powers are delegated (as powers are to directors under the articles) cannot further delegate the exercise of those powers, *unless* the instrument of delegation itself authorises further delegation.[163] In practice, wide powers of further delegation are conferred on the directors by the articles, and it is indeed difficult to see how the board of a large company could otherwise effectively exercise its powers of management of the company. However, this rule means that the articles may effectively prevent further delegation beyond the board by simply not providing for this.

Exercise of future discretion

16–35

Thirdly, it was debated at common law whether the non-fettering rule prevented a director from contracting with a third party as to the future exercise of his or her discretion. The answer ultimately arrived at was that this was permissible in appropriate cases. The starting point at common law, despite the paucity of reported cases on the point,[164] seems to be that directors cannot validly contract (either with one another or with third parties) as to how they shall vote at future board meetings or otherwise conduct themselves in the future.[165] This is so even though there is no improper motive or purpose and no personal advantage reaped by the directors under the agreement. This, however, does not mean that if, in the bona fide exercise of their discretion, the directors have entered into a contract on behalf of the company, they cannot in that contract validly agree to take such further action at board meetings or otherwise as is necessary to carry out that contract. As was said in a judgment of the Australian High Court[166]:

> "There are many kinds of transaction in which the proper time for the exercise of the directors' discretion is the time of the negotiation of a contract and not the time at which the contract is to be performed…If at the former time they are bona fide of opinion that it is in the best interests of the company that the transaction should be entered into and carried into effect, I can see no reason in law why they should not bind themselves to do whatever under the transaction is to be done by the board."

The principle in *Thorby v Goldberg* was applied by the English Court of Appeal in *Cabra Estates Plc v Fulham Football Club,*[167] so as to uphold an elaborate contract which the directors had entered into on behalf of the company for the redevelopment of the football ground and under which, inter alia, the club was entitled to some £11 million and the directors agreed to support any planning application the developers might make during the coming seven years. This is surely correct: if individuals may contract as to their future behaviour in these matters, it is desirable that companies should be able to do so too. The application of the "no fettering" rule would make companies unreliable contracting parties and perhaps deprive them of the opportunity to enter into long-term contracts which would be to their commercial benefit.

Section 173(2)(a) now provides that the duty to exercise independent judgment is not infringed by a director acting "in accordance with an agreement duly entered into by the company

that restricts the future exercise of discretion by its directors". In the parliamentary debates this provision was described as enshrining the *Cabra Estates* decision,[168] including presumably the rider that the agreement must be one entered into by the directors in the bona fide opinion that it is in the best interests of the company to do so (i.e. "duly" entered into). Section 173(2)(b) goes on to state that no breach of the independent judgment rule arises if the director acts "in a way authorised by the company's constitution". Thus, the articles may authorise restrictions on the exercise of independent judgment, which might be a useful facility in private companies.

However, s.173(2)(a) protects the directors only from the argument that they have failed to exercise independent judgment by entering into the agreement which restricts their future freedom of action. Can the subsequent exercise of their powers as the contract demands be said to be a breach of their core duty of loyalty, if at that time they no longer believe it to be in accordance with their core duty to act in accordance with the contract? There are a number of cases in which, where shareholder consent has been required for a disposal of assets or for a takeover, the courts have been reluctant to construe agreements on the part of the directors not to co-operate with rival suitors or to recommend a rival offer to the shareholders as binding the directors, if they come to the view that the later offer is preferable from the shareholders' point of view.[169] This line of cases might be justified on the basis that shareholders are peculiarly dependent upon the advice of their directors and that they might find themselves in a poor position to take the decision which had been put in their hands, if they were given advice by the directors which did not reflect the situation as the directors saw it at the time it fell to the shareholders to take their decision. The continuing validity of the no fettering rule in this context could be reconciled with the provisions of s.173 on the basis that that section deals only with the fiduciary duties owed by the director to the company (see s.170(1)), whereas the situation just mentioned triggers the duty owed by directors to the shareholders to give them advice in the shareholders' best interest, if they choose to give them advice at all.[170]

Nominee directors

16–36

Finally, the independent judgment principle could cause difficulties for "nominee" directors, i.e. directors not elected by the shareholders generally but appointed by a particular class of security holder or creditor to protect their interests. English law solves such problems by requiring nominee directors to ignore the interests of the nominator,[171] though it may be doubted how far this injunction is obeyed in practice. The Ghana Companies Code 1973 adopted what might be regarded as the more realistic line by permitting nominee directors to "give special, but not exclusive, consideration to the interests" of the nominator, but even this formulation would not permit the "mandating" of directors and thus the creation of a fettering problem.

Duty to Promote the Success of the Company

Settling the statutory formula

16–37

The duty to promote the success of the company is the modern version of the most basic of the duties of good faith or fidelity owed by directors. It is the core duty to which directors are subject, in the sense that it applies to every exercise of judgement which the directors undertake, whether they are testing the margins of their powers under the constitution or not and whether or not there is an operative conflict of interest. Together with the non-fiduciary duty to exercise care, skill and diligence, the duty to promote the success of the company expresses the law's view on how directors should discharge their functions on a day-to-day basis. Thus, it is not surprising that its proper formulation has always been controversial, and perhaps never more so than during the deliberations of the CLR and the passage of the 2006 Act through Parliament, since this was an area of directors' duties where it was not proposed that the statute should simply repeat the common law. The common law duty was typically formulated as one which required the directors to act in good faith in what they believed to be "the best interests of the company". This, predictably, follows the equivalent formulation in relation to trustees, who are required to act bona fide in the best interests of their beneficiaries.

That historical common law formulation differs in significant ways from what is now found in s.172(1) of the Act. This section requires the director to act "in the way he considers, in good faith, would be most likely to promote the success of the company for the benefit of its members as a whole"; and then sets out a non-exhaustive list of six matters to which the directors must "have regard" when deciding on the appropriate course of action.

The common law formulation made it clear that the duty was owed to the company, so that only those who could claim to act as, or on behalf of, the company could enforce the duty. Section 170(1) repeats that. But, that aside, the common law formulation that directors must act *in the interests of* "the company" was seen by many a being close to meaningless in providing guidance to directors. Because the company is an artificial legal person, it was seen as impossible to assign interests to it unless one goes further and identifies the company with the interests of one or more groups of human persons. As Nourse LJ remarked, "The interests of a company, as an artificial person, cannot be distinguished from the interests of the persons who are interested in it".[172] In practice, the common law normally identified the interests of the company with those of its shareholders, current and future if that was appropriate,[173] and thus took the further step envisaged by Nourse LJ. In addition, at common law it was seemingly permissible for the directors to take into account stakeholder interests when acting in the interests of the company. The point was made a long time ago, albeit in the context of ultra vires, by Bowen LJ, who famously said: "The law does not say that there are to be no cakes and ale, but there are to be no cakes and ale except such as are required for the benefit of the company".[174] It is in this sense that the view of the Law Society,[175] opposing any statutory reformulation as being unnecessary, can be understood; they urged instead that "the concept of the company as a legal entity separate from its members, and in whose interests the directors must act, is well understood".

16–38

If the old test of "the interests of the company" was too vague, what should a clearer statutory version require? Given the

concentration of economic power in large companies, the question of which interests the directors were required to pursue when exercising their powers was of considerable interest and controversy across the political spectrum. Should the directors be required to act in the interests of the shareholders (the shareholder primacy model), or should they perhaps give equal status to all the company's various stakeholders, including not simply the shareholders but also employees, customers, suppliers, and indeed even the local community and the environment (the pluralist model)? The different interests ranged on either side added heat to the debate. The final outcome was, perhaps predictably, something between these two extremes, although undoubtedly closer to the first and so also to the old common law test. The statutory formulation clearly rejects the "pluralist" approach, at least to the extent that it might have given all stakeholders some sort of equivalent status, allowing all to have the right to enforce directors' duties. But, at the other end of the spectrum, shareholder primacy was refined: the shareholders or members are certainly to be the primary object of the directors' efforts, hence the current formulation that the director must act "in the way he considers, in good faith, would be most likely to promote the success of the company for the benefit of its members as a whole"; but the directors are also subject to an obligation (not merely a power), although clearly a subordinate obligation, to "have regard to" the interests of other stakeholders. The subordinate nature of this second duty is made clear by the words "in doing so", i.e. in discharging the central duty. Put another way, the shareholders' position as the object of the directors' efforts is not shared with other groups of persons upon whose success the company's business may be thought to depend, for example, its employees or other stakeholders. To this extent, the rule of shareholder primacy is reiterated in the section.

The strategy of rejecting pluralism but adopting a modernised version of shareholder primacy emerged from the CLR, and was described there as a philosophy of "enlightened shareholder value (ESV)".[176] Thus, in promoting the success of the company for the benefit of its members as a whole, s.172(1) requires that the director:

"in doing so [must] have regard (amongst other matters) to—

(a) the likely consequences of any decision in the long term,

(b) the interests of the company's employees,

(c) the need to foster the company's business relationships with suppliers, customers and others,

(d) the impact of the company's operations on the community and the environment,

(e) the desirability of the company maintaining a reputation for high standards of business conduct, and

(f) the need to act fairly as between members of the company (s.172(1))"

The ESV approach can be said to embody the insight that the success of the company or the interests of the shareholders are not likely to be advanced if the management of the company conducts its business so that its employees are unwilling to work effectively, its suppliers and customers would rather not deal with it, it is at odds with the community in which it operates and its ethical and environmental standards are regarded as lamentable. However, it is crucial to note that the interests of the non-shareholder groups are to be given consideration by the directors only to the extent that it is desirable to do so in order to promote the success of the company for the benefit of its members as a whole. The non-shareholder interests do not have an independent value in the directors' decision-making, as they would have under a pluralist approach. For this reason, it seems wrong in principle to regard the section as requiring the directors to "balance" the interests of the members with those of the stakeholders. The members' interests are paramount, but the interests of stakeholders are to be taken into account when determining the best way of promoting the members' interests.

16–39

It may be asked whether the ESV approach amounts to a development or a repetition of the common law. The answer is that it represents a development, but a modest one. What the Act adds to the common law is a *duty* on the part of the directors to take account of stakeholder interests when it is in the interests of the success of the company for the benefit of members to do so (but not a corresponding right in the stakeholders to enforce that duty). However, the statutory restatement may nevertheless have an impact, if only by disabusing those directors and their

advisers who might have been inclined to take an unduly narrow interpretation of the duty previously held.

If the move from permission to well-described obligation is what lies at the root of the ESV approach, it becomes of great importance to know how the duty will be enforced. As argued immediately below, s.172 imposes a mainly subjective test,[177] so, as with the predecessor common law duty, litigation is likely to be relatively uncommon and probably even less often successful. This is because it is very difficult to show that the directors have breached this duty of good faith, except in egregious cases or cases where the directors have, obligingly, left a clear record of their thought processes leading up to the challenged decision.[178]

Instead, the major role in giving some degree of practical substance to the ESV duty will lie in the extended reporting requirements to shareholders by directors, as described in Ch.21.[179] This was as envisaged by the CLR, which saw the ESV approach to directors' duties and enhanced reporting requirements as closely linked.[180]

Finally, and for the avoidance of doubt, the duty of the directors to promote the success of the company for the benefit of its members does not exempt the company from compliance with its other legal obligations, for example, health and safety or discrimination legislation, even if it could be shown that non-compliance would promote the company's overall success.

Interpreting the statutory formula

Defining the company's success

16–40

Several important points arise on the interpretation of the language contained in this section. First, it is to be noted that corporate *success* for the benefit of the members is the word used to identify the touchstone for the exercise of the directors' discretion. Success is a more general word than, for example, "value", which it might have been thought was what the shareholders are interested in. However, the more general word is clearly the appropriate one, because not all companies formed under the Act are aimed at maximising the financial interests of

their members. Companies may be charitable; they may have non-profit-making objectives without being charities, as in the case of a company formed by leaseholders to hold the freehold of a block of flats; they may be companies set up within a corporate group simply to hold a particular asset rather than to exploit it, even though the overall purpose of the group is to make profits; or they may be commercially-oriented but without aiming to distribute profits, in which case the company may, but is not obliged to, be incorporated as a CIC. In all these cases, maximising the value of the company is not the primary objective of its members and perhaps not even an objective at all. Section 172(2) makes it clear that:

> "where or to the extent that the purposes of the company consist of or include purposes other than the benefit of its members, subsection (1) has effect as if the reference to promoting the success of the company for the benefit of its members were to achieving those purposes."

The underlying thrust of the section is that it is the members who are to define the purposes of the company against which the directors can give meaning to the requirement to promote its success. The definition of the purpose of the company may be set out in its constitution. This is less likely to be the case now that the company is no longer required to have an objects clause, but certainly in the case of companies with non-commercial or non-profit objectives this fact is likely to appear clearly enough from the company's articles. In other words, the position may turn out to be that the company is to be regarded as a commercial company, unless its constitution indicates otherwise, and so in the typical case the directors will define success in commercial terms.

A more important underlying question is the extent to which the section is intended to constrain directors' decisions about precisely how to pursue the success of the company. Should the company aim for expansion through a series of takeovers or by organic growth? Should the company aim for expansion at all or for exploitation of a niche position? It seems clear that the section does not intend to address this sort of issue at all. This is to be left to the directors, who in turn are accountable to the shareholders for their decisions through the company's corporate governance mechanisms rather than through the courts. To this end, the section imposes a subjective test for compliance: the

director must act “in the way he considers, in good faith, would be most likely to promote the success of the company”. This aspect of the statutory duty is one shared with the previous common law formulation, and that was interpreted by the courts in such a way as to leave business decisions to the directors. As Lord Greene MR put it in *Re Smith & Fawcett Ltd*, directors were required to act “bona fide in what they consider—not what a court may consider—is in the interests of the company”.[181] In most cases, it is true, compliance with the rule that directors must act in good faith was tested on commonsense principles, the court asking itself whether it was proved that the directors had not done what they believed to be right, and normally accepting that they had unless satisfied that they had not behaved as honest men of business might be expected to act. However, even where the director had not acted as an honest business person might be expected to act, this is not necessarily a demonstration of breach of the duty of good faith. Thus, in one case where the directors’ decision had caused substantial harm to the company it was held that this was merely a piece of evidence, perhaps a strong piece, against their contention that they had acted in good faith, rather than proof absolute that they had not.[182] These decisions on the meaning of good faith in the context of the core duty of fidelity at common law seem equally applicable to the statutory duty.

Failure to have regard, or due regard, to relevant matters

16–41

The concept of ESV enshrined in the statutory duty imposes an obligation on directors to “have regard” to the list of factors set out in subs.172(1)(a)–(f). Does this give rise to a corresponding power in the courts to scrutinise the decisions of directors to establish whether they have indeed taken account of these factors, or perhaps even whether, on an objective basis, they have taken *appropriate* account of these factors? The answers to these questions seem inextricably linked to the “improper purposes” issues discussed earlier (s.171(b)); the older common law rule similarly juxtaposed the two requirements.[183]

On the first question, a proper reading of the section does

suggest that a failure by directors to have regard to each item on the list of factors would constitute a breach of duty and render the directors' decision challengeable. This principle was already established at common law, although perhaps in a more limited form: although much was left to the directors' discretion (as described below) in determining what was in the interests of the company, the directors might breach that duty where they failed to direct their minds at all to the question of whether a transaction was in the interests of the company, even though a board which had considered the question might well have acted in the same way. A good illustration of the principle is afforded by *Re W&M Roith Ltd*.[184] There the controlling shareholder and director wished to make provision for his widow. On advice, he entered into a service agreement with the company whereby on his death she was to be entitled to a pension for life. On being satisfied that no thought had been given to the question whether the arrangement was for the benefit of the company and that, indeed, the sole object was to make provision for the widow, the court held that the transaction was not binding on the company.[185]

In this case it might be said that the straightforward financial success of the company was clearly compromised by the decision, since the widow was unlikely to provide the company with any corresponding corporate benefit. In such circumstances, the directors needed to be able to demonstrate that their decision was based on due consideration of the corporate benefit, and this they could not do.[186] However, had they been able to do that, the court would have been unlikely to second-guess their conclusions even if the court itself might not have reached the same decision.

16–42

But this strict approach might be thought impractical. By contrast, in *Charterbridge Corp v Lloyds Bank*,[187] the directors of a company forming part of a corporate group had considered the benefit of the group as a whole, but without giving separate consideration to that of the company alone, when they caused the subsidiary company of which they were directors to give security for a debt owed by the parent company to a bank. It was held, perhaps surprisingly given the accepted common law

formulation of the requirement on directors, that "the proper test in the absence of actual separate consideration must be whether an intelligent and honest man in the position of a director of the company concerned could have reasonably believed that the transactions were for the benefit of the company". Here the collapse of the parent company would have been "a disaster" for the subsidiary.[188] The decision perhaps suggests that although directors must act in ways *they* consider would be most likely to promote the interests (or the success) of the company, it is also true that where, objectively, on balance, their decision can be seen to do that, it will not be overturned; the directors will not be held to be in breach of their duty at common law to act in the interests of the company (or, under the statute, their duty to promote the success of the company) *merely* because they did not give explicit thought to the question, at least in the absence of proven detriment.[189]

On the other hand, and despite the *Charterbridge* decision, it must be said that the core duty of good faith does not recognise a duty "to the group" or to other companies in the group. It insists that the main focus of directors must be on the interests of their subsidiary, even if it accepts that the interests of the subsidiary are in many cases intimately related to the continuing existence of the group.[190] Directors in corporate groups must guard against their inevitable inclinations to promote the interests of the group as a whole (or some part of it).

16–43

These cases all concern the common law duty. Their analysis is in principle equally applicable to breaches of the statutory provisions, and indeed finding a breach of the core statutory duty of good faith on the ground that not all the required interests have been taken into account is perhaps more likely under the ESV approach because the statute is so much clearer about the precise range of matters to which directors must have regard in the discharge of their duty to promote the success of the company for the benefit of its members. To that extent, the retreat from the strict approach in *Re W & M Roith Ltd*[191] is welcome. Moreover, since the statutory list of factors is non-exhaustive, it would follow that a director would be in breach of duty in failing to take account of any matter which he or she

considered relevant to the decision in question. However, in truth the statutory formulation largely makes explicit what was already implicit in the earlier common law, so it does not require boards to approach decision-making, or to document their decisions, in a totally novel fashion. Of course, to the extent that boards might previously have ignored potential adverse impacts on shareholders' interests by failing to analyse the impact of a proposed decision on non-shareholders, the section should produce a change of practice.

On the second question, of whether the directors have not simply taken account of the listed factors but have taken *appropriate* account of them, the earlier common law cases suggest that the courts will generally resist any request to second-guess the directors' judgement of how best to act in the interests of the company.[192] The only exception is perhaps when, in the court's view, no reasonable director could have considered the chosen course of action to be in the company's interests (by analogy with the public law "*Wednesbury* unreasonableness" test). Such facts as raise this concern are often seen to go to the question of whether the court believes that the director did in fact consider the relevant matter at all (and so is part of the analysis of the first question just considered), but to the extent that the court's determination is not simply evidential, but judgemental, the resulting judicial oversight of directors' management decisions has remained very restrained, and in any event is limited to overturning the impugned decision, not substituting the courts' decision (except to the extent that this is implicit in the courts' unravelling of what has been done). Indeed it is notable that the architect of the public law *Wednesbury* principle, Lord Greene MR, was also the judge who in *Re Smith & Fawcett* (quoted earlier) was concerned to stress the freedom of directors from control by the courts in the exercise of their good faith judgement, while also adding a "proper purposes" limitation analogous to the public law principle and to the statutory principle now found in s.171(b).

The most authoritative statement of this approach to judicial review is that of Lord Woolf in *Equitable Life Assurance Society v Hyman*,[193] although his approach was not part of the arguments of the other two judges in that case (or in the House of Lords on

appeal). The complaint in this case was between groups of corporate creditors each complaining about the effect of the directors' decision; in other cases where the *Wednesbury* principle has been invoked, the disputes have typically been among members of the company about their rights and interests as shareholders rather than disagreements about the setting of the company's business strategy.[194] It might be thought, therefore, that the inclusion in subs.(1)(f) of "the need to act fairly as between the members of the company" as one of the factors of which the directors need to have regard could turn out to be significant, although the shareholders typically have more amenable avenues for complaint than reliance on a duty the directors owe to the company.

Indeed, it might be better, analytically, to see this type of objective judicial review, where relevant, as situated under s.171(b), with s.172 merely providing an explicit list of proper considerations required to be taken into account in directors' decision-making. Such an approach would effectively align s.171(b) "improper purposes" with the mandatory considerations listed in s.172, but would remind complainants of the inherent limitations in the claim being advanced. And to the extent that unfair treatment of minorities by controlling persons is the chief mischief to be dealt with, a remedy can alternatively often be provided under the unfair prejudice provisions discussed in Ch.20.

16–44

Whatever the better classification of these claims, it seems clear from the course of parliamentary debates on the Bill that the Government did not intend in its formulation of s.172 to introduce a wide-ranging judicial review of the decisions of directors. In an earlier version of what became s.172, the duty to act in good faith was set out in subs.1 and the list of ESV factors in subs.3. Later they were brought together in subs.1. As the Minister for Industry and the Regions explained in the parliamentary debates:

> "In [the House of Lords], the clause was amended to bring together what are now its subsections and make even clearer—I hope to hon. Members and certainly to those outside who will have to use the law—our intention that, while a director must have regard to the various factors stated, that requirement is subordinate to the overriding duty to promote the success of the company."

In addition, the Minister continued, the bringing together of the two previously separate subsections involved the deletion "from the clause of a second 'must', which we considered could be perceived as creating a separate duty". Finally, and most importantly:

> "we believe it essential for the weight given to any factor to be a matter for a director's good faith judgment. Importantly, the decision is not subject to the reasonableness test that appears in other legislation ….That is in sharp contrast to, for example, decisions on public law, to which courts often apply such a test."[195]

For all these reasons, it appears that the deferential approach of the common law to directors' judgements in relation to the core duty of good faith and fidelity was intended to be applied also to its statutory reformulation.

A duty to disclose wrongdoing

16–45

In an interesting decision, in *Item Software (UK) Ltd v Fassihi*[196] the Court of Appeal held that a director was under a duty to disclose his own breaches of fiduciary duty, an obligation apparently derived from, i.e. was an aspect of, the core duty of good faith and loyalty.[197] At first sight this is a draconian duty. However, in many cases it will add little to the director's potential liability for breaches of fiduciary duty, though in some cases, as in this one, it will. The director had committed a breach of the corporate opportunity rule (discussed below) by attempting to persuade a client of the company to renew a contract with him personally rather than with the company. In the end, the client renewed the contract with neither the director nor the company. Against orthodoxy, the company sued for damages (not profits) for breach of the corporate opportunity doctrine, but failed because the trial judge had held that the client did not take the director's offer seriously. However, the court also found that, had the company known of the director's activities, it would have accepted an offer to renew from the client which it in fact rejected. Thus, the company's loss was the profit it would have made on this admittedly not favourable contract, but that loss could be recovered only if the director should have told the company of his underhand activities, a duty which the court found to exist.

The case has been thought in some quarters to create a new and free-standing "duty of disclosure" on directors, but it is submitted that this is not the case. In fact, seen as a part of the core duty of good faith and loyalty, rather than as a free-standing duty of disclosure, the decision seems unproblematic. The core duty must require a director to bring to the attention of the board threats to its business of which the director becomes aware. The twist in this case was that the duty was imposed even though the threat arose out of the director's own wrongdoing, but it would be odd if the director's wrongdoing could relieve him or her from a course of action which would otherwise have to be taken.[198] The main obstacle in reaching this result was the earlier decision of the House of Lords in *Bell v Lever Bros Ltd*,[199] which had been interpreted by some as laying down a general principle that a director's own wrongdoing never had to be disclosed. The court was able to accept the result in that case by confining it to the situation where the director was negotiating compensation for the termination of his or her services with the company or an improvement in the terms of his or her employment, on the grounds that disclosure in such a case would be "contrary to the expectations of the parties".[200] However, outside the context of the director negotiating terms of service with the company, a duty to disclose others' or one's own wrongdoing can be regarded as a normal incident of the core duty of fidelity, where the director is aware that the facts of which he or she is in possession should be given to the company if it is to protect and further its own interests.

The problem of "short-termism"

16–46

The common law focus on shareholders led to a widespread but, it is submitted, erroneous view that the law required directors acting in the interests of shareholders to prioritise their short-term interests. The better view, it is suggested, is that the directors were not bound to any particular timeframe; on the contrary, they must take into account both the long- and the short-term interests of the shareholders and strike a balance between them.[201] The CLR proposed in its draft statement of directors' duties to specify an obligation on the directors to take

into account “the likely consequences (short and long term) of the actions open to the director”.[202] As we have seen, s.172 refers merely to “the likely consequences of any decision in the long term”. If anything, the omission of the reference to short-term interests in the non-exhaustive list emphasises the importance of long-term consequences. That bias is repeated in the UK Corporate Governance Code.[203]

Corporate groups

16–47

We have already considered the potential problem faced by directors within corporate groups, where their instinct may be to look to the overall success of the group, whereas their duty of good faith and loyalty is owed only to their appointing company.[204]

Employees

16–48

Among the factors to which a director of a company must have regard under s.172(1) are “the interests of the company’s employees”. This is as one would expect: any comprehensive list of stakeholder interests will necessarily include the employees. But the practical impact of this on employees is limited. Indeed, it was said of the predecessor provision[205] that its real impact was to dilute directors’ accountability to shareholders rather than strengthen accountability to employees. This is because employees cannot use the section offensively, whilst directors can use it defensively when sued by shareholders, by arguing that a decision apparently unfavourable to the shareholders is unchallengeable because it was taken in the interests of the employees.[206] Writ large, this illustrates the argument against the pluralist approach to this core duty of good faith. So long as the duty is perceived subjectively, increasing the number of equal-status groups whose interests the directors must promote makes proof of breach difficult, almost to the point of impossibility. Correcting that defect by making the duty objective, however, paves the way for excessive judicial intervention in the taking of board-level decisions, thus inducing caution on the part of those who ought to be risk-takers. The best view is probably that any

broadly-formulated pluralist provision could not by itself operate so as to alter the decision-making processes of a board unless coupled with further changes in company law, such as board-level representation for the relevant stakeholder groups.

There is, however, one particular derogation from the core duty which is made in favour of employees. This is to be found in s.247, involving the power to make gratuitous payments to employees on the cessation of the company's business, as discussed at para.7–29.

Creditors

16–49

There is one surprising omission from the statutory list of matters to which the directors must have regard, namely, the interests of the creditors, except to the extent it is embraced by subs.172(1)(c). Of course, so long as the company's business is flourishing, the creditors' position is not prejudiced by such an omission. Their contractual rights against the company plus the company's desire to preserve its reputation and thus access to future credit will act so as to protect the creditors. However, once the company's fortunes begin to decline, conflict between the interests of the shareholders and the creditors may emerge in a strong form; the directors have an incentive to take excessive risks to protect their own and the shareholders' position, knowing that, if the company is in the vicinity of insolvency, the downside risk will fall wholly on the creditors, whilst the upside benefit will get the company out of trouble. We have already seen in Ch.9 how this problem is dealt with, both by statutory insolvency laws operating in the lead up to insolvency, and by common law rules operating still earlier. The CLR considered whether these statutory and common law rules should be reiterated, or even expanded, in s.172,[207] but in the end the many perceived difficulties were all avoided by the simple strategy of providing, expressly, in s.172(3), that the duty imposed under that section "has effect subject to any enactment or rule of law requiring directors, in certain circumstances, to consider or act in the interests of creditors of the company". The detail thereby comprehended is covered in Ch.9.[208]

16–50

In the abstract, a decision on the part of the directors to give the company's assets away would appear to be a *clear* example of a decision not taken in good faith to promote the success of the company for the benefit of its members. On the other hand, companies are always being approached to support various causes, worthy or less worthy, and do in fact make donations of various sorts. Company law has sought to distinguish between donations which promote the company's business (legitimate) and those which do not (illegitimate). Traditionally, that distinction was drawn by the law relating to ultra vires, but now the focus is on directors' powers: in the absence of an express provision in the articles or elsewhere conferring upon directors the authority to make donations, is there an implied power to do so in order to further the company's business?[209] And if there is such a power, has it been exercised appropriately?[210] This second question has various strands. Thus, in *Re Lee, Behrens and Co Ltd*,[211] where the company's constitution conferred an express power on the directors to make the gift in question, Eve J identified the relevant tests as follows: "(i.) Is the transaction reasonably incidental to the carrying on of the company's business? (ii.) Is it a bona fide transaction? and (iii.) Is it done for the benefit and to promote the prosperity of the company?"

In practice, the courts have tended not to examine very closely the link between the donation and the company's business when it seemed to them that the donation was in the public interest, so that a substantial donation by a large chemical company to promote scientific tertiary education was upheld even though the gift might not be used to promote the study of chemistry in particular and the company had no greater claim on the graduating students than any of its rivals.[212] It seems unlikely that this approach will change in the future, in the light of pressures on companies to be "good citizens" in their communities and of the recognition that companies may secure "reputational" advantages from supporting activities which seem remote from their businesses, for example, a bank sponsoring an opera production (presumably thus enhancing its reputation

among wealthy potential customers).[213] By contrast, donations which shift assets away from shareholders in the direction of other stakeholders in the company have traditionally been treated with suspicion, but that attitude may also be undergoing a change and, in any event, it is normally possible to present such apparent gifts as part of an exchange where the company is a going concern.[214]

The upshot of the law in this area is that directors probably have some leeway to steer donations or other similar arrangements (such as sponsorship) in the direction of their favourite charities or pastimes, without serious threat of legal challenge, provided such donations are not of excessive size and provided there is some link with the company's business.

16–51

However, in one area, that of corporate political donations, such leeway is arguably constitutionally objectionable. Consequently, in that area, as we shall see, the law has required shareholder approval of donations since reforms made in 2000.[215]

Overview of the No-Conflict Rules

16–52

As fiduciaries, directors must not place themselves in a position in which there is a conflict between their duties to the company and their personal interests or duties to others.[216] This fundamental common law principle was perhaps most famously stated by Lord Herschell in *Bray v Ford*[217]:

> "It is an inflexible rule of a court of equity that a person in a fiduciary position is not, unless otherwise expressly provided,[[218]] entitled to make a profit; he is not allowed to put himself in a position where his interest and duty conflict. It does not appear to me that this rule is founded upon principles of morality. I regard it rather as based on the consideration that, human nature being what it is, there is a danger, in such circumstances, of the person holding a fiduciary position being swayed by interest rather than by duty, and thus prejudicing those he was bound to protect. It has, therefore, been deemed expedient to law down this positive rule."

It can be argued that this common law "no conflict" principle (often separated, as here, into no-conflict and no-profit rules) underlies all three of the remaining general duties of directors set out in the Act: the self-dealing transaction rules discussed immediately below (ss.175(3) and 177, and Pt 10, Chs 3 and 4,

the latter provisions all dealing with specific and invariably substantial types of property transactions with directors); the principle that a director must not make personal use of the company's property, information or opportunities (s.175(1) and (2)); and, finally, the requirement that directors must not receive benefits from third parties in exchange for the exercise of directorial powers (s.176). In the first case (self-dealing), the conflict arises because the director is, in a very practical sense, on both sides of a transaction with the company, and so motivated perhaps by self-interest rather than by duty.[219] In the case of directorial exploitation of corporate property or opportunity, by contrast, the director uses, for his or her own ends, the company's property or opportunities, to the exclusion of the company. Finally, in the case of what the common law calls, generically, "bribes", the risk is that the director exercises his or her powers in the interests of the third party rather than the company because of the personal benefit conferred on the director by that third party.

16–53

Although, at a broad level, it is undoubtedly true that the purpose of all three duties is to discourage directors from putting their personal interests ahead of their duties to the company, it is also true that the more specific rules under each duty have now developed sufficiently separately, especially, as we shall see, in terms of the action required of the director to comply with the duty, that it is sensible to consider them separately, as the Act does.[220]

These various "no conflict" rules are probably the most important of the directors' various duties of good faith and loyalty. As we have seen, the core good faith rule is overwhelmingly subjective and so difficult to enforce, whilst, given the width of the powers conferred upon directors by the articles, the requirement that they stay within their powers under the constitution, and use those powers for proper purposes, tends to have only a marginally constraining impact upon directors' activities.

Transactions with the Company (Self-Dealing)

The scope of the relevant provisions

16–54

The structure of the Act is a little more complex than the above might suggest. Section 175 is the apparently general section dealing with, as the side-note says, "the duty to avoid conflicts of interest". However, self-dealing transactions are excluded from s.175 by s.175(3): "this duty does not apply to a conflict of interest arising in relation to a transaction or arrangement with the company". A number of other provisions are instead brought into play.

If we were to summarise their general effect, the general strategy adopted by the Act in managing these problematic self-dealing transactions is to put in place a fairly lenient default rule, requiring only that the self-interest of the self-dealing director be disclosed to the board in advance of the transaction being agreed to by the company (regardless of whether that agreement is then by the board or by some delegated manager). But then the Act goes on to identify particular specific categories of self-dealing transactions as being especially vulnerable to inadequate oversight by the board (either simply because of their size, or because of their commonality amongst the directors which might then risk mutual back-scratching[221]), and with these the Act requires not only disclosure to the board but also approval by the general meeting. Perhaps predictably, the protective regime is even stricter with listed companies, with particular ex ante approval rules for related party transactions, and strict ex post disclosure rules demanded by modern accounting standards. All of these various rules are examined in this section, but their significance is far more easily understood if we start with the common law rules from which these variations are derived.

As far as self-dealing transactions are concerned, by the middle of the nineteenth century it had been clearly established that the trustee-like position of directors was liable to vitiate any contract which the board entered into on behalf of the company with one of their number. This principle received its clearest expression in *Aberdeen Railway Co v Blaikie Bros*,[222] in which a contract between the company and a partnership of which one of the directors was a partner was avoided at the instance of the

company, notwithstanding that its terms were perfectly fair. Lord Cranworth LC said on that occasion[223]:

> "A corporate body can only act by agents, and it is, of course, the duty of those agents so to act as best to promote the interests of the corporation whose affairs they are conducting. Such agents have duties to discharge of a fiduciary nature towards their principal. And it is a rule of universal application that no one, having such duties to discharge, shall be allowed to enter into engagements in which he has, or can have, a personal interest conflicting, or which possibly may conflict, with the interests of those whom he is bound to protect ….So strictly is this principle adhered to that no question is allowed to be raised as to the fairness or unfairness of a contract so entered into."

It is important to note that, provided there is a conflict of interest which is not just fanciful, a director is in breach of this duty whether or not the conflict had an effect upon the terms negotiated between the parties to the transaction and whether or not the terms of the transaction could be regarded as fair in any event. It is therefore a strict liability rule. Strict though this rule is from the director's point of view, it makes the task of the courts somewhat easier. In the British jurisdiction, the courts do not scrutinise self-dealing transactions, as they do in some jurisdictions, to see if they are fair. If there is a conflict of the type covered by the self-dealing rules, there is a breach of duty on the part of the director.

Approval mechanisms

16–55

However, the lesson likely to be drawn from Lord Cranworth's statement that directors should not contract with their company was not necessarily correct or wise, even from the company's point of view. The director may in fact be the best source of a particular asset which the company wishes to acquire, and so an outright ban on self-dealing would cut against the company's interests. An obvious example is a contract between a director and the company for the provision of the full-time services of the director to the company.[224] The crucial issue underlying the rule thus became, even at common law, the identification of the procedure which the director needed to observe in order to rid him- or herself of the taint of conflicted contracting. At common law the rule was that disclosure of the conflict in advance to, and approval of the contract by, the shareholders was the appropriate procedure whereby an interested director could enter into a

contract with the company. This was because the shareholders, acting as the company and thus as the beneficiaries of the directors' duty, could waive compliance with it, if they wished.

This search for the appropriate internal decision-maker to approve the self-dealing transaction is shared with the other no-conflict rules, as we shall see. Moreover, this approach had a further consequence. If the shareholders did approve the transaction, it would then be virtually impossible for the company later (via a new board, or a liquidator) to challenge it in court. In other words, shareholder approval (or "whitewash" as it is sometimes called) was a robust technique for protecting the director. Shareholder approval did not, for example, simply create a presumption of fairness which a court might overturn, as it does in some other systems. The robustness of the "whitewash" provisions is again a feature of the other no-conflict rules, as we shall see, although it is not without some limits.

Nevertheless, directors found shareholder approval an inconvenient rule and one which they regarded as in many cases tantamount to a prohibition on contracting with the company. Just as the normal restraints on trustees can be modified by express provisions in the will or deed under which they were appointed,[225] so (at common law) can the normal fiduciary duties of directors be modified by express provision in the company's articles, which of course bind all the members of the company. Directors therefore sought through provisions in the articles to substitute the more congenial requirement of mere disclosure, rather than disclosure and approval; and disclosure to the board rather than to the shareholders in general meeting. Such provisions became common-form in the articles of registered companies. Indeed, in some cases the articles gave directors permission to engage in self-dealing transactions without any form of disclosure. This practice caused the legislature to step in and require (in a provision which was introduced in 1929 and became s.317 of the 1985 Act) that directors disclose conflicts to the board, irrespective of any provisions in the articles. Thus, the board would be aware of the conflict and could decide what to do about it.

16–56

Section 177 of the 2006 Act adopts this approach and imposes a rule of disclosure to the board. Thus, the modern rule on self-dealing has become, in principle, and subject to some crucial exceptions,[226] simply a requirement of disclosure to the board. There is no duty to *avoid* such dealings (hence s.175(3)). And approval by others, whether shareholders or fellow directors, is not formally required, although presumably it could be imposed by the articles.[227]

Notice, further, that the 2006 Act deals in separate places with disclosure of interests in proposed transactions (s.177, Ch.2 of Pt 10) and disclosure in relation to existing transactions (s.182, Ch.3 of Pt 10). The former is one of the general duties imposed on directors; the latter is not. Beyond doctrinal elegance, however, the division is important in relation to the sanctions for breach of the two disclosure duties, for the categories of directors who are bound by the two duties, and to some extent for the methods of disclosure. Whether there is any merit, in remedies, in this split is questionable.

In what follows, we shall look at each of these two rules in turn, and then at the crucial exceptions noted earlier where the tougher requirement of shareholder approval is made compulsory.

Duty to declare interests in relation to proposed transactions or arrangements

16–57

A director who is "in any way, directly or indirectly" interested in a proposed transaction or arrangement with the company must declare to the other directors the "nature and extent" of that interest and do so before the company enters into the transaction or arrangement (s.177(1)). If the declaration, once made, becomes or proves to be inaccurate or incomplete, a further declaration must be made (s.177(3)).

Purpose of the disclosure requirement

16–58

The aim of s.177 is to put the other directors on notice of the conflict of interest, so that they may take the necessary steps to

safeguard the company's position. What steps the other directors should take, once put on notice, is not dealt with in the section nor, indeed, in precise terms elsewhere in the Act. No doubt, they will be in breach of their duties of care and, perhaps, good faith if they take no or inadequate steps, but such a conclusion would require analysis of the other directors' actions (or inaction) under the principles discussed above. It is not difficult to envisage a board culture in which the steps taken on the basis of the declaration are minimal, especially if all the directors from time to time make such disclosures and trust that their disclosure will be readily accepted if they readily accept disclosures by others.

It is also to be noted that the Act leaves to the company's articles the task of deciding whether, if the proposed transaction is to be entered into by the board, the interested director is entitled to vote or count towards the quorum at the meeting at which the decision is taken.[228]

Who is subject to this duty?

16–59

Since s.177, dealing with proposed transactions, is one of the general duties of directors, it applies also to shadow directors, although only "where and to the extent that [it is] capable of so applying": s.170(5).[229] By contrast, s.182, in relation to disclosure of interests in existing transactions, applies explicitly to shadow directors: s.187(1). There would seem to be no argument that s.177 is "incapable" of applying to shadow directors, all the more so in the light of the absolute rule in s.187. And the practical arguments for requiring disclosure of interests in relation to proposed transactions are even stronger than those relating to existing transactions, since in relation to the former the company has the luxury of being legally free to withdraw from negotiations if the terms seem unfavourable.[230]

The interests to be disclosed

16–60

The director must disclose interests in a "transaction or arrangement". This clearly includes contracts, which will be the

paradigm example of a transaction or arrangement, but it also embraces non-contractual arrangements,[231] and it matters not whether the transaction or arrangement is entered into by the company through its board or through a subordinate manager.[232]

Both direct and indirect interests must be disclosed. The extension of the section to "indirect" interests means that the director need not himself be the other party to the transaction. It is enough, for example, that he is a shareholder in the company which is the other party, or is a member of a contracting partnership. This is not a novel development: the common law had recognised indirect conflicts of interest during the nineteenth century.[233]

The director must disclose not only the nature but also the extent of the relevant interest.[234] It is obviously more informative to be told, not simply that X is a shareholder in the contracting party, but also whether X is a 1 per cent shareholder or holds a controlling interest.

The section includes a number of restrictive clarifications of the scope of the disclosure principle. The words of Lord Cranworth, quoted above, that the common law embraced personal interests "which possibly may conflict" with the director's duty were thought to be too broad, and in consequence s.177(6)(a) provides that a director does not have to declare an interest "if it cannot reasonably be regarded as likely to give rise to a conflict of interest".[235] This probably does no more than re-state the common law.[236]

Section 177(5) does not require the director to disclose an interest in relation to a transaction unless he or she is aware *or* ought reasonably to be aware of both the interest and the transaction. A director might be excusably unaware of an interest he or she has in a third party who is contracting with the company (for example, where the managers of a unit trust in which the director holds units have recently bought a large stake in the third party) or in the transaction (for example, where it is to be entered into at sub-board level).

Nor need the director disclose interests of which the other directors are or ought reasonably to be aware, on the grounds that such disclosure is or ought to be unnecessary (s.177(6)(b)).

In particular, s.177 does not require disclosure in the case of single-member boards.[237]

Also excluded is the need for a director to disclose an interest in the terms of his service contract that is being or has been considered by a meeting of the directors or the appropriate committee of the board (s.177(6)(c)). It might be thought that this last exception is covered by the previous one, and in most cases this will be so. However, where the service contract is to be decided on by a committee of the board, for example, its remuneration committee, it is conceivable that not all the other directors would be aware of the director's interest.

Methods of disclosure

16–61

Assuming the duty to disclose does bite, s.177(2) lays down three non-exhaustive methods of making the disclosure.[238] These are (i) at a meeting of the directors; (ii) by written notice to the directors (as per s.184); or (iii) by a general notice (as per s.185).

The first two options provide methods of giving notice in relation to an identified transaction. Notice given outside a meeting must be sent to each director and the notice is deemed to be part of the proceedings of the next directors' meeting and so must be included in the minutes of that meeting.[239] A general notice, by contrast, is given in the absence of any specific identified transaction, and is notice by which the director declares that he is to be regarded as interested in any transaction or arrangement which is subsequently entered into by the company with a specified company, firm or individual because of the director's interest in or connection with that other person.[240] As usual, the nature and extent of the interest has to be declared. Unlike a specific notice, however, a general notice must either be given at a meeting of the directors or, if given outside a meeting, the director must take reasonable steps to ensure that it is brought up and read out at the next meeting after it is given.[241] Thus, in relation to a general notice, the board must positively be given the opportunity to discuss the notice, though there is no obligation on the board actually to do so. The giver of a general notice is not exempted from the requirement to provide a further declaration if the first notice becomes inaccurate, as it

might if the nature or extent of the director's interest in the third party altered, for example, if the director's shareholding in the third party increased significantly. Thus, even a general notice cannot simply be given once and forgotten.

Remedies

16–62

Breach of s.177 (failure to declare interest in proposed transactions) is subject to civil sanctions, not criminal ones, but those sanctions are defined only generally. They are "the same as would apply if the corresponding common law rule or equitable principle applied".[242]

Those civil sanctions seem to be as follows. Where the self-dealing director acts in breach of the statutory disclosure rule, but subject to what is said next on special provisions in the company's articles, the transaction is voidable at the option of (i.e. not binding on, at the election of) the company, unless third party rights have intervened. On orthodox principles, avoidance (i.e. rescission) is the *only* remedy,[243] unless the director has also infringed some other rule that will deliver an alternative remedy.[244] And if rescission is no longer possible for any reason, then the court will decline to intervene. This may seem odd, especially since self-dealing transactions are illustrations of the "no conflicts" duty, for which directors are typically required to disgorge the profits they have made. But the courts in these self-dealing cases say that the director's profit is "unquantifiable", since that would involve the courts fixing a new contract price for the parties. Given all the other situations in which courts are content to make commercial assessments of value, this seems unduly reticent.

A continuing role for the articles in setting tighter constraints

16–63

We know from s.170(3) that the duties laid out in Ch.2 of Pt 10 "have effect in place" of the common law rules and equitable principles on which they are based. Consequently, in a self-dealing transaction, a director must comply with the provisions

of s.177 and disclose his or her interests to the board. If the director does this, then s.180(1) provides that "the transaction or arrangement is not liable to be set aside by virtue of any common law rule or equitable principle requiring the consent or approval of the members of the company". Thus, in the standard case, compliance with s.177 disclosure rules will mean that the director is not in breach of the relevant duty of loyalty, and that the transaction is therefore binding on the company.

However, s.180(1) specifically operates without prejudice to any "provision of the company's constitution requiring such consent or approval". Thus, the company's articles may reinstate the common law principle of shareholder approval and, where this is done, a transaction entered into without such approval will not be binding on the company, subject to the protections for third parties contained in s.40 (to the limited extent that these rules may be relevant in a self-dealing transaction).[245] As we have seen already, the impact of restrictions in the articles upon the validity of the transaction will vary according to whether the restriction requires a particular organ or group within the company to take the decision on the self-dealing transaction with the director, or merely to approve it. Breach in the first case renders the transaction void; in the second, voidable only.[246] These provisions cannot, however, oust the disclosure requirements in s.177.

In short, the shareholders remain masters of the rules on self-dealing transactions but now the onus is on those who want to move away from board disclosure and require shareholder approval or some other additional control, whereas under the prior law the burden of action lay on those who wished to introduce into the articles provisions modifying the common law requirement of shareholder approval.

Duty to declare interests in relation to existing transactions or arrangements

16–64

Section 182 requires the compulsory disclosure to the board of existing self-dealing transactions, unless the interest has already been declared in relation to a proposed transaction.[247] This
